

## Technical Memorandum

To: Paul Loubet, First Industrial Realty Trust

From: Eliza Laws, Senior Environmental Analyst  
Noemi Avila, Assistant Environmental Analyst

Date: November 17, 2022

Re: Air Quality/Greenhouse Gas Analysis for the First Industrial Warehouse on Day Street  
(PEN22-0144), City of Moreno Valley

---

The following air quality assessment was prepared to evaluate whether the expected criteria air pollutant emissions generated as a result of construction and operation of the proposed Project would cause exceedances of the South Coast Air Quality Management District's (SCAQMD) thresholds for air quality in the Project area. The greenhouse gas (GHG) assessment was prepared to evaluate whether the proposed Project would be consistent with the *City of Moreno Valley Climate Action Plan* (CAP), adopted June 15, 2021.<sup>1</sup> This assessment was conducted within the context of the California Environmental Quality Act (CEQA, California Public Resources Code Sections 21000 *et seq.*). The methodology follows the *CEQA Air Quality Handbook* prepared by the SCAQMD for quantification of emissions and evaluation of potential impacts to air resources. As recommended by SCAQMD staff, the **California Emissions Estimator Model®** version 2020.4.0 (CalEEMod) was used to quantify Project-related emissions.

The Project Applicant proposes the demolition of the existing 63,220 square foot building and the development of an approximate 164,968 square foot (SF), non-refrigerated warehouse building that includes 3,500 SF of office space and 3,500 SF of mezzanine office space, on approximately 8.01 net acres on the east side of Day Street, south of Alessandro Boulevard, in the City of Moreno Valley, California. The Project is proposing a new potable water line within Day Street from the Project's southern frontage to a point of connection in the intersection with Alessandro Boulevard. The total off-site disturbance area is approximately 1.01 acres.

---

<sup>1</sup> City of Moreno Valley. City of Moreno Valley Climate Action Plan, Adopted June 15, 2021. (Available at: [https://moval.gov/city\\_hall/general-plan2040/MV-CAP.pdf](https://moval.gov/city_hall/general-plan2040/MV-CAP.pdf), accessed on October 12, 2022.)

## ▪ **Regional Significance Thresholds**

The thresholds contained in the SCAQMD CEQA Air Quality Handbook<sup>2</sup> (SCAQMD 1993) and posted in a supplemental table as mass daily thresholds on SCAQMD's website<sup>3</sup> are considered regional thresholds and are shown in **Table 1 – SCAQMD CEQA Daily Regional Significance Thresholds**, below. These regional thresholds were developed based on the SCAQMD's treatment of a major stationary source.

**Table 1 – SCAQMD CEQA Daily Regional Significance Thresholds**

Emission Threshold	Units	VOC	NO <sub>x</sub>	CO	SO <sub>x</sub>	PM-10	PM-2.5
Construction	lbs/day	75	100	550	150	150	55
Operation	lbs/day	55	55	550	150	150	55

Air quality impacts can be described in a short- and long-term perspective. Short-term impacts occur during site grading and Project construction and consist of fugitive dust and other particulate matter, as well as exhaust emissions generated by construction-related vehicles. Long-term air quality impacts occur once the Project is in operation.

The Project will be required to comply with existing SCAQMD rules for the reduction of fugitive dust emissions. SCAQMD Rule 403 establishes these procedures. Compliance with this rule is achieved through application of standard best management practices in construction and operation activities, such as application of water or chemical stabilizers to disturbed soils, managing haul road dust by application of water, covering haul vehicles, restricting vehicle speeds on unpaved roads to 15 mph, sweeping loose dirt from paved site access roadways, cessation of construction activity when winds exceed 25 mph and establishing a permanent, stabilizing ground cover on finished sites. In addition, projects that disturb 50 or more acres or more of soil or move 5,000 cubic yards of materials per day are required to submit a Fugitive Dust Control Plan or a Large Operation Notification Form to SCAQMD. Based on the size of this Project's disturbance area (9.02 acres), a Fugitive Dust Control Plan or a Large Operation Notification Form would not be required.

## **Short-Term Analysis**

Short-term emissions from Project construction were evaluated using the CalEEMod version 2020.4.0 program. The estimated construction period for the proposed Project is approximately ten months, beginning no sooner than June 2023. The default parameters within CalEEMod were used and these default values reflect a worst-case scenario, which means that Project emissions are expected to be equal to or less than the estimated emissions. In addition to the default values used, assumptions relevant to model inputs for short-term construction emission estimates used are:

- Construction is anticipated to begin in June 2023 with demolition and end with architectural coatings (painting):

<sup>2</sup> South Coast Air Quality Management District, *CEQA Air Quality Handbook*, November 1993. (Available at SCAQMD.)

