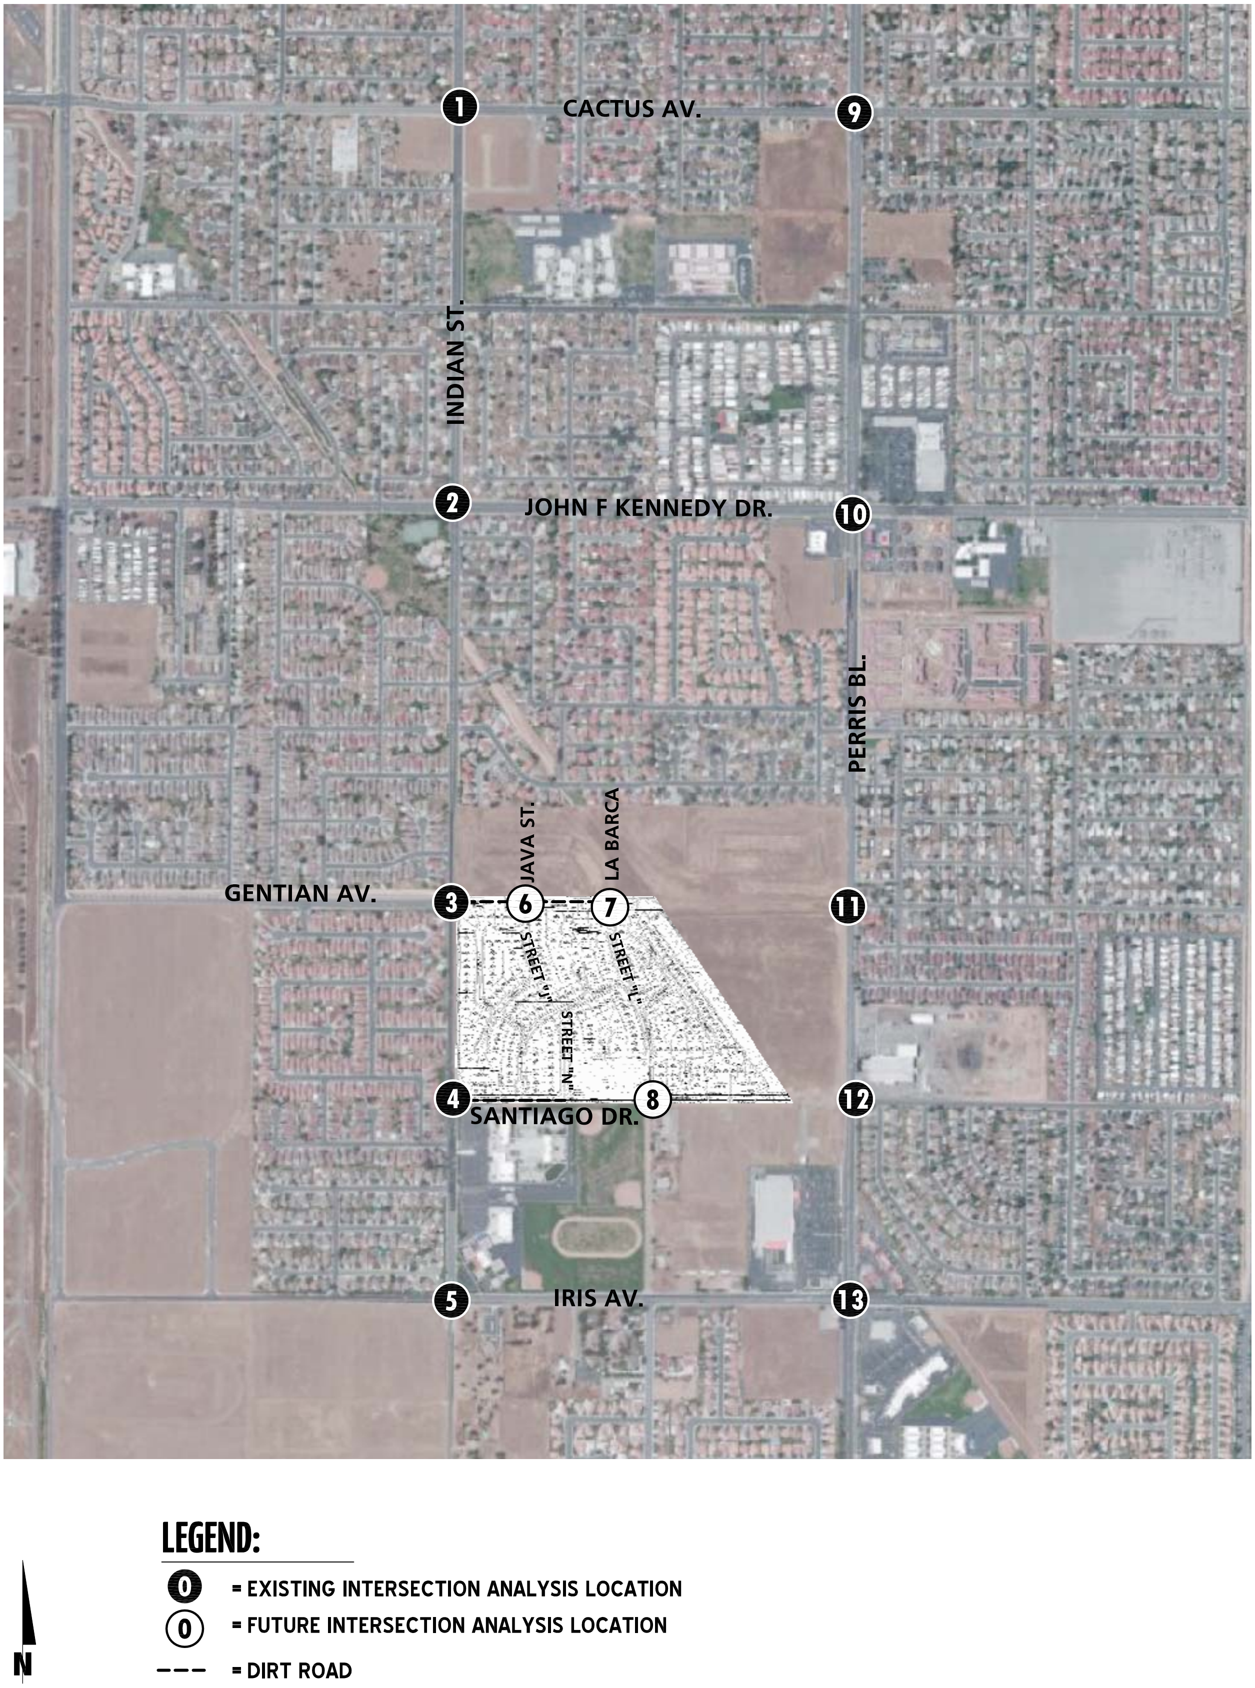
The intent of a Congestion Management Program (CMP) is to more directly link land use, transportation, and air quality, thereby prompting reasonable growth management programs that will effectively utilize new transportation funds, alleviate traffic congestion and related impacts, and improve air quality. Counties within California have developed CMPs with varying methods and strategies to meet the intent of the CMP legislation. The County of Riverside CMP became effective with the passage of Proposition 111 in 1990 and updated most recently in 2011. The Riverside County Transportation Commission (RCTC) adopted the 2011 CMP for the County of Riverside in December 2011. (5) There are no study area intersections identified as CMP facilities.

[1] The "50 or more peak hour trips" intersection analytic protocol stipulated in the City Traffic Study Guidelines is consistent with standard industry practice. It is noted further that the 50 peak hour trip threshold is employed by other agencies throughout southern California including Caltrans, County of Riverside, County of San Bernardino, and the County of Orange.

EXHIBIT 1-2: LOCATION MAP



1.3.2 Roadway Segments

The roadway segment study area utilized for this analysis is based on a review of the key roadway segments in which the Project is anticipated to contribute 50 or more peak hour trips. The study area identifies a total of 10 existing/future roadway segments. The roadway segments include the segments on either side of the study area intersections and are listed in Table 1-2 and are identified on Exhibit 1-2.

TABLE 1-2: ROADWAY SEGMENT ANALYSIS LOCATIONS

ID	Street	Segment	Jurisdiction
1	Indian Street	Cactus Av. to John F. Kennedy Dr.	Moreno Valley
2		John F. Kennedy Dr. to Gentian Av.	Moreno Valley
3		Santiago Dr. to Iris Av.	Moreno Valley
4	Gentian Avenue	Indian St. to Street J/Java St.	Moreno Valley
5		Street J/Java St. to Street L/La Barca	Moreno Valley
6		West of Perris Bl.	Moreno Valley
7	Santiago Drive	East of Indian St.	Moreno Valley
8		West of Perris Bl.	Moreno Valley
9	Perris Boulevard	Cactus Av. to John F. Kennedy Dr.	Moreno Valley
10		John F. Kennedy Dr. to Gentian Av.	Moreno Valley

1.4 Summary of Intersection Analysis

1.4.1 Intersections

A summary of the operationally deficient study area intersections and recommended improvements required to achieve acceptable circulation system operational conditions are described in detail within Section 3.0 *Existing Conditions*, Section 5.0 *E+P Traffic Conditions*, and Section 6.0 *Opening Year Cumulative (2021) Traffic Conditions* of this report. The peak hour intersection LOS are summarized on Table 1-3 for each of the analysis scenarios.

1.4.2 Roadway Segments

A summary of the operationally deficient study area roadway segments and recommended improvements required to achieve acceptable circulation system operational conditions are described in detail within Section 3.0 *Existing Conditions*, Section 5.0 *E+P Traffic Conditions*, and Section 6.0 *Opening Year Cumulative (2021) Traffic Conditions* of this report. The roadway segment LOS are summarized on Table 1-4 for each of the analysis scenarios.

1.5 Local and Regional Funding Mechanisms

Transportation improvements throughout the City of Moreno Valley are funded through a combination of project mitigation, fair share contributions or development impact fee programs, such as Transportation Uniform Mitigation Fee (TUMF) program or the City's Development Impact Fee (DIF) program.

Table 1-3

Summary of Intersection Operations by Analysis Scenario

#	Intersection	Traffic Control [1]	Existing (2016)				E+P				2021 NP				2021 WP

[2] LOS = Level of Service

1.5.1 TRANSPORTATION UNIFORM MITIGATION FEE (TUMF) PROGRAM

The Western Riverside Council of Governments (WRCOG) is responsible for establishing and updating TUMF rates. The County may grant to developers a credit against the specific components of fees for the dedication of land or the construction of facilities identified in the list of improvements funded by each of these fee programs. Fees are based upon projected land uses and a related transportation need to address growth based upon a 2009 Nexus study.

TUMF is an ambitious regional program created to address cumulative impacts of growth throughout western Riverside County. Program guidelines are being handled on an iterative basis. Exemptions, credits, reimbursements and local administration are being deferred to primary agencies. The County of Riverside serves this function for the proposed Project. Fees submitted to the County are passed on to the WRCOG as the ultimate program administrator.

TUMF guidelines empower a local zone committee to prioritize and arbitrate certain projects. The Project is located in the Central Zone. The zone has developed a 5-year capital improvement program to prioritize public construction of certain roads. TUMF is focused on improvements necessitated by regional growth. The Perris Boulevard is a designated TUMF roadway/facility within the Project's traffic study area.

1.5.2 CITY OF MORENO VALLEY DEVELOPMENT IMPACT FEE (DIF) PROGRAM

The City of Moreno Valley has created its own local Development Impact Fee (DIF) program to impose and collect fees from new residential, commercial and industrial development for the purpose of funding roadways and intersections necessary to accommodate City growth as identified in the City's General Plan Circulation Element. The City's DIF program includes facilities that are not part of, or which may exceed improvements identified and covered by the TUMF program. As a result, the pairing of the regional and local fee programs provides a more comprehensive funding and implementation plan to ensure an adequate and interconnected transportation system. Under the City's DIF program, the City may grant to developers a credit against specific components of fees when those developers construct certain facilities and landscaped medians identified in the list of improvements funded by the DIF program.

The timing to use the DIF fees is established through periodic capital improvement programs which are overseen by the City's Public Works Department. Periodic traffic counts, review of traffic accidents, and a review of traffic trends throughout the City are also periodically performed by City staff and consultants. The City uses this data to determine the timing of implementing the improvements listed in its facilities list.

The Project Applicant would pay requisite DIF pursuant to incumbent City ordinance requirements. Payment of requisite DIF would satisfy the Applicant's mitigation responsibilities for potentially significant impacts affecting DIF-funded facilities.

1.5.3 FAIR SHARE FEES

The Project Applicant's mitigation responsibilities may also be may be fulfilled through payment of fair-share fees. Fair share fees would be paid in instances where required traffic facilities are not otherwise funded by TUMF and/or DIF programs noted above.

1.6 PROJECT IMPACTS AND MITIGATION MEASURES

Based on the assessment of E+P traffic conditions, the intersection of Perris Boulevard and Santiago Drive is anticipated to be cumulatively impacted by the Project. Section 5 *E+P Traffic Analysis* includes the detailed analysis results.

1.7 CUMULATIVE IMPACTS AND MITIGATION MEASURES

This section provides a summary of recommended improvements and associated fee assessments necessary to address the Project's contributions to study area cumulative traffic impacts.

Table 1-5 lists the recommended improvements necessary to reduce the identified intersection LOS deficiencies, by analysis scenario. Street and intersection improvements that may be funded though the TUMF and/or DIF programs are noted. If a particular facility tentatively listed in Table 1-5 is ultimately excluded from the TUMF and/or DIF programs, the Project would be responsible for, and would be required to pay, fair share fees for improvement of affected facilities. These fees are collected as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected vehicle trip increases. Alternatively, minor fair share responsibilities may be waived when collection is infeasible or where other mitigation assignments substantially exceed the Project's demonstrated impacts.

Improvements included in a defined program and constructed by development may be eligible for a fee credit or reimbursement through the program where appropriate. Tables 1-5 also summarizes the applicable fair share percentage associated with each of the recommended improvements. Detailed fair share calculations, for each peak hour, has been provided on Table 1-6 for the applicable deficient intersections shown previously on Table 1-5.

Mitigation Measure 1.1 – Prior to the issuance of building permits, the Project applicant shall participate in the City's DIF and County TUMF fee programs by paying the requisite fees at the time of building permit, and in addition pay the Project's fair share amount of $35,361 for the improvements identified in Table 1-5 that are consistent with the improvements shown on Table 6-3, or as otherwise agreed to by the City and Project Applicant. Project fair share payment shall only be collected if the City creates a fee program that includes the improvements the fair share contribution is intended to construct.

Table 1-5

Summary of Improvements by Analysis Scenario

#	Intersection Location	Jurisdiction	Recommended Improvements[1]				Improvements in DIF, TUMF, etc.[1]	Total Cost[2]	Fair Share %[3]	Fair Share Cost[3]
			Existing (2016)	E+P	2021 Without Project	2021 With Project				
1	Indian St / Cactus Av	Moreno Valley	None	None	None	EB right turn lane	No	$90,390	13.9%	$12,586
							TOTAL	**$90,390**		**$0**
3	Indian St / Gentian Av	Moreno Valley	None	None	None	NB left turn lane	No	$90,390	34.2%	$30,911
						2nd NB through lane[4]	No	$0		$0
						SB left turn lane[4]	No	$0		$0
						2nd SB through lane[4]	No	$0		$0
						WB shared left-through-right turn lane[4]	No	$0		$0
							TOTAL	**$90,390**		**$30,911**
12	Perris Bl / Santiago Dr	Moreno Valley	Traffic Signal	Same	Same	Same	Yes[5]	$0	4.9%	$0
					EB left turn lane	Same	No	$90,390		$4,450
							TOTAL	**$90,390**		**$4,450**
	Total Project Fair Share Contribution to the City of Moreno Valley (non-DIF/TUMF)[6]							**$271,170**		**$35,361**

[1] Improvements included in TUMF Nexus or City of Moreno Valley DIF programs.

[2] Costs have been estimated using the data provided in Appendix G of the San Bernardino County CMP (2003 Update) for preliminary construction costs. Appendix G costs escalated by a factor of 1.8078 to reflect 2021 conditions, except for T

[3] Program improvements constructed by project may be eligible for fee credit. In lieu fee payment is at discretion of City. Represents the fair share percentage for the Project during the most impacted peak hour.

[4] Improvements to be constructed by the Project as part of site adjacent or site access improvements.

[5] Fair share percentage is not applicable as the recommended improvements at this location are included in a pre-existing fee program.

[6] Total project fair share contribution consists of the improvements which are not already included in the City-wide DIF/County TUMF for those intersections wholly or partially within the City of Moreno Valley.

Table 1-6

Project Fair Share Calculations

#	Intersection		Existing	Project	2021 With Project	Total New Traffic	Project Fair Share[1]
1	Indian St / Cactus Av						
		AM:	2,669	49	3,077	408	12.0%
		PM:	2,430	66	2,904	474	**13.9%**
3	Indian St / Gentian Av						
		AM:	779	48	939	160	30.0%
		PM:	821	66	1,014	193	**34.2%**
12	Perris Bl / Santiago Dr						
		AM:	1,677	32	2,327	650	**4.9%**
		PM:	1,997	44	3,236	1,239	3.6%

* Highest fair share percentage represented in **BOLD** and shown on Table 1-5.

[1] Fair share based on net new traffic which is calculated from Opening Year Cumulative (2021) with Project traffic volumes less Existing (2016) traffic volumes.

1.8 SITE ADJACENT ROADWAY AND SITE ACCESS IMPROVEMENTS

This section summarizes Project site access and on-site circulation recommendations. The Project is proposed to have access on Gentian Avenue via Street J and Street L and Santiago Drive via Street N and Street L. All driveways are assumed to allow full-access, with the exception of the intersections on Santiago Drive, which are both knuckles. Regional access to the project site is provided via the I-215 Freeway at Cactus Avenue interchange.

Roadway improvements necessary to provide site access and on-site circulation are assumed to be constructed in conjunction with site development and are described below. These improvements are required to be in place prior to occupancy. Exhibit 1-3 illustrates the site-adjacent roadway improvement recommendations and site access improvements. Construction of on-site and site adjacent improvements are recommended to occur in conjunction with adjacent Project development activity or as needed for Project access purposes.

1.8.1 SITE ADJACENT ROADWAY IMPROVEMENTS

The recommended site-adjacent roadway improvements for the Project are described below. These improvements need to be incorporated into the project description prior to Project approval or imposed as conditions of approval as part of the Project approval. Exhibit 1-3 illustrates the site-adjacent roadway improvement recommendations.

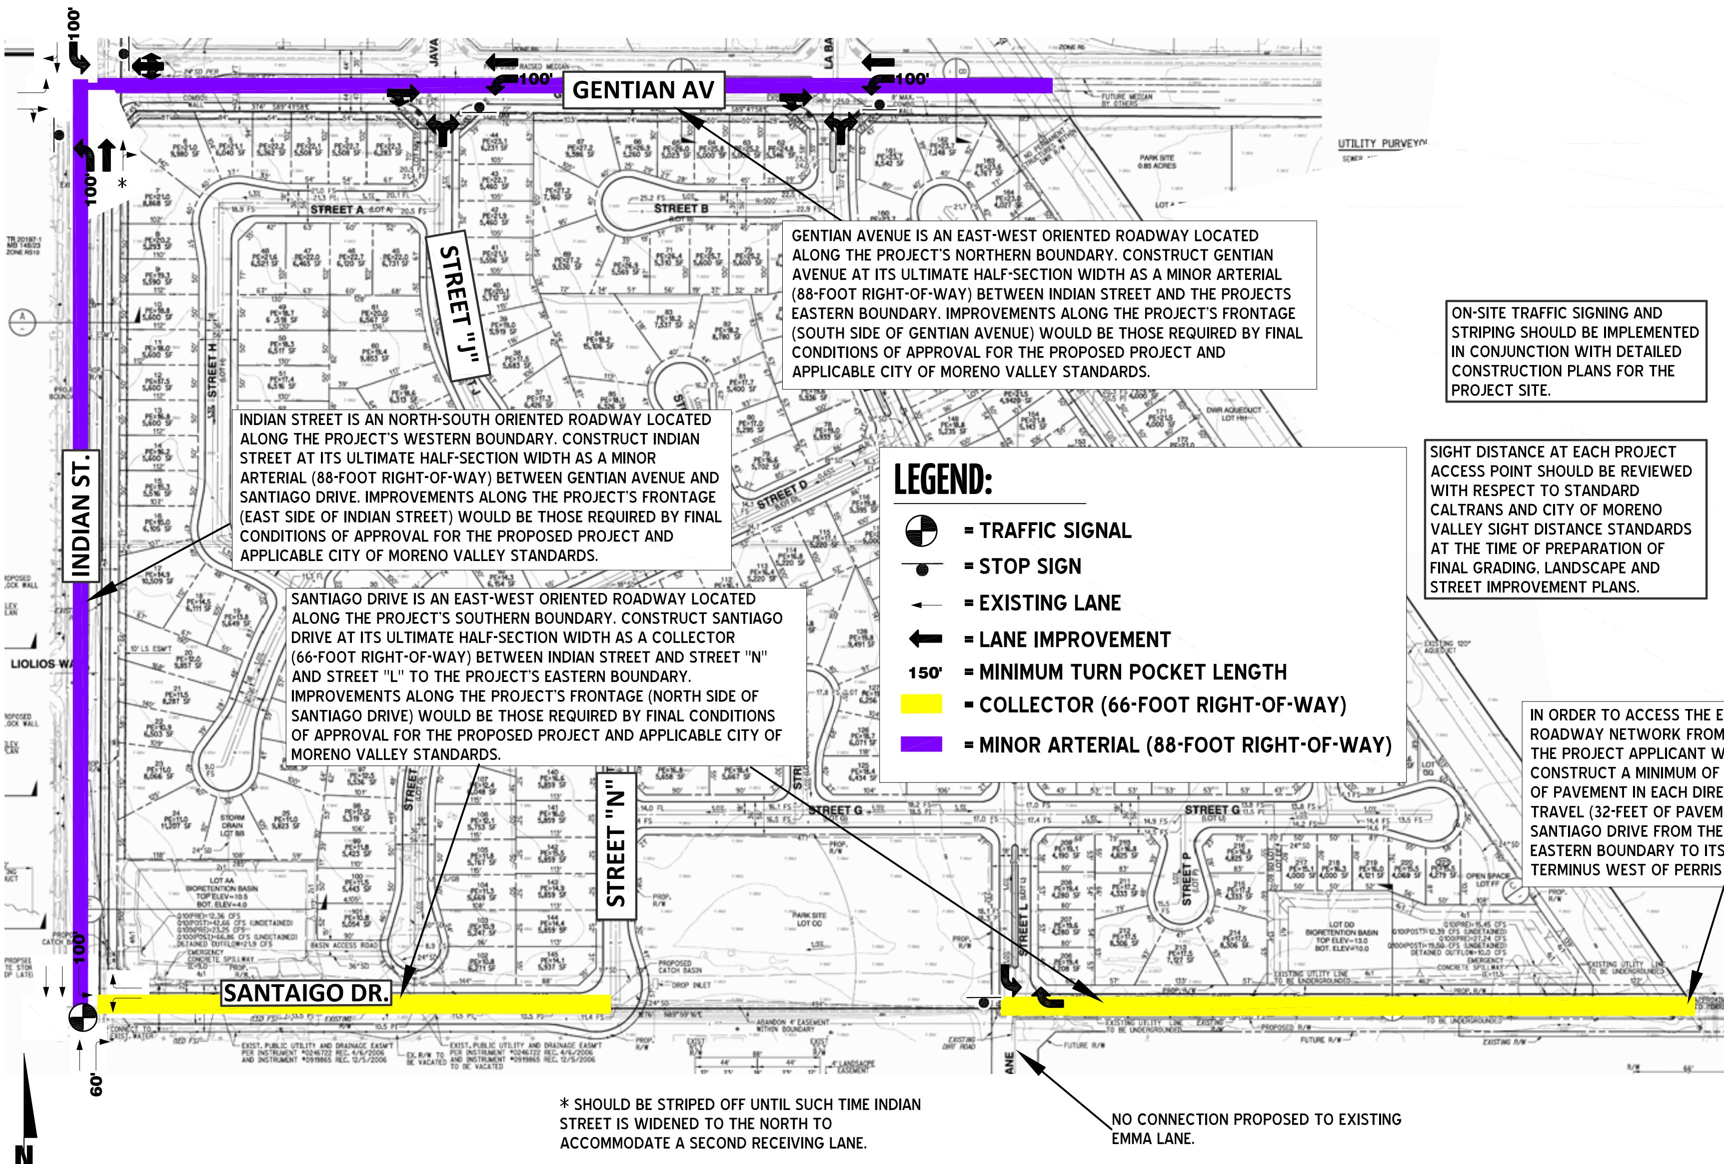
Gentian Avenue – Gentian Avenue is an east-west oriented roadway located along the Project's northern boundary. Construct Gentian Avenue at its ultimate half-section width as a minor arterial (88-foot right-of-way) between Indian Street and the Project's eastern boundary. Improvements along the Project's frontage (south side of Gentian Avenue) would be those required by final conditions of approval for the proposed Project and applicable City of Moreno Valley standards.

Indian Street – Indian Street is a north-south oriented roadway located along the Project's western boundary. Construct Indian Street at its ultimate half-section width as a minor arterial (88-foot right-of-way) between Gentian Avenue and Santiago Drive. Improvements along the Project's frontage (east side of Indian Street) would be those required by final conditions of approval for the proposed Project and applicable City of Moreno Valley standards.

Santiago Drive – Santiago Drive is an east-west oriented roadway located along the Project's southern boundary. Construct Santiago Drive at its ultimate half-section width as a collector (66-foot right-of-way) between Indian Street and Street N and Street L to the Project's eastern boundary. Improvements along the Project's frontage (north side of Santiago Drive) would be those required by final conditions of approval for the proposed Project and applicable City of Moreno Valley standards.

In order to access the existing roadway network from the site, the Project Applicant will also construct a minimum of one lane of pavement in each direction of travel (32-feet of pavement) along Santiago Drive from the Project's eastern boundary to its existing terminus west of Perris Boulevard.

Exhibit 1-3: Site Access and Site Adjacent Roadway Recommendations



09188 - recs2.dwg

URBAN CROSSROADS

1.8.2 SITE ACCESS IMPROVEMENTS

The recommended site access driveway improvements for the Project are described below. Exhibit 1-3 illustrates the on-site and site adjacent recommended intersection lane improvements. Construction of on-site and site adjacent improvements are recommended to occur in conjunction with adjacent Project development activity or as needed for Project access purposes.

The following intersection recommendations represent the minimum lanes that must be provided to achieve acceptable peak hour operations. As there is not anticipated to be sufficient receiving lanes beyond the Project, a minimum of one lane should be provided in each direction of travel until such time that the adjacent roadways are also widened to their ultimate General Plan roadway classification. However, the site adjacent roadways will be improved consistent with Section 1.8.1 *Site Adjacent Roadway Improvements* of this report.

Indian Street & Gentian Avenue (#3) – Install a stop control on the westbound approach and construct the intersection with the following geometrics:

Northbound Approach: One left turn lane with a minimum of 100-feet of storage, one through lane, and one shared through right turn lane. The second northbound through lane should not be striped until such time Indian Street is widened to the north to accommodate a second receiving lane.

Southbound Approach: One left turn lane with a minimum of 100-feet of storage and one shared through-right turn lane.

Eastbound Approach: One left turn lane and restripe the right turn lane as a shared through-right turn lane.

Westbound Approach: One shared left-through-right turn lane.

Indian Street & Santiago Drive (#4) – Maintain the existing traffic signal control and the following existing geometrics:

Northbound Approach: One through lane and one right turn lane with 60-feet of storage.

Southbound Approach: One left turn lane with 100-feet of storage and two through lanes.

Eastbound Approach: Not Applicable (N/A)

Westbound Approach: One left turn lane and one right turn lane.

Street J & Gentian Avenue (#6) – Intersection is proposed to align with the future Java Street to the north. Install a stop control on the northbound approach and construct the intersection with the following geometrics:

Northbound Approach: One shared left-right turn lane.

Southbound Approach: N/A

Eastbound Approach: One shared through-right turn lane.

Westbound Approach: One left turn lane with a minimum of 100-feet of storage and one through lane.

Street L & Gentian Avenue (#7) – Intersection is proposed to align with the future La Barca to the north. Install a stop control on the northbound approach and construct the intersection with the following geometrics:

Northbound Approach: One shared left-right turn lane.

Southbound Approach: N/A

Eastbound Approach: One shared through-right turn lane.

Westbound Approach: One left turn lane with a minimum of 100-feet of storage and one through lane.

Street L & Santiago Drive (#8) – No connection is proposed from Street L to the existing Emma Lane. Install a stop control on the southbound approach and construct the intersection with the following geometrics:

Northbound Approach: N/A

Southbound Approach: One left turn lane.

Eastbound Approach: N/A

Westbound Approach: One right turn lane.

On-site traffic signing and striping should be implemented in conjunction with detailed construction plans for the Project site.

Sight distance at each project access point should be reviewed with respect to standard Caltrans and City of Moreno Valley sight distance standards at the time of preparation of final grading, landscape and street improvement plans.

1.9 QUEUING ANALYSIS AT THE PROJECT DRIVEWAYS

A queuing analysis was conducted along the site adjacent roadways of Gentian Avenue, Indian Street, and Santiago Drive for Opening Year Cumulative (2021) traffic conditions to determine the turn pocket lengths necessary to accommodate near term 95th percentile queues. The analysis was conducted for both the weekday AM and weekday PM peak hours.

The traffic modeling and signal timing optimization software package Synchro (Version 9) has been utilized to assess queues at the Project access points. Synchro is a macroscopic traffic software program that is based on the signalized and unsignalized intersection capacity analyses as specified in the HCM. SimTraffic is designed to model networks of signalized and unsignalized intersections, with the primary purpose of checking and fine tuning signal operations. SimTraffic uses the input parameters from Synchro to generate random simulations.

SimTraffic has been utilized to assess peak hour queuing at the site access driveways for Opening Year Cumulative With Project traffic conditions. The random simulations generated by SimTraffic have been utilized to determine the 95th percentile queue lengths observed for each turn lane. A SimTraffic simulation has been recorded 5 times, during the weekday AM and weekday PM peak hours, and has been seeded for 30-minute periods with 60-minute recording intervals.

A vehicle is considered queued whenever it is traveling at less than 10 feet/second. A vehicle will only become queued when it is either at the stop bar or behind another queued vehicle. Although only the 95th percentile queue has been utilized for purposes of determining the necessary turn pocket storage lengths, the 50th percentile queues are also reported. The 50th percentile queue is the maximum back of queue on a typical cycle during the peak hour, while the 95th percentile queue is the maximum back of queue with 95th percentile traffic volumes during the peak hour. In other words, if traffic were observed for 100 cycles, the 95th percentile queue would be the queue experienced with the 95th busiest cycle (or 5% of the time). The 50th percentile, or average, queue represents the typical queue length for peak hour traffic conditions, while the 95th percentile queue is derived from the average queue plus 1.65 standard deviations. The 95th percentile queue is not necessarily ever observed, it is simply based on statistical calculations. The average queue is the average of all the two-minute maximum queues observed by SimTraffic. The maximum back of queue observed for every two-minute period is recorded by SimTraffic. However, many jurisdictions utilize the 95th percentile queues for design purposes.

The storage length recommendations for the turning movements at the Project were shown previously on Exhibit 1-3 for Opening Year Cumulative traffic conditions. Queuing results are provided in Appendix 1.2.

2 METHODOLOGIES

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report. The methodologies described are generally consistent with City of Moreno Valley. (1)

2.1 LEVEL OF SERVICE

Traffic operations of roadway facilities are described using the term "Level of Service" (LOS). LOS is a qualitative description of traffic flow based on several factors such as speed, travel time, delay, and freedom to maneuver. Six levels are typically defined ranging from LOS A, representing completely free-flow conditions, to LOS F, representing breakdown in flow resulting in stop-and-go conditions. LOS E represents operations at or near capacity, an unstable level where vehicles are operating with the minimum spacing for maintaining uniform flow.

2.2 INTERSECTION CAPACITY ANALYSIS

The definitions of LOS for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The *Highway Capacity Manual* (HCM) methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. (6) The HCM uses different procedures depending on the type of intersection control.

2.2.1 SIGNALIZED INTERSECTIONS

City of Moreno Valley

The City of Moreno Valley requires signalized intersection operations analysis based on the methodology described in the HCM. (6) Intersection LOS operations are based on an intersection's average control delay. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. For signalized intersections, LOS is directly related to the average control delay per vehicle and is correlated to a LOS designation as described in Table 2-1. Study area intersections have been evaluated using the Synchro (Version 9) analysis software package.

Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the HCM. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length. The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

TABLE 2-1: SIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Operations with very low delay occurring with favorable progression and/or short cycle length.	0 to 10.00	A	F
Operations with low delay occurring with good progression and/or short cycle lengths.	10.01 to 20.00	B	F
Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.01 to 35.00	C	F
Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.01 to 55.00	D	F
Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.01 to 80.00	E	F
Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths	80.01 and up	F	F

Source: HCM

The peak hour traffic volumes have been adjusted using a peak hour factor (PHF) to reflect peak 15 minute volumes. Common practice for LOS analysis is to use a peak 15-minute rate of flow. However, flow rates are typically expressed in vehicles per hour. The PHF is the relationship between the peak 15-minute flow rate and the full hourly volume (e.g. PHF = [Hourly Volume] / [4 x Peak 15-minute Flow Rate]). The use of a 15-minute PHF produces a more detailed analysis as compared to analyzing vehicles per hour. Existing PHFs have been used for all analysis scenarios. Per the HCM, PHF values over 0.95 often are indicative of high traffic volumes with capacity constraints on peak hour flows, while lower PHF values are indicative of greater variability of flow during the peak hour. (6)

2.2.2 UNSIGNALIZED INTERSECTIONS

All unsignalized intersections in the study area are located within the City of Moreno Valley. The City of Moreno Valley requires the operations of unsignalized intersections be evaluated using the methodology described the HCM. (6) The LOS rating is based on the weighted average control delay expressed in seconds per vehicle (see Table 2-2).

TABLE 2-2: UNSIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay Per Vehicle (Seconds)	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Little or no delays.	0 to 10.00	A	F
Short traffic delays.	10.01 to 15.00	B	F
Average traffic delays.	15.01 to 25.00	C	F
Long traffic delays.	25.01 to 35.00	D	F
Very long traffic delays.	35.01 to 50.00	E	F
Extreme traffic delays with intersection capacity exceeded.	> 50.00	F	F

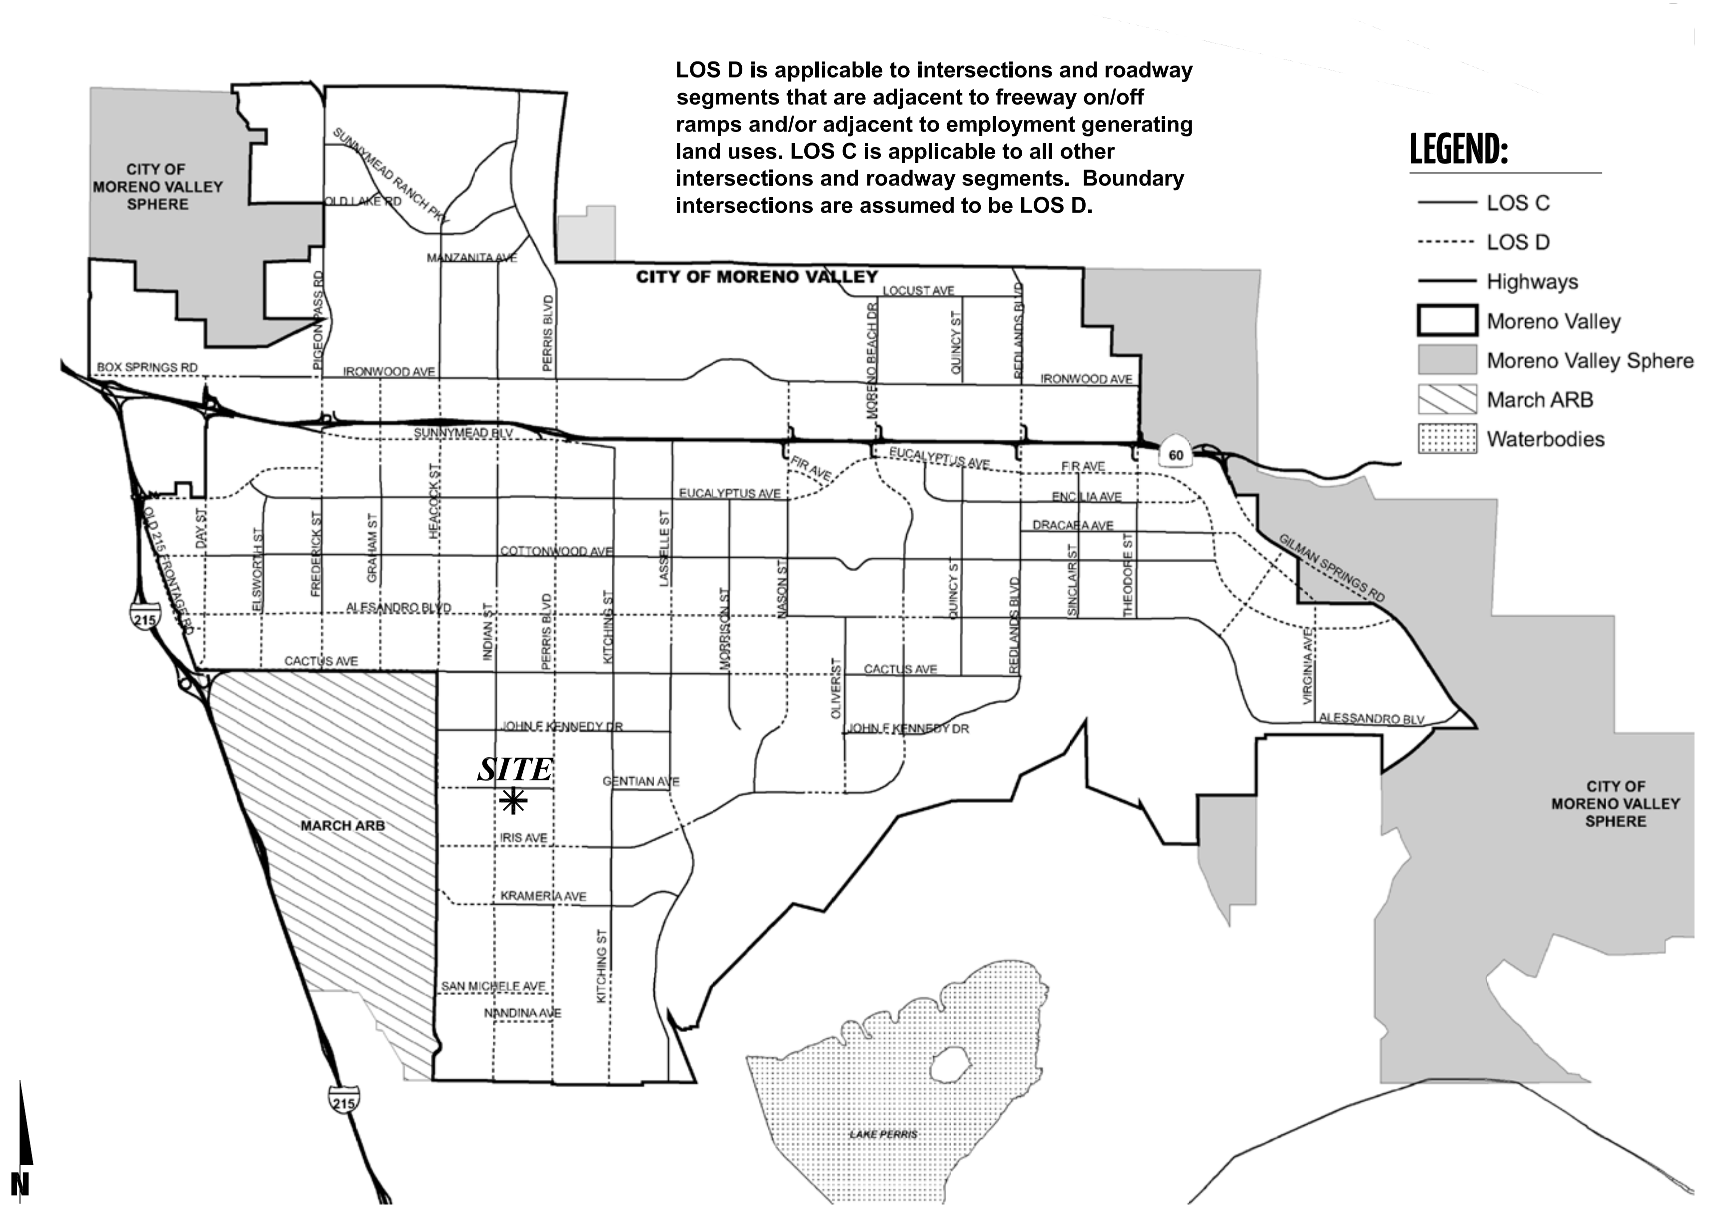
Source: HCM

At two-way or side-street stop-controlled intersections, LOS is calculated for each controlled movement and for the left turn movement from the major street, as well as for the intersection as a whole. For approaches composed of a single lane, the delay is computed as the average of all movements in that lane. For all-way stop controlled intersections, LOS is computed for the intersection as a whole.

2.3 ROADWAY SEGMENT CAPACITY ANALYSIS

Roadway segment operations have been evaluated using the City of Moreno Valley Daily Roadway Capacity Values provided in the *City of Moreno Valley Transportation Engineering Division Traffic Impact Analysis (TIA) Preparation Guide* (1). Per the City of Moreno Valley TIA guidelines, roadway segments within the study area should maintain the LOS capacities illustrated on Exhibit 2-1. The daily roadway segment capacities for each type of roadway are summarized in Table 2-3. These roadway capacities are "rule of thumb" estimates for planning purposes and are affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic), and pedestrian bicycle traffic. As such, where the average daily traffic (ADT) based roadway segment analysis indicates a deficiency (unacceptable LOS), a review of the more detailed peak hour intersection analysis and progression analysis are undertaken. The more detailed peak hour intersection analysis explicitly accounts for factors that affect roadway capacity. Therefore, roadway segment widening is typically only recommended if the peak hour intersection analysis indicates the need for additional through lanes.

EXHIBIT 2-1: CITY OF MORENO VALLEY LEVEL OF SERVICE (LOS) STANDARDS



09188 - mv-los.dwg

TABLE 2-3: ROADWAY SEGMENT CAPACITY LOS THRESHOLDS[1]

Facility Type	Level of Service Capacity[1]				
	A	B	C	D	E
Six Lane Divided Arterial	33,900	39,400	45,000	50,600	56,300
Four Lane Divided Arterial	22,500	26,300	30,000	33,800	37,500
Four Lane Undivided Arterial	15,000	17,500	20,000	22,500	25,000
Two Lane Industrial Collector	7,500	8,800	10,000	11,300	12,500
Two Lane Undivided Residential	N/A	N/A	N/A	N/A	2,000

[1] These maximum roadway capacities have been extracted from the City of Moreno Valley's Transportation Division's TIA Preparation Guidelines (August 2007). These roadway capacities are "rule of thumb" estimates for planning purposes. The LOS E service volumes are estimated maximum daily capacity for respective roadway classifications. Capacity is affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic) and pedestrian and bicycle traffic.

2.4 TRAFFIC SIGNAL WARRANT ANALYSIS METHODOLOGY

The term "signal warrants" refers to the list of established criteria used by the California Department of Transportation (Caltrans) and other public agencies to quantitatively justify or ascertain the potential need for installation of a traffic signal at an otherwise unsignalized intersection. This TIA uses the signal warrant criteria presented in the latest edition of the Federal Highway Administration’s (FHWA) *Manual on Uniform Traffic Control Devices (MUTCD)*, as amended by *the MUTCD 2014 California Supplement*, for all study area intersections. (7)

The signal warrant criteria for Existing study area intersections are based upon several factors, including volume of vehicular and pedestrian traffic, frequency of accidents, and location of school areas. Both the FHWA’s *MUTCD* and the *MUTCD 2014 California Supplement* indicate that the installation of a traffic signal should be considered if one or more of the signal warrants are met. (7) Specifically, this TIA utilizes the Peak Hour Volume-based Warrant 3 as the appropriate representative traffic signal warrant analysis for existing traffic conditions. Warrant 3 criteria are basically identical for both the FHWA’s *MUTCD* and the *MUTCD 2014 California Supplement*. Warrant 3 is appropriate to use for this TIA because it provides specialized warrant criteria for intersections with rural characteristics (e.g. located in communities with populations of less than 10,000 persons or with adjacent major streets operating above 40 miles per hour). For the purposes of this study, the speed limit was the basis for determining whether Urban or Rural warrants were used for a given intersection.

Future unsignalized intersections, that currently do not exist, have been assessed regarding the potential need for new traffic signals based on future average daily traffic (ADT) volumes, using the Caltrans planning level ADT-based signal warrant analysis worksheets.

Traffic signal warrant analyses were performed for the following unsignalized study area intersections during the peak weekday conditions wherein the Project is anticipated to contribute the highest trips:

- Indian Street / Gentian Avenue (#3)
- Street J / Gentian Avenue (#6)
- Street L / Gentian Avenue (#7)
- Street L / Santiago Drive (#8)
- Perris Boulevard / Santiago Drive (#12)

The Existing conditions traffic signal warrant analysis is presented in the subsequent section, Section 3 *Area Conditions* of this report. The traffic signal warrant analyses for future conditions are presented in Section 5 *E+P Traffic Analysis,* and Section 6 *Opening Year Cumulative (2021) Traffic Analysis* of this report.

It is important to note that a signal warrant defines the minimum condition under which the installation of a traffic signal might be warranted. Meeting this threshold condition does not require that a traffic control signal be installed at a particular location, but rather, that other traffic factors and conditions be evaluated in order to determine whether the signal is truly justified. It should also be noted that signal warrants do not necessarily correlate with LOS. An intersection may satisfy a signal warrant condition and operate at or above acceptable LOS or operate below acceptable LOS and not meet a signal warrant.

2.5 Minimum Level of Service (LOS)

The definition of an intersection deficiency has been obtained from each of the applicable surrounding jurisdictions.

2.5.1 City of Moreno Valley

The definition of an intersection deficiency in the City of Moreno Valley is based on the City of Moreno Valley General Plan Circulation Element. The City of Moreno Valley General Plan states that target LOS C or LOS D be maintained along City roads (including intersections) wherever possible. Exhibit 2-1 depicts the level of service standards within the City.

2.5.2 CMP

In an effort to more directly link land use, transportation and air quality and promote reasonable growth, the County of Riverside adopted a CMP (December 2011). The RCTC monitors the CMP roadway network system to minimize LOS deficiencies. Within the project study area, the I-215 Freeway is recognized as a key transportation facility within the CMP system. Although Caltrans utilizes LOS D as their stated threshold, RCTC has adopted LOS E as the minimum standard for intersections and segments along the CMP System of Highways and Roadways. There are no CMP intersections within the study area.

2.6 Project Fair Share Calculation Methodology

Improvements found to be included in the City of Moreno Valley's DIF program and WRCOG TUMF, will be identified as such. For improvements that do not appear to be in either of the pre-existing fee programs, a fair share financial contribution based on the Project's fair share impact may be imposed in order to mitigate the Project's share of impacts in lieu of construction.

If the intersection is currently operating at acceptable LOS under Existing traffic conditions, the Project's fair share cost of improvements would be determined based on the following equation, which is the ratio of Project traffic to <u>new</u> traffic, where new traffic is total future traffic less existing baseline traffic:

Project Fair Share % = Project Traffic / (2020 With Project Total Traffic – Existing Traffic)

This Page Intentionally Left Blank

3 AREA CONDITIONS

This section provides a summary of the existing circulation network, the City of Moreno Valley General Plan Circulation Network, and a review of existing peak hour intersection operations, roadway segment, and traffic signal warrant analyses.

3.1 EXISTING CIRCULATION NETWORK

Pursuant to the scoping agreement with City of Moreno Valley staff (Appendix 1.1), the study area includes a total of 13 existing and future intersections as shown previously on Exhibit 1-2 where the Project is anticipated to contribute 50 or more peak hour trips. Exhibit 3-1 illustrates the study area intersections located near the proposed Project and identifies the number of through traffic lanes for existing roadways and intersection traffic controls.

3.2 CITY OF MORENO VALLEY GENERAL PLAN CIRCULATION ELEMENT

As noted previously, the Project site is located within the City of Moreno Valley. The roadway classifications and planned (ultimate) roadway cross-sections of the major roadways within the study area, as identified on the City of Moreno Valley General Plan Circulation Element, are described subsequently. Exhibit 3-2 shows the City of Moreno Valley General Plan Circulation Element, and Exhibit 3-3 illustrates the City of Moreno Valley General Plan roadway cross-sections.

3.3 TRANSIT SERVICE

The study area is currently served by the Riverside Transit Authority (RTA), a public transit agency serving the unincorporated Riverside County region. As shown on Exhibit 3-4, RTA Route 19 is the only existing bus route that serves a roadway within the study area in close proximity to the proposed Project. RTA Route 19 serves Perris Boulevard throughout the study area. However, Route 11 and Route 20 could also potentially serve the Project if extended to run along Indian Street.

Transit service is reviewed and updated by RTA periodically to address ridership, budget, and community demands Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate.

3.4 BICYCLE & PEDESTRIAN FACILITIES

In an effort to promote alternative modes of transportation, the City of Moreno Valley also includes a trails and bikeway system. The City of Moreno Valley trails and bikeway system are shown on Exhibit 3-5 and Exhibit 3-6. The Juan Bautista de Anza (Aqueduct Trail) bike trail is adjacent to the eastern boundary of the Project and crosses Gentian Avenue. Indian Street and Gentian Avenue are both Class II bike routes.

Field observations conducted in April 2016 indicate nominal pedestrian and bicycle activity within the study area. Exhibit 3-7 illustrates the existing pedestrian facilities, including sidewalks and crosswalk locations.

3.5 EXISTING (2016) TRAFFIC COUNTS

The intersection LOS analysis is based on the traffic volumes observed during the peak hour conditions using traffic count data collected in April 2016. The following peak hours were selected for analysis:

- Weekday AM Peak Hour (peak hour between 7:00 AM and 9:00 AM)
- Weekday PM Peak Hour (peak hour between 4:00 PM and 6:00 PM)

The weekday AM and weekday PM peak hour count data is representative of typical weekday peak hour traffic conditions in the study area. There were no observations made in the field that would indicate atypical traffic conditions on the count dates, such as construction activity or detour routes and near-by schools were in session and operating on normal schedules.

The raw manual peak hour turning movement traffic count data sheets are included in Appendix 3.1. These raw turning volumes have been flow conserved between intersections with limited access, no access, and where there are currently no uses generating traffic (e.g., between ramp-to-arterial intersections, etc.).

Existing weekday average daily traffic (ADT) volumes on arterial highways throughout the study area are shown on Exhibit 3-8. The ADT volumes shown are based on 24-hour tube count data collected in April 2016. Existing weekday AM and weekday PM peak hour intersection volumes are also shown on Exhibit 3-8.

3.6 INTERSECTION OPERATIONS ANALYSIS

Existing peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2.2 *Intersection Capacity Analysis* of this report. The intersection operations analysis results are summarized in Table 3-1 which indicates that all of the study area intersections are currently operating at an acceptable LOS during the peak hours, with the exception of the following intersection:

- Perris Boulevard / Santiago Drive (#12)

Consistent with Table 3-1, a summary of the peak hour intersection LOS for Existing conditions are shown on Exhibit 3-9. The intersection operations analysis worksheets are included in Appendix 3.2 of this TIA.

EXHIBIT 3-8: EXISTING (2016) TRAFFIC VOLUMES

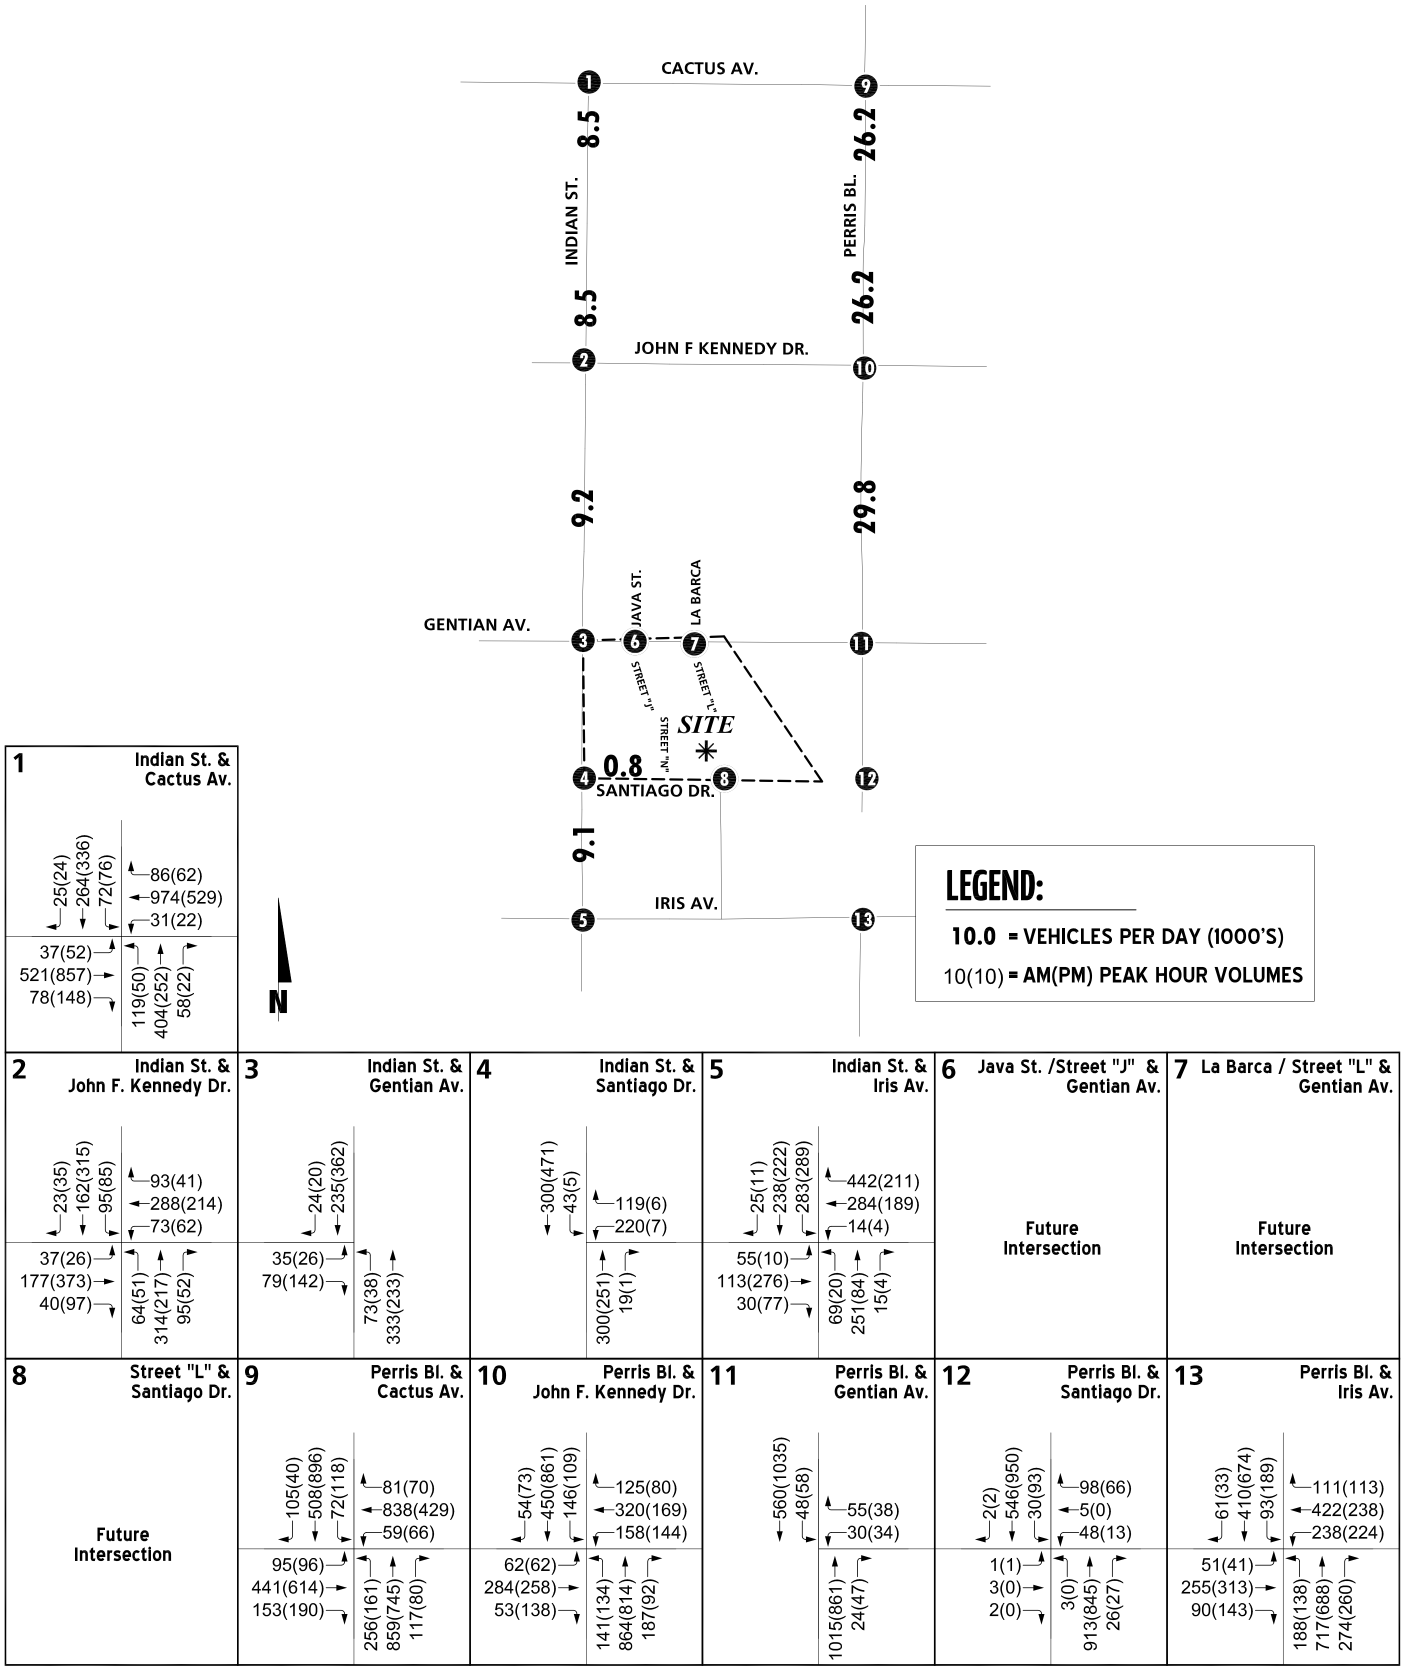

EXHIBIT 3-9: EXISTING (2016) SUMMARY OF LOS

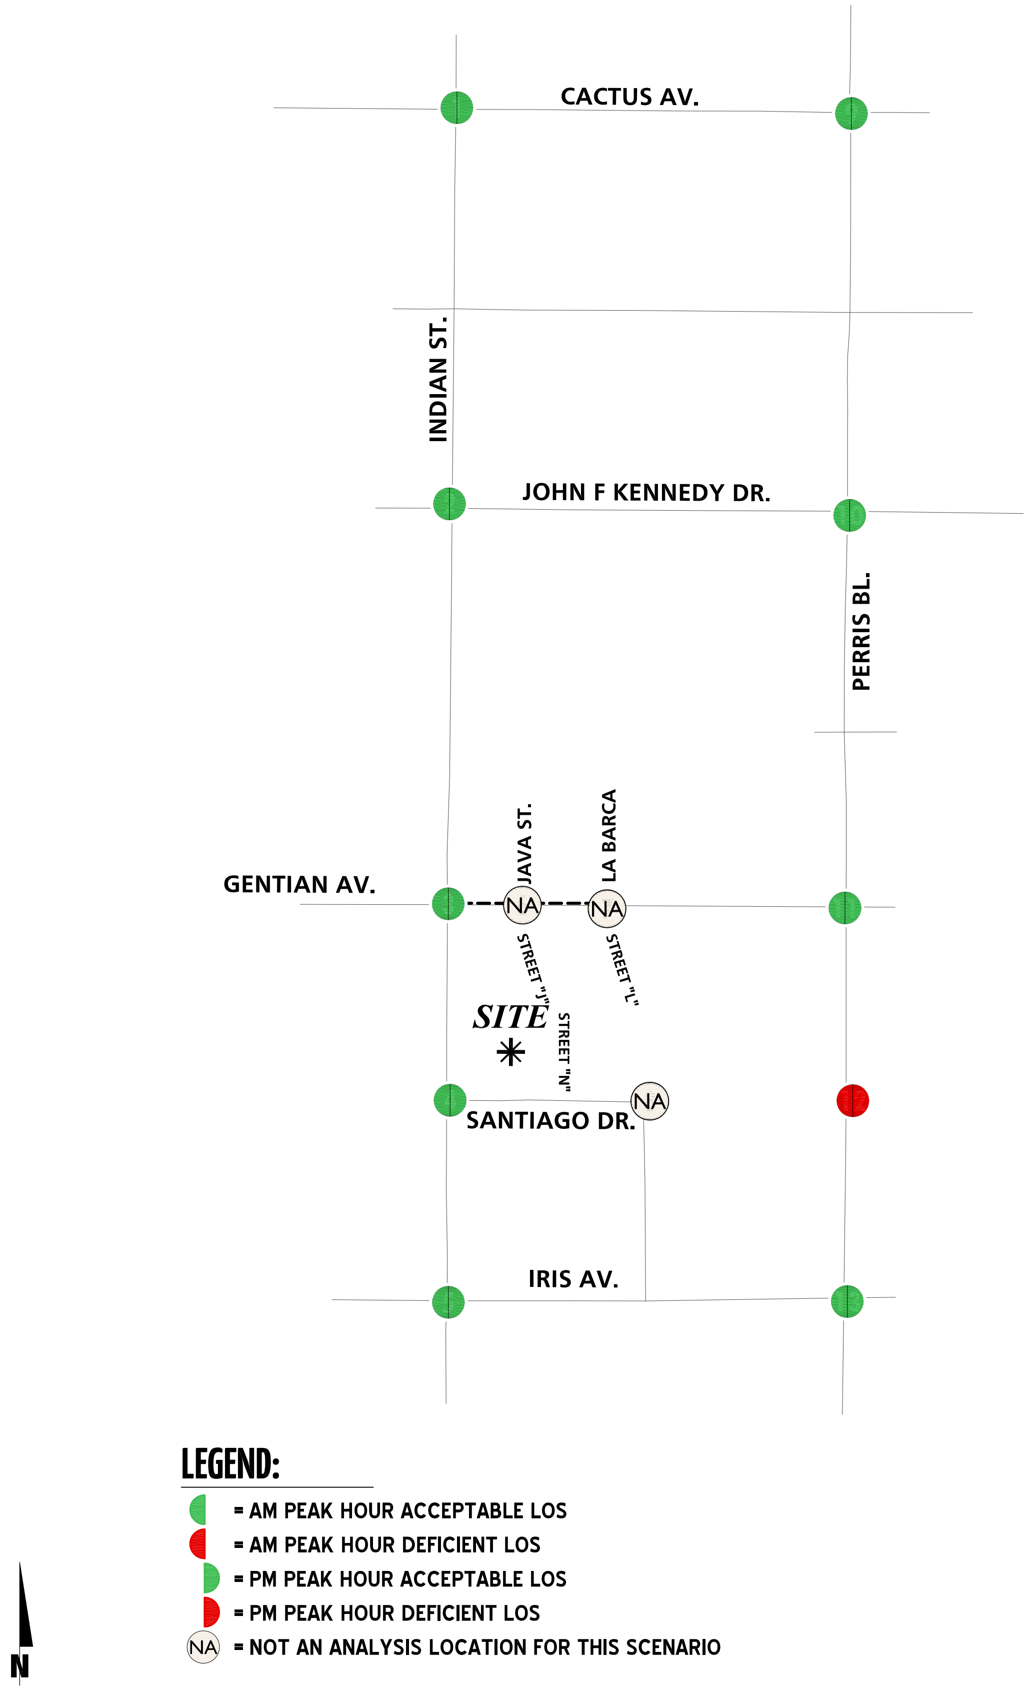

Table 3-1

Intersection Analysis for Existing (2016) Conditions

#	Intersection	Traffic Control[3]	Intersection Approach Lanes[1]												Delay[2] (secs.)		Level of Service	
			Northbound			Southbound			Eastbound			Westbound						
			L	T	R	L	T	R	L	T	R	L	T	R	AM	PM	AM	PM

[1] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; d= Defacto Right Turn Lane

[2] Per the 2010 Highway Capacity Manual, overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[3] CSS = Cross-street Stop; TS = Traffic Signal

3.7 Roadway Segment Capacity Analysis

The City of Moreno Valley General Plan Circulation Element provides roadway volume capacity values presented previously on Table 2-3. The roadway segment capacities are approximate figures only and are used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet traffic demand. Table 3-2 provides a summary of the Existing (2016) conditions roadway segment capacity analysis based on the City of Moreno Valley and City of Perris General Plan Circulation Element Roadway Segment Capacity/ LOS Thresholds identified previously on Table 2-3. As shown on Table 3-2, all the study area roadway segments currently operate at an acceptable LOS based on the City's planning level daily roadway capacity thresholds (i.e., LOS C or better).

3.8 Traffic Signal Warrants Analysis

Traffic signal warrants for Existing traffic conditions are based on existing peak hour intersection turning volumes. The following study area intersection currently warrants a traffic signal for Existing traffic conditions:

- Perris Boulevard / Santiago Drive (#12)

Existing conditions traffic signal warrant analysis worksheets are provided in Appendix 3.3.

3.9 Recommended Improvements

3.9.1 Recommended Improvements to Address Deficiencies at Intersections

Improvement strategies have been recommended at intersections that have been identified as deficient to reduce each location's peak hour delay and improve the associated LOS grade to an acceptable LOS (LOS D or better). The effectiveness of the proposed recommended improvements is presented in Table 3-3 for Existing traffic conditions. Recommended improvements to address deficiencies for Existing traffic conditions are described below and analysis worksheets are provided in Appendix 3.4.

Recommended Improvement –Perris Boulevard / Santiago Drive (#12)

- Install a traffic signal.

3.9.2 Recommended Improvements to Address Deficiencies on Roadway Segments

All study area roadway segments are anticipated to operate at acceptable LOS (LOS C or better) for Existing (2016) traffic conditions. As such, no roadway improvements have been recommended.

Table 3-2

Roadway Segment Capacity Analysis for Existing (2016) Conditions

#	Roadway	Segment Limits	Roadway Section	LOS Capacity[1]	Existing (2016)	V/C	LOS	Acceptable LOS
1	Indian Street	Cactus Avenue to John F. Kennedy Dr.	4D	37,500	8,525	0.23	A	C
2		John F. Kennedy Dr. to Gentian Av.	4D	37,500	9,215	0.25	A	C

10		John F. Kennedy Dr. to Gentian Av.	6D	56,300	29,801	0.53	A	D

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

N/A = Not Applicable; Segment does not exist.

[1] These maximum roadway capacities have been extracted from the City of Moreno Valley's Transportation Division's Traffic Impact Analysis Transportation Division's Traffic Impact Analysis Preparation Guidelines (August 2007). These roadway capacities are "rule of thumb" estimates for planning purposes. The LOS E service volumes are estimated maximum daily capacity for respective classifications. Capacity is affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic) and pedestrian and bicycle traffic.

Table 3-3

Intersection Analysis for Existing (2016) Conditions With Improvements

#	Intersection	Traffic Control[3]	Intersection Approach Lanes[1]												Delay[2] (secs.)		Level of Service	
			Northbound			Southbound			Eastbound			Westbound

[1] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for righ turning vehicles to travel outside the through lanes

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; d= Defacto Right Turn Lane

[2] Per the 2010 Highway Capacity Manual, overall average intersection delay and level of service are shown for intersections with a traffic signal o all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (o movements sharing a single lane) are shown.

[3] CSS = Cross-street Stop; TS = Traffic Signal

This Page Intentionally Left Blank

4 PROJECTED FUTURE TRAFFIC

This section presents the traffic volumes estimated to be generated by the Project, as well as the Project's trip assignment, onto the study area roadway network. The Project is proposed to consist of a total of 221 single family detached residential dwelling units. Per the City's traffic study guidelines, the Opening Year will have a 5-year minimum horizon. As such, the Opening Year analysis will assess 2021 traffic conditions.

The Project is proposed to have access on Gentian Avenue via Street J and Street L and Santiago Drive via Street N and Street L. All driveways are assumed to allow full-access, with the exception of the intersections on Santiago Drive, which are both knuckles. Regional access to the project site is provided via the I-215 Freeway at Cactus Avenue interchange.

4.1 PROJECT TRIP GENERATION

Trip generation represents the amount of traffic which is both attracted to and produced by a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to and produced by the specific land uses being proposed for a given development. The trip generation rates used for this assessment are based upon information collected by the Institute of Transportation Engineers (ITE) as provided in their Trip Generation manual (9th Edition, 2012). The ITE Trip Generation manual is a nationally recognized source for estimating site specific trip generation.

4.1.1 PROPOSED PROJECT: R5 RESIDENTIAL

The Single Family Residential land use (ITE Land Use Code 210) has been utilized for the purposes of this trip generation evaluation. The Project is proposing to develop the entire site (approximately 52.94 acres) per the R5 Residential General Plan Land Use designation, allowing up to 5 dwelling units per acre. Specifically, the Project is proposing 221 dwelling units, or approximately 4.2 dwelling units per acre. Trip generation rates and the daily and peak hour trip generation for proposed Project are also shown in Table 4-1. The proposed Project is anticipated to generate a net total of approximately 2,104 based trip-ends per day with 166 based AM peak hour trips and 221 based PM peak hour trips.

4.1.2 CURRENTLY ADOPTED GENERAL PLAN: R5 AND R30 RESIDENTIAL

Table 4-2 summarizes the resulting trip generation estimates based on the Currently Adopted General Plan approved land use (R5 and R30 Residential). 37.88 acres of the site is currently designated with the R5 residential land use, however, the remaining 15.06 acres is designated with the R30 land use with an allowable density of 24 to 30 dwelling units per acre. Based on the currently adopted General Plan land use designations, the site currently allows for the development of up to 551 dwelling units. The currently adopted land use is anticipated to generate a net total of approximately 3,903 trip-ends per day with 301 AM peak hour trips and 377 PM peak hour trips.

Table 4-1

Proposed Project Trip Generation Summary

[2] DU = Dwelling Units

[3] Allowable density: 5 dwelling units per acre.

[4] Allowable density: 24-30 dwelling units per acre.

4.1.3 TRIP GENERATION COMPARISON

As shown in Table 4-2, the development of the proposed Project is anticipated to generate 1,799 fewer trip-ends per day with 135 fewer AM peak hour trips and 156 fewer PM peak hour trips as compared to the currently adopted General Plan land uses. As such, evaluation of long-range traffic conditions was determined to be unnecessary as the proposed General Plan Amendment is anticipated to reduce the trips generated by the site. E+P and Opening Year Cumulative traffic conditions have been evaluated as part of this TIA in an effort to identify the near-term Project impacts, however, long-range traffic impacts are anticipated to be consistent with or less than those identified by the City's General Plan.

4.2 PROJECT TRIP DISTRIBUTION

Trip distribution is the process of identifying the probable destinations, directions, or traffic routes that will be utilized by Project traffic. The potential interaction between the planned land uses and surrounding regional access routes are considered to identify the route where the Project traffic would distribute.

The Project trip distribution was developed based on anticipated travel patterns to and from the Project site for both passenger cars and truck traffic. The truck trip distribution patterns have been developed based on the anticipated travel patterns for the high-cube warehousing trucks. The Project trip distribution patterns for both passenger cars and trucks were developed based on an understanding of existing travel patterns in the area, the geographical location of the site, and the site's proximity to the regional arterial and state highway system.