<sup>3</sup> <http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf?sfvrsn=2>

Construction Activity	Start Date	End Date	Total Working Days
Demolition	June 1, 2023	June 30, 2023	22 Days
Grading	July 1, 2023	July 21, 2023	15 Days
Building Construction	July 22, 2023	April 12, 2024	190 Days
Paving	March 18, 2024	April 12, 2024	20 Days
Architectural Coatings	March 18, 2024	April 12, 2024	20 Days

- The equipment to be used for each activity is shown below and is based on engineering estimates and the Applicant. Each piece of equipment is assumed to operate 8 hours per day:

Construction Activity	Off-Road Equipment	Unit Amount
Demolition	Concrete/Industrial Saws	1
	Excavators	2
	Rubber Tired Dozers	2
Grading	Excavators	1
	Graders	1
	Rubber Tired Dozers	1
	Scrapers	2
	Tractors/Loaders/Backhoes	3
	Crusher/Processing Equipment	1
Building Construction	Crane	1
	Forklifts	3
	Generator Set	1
	Tractor/Loader/Backhoe	3
	Welder	1
Paving	Paver	1
	Paving Equipment	1
	Rollers	1
Architectural Coatings	Air Compressors	1

- To evaluate Project compliance with SCAQMD Rule 403 for fugitive dust control, the Project utilized the mitigation option of watering the Project site three times daily which achieves a control efficiency of 61 percent for PM-10 and PM-2.5 emissions. Two (2) one-way vendor trips per day were added to the demolition, grading and paving activities to account for water truck trips.
- The existing building totaling 63,220 SF will be demolished.
- Vendor trips from concrete trucks utilized during building construction were based on CalEEMod defaults.
- Approximately 6,500 cubic yards of soil will be imported during grading operations. Truck capacity is assumed to be 16 cubic yards, resulting in approximately 406 truckloads of import over a 15-day period. The import site is currently unknown. Therefore, the CalEEMod Default was utilized which assumes a hauling trip length of 20 miles per trip.
- Off-site infrastructure improvements will include a potable water line and associated connections. The off-site improvement area will disturb approximately 1.01 acres.

- The VOC content of interior and exterior architectural coatings were changed to 50 grams per liter, pursuant to SCAQMD Rule 1113.

The results of this analysis are summarized below.

**Table 2 – Unmitigated Estimated Maximum Daily Construction Emissions**

Activity	Peak Daily Emissions (lb/day)					
	VOC	NO <sub>x</sub>	CO	SO <sub>2</sub>	PM-10	PM-2.5
<b>SCAQMD Daily Construction Thresholds</b>	<b>75</b>	<b>100</b>	<b>550</b>	<b>150</b>	<b>150</b>	<b>55</b>
Demolition-2023	2.16	21.42	17.25	0.04	2.44	1.15
Grading-2023	3.94	<b>43.34</b>	33.71	0.10	<b>6.47</b>	<b>3.29</b>
Building Construction-2023	2.35	18.08	24.26	0.06	3.05	1.34
Building Construction-2024	<b>2.20</b>	17.02	<b>23.77</b>	<b>0.06</b>	2.96	1.25
Paving-2024	<b>0.66</b>	4.85	<b>7.61</b>	<b>0.01</b>	0.34	0.24
Architectural Coatings-2024	<b>41.80</b>	1.69	<b>3.54</b>	<b>0.01</b>	0.45	0.18
<b>Maximum<sup>1</sup></b>	<b>44.66</b>	<b>43.34</b>	<b>34.92</b>	<b>0.08</b>	<b>6.47</b>	<b>3.29</b>
<b>Exceeds Threshold?</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>

Note: <sup>1</sup> Maximum emissions are the greater of either demolition, grading or building construction 2023 alone or the sum of building construction 2024, paving and architectural coating since these activities overlap. Maximum emissions are shown in bold.

As shown in the table above, the emissions from construction of the Project are below the SCAQMD daily construction thresholds for all the criteria pollutants.

### Long-Term Analysis

Long-term emissions are evaluated at build-out of a project. The Project is assumed to be operational in 2024. Mobile source emissions refer to on-road motor vehicle emissions generated from the Project's traffic and based on the *Scoping Agreement for Traffic Study* (TIA) for FIR Day Street Warehouse (PEN22-0144).<sup>4</sup> An average truck trip length of approximately 40 miles was assumed, per SCAQMD recommendations. On-site service equipment (i.e., forklifts) are assumed to be electric and therefore do not have any direct emissions of criteria pollutants. Area source emissions from the Project include stationary combustion emissions of natural gas used for space and water heating (shown in a separate row as energy), yard and landscape maintenance, and an average building square footage to be repainted each year. CalEEMod computes area source emissions based upon default factors and land use assumptions. To account for the energy used for parking lot lighting, the parking lot lighting energy intensity rate was conservatively applied to the Project site's concrete parking lot and landscaped areas and off-site improvement area. Separate emissions were computed for both the summer and winter and are shown in **Table 3** and **Table 4**, respectively.

<sup>4</sup> Albert A. Webb Associates, *Scoping Agreement for Traffic Study, FIR Day Street Warehouse (PEN22-0144)*, September 2022.