The trip distributions utilized for the purposes of this analysis are shown on Exhibit 4-1 and Exhibit 4-2. E+P conditions will assume Gentian Avenue to connect to the west at Indian Street only (see Exhibit 4-1). The trip distribution patterns assume that Gentian Avenue will be in place from the Project boundary east to Perris Boulevard for Opening Year Cumulative conditions only (see Exhibit 4-2). It is our understanding that the Project would have access to Indian Street via Santiago Drive and also Perris Boulevard via Santiago Drive. As such, this connection is assumed for both E+P and Opening Year Cumulative traffic conditions.

4.3 MODAL SPLIT

The traffic reducing potential of public transit, walking, or bicycling have not been considered in this TIA. Essentially, the traffic projections are "conservative" in that these alternative travel modes might be able to reduce the forecasted traffic volumes.

4.4 PROJECT TRIP ASSIGNMENT

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, Project ADT and peak hour intersection turning movement volumes are shown on Exhibit 4-3 for E+P and Exhibit 4-4 for Opening Year Cumulative traffic conditions.

Table 4-3

Trip Generation Comparison

Land Use	Acres	Quantity	Units[2]	AM Peak Hour In	AM Peak Hour Out	AM Peak Hour Total	PM Peak Hour In	PM Peak Hour Out	PM Peak Hour Total	Daily
Proposed Project	52.94	221	DU	42	124	166	139	82	221	2,104
Currently Adopted	52.94	265	DU	61	240	301	246	131	377	3,903

4.5 BACKGROUND TRAFFIC

To account for growth in traffic between Existing Conditions (2016) and the Project Opening Year (2021), a compounded annual traffic growth rate of 2 percent was assumed (10.41 percent aggregate growth in background traffic for the period 2016—2021). The 2 percent annual growth rate is intended to capture non-specific ambient traffic growth.

In context, the TIA's assumed 2 percent compounded annual growth rate is considered a reasonable approximation of future traffic growth when compared to demographic projections reflected in other local and regional growth modeling efforts. More specifically, the Southern California Association of Governments (SCAG) 2016—2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) growth forecasts for the City of Moreno Valley assume the City population to increase from 197,600 in 2012 to 256,600 by the year 2040, or an approximate 0.94 percent growth rate compounded annually. The RTP/SCS assumed growth in households over the same 28-year period reflects an increase from 51,800 households to 73,000 households; a rate of 1.23 percent compounded annually. At the upper end of assumed RTP/SCS growth rates, employment over the same 28-year period is projected to increase from 31,400 jobs to 83,200 jobs; a rate of approximately 3.54 percent compounded annually. (3) The 2 percent compounded annual traffic growth rate employed in the TIA reflects the fact that not all persons comprising population growth, household growth, or employment growth would translate on a one to one basis as a new vehicle trip in the region; and establishes a judicious midrange estimate lying between the RTP/SCS assumed regional population growth rate (0.94 percent) and the RTP/SCS assumed regional employment growth rate (3.54 percent).

Conservatively, the TIA estimates of area traffic growth then add traffic generated by other known or probable related projects. These related projects are at least in part already accounted for in the assumed annual 2 percent ambient growth in traffic noted above; and in some instances these related projects would likely not be implemented and functional within the 2021 Opening Year time frame assumed for the Project. The resultant assumed traffic growth rate employed in the TIA (2 percent annual ambient growth plus traffic generated by related projects) would therefore tend to overstate rather than understate background cumulative traffic impacts under 2021 conditions.

4.6 CUMULATIVE DEVELOPMENT TRAFFIC

The California Environmental Quality Act (CEQA) guidelines require that other reasonably foreseeable development projects which are either approved or being processed concurrently in the study area also be included as part of a cumulative analysis scenario. A cumulative project list was developed for the purposes of this analysis through consultation with planning and engineering staff from the City of Moreno Valley. The cumulative project list includes known and foreseeable projects that are anticipated to contribute traffic to the study area intersections. The cumulative projects provided by each of the applicable surrounding agencies are provided in Appendix 4.1.

Where applicable, cumulative projects anticipated to contribute measurable traffic (i.e. 50 or more peak hour trips) to study area intersections have been manually added to the study area network to generate Opening Year Cumulative forecasts. In other words, this list of cumulative development projects has been reviewed to determine which projects would likely contribute measurable traffic through the study area intersections (e.g., those cumulative projects in close proximity to the proposed Project). For the purposes of this analysis, the cumulative projects that were determined to affect one or more of the study area intersections are shown on Exhibit 4-5, listed on Table 4-4, and have been considered for inclusion.

Although it is unlikely that these cumulative projects would be fully built and occupied by Year 2021, they have been included in an effort to conduct a conservative analysis and overstate as opposed to understate potential traffic impacts.

Any other cumulative projects that are not expected to contribute measurable traffic to study area intersections have not been included since the traffic would dissipate due to the distance from the Project site and study area intersections. Any additional traffic generated by other projects not on the cumulative projects list is accounted for through background ambient growth factors that have been applied to the peak hour volumes at study area intersections as discussed in Section 4.5 *Background Traffic*. Cumulative development project ADT and peak hour intersection turning movement volumes are shown on Exhibit 4-5.

4.7 NEAR-TERM TRAFFIC FORECASTS

To provide a comprehensive assessment of potential transportation network deficiencies, the “buildup” analysis was performed in support of this work effort. The “buildup” method was used to approximate the Opening Year Cumulative traffic forecasts, and is intended to identify the cumulative impacts on both the existing and planned near-term circulation system. The Opening Year Cumulative traffic forecasts include background traffic, traffic generated by other cumulative development projects within the study area, and the traffic generated by the proposed Project.

The “buildup” approach combines existing traffic counts with a background ambient growth factor to forecast the near-term 2020 traffic conditions. An ambient growth factor of 10.41% (2021) accounts for background (area-wide) traffic increases that occur over time, up to the year 2021 from the year 2016 (compounded two percent per year growth over a 5-year period). Traffic volumes generated by the Project are then added to assess the Opening Year Cumulative traffic conditions. The 2021 roadway network is similar to the existing conditions roadway network with the exception of future roadways and intersections proposed to be developed by the Project.

[3] Source: Cactus Avenue and Commerce Center Drive Commercial Center TIA, Urban Crossroads, Inc., December 9, 2008 (Revised).

[4] Source: March Lifecare Campus Specific Plan Traffic Impact Analysis, Mountain Pacific, Inc., May 2009 (Revised).

As noted previously, an analysis of the proposed Project at various development tiers has been assessed for the purposes of this traffic study. The near-term traffic analysis includes the following traffic conditions, with the various traffic components:

- Opening Year Cumulative (2021)
    - Existing 2016 counts
    - Ambient growth traffic (10.41%)
    - Cumulative Development Project traffic
    - Project traffic

This Page Intentionally Left Blank

5 E+P TRAFFIC CONDITIONS

This section discusses the traffic forecasts for Existing plus Project (E+P) conditions and the resulting intersection operations, roadway segment, and traffic signal warrant analyses.

5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for E+P conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for E+P conditions only (e.g., intersection and roadway improvements at the Project's frontage and driveways).

5.2 E+P TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus Project traffic. Exhibit 5-1 shows the ADT and peak hour intersection turning movement volumes, which can be expected for E+P traffic conditions.

5.3 INTERSECTION OPERATIONS ANALYSIS

E+P peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies* of this TIA. The intersection analysis results are summarized in Table 5-1, which indicate that consistent with Existing traffic conditions, the following study area intersection is anticipated to operate at an unacceptable LOS:

Exhibit 5-2 summarizes the weekday AM and PM peak hour study area intersection LOS under E+P traffic conditions, consistent with the summary provided in Table 5-1. The intersection operations analysis worksheets are included in Appendix 5.1 of this TIA.

5.4 ROADWAY SEGMENT CAPACITY ANALYSIS

As noted previously, the City of Moreno Valley stated roadway segment capacities are approximate figures only and are used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet future traffic demand.

Table 5-2 provides a summary of the E+P conditions roadway segment capacity analysis based on the City of Moreno Valley General Plan Circulation Element Roadway Segment Capacity/LOS Thresholds identified previously on Table 2-3. As shown on Table 5-2, there are no roadway segments that are anticipated to operate at an unacceptable LOS under E+P traffic conditions, consistent with Existing traffic conditions.

EXHIBIT 5-1: E+P TRAFFIC VOLUMES

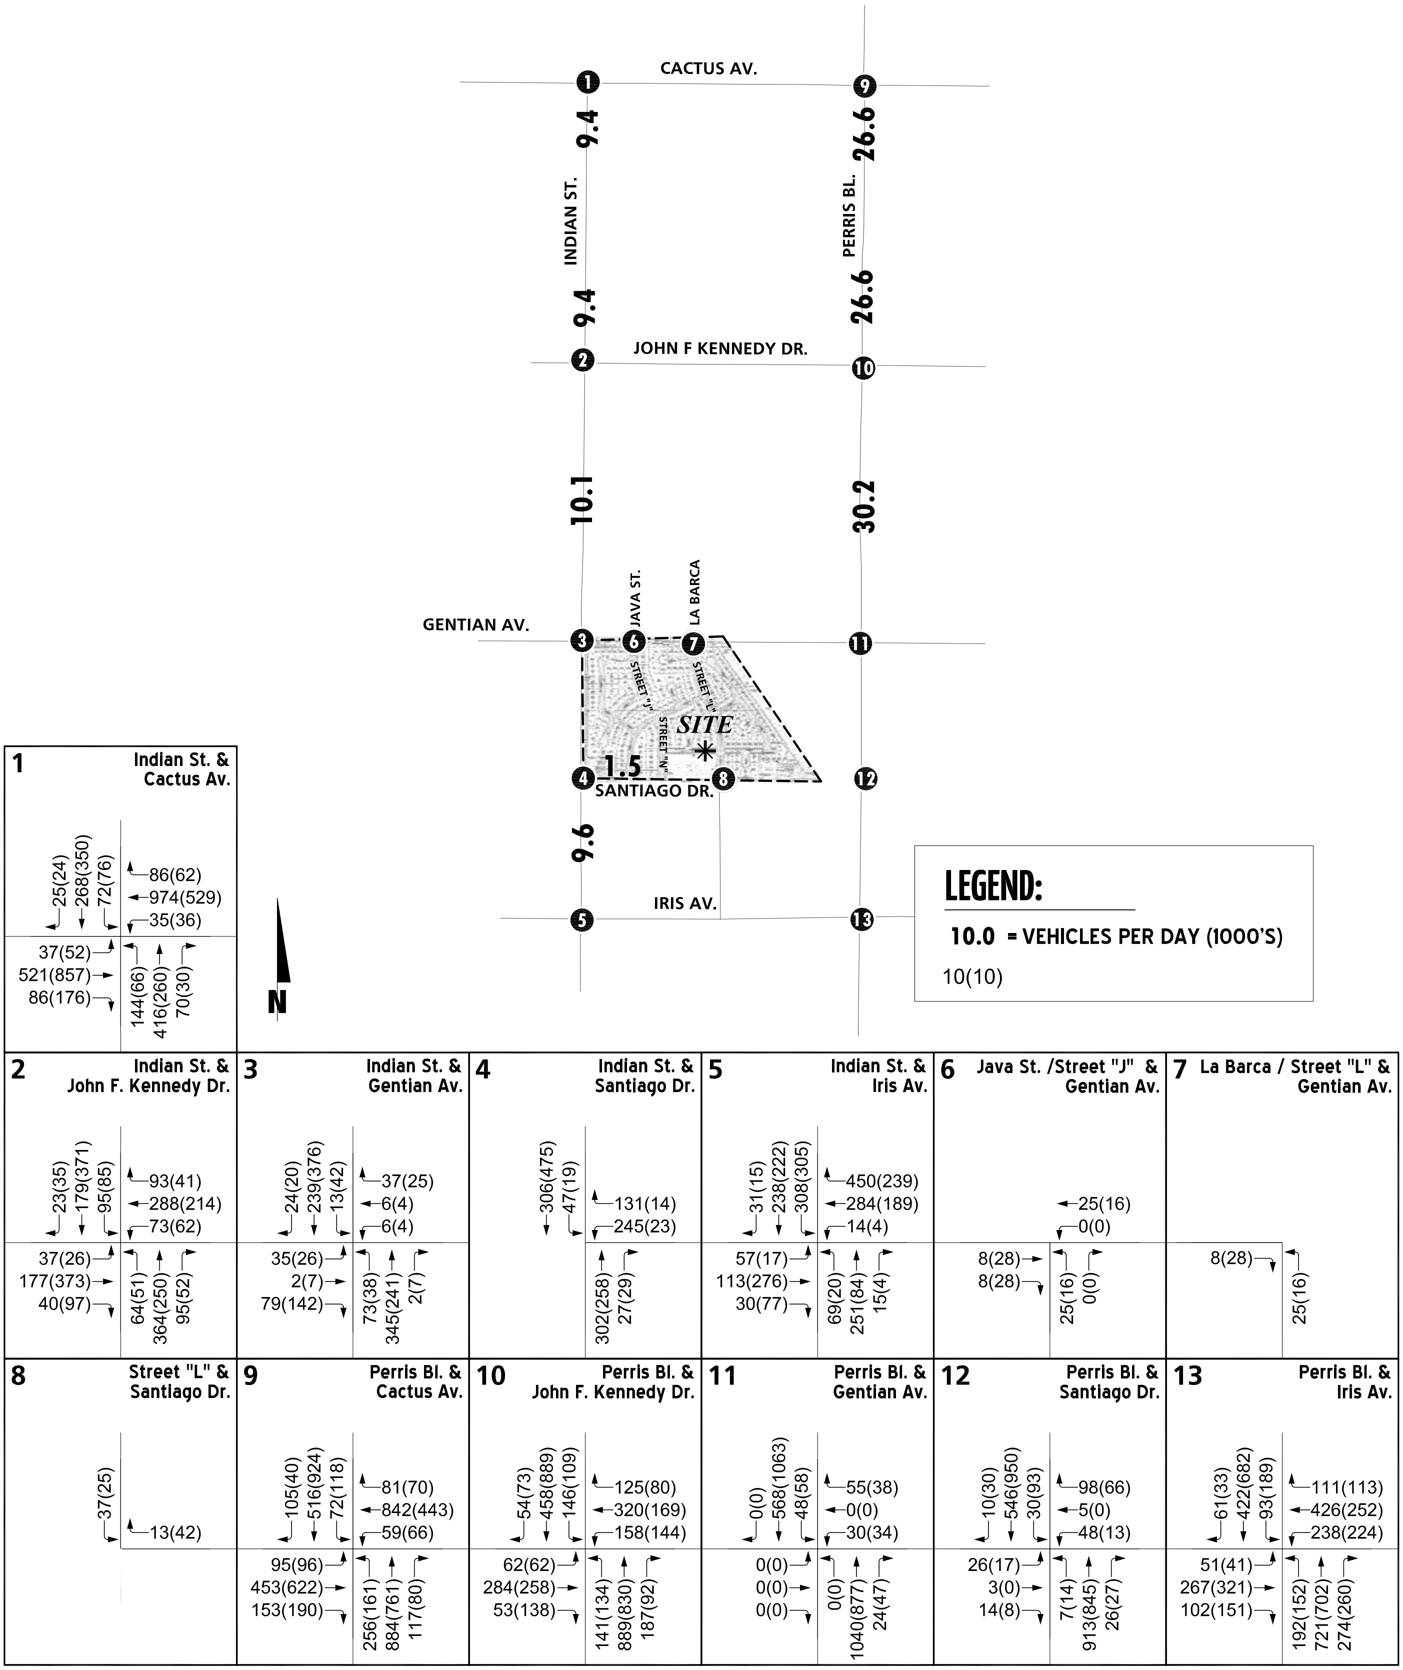

EXHIBIT 5-2: E+P SUMMARY OF LOS

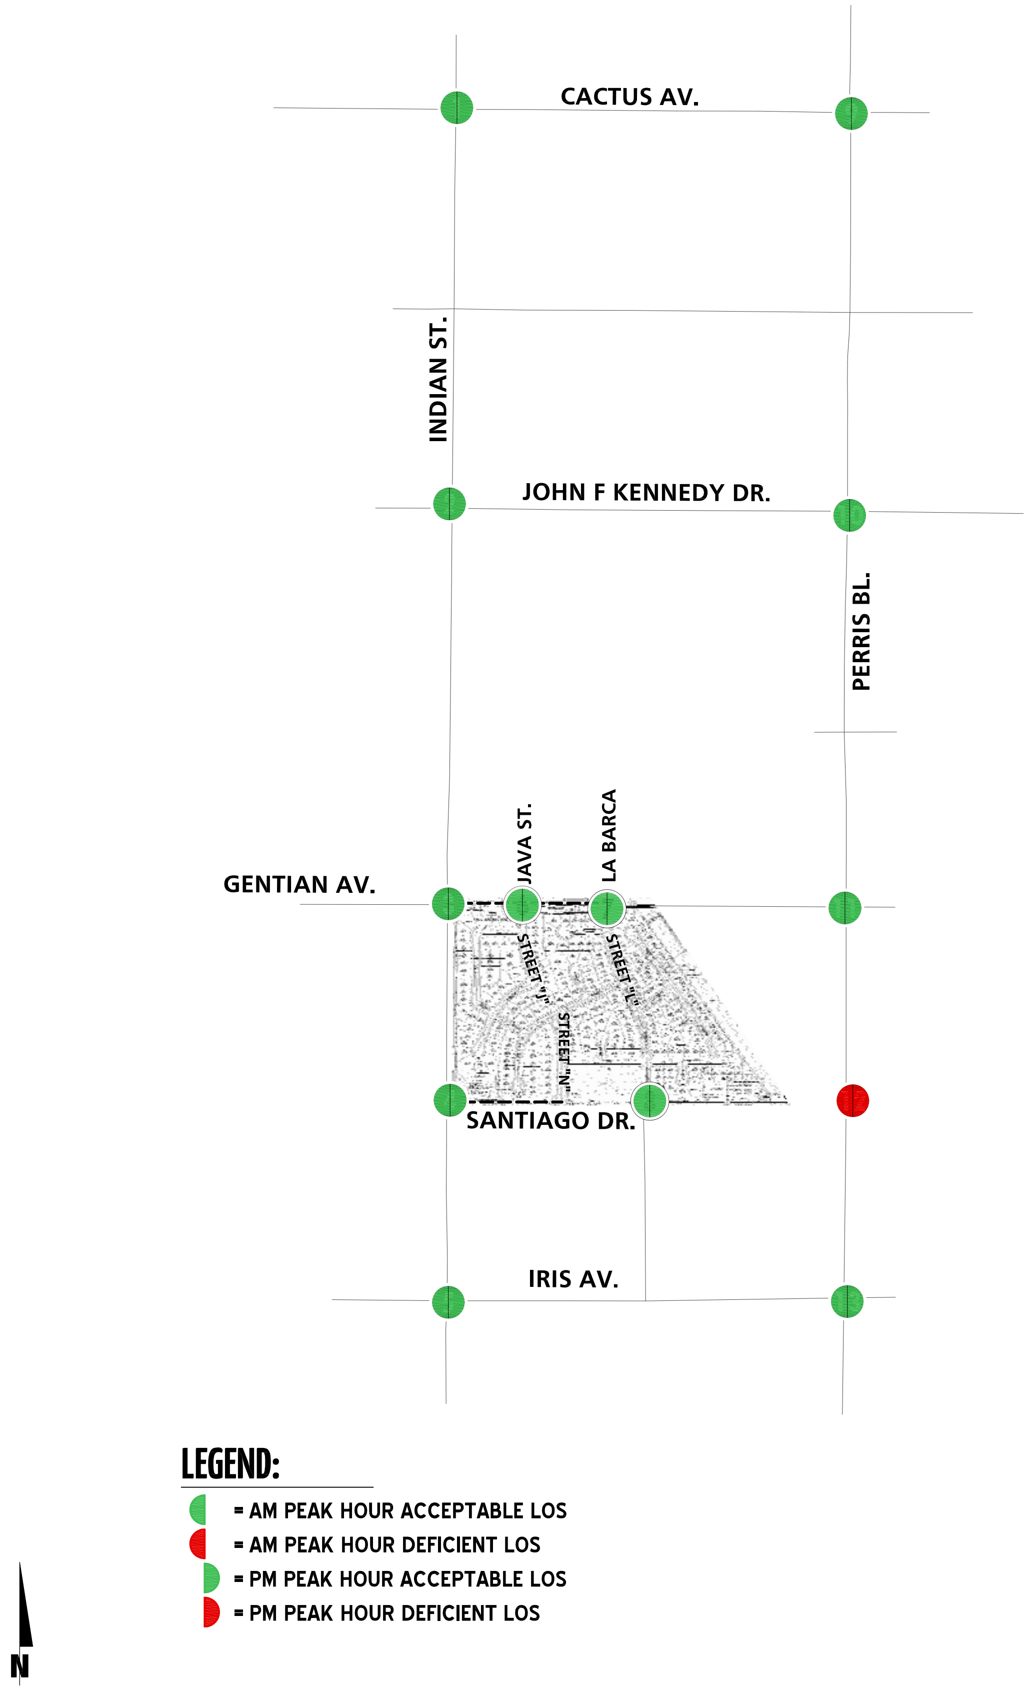

Attachment: Traffic Study (2444 : Legacy Park Project)

Table 5-1

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

N/A = Not Applicable; Segment does not exist.

[1] These maximum roadway capacities have been extracted from the City of Moreno Valley's Transportation Division's Traffic Impact Analysis Transportation Division's Traffic Impact Analysis Preparation Guidelines (August 2007). These roadway capacities are "rule of thumb" estimates for planning purposes. The LOS E service volumes are estimated maximum daily capacity for respective classifications. Capacity is affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic) and pedestrian and bicycle traffic.

5.5 TRAFFIC SIGNAL WARRANTS ANALYSIS

There are no additional study area intersections anticipated to meet either peak hour or planning level (ADT) volume based traffic signal warrants under E+P traffic conditions, in addition to those previously warranted under Existing traffic conditions (see Appendix 5.2).

5.6 RECOMMENDED IMPROVEMENTS

5.6.1 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Improvement strategies have been recommended at intersections that have been identified as deficient to reduce each location's peak hour delay and improve the associated LOS grade to an acceptable LOS (i.e., LOS D or better). The effectiveness of the proposed recommended improvements is presented in Table 5-3 for E+P traffic conditions. Recommended improvements to address deficiencies for E+P traffic conditions are described below. All recommended improvements are consistent with Existing (2016) traffic conditions (see Table 3-3).

Recommended Improvement – Perris Boulevard / Santiago Drive (#12)

- Install a traffic signal.

Worksheets for E+P conditions, with improvements, HCM calculations are provided in Appendix 5.3.

5.6.2 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON ROADWAY SEGMENTS

All study area roadway segments are anticipated to operate at acceptable LOS (LOS C or better) for E+P traffic conditions. As such, no roadway improvements have been recommended.

Table 5-3

Intersection Analysis for E+P Conditions With Improvements

#	Intersection	Traffic Control[3]	Intersection Approach Lanes[1] Northbound L	T	R	Southbound L	T	R	Eastbound L	T	R	Westbound L	T	R	Delay[2] (secs.) AM	PM	Level of Service AM	PM

[1] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for righ turning vehicles to travel outside the through lanes

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; d= Defacto Right Turn Lane

[2] Per the 2010 Highway Capacity Manual, overall average intersection delay and level of service are shown for intersections with a traffic signal o all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (o movements sharing a single lane) are shown.

[3] CSS = Cross-street Stop; TS = Traffic Signal

This Page Intentionally Left Blank

6 OPENING YEAR CUMULATIVE (2021) TRAFFIC CONDITIONS

This section discusses the methods used to develop Opening Year Cumulative (2021) traffic forecasts and the resulting intersection operations, roadway segment, and traffic signal warrant analyses.

6.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Opening Year Cumulative (2021) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Opening Year Cumulative conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Opening Year Cumulative conditions only (e.g., intersection and roadway improvements along the cumulative development's frontages and driveways).

6.2 OPENING YEAR CUMULATIVE (2021) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

To account for background traffic, other known cumulative development projects in the study area were included in addition to 10.41% of ambient growth for Opening Year Cumulative traffic conditions. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2021) Without Project traffic conditions are shown on Exhibit 6-1.

6.3 OPENING YEAR CUMULATIVE (2021) WITH PROJECT TRAFFIC VOLUME FORECASTS

To account for background traffic, other known cumulative development projects in the study area were included in addition to 10.41% of ambient growth for Opening Year Cumulative traffic conditions in conjunction with traffic associated with the proposed Project. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2021) With Project traffic conditions are shown on Exhibit 6-2.

EXHIBIT 6-1: OPENING YEAR CUMULATIVE (2021) WITHOUT PROJECT TRAFFIC VOLUMES

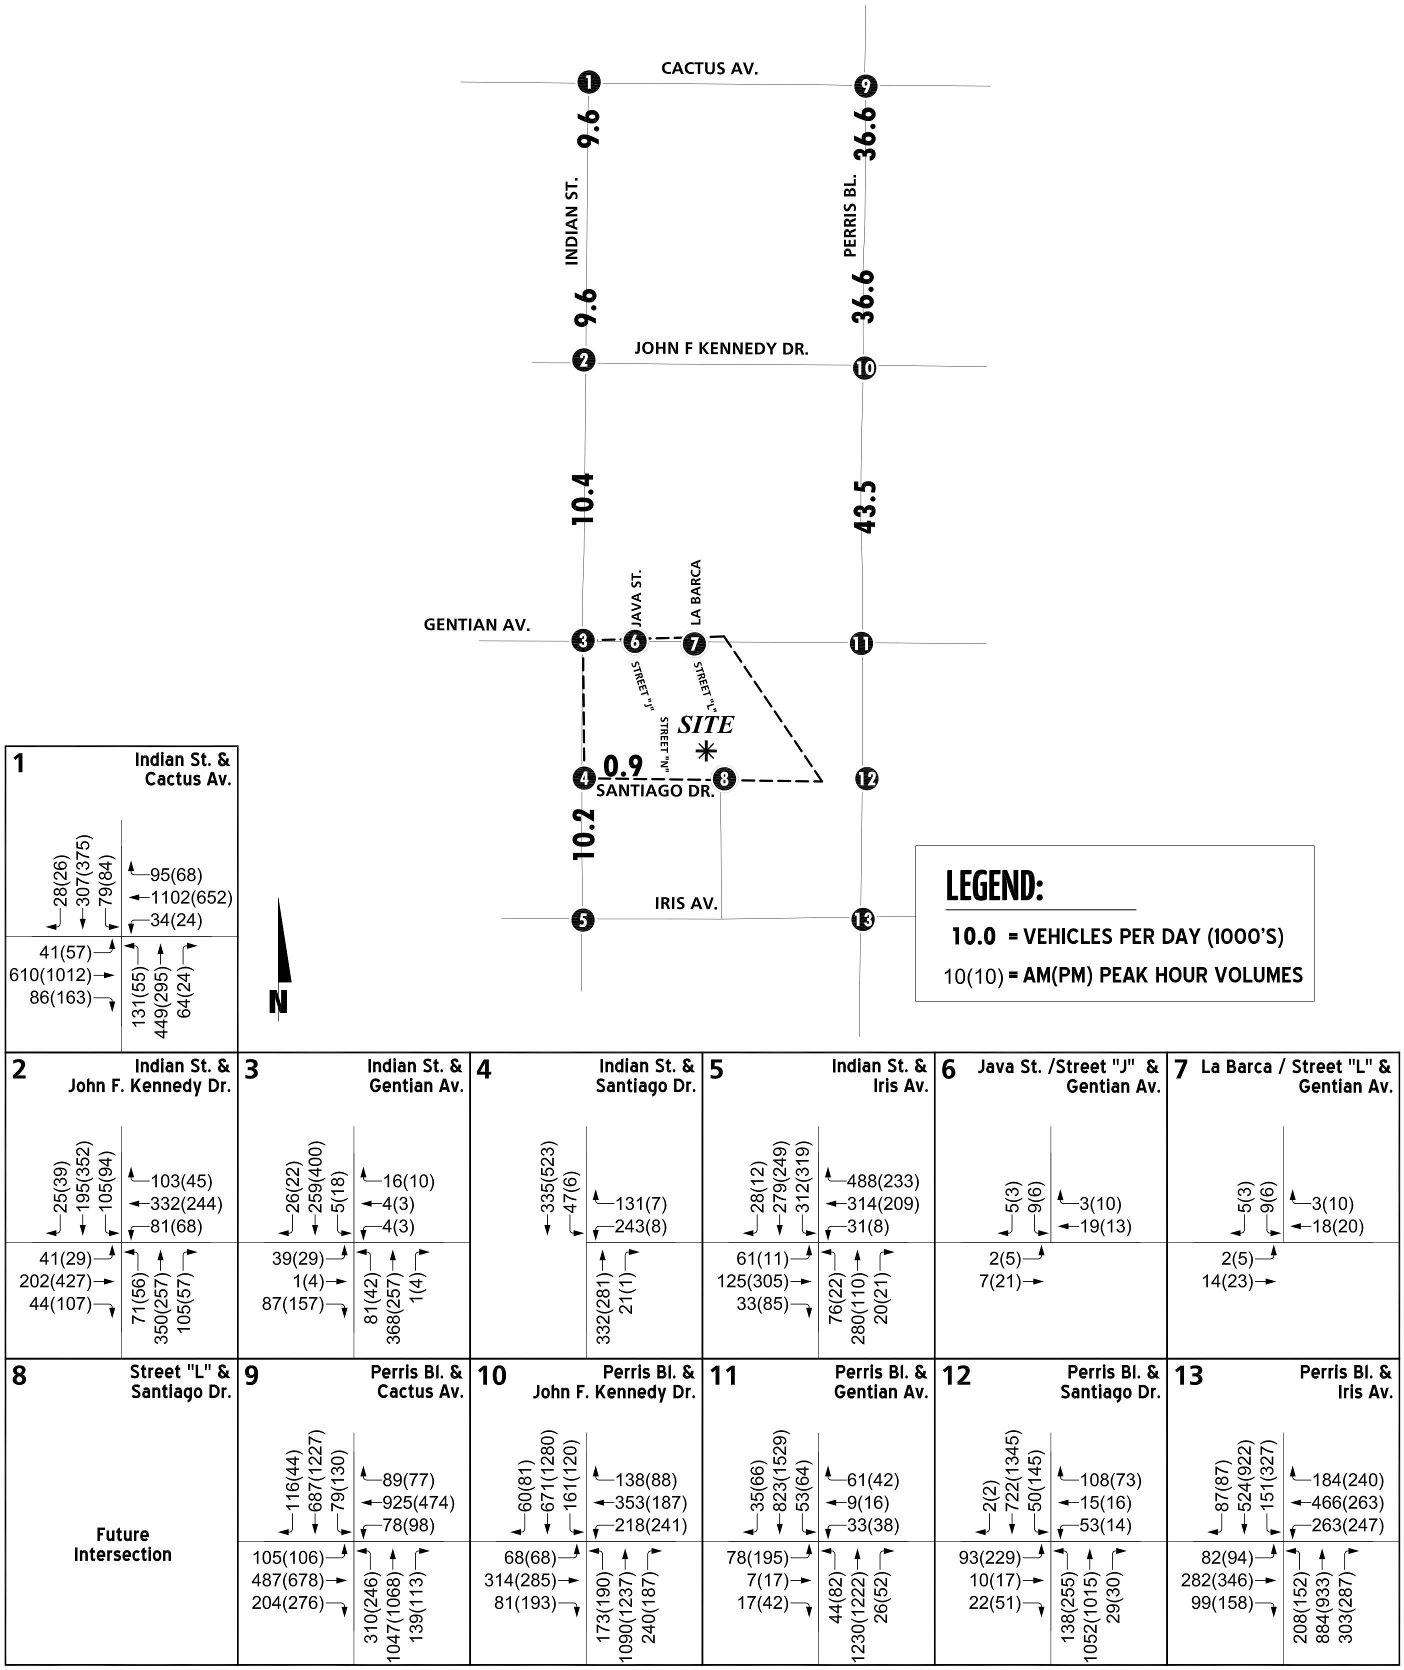

EXHIBIT 6-2: OPENING YEAR CUMULATIVE (2021) WITH PROJECT TRAFFIC VOLUMES

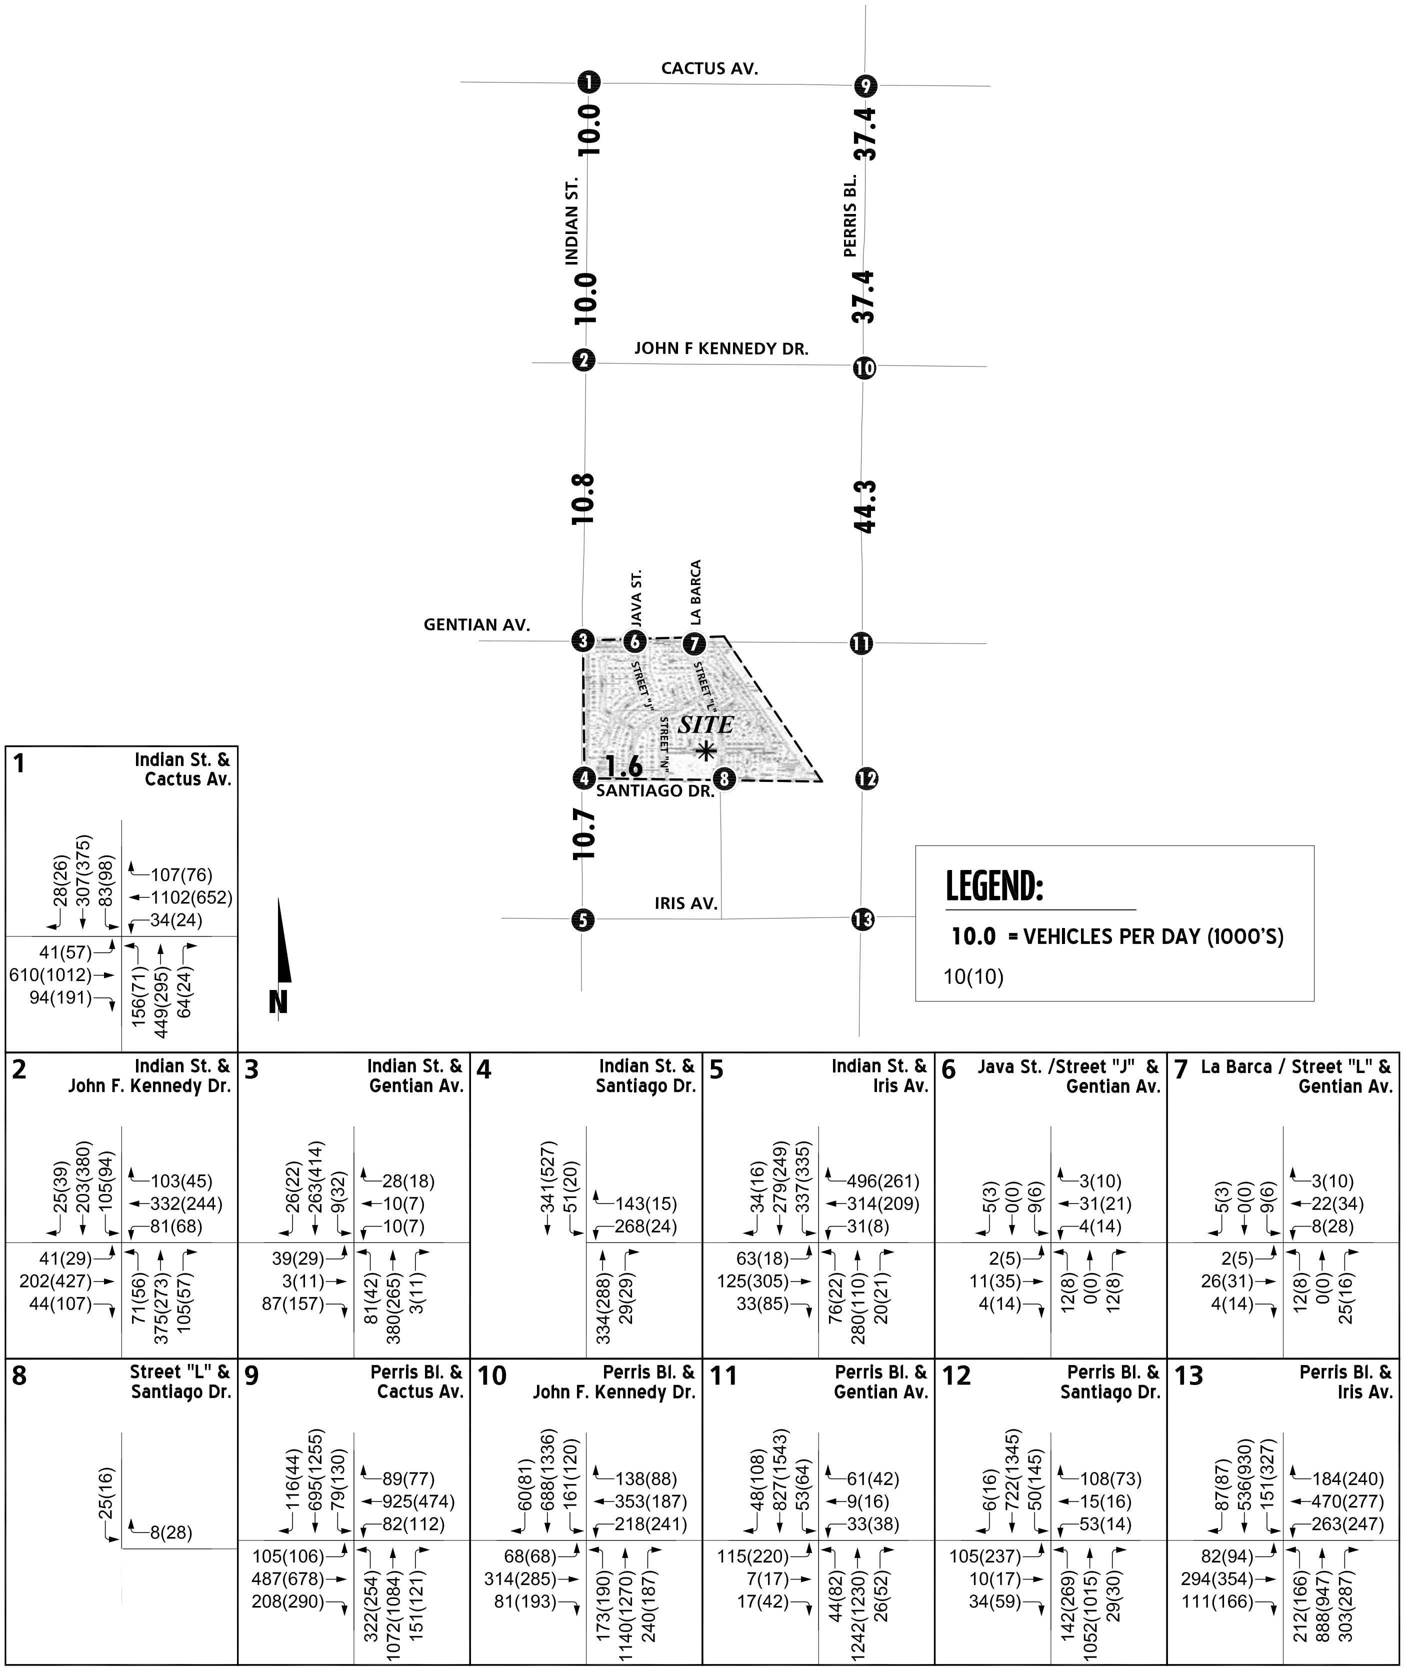

6.4 INTERSECTION OPERATIONS ANALYSIS

LOS calculations were conducted for the study intersections to evaluate their operations under Opening Year Cumulative conditions with roadway and intersection geometrics consistent with Section 6.1 *Roadway Improvements*. As shown in Table 6-1, there are no study area intersections are anticipated to operate at unacceptable LOS during the peak hours under Opening Year Cumulative (2021) without Project traffic conditions, in addition to the location previously identified under Existing (2016) traffic conditions.