**Table 3 – Unmitigated Estimated Daily Project Operation Emissions (Summer)**

Source	Peak Daily Emissions (lb/day)					
	VOC	NO <sub>x</sub>	CO	SO <sub>2</sub>	PM-10	PM-2.5
<b>SCAQMD Daily Thresholds</b>	<b>55</b>	<b>55</b>	<b>550</b>	<b>150</b>	<b>150</b>	<b>55</b>
Area	3.79	0.00	0.04	0.00	0.00	0.00
Energy	0.01	0.09	0.07	0.00	0.01	0.01
Mobile	1.28	10.47	16.80	0.09	5.81	1.67
<b>Total</b>	<b>5.08</b>	<b>10.56</b>	<b>16.91</b>	<b>0.09</b>	<b>5.82</b>	<b>1.68</b>
<b>Exceeds Threshold?</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>

Note: Emissions reported as zero are rounded and not necessarily equal to zero.

**Table 4 – Unmitigated Estimated Daily Project Operation Emissions (Winter)**

Source	Peak Daily Emissions (lb/day)					
	VOC	NO <sub>x</sub>	CO	SO <sub>2</sub>	PM-10	PM-2.5
<b>SCAQMD Daily Thresholds</b>	<b>55</b>	<b>55</b>	<b>550</b>	<b>150</b>	<b>150</b>	<b>55</b>
Area	3.79	0.00	0.04	0.00	0.00	0.00
Energy	0.01	0.09	0.07	0.00	0.01	0.01
Mobile	1.18	11.08	14.85	0.08	5.81	1.67
<b>Total</b>	<b>4.98</b>	<b>11.17</b>	<b>14.96</b>	<b>0.08</b>	<b>5.82</b>	<b>1.68</b>
<b>Exceeds Threshold?</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>

Note: Emissions reported as zero are rounded and not necessarily equal to zero.

Evaluation of the data presented on the above tables indicates that criteria pollutant emissions from operation of this Project will not exceed the SCAQMD regional daily thresholds for any pollutant during summer or winter.

## ▪ Localized Significance Threshold Analysis

### Background

As part of the SCAQMD's environmental justice program, attention has been focused on localized effects of air quality. Staff at SCAQMD has developed localized significance threshold (LST) methodology<sup>5</sup> that can be used by public agencies to determine whether or not a project may generate significant adverse localized air quality impacts (both short- and long-term). LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the state ambient air quality standard, and are developed based on the ambient concentrations of that pollutant for each source receptor area (SRA). The Project is located in SRA 24.

### Short-Term Analysis

According to the LST methodology, only on-site emissions need to be analyzed. Emissions associated with vendor and worker trips are mobile source emissions that occur off site. The emissions analyzed under the LST methodology are NO<sub>2</sub>, CO, PM-10, and PM-2.5. SCAQMD has provided LST lookup tables<sup>6</sup> to allow users to readily determine if the daily emissions for proposed construction or operational activities could result in significant localized air quality impacts for projects five acres or smaller. Although the Project site disturbs more than five acres, it is anticipated that a smaller area will be disturbed per day. The SCAQMD's Fact Sheet for Applying CalEEMod to Localized Significance Thresholds is used to determine the maximum site acreage that is actively disturbed based on the construction equipment fleet and equipment hours as estimated in CalEEMod.<sup>7</sup> Based on this SCAQMD

<sup>5</sup> South Coast Air Quality Management District, *Final Localized Significance Threshold Methodology*, Revised July 2008. (Available at <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds>, accessed October 2022.)

<sup>6</sup> <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds>

<sup>7</sup> <http://www.aqmd.gov/docs/default-source/ceqa/handbook/localized-significance-thresholds/caleemod-guidance.pdf?sfvrsn=2>

guidance and the Project's equipment list during grading (above), the Project will disturb approximately two acres per day during grading.<sup>8</sup>

The LST thresholds are estimated using the maximum daily disturbed area (in acres) and the distance of the Project to the nearest sensitive receptors (in meters). The closest sensitive receptors to the Project construction site are the existing residential properties to the northwest of the Project site along Alessandro Boulevard, approximately 908 feet (277 meters) away. The closest receptor distances on the LST look-up tables are 200 meters. Therefore, a receptor distance of 200 meters (656 feet) was used to ensure a conservative analysis. The results are summarized below.

**Table 5 – Unmitigated LST Results for Daily Construction Emissions**

Pollutant	Peak Daily Emissions (lb/day)			
	NO <sub>x</sub>	CO	PM-10	PM-2.5
<b>LST for 2-acres at 200 meters</b>	<b>379</b>	<b>5,136</b>	<b>75</b>	<b>23</b>
Demolition-2023	19.94	16.39	2.03	1.03
Grading-2023	37.49	<b>31.35</b>	<b>5.19</b>	<b>2.89</b>
Building Construction-2023	15.44	17.31	0.75	0.70
Building Construction-2024	<b>9.03</b>	11.70	0.47	0.43
Paving-2024	<b>9.03</b>	11.70	0.47	0.43
Architectural Coatings-2024	<b>1.88</b>	2.42	0.11	0.11
<b>Maximum<sup>1</sup></b>	<b>37.49</b>	<b>31.35</b>	<b>5.19</b>	<b>2.89</b>
<b>Exceeds Threshold?</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>

Note: <sup>1</sup> Maximum emissions are the greater of either demolition, grading, or building construction 2023 alone, or the sum of building construction 2024, paving and architectural coating since these activities overlap. Maximum emissions are shown in bold.

Emissions from construction of the Project will be below the LST established by SCAQMD for the Project.

### Long-Term Analysis

According to the LST methodology, LSTs only apply to the operational phase if a project includes stationary sources or attracts mobile sources that may spend long periods of time idling at the site, such as warehouse/transfer facilities. Therefore, because the proposed Project will operate as a warehouse and has the potential to attract mobile sources that can reasonably be assumed to idle at the site, a long-term LST analysis was prepared for this Project. Although the Project exceeds five acres, per SCAQMD, the LST lookup tables can be used as a screening tool to determine if dispersion modeling would be necessary. Therefore, the Project's on-site emissions from CalEEMod and LST Look-Up Tables for the 5-acre site were utilized as a screening-level analysis.

CalEEMod version 2020.4.0 was utilized to estimate the Project's total on-site emissions, which includes from trucks traveling on the Project site. An on-site distance of 0.27 miles was conservatively assumed to be traveled for each one of the Project's truck trips identified in the Scoping Agreement. The output is attached to this memo and summarized below. Idling emissions from trucks at loading docks is not available in CalEEMod; therefore, PM-10 and PM-2.5 idling emissions were calculated separately to account for 15-minutes of on-site idling per truck per day.<sup>9</sup> The results were added to the total PM-10 and PM-2.5 emissions from CalEEMod and presented in the table below. The closest sensitive receptors to the Project operations are the existing residential properties to the northwest of the Project site along

<sup>8</sup> <http://www.aqmd.gov/docs/default-source/ceqa/handbook/localized-significance-thresholds/caleemod-guidance.pdf?sfvrsn=2>

<sup>9</sup> Idling emission factors obtained from EMFAC2017; idling calculations attached herewith

Alessandro Boulevard, approximately 908 feet (277 meters) away. Therefore, a receptor distance of 200 meters (656 feet) was used to ensure a conservative analysis. The results are summarized below.

**Table 6 – Unmitigated LST Results for Daily Operational Emissions**

Pollutant	Peak Daily Emissions (lb/day)			
	NO <sub>x</sub>	CO	PM-10 <sup>1</sup>	PM-2.5 <sup>1</sup>
LST for 5-acre at 200 meters	488	6,860	23	8
On-Site Emissions	1.60	1.37	0.04	0.02
<b>Exceeds Threshold?</b>	<b>No</b>	<b>No</b>	<b>No</b>	<b>No</b>

Note: The greater of summer or winter emissions from CalEEMod is shown. Output attached herewith.

<sup>1</sup> CalEEMod output emissions added to idling emissions

Therefore, as indicated in the table above, Project-related long-term operational emissions will not exceed any SCAQMD operational LST.

### CO Hot Spots Analysis

A carbon monoxide (CO) “hot spot” is a localized concentration of CO that is above the state or federal 1-hour or 8-hour ambient air quality standards (AAQS). Localized high levels of CO are associated with traffic congestion and idling or slow-moving vehicles.

Based on the information presented below, a CO “hot spot” analysis is not needed to determine whether the addition of Project related traffic will contribute to an exceedance of either the state or federal AAQS for CO emissions in the Project area.

The analysis prepared for CO attainment in the South Coast Air Basin by the SCAQMD can be used to assist in evaluating the potential for CO exceedances in the South Coast Air Basin. CO attainment was thoroughly analyzed as part of the SCAQMD’s 2003 Air Quality Management Plan (2003 AQMP)<sup>10</sup> and the Revised 1992 Federal Attainment Plan for Carbon Monoxide (1992 CO Plan).<sup>11</sup> As discussed in the 1992 CO Plan, peak carbon monoxide concentrations in the South Coast Air Basin are due to unusual meteorological and topographical conditions, and not due to the impact of particular intersections (2003 AQMP Appendix V, p. V-4-32). Considering the region’s unique meteorological conditions and the increasingly stringent CO emissions standards, CO modeling was performed as part of the 1992 CO Plan and subsequent plan updates and air quality management plans.