The following additional study area intersections are anticipated to operate at unacceptable LOS with the addition of Project traffic, in addition to those previously identified for Opening Year Cumulative Without Project traffic conditions:

- Indian Street / Cactus Avenue (#1)
- Indian Street / Gentian Avenue (#3)

A summary of the peak hour intersection LOS for Opening Year Cumulative (2021) Without Project conditions are shown on Exhibit 6-3 and on Exhibit 6-4 for Opening Year Cumulative (2021) With Project traffic conditions. The intersection operations analysis worksheets for Opening Year Cumulative (2021) Without and With Project traffic conditions are included in Appendix 6.1 and Appendix 6.2 of this TIA, respectively. Measures to address near-term cumulative deficiencies for Opening Year Cumulative traffic conditions are discussed in Section 6.7 *Recommended Improvements.*

6.5 ROADWAY SEGMENT CAPACITY ANALYSIS

As noted previously, the roadway segment capacities are approximate figures only, and are typically used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet future forecasted traffic demand. Table 6-2 provides a summary of the Opening Year Cumulative (2021) conditions roadway segment capacity analysis based on the City of Moreno Valley General Plan Circulation Element Roadway Segment Capacity/LOS Thresholds identified previously on Table 2-3. As shown on Table 6-2, there are no roadway segments that are anticipated to operate at an unacceptable LOS under Opening Year Cumulative Without and With Project traffic conditions, consistent with Existing traffic conditions.

Table 6-1

Intersection Analysis for Opening Year Cumulative (2021) Conditions

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

N/A = Not Applicable; Segment does not exist.

[1] These maximum roadway capacities have been extracted from the City of Moreno Valley's Transportation Division's Traffic Impact Analysis Transportation Division's Traffic Impact Analysis Preparation Guidelines (August 2007). These roadway capacities are "rule of thumb" estimates for planning purposes. The LOS E service volumes are estimated maximum daily capacity for respective classifications. Capacity is affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic) and pedestrian and bicycle traffic.

EXHIBIT 6-3: OPENING YEAR CUMULATIVE (2021) WITHOUT PROJECT SUMMARY OF LOS

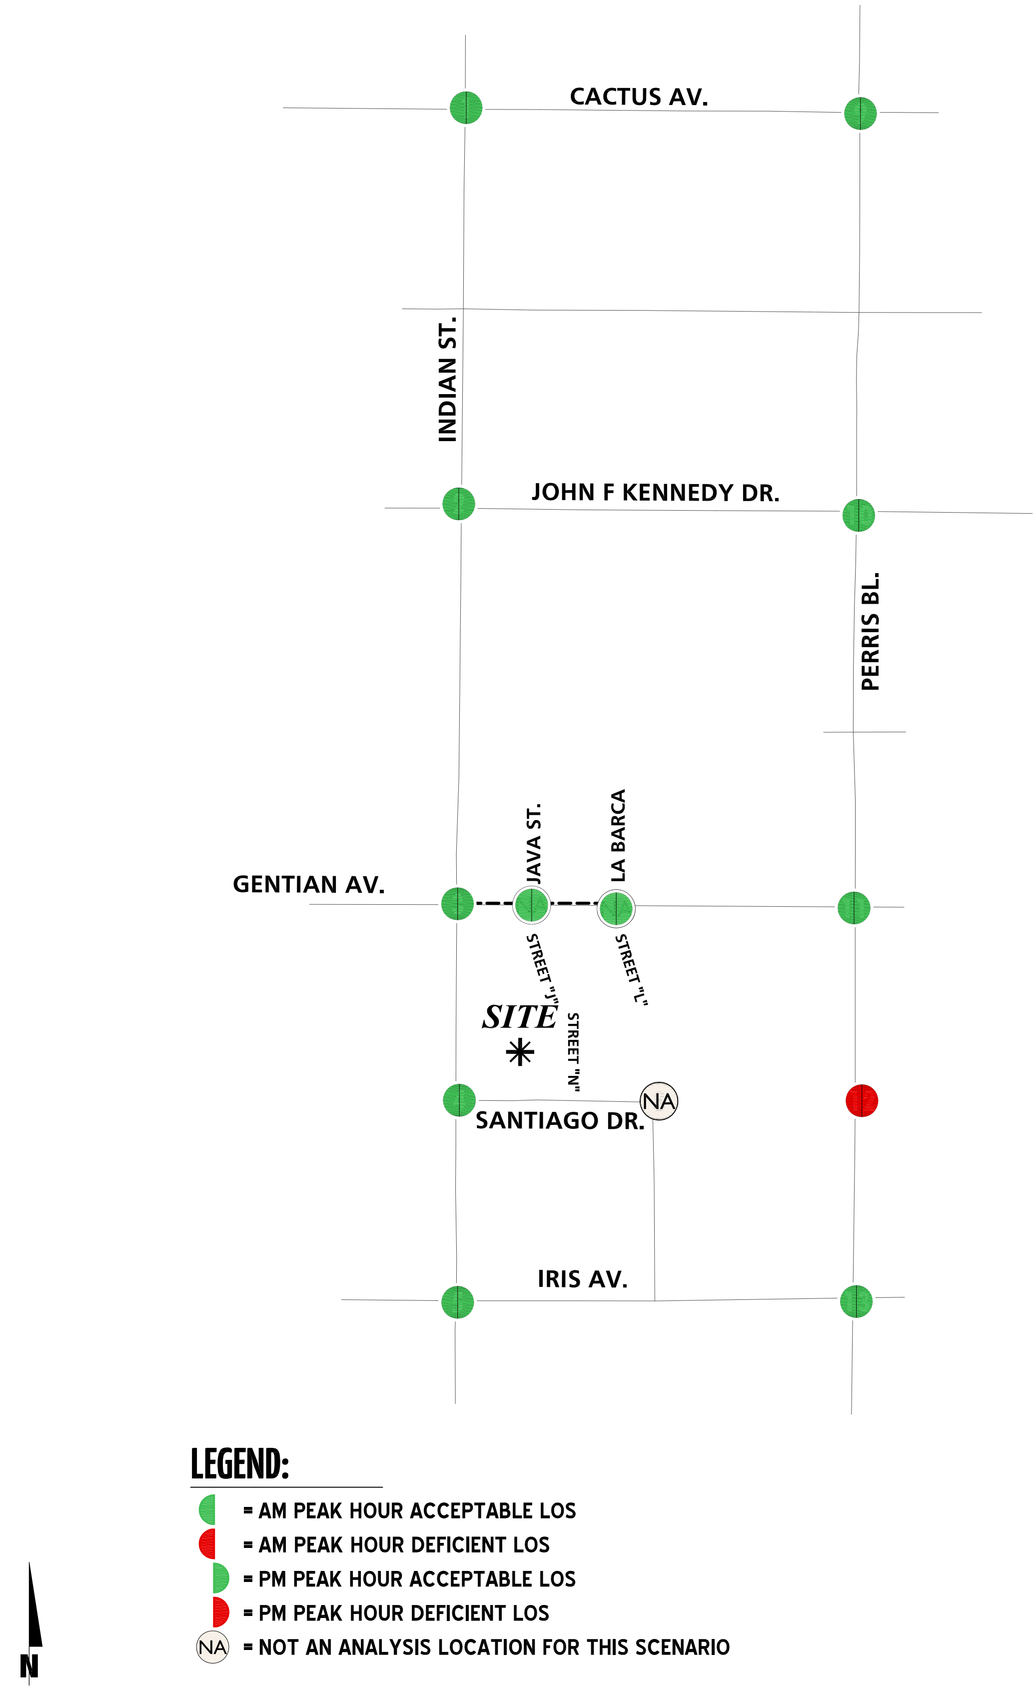

EXHIBIT 6-4: OPENING YEAR CUMULATIVE (2021) WITH PROJECT SUMMARY OF LOS

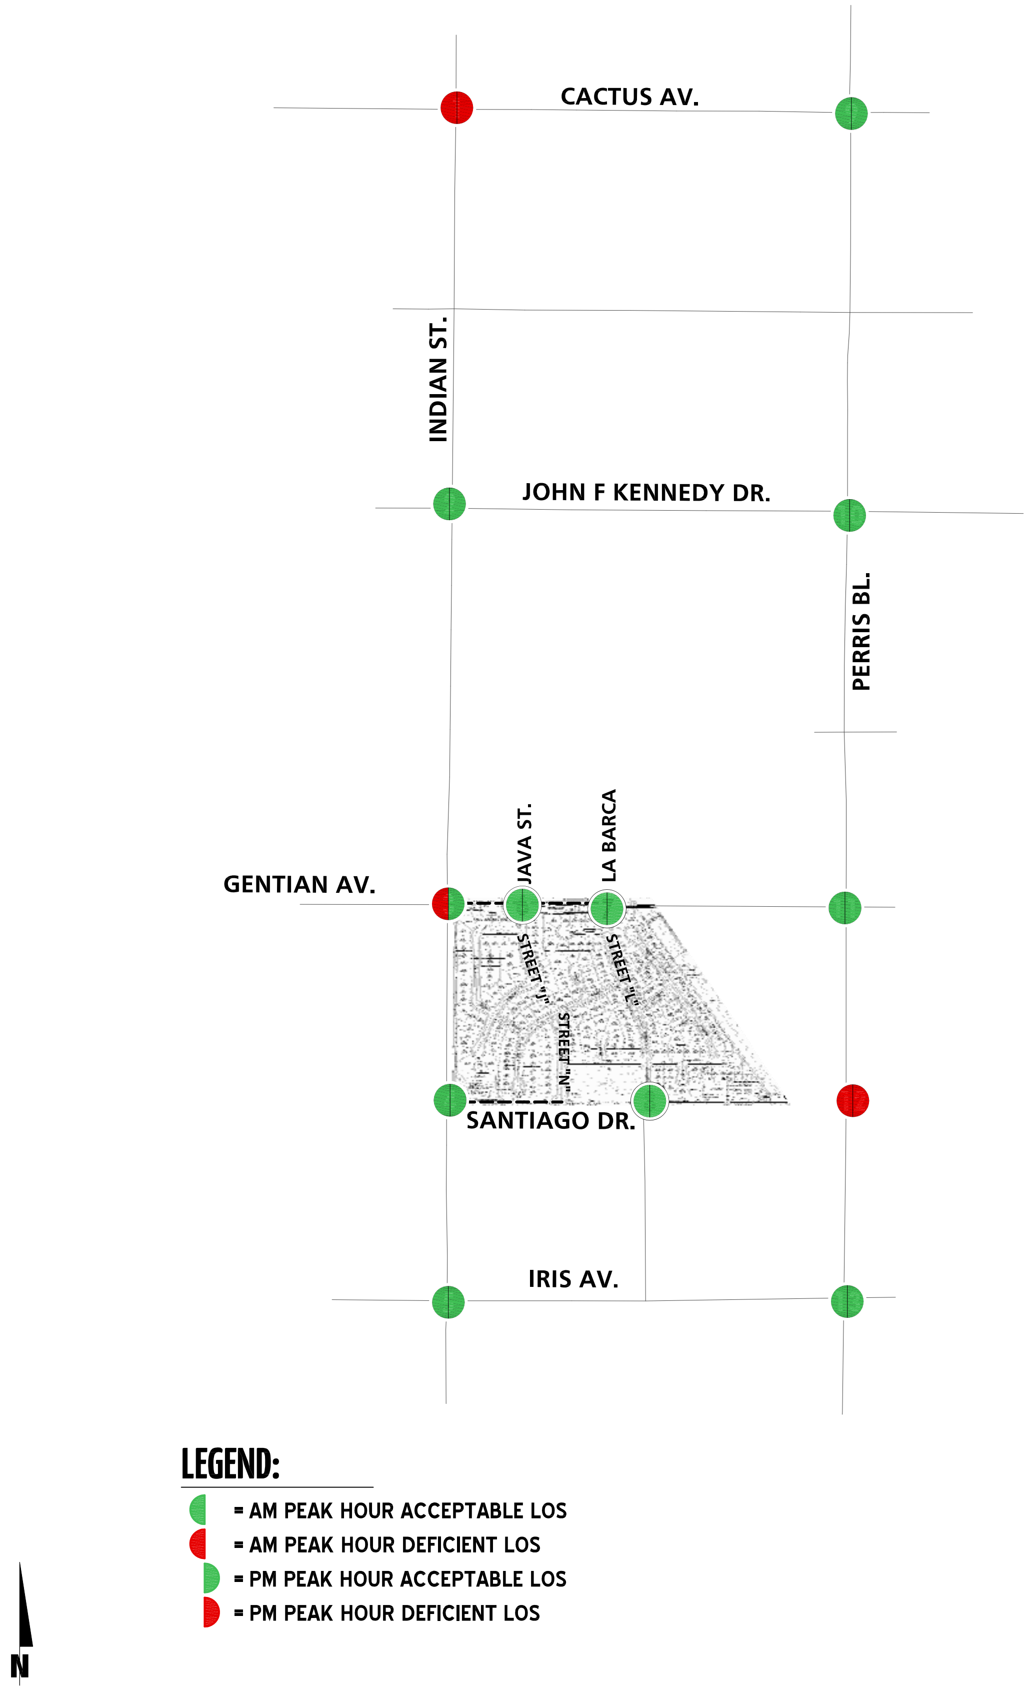

6.6 TRAFFIC SIGNAL WARRANTS ANALYSIS

There are no additional study area intersections that are anticipated to meet either peak hour or planning level (ADT) volume based traffic signal warrants for Opening Year Cumulative traffic conditions (see Appendix 6.3 and Appendix 6.4).

6.7 OPENING YEAR CUMULATIVE DEFICIENCIES AND RECOMMENDED IMPROVEMENTS

6.7.1 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Improvement strategies have been recommended at intersections that have been identified as deficient in an effort to reduce each location's peak hour delay and improve the associated LOS grade to an acceptable LOS (LOS D or better). The effectiveness of the recommended improvement strategies discussed below to address Opening Year Cumulative traffic deficiencies is presented in Table 6-3.

The applicant shall participate in the funding of off-site improvements, including traffic signals that are needed to serve cumulative traffic conditions through the payment of Western Riverside County TUMF, City DIF, or a fair share contribution as directed by the City. These fees are collected as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected population increases. Each of the improvements discussed above have been identified as being included as part of TUMF fee program, DIF fee program, or fair share contribution in Section 1.5 *Local and Regional Funding Mechanisms* of this TIA.

Worksheets for Opening Year Cumulative (2021) Without and With Project traffic conditions, with improvements, HCM calculation worksheets are provided in Appendix 6.5 and Appendix 6.6, respectively.

6.7.2 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON ROADWAY SEGMENTS

All study area roadway segments are anticipated to operate at acceptable LOS (LOS D or better) for Opening Year Cumulative traffic conditions. As such, no roadway improvements have been recommended.

PLANNING COMMISSION

STAFF REPORT

Meeting Date: January 26, 2017

IRONWOOD VILLAGE - GENERAL PLAN AMENDMENT, CHANGE OF ZONE, TENTATIVE TRACT MAP 37001, AND DESIGN GUIDELINES FOR A 181 LOT SINGLE FAMILY RESIDENTIAL DEVELOPMENT

Case:	Ironwood Village - General Plan Amendment, Change of Zone, Tentative Tract Map 37001, and Design Guidelines for a 181 Lot Single family Residential Development
Applicant:	Global Investment & Development LLC
Owner:	Ironwood 8 Properties LP
Representative:	Anderson Consulting Engineers, Inc.
Location:	Ironwood Avenue, east of Nason Street and west of Oliver Street (APN: 473-160-004)
Case Planner:	Claudia Manrique
Council District:	2

SUMMARY

The applicant, Global Investment & Development LLC, is requesting to amend the land use and zoning designations on an existing 78.4 gross acre parcel (Assessor's Parcel Number (APN) 473-160-004) for the subdivision and development of a 181 lot single family residential tract (Tentative Tract Map 37001). The project consists of the following entitlements:

- The General Plan Amendment will amend the existing Land Use Designation

from Residential 2 (R2) to Residential 3 (R3) and Residential 5 (R5). Approximately 10.3 acres of Residential 2 (R2) in the northwest corner of the site will become Hillside Residential (HR) (Attachment 1). As part of the General Plan Amendment, the project will amend both the "General Plan Figure 4-2 Future Parkland Acquisition Area" map (Attachment 2) and "General Plan Figure 4-3 Master Plan of Trails" map (Attachment 3). The project site will no longer be considered for future parkland acquisition and the proposed City maintained trail through the center of the site will be removed.

- The Change of Zone will amend the underlying zoning from Residential Agriculture 2 (RA2) to Residential 3 (R3) and Residential 5 (R5) (Attachment 4). The existing approximately 10.3 acres of Hillside Residential (HR) in the northwest corner of the site will remain as Hillside Residential (HR). The Change of Zone also includes withdrawal of the parcel from the Primary Animal Keeping Overlay (PAKO) (Attachment 5).

- Tentative Tract Map proposes to subdivide the 78.4 gross acre parcel into 68.1 net developable acres and 10.3 acres of natural open space. Tentative Tract Map 37001 includes 181 single family residential parcels (Residential 3 (R3) Lots #20 through 68 and Residential 5 (R5) Lots #1 through 19 and 69 through 181) and 16 lettered lots (Attachment 6).

- A Plot Plan for approval of the Ironwood Village Design Guidelines, which include site development regulations in order to provide cohesive design throughout the Ironwood Village Project (Attachment 7). The proposed Project encourages a range of housing alternatives with a variety of lot sizes intermixed with trails, a park, open space areas and water quality features;

- An Initial Study and Mitigated Negative Declaration (MND) were prepared to analyze the potential environmental impacts associated with the project (Attachment 8). The MND was prepared by a qualified environmental consultant in accordance with established California Environmental Quality Act Guidelines and underwent thorough independent review by City staff.

The project, as designed and conditioned, conforms to all development standards and design guidelines for single family residential uses as prescribed in the City's Municipal Code and City Landscape Standards for development within Residential 3 (R3) and Residential 5 (R5) zoning districts.

The proposed project will not have a significant effect on the environment with the implementation of mitigation measures. The Initial Study/Mitigated Negative Declaration recommends 30 mitigation measures to reduce project specific and cumulative impacts related to Air Quality, Biological Resources, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Noise, Transportation/Traffic and Public Safety.

PROJECT DESCRIPTION

The Ironwood Village Project proposes a residential community with design guidelines that will ensure a consistent quality development. The proposed Change of Zone will modify the existing General Plan and zoning designations of RA2 (maximum of 2 dwelling units per acre) to R3 (maximum of 3 dwelling units per acre) on the westerly portion of the site, and R5 (maximum of 5 dwelling units per acre) on the easterly portion. The proposed residential lots are considerably larger than single family residences that could otherwise be permitted under the proposed R3 and R5 zones. The General Plan Amendment amends the General Plan designation from R2 to Hillside Residential (HR) in the northwest portion of the site for consistency with the existing zoning map. The General Plan Amendment to HR will also help to ensure that the steeper slopes within the project are protected and not developed in the future.

The design includes a combination of open spaces, interior walking paths, and park space as a dividing edge between the two density districts. This project includes appropriate use of natural open space, landscaping, trails, right-of-ways and fire access facilities to create a pleasing visual and physical transition between the existing rural residential uses in the vicinity, the project site, and open adjacent hillside residential areas that will remain with the project. The project as designed provides for a suburban life-style in a cohesively planned “private” non-gated community with amenities not commonly found in the adjacent large lot subdivisions.

Tentative Tract Map 37001

Tentative Tract Map 37001 proposes to subdivide a 78.4 gross acre parcel into 68.1 net developable acres and 10.3 acres of natural open space. Tentative Tract Map 37001 includes 181 single family residential parcels (Residential 3 (R3) Lots 20 through 68 and Residential 5 (R5) Lots 1 through 19 and 69 through 181) and 16 lettered lots. Lot sizes for the proposed single-family homes range from a minimum of 7,200 square feet to over 17,200 square feet. The average lot size proposed within the Residential 3 (R3) zoning designation is 11,654 square feet, and within the Residential 5 (R5) zoning is 8,359 square feet. The overall lot size average for the entire tract is 9,251 square feet.

The proposed Ironwood Village Project anticipates 181 units on approximately 38.5 acres, along with approximately twenty-nine point four (29.4) acres of open space, and an additional 10.3 acres of natural open space (i.e. hillsides and rock outcroppings).

Residential Density

The Ironwood Village project is a mix of 49 Residential 3 (R3) lots and 132 Residential 5 (R5) lots for a total of 181 lots on 68.1 net developed acres and a total density of 2.7 dwelling units per acre. The density calculation does not include the approximately 10.3 acres of the site that will remain undeveloped natural open space and designated Hillside Residential (HR).

The density calculation of the entire parcel acreage is 2.3 dwelling units per acre or just

0.3 dwelling units per acre over the maximum allowable density under the existing Residential 2 (R2) General Plan land use designation.

General Plan Amendment

The existing General Plan designation for the project site is Residential 2 (R2), which provides for suburban lifestyles on residential lots larger than commonly available in suburban subdivisions and to provide a rural atmosphere where large animal keeping is allowed. The proposed General Plan designations of Hillside Residential (HR), Residential 3 (R3), Residential 5 (R5) will still allow for suburban lifestyles on lots larger than commonly available in suburban subdivisions. The project provides the opportunity for active lifestyle living with trail linkages, recreational, and open space amenities.

Approximately 10.3 acres of Residential 2 (R2) in the northwest corner of the site will become Hillside Residential (HR) as a result of the proposed General Plan Amendment. The proposed HR portion of the site provides for conservation of the steeper slopes more so than afforded by the existing R2 General Plan designation. In addition, the proposed R3 General Plan designation on the westerly portion of the site will provide an appropriate transition from the proposed R5 area of the project to the existing R2 General Plan designated land to the immediate west of the project site.

The Goals and Objectives of the Community Development Element of the General Plan include providing a wide range of housing types in sufficient numbers suitable to meet the diverse needs of present and future residents of all socioeconomic groups and to support healthy economic development without creating an oversupply of any particular type of housing (Goal 2.4 and Objective 2.2). The proposal will provide a wider range of housing types than currently permitted under the R2 General Plan designation by clustering development on the flatter portions of the site, and protecting the hillside areas.

The range of residential opportunities and dwelling types (Residential 3 (R3), Residential 5 (R5), and Hillside Residential (HR)) proposed in the Ironwood Village Project are described in the General Plan as follows:

- The primary purpose of areas designated Residential 3 (R3) is to provide a transition between rural and urban density development areas, and to provide for a suburban lifestyle on residential lots larger than those commonly found in suburban subdivisions. The maximum allowable density shall be 3.0 dwelling units per acre.

- The primary purpose of areas designated Residential 5 (R5) is to provide for single-family detached housing on standard sized suburban lots. The maximum allowable density shall be 5.0 dwelling units per acre.

- The primary purpose of areas designated Hillside Residential (HR) is to balance the preservation of hillside areas with the development of view-oriented residential uses. General Plan Policy 2.2.2.c goes on to require development in the Hillside Residential (HR) designation to maximize preservation of natural hillside contours, vegetation and other characteristics. Hillside area developments should minimize grading by following the natural contours as much as possible.

As a component of the proposed General Plan Amendment, the project proposes to remove the site from the "General Plan Figure 4-2 Future Parkland Acquisition Area" map and proposes to revise "General Plan Figure 4-3 Master Plan of Trails." The current Master Plan of Trails identifies a theoretical future public trail running north and south through the center of the project parcel connecting to a forked future trail just north of the project limits. This central City trail section is proposed to be replaced with private, Home Owners Association (HOA) maintained multi-use trails that would connect the Ironwood Village Project neighborhoods, interior open spaces and on-site park, and will connect to the future City of Moreno Valley public off-site trails on Ironwood Avenue, Oliver Street and to the north of the project site. Parks, Recreation and Open Space Element Policy 4.2.8 encourages the development of recreational facilities within private developments with appropriate mechanisms to ensure that such facilities are properly maintained and that they remain available to residents in perpetuity.

Based upon the information presented above, the proposed change in land use and trail system are compatible and would not conflict with the goals, objectives, policies or programs of the General Plan. Ironwood Village exhibits a balanced land use pattern that accommodates a range of residential opportunities (Goal 9.1.I), provides recreational amenities including a park, multi-use trails and open space (Goal 9.1.V), and recognizes the need to conserve natural resources by preserving 10.3 acres of the project site as open space (Goal 9.1.VIII).

Change of Zone

The proposed project includes a request for a Change of Zone. The current zoning is Residential Agriculture 2 (RA2) and Hillside Residential (HR). The proposed Change of Zone requests a combination of Residential 3 (R3) and Residential 5 (R5) zoning to provide for a higher number of single family residential units than is currently permitted. The existing Hillside Residential (HR) zone in the northwest corner of the site measures approximately 10.3 acres and is proposed to remain as Hillside Residential (HR) and retained as open space with no residential units planned for development in this area of the project site.

The maximum density allowed in Residential Agriculture 2 (RA2) zones is two (2) units per acre. As an innovative approach, which attempts to respect the integrity of the current General Plan and zoning designations for larger residential lots while also respecting present and anticipated market demands for efficient residential subdivisions, the applicant has proposed a blended zoning modification. The applicant is requesting a change of zone to Residential 3 (R3), which allows up to 3 dwelling units per acre, on the western portion of the Project site and Residential 5 (R5), which allows up to 5 dwelling units per acre, on the eastern portion of the site. A proposed open space and recreation corridor would bisect the property in a north-south orientation, thereby separating the lower density and higher density components. As a result, the tentative tract is proposed at an overall density of 2.7 dwelling units per acre with overall average lot sizes of 9,260 square feet, some lots over 17,000 square feet, and considerate use of open space and trails.

Relationship of Proposed Zoning to Existing Zoning Designations

The project will provide a transition between existing lower density Residential 1 (R1) zoned residential uses immediately to the west of the Project site across Nason Street. Existing parcels to the west range in parcel size from roughly one-half acre to over an acre. The project provides for a thoughtful transition to the existing Residential 2 (R2) residential development to the south and farther to the east across Moreno Beach Drive, as well as Residential Agriculture 2 (RA2), zoning immediately to the east of the Project site.

Discussion of PAKO Overlay

The Change of Zone includes withdrawal of the 78.4 acres of the project area from the Primary Animal Keeping Overlay (PAKO). Residential 3 (R3) and Residential 5 (R5) zoning do not allow for medium and large animal keeping. The purpose of the PAKO district is to provide for animal keeping in areas of the City with rural characteristics. The PAKO overlay applies to animal keeping activities in the Rural Residential (RR), Residential 1 (R1) and Residential Agriculture 2 (RA2) land use districts only within an area bounded by Nason Street to the west, Theodore Street to the east, the city limit line to the north and Cottonwood Avenue to the south. This boundary of available land designated in the City for PAKO is quite large (estimated at 2,500 acres); the withdrawal of the 78.4 acres does not preclude all opportunity for PAKO. Furthermore, the residential market trend in the City over the last decade demonstrates almost no measurable interest/demand for PAKO development.

The residential areas to the west and south of the site are not currently designated as within the PAKO. The existing designated areas within the PAKO overlay in proximity to the project area are immediate north, east, and southeast.

Plot Plan/Design Guidelines

The proposed Project is proposed to be implemented in accordance with the Ironwood Village Design Guidelines (Design Guidelines). The Design Guidelines serve as the codified site development regulations that will ensure cohesive design throughout the Ironwood Village Project. The Design Guidelines respect the intended and desired diversity of housing choices not available with typical tract developments. The Design Guidelines consider the variety of lot sizes available, the intermixed with trails, the park, open space areas and water quality features.

The development standards included in the Ironwood Village Design Guidelines call for a quality mix of floor plans, elevations, colors and materials, and create a walkable neighborhood with access to trails, outdoor recreation and open space opportunities.

The proposed Project Guidelines respect the existing topography, maintain rock outcroppings where feasible and provide a transition into the hillside areas.

Architecture for the Ironwood Village Project reflects the diversity of architectural styles found throughout California. The Ironwood Village Architectural Design Guidelines are intended to ensure design quality and consistency throughout the project while at the same time allowing flexibility during project implementation. The Design Guidelines provide a palette of options for design features and elements to create a comprehensive project that has continuity of design throughout, but is not monotonous or repetitive. The Design Guidelines allow for five different styles of architecture, including Monterey, Spanish Colonial, Santa Barbara, Napa, and Tuscan. The Design Guidelines allow for updated styles as long as the defining features can be identified and applied to the floor plans. The actual detailed architectural design elements and details that will be implemented within the Ironwood Village community will be submitted for review and approval during project implementation.

Site

The 78.4 acre Project site is located in the northeastern portion of City of Moreno Valley immediately northeast of the intersection of Ironwood Avenue and Nason Street, and bounded by Ironwood Avenue on the south, Nason Street on the west, Oliver Street on the east, and vacant land to the north. The Project site is located immediately south of the foothills of the San Timoteo Badlands, and consists of one single-family residential designated parcel (APN 473-160-004-5). There is no street address associated with the property, which is currently vacant land, though several unimproved trails/dirt roads traverse the property, which are oriented east-west and north-south.

Surrounding Area

The surrounding land uses near the site include single-family residential development to the west (Residential 1 (R1) large-lot residential uses, one acre and larger in size) and south (Residential 2 (R2) residential uses up to 2 units per acre). To the east and northeast of the site there vacant land zoned for single-family residential uses (Residential Agriculture 2 (RA2) residential agriculture up to 2 units per acre) and to the north and northeast vacant land zoned for single-family residential uses (Residential Agriculture 2 (RA2) and Hillside Residential (HR) uses). Further east of Moreno Beach Drive and Pettit Street is mix of developed Residential 2 (R2) and Residential Agriculture 2 (RA2) as well as the Calvary Chapel Church of Moreno Valley and School.

Access/Parking

Vehicular access to the Project site will be provided via Ironwood Avenue, Nason Street, and Oliver Street. As shown in Figure A-4 above, the primary driveway for the Project site would be located on Ironwood Avenue about mid-block between Nason Street and Oliver Street, immediately opposite from and north of Lantz Lane. Secondary site access would be provided by driveways on both Nason Street and Oliver Street just north of Ironwood Avenue.

The internal streets within the “private” non-gated Ironwood Village community are proposed to be privately maintained streets. The private roadway section is based on the City’s standard street width of 36 feet from curb face to curb face. However, in order to maintain a unique streetscape within the community, the typical parkway landscape cross-section would be replaced with a dedicated, HOA-maintained, eight-foot lettered landscape lot containing a four-foot-wide concrete sidewalk along a single side of the roadway. The other side of the private road would have homeowner maintain yards to the back of the curb. The roadway section, including curb face, would be dedicated to, and maintained by, the Ironwood Village HOA. Separate easements for utilities would also be dedicated, as necessary, to provide proper services to the “private” non-gated community.

REVIEW PROCESS

A pre-application for this project was submitted on December 19, 2014 with the review process completed in late January 2015. The Project applications were submitted in October 2015. This type of project warrants a comprehensive review, therefore, the plans were routed several City departments, including Public Works, Fire Department, Public Safety, Building, and Planning as well as various outside agencies including, but not limited to the Riverside County Airport Land Use Commission, Moreno Valley Unified School District, Eastern Municipal Water District, Riverside Transit Agency, gas and electric utilities, and several Indian Tribes for their review.

Upon completion of the initial plan review, the project was reviewed by the Pre-Project Review Staff Committee (Pre-PRSC) in January 2016. Modifications were requested to the General Plan and Change of Zone proposal of Residential 3 (R3) with a Planned Unit Development (PUD) application. As the Tentative Tract Map 37001 (TTM) design satisfied the lot standards of both Residential 3 (R3) and Residential 5 (R5) zoning districts without the need for the PUD, the PUD application was replaced with the Design Guidelines, which will regulate site development of TTM and provide cohesive design throughout the Ironwood Village Project. Additional modifications were requested including providing a greater range of pedestrian access throughout the site, south to Ironwood Avenue, limiting development in the northwesterly portion of the site, which will remain zoned Hillside Residential (HR) and a variety of site design considerations. Written comments were provided to the applicant.

Revised plans were submitted by the applicant in May 2016, and progressed through the second and subsequent reviews to work through various site design options between May and September 2016. During this process, the applicant’s environmental consultants were working on the required environmental studies for the project. The Initial Study/Mitigated Negative Declaration and related studies were submitted in August 2016. The environmental documents were finalized in November 2016.

Upon resolution of all outstanding site, building, preliminary grading and environmental review issues, the Initial Study/Mitigated Negative Declaration document was completed and final conditions of approval were drafted so that the project could be scheduled for the Planning Commission public hearing on January 26. 2017.

ENVIRONMENTAL

An Initial Study was prepared by ESA/PCR in compliance with California Environmental Quality Act (CEQA) Guidelines. The Initial Study examined the potential of the proposed project to have an impact on the environment. The Initial Study provides information in support of the findings for a Mitigated Negative Declaration (MND) as the proposed project will not have a significant effect on the environment with the implementation of mitigation measures required for the project. Studies prepared for this project included a traffic study, an air quality study/greenhouse gas analysis, a cultural resource assessment, preliminary hydrology study, geotechnical study, biological resources assessment, Determination of Biologically Equivalent or Superior Preservation (DBESP), and a Preliminary Water Quality Management Plan.

The 30-day public review period for the MND commenced on November 15, 2016 and concluded on December 14, 2016 for the project. The Notice of Intent to Adopt a MND was mailed to interested parties, public agencies and to the State Clearinghouse (#2016111039) and published in the Press Enterprise newspaper on November 15, 2016. The 43 public comment documents (consisted of emails and letters) received have been considered fully in preparing the final MND. A written summary response memorandum to the comment documents received has been prepared and is included as Attachment 9.

Findings of Less Than Significant Impacts with Mitigation Incorporated

Based on the analysis of the Project's impacts provided in the Initial Study, with the incorporation of mitigation, there is no indication that this Project could result in substantial adverse effects the environment. While there would be a variety of effects during construction related to traffic, noise and air quality, these impacts were found to be less than significant based on compliance with applicable regulatory requirements and established impact thresholds, as well as in consideration of the mitigation measures set forth in the Mitigation Monitoring and Reporting Program (MMRP) (Attachment 10). Long-term effects considered include increased vehicular traffic, traffic-related noise, periodic on-site operational noise, various changes to on-site drainage, and change to visual character of the site, with a majority of these impacts affecting adjacent roadway segments and intersections in the immediate area. The analysis concluded that direct and indirect environmental effects can be reduced to less than significant levels with mitigation.

The City staff completed a detailed review of the Initial Study/Mitigated Negative Declaration. Based on the independent judgment of City staff, the analysis fully addresses the requirements of the California Environmental Quality Act. City staff also concur with the determination that the project as designed and conditioned will be consistent with the Multi-species Habitat Conservation Plan (MSHCP). Based on analysis in the Initial Study, the City finds that direct and indirect impacts to human beings and the environment as a whole will be less than significant with mitigation incorporated.

Mitigation Measures

The Initial Study/Mitigated Negative Declaration recommends 30 mitigation measures to reduce project specific and cumulative impacts related to Air Quality, Biological Resources, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Noise, Transportation/Traffic and Public Safety. CEQA requires that public agencies "adopt a reporting and monitoring program for the changes to the project which it has adopted or made a condition of project approval in order to mitigate or avoid significant effects on the environment." (Public Resources Code Section 21081.6) Compliance with these mitigation measures will be accomplished through administrative controls over project planning and implementation through the Mitigation Monitoring and Reporting Program prepared for the project. Monitoring would be accomplished under Reporting Procedures through verification and certification by City staff.

NOTIFICATION

The public hearing notice for this project was published in the local newspaper on January 15, 2017. Public notice was sent to all property owners of record within 300 feet of the project site on January 13, 2017 (Attachment 11). The public hearing notice for this project was also posted on the project site on January 13, 2017.

As of the date of report preparation, staff has received six (6) email correspondences, two (2) phone call and two (2) members of the public at the Planning Division front counter in response to the noticing for this project.

REVIEW AGENCY COMMENTS

In the course of the entitlement phase plan review process, staff sent all potentially affected reviewing agencies a transmittal of project documents for their review. The following responses were received:

Agency	Response Date	Comments
Moreno Valley Utility	November 15, 2015	Will serve notice
Eastern Municipal Water District	November 18, 2015	Submit for a Plan of Service
Riverside County Flood Control	December 19, 2016	Approved storm water plan
Airport Land Use Commission	November 18, 2016	No comments
Santa Ana Regional Water Quality Control Board	December 13, 2016	Project may require permits

The City complied with the requirements of State Assembly Bill 52 requiring notice and consultation to Native American tribal groups. The City coordinated with all participating

Native American tribal groups requesting consultation for this project, and incorporated conditions of approval and mitigation measures as requested. A copy of the Mitigated Negative Declaration was provided to the following Tribes:

- Pechanga Band of Luiseno Mission Indians
- Soboba Band of Luiseño Indians
- Agua Caliente Band of Cahuilla Indians (ACBCI)
- San Manuel Band of Mission Indians (SMBMI)

Staff has coordinated with the agencies listed above and where applicable, conditions of approval have been included to address concerns from the responding agencies.

STAFF RECOMMENDATION

Staff recommends that the Planning Commission take the following action:

1. **APPROVE** Resolution No. 2017-05 and thereby **RECOMMEND** that the City Council:

    - **ADOPT** a Mitigated Negative Declaration, pursuant to the California Environmental Quality Act (CEQA) Guidelines for General Plan Amendment Application No. PEN16-0077 (PA15-0037); and

    - **ADOPT** the Mitigation Monitoring and Reporting Program prepared for General Plan Amendment Application No. PEN16-0077 (PA15-0037 pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

    - **APPROVE** General Plan Amendment Application No. PEN16-0077 (PA15-0037)

2. **APPROVE** Resolution No. 2017-06 and thereby **RECOMMEND** that the City Council:

    - **ADOPT** a Mitigated Negative Declaration, pursuant to the California Environmental Quality Act (CEQA) Guidelines for Change of Zone Application No. PEN16-0078 (PA15-0038); and

    - **ADOPT** the Mitigation Monitoring and Reporting Program prepared for Change of Zone Application No. PEN16-0078 (PA15-0038) pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

    - **APPROVE** Change of Zone Application No. PEN16-0078 (PA15-0038)

3. **APPROVE** Resolution No. 2017-07 and thereby **RECOMMEND** that the City Council:

- **ADOPT** a Mitigated Negative Declaration, pursuant to the California Environmental Quality Act (CEQA) Guidelines for Tentative Tract Map 37001 Application No. PEN16-0079 (PA15-0039) and Plot Plan Application PEN16-0080 (PA15-0040); and

- **ADOPT** the Mitigation Monitoring and Reporting Program prepared for Tentative Tract Map 37001 Application No. PEN16-0079 (PA15-0039) and Plot Plan Application PEN16-0080 (PA15-0040) for the Ironwood Village Design Guidelines pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

- **APPROVE** Tentative Tract Map 37001 Application No. PEN16-0079 (PA15-0039)

- **APPROVE** Plot Plan Application PEN16-0080 (PA15-0040) for the Ironwood Village Design Guidelines

STORM WATER NOTE

THE PROJECT SITE WILL COLLECT OFFSITE FLOWS VIA ONE OF THREE STORM DRAIN SYSTEMS DESIGNATED AS LINE A1, LINE A5 AND LINE B1. THE STORM DRAIN SIZES RANGE FROM 18 TO 48 RCP. LINES A1 AND B1 DISCHARGE INTO BASINS A (WESTERLY BASIN) AND B (EASTERLY BASIN), RESPECTIVELY. LINE A5 CONNECTS DIRECTLY TO THE EXISTING 42" CMP "WEST" STORM DRAIN CROSSING IRONWOOD AVENUE. THE TRIBUTARY OFFSITE AREA COLLECTED BY THESE SYSTEMS IS ROUGHLY 133 ACRES. THE PROJECT SITE DISCHARGES FLOWS FROM BASINS A AND B INTO THE EXISTING 42" CMP "MIDDLE" AND EXISTING 24" CMP "EAST". SEE "PRELIMINARY HYDROLOGY AND HYDRAULIC STUDY FOR TENTATIVE TRACT MAP 37001 – IRONWOOD" PREPARED BY ALC ENGINEERING AND CONSULTING, INC.

LIST OF FIGURES *Page*

Ironwood Village Design Guidelines:
Tentative Tract 31007

Project Location

The location of the *Ironwood Village* Tentative Tract Number 31007 (TTM 31007) is North of Ironwood Avenue, East of Nason Street, West of Oliver Street and the northern boundary is just north of the proposed Juniper Avenue alignment in the City of Moreno Valley, California. ***Please refer to Figure 1-1 Site Location.***

Purpose

The purpose of the *Ironwood Village* TTM 31007 Design Guidelines (site development regulations) is to provide cohesive design throughout the *Ironwood Village* project. Creating a diversity of housing choices not available with a standard tract map, the project will encourage a range of housing alternatives with a variety of lot sizes intermixed with trails, a park, trail head, open space areas and water quality features. The design guidelines will require a quality mix of products, while creating walkable neighborhood with access to trails and other outdoor recreation / open space opportunities. The *Ironwood Village* project will conserve the northwestern hillside areas and will not be building on that portion of the site. The project is designed to respect the existing topography, maintain rock outcroppings where feasible and provide a transition into the hillside areas. The Design Guidelines provide the development standards, architecture, and landscaping standards necessary to create this unique housing project within the City of Moreno Valley. The *Ironwood Village* project will provide a buffer with the appropriate use of natural open space, landscaping, trails, right-of-ways and fire access creating a pleasing visual transition between the existing rural residential uses. While providing for a suburban life-style in a cohesively planned community with amenities not commonly found in typical subdivisions. The proposed *Ironwood Village* anticipates one hundred eighty-one (181) units on approximately thirty-eight and one half (38.5) acres, along with approximately twenty-nine point three (29.3) acres of open space and basin areas, and an additional ten point six (10.6) acres of natural open space (i.e. hillsides and rock outcroppings) with a mix of lot sizes range from ten thousand (10,000) square feet minimum down to seven thousand two hundred (7,200) square feet minimum lot sizes.

Theme

The theme for *Ironwood Village* will be typical traditional California styles of architecture (i.e. Monterey, Spanish Colonial, Santa Barbara, Napa, & Tuscan.) The theme is broad enough to allow for a diversity of architectural and landscape details, elements and styles to create a cohesive but, unique residential community. The architecture and overall project theme allows for varied streetscapes, while keeping a consistent and welcoming community atmosphere that will be inviting and comfortable for the residents and visitors alike.

1. Site Planning and Design

The following section includes the *Ironwood Village* development standards that encourages innovative housing development, with a diversity of housing choices, not typically found in a standard housing tract. To ensure that the neighborhoods are interesting and varied in appearance, at least one (1) single-story design is required. The addition of a single-story elements help to create a mix of not only architectural styles but, an array of building heights and building articulation avoiding the creation of a monotonous streetscape. The project is designed to respect the existing topography and provide a transition to the steeper hillside areas, within and adjacent to the project site. ***Please refer to Figure 1- 2 Land Use Plan.***

a. Setbacks

Table 1-1 lists the development standards required for development within the *Ironwood Village* project area.

TABLE 1-1

Summary of Setback Requirements		
Minimum Lot Size (sq. ft. net area)	10,000 sf **(R3)**	7,200 sf **(R5)**
Minimum Lot Width	90'	70'
Minimum Lot width Cul-De-Sac / Knuckle Frontage	50'	50'
Minimum Lot Depth	100'	100'
Typical House Width		
Front Setbacks		
Minimum Typical Front yard setback	25'	20'
Minimum Front Facing Garage	25'	20'
Minimum Swing-in Garage	16'	16'

Ironwood Village

Rear Setbacks		
Minimum Rear	30'	15'
Side Setbacks		
Minimum Interior Side Yard	*combined 20'	**combined 15'
Minimum Street Side yard	15'	15'
Maximum Building Height		
Dwelling Unit Maximum two stories	35'	35'
Accessory Structures	35'	35'
Miscellaneous		
Maximum Lot Coverage	50%	50%
Minimum Dwelling Size, (sq. ft.)	1,250 sf	1,250 sf
Minimum Distance Between buildings	10'	10'

* Combined interior side yard setbacks of 20' shall be provided with a minimum of 5' on one side.
** Combined interior side yard setbacks of 15' shall be provided with a minimum of 5' on one side.

All of the setbacks are minimums unless noted as otherwise and shall be measured from the property line.

Side yard setbacks shall have a minimum of five feet (5′) of flat usable pad area in all conditions as measured to the center of any wall or fence, or top of slope, or toe of slope.

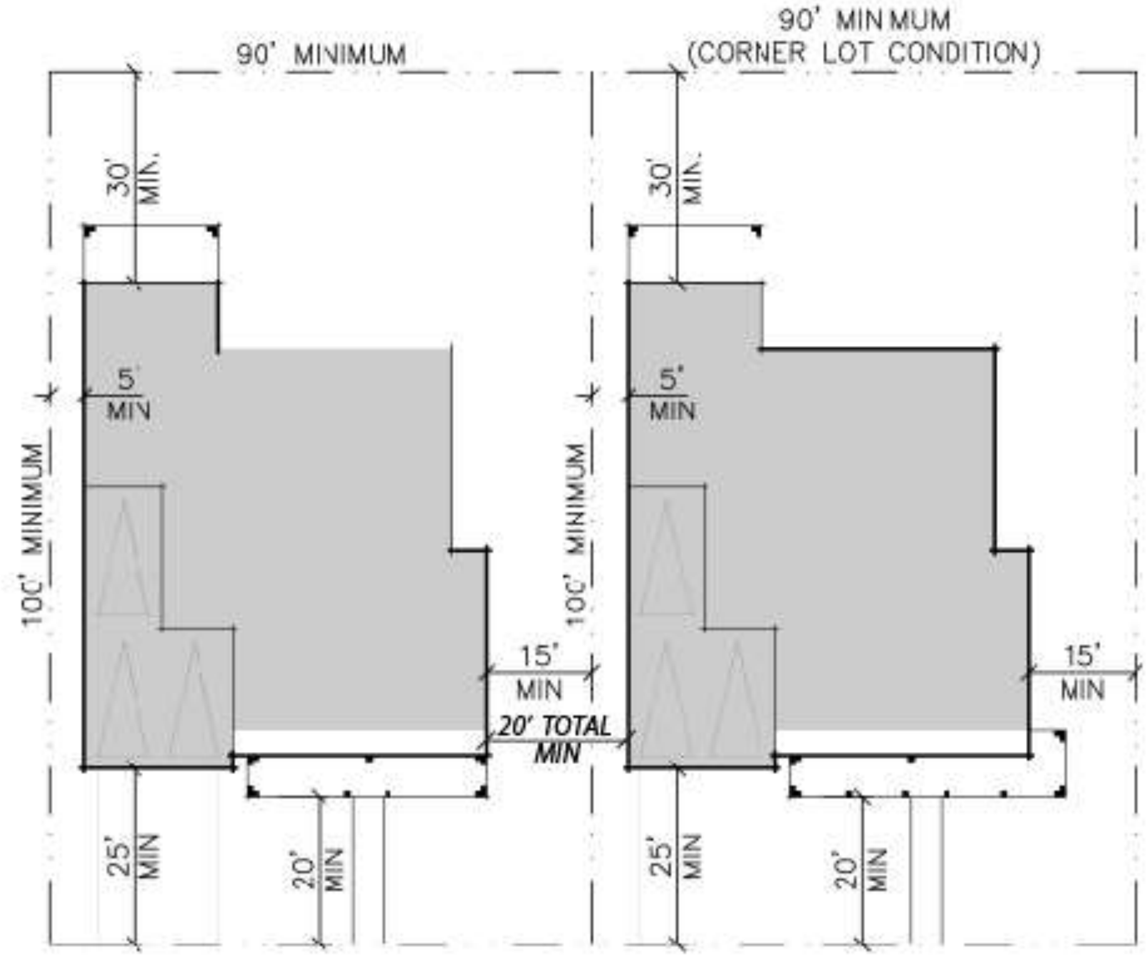
Vary front setbacks up to five feet (5′) to the extent flat useable pad depths exceed one-hundred ten feet (110′) (at their narrowest point) when possible.

Where feasible, center the house within the buildable pad width to maximize separation between adjacent houses.

Maximum lot coverage including garage shall be fifty percent (50%.)

Side-on garages are one of the optional architectural design elements that can increase the architectural variation, enhancing the project’s overall visual appeal.

Figure 1- 3 10,000 sf building footprint (R3)

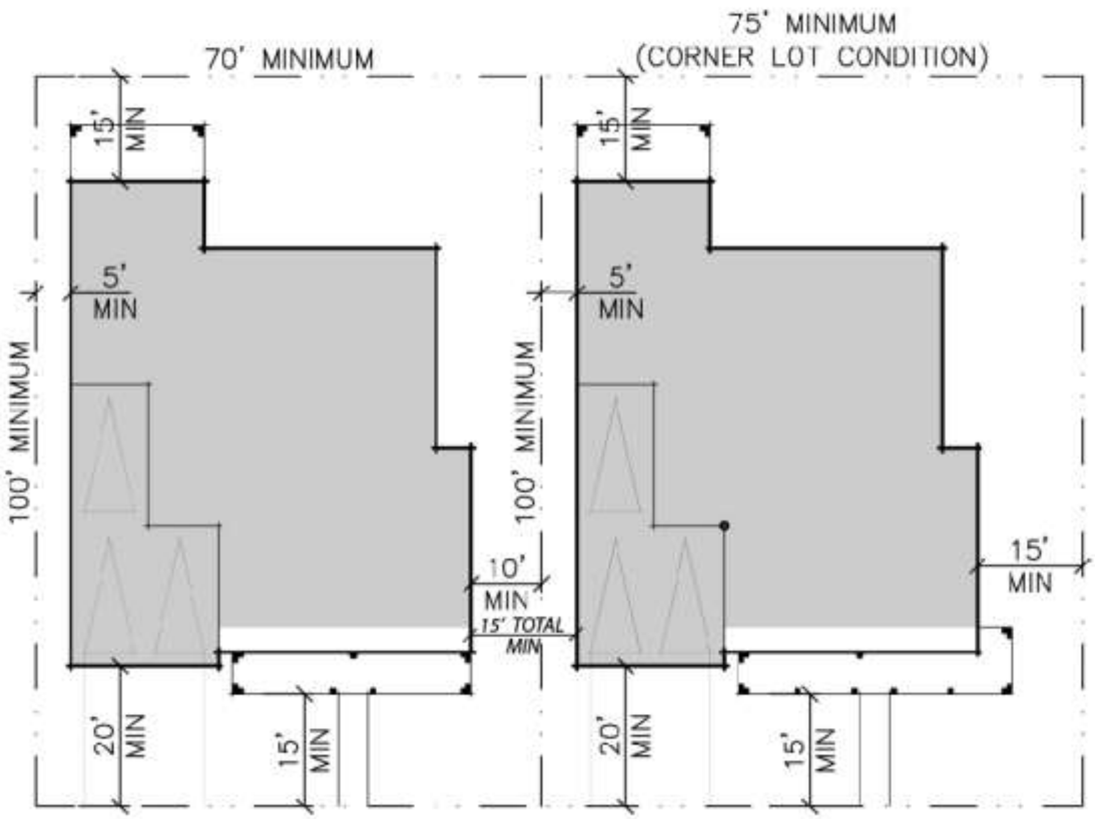


WALL LEGEND

SINGLE-STORY

TWO-STORY

Figure 1- 4 7,200 sf building footprint (R5)



b. Plotting Requirements

A mix of dwelling unit sizes, floor plans, and elevations shall be provided (*Refer to Section 3 Architectural Style*).

To create a varied and unique streetscape, neither the same floor plan nor the same elevation style shall be plotted next to or directly across the street from itself. "Directly across the street" is defined as more than one half (½) of the narrower lot overlapping the wider lot across the street from the lot in question.

- Repetitive patterns of garage placement shall be avoided when possible.
- Unless street slope prevents otherwise, a left or right side on garage may not be plotted more than three (3) times in a row.
- Corner lots shall incorporate single-story elements into their design to minimize visual impacts.

2. Architectural Design

The *Ironwood Village* Architectural Design Guidelines are envisioned as just that "guidelines"; they are intentionally created to allow ultimate flexibility to the builder and are purely illustrative in character for the final buildout. The guidelines provide the builder with a palette of options of design features and elements to be mixed and matched to create a comprehensive project that has one personality throughout, although is not boring or repetitive. The actual detailed architectural design elements and details that will be used within the *Ironwood Village* community will be decided at time of buildout by the builder with approval by the City of Moreno Valley.

a. Design Principals

While these design guidelines suggest architectural styles, the styles utilized should be authentic and distinct. Traditional styles tend to have defining features that should be consistently implemented throughout the *Ironwood Village* development. These guidelines allow for updated styles as long as the defining features can be identified and applied to the floor plans.

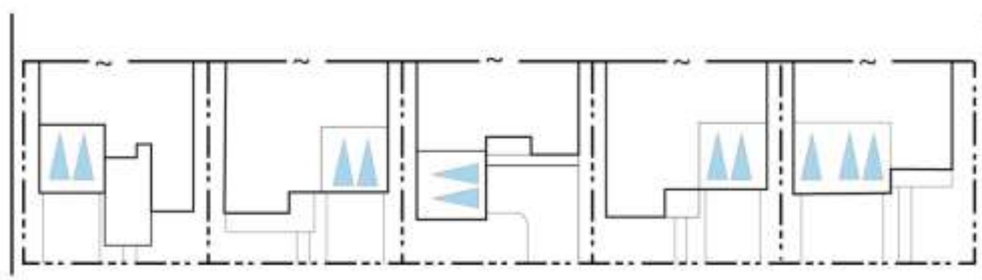
Architectural styles should be dictated by the massing of the floor plans and a certain style should not be forced upon every floor plan. By emphasizing authentic styles, these guidelines discourage similarity and uniformity of residential buildings. The street scene should be diverse as to form, massing, features, windows, front doors, garage doors, materials and colors.

As appropriate resource efficiency should influence architectural styles. The concept of resource efficiency includes reduction of wasteful elements in the design and construction of the house as well as conservation of energy, natural resources and water during occupancy of the home.

b. Form and Massing

Building mass and scale are key design elements that affect how a structure and the immediate surrounding areas are perceived. Controlling the mass of a building through design articulation of the building facades, attention to rooflines and variation in vertical and horizontal planes reduces the visual mass of a building. Building massing should be varied to provide interesting form, proportion and scale. Monolithic forms are discouraged; massing variety should be three dimensional. The perception of a buildings massing may be altered through the use of landscaping as well as the use of light and shadows.

Figure 2- 1 Varied Massing Diagram



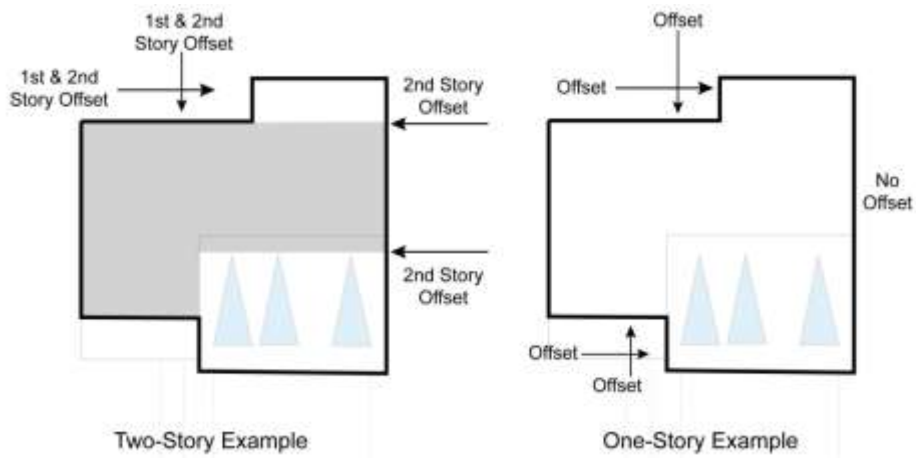
The Varied Massing Diagram is for illustrative purposes only, the floor plans and mix of two (2) and three (3) car garages may vary.

Design details should be included on the rear and sides of homes, creating four (4) sided architecture. Neighborhood housing should be arranged to create a varied appearance of building heights, articulation and setbacks for a comprehensive and integrated street scene.

Special design features (i.e. recessed entry ways, covered front porches, window and door articulation, variety of masonry accents, balcony's, courtyards, extended overhangs and varied building setbacks) are expected. General massing should vary perceptibly among the distinct floor plans. Together with variable setbacks, massing variation will create visual diversity along neighborhood streets.

- Every side of a two-story house must have at least one plane break "offset" at the first and/or second story in order to avoid monolithic elevations. A plane break must be at least two feet (2').
- Three (3) sides of a single-story floor plan must have at least one (1) plane break "offset". A plane break must be at least two feet (2').
- The floor area of a second story, including the stairs, may not exceed eighty percent (80%) of the floor area of the first story including the garage and any porch areas.
- Shadow patterns created by architectural details such as overhangs, projections and recesses of stories, balconies, reveals and/or awnings are encouraged, adding interest and aiding in climate control.

Figure 2-2 Example of Offsets



The Example Offsets are for illustrative purposes only, the floor plans and actual offsets may vary.

c. Roofs

Rows of homes backing onto a hillside are perceived by their contrast against the hillside area. The prevailing impact is the shape of the house and roofline. The house mass shall be varied to minimize the visual impact of similar housing silhouettes and similar ridge heights. This can be achieved by using a variety of roof structure designs such as; front-to-rear, side-to-side, gables and hipped roofs and/or by the introduction of single-story elements.

- Roof pitches should vary according to the architectural style. Primary roof pitches may be three to twelve (3:12), four to twelve (4:12), five to twelve (5:12) or six to twelve (6:12) (*for solar panel efficiency*). Secondary roof pitches can vary from primary roof pitches but only if such variation is consistent with the architectural style.
- To the extent they are consistent with an architectural style; hipped roofs are encouraged in order to accommodate solar panels and to cast shade over windows.
- Simplified rooflines are encouraged in order to accommodate integrated solar panels. Provide large enough unbroken roof planes to be sufficient to meet the state code for "solar zones."
- Eave depths should vary according to the architectural style and may range in depth from twelve to twenty-four inches (12 – 24").
- Porches and balconies are encouraged when consistent with the architectural style of the house. The minimum porch depth shall be five feet (5') to edge of the porch.

Figure 2-3 Varied roof examples

The variety of roof examples shown may be utilized for both single-story and two-story floor plans. These roof types are found within the architectural styles to be used within the *Ironwood Village* community.

d. Garage Orientation / Location and Design

The visual impact of three-car garages should be reduced wherever feasible. Although not necessarily depicted on the architectural elevations (see Section 3 Architectural Styles), the builder(s) of *Ironwood Village* will pay attention to the design, placement, and orientation of garages. Depending on the lot size, this can be achieved in a number of ways including but not limited to the following:

- Garage setback greater than the front of the house.
- Side-on a side-on garage shall have a minimum back-up area of twenty-eight feet (28'). (*Side-on garages are one of the optional architectural design elements that can increase the architectural variation, enhancing the project's overall visual appeal.)*
- Porte-cochere architectural element (covered parking area).
- Tandem garages allow for parking a boat or two vehicles (one behind the other) inside "one stall" of the garage that is twice the depth.
- Garage door details shall vary in manner that is consistent with the architectural style.
- Garage door windows are standard.
- Front-facing garages shall not be wider than sixty-five percent (65%) of the house width.
- Exclusive use of three-car front-facing garages in all floor plans is not permitted. Three-car front-facing garages may only be utilized if a single garage door is offset from the double garage door.

e. Architectural Elements

Architectural styles for *Ironwood Village* should be chosen in part as an opportunity to introduce a variety of exterior accent details and materials (i.e. brick, wood siding, masonry, metal, pre-cast concrete, timber, stucco or ceramic tile).

- Color schemes should be simple, attractive and consistent with the architectural style.
- Front door details shall vary according to architectural style.
- Feature window shapes shall vary according to architectural style.
- Acceptable roof materials include concrete tiles, and metal but exclude composition shingles and should be consistent with the architectural style of the building.

- Chimneys, which may cast shadows over solar panels, are optional and should be consistent with the architectural style.
- A minimum of two (2) photosensitive carriage lights per house are required and the style should vary according to architectural style.
- Shutters are not required; but to the extent they are used, shutter sizes should be proportional to the window and shutter styles should vary in accordance with the architectural style.
- Trim details from the front elevation should be applied to the sides and rear elevations of the house for continuity and vary in accordance with the architectural style.

f. Mechanical Equipment

All mechanical equipment for individual dwelling units (i.e. air conditioners, heating, cooling and ventilation equipment and/or all other such equipment) will not be roof mounted and shall be screened from surrounding properties and streets (by using screening, privacy fencing/walls and/or landscaping) and shall not be located in the front yard or street side yard outside of building setbacks.

Architectural Style

Architecture within *Ironwood Village* reflects the diversity of architectural styles found throughout California. The architectural elements and details provided within this Design Guidelines document are guidelines, not required details and/or elements. The implementation of modern interpretations of the historical architectural styles are allowed as appropriate.

The Architectural styles and the design elements shown in this document are purely for illustrative purposes and the actual product may vary. It is required that the chosen architectural styles be utilized and the elevations are identifiable and the street scene is varied. Generic box architecture that has an unidentifiable style or detailing is not permitted. The actual detailed architectural designs and details that will be used within the *Ironwood Village* community will be decided at time of buildout by the builder with approval by the City of Moreno Valley.

ARCHITECTURAL STYLES

Architectural Styles

Ironwood Village is envisioned as a community with a variety of home styles where architectural massing, roof forms, detailing, walls and landscape are integrated to reflect historic, regional, and climate-appropriate styles. Five styles have been chosen for the Ironwood Village community.

- Monterey
- Spanish Colonial
- Santa Barbara
- Napa
- Tuscan

ARCHITECTURAL STYLES

1. Monterey

The Monterey style emerged in the town of Monterey on California's central coast in the mid-19th Century. The style developed from a combination of two-story New England colonial house with an Adobe brick exterior. Later, the Monterey style was merged with elements from the Spanish Eclectic and Colonial Revival styles. Regardless of this evolution, the defining feature of the Monterey style remained the same: a prominent second-floor balcony.

Identifying Characteristics

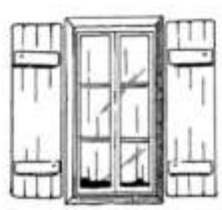
- Simple 2-story building forms
- Cantilevered balconies on front facades
- Pot shelves and decorative vents

Figure 3-1 Monterey Style

ARCHITECTURAL STYLES

Style Elements	Required
Form	• Typically two stories with simple building massing
Roof	• Low pitched gable roofs (occasionally hipped), 3.5:12 to 4:12 • 12" to 24" overhangs • Shallow sloped, concrete 'S' tile roofs in variegated colors (red clay is predominant color) • Flat concrete shingle
Walls	• Stucco exterior walls, smooth to light sand finish • Brick or siding (shingle, or vertical board-and-batten) • First and second stories frequently have different finish materials, with wood over brick being most common
Windows	• Rectangular, vertically proportioned windows • Paired windows • Full length window opening onto balcony • Simple window trim
Details	• Wood balcony and railing • Decorative shaped rafter tails • Ornate chimney cap • Round tile attic vents • Shutters as occasional accents
Colors	• Whites, painted brick building color • White or dark brown trim

Cantilevered Second



Shutter and Window

Pot Shelves

Graphics shown are for illustrative purpose only

ARCHITECTURAL STYLES

2. Spanish Colonial

The Spanish Colonial style was popular during the 1920s and early 1930s. This style evolved in California and the southwest as an adaptation of Mission Revival infused with additional elements and details from Latin America. It is common in California, Arizona, Texas and Florida. The key elements of this style were adapted to the California lifestyle. Plans were informally organized around a courtyard with the front elevation simply articulated and detailed.

Identifying Characteristics

- Terra cotta or red concrete tile roofs
- Entry courtyards with gates
- Decorative elements, including wrought iron, clay vents, ceramic tiles, etc.

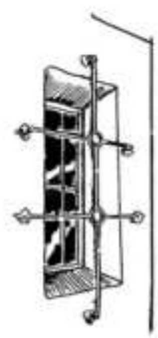
Figure 3-2 Spanish Colonial Style

Ironwood Village

ARCHITECTURAL STYLES

Style Elements	Required
Form	• One-and Two-story building massing, often asymmetrical in form
Roof	• Typical 4:12 roof pitch • Predominant gable and shed with tight rake and 12"-18" eaves • Full 'S' concrete tile • Limited use of conical roofs on circular towers
Walls	• Stucco exterior walls, smooth to light sand finish • Shaped stucco eave details
Windows	• Recessed Feature windows • Square, rectilinear or round accent window • Vertical proportioned windows • Simple window trim • Tile or pre-cast window trim at select locations
Details	• Decorative iron lanterns, sconces, hinges, railing and hardware • Fabric or metal awnings • Sculpted walls and chimneys • Gable end roof vents • Pre-cast concrete accents • Round pre-cast concrete columns, or stucco pilaster with decorative cornice trim
Colors	• Off-white or cream building color • Dark brown trim • Bright accent color on entry door, shutters and awnings

Decorative Tile



Recessed Window

Decorative Wrought Iron

Graphics shown are for illustrative purpose only

ARCHITECTURAL STYLES

3. Santa Barbara

This style was established in the City of Santa Barbara. After the devastating earthquake of 1925, the City adopted the Hispanic style as its official style. The Santa Barbara style has its roots in the Spanish colonial revival style. White-washed stucco walls are inherent to the Santa Barbara style, which also features boxy, simple forms, low-pitched gable roof form, and the use of wood and tile as accent details.

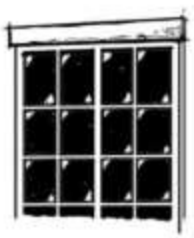
Identifying Characteristics

- Stucco with light sand finish
- Boxy, simple massing
- Fully rounded arch elements
- Deeply recessed wall fenestration and asymmetrical volumes grouped about courtyards
- Dark wood exposed rafter tails
- Wrought iron accents

Figure 3-3 Santa Barbara Style

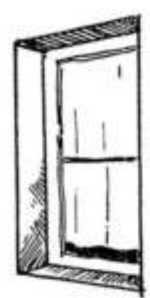
ARCHITECTURAL STYLES

Style Elements	Required
Form	• Boxy, simple massing • One- and two-story stacked elements • Recessed entry or covered porch
Roof	• Roof pitch: 4:12 to 5:12 • 0-6" rake and 18"-24" eaves • Full 'S' concrete tile • Hip or intersecting gable roof
Walls	• Stucco exterior walls, smooth to light sand finish • Stucco eave details
Windows	• Vertical multi-paned windows • Accent recessed window • Simple window trim
Details	• Decorative wrought iron accent details • Decorative shaped rafter tails • Sculpted walls and chimneys • Gable end roof vents • Full round arched arcades or openings • Juliette balconies
Colors	• Off-white and cream building color • Cream and earth tone trim • Dark colored eaves and fascia



Window Headers

Balcony



Recessed Windows

Graphics shown are for illustrative purpose only

ARCHITECTURAL STYLES

4. *Napa*

This style has evolved in California's Napa Valley. The architecture shares elements of California Eclectic and Mediterranean historical styles. To respond to the local climate environment, large overhangs are incorporated into the style in order to shield the house from sun in summer and warm the house in winter. Deep earth tone colors help to ground the Architecture and blend into the landscape design.

Identifying Characteristics

- Deep earth tone
- 'S'- shaped or flat concrete roof tiles
- Large overhang
- Stucco finish
- Masonry veneer accents

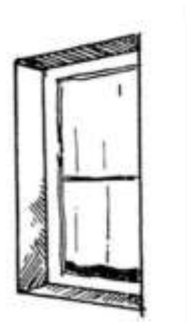
Figure 3-4 Napa Style

ARCHITECTURAL STYLES

Style Elements	Required
Form	• Informal arrangement of one- and two-story building forms
Roof	• Roof pitch: 4:12 to 6:12 • 12" to 24" overhangs at eaves • 6" to 12" overhangs at rakes • Full 'S' concrete tile or flat shingle w/ barrel tile hips/ridges • Main hip or gable roof with secondary shed or gable roofs over one-story elements
Walls	• Stucco finish with masonry veneer accents
Windows	• Recessed windows • Vertically oriented, multi-light window • Simple window trim
Details	• Decorative iron accents • Decorative shaped rafter tails • Pre-cast door or window trims
Colors	• Deep earth tone building color • Lighter or darker contrasting trim color • Dark or rich accent color

Window with Louvered Shutters

Overhang



Recessed Windows

Graphics shown are for illustrative purpose only

ARCHITECTURAL STYLES

5. Tuscan

The Tuscan style home originates from the Tuscany region of Italy and has become a highly sought-after style of architecture. The style represents the unique heritage of the region and is true to its original design created during the Middle Ages. Tuscan style homes incorporate accent materials such as stone, fieldstone, brick, or other rustic materials. Shed and hip roofs or occasional gable or cross gables help identify the Tuscan style as well.