In the 1992 CO Plan, a CO hot spot analysis was conducted for four busy intersections in Los Angeles at the peak morning and afternoon time periods. The intersections evaluated included: Long Beach Blvd. and Imperial Highway (Lynwood); Wilshire Blvd. and Veteran Ave. (Westwood); Sunset Blvd. and Highland Ave. (Hollywood); and La Cienega Blvd. and Century Blvd. (Inglewood). These analyses did not predict a violation of CO standards. The busiest intersection evaluated in the 1992 CO Plan and subsequent 2003 AQMP was that at Wilshire Blvd. and Veteran Ave., which has a daily traffic volume of approximately 100,000 vehicles per day (2003 AQMP Appendix V, Table 4-7). The Los Angeles County Metropolitan Transportation Authority (MTA)<sup>12</sup> evaluated the LOS in the vicinity of the Wilshire Blvd./Veteran Ave. intersection and found it to be level E at peak morning traffic and Level F at peak afternoon traffic (MTA, Exhibit 2-5 and 2-6). This hot spot analysis was conducted at intersections subject to extremes in vehicle volumes and vehicle congestion, and did not predict any violation of CO

<sup>10</sup> SCAQMD, 2003 Air Quality Management Plan, August 1, 2003. (Available at <http://www.aqmd.gov/home/air-quality/clean-air-plans/air-quality-mgt-plan/2003-aqmp>, accessed October 12, 2022.)

<sup>11</sup> SCAQMD, Revision to the 1992 Carbon Monoxide Attainment Plan, September 1994. (Available at SCAQMD.)

<sup>12</sup> Metropolitan Transportation Authority, 2004 Congestion Management Plan for Los Angeles County, Adopted July 22, 2004. (Available at [http://www.metro.net/images/cmp\\_2004.pdf](http://www.metro.net/images/cmp_2004.pdf), accessed October 12, 2022.)

standards. Considering that Project-related traffic would result in an increase of 283 daily trips on local roadways,<sup>13</sup> it can reasonably be concluded that Project-related traffic would not have daily traffic volumes exceeding those at the intersections modeled in the 2003 AQMP, nor would there be any reason unique to the meteorology to conclude that intersections affected by the Project would yield higher CO concentrations if modeled in detail. Thus, the Project would not result in CO hot spots.

## ▪ **Greenhouse Gas Analysis**

Greenhouse gases (GHG) are not presented in lbs/day like criteria pollutants; they are typically evaluated on an annual basis using the metric system. Additionally, unlike the criteria pollutants, GHG do not have adopted significance thresholds associated with them at this time. Several agencies, at various levels, have proposed draft GHG significance thresholds for use in CEQA documents. SCAQMD has been working on GHG thresholds for development projects. The most recent draft proposal was in September 2010<sup>14</sup> and included significance thresholds for residential, commercial, and mixed-use projects at 3,500, 1,400, and 3,000 metric tonnes per year of carbon dioxide equivalents (MTCO<sub>2</sub>E/yr), respectively. Alternatively, a lead agency has the option to use 3,000 MTCO<sub>2</sub>E/yr as a threshold for all non-industrial projects. Although both options are recommended by SCAQMD, a lead agency is advised to use only one option and to use it consistently. In December 2008, the SCAQMD adopted a threshold of 10,000 MTCO<sub>2</sub>E/yr for stationary source projects where SCAQMD is the lead agency. The SCAQMD significance thresholds also evaluate construction emissions by amortizing them over an expected project life of 30 years. More recently, the City of Moreno Valley adopted a Climate Action Plan.

### **City of Moreno Valley Climate Action Plan**

As stated above, the City of Moreno Valley adopted the *City of Moreno Valley Climate Action Plan* (CAP) and General Plan 2040 on June 15, 2021.<sup>15</sup> The CAP was designed to reinforce the City's commitment to reducing GHG emissions and to show how the City is going to comply with the State of California's GHG emission reduction standards. The CAP identifies a comprehensive set of goals and specific measures and actions that the City of Moreno Valley will take in order to meet its GHG emissions target. The measures in the CAP are in addition to the General Plan 2040 policies. In implementing these measures, the City would ensure that implementation of projects consistent with the General Plan would not require additional GHG analysis in accordance with CEQA (CAP, p. 3-8).

As specifically stated on pages 1-15 to 1-16 of the CAP:

The City's approach to addressing GHG emissions within the General Plan is parallel to the climate change planning process followed by numerous California jurisdictions. A General Plan is a project under CEQA, and projects under CEQA are required to estimate CO<sub>2</sub> and other GHG emissions, as described above. The CAP is designed to provide discrete actions to operationalize the General Plan policies that help with GHG reduction. The preparation of a CAP is also consistent with CEQA Guidelines Section 15183.5 that allows jurisdictions to analyze and mitigate the significant effects of GHG at a programmatic level, by adopting a plan to reduce GHG emissions.

Project-specific environmental documents prepared for projects consistent with the General Plan may rely on the programmatic analysis contained in the CAP and the EIR certified for the Moreno Valley General Plan.

---

<sup>13</sup> Albert A. Webb Associates, *Scoping Agreement for Traffic Study PEN22-0144*, September 2022.

<sup>14</sup> [http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-\(ghg\)-ceqa-significance-thresholds/year-2008-2009/ghg-meeting-15/ghg-meeting-15-main-presentation.pdf?sfvrsn=2](http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/year-2008-2009/ghg-meeting-15/ghg-meeting-15-main-presentation.pdf?sfvrsn=2)

<sup>15</sup> City of Moreno Valley. *City of Moreno Valley Climate Action Plan*, Adopted June 15, 2021. (Available at: [https://moval.gov/city\\_hall/general-plan2040/MV-CAP.pdf](https://moval.gov/city_hall/general-plan2040/MV-CAP.pdf), accessed on October 12, 2022.)