Identifying Characteristics

- Stucco wall materials with stone accent wall planes
- Typically shallower pitched hip or gable roofs with "S" tile
- Exposed rafter tails with decorative end cuts
- Front entries typically detailed with a pre-cast trim surround and wood head trim

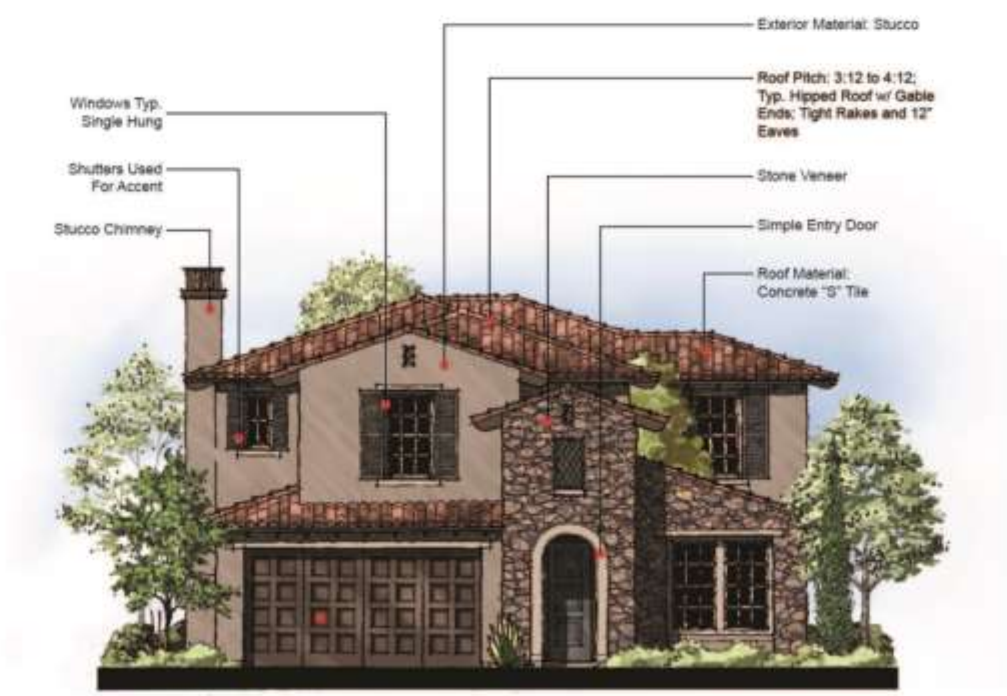


Figure 3-5 Tuscan Style

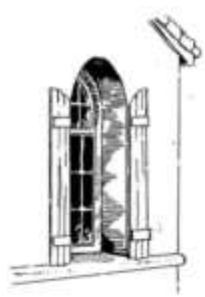
ARCHITECTURAL STYLES

Style Elements	Required
Form	• Informal arrangement of one- and two-story building forms
Roof	• Low pitched roofs, 3:12 to 4:12 • Tight to 18" overhangs at eaves • Tight to 12" overhangs at rakes • Full 'S' concrete tile • Shed and hip roofs or occasional gable or cross gable
Walls	• Stucco exterior walls, smooth to light sand finish • Hill stone accents
Windows	• Recessed windows • Shaped window trim
Details	• Decorative "lacy" wrought iron grille work • Entry door patterns shall reflect architectural style of the building • Decorative iron accents • Decorative shutters and awnings • Arched windows or openings • Decorative shaped rafter tails
Colors	• Variety of rich earth tone building color • Lighter or darker contrasting trim color • Dark or bright accent color

Round Arches



Recessed Window

Decorative Balcony

Graphics shown are for illustrative purpose only

a. Variation Requirements

The variation requirements below have been determined by fixing the maximum average frequency of a given house at two (2) times per development. The frequency equals the number of lots in a planning area divided by the number of required house footprint combinations. These variation requirements, along with the mix requirements, will help to ensure development of an architecturally diverse community.

Table 2-1 Summary of Variation Requirements

Summary of Footprint Variation Requirements		
Number of Lots	**Minimum Footprints**	**Minimum Elevation Footprints**
181	6	6

Note: These minimum Footprints are per the City of Moreno Valley Municipal Code 9.16.130 (Table 9.16.130B)

If the project is split into two or more planning areas, ***Table 2-1 Summary of variation requirements*** for the revised number of lots will meet or exceed the City of Moreno Valley Municipal Code Section 9.16.130 Table B which applies to all projects within the City of Moreno Valley.

The table should be regarded as a minimum, reverse versions of each floor plan must be provided.

To minimize visual impact, corner residential structures shall be single-story or if two-story, shall incorporate single-story elements into the design. The short and low side of the home should be sited fronting the street corner.

b. Mix Requirements

A single floor plan may not be plotted with less than fifteen percent (15%) or more than a twenty-five percent (25%) frequency, unless otherwise directed to do so by City of Moreno Valley staff.

c. Colors and Materials

A range colors and textures of building materials are required to lend to the appearance of a varied street scene. The use of appropriate building materials and colors helps to maintain a specific architectural style, as well as providing a diverse neighborhood design. Material breaks, transitions and terminations should produce clear definitions of separation while maintaining a defined color and/or materials theme. This is important when transitioning from stucco and/or siding to masonry veneers. Colors and materials should visually blend with the hillsides. The actual colors and materials to be used within the *Ironwood Village* community will be decided at time of buildout by the builder with approval by the City of Moreno Valley.

3. Landscape Design

The conceptual landscape and planting design provides the identity to the *Ironwood Village* community that at time of buildout the builder shall comply with the ***City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code***. The plant palette for *Ironwood Village* will be appropriate to the project's climate. The landscaping shall be where appropriate drought tolerant/native vegetation and utilize water-conserving equipment including the installation of bubblers, drip systems, low volume sprays and/or smart irrigation controls when feasible.

Landscaping shall consist predominately of plant materials that include water efficient "drought tolerant", and/or native plants. The landscape areas shall be designed to promote water retention and allow runoff from impervious surfaces to permeable areas. Hardscape areas are recommended to be constructed with pervious surfaces where feasible to reduce run off and allow water percolation.

The landscape plan incorporates the water retention/detention/ water quality basins as well as the hillside areas that are to be conserved and the fuel modification areas as shown on TTM 37001. Project open space, fuel modification area, interior streets, interior trails and park will be maintained by the *Ironwood Village* Home Owners Association (HOA.) In addition, there are exterior multi-use trails along the roadways adjacent to the project, and a trail head (*located in the southeast corner of the project at Ironwood Avenue and*

Oliver Street) connecting to future City of Moreno Valley Proposed off-site trails; these will be maintained by the City of Moreno Valley. The drainages will be maintained by the City of Moreno Valley, however the water basins will be maintained by the *Ironwood Village* HOA (landscaping) . ***Please refer to Figure 4-1 Maintenance Responsibility***. The actual detailed landscape design and placement that will be used within the *Ironwood Village* community will be decided at time of buildout by the builder with approval by the City of Moreno Valley.

a. Community Landscape, Walls and Fencing

All of the *Ironwood Village's* community areas will be landscaped as appropriate per ***City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code***. The landscape will provide a cohesive appearance to the community and aid in the transition to and from adjacent areas. The visible *Ironwood Village* perimeter walls include a six feet (6') high block wall with pilasters and concrete block cap. Neighborhood walls will be six feet (6') high concrete masonry walls and vinyl privacy fencing in tan or white for residential privacy are to be a five feet six inches (5' 6") high, made with 6" vinyl tongue and groove with 7" top and bottom vinyl rails. Adjacent to the multi-use trails, a five feet (5') high, in tan or white three rail vinyl fence or a Three (3) Cable and Post fencing along the trails should be minimized, unless needed when out of "public view". Therefore, a trail may have no fence or a Three (3) cable and post fence, along the hilly trail sections if necessary the two trail fencing types are to be per City of Moreno Valley standards will define the trail areas. Top of slopes in the rear yards, a six feet (6') high view wall will be built; a low wall with tubular steel fencing on top will be provided. Tubular steel fencing will also be provided adjacent to water quality basins and the park per City of Moreno Valley standards. There will be an Entry monument located at the project entry into the project from Ironwood Avenue. In addition, there will be secondary entry monument at the Nason Street entry road and the Oliver Street entry road. ***Please refer to Figure 4- 2 Preliminary Wall/Fence Plan & Figure 4-4 Trails and Open Space Plan.***

The walls and fencing shall meet the following requirements as shown on ***Figure 4- 2 Preliminary Walls and Fence Plan.*** All of the public walls and fencing will be maintained by the *Ironwood Village* HOA. However, individual residential lot walls/ fences will be maintained by the homeowner. The Wall and Fence materials and colors will be decided at time of buildout by the builder with approval from the City of Moreno Valley.

Block Community Walls (*Perimeter Wall & Neighborhood Wall*)

- Block walls will be block or an approved alternative. This includes perimeter walls and private areas.
- Colored concrete caps at wall and pilaster tops shall match the color of the masonry.
- Perimeter wall pilasters will match the block material and color.
- Retaining walls will match the block wall conditions.
- Perimeter & neighborhood walls should have two feet (2′) wide square block pilasters which match the wall, with a two inch (2″) cap block.
- Perimeter walls should be four inches by six inches by sixteen inches (6″x 8″x 16″) stucco over regular CMU or split face CMU.
- Perimeter walls should have six inches by eight inches by sixteen inches (6″x 8″x 16″) split face CMU along the top edge of the wall.
- Perimeter walls should have fourteen inches (14″) Concrete Cap on top of the wall.
- Neighborhood walls should be four inches by eight inches by sixteen inches (4″x 8″x 16″) regular CMU.
- Entry Monuments with the Ironwood Village logo will be placed within the Ironwood Avenue, Nason Street and Oliver Street entrance road landscape setback areas. (*Exact design has not been determined at this time and will be determined at time of buildout by the builder and approved by the City of Moreno Valley*.)
- *Please refer to* ***Figure 4—3 Wall/Fence Details****.*

Rear Fencing on Slopes (*View Wall*)

- The "View Wall" low block wall twenty-four inches (24″) high lower wall will match the community block wall, with tubular steel fencing placed on top of the lower block wall.

- The view walls will be made with tubular steel fencing materials.
- View walls should have one and one-half inches (1 ½ “) square tubular steel tubing, top and bottom rails.
- View walls should have one inch (1”) square steel tubing pickets set four and one-half inches (4 ½ “) on-center spacing.
- View walls should have two feet (2’) wide square block pilasters which match the wall, with a two inch (2”) cap block.
- View walls should be stucco over or split face CMU block six inches by eight inches by sixteen inches (6”x 8”x 16”) regular CMU.
- View walls should have four inch (4”) square tubular steel posts at property line corners, with a Newel Post Ball on top.
- View walls should be along the back of the lots, that back onto open space or other lots that back to open space areas but, not along trails.
- *Please refer to **Figure 4—3 Wall/Fence Details**.*

Interior Fencing (*Privacy Fence*)

- Interior privacy fencing will be tan or white vinyl for both interior property lines and fence return conditions.
- Interior fencing heights will vary but no lower than five feet six inches (5’ 6”) high.
- Privacy fencing should have five inches by five inches (5” x 5”) Vinyl Post.
- Privacy fencing should have a domed cap on top of the post.
- Privacy fencing should have six inch (6”) wide tongue and groove Vinyl or fencing that simulates tongue and groove.
- Privacy fencing should have two inches by seven inches (2” x 7”) Top and Bottom vinyl rails.
- Vinyl privacy fencing will be tan or white.
- Gates will be constructed to match the tan or white interior vinyl privacy fence.
- *Please refer to **Figure 4—3 Wall/Fence Details**.*

Trail Fencing (*3 Rail Fence*)

- Trail fencing will be per City of Moreno Valley standards.
- Vinyl Ribbed Rails in tan or white.
- Five inches by five inches (5”x 5”) Vinyl Posts in tan or white.

- Posts will be topped with post caps that match the vinyl posts in tan or white.
- Three rail fencing should have one and one-half inches by five and one-half inches (1 ½ x 5 ½ “) vinyl ribbed rails, spaced eleven inches to twelve and one-half inches (11” – 12 ½ “) apart.
- *Please refer to **Figure 4—3 Wall/Fence Details**.*

Trail Fencing (*3 Cable & Post Fence*)

- Trail fencing will be per City of Moreno Valley Standard MVGF-616-0.
- Galvanized Posts, Cable and Hardware.
- Posts 2” Standard Galvanized Post.
- Cable 1/4” Galvanized Cable.
- Posts will be topped with post caps that are driven fit.
- 5/16” Turnbuckle with 4 - ½ “ adjustment and 2 - ¼” Cable Clamps per end
- Three cable and post fencing should have cable spaced twelve inches (12”) apart.
- *Please refer to **Figure 4—3 Wall/Fence Details**.*

Basin / Open Space Fencing (*View Fence*)

- The view fencing will be made with tubular steel fencing materials.
- View Fencing should have one and one-half inches (1 ½ “) square tubular steel tubing, top and bottom rails.
- View fencing should have five-eight inches (5/8”) square steel tubing pickets set four and one-half inches (4 ½ “) on-center spacing.
- View fencing should have one and one-half inches (1 ½ “) square tubular steel posts set six feet (6’) on-center maximum spacing.
- View fencing should have four inch (4”) square tubular steel posts at property line corners, with a Newel Post Ball on top.
- View fencing should also be around the basins and other open space areas.
- *Please refer to **Figure 4—3 Wall/Fence Details**.*

b. Fuel Modification Requirements

On the north side of the *Ironwood Village* community are fuel modification zone areas. The removal and or preservation of plants/trees will be subject to review and approval by the City's fuel management officer. Maintenance of the fuel modification zone will be the responsibility of the *Ironwood Village* HOA. The twenty to twenty-four feet (20'– 24') wide fire access road and the multi-use trail that travels along the northern edge of the developed portion of the project, is built into the fuel modification zone for this project. All landscaping within *Ironwood Village* shall comply with the ***City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code***.

c. Trails

The multi-use trails interconnect the *Ironwood Villag*e project neighborhoods to the interior open spaces and park as well as to the future City of Moreno Valley's off-site trails system. A Trail Head will be located at the southeast corner of the Ironwood Village at Oliver Street and Ironwood Avenue. The Trail Head will connect to the exterior trail system along Ironwood Avenue and Oliver Street which connects to the interior trail system as well as to the off-site trails. There will be "nodes of interest" located along the central trail that leads from north to south to and from the neighborhood park. The "nodes of interest" may be but not limited to the following: scenic views, exercise equipment, benches, dog stations, drinking fountains, trash/recycling containers and/or other items along the project's trails. There are trail connections onto the central trail from trails leading off the adjacent cul-de-sacs. The central trail will have areas to rest and enjoy the outdoors within walking distance of home. In addition to the trails creating interconnectivity on site the project includes two (2) trail connections from Street "A" directly to Ironwood Avenue. These connections will provide view corridors from Ironwood Avenue into Ironwood Village as well as rest stops. The combination of trails and fire access located to the rear of the houses on the northern portion of the development are to be a minimum of twenty-four feet (20'– 24') wide per City of Moreno Valley standards. ***Please refer to Figure 4-4 Trails and Open Space Plan.***

Trails will provide connections through the central open space area and will branch off east and west along this north-south open space area, with additional trails connecting to neighborhood streets, and other trails. All the trails will loop throughout the *Ironwood Village* project and allows pedestrian connections to the park and the proposed City Trails north, east and west of the site. The trails will be built per City of Moreno Valley Standards. ***Please refer to Figure 4-4 Trails and Open Space Plan & Figure 4-5 Conceptual Trails Section.***

i. Trail Head

A Trail Head will be located within lot "M", adjacent to the corner of Oliver Street and Ironwood Avenue, parking will be on-street parking along Oliver Street. The Trail Head may include but is not limited to the following amenities: bench seating, covered picnic area, trash/recycling receptacles, dog station, water fountain, hitching post, horse watering station and/or exercise equipment. The actual Trail Head amenities will be decided at time of buildout by the builder with approval from the City of Moreno Valley. ***Please refer to Figure 4—8 Conceptual Trail Head.***

ii. Ironwood Avenue Trail Connections

There are two (2) Trail connections to Ironwood Avenue from Street "A" within the *Ironwood Village* project. The first trail connection is located between lots 13 & 14 and is a part of lot "K", this trail will cross the water basin with a bridge and a pedestrian walkway. The design and materials of the bridge will be determined at time of buildout by the builder with approval from City of Moreno Valley. The second trail connection is located between lots 5 & 6 and crosses between lot "K" and lot "M". The trail connections will be pedestrian walkways that will allow direct access from the project interior to the exterior trails along Ironwood Avenue. One of the trail connections bulbs/flares out on the Ironwood Avenue end of the connection, allowing room for enhanced landscaping and, seating areas and/or other amenities. Each of these trail connections may include but is not limited to the following amenities: bench seating, trash/recycling receptacles, dog station, shade structure and/or water fountain. The actual Trail Connection amenities will be decided at time of buildout by the builder with approval from the City of Moreno Valley. ***Please refer to Figure 4--9 Trails Connectivity and Figure 4-10 Ironwood Pedestrian Connections.***

All landscaping within *Ironwood Village* shall comply with the ***City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code***.

d. Hillside Nature Area

The hillside nature / open space areas are to be left undeveloped or minimally developed on the northwest and northeastern areas along the northern most project boundaries as shown on TTM 31007. ***Please refer to Figure 4-4 Trails and Open Space Plan .***These areas will be conserved as natural open space to help preserve the scenic views of the hillsides from the City of Moreno Valley. These areas will not be landscaped and/or watered the area will be maintained as is, unless otherwise required by the City of Moreno Valley. The hillside nature / open space areas creates a "natural" transition between the developed and undeveloped areas and, may include the fuel modification vegetation clearance zone and/or fire access/trail. The hillside areas will help to buffer and transition the project from the surrounding land uses to the proposed *Ironwood Village* community. Preserving the hillside areas for scenic and transitional reasons allows for some of the natural rock outcroppings as well as the existing off-site trails to remain intact.

e. Open Space

The *Ironwood Village* open space areas that are not to remain as natural vegetation will be planted as appropriate to the project's climate. The landscaping shall be where appropriate drought tolerant or native plants and utilize water-conserving equipment including the installation of bubblers, drip systems, low volume sprays and/or smart irrigation controls when feasible. No detailed plant palettes have been proposed within this document due to the currently evolving nature of the water conservation measures in the State of California. All landscaping within *Ironwood Village* shall comply with the ***City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code***.

Landscaping shall consist predominately of plant materials that include water efficient "drought tolerant" and native plants. Landscape areas shall be designed to promote water retention and allow runoff from impervious surfaces. Hardscape areas are recommended to be constructed with pervious surfaces where feasible to reduce run off and allow water percolation. ***Please refer to Figure 4-4 Trails and Open Space Plan.***

f. Park

The *Ironwood Village* park is located centrally within to the project, allowing residents to walk to the park safely using the project wide inter-looping trails system. The park may include but not limited to: bench seating, an open play area, Bocce ball courts, ½ court basketball, volleyball court, exercise equipment, picnic area and/or a tot lot "children's play equipment". The actual park amenities will be decided at time of buildout by the builder with approval from the City of Moreno Valley. ***Please refer to Figure 4--6 Conceptual Park Plan.***

The park areas will be planted as appropriate to the project's climate. The landscaping shall be where appropriate drought tolerant and utilize water-conserving equipment including the installation of bubblers, drip systems, low volume sprays and/or smart irrigation controls when feasible. No detailed plant palettes have been proposed within this document due to the currently evolving nature of the water conservation measures in the State of California. All landscaping within *Ironwood Village* shall comply with the ***City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code***.

Landscaping shall consist predominately of plant materials that include water efficient "drought tolerant" native plants. Landscape areas shall be designed to promote water retention and allow runoff from impervious surfaces. Hardscape areas are recommended to be constructed with pervious surfaces where feasible to reduce run off and allow water percolation.

g. Basins

The basins within *Ironwood Village* community are located along the southern edge of the project site. The basins will not only provide a necessary job for retaining water on-site to prevent run-off, they also provide a transition and visual buffer to the existing residences south of Ironwood Avenue. The basins make the transition softer and more visually appealing by having landscaping and open space, instead of walls and roof tops. The basins will be planted as appropriate to the project's climate. The landscaping shall be where appropriate drought tolerant and utilize water-conserving equipment including the installation of bubblers, drip systems, low volume sprays and/or smart irrigation controls when feasible. No detailed plant palettes have been proposed within this document due to the currently evolving nature of the water conservation measures in the State of California. All landscaping within *Ironwood Village* shall comply with the ***City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code***.

Landscaping shall consist predominately of plant materials that include water efficient "drought tolerant" native plants. Landscape areas shall be designed to promote water retention and allow runoff from impervious surfaces. Hardscape areas are recommended to be constructed with pervious surfaces where feasible to reduce run off and allow water percolation. ***Please refer to Figure 4-- 7 Typical Basin Section.***

ENVIRONMENTAL CHECKLIST FORM

1. **Project title:** Ironwood Residential Project

2. **Lead agency name and address:** City of Moreno Valley
14177 Frederick Street
Moreno Valley, CA 92553

3. **Contact person and phone number:** Claudia Manrique, Associate Planner: (951) 413-3225

4. **Project location:** The approximately 75-acre project site does not have a physical address but is located within the City of Moreno Valley and is bound by Ironwood Avenue on the south, Nason Street on the west, Oliver Street on the east, and vacant land within the San Timoteo Badlands to the north. The rectangular-shaped site consists of a single parcel (APN 473-160-004-5). The site is currently undeveloped and supports a mix of native, non-native and ruderal (i.e., weedy) vegetation, and the site also contains a number of unimproved roads/trails that traverse the property. Elevations on-site range from approximately 1,840 feet above mean sea level (MSL) to 1,980 feet above MSL.

5. **Project sponsor's name and address:** Global Investments and Development, LLC
3470 Wilshire Boulevard, Suite 1020
Los Angeles, California 90010
Contact: Joseph Rivani, Principal
(p) (213) 365-0005
e-mail: jrivani@gidllco.com

6. **General plan designation:** R2 (Residential – 2 units per acre max) and HR (Hillside Residential)

7. **Zoning:** RA2 (Residential Agriculture – 2 units per acre max) and HR (Hillside Residential)

8. **Description of project: (Describe the whole action involved, including but not limited to later phases of the project, and any secondary, support, or off-site features necessary for its implementation. Attach additional sheets if necessary.)**

   The proposed project consists of the development of a 181-unit single-family residential subdivision with lot sizes ranging from 7,200 square feet to over 17,200 square feet on the approximately 75-acre property. The project would also provide public and private open space, private recreational facilities (on-site park), public and private trails, public and private streets, on- and off-site utility improvements (including off-site water distribution pipelines), and stormwater detention basins and water quality features.

9. Surrounding land uses and setting: Briefly describe the project's surroundings:

Surrounding land uses include low density single-family residential development to the west and south of the site, which are zoned R1 and R2, respectively. To the east of the project site is vacant land to the east of Oliver Street, which is zoned RA2 similar to the project site, and to the north of the project site is vacant land zoned HR and RA2 within the foothills of the San Timoteo Badlands.

10. Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement.)

The discretionary actions for the project may include, but are not limited to, the following: General Construction Permit and Section 401 Water Quality Certification from the Regional Water Quality Control Board (RWQCB); Section 404 Permit (U.S. Army Corps of Engineers); Section 1602 Streambed Alteration Agreement (CDFW); grading, excavation, foundation, and/or associated building permits, as required; and other permits and approvals by other agencies as deemed necessary.

PURPOSE OF THE INITIAL STUDY

The Ironwood Residential Project is analyzed in this Initial Study/Mitigated Negative Declaration (IS/MND) in accordance with the California Environmental Quality Act (CEQA) to determine if approval of the proposed project would have a significant impact on the environment. This IS/MND has been prepared pursuant to the requirements of CEQA, under Public Resources Code 21000-21177, of the State CEQA Guidelines (California Code of Regulations, Title 14, Division 6, Chapter 3, Sections 15000-15387) and under the guidance of the City of Moreno Valley. The City of Moreno Valley is the Lead Agency under CEQA and is responsible for preparing the IS/MND for the proposed project.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture and Forestry Resources	☐ Air Quality
☐ Biological Resources	☐ Cultural Resources	☐ Geology/Soils
☐ Greenhouse Gas Emissions	☐ Hazards/Hazardous Materials	☐ Hydrology/Water Quality
☐ Land Use/Planning	☐ Mineral Resources	☐ Noise
☐ Population/Housing	☐ Public Services	☐ Recreation
☐ Transportation/Traffic	☐ Utilities and Service Systems	☐ Mandatory Findings of Significance

DETERMINATION: (To be completed by the Lead Agency)

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☒ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

EVALUATION OF ENVIRONMENTAL IMPACTS:

The impact columns heading definitions in the table below are as follows:

- "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.
- "Less Than Significant Impact with Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Than Significant Impact." The mitigation measures must be described, along with a brief explanation of how they reduce the effect to a less than significant level.

- "Less Than Significant Impact" applies where the project creates no significant impacts, only Less Than Significant impacts.
- "No Impact" applies where a project does not create an impact in that category. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one proposed (e.g., the project falls outside of a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
I. AESTHETICS – Would the project:				
a) Have a substantial adverse effect on a scenic vista?	☐	☐	☒	☐
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	☐	☐	☒	☐
c) Substantially degrade the existing visual character or quality of the site and its surroundings?	☐	☐	☒	☐
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	☒	☐
II. AGRICULTURE AND FORESTRY RESOURCES – In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire protection regarding the state's inventory of forest land, including the Forest and Range Assessment of and the Forest Legacy Assessment Project; and forest carbon measurements methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project::				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	☒
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	☒
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 1220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?	☐	☐	☐	☒
d) Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	☒
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?	☐	☐	☐	☒

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
III. AIR QUALITY – Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	☒	☐
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	☐	☐	☒	☐
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	☐	☐	☒	☐
d) Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	☒	☐
e) Create objectionable odors affecting a substantial number of people?	☐	☒	☐	☐
IV. BIOLOGICAL RESOURCES – Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	☐	☒	☐	☐
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?	☐	☐	☒	☐
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	☐	☒	☐
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native nursery sites?	☐	☒	☐	☐
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	☐	☐	☒
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	☐	☒	☐	☐

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
V. CULTURAL RESOURCES – Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?	☐	☐	☐	☒
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	☐	☒	☐	☐
c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	☒	☐	☐
d) Disturb any human remains, including those interred outside of formal cemeteries?	☐	☒	☐	☐
VI. GEOLOGY AND SOILS – Would the project:				
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	☒	☐
ii) Strong seismic ground shaking?	☐	☒	☐	☐
iii) Seismic-related ground failure, including liquefaction?	☐	☒	☐	☐
iv) Landslides?	☐	☐	☒	☐
b) Result in substantial soil erosion or the loss of topsoil?	☐	☐	☒	☐
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	☒	☐	☐
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	☐	☒	☐	☐
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	☐	☐	☐	☒

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
VII. GREENHOUSE GAS EMISSIONS – Would the Project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment, based on any applicable threshold of significance?	☐	☐	☒	☐
b) Conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing the emissions of greenhouse gases?	☐	☐	☒	☐
VIII. HAZARDS AND HAZARDOUS MATERIALS – Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	☒	☐
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	☐	☐	☒	☐
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☒	☐
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	☒	☐
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	☐	☐	☐	☒
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	☒	☐
h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	☐	☒	☐	☐

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
IX. HYDROLOGY AND WATER QUALITY – Would the project:				
a) Violate any water quality standards or waste discharge requirements?	☐	☐	☒	☐
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	☐	☐	☒	☐
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?	☐	☐	☒	☐
d) Substantially alter the existing drainage pattern of the site or area, including through the alternation of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?	☐	☐	☒	☐
e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	☐	☐	☒	☐
f) Otherwise substantially degrade water quality?	☐	☐	☒	☐
g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	☐	☐	☐	☒
h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	☐	☐	☐	☒
i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	☐	☐	☐	☒
j) Inundation by seiche, tsunami, or mudflow?	☐	☐	☐	☒
X. LAND USE AND PLANNING – Would the project:				
a) Physically divide an established community?	☐	☐	☐	☒
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	☒	☐

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	☐	☒	☐	☐
XI. MINERAL RESOURCES – Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	☒
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	☒
XII. NOISE – Would the project result in:				
a) Exposure of persons to or generation of noise level in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☒	☐	☐
b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	☒	☐
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	☐	☐	☒	☐
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	☐	☐	☒	☐
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒
f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	☒
XIII. POPULATION AND HOUSING – Would the project:				
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	☐	☐	☒	☐
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	☒

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
XIV. PUBLIC SERVICES				
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
Fire protection?	☐	☒	☐	☐
Police protection?	☐	☒	☐	☐
Schools?	☐	☐	☒	☐
Parks?	☐	☐	☒	☐
Other public facilities?	☐	☐	☒	☐
XV. RECREATION				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	☒	☐
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	☒	☐
XVI. TRANSPORTATION/TRAFFIC – Would the project:				
a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?	☐	☒	☐	☐
b) Conflict with an applicable congestion management program, including, but not limited to, level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?	☐	☐	☒	☐
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	☐	☐	☐	☒
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	☒	☐
e) Result in inadequate emergency access?	☐	☐	☒	☐

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
f) Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities??	☐	☐	☒	☐
XVII. UTILITIES AND SERVICE SYSTEMS – Would the project:				
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	☐	☐	☒	☐
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☒	☐
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	☐	☐	☒	☐
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?	☐	☐	☒	☐
e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	☒	☐
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	☐	☐	☒	☐
g) Comply with federal, state, and local statutes and regulations related to solid waste?	☐	☐	☒	☐
XVIII. MANDATORY FINDINGS OF SIGNIFICANCE				
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	☒	☐	☐
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☐	☒	☐	☐
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	☒	☐	☐

Attachment A
Project Description

ATTACHMENT A - PROJECT DESCRIPTION

A. Introduction

Global Investment and Development, LLC (Project Applicant) is proposing a Tentative Tract Map (TTM No. 37001) to develop up to 181 single-family residential units on the approximately 75-acre undeveloped Project site within the City of Moreno Valley, herein referred to as the Ironwood Village Project (the "Project" or "proposed Project"). The following describes the Project site location, existing site conditions, the proposed residential development and related improvements, anticipated construction schedule, and necessary discretionary approvals for the Project.

B. Project Location and Surrounding Uses

The approximately 75-acre Project site is located in the northeastern portion of City of Moreno Valley immediately northeast of the intersection of Ironwood Avenue and Nason Street, and bounded by Ironwood Avenue on the south, Nason Street on the west, Oliver Street on the east, and vacant land to the north. **Figure A-1,** *Regional Location and Vicinity Map,* illustrates the regional location and the local vicinity of the Project site, while **Figure A-2**, *Aerial Photograph*, provides an aerial view of the Project site with surrounding land uses indicated by land use type. The Project site is located immediately south of the foothills of the San Timoteo Badlands, and consists of one single-family residential designated parcel (APN 473-160-004-5). There is no street address associated with the property, which is currently vacant land, though several unimproved trails/dirt roads traverse the property which are oriented east-west and north-south.

The Project site is designated for low-density residential uses (R2 residential uses up to 2 units per acre) per the City's General Plan Land Use Map, and is zoned Residential Agriculture (RA2, up to 2 units per acre) and Hillside Residential (HR). As shown in Figure A-2, surrounding land uses near the site include single-family residential development to the west (R1 large-lot residential uses) and south (R2 residential uses up to 2 units per acre). To the east of the site is vacant land zoned for single-family residential uses (RA2 residential agriculture up to 2 units per acre), while vacant land zoned for single-family residential uses (RA2 and HR hillside residential uses).

C. Existing Conditions

Elevations on-site range from approximately 1,840 feet above mean sea level (MSL) in the south-central portion of the site to approximately 1,980 feet above MSL in the northwestern portion of the site. From east to west across the property is a series of north-south-oriented ridges and alternating drainage gullies in the lower, southern portion of the property.

Ironwood Village Project

Figure A-2

Aerial Photograph and Surrounding Land Uses

ESA PCR

Attachment: Initial Study/Mitigated Negative Declaration (IS/MND) (2437 : Ironwood Village (PEN16-0077 through PEN16-0081))

The intervening ridges are generally about 5 to 10 feet higher in elevation them the adjacent drainage gullies. Rounded granitic outcrops are exposed in the northwestern and northeastern sections of the property. The overall surface gradient across the property is gently to moderately south or south-southeast. The Project site is undeveloped and supports a limited mix of native, non-native, and ruderal (i.e., weedy) vegetation. Although the majority of the site consists of ruderal and non-native vegetation, the site also supports a few small, isolated patches of native scrub habitats (e.g., lemonade berry scrub, purple sage scrub/California sagebrush scrub, and California sagebrush scrub). No blueline streams or drainages exist on-site.

D. Description of the Proposed Project

1. Project Summary

The proposed Project would entail the construction of a new, 181-unit single-family residential development on the currently undeveloped approximately 75-acre Project site. Lot sizes for the proposed single-family homes would range from a minimum of 7,200 square feet to over 17,200 square feet, with an average lot size of approximately 9,260 square feet. In order to accommodate the proposed density on the Project site, which is currently zoned RA2 with a density of up to two units per acre, the applicant is requesting a change of zone to R3 (single-family residential up to 3 units per acre) on the western portion of the Project site, and R5 (single-family residential uses up to 5 units per acre) on the eastern portion of the site. Please see **Figure A-3**, *Conceptual Land Use Plan*, below, for an illustration of the proposed land use plan and associated residential densities on the Project site. As such, the residential density would be lower on the western side of the Project site, to the west of a proposed open space and recreation corridor that would bisect the property in a north-south orientation, while higher density development would be located east of the of this corridor. The shift in density is intended to serve a transition between existing lower density R1 residential uses immediately to the west of the Project site across Nason Street and existing R2 residential uses to the south and farther to the east across Moreno Beach Drive, as well as R2 or potentially higher density residential uses immediately to the east of the Project site. As illustrated below in **Figure A-4**, *Project site Plan*, the proposed Tentative Tract Map (TTM No. 37001) for the Project would subdivide the property into 181 for-sale residential lots as well as a number of lettered lots for open space, recreation, private recreational facilities, stormwater detention facilities, utility easements, trails, and a “buffer lot” at the southeast corner of the property.

The proposed Project is proposed to be implemented in accordance with the Ironwood Village Design Guidelines (Design Guidelines), which would serve as a guide for implementation of the residential development. The Design Guidelines include site development regulations in order to provide cohesive design throughout the Ironwood Village Project. Creating a diversity of housing choices not available with a typical tract map, the proposed Project is intended to encourage a range of housing alternatives with a variety of lot sizes intermixed with trails, a park, open space areas and water quality features.

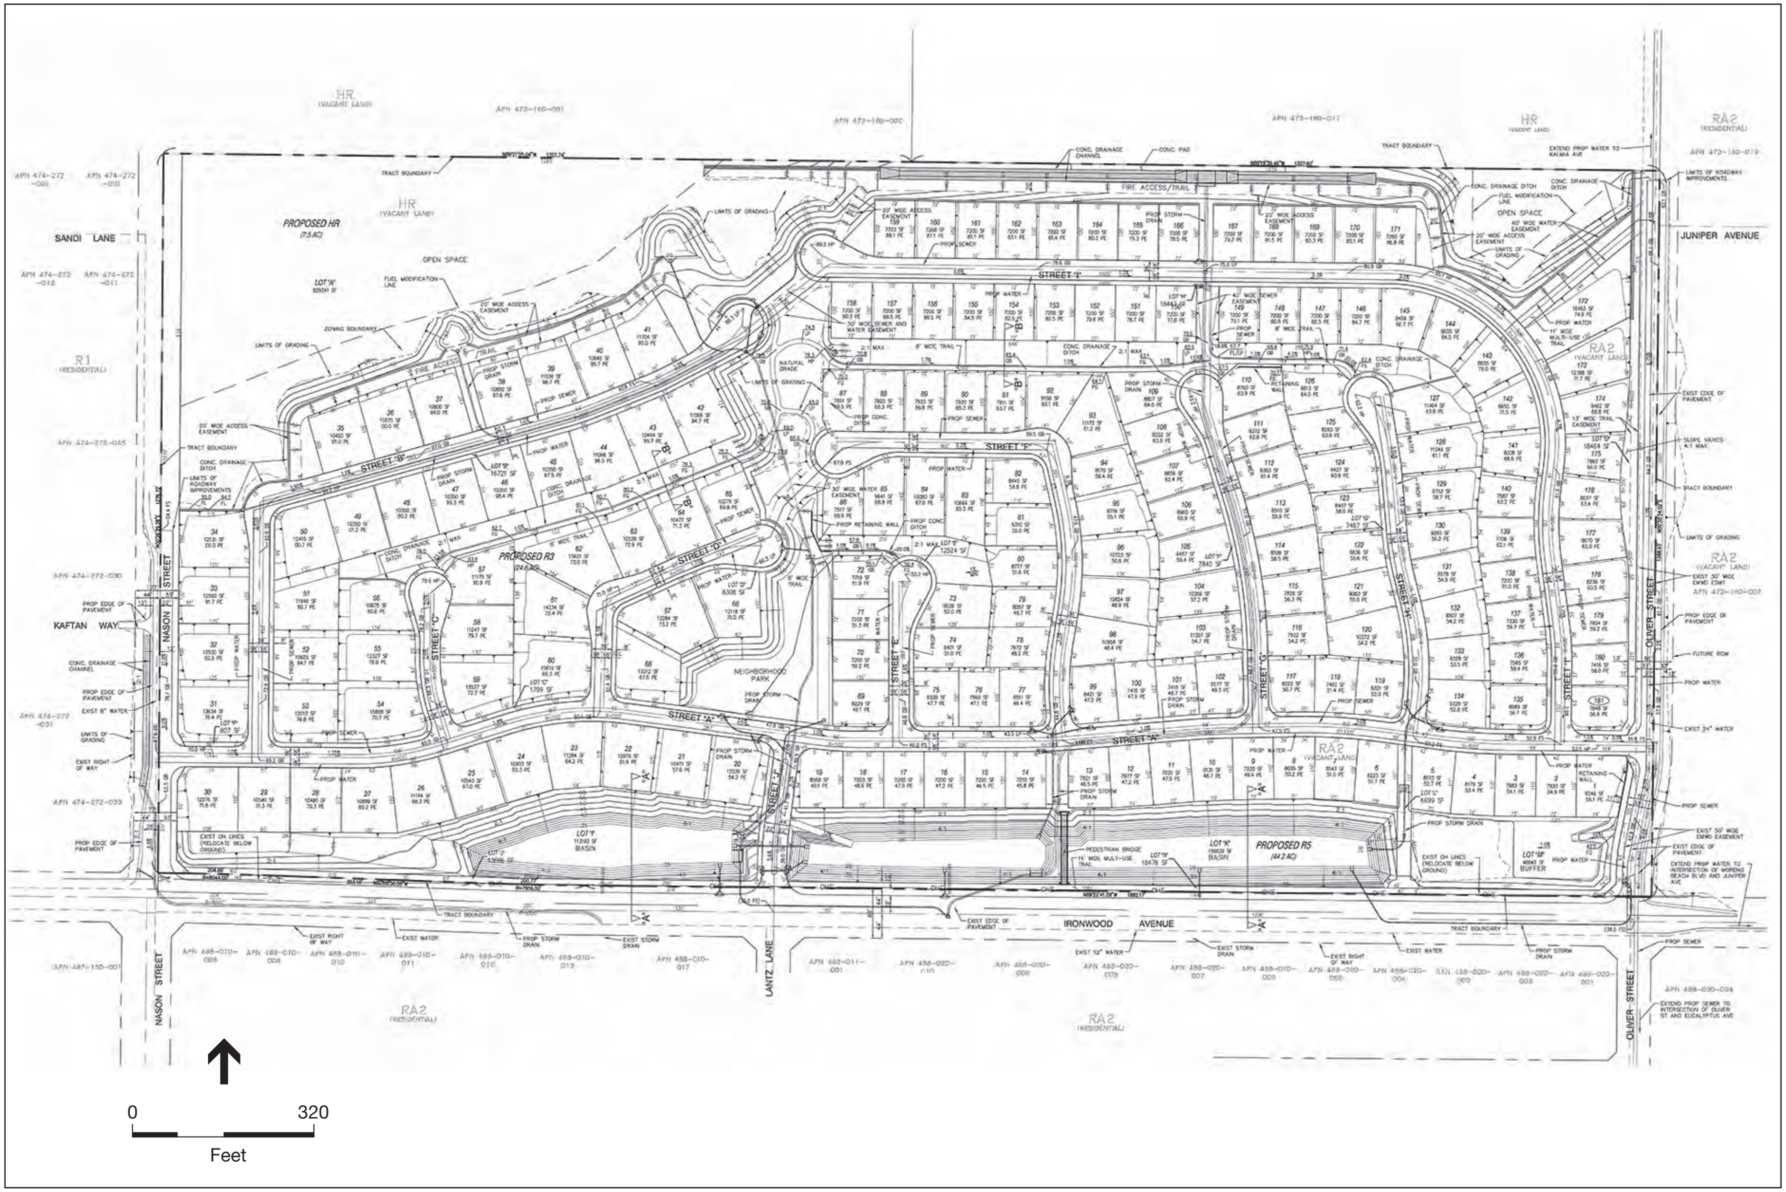
Ironwood Village Project

Figure A-3
Conceptual Land Use Plan

ESA PCR



SOURCE: Anderson Consulting Engineers, Inc., 2016

Ironwood Village Project

Figure A-4

Project Site Plan

ESA PCR

The development standards included in the Design Guidelines require a quality mix of products, while creating walkable neighborhood with access to trails and other outdoor recreation and open space opportunities. The Ironwood Village Project would conserve the northwestern hillside areas of the Project site and would not build any physical improvements in that area. The proposed Project is designed to respect the existing topography, maintain rock outcroppings where feasible and provide a transition into the hillside areas.

2. Site Design and Architectural Theme

a. Site Design

The Ironwood Village Project is intended to provide a buffer with the appropriate use of natural open space, landscaping, trails, right-of-ways and fire access creating a pleasing visual transition between the existing rural residential uses, while providing for a suburban life-style in a cohesively planned “private” non-gated community with amenities not commonly found in typical subdivisions. This Project is intended for the development of lots a bit larger than typical single family residences at a maximum allowable density of three (3) dwelling units per acre on the western portion of the site and five units per acre on the eastern portion.

The proposed Ironwood Village Project anticipates 181 units on approximately 38.5 acres, along with approximately twenty-nine point four (29.4) acres of open space, and an additional 10.3 acres of natural open space (i.e. hillsides and rock outcroppings) with a mix of lot sizes ranging from 10,000 square feet minimum (on the western portion of the site) down to 7,200 square feet minimum (on the eastern portion of the site) lot sizes. Architecture for the Ironwood Village Project reflects the diversity of architectural styles found throughout California.

b. Architectural Design

The Ironwood Village Architectural Design Guidelines are intended to allow ultimate flexibility to the builder and are purely illustrative in character for the final buildout. The Design Guidelines provide the builder with a palette of options of design features and elements to be mixed and matched to create a comprehensive Project that has continuity of design throughout, but is not monotonous or repetitive. The actual detailed architectural design elements and details that will be used within the Ironwood Village community will be decided at time of buildout by the developer with approval by the City of Moreno Valley. While these design guidelines suggest architectural styles, the styles utilized should be authentic and distinct. Traditional styles typically have defining features that should be consistently implemented throughout the Ironwood Village development. The Design Guidelines allow for updated styles as long as the defining features can be identified and applied to the floor plans. The Design Guidelines allow for five different styles of architecture, including Monterey, Spanish Colonial, Santa Barbara, Napa, and Tuscan.

3. Circulation and Access

a. Project site Access

Vehicular access to the Project site is currently and would continue to be provided via Ironwood Avenue, Nason Street, and Oliver Street. As shown in Figure A-4 above, the primary driveway for the Project site would be located on Ironwood Avenue about mid-block between Nason Street and Oliver Street, immediately opposite from and north of Lantz Lane. Secondary site access would be provided by driveways on both Nason Street and Oliver Street just north of Ironwood Avenue.

b. On-Site Circulation

The internal streets within the "private" non-gated Ironwood Village community propose using privately maintained streets within the Project interior. The private roadway section is based on the City-Standard Street width of 36 feet from curb face to curb face. However, in order to maintain a unique feel to the community, the typical parkway landscape would be replaced with a dedicated, HOA-maintained, eight-foot lettered landscape lot containing a four-foot-wide concrete sidewalk along a single side of the roadway (see **Figure A-5**, *Trails and Open Space Plan*, below for an illustration of the proposed sidewalk location). The other side of the private road would have homeowner maintain yards to the back of the curb. The roadway section, including curb face, would be dedicated to, and maintained by, the Ironwood Village HOA. Separate easements for utilities would also be dedicated, as necessary, to provide proper services to the "private" non-gated community.

4. Open Space and Recreation

a. Open Space

(1) Natural Open Space

As noted above, the hillside natural open space areas would be left undeveloped or minimally developed on the northwest and northeastern areas along the northern most Project boundaries as shown on the Tract Map 31007. Please refer to Figure A-5 for an illustration of areas to be preserved as open space. These areas would be conserved as natural open space to help preserve the scenic views of the hillsides from the City of Moreno Valley. These areas would not be landscaped and/or watered the area would be maintained as is, unless otherwise required by the City of Moreno Valley. The hillside natural open space areas create a "natural" transition between the developed and undeveloped areas, and may include the fuel modification vegetation clearance zone and/or fire access or trails. The hillside areas would also help to buffer and transition the Project from the surrounding land uses. Preserving the hillside areas for scenic and transitional reasons allows for some of the natural rock outcroppings as well as the existing off-site trails to remain intact.

SOURCE: KTGY Group, Inc., 2016

Ironwood Village Project

Figure A-5

Trails and Open Space Plan

ESA PCR

(2) Community Open Space

The Ironwood Village open space areas that are not to remain as natural vegetation would be planted as appropriate to the Project's climate. The landscaping shall be where appropriate drought tolerant or native plants and utilize water-conserving equipment including the installation of bubblers, drip systems, low volume sprays and/or smart irrigation controls when feasible. No detailed plant palettes have been proposed within this document due to the currently evolving nature of the water conservation measures in the State of California. All landscaping within Ironwood Village shall comply with the City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code. Landscaping shall consist predominately of plant materials that include water efficient "drought tolerant" and native plants. Landscape areas shall be designed to promote water retention and allow runoff from impervious surfaces. Hardscape areas are recommended to be constructed with pervious surfaces where feasible to reduce run off and allow water percolation. Please also refer to Figure A-5.

b. Proposed Park

The Ironwood Village Park, which would be a private facility for exclusive use by Ironwood Village residents, would be located centrally within the projects site allowing residents to walk to the park safely using the Project-wide interconnected trails system. The park may include but is not limited to the following features and amenities: bench seating, an open play area, Bocce ball courts, picnic area and a tot lot "children's play equipment". The actual park amenities would be decided at time of buildout by the developer with approval from the City of Moreno Valley. Please refer to **Figure A-6**, *Conceptual Park Plan*, for a conceptual illustration of the proposed on-site park.

The park areas would be planted as appropriate to the Project's climate. The landscaping shall be where appropriate drought tolerant and utilize water-conserving equipment including the installation of bubblers, drip systems, low volume sprays and/or smart irrigation controls when feasible. Landscaping and water conservation features would be incorporated into the park as required by the City of Moreno Valley, as noted above.

c. Trails

The proposed Project would include multi-use trails that would interconnect the Ironwood Village Project neighborhoods to the interior open spaces and on-site park, as well as to the future City of Moreno Valley's off-site trails system, as illustrated below in **Figure A-7**, *Trail Connection Map*. There would be "nodes of interest" located along the central trail that leads from north to south to and from the proposed neighborhood park. There would also be trail connections onto the central trail from trails leading off the adjacent cul-de-sacs. The central trail would provide areas to rest and enjoy the outdoors within walking distance of on-site residents' homes. The combination of trails and fire access located to the rear of the houses on the northern portion of the development are to be a minimum of 20 to 24 feet wide per City of Moreno Valley standards.

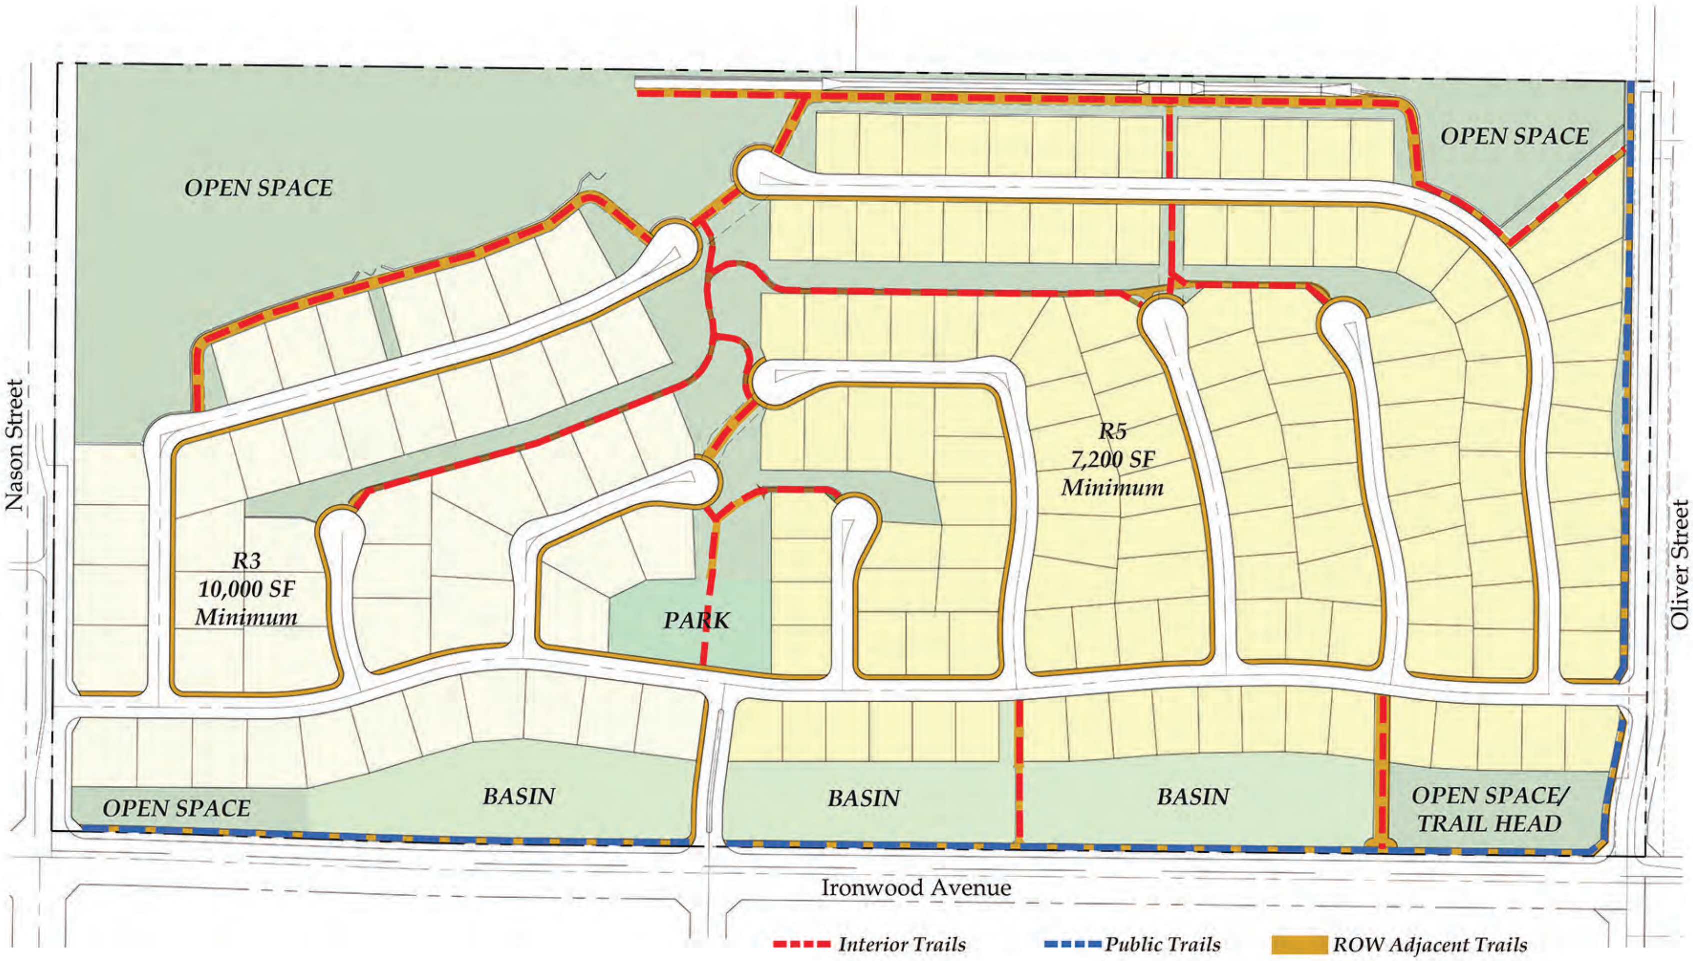
Ironwood Village Project

Figure A-6

Conceptual Park Plan

ESA PCR



SOURCE: KTGY Group, Inc., 2016

Ironwood Village Project

Figure A-7

Trail Connection Map

ESA PCR

Trails would provide connections through the central open space area and would branch off east and west along the north-south-oriented open space area, with additional trails connecting to neighborhood streets, as well as other off-site trails. All the trails would loop throughout the Ironwood Village Project, which would allow pedestrian connections to the park and the proposed City Trails to the north, east and west of the Project site. The trails would be built per City of Moreno Valley Standards. Please refer **Figure A-8**, *Conceptual Trail Section*, below for an illustration of proposed trail design.

5. Landscaping

a. Landscape Concept

The conceptual landscape and planting design provides the identity to the Ironwood Village community that at time of buildout the developer shall comply with the City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code. The plant palette for Ironwood Village would be appropriate to the Project's climate. The landscaping shall be where appropriate drought tolerant/native vegetation and utilize water-conserving equipment including the installation of bubblers, drip systems, low volume sprays and/or smart irrigation controls when feasible. The landscape areas shall also be designed to promote water retention and allow runoff from impervious surfaces to permeable areas. Hardscape areas are recommended to be constructed with pervious surfaces where feasible to reduce run off and allow water percolation.

The landscape plan incorporates the water retention/detention/ water quality basins as well as the hillside areas that are to be conserved and the fuel modification areas as shown on TTM 37001. Project open space, fuel modification area, interior streets, interior trails and park would be maintained by the Ironwood Village Home Owners Association (HOA), this is a "private" non-gated Community. In addition, there are exterior multi-use trails along the roadways adjacent to the Project, connecting to future City of Moreno Valley Proposed off-site trails; these would be maintained by the City of Moreno Valley. The drainages would be maintained by the City of Moreno Valley, however the water basins would be jointly maintained by the Ironwood Village HOA (landscaping) and the City of Moreno Valley (structures/water quality). Please refer to **Figure A-9**, *Maintenance Responsibility*, below. The actual detailed landscape design and placement that would be used within the Ironwood Village community would be decided at time of buildout by the developer with approval by the City of Moreno Valley. As noted previously, all landscaping within Ironwood Village shall comply with the City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code.

b. Fuel Modification

On the north side of the Ironwood Village community are fuel modification zone areas. The removal and or preservation of plants/trees would be subject to review and approval by the City's fuel management officer. Maintenance of the fuel modification zone would be the responsibility of the Ironwood Village HOA. The 20 to 24-foot-wide fire access road and the multi-use trail that travels along the northern edge of the developed portion of the Project, has been incorporated into the fuel modification zone for the Project. As noted above, all landscaping within Ironwood Village shall comply with the City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code.

Ironwood Village Project

Figure A-9
Maintenance Responsibility

ESA PCR

6. Stormwater Management

The proposed Project would include a number of stormwater detention basins, as well as other stormwater management features and facilities, as required by City of Moreno Valley and County of Riverside. The proposed stormwater basins within the Ironwood Village community would be located along the southern edge of the Project site as shown above in Figure A-5. The basins would not only provide a necessary function of retaining stormwater on-site to prevent run-off, but would also provide a transition and visual buffer to the existing residences south of Ironwood Avenue. The basins help make the transition softer and more visually appealing by having landscaping and open space, instead of walls and roof tops. The basins would be planted as appropriate to the Project site's climate and would incorporate drought-tolerant materials and irrigation systems, as noted previously for other aspects of the Project. Hardscape areas are recommended to be constructed with pervious surfaces where feasible to reduce run off and allow water percolation and minimize stormwater runoff volumes requiring on-site retention. Please refer to **Figure A-10**, *Conceptual Trail and Basin Sections*, for a depiction of proposed stormwater basin design.

7. Infrastructure and Utilities

The proposed Ironwood Village Project would be served by various public utilities, including water, sewer, and storm drains, as well as connections to electricity and natural gas services. Water service would be provided by an on-site distribution system with supply provided via two connections to existing Eastern Municipal Water District (EMWD) pipelines, one from the southeast near the intersection of Oliver Street and Ironwood Avenue, and the other from the north via a new pipeline connection along Oliver Street at the western terminus of Kalmia Avenue. The on-site sewer system, which would be owned and maintained by EMWD once constructed, would collect wastewater generated by the proposed residential units, which would be conveyed via a new sewer line extending from the Project site southward along Oliver Street to an existing sewer also owned and operated by EMWD located south of the SR-60 freeway near Eucalyptus Avenue. Stormwater, as noted above, would be collected by the proposed on-site storm drain system, which would be conveyed to the on-site detention basins (shown as Lots I and K in Figure A-4), and then to an existing storm drain located in Ironwood Avenue. Electrical and natural gas services would be provided by Southern California Edison (SCE) and Southern California Gas Company (SoCalGas), respectively, via existing distribution facilities in the Project area.

In addition, a number of off-site water and sewer improvements and limited off-site grading would be necessary to serve the proposed development, which would require earthmoving and/or construction of new pipelines or other facilities in one or more off-site locations. Although the specific location of future facilities has yet to be determined, the areas potentially affected by off-site improvements or off-site grading activities are illustrated below in **Figure A-11**, *Off-Site Improvements*.

Ironwood Village Project

Figure A-10

Conceptual Trail and Basin Sections

ESA PCR

E. Construction Schedule

Construction activities associated with the Project are anticipated to occur for approximately 40 months, beginning in early 2017 with Project occupancy and operation expected by August 2020. The construction schedule includes grading and excavation activities (3.5 months), paving (2.5 months), building construction and application of architectural coatings (34 months). Haul trucks would be required to follow a prescribed haul route, which is expected to be from the Project site southbound down Nason Street to the SR-60 Freeway when leaving the site and the reverse when arriving at the site. The highest number of daily truck trips would occur during grading and soil excavation activities, which would occur for approximately 3.5 months of the overall 40-month construction effort.

F. Necessary Approvals

The discretionary actions for the Project may include, but are not limited to, the following:

- United States Army Corps of Engineers – Section 404 Permit
- California Department of Fish and Wildlife – Section 1602 Streambed Alteration Agreement
- Santa Ana Regional Water Quality Control Board – Section 401 Water Quality Certification
- City of Moreno Valley – Adoption of Mitigated Negative Declaration (MND)
- City of Moreno Valley – General Plan Amendment (change from R2 to R3/R5)
- City of Moreno Valley – Zone Change (change from RA2 to R3/R5)
- City of Moreno Valley – Approval of Ironwood Village Design Guidelines
- City of Moreno Valley – Grading, excavation, foundation, and/or associated building permits, as required, from the City of Moreno Valley; and
- Other permits and approvals by other agencies as deemed necessary.

Off-Site Improvements

FSA PCR

Attachment B

Explanation of Checklist Determinations

ATTACHMENT B - EXPLANATION OF CHECKLIST DETERMINATIONS

I. Aesthetics

Would the Project:

a. Have a substantial adverse effect on a scenic vista?

Less Than Significant Impact. A scenic vista generally provides focal views of objects, settings, or features of visual interest; or panoramic views of large geographic areas of scenic quality, primarily from a given vantage point. Scenic vistas are generally associated with public vantages. A significant impact may occur if the Project introduced incompatible visual elements within a field of view containing a scenic vista or substantially altered a view of a scenic vista.

Moreno Valley Scenic Resources[1]

The City of Moreno Valley lies on a relatively flat valley floor surrounded by rugged hills and mountains. The topography of the study area is defined by the Box Springs Mountains and Reche Canyon area to the north, the "Badlands" to the east, and the Mount Russell area to the south. These features provide the City with outstanding vistas. The major aesthetic resources within the study area include views of the mountains and southerly views of the valley. The major scenic resources within the Moreno Valley study area are visible from State Route 60, the major transportation route in the area. Upon entering the Moreno Valley from the west, the dominant view is of the Box Springs Mountains to the immediate north and the Mount Russell foothills to the south. Moreno Peak is part of a prominent landform located south of State Route 60 along Moreno Beach Drive. This landform only rises a few hundred feet above the valley floor but has a unique location near the center of the valley. Moreno Beach Drive, the main route to Lake Perris from State Route 60, offers views of Moreno Peak and a panoramic view of Moreno Valley. Panoramic views of the valley can be seen from elevated segments of some local roads and from hillside residences. The views are particularly attractive on clear days and at night when the glow of city lights can be seen. As State Route 60 traverses east through Moreno Valley, it passes through the Badlands area. Characterized by steep and eroded hillsides, the Badlands form the eastern boundary of the study area and provide a sweeping range of hills that act as a visual backdrop to the valley. Expanses of open land are found throughout the eastern portion of the study area. These tracts of land allow for uninterrupted scenic vistas from State Route 60, Gilman Springs Road and other roadways and provide views of the San Jacinto Valley and the ephemeral Mystic Lake. Views of the San Bernardino and San Gabriel mountains are evident at times from the valley floor.

---

1 Background information provided in Section 7.7, Scenic Resources, in Chapter 7 – Conservation, of the City's General Plan (2006). Page 7-12.

Project Site Conditions

Figure I-1, *Photo Location Map*, illustrates the viewpoint locations of photos of the existing Project site that are provided in **Figure I-2** through **Figure I-5**, *Existing Site Photos*. As shown in Figures I-1 through I-5, the Project site is part of an existing natural undulating slope that traverses in an east-west direction framed by Ironwood Avenue to the south and the vacant hillside areas to the north. Slopes descend southward across the site from the hills to the north, and also generally descend from the west to the east on the western portion of the site and then gently ascend moving eastward from the center of the property. Thus, the surrounding residential land uses to the west of the Project site are at higher elevations, while residential uses to the south are at lower elevations. Given the topography of the site and surroundings, as well as the presence of intervening urban development and landscaping, long-range views of the site from surrounding areas are limited to locations to the east of the Project site where land is predominantly vacant, though short- and mid-distance views of the Project site are currently available from adjacent residential areas at higher elevations and from vacant land to the north of the Project site. In addition, the Project site is visible from a number of public roadways in the area including Ironwood Avenue, Nason Street, Oliver Street, and Moreno Beach Drive. According to Figure 7-2, Major Scenic Resources, in Chapter 7 – Conservation, of the City's General Plan and as noted above, Moreno Beach Drive is a designated Scenic Route. Furthermore, as also shown in Figure 7-2 of the General Plan, the Project site is located within two designated View Corridors. The first designated View Corridor, as viewed from areas to the west of the Project site (i.e., west of approximately Lasselle Street), provides mid-distance views eastward toward noted scenic resources including the Reche Mountains to the north of the Project site, Moreno Peak to the south, and the San Timoteo Badlands to the northeast, as well as long-distance views of the San Jacinto Mountains and San Bernardino Mountains. The second, as viewed from areas east of the Project site (i.e., east of approximately Redlands Boulevard), provides mid-distance views westward of the Reche Mountains, Box Spring Mountains, and Moreno Peak, and long-distance views of the San Gabriel Mountains.

The proposed Project would be developed in accordance with all applicable development standards set forth in Section 9.03.040 of the Moreno Valley Municipal Code (MVMC) and in accordance with the Project's Design Guidelines document, which would be subject to review and approval by the City of Moreno Valley. Per the requirements of the MVMC the proposed residential structures would be limited to a maximum height of 35 feet, and would be designed, constructed, and landscaped in accordance with the approved Design Guidelines. As part of the Project, the Project site would be graded to establish developable building pads, roadways, detention basins, and other improvements, which would result in a sloping topography within the Project boundaries, with stepped terraces along proposed streets in the northern portion of the site where existing slopes are steeper and a relatively flatter slope in the southern portion of the site (refer to Figure A-4 in Attachment A of this Initial Study). As such, elevations on-site would decrease from the north to the south across the Project site, and the proposed improvements would generally conform to the current topography of the site but with a more consistent grade compared to existing conditions.

Ironwood Village Project

Figure I-5

Existing Site Photographs

ESA PCR

Based on the limited height of the proposed structures and the location of the Project site relative to designated scenic resources including views of surrounding mountains as seen from Moreno Beach Drive (designated Scenic Route) and the designated View Corridors to the west and east of the Project site, it is anticipated that views of these resources would not be substantially affected by implementation of the proposed Project. Specifically, given the location of the Project site at a lower elevation than the foothills of the Reche Mountains to the north and the presence of existing single-family residential development to the west and south, views of and across the Project site from west of the Project site (i.e., within the designated View Corridors that provide views across the site) would not be notably affected by implementation of proposed two-story single-family residential uses.

As shown in Figure I-2, views to the east toward the San Timoteo Badlands (mid-distance views) and San Jacinto Mountains (long-distance views) and views to the north and northeast toward the Reche Mountains (mid-distance views) and San Bernardino Mountains (long-distance views) would not be substantially adversely affected based on the presence of intervening development and associated landscaping, as well as the relative topography of the area which currently obstructs direct views of the Project site from areas west of the Project site along Ironwood Avenue (i.e., west of the eastern terminus of Helga Lane). Similarly, as shown in Figure I-5, views to the west of the Reche Mountains and Box Spring Mountains (mid-distance views) and San Gabriel Mountains (long-distance views) would also not be substantially adversely affected by Project implementation. Thus, impacts to views from designated View Corridors would be less than significant.

With regard to views of and across the Project site from Moreno Beach Drive, as shown in Figure I-5, while the Project site would be visible from various locations along Moreno Beach Drive, the site does not represent a substantial portion of the view field given the distance of the site from the roadway, the presence of intervening topography and urban development, the elevation of the site relative to the backdrop of the hills immediately north of the site, and the limited height of proposed structures at a maximum of 35 feet above grade. As such, the construction of single-family residential uses up to two stories in height and associated landscaping on the graded Project site would not have the potential to substantially obstruct views of designated scenic resources identified above, most notably the Reche Mountains and San Bernardino Mountains. As such, impacts to scenic resources resulting from implementation of the proposed Project would be less than significant. It should be noted that although State Route 60 (Moreno Valley Freeway), which is located approximately ½-mile to the south of the Project site, is also designated as a Scenic Route in the City's General Plan; however, given the location of the freeway at a lower elevation than the Project site and the presence of existing development and vegetation, the development portions of the Project site are not visible from any location along the alignment. As such, the Project would have no potential to substantially adversely affect views of scenic resources as viewed from this designated Scenic Route.

b. Substantially damage scenic resources, including, but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway?

Less Than Significant Impact. No State-designated scenic highways are located in the Project area, and thus the proposed Project would have no potential to affect scenic resources at viewed from such facilities. However, as noted in Response I.a, above, two City-designated Scenic Routes are located in the vicinity of the Project site, though impacts to scenic resources as viewed from these locations were determined to be less than significant. The Project site does not contain any notable tree specimens and is devoid of any structures (including historic buildings), but does contain rock outcroppings within the northern portion of the property, views of which could be affected by Project implementation. However, the Project has been designed to avoid substantial physical changes (i.e, grading) to these rock outcroppings, as illustrated in Figure A-4, and based on the proposed grading plan and maximum 35-foot structural heights, views of surrounding rock outcroppings would not be substantially obstructed by construction of the proposed single-family residential neighborhood. While views of the lower elevations of the rock outcroppings would be obscured by the proposed development and associated landscaping, the rock outcroppings would still be a prominent visual feature within the visual field, particularly mid-distance westward views of the Project site from Moreno Beach Drive. Given the scale and elevation of the rock outcroppings relative to the proposed structures, the lack of notable physical changes to the rock outcroppings, the lack of available mid- and long distance views of the Project site from areas to the north, south, and west of the property due to topography and existing development, and the limited potential for the proposed development to obstruct views of these features from surrounding locations, implementation of the proposed Project is not expected to substantially damage scenic resources, including, but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway. As such, impacts would be less than significant in this regard.

c. Substantially degrade the existing visual character or quality of the site and its surroundings?

Less Than Significant Impact. The Project site is currently undeveloped, vacant land. The Project site, which is considered moderately disturbed in some areas, consists mostly of ruderal/non-native grasslands and very limited areas of non-native trees and native vegetation in the lower elevations on the site (i.e., south of existing rock outcroppings). On-site vegetation also includes Riversidean sage scrub and brittlebush scrub, which is generally in the northwestern portion of the site, interspersed with the rock outcroppings at the higher elevations. Although the rock outcroppings in the northwest portion of the Project site are prominent visual features of the property, the portions of the site the Project site proposed for future development lack significant native vegetation or other visually distinct features that would improve the visual character and quality of the site. Thus, the visual quality of the site under existing conditions is considered low.

The Project would alter the existing visual character of the Project site by developing a single-family residential subdivision on the property. The native and non-native species of trees, shrubs, and grass located on the site would be removed and replaced with 181 single-family residences and associated infrastructure (i.e., streets, utilities), landscaping and other improvements. The Project would be designed and implemented in accordance with City-approved Design Guidelines, as noted previously, which would prescribe among other features, landscape design, architectural design, and architectural style, in order to provide a consistent and visually cohesive Project. The architectural theme for proposed residential neighborhood is typical traditional California styles of architecture (i.e., Monterey, Spanish Colonial, Santa Barbara, Napa, and Tuscan). While the Design Guidelines and the MVMC allow for two-story (or 35-foot) maximum building heights, the proposed Project would include single-story designs as well, in order to provide visual interest and variation in the rooflines of the development. In addition, the Design Guidelines require that the Project incorporate extensive landscaping throughout the development, as well as apply consistent design for all walls and fences in the subdivision. The proposed Project would also preserve a substantial portion of the site as open space, particularly the rock outcroppings in the northwest corner of the site, and would also provide an on-site community park with turf and landscaping, as well as stormwater detention basins along the southern Project site boundary, all of which would provide a visual buffer by creating view corridors across the site and providing additional vegetation and landscaping to soften the appearance of surrounding new structures on-site. Given the current low visual quality of the development portions of the Project site, adherence to and implementation of the City-approved Design Guidelines for the Project, which would provide for a consistent and visually cohesive development, and avoidance of the rock outcroppings on the property thereby preserving existing views of these visual features, the proposed Project would improve the visual quality of the Project site relative to existing conditions.

Furthermore, it should be noted that the overall architectural style of the homes and building materials, while more modern and cohesive in design, would not substantially contrast with the existing single-family residences that are in proximity to the Project site. While the proposed architectural styles would vary slightly from the surrounding developments, the proposed residences would not be in direct conflict with the overall character of the area.

Based on the above, the proposed Project would not substantially degrade the existing visual character or quality of the Project site and its surroundings and a less than significant impact would occur in this regard.

d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less Than Significant Impact. The Project site is currently unlit, as it is vacant undeveloped land, as noted previously. The proposed Project would provide illumination due to the addition of security lighting, street lighting, lighting within the residences, as well as transient vehicular lighting from cars traveling on adjacent roadways. Lighting proposed on the site would be similar to that which currently exists in the surrounding area, but would be more concentrated on the Project site relative to surrounding uses given the relative increase in residential density. However, despite the additional potential sources of artificial light, all outdoor lighting would be required to comply with current City lighting requirements accordance with Section 9.08.100, Lighting, of the MVMC, which would include light shielding and wattage limitations to minimize light spill effects on adjacent properties. Additionally, it can be reasonably expected that most Project residents would use blinds or curtains for privacy, which would reduce the amount of light emanating from the residences. Further, the lighting would only be partially visible to the surrounding residential uses due to the topography of the site and the landscaping proposed to encompass the site. Also, the proposed residences would be set back from existing surrounding residential uses and proposed light sources would be shielded and directed on-site to preclude the nighttime illumination from spilling over onto the adjacent residential uses.