And as further stated on page 5-1 of the CAP:

For discretionary projects seeking to use CEQA streamlining provisions, in an environmental document the City shall refer to the required measures in this CAP as mandatory conditions of approval or as mitigation. This will enable projects to benefit from CEQA streamlining provisions, while ensuring that the City can achieve the reduction targets outlined in this plan.

The Project site is designated as industrial in the General Plan. Warehouses, such as those proposed by the Project, are permitted under the Industrial designation. Therefore, the Project is consistent with the General Plan. As such, the Project will be required to implement the applicable measures in the CAP as mandatory conditions of approval and implementation of the Project would not require additional GHG analysis in accordance with CEQA. Nonetheless, the analysis herein discloses the GHG emissions estimates from the proposed Project.

## Short-Term Analysis

### Construction-Related Emissions

The CalEEMod model calculates GHG emissions from fuel usage by construction equipment and construction-related activities, like construction worker trips, for the Project. The CalEEMod estimate does not analyze emissions from construction-related electricity or natural gas. Construction-related electricity and natural gas emissions vary based on the amount of electric power used during construction and other unknown factors which make them too speculative to quantify. The CalEEMod output results for construction-related GHG emissions present the GHG emissions estimates for the Project for CO<sub>2</sub>, methane (CH<sub>4</sub>), nitrous oxide (N<sub>2</sub>O), and CO<sub>2</sub>E.<sup>16</sup>

**Table 7 – Project Construction Equipment GHG Emissions**

Year	Metric Tons per year (MT/yr)			
	Total CO <sub>2</sub>	Total CH <sub>4</sub>	Total N <sub>2</sub> O	Total CO <sub>2</sub> E
2023	394.53	0.06	0.02	400.85
2024	201.00	0.03	0.01	203.89
<b>Total</b>	<b>595.53</b>	<b>0.09</b>	<b>0.02</b>	<b>604.74</b>
			<b>Amortized</b>	<b>20.16</b>

Evaluation of the table above indicates that an estimated 604.74 MTCO<sub>2</sub>E will occur from Project construction equipment over the course of the estimated construction period. The draft SCAQMD GHG threshold Guidance document released in October 2008<sup>17</sup> recommends that construction emissions be amortized for a project lifetime of 30 years to ensure that GHG reduction measures address construction GHG emissions as part of the operational reduction strategies. Therefore, the total GHG emissions from Project construction were amortized and are included in **Table 9**, below.

## Long-Term Analysis

### Area Source Emissions

CalEEMod estimates the GHG emissions associated with area sources which include landscape equipment emissions, architectural coating, consumer products, and hearths. Landscape equipment servicing the Project site create CO<sub>2</sub> resulting from fuel combustion based on the Project's land uses. Consumer products consist of consumer use of solvents and personal care products and architectural coatings consist of an average building square footage to be repainted each year. **Table 9** summarizes the Project's area source emissions.

<sup>16</sup> CO<sub>2</sub>E is the sum of CO<sub>2</sub> emissions estimated plus the sum of CH<sub>4</sub> and N<sub>2</sub>O emissions estimated multiplied by their respective global warming potential (GWP).

<sup>17</sup> [http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-\(ghg\)-ceqa-significance-thresholds/year-2008-2009/ghg-meeting-6/ghg-meeting-6-guidance-document-discussion.pdf?sfvrsn=2](http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/year-2008-2009/ghg-meeting-6/ghg-meeting-6-guidance-document-discussion.pdf?sfvrsn=2)

## Energy-Related Emissions

CalEEMod estimates the GHG emissions associated with building electricity and natural gas usage (non-hearth) for each land use type. Electricity and natural gas used in buildings is typically generated at an off-site power plant which indirectly generates GHG emissions. The default energy usage values used in CalEEMod are based on the CEC sponsored California Commercial End Use Survey and Residential Appliance Saturation Survey studies and reflect 2019 Title 24 improvements (CalEEMod User's Guide, Appendix A). The energy used for parking lot lighting, the parking lot lighting energy intensity rate was conservatively applied to Project site's concrete parking lot and landscaped areas and off-site improvement areas.

The GHG emissions from electricity usage from the future electric vehicle (EV) charging stations serving the Project site's designated nine (9) EV charging spaces were estimated outside CalEEMod. Emissions were estimated using data from SCAQMD for EV charging station usage and the CalEEMod default Southern California Edison (SCE) carbon intensity data. It was assumed that each designated EV charging space would contain one charger and, based on SCAQMD data, that each charger would be a 50-kilowatt (kW) charger used approximately 10 hours per day or five separate two-hour charging events.<sup>18</sup> Based on these assumptions, each EV charger would use approximately 450 kilowatt-hours (kWh) of electricity per day. The following table summarizes the GHG emissions estimates reported by CalEEMod for the Project based on the assumptions described above.

**Table 8 – Energy-Related GHG Emissions**

Source	Metric Tons per year (MT/yr)			
	CO <sub>2</sub>	CH <sub>4</sub>	N <sub>2</sub> O	Total CO <sub>2</sub> E
Electricity <sup>1</sup>	82.23	0.01	0.00	346.21
Natural Gas	17.69	0.00	0.00	17.80
<b>Total</b>	<b>99.92</b>	<b>0.01</b>	<b>0.00</b>	<b>364.01</b>

Note: Emissions reported as zero are rounded and not necessarily equal to zero.

1. Total MTCO<sub>2</sub>E emissions include building energy usage estimated in CalEEMod and the estimated EV charging station electricity usage calculated outside of CalEEMod and are attached herewith.

## Mobile Source Emissions

CalEEMod estimates the annual GHG emissions from Project-related vehicle usage based on trip generation data contained in defaults or in a project-specific traffic analyses. As stated above, the trip generation rate and fleet mix were adjusted based on the rates and ratios found in the Scoping Agreement for the Project. Trip length data was based on CalEEMod defaults for passenger cars and the distance of 40 miles for Project trucks was used based on SCAQMD's *Final Staff Report for proposed 2305 and Rule 316*. **Table 9** shows the mobile source emissions from the Project.

## Solid Waste Emissions

CalEEMod also calculates the GHG emissions associated with the disposal of solid waste into landfills based on default data contained within the model for waste disposal rates, composition, and the characteristics of landfills throughout the state. A large percentage of this waste will be diverted from landfills by a variety of means, such as reducing the amount of waste generated, recycling, and/or composting. The remainder of the waste not diverted will be disposed of at a landfill. This analysis assumes a solid waste diversion from the landfills consistent with the most recent data provided by the state, 37 percent.<sup>19</sup> The waste diversion rate was evaluated in the model by selecting the mitigation option for solid waste and **Table 9** shows the solid waste emissions from the Project utilizing this waste reduction rate.

(Available at <http://www.aqmd.gov/docs/default-source/agendas/governing-board/2021/2021-may-7-027.pdf?sfvrsn=10>, accessed October 12, 2022.)

<sup>19</sup> CalRecycle, *California's 2019 Per Capita Disposal Rate Estimate*, webpage. Available at: <https://www.calrecycle.ca.gov/lcentral/goalmeasure/disposalrate/mostrecent>, accessed October 12, 2022.

## Water-Related Energy Usage

Electricity is also indirectly used in water supply, treatment, and distribution, as well as wastewater treatment in Southern California and plays a large role in GHG production.

There are three processes necessary to supply potable water to urban users (i.e., residential, commercial, and industrial): (1) supply and conveyance of the water from the source; (2) treatment of the water to potable standards; and (3) distribution of the water to individual users. After use, the wastewater is treated and either reused as reclaimed/recycled water or returned to the environment. CalEEMod calculates the GHG emissions from these processes based on default emissions factors and water/wastewater generation rates for a project's location. Default values were used for electricity intensity factor associated with the supply and conveyance of water from its source which assumes that the water is being imported from Northern California. Total water demand was obtained from the Design Conditions Report,<sup>20</sup> using the average daily demand. Outdoor water demand was obtained from the Project's landscape architect.<sup>21</sup> The indoor water demand was calculated by subtracting the total water demand by the outdoor water demand. **Table 9** shows the GHG emissions from water-related energy usage for the Project.

## Total Project GHG Emissions

As shown on **Table 9 – Total Project-Related GHG Emissions**, using all the emissions quantified above, the total GHG emissions generated from the Project is approximately 1,923.41 MTCO<sub>2</sub>E/yr which includes construction-related emissions amortized over a typical project life of 30 years.

**Table 9 – Total Project-Related GHG Emissions**

Source	Metric Tons per year (MT/yr)			
	CO <sub>2</sub>	CH <sub>4</sub>	N <sub>2</sub> O	Total CO <sub>2</sub> E
Amortized Construction	--	--	--	20.16
Area	0.01	0.00	0.00	0.01
Energy	99.92	0.01	0.00	364.01
Mobile	1,436.31	0.04	0.16	1,484.74
Solid Waste	19.83	1.17	0.00	49.13
Water	3.96	0.04	0.00	5.36
<b>Total</b>	<b>1,560.03</b>	<b>1.26</b>	<b>0.16</b>	<b>1,923.41</b>

Note: Emissions reported as zero are rounded and not necessarily equal to zero.

As stated above, the Project is consistent with the General Plan and therefore may rely on the programmatic analysis contained in the CAP. With implementation of the applicable measures in the CAP as mandatory conditions of approval, the Project is consistent with the CAP and will not generate a substantial amount of GHG emissions.

## Conclusion

The conclusion of this analysis indicates that construction or operation of the proposed Project will not exceed criteria pollutant thresholds established by SCAQMD on a regional or localized level. No mitigation is required. In addition, the Project will not create a CO hot spot. The Project is also consistent with the CAP.

## First Industrial Warehouse at Day Street - Riverside-South Coast County, Winter

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied****First Industrial Warehouse at Day Street**

Riverside-South Coast County, Winter

**1.0 Project Characteristics****1.1 Land Usage**

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	164.97	1000sqft	3.71	164,968.00	0
Other Asphalt Surfaces	44.43	1000sqft	1.02	44,431.00	0
Other Non-Asphalt Surfaces	186.87	1000sqft	4.29	186,872.00	0

**1.2 Other Project Characteristics**

Urbanization	Urban	Wind Speed (m/s)	2.4	Precipitation Freq (Days)	28
Climate Zone	10			Operational Year	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	CH4 Intensity (lb/MWhr)	0.033	N2O Intensity (lb/MWhr)	0.004

**1.3 User Entered Comments & Non-Default Data**

Project Characteristics -

Land Use - Per Site Plan and offsite improvement area

Construction Phase - Per Applicant

Off-road Equipment - 8hr workday

Off-road Equipment - 8hr workday

Off-road Equipment - Per Applicant

Off-road Equipment - Per Applicant

Off-road Equipment - Per Applicant

Trips and VMT - Two (2) one-way vendor trips added to demolition, grading, and paving activities to account for water truck trips per Rule 403.

Demolition - 63,220 SF of existing building will be demolished.

## First Industrial Warehouse at Day Street - Riverside-South Coast County, Winter

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied**

Grading - 6,5000 of import. Per Plot Plan.

Architectural Coating - Per Rule 1113

Vehicle Trips - Trip Rates per Scoping Agreement; Truck Length 40 miles per SCAQMD.

Energy Use - Added 0.35 Lighting Energy Intensity to account for Parking lot Lighting

Water And Wastewater - Per Design Consideration Report

Construction Off-road Equipment Mitigation - Per Rule 403

Waste Mitigation - 2019 Statewide Average

Fleet Mix - Per Scoping Agreement

**1.2 Other Project Characteristics**

Urbanization	Urban	Wind Speed (m/s)	2.4	Precipitation Freq (Days)	28
Climate Zone	10			Operational Year	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	CH4 Intensity (lb/MWhr)	0.033	N2O Intensity (lb/MWhr)	0.004

**1.3 User Entered Comments & Non-Default Data**

Project Characteristics -

Land Use - Per Site Plan and offsite improvement area

Construction Phase - Per Applicant

Off-road Equipment - 8hr workday

Off-road Equipment - 8hr workday

Off-road Equipment - Per Applicant

Off-road Equipment - Per Applicant

Off-road Equipment - Per Applicant

Trips and VMT - Two (2) one-way vendor trips added to demolition, grading, and paving activities to account for water truck trips per Rule 403.

Demolition - 63,220 SF of existing building will be demolished.

## First Industrial Warehouse at Day Street - Riverside-South Coast County, Annual

**EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied**

Grading - 6,5000 of import. Per Plot Plan.

Architectural Coating - Per Rule 1113

Vehicle Trips - Trip Rates per Scoping Agreement; Truck Length 40 miles per SCAQMD.

Energy Use - Added 0.35 Lighting Energy Intensity to account for Parking lot Lighting

Water And Wastewater - Per Design Consideration Report

Construction Off-road Equipment Mitigation - Per Rule 403

Waste Mitigation - 2019 Statewide Average

Fleet Mix - Per Scoping Agreement

## 1.0 Project Characteristics

---

### 1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Unrefrigerated Warehouse-No Rail	164.97	1000sqft	3.71	164,968.00	0
Other Asphalt Surfaces	44.43	1000sqft	1.02	44,431.00	0
Other Non-Asphalt Surfaces	186.87	1000sqft	4.29	186,872.00	0

### 1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.4	Precipitation Freq (Days)	28
Climate Zone	10			Operational Year	2024
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	390.98	CH4 Intensity (lb/MWhr)	0.033	N2O Intensity (lb/MWhr)	0.004

### 1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Per Site Plan and offsite improvement area

Construction Phase - Construction not Modeled.

Off-road Equipment - 8hr workday

Off-road Equipment - Construction not modeled.

Trips and VMT -

Demolition -

Grading -

Architectural Coating -

Vehicle Trips - Trip Rates per Scoping Agreement. Model onsite truck travel.

### EV Charging Station Electricity Consumption

EV Charging Station	KWh per Day*	Future Charging Stations	Annual Project Total KWh	Annual Project Total MWh
Proposed Charging Stalls	450	9	1,478,250	1,478.25
Total			1,478,250	1,478.25

\* Per SCAQMD assuming a 50 kW charger. *Final Staff Report for Proposed Rule 2305 and Proposed Rule 316*, May 2021

### EV Charging Station GHG Emissions per Year

SCE 2021 Intensity Factors	(lbs/MWh)	Annual Project GHG (lbs/yr)	Annual Project GHG (MT/yr)
CO <sub>2</sub> E	393	580,952.25	
Total			263.52