Transient sources of light associated with the proposed Project (i.e., automobile lights) would be similar to that which occurs on the adjacent streets. With regard to glare, the proposed Project is not expected to create unusual or isolated glare impacts since the buildings would be constructed of materials that provide for minimal glare potential. The use of neon or glare-generating materials is not proposed. Therefore, the proposed Project would not create a new source of substantial light or glare which would adversely affect day or nighttime views in the area. Impacts would be less than significant in this regard.

II. Agriculture and Forestry Resources

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire protection regarding the State's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment Project; and forest carbon measurements methodology provided in Forest Protocols adopted by the California Air Resources Board.

Would the Project:

a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency to non-agricultural use?

No Impact. The Project site is currently undeveloped though several unimproved trails/dirt roads traverse the property. There are no active agricultural uses or related operations on or near the Project site. According to the City of Moreno Valley General Plan Final Environmental Impact Report (2006) (GP FEIR), Figure 5.8-1, Important Farmlands, the eastern portion of the Project site contains farmland of local importance while the majority of the western portion of the Project site contains grazing land with urban and build-up land in the northwestern corner. Accordingly, the Project site is not located on designated Prime Farmland, Unique Farmland, or Farmland of Statewide Importance as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program.[2] Therefore, the Project would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to non-agricultural uses. Thus, no impact would occur in this regard.

b. Conflict with the existing zoning for agricultural use, or a Williamson Act Contract?

No Impact. The Project site is currently zoned Residential Agriculture 2 (RA2) and Hillside Residential (HR). No portion of the Project or surrounding land uses are zoned primarily for agricultural uses and no nearby lands are enrolled under the Williamson Act. As such, the Project

2 State of California Department of Conservation, California Important Farmland Finder, http://maps.conservation.ca.gov/ciff/ciff.html, accessed May 2016.

would not conflict with existing zoning for agricultural use or a Williamson Act contract and no impact would occur in this regard.

c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 1220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

No Impact. As discussed under Response II.b, the Project site is currently zoned Residential Agriculture 2 (RA2) and Hillside Residential (HR). No forest land or timberland zoning is present on the Project site or in the surrounding area. As such, the Project would not conflict with existing zoning for forest land or timberland and no impact would occur in this regard.

d. Result in the loss of forest land or conversion of forest land to non-forest use?

No Impact. No forest land exists on the Project site or in the surrounding area. As such, the Project would not result in the loss of forest land or conversion of forest land to non-forest use and no impact would occur in this regard.

e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

No Impact. The Project site is currently undeveloped though several unimproved trails/dirt roads traverse the property. Since there are no active agricultural uses or related operations on or near the Project site, the Project would not involve the conversion of farmland to other uses, either directly or indirectly. No impacts to agricultural land or uses would occur.

III. Air Quality

The following impact analysis pertaining to air quality impacts is based on information contained in the Ironwood Residential (TTM No. 37001), Air Quality Impact Analysis, City of Moreno Valley *(herein referred to as the "Air Quality Impact Analysis"), prepared by Urban Crossroads, dated August 31, 2015. The Air Quality Impact Analysis is provided in Appendix A.*

Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations.

Would the Project:

a) Conflict with or obstruct implementation of the applicable air quality plan?

Less Than Significant Impact. The Project site is located within the 6,745-square-mile South Coast Air Basin (SCAB). Air quality planning for the SCAB is under the jurisdiction of the South Coast Air Quality Management District (SCAQMD). The Project would be subject to the SCAQMD's Air Quality Management Plan (AQMP), which contains a comprehensive list of pollution control strategies directed at reducing emissions and achieving ambient air quality standards. These strategies are developed, in part, based on regional population, housing, and employment projections prepared by the Southern California Association of Governments (SCAG). The 2012 AQMP was adopted by the AQMD Governing Board on December 7, 2012. The 2012 AQMP incorporates the latest scientific and technological information and planning assumptions including the 2012 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) and updated emission inventory methodologies for various source categories. Similar to the 2007 AQMP, the 2012 AQMP was based on assumptions provided by both the California Air Resources Board (CARB) and SCAG in the latest available EMFAC model for the most recent motor vehicle and demographics information, respectively. The air quality levels projected in the 2012 AQMP are based on several assumptions. For example, the 2012 AQMP has assumed that development associated with general plans, specific plans, residential projects, and wastewater facilities would be constructed in accordance with population growth projections identified by SCAG in its 2012 RTP. The 2012 AQMP has also assumed that such development projects would implement strategies to reduce emissions generated during the construction and operational phases of development. Criteria for determining consistency with the AQMP are defined in Chapter 12, Section 12.2 and Section 12.3 of the SCAQMD's CEQA Air Quality Handbook (1993). These indicators are discussed below:

Consistency Criterion No. 1: The proposed project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

Consistency Criterion No. 1 refers to violations of the California Ambient Air Quality Standards (CAAQS) and National Ambient Air Quality Standards (NAAQS). CAAQS and NAAQS violations would occur if Localized Significance Thresholds (LSTs) were exceeded. As evaluated as part of the Project LST analysis under Response III.b., below, the Project's localized construction-source emissions would not exceed applicable LSTs.

The Project regional analysis demonstrates that Project operational-source emissions would not exceed applicable thresholds, and would therefore not result in or cause violations of the CAAQS and NAAQS. On the basis of the preceding discussion, the Project is determined to be consistent with the first criterion.

Consistency Criterion No. 2: The proposed project will not exceed the assumptions in the AQMP based on the years of project build-out phase.

The 2012 AQMP demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to SCAG, which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in the City of Moreno Valley General Plan (2006) (General Plan) is considered to be consistent with the AQMP.

Peak day emissions generated by construction activities are largely independent of land use assignments, but rather are a function of development scope and maximum area of disturbance.

Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities.

The Project site is designated for low-density residential uses (R2 residential uses up to 2 units per acre) per the City's General Plan Land Use Map, and is zoned Residential Agriculture (RA2, up to 2 units per acre) and Hillside Residential (HR). In order to accommodate the proposed density on the Project site, which is currently zoned RA2 with a density of up to two units per acre, the Project applicant is requesting a change of zone to R3 (single-family residential up to 3 units per acre) on the western portion of the Project site, and R5 (single-family residential uses up to 5 units per acre) on the eastern portion of the site. Although the Project is proposing zone changes, it should be noted that the Project would not exceed regional thresholds for operational emissions. As such, a less than significant impact would occur in this regard. Therefore, the Project is generally consistent with the growth projections in the City's General Plan and is considered to be consistent with the 2012 AQMP. On the basis of the preceding discussion, the Project is determined to be consistent with the second criterion.

b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?

Less Than Significant Impact. As indicated above, the Project site is located within the SCAB, which is characterized by relatively poor air quality. State and federal air quality standards are often exceeded in many parts of the SCAB, including those monitoring stations nearest to the Project site. The Project would contribute to local and regional air pollutant emissions during construction (short-term or temporary) and Project occupancy (long-term). However, based on the following analysis, construction and operation of the Project would result in less than significant impacts relative to the daily significance thresholds for criteria air pollutant emissions established by the SCAQMD for construction and operational phases.

On October 2, 2013, the SCAQMD in conjunction with the California Air Pollution Control Officers Association (CAPCOA) released the latest version of the California Emissions Estimator Model™ (CalEEMod™) v2013.2.2. The purpose of this model is to calculate construction-source and operational-source criteria pollutant (oxides of nitrogen [NOx], volatile organic compounds [VOC], particulate matter 10 microns in diameter or less [PM_{10}], particulate matter 2.5 microns in diameter or less [$PM_{2.5}$], sulfur oxides [SO_x], and carbon monoxide [CO]) and greenhouse gas (GHG) emissions from direct and indirect sources and quantify applicable air quality and GHG reductions achieved from mitigation measures. Accordingly, the latest version of CalEEMod™ has been used for the Project to determine construction and operational air quality emissions.

Construction Emissions

Construction activities associated with the Project would result in emissions of CO, VOCs, NO_x, SO_x, PM_{10}, and $PM_{2.5}$. Construction related emissions are expected from the grading, paving, building construction, architectural coatings, and construction worker commutes. Construction is expected to commence in March 2017 and would last through July 2020. Construction duration by phase is provided on **Table III-1**, *Construction Duration.* The construction schedule utilized in the Air Quality Impact Analysis represents a "worst-case" scenario should construction occur any time after the respective dates since emission factors for construction decrease as the analysis year increases. The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required per CEQA guidelines. Site specific construction fleet may vary due to specific Project needs at the time of construction. The duration of construction activity and associated construction equipment was estimated based on consultation with the Project applicant. A detailed summary of construction equipment assumptions by phase is provided in **Table III-2**, *Construction Equipment Assumptions*.

TABLE III-1
CONSTRUCTION DURATION

Activity	Start Date	End Date	Duration
Grading	3/1/2017	6/13/2017	75
Paving	6/14/2017	8/29/2017	55
Building Construction	8/30/2017	3/31/2020	675
Architectural Coatings	12/1/2017	7/2/2020	675

Dust is typically a major concern during rough grading activities. As such emissions are not amenable to collection and discharge through a controlled source, they are referred to as "fugitive emissions". Fugitive dust emissions rates vary as a function of many parameters (soil silt, soil moisture, wind speed, area disturbed, number of vehicles, depth of disturbance or excavation, etc.). The CalEEMod model was utilized to calculate fugitive dust emissions resulting from this phase of activity. Construction emissions for construction worker vehicles traveling to and from the Project site, as well as vendor trips (construction materials delivered to the Project site) were estimated based on information from CalEEMod model defaults.

The estimated maximum daily construction emissions are summarized on **Table III-3**, *Emissions Summary of Overall Construction*. Under the assumed scenarios, emissions resulting from the Project construction would not exceed any criteria pollutant thresholds established by the SCAQMD. As such, a less than significant impact would occur in this regard.

TABLE III-3
EMISSIONS SUMMARY OF OVERALL CONSTRUCTION

Year	Emissions (pounds per day)					
	VOC	NOx	CO	SOx	PM10	PM2.5
2017	6.87	76.97	50.90	0.07	7.27	4.81
2018	5.87	19.94	18.26	0.03	1.45	1.15

Operational Emissions

Operational activities associated with the Project would result in emissions of reactive organic gases (ROG), NO_x, CO, So_x, PM_{10}, and $PM_{2.5}$. Operational emissions would be expected from area source emissions, energy source emissions, and mobile source emissions.

Area Source Emissions

Architectural Coatings: Over a period of time the proposed residential uses would be subject to emissions resulting from the evaporation of solvents contained in paints, varnishes, primers, and other surface coatings as part of Project maintenance. The emissions associated with architectural coatings were calculated using the CalEEMod model.

Consumer Products: Consumer products include, but are not limited to detergents, cleaning compounds, polishes, personal care products, and lawn and garden products. Many of these products contain organic compounds which when released in the atmosphere can react to form ozone and other photochemically reactive pollutants. The emissions associated with use of consumer products were calculated based on defaults provided within the CalEEMod model.

Hearths/Fireplaces: The emissions associated with use of hearths/fireplaces were calculated based on assumptions provided in the CalEEMod model. The Project is required to comply with SCAQMD Rule 445, which prohibits the use of wood burning stoves and fireplaces in new development. In order to account for the requirements of this Rule, the unmitigated CalEEMod model estimates were adjusted to remove wood burning stoves and fireplaces. As the Project is required to comply with SCAQMD Rule 445, the removal of wood burning stoves and fireplaces is not considered "mitigation" although it must be identified as such in CalEEMod in order to treat the case appropriately.

Landscape Maintenance Equipment: Landscape maintenance equipment would generate emissions from fuel combustion and evaporation of unburned fuel. Equipment in this category would include lawnmowers, shedders/grinders, blowers, trimmers, chain saws, and hedge trimmers used to maintain the landscaping of the Project. The emissions associated with landscape maintenance equipment were calculated based on assumptions provided in the CalEEMod model.

Area Source Emissions

Combustion Emissions Associated with Natural Gas and Electricity: Electricity and natural gas are used by almost every project. Criteria pollutant emissions are emitted through the generation of electricity and consumption of natural gas. However, as electrical generating facilities for the Project area are located either outside the region (State) or offset through the use of pollution credits (RECLAIM) for generation within the SCAB, criteria pollutant emissions from off-site generation of electricity is generally excluded from the evaluation of significance and only natural gas use is considered. The emissions associated with natural gas use were calculated using the CalEEMod model.

Mobile Source Emissions

Vehicles: Project operational (vehicular) impacts are dependent on both overall daily vehicle trip generation and the effect of the Project on peak hour traffic volumes and traffic operations in the vicinity of the Project. The Project related operational air quality impacts derive primarily from vehicle trips generated by the Project. Trip characteristics available from the Project's Traffic Impact Analysis, were utilized in this analysis. A vehicle fleet mix consistent with the Caltrans ITS Transportation Project-Level Carbon Monoxide Protocol was used (i.e., light duty autos 69 percent, light duty trucks 19.4 percent, medium duty trucks 6.4 percent, heavy duty trucks 4.7 percent, and motorcycles 0.5 percent). This fleet mix was utilized as it is more appropriate than the CalEEMod default fleet mix for residential land uses.

Fugitive Dust Related to Vehicular Travel: Vehicles traveling on paved roads would be a source of fugitive emissions due to the generation of road dust inclusive of tire wear particulates. The emissions estimates for travel on paved roads were calculated using the CalEEMod model.

Overall, Project operational-source emissions would not exceed applicable SCAQMD regional thresholds of significance. Operational-source emissions are summarized in **Table III-4**, *Summary of Peak Operational Emissions*. As such, a less than significant impact would occur in this regard.

TABLE III-4
SUMMARY OF PEAK OPERATIONAL EMISSIONS

Operational Activities – Summer Scenario	Emissions (pounds per day)					
	VOC	**NOx**	**CO**	**SOx**	**PM10**	**PM2.5**

Localized Significance – Construction Activity

Background on Localized Significance Threshold (LST) Development

The Air Quality Impact Analysis makes use of methodology included in the SCAQMD Final Localized Significance Threshold Methodology (Methodology). The SCAQMD has established that impacts to air quality are significant if there is a potential to contribute or cause localized exceedances of the federal and/or State ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs).

The significance of localized emissions impacts depends on whether ambient levels in the vicinity of any given project are above or below State standards. In the case of CO and NO_2, if ambient levels are below the standards, a project is considered to have a significant impact if project emissions result in an exceedance of one or more of these standards. If ambient levels already exceed a state or federal standard, then project emissions are considered significant if they increase ambient concentrations by a measurable amount. This would apply to PM_{10} and $PM_{2.5}$, both of which are non-attainment pollutants.

The SCAQMD established LSTs in response to the SCAQMD Governing Board's Environmental Justice Initiative I-4. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the nearest residence or sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses. LSTs were developed in response to environmental justice and health concerns raised by the public regarding exposure of individuals to criteria pollutants in local communities. To address the issue of localized significance, the SCAQMD adopted LSTs that show whether a project would cause or contribute to localized air quality impacts and thereby cause or contribute to potential localized adverse health effects. The Air Quality Impact Analysis makes use of methodology included in the SCAQMD Final Localized Significance Threshold Methodology (LST Methodology).

Applicability of LSTs for the Project

For the Project, the appropriate Source Receptor Area (SRA) for the LST is the Perris monitoring station (SRA 24). LSTs apply to CO, NO_2, PM_{10}, and $PM_{2.5}$. The SCAQMD produced look-up tables for projects less than or equal to five acres in size. In order to determine the appropriate methodology for determining localized impacts that could occur as a result of Project-related construction, the following process is undertaken:

The CalEEMod model is utilized to determine the maximum daily on-site emissions that would occur during construction activity;

The SCAQMD's Fact Sheet for Applying CalEEMod to Localized Significance Thresholds is used to determine the maximum site acreage that is actively disturbed based on the construction equipment fleet and equipment hours as estimated in CalEEMod;

If the total acreage disturbed is less than or equal to five acres per day, then the SCAQMD's screening look-up tables are utilized to determine if a Project has the potential to result in a significant impact (the SCAQMD recommends that Projects exceeding the screening look-up tables undergo dispersion modeling to determine actual impacts). The look-up tables establish a maximum daily emissions threshold in pounds per day that can be compared to CalEEMod outputs; and

If the total acreage disturbed is greater than five acres per day, then the SCAQMD recommends dispersion modeling to be conducted to determine the actual pollutant concentrations for applicable LSTs in the air. In other words, the maximum daily on-site emissions as calculated in CalEEMod are modeled via air dispersion modeling to calculate the actual concentration in the air (e.g., parts per million or micrograms per cubic meter) in order to determine if any applicable thresholds are exceeded.

Emissions Considered

SCAQMD's Methodology clearly states that "off-site mobile emissions from the Project should not be included in the emissions compared to LSTs." Therefore, for purposes of the construction LST analysis only emissions included in the CalEEMod "on-site" emissions outputs were considered

Maximum Daily Disturbed-Acreage

Table III-5, *Maximum Daily Disturbed-Acreage* is used to determine the maximum daily disturbed-acreage for use in determining the applicability of the SCAQMD's LST look-up tables. Based on Table III-5, the Project could actively disturb approximately four acres per day and thus would not exceed the five acre per day limit established by the SCAQMD's LST look-up tables. Site specific construction fleet may vary due to specific project needs at the time of construction. The SCAQMD produced look-up tables for projects less than or equal to five acres in size; since the Project does not exceed a disturbance area of five acres in size, SCAQMD LST look-up tables would be used to determine localized impacts consistent with SCAQMD protocol.

TABLE III-5
MAXIMUM DAILY DISTURBED-ACREAGE

Construction Phase	Equipment Type	Equipment Quantity	Acres grader per 8 hour day	Operating Hours per Day	Acres graded per day
Grading	Crawler Tractors	2	0.5	8	1
	Graders	1	0.5	8	0.5
	Rubber Tired Dozers	1	0.5	8	0.5
	Scrapers	2	1.0	8	2
Total acres graded per day					4.0
Applicable LST Mass Rate Look-up Table					4.0

SOURCE: Ironwood Residential (TTM No. 37001), Air Quality Impact Analysis, City of Moreno Valley, prepared by Urban Crossroads, dated August 31, 2015.

Receptors

The nearest sensitive receptor is the residential uses located immediately west of the Project site. Notwithstanding, the Methodology explicitly states that "It is possible that a project may have receptors closer than 25 meters. Projects with boundaries located closer than 25 meters to the nearest receptor should use the LSTs for receptors located at 25 meters." Accordingly, LSTs for receptors at 25 meters are utilized in this analysis and provide for a conservative i.e. "health protective" standard of care.

Overall, emissions during construction activity would not exceed any of the SCAQMD's localized significance thresholds. **Table III-6**, *Localized Significance Summary Construction*, identifies the localized impacts at the nearest receptor location in the vicinity of the Project site. As such, a less than significant impact would occur in this regard.

TABLE III-6
LOCALIZED SIGNIFICANT SUMMARY CONSTRUCTION

On-Site Grading Emissions	Emissions (pounds per day)			
	NOx	**CO**	**PM10**	**PM2.5**
Maximum Daily Emissions	76.87	49.73	7.01	4.74
SCAQMD Localized Threshold	236	1,345.67	11	6.67
Threshold Exceeded?	NO	NO	NO	NO

SOURCE: Ironwood Residential (TTM No. 37001), Air Quality Impact Analysis, City of Moreno Valley, prepared by Urban Crossroads, dated August 31, 2015.

Localized Significance – Long-Term Operational Activity

The Project involves the construction and operation of 181 single-family residential units. According to SCAQMD LST methodology, LSTs would apply to the operational phase of a proposed project, if the project includes stationary sources, or attracts mobile sources that may spend long periods queuing and idling at the site (e.g., warehouse or transfer facilities). The Project does not include such uses, and thus, due to the lack of stationary source emissions, no long-term localized significance threshold analysis is needed.

CO "Hot Spot" Analysis

As discussed below, the Project would not result in potentially adverse CO concentrations or "hot spots." Further, detailed modeling of Project-specific carbon monoxide (CO) "hot spots" is not needed to reach this conclusion.

It has long been recognized that adverse localized CO concentrations ("hot spots") are caused by vehicular emissions, primarily when idling at congested intersections. In response, vehicle emissions standards have become increasingly stringent in the last twenty years. Currently, the allowable CO emissions standard in California is a maximum of 3.4 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of increasingly sophisticated and efficient emissions control technologies, CO concentrations in the Project vicinity have steadily declined, as indicated by historical emissions data.

A CO "hot spot" would occur if an exceedance of the State one-hour standard of 20 parts per million (ppm) or the eight-hour standard of 9 ppm were to occur. At the time of the 1993 Handbook, the SCAB was designated nonattainment under the California AAQS and National AAQS for CO. As identified within SCAQMD's 2003 AQMP and the 1992 Federal Attainment Plan for Carbon Monoxide (1992 CO Plan), peak carbon monoxide concentrations in the SCAB were a result of unusual meteorological and topographical conditions and not a result of congestion at a particular intersection. To establish a more accurate record of baseline CO concentrations affecting the SCAB, a CO "hot spot" analysis was conducted in 2003 for four busy intersections in the City of Los Angeles at the peak morning and afternoon time periods. The hot spot analysis did not predict violations of CO standards, as indicated on **Table III-7**, *CO Model*

Results. Traffic volumes generating the CO concentrations for the analysis are indicated on **Table III-8**, *Traffic Volumes*. It can therefore be reasonably concluded that projects, including the proposed Project, that are not subject to the extremes in vehicle volumes and vehicle congestion that was evidenced in the 2003 Los Angeles hot spot analysis would similarly not create or result in CO hot spots. Similar considerations are also employed by other air districts when evaluating potential CO concentration impacts. More specifically, the Bay Area Air Quality Management District (BAAQMD) concludes that under existing and future vehicle emission rates, a given project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour, or 24,000 vehicles per hour where vertical and/or horizontal air does not mix, in order to generate a significant CO impact. The Project would not produce the volume of traffic required to generate a CO hotspot either in the context of the 2003 Los Angeles hot spot study, or based on representative BAAQMD CO threshold considerations; refer to **Table III-9**, *Project Peak Hour Traffic Volumes*. Therefore, CO hotspots are not an environmental impact of concern for the Project. As such, localized air quality impacts related to mobile-source emissions would be less than significant.

TABLE III-7
CO MODEL RESULTS

Intersection Location	Morning 1-hour	Afternoon 1-hour	8-hour
Wilshire-Veteran	4.6	3.5	4.2

c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions that exceed quantitative thresholds for ozone precursors)?

Less Than Significant Impact. The SCAB is currently in extreme nonattainment for ozone and non-attainment PM_{10}, and $PM_{2.5}$. The SCAQMD's approach for assessing cumulative impacts related to operations is based on attainment of ambient air quality standards in accordance with the requirements of the federal and State Clean Air Acts. As discussed above, the SCAQMD has developed a comprehensive plan, the 2012 AQMP, which addresses the region's cumulative air quality condition.

A significant impact may occur if a project were to add a cumulatively considerable contribution of a federal or State non-attainment pollutant. Because the SCAB is currently in nonattainment for ozone, PM_{10} and $PM_{2.5}$, related projects could cause ambient concentrations to exceed an air quality standard or contribute to an existing or projected air quality exceedance. Cumulative impacts to air quality are evaluated under two sets of thresholds for CEQA and the SCAQMD. In particular, CEQA Guidelines Sections 15064(h)(3) provides guidance in determining the significance of cumulative impacts. Specifically, Section 15064(h)(3) states in part that:

"A lead agency may determine that a project's incremental contribution to a cumulative effect is not cumulatively considerable if the project will comply with the requirements in a previously approved plan or mitigation program which provides specific requirements that will avoid or substantially lessen the cumulative problem (e.g., water quality control plan, air quality plan, integrated waste management plan) within the geographic area in which the project is located. Such plans or programs must be specified in law or adopted by the public agency with jurisdiction over the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency…"

For purposes of the cumulative air quality analysis with respect to CEQA Guidelines Section 15064(h)(3), the Project's incremental contribution to cumulative air quality impacts is determined based on compliance with the SCAQMD adopted 2012 AQMP. The 2012 AQMP includes demographic growth forecasts for various socioeconomic categories (e.g. population, housing, employment), developed by SCAG for their 2012 Regional Transportation Plan (RTP). As discussed under Response III.a, above, the Project would be consistent with the 2012 AQMP.

As the Project is not part of an ongoing regulatory program, the SCAQMD also recommends that project-specific air quality impacts be used to determine the potential cumulative impacts to regional air quality. As discussed above, peak daily emissions of operation-related pollutants would not exceed SCAQMD regional significance thresholds. By applying SCAQMD's cumulative air quality impact methodology, implementation of the Project would not result in an addition of criteria pollutants such that cumulative impacts would occur, in conjunction with related projects in the region. In addition, as discussed in Response III.b, above, construction of the Project is not expected to result in a cumulatively considerable net increase of any criteria pollutant for which the SCAQMD has established a localized impact threshold. Therefore, the emissions of non-attainment pollutants and precursors generated by the Project in excess of the SCAQMD Project-level thresholds would be less than significant.

d) Expose sensitive receptors to substantial pollutant concentrations?

Less Than Significant Impact. Certain population groups are especially sensitive to air pollution and should be given special consideration when evaluating potential air quality impacts. These population groups include children, the elderly, persons with pre-existing respiratory or cardiovascular illness, and athletes and others would engage in frequent exercise. As defined in the SCAQMD CEQA Air Quality Handbook, a sensitive receptor to air quality is defined as any of the following land use categories: (1) long-term health care facilities; (2) rehabilitation centers; (3) convalescent centers; (4) retirement homes; (5) residences; (6) schools; (7) parks and playgrounds; (8) child care centers; and (9) athletic fields.

As discussed in Response III.b, above, results of the LST analysis indicate the Project would not exceed the SCAQMD localized significance thresholds during construction. Therefore, sensitive receptors would not be subject to a significant air quality impact during Project construction. As such, a less than significant impact would occur in this regard.

Results of the LST analysis indicate the Project would not exceed the SCAQMD localized significant thresholds during operational activity. The Project would not result in a CO "hotspot" or result in a significant adverse health impact as a result of Project related traffic during ongoing operations. As such, a less than significant impact would occur in this regard.

e) Create objectionable odors affecting a substantial number of people?

Less Than Significant Impact With Mitigation Incorporated. Potential sources that may emit odors during construction activities include construction equipment exhaust, the application of asphalt, and the use of architectural coatings and solvents. According to the SCAQMD CEQA Air Quality Handbook, construction equipment is not a typical source of odors. SCAQMD Rule 1113 limits the amount of VOCs from architectural coatings and solvents. Further, construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the completion of construction. Through adherence with mandatory compliance with SCAQMD Rules, no construction activities or materials are proposed which would create objectionable odors. The nearest existing sensitive receptors are residences located immediately west of the Project site. However, the Project's proposed uses would not typically generate nuisance odors at nearby sensitive receptors.

According to the SCAQMD CEQA Air Quality Handbook, land uses associated with odor complaints typically include agricultural uses, wastewater treatment plants, food processing plants, chemical plants, composting operations, refineries, landfills, dairies, and fiberglass molding facilities. The Project would not involve elements related to these types of uses. It is expected the Project-generated refuse would be temporarily stored in covered containers and would be removed at regular intervals in compliance with the City's solid waste regulations. While there is a potential for odors to occur, compliance with industry standard odor control practices, SCAQMD Rule 402 (Nuisance), SCAQMD Best Available Control Technology Guidelines, and implementation of recommended mitigation measures ("MM") MM AQ-1 through MM AQ-3, would limit potential objectionable odor impacts to a less than significant level.

Mitigation Measures

MM AQ-1 The Project shall comply with the provisions of South Coast Air Quality Management District Rule 403, "Fugitive Dust." Rule 403 requires implementation of best available dust control measures during construction activities that generate fugitive dust, such as earth moving, grading, and equipment travel on unpaved roads. Prior to grading permit issuance, the City of Moreno Valley shall verify that the following notes are specified on the grading plan. Project construction contractors shall be required to ensure compliance with the notes and permit periodic inspection of the construction site by City of Moreno Valley staff or its designee to confirm compliance. These notes shall also be specified in bid documents issued to prospective construction contractors.

a) All clearing, grading, earth-moving, and excavation activities shall cease when winds exceed 25 miles per hour;

b) During grading and ground-disturbing construction activities, the construction contractor shall ensure that all unpaved roads, active soil stockpiles, and areas undergoing active ground disturbance within the Project site are watered at least three (3) times daily during dry weather. Watering, with complete coverage of disturbed areas by water truck, sprinkler system, or other comparable means, shall occur in the mid-morning, afternoon, and after work is done for the day;

c) Temporary signs shall be installed on the construction site along all unpaved roads indicating a maximum speed limit of 15 miles per hour (MPH). The signs shall be installed before construction activities commence and remain in place for the duration of construction activities that include vehicle activities on unpaved roads; and

d) The cargo area of all vehicles hauling soil, sand, or other loose earth materials shall be covered.

MM AQ-2 The Project shall comply with the provisions of South Coast Air Quality Management District Rule 1186 "PM10 Emissions from Paved and Unpaved Roads and Livestock Operations" and Rule 1186.1, "Less-Polluting Street Sweepers" by complying with the following requirements. To ensure and enforce compliance with these requirements and reduce the release of criteria pollutant emissions into the atmosphere during construction, prior to grading and building permit issuance, the City of Moreno Valley shall verify that the following notes are included on the grading and building plans. Project construction contractors shall be required to ensure compliance with the notes and permit periodic inspection of the construction site by City of Moreno Valley staff or its designee to confirm compliance. The notes also shall be specified in bid documents issued to prospective construction contractors.

a) If visible dirt or accumulated dust is carried onto paved roads during construction, the contractor shall remove such dirt and dust at the end of each work day by street cleaning and

b) Street sweepers shall be certified by the South Coast Air Quality Management District as meeting the Rule 1186 sweeper certification procedures and requirements for PM10-efficient sweepers. All street sweepers having a gross vehicle weight of 14,000 pounds or more shall be powered with alternative (non-diesel) fuel or otherwise comply with South Coast Air Quality Management District Rule 1186.1.

MM AQ-3 The Project is required to comply with the provisions of South Coast Air Quality Management District Rule 402 "Nuisance." To ensure and enforce compliance with this requirement, which applies to the release of odorous emissions into the atmosphere, prior to the issuance of grading and building permits, the City of Moreno Valley shall verify that the following note is included on grading and building plans. During Project construction, contractors shall be required to ensure compliance with Rule 402 and permit periodic inspection of the construction site by the City of Moreno Valley staff or its designee to confirm compliance.

IV. Biological Resources

The following impact analysis pertaining to biological resources is based on information contained in the *Ironwood Village Biological Resources Assessment* (herein referred to as the "Biological Resources Assessment" or "BRA"), prepared by ESA PCR, dated September 2016, as well as the *Determination of Biologically Equivalent or Superior Preservation* (referred to as the "DBESP" Report), also prepared by ESA PCR, dated September 2016. The scope of the BRA includes descriptions of Project-related improvements, methods of study, existing site conditions including vegetation communities and the potential for special-status biological resources, followed by an evaluation of impacts to special-status biological resources pursuant to CEQA thresholds and compliance with the Western Riverside County MSHCP. The BRA summarizes existing on- and off-site biological resources conditions within and around the Project site based on information compiled through field reconnaissance and appropriate reference materials. Surveys included a general biological survey and vegetation mapping; an investigation of jurisdictional waters; focused plant surveys; and focused burrowing owl surveys.

Avoidance, minimization, and/or mitigation measures are proposed to reduce any potential adverse effects to biological resources to less than significant under CEQA where appropriate.

The Biological Resources Assessment and DBESP Report are both provided in Appendix B of this Initial Study.

Existing Biological Resources Conditions

The study area for the BRA included the approximately 78.48-acre on-site study area (Project site) as well as approximately 10.57 acres of off-site study areas that could potentially be affected by off-site infrastructure improvements to serve future development on-site. The specific location of the study area is depicted below in **Figure IV-1**, *BRA Study Area*. Off-site study areas associated with four types of proposed Project improvements include manufactured slopes, road improvements, a sewer line extension, and water line extensions, as illustrated and indicated in Figure IV-1.

The Project study areas consist primarily of non-native vegetation characterized by ruderal vegetation and disturbed areas that consist of little to no vegetation. There are some areas that support native plant communities, such as Riversidean sage scrub and brittlebush scrub, which predominantly reside in the northwestern corner of the on-site study area. The Project proposes avoidance of the northwestern and northeastern corners of the on-site study area, which are located on hillsides that transition into the foothills of the Badlands mountain range located to the north of the Project site. These avoided areas will be maintained as natural open space, in part, to preserve the scenic views of the hillsides from the City of Moreno Valley. The Project on- and off-site study areas also support two drainage systems, which include Drainage A and Drainage Complex B (see discussion and exhibits below), approximately 40% of which will be avoided.

Characteristics of the Study Area and Surrounding Area

On-Site Characteristics

The approximately 79-acre Project site and the 10.57-acre off-site areas are located in the City of Moreno Valley in Riverside County. The Project site consists primarily of non-native vegetation characterized by ruderal vegetation and disturbed areas that consist of little to no vegetation. There are some areas that support native plant communities, such as Riversidean sage scrub and brittlebush scrub, which predominantly reside in the northwestern corner of the Project site. The study area supports two drainage systems observed to support field indicators associated with USACE, RWQCB, and CDFW (collectively “the resource agencies”) jurisdictional waters, referred to in this analysis as Drainage A and Drainage Complex B, although only Drainage A occurs on-site. The topography on-site is generally flat with gently rolling hills throughout the Project site and steeper rock outcrops on the northwest corner. On-site elevations range from the lowest of approximately 1,830 feet above mean sea level (MSL) along the southern boundary of the Project site to a high of approximately 1,975 feet above MSL along the northwest boundary of the site. The entire Project site is within the Reche Canyon/Badlands Area Plan of the MSHCP (see **Figure IV-2**, *Relationship to the MSHCP*, below).

Relationship to the MSHCP

ESA PCR

Off-Site Characteristics

The 10.57-acre off-site areas include the proposed manufactured slopes, road improvements, sewer line, and water line areas. The off-site areas are dominated by ruderal vegetation and disturbed areas with only a small acreage of native brittlebush scrub and Riversidean sage scrub. The off-site areas also support some areas of sparsely vegetated river wash areas. A portion of Drainage A and the entirety of Drainage Complex B occurs within the off-site area. The topography of the off-site areas is generally flat with the exception of the proposed northern water line area near an existing water tank, which consists of a fairly steep east-facing slope supporting some native vegetation and rocky outcrops. Elevations within the off-site areas range from the lowest of approximately 1,793 feet above MSL at the southern end of the proposed sewer line to a high of approximately 1,948 feet above MSL at the steepest portion of the proposed water line area.

Plant Communities

Descriptions of each of the plant communities found within the study area are provided in Section 4.2 of the Project BRA. The locations of each of the plant communities are shown below in **Figure IV-3**, *Plant Communities*, while **Table IV-1**, *Plant Communities*, below, lists each of the plant communities observed, as well as the acreage within the study area.

TABLE IV-1
PLANT COMMUNITIES

Plant Communities	On-site (acres)	Off-site (acres)
Brittlebush Scrub	2.34	0.27
Brittlebush Scrub/Ruderal	0.31	0.21
Buckwheat Scrub/Ruderal	0.09	0.04
Laurel Sumac Scrub/Ruderal	0.78	-
Riversidean Sage Scrub	3.10	0.12
Riversidean Sage Scrub/Ruderal	-	0.07
Rock Outcrop/Riversidean Sage Scrub	2.15	-
River Wash	-	0.05

Attachment: Initial Study/Mitigated Negative Declaration (IS/MND) (2437 : Ironwood Village (PEN16-0077 through PEN16-0081))

General Plant Inventory

The plant communities discussed above are comprised of numerous plant species. Observations regarding the plant species present were made during the field visits to the study area, and a list of all plant species observed is provided in Appendix A, Floral and Faunal Compendium, of the BRA. Special-status plant species occurring or potentially occurring within the study area are discussed in Section 4.7.5, *Special-status Plant Species*, of the BRA.

General Wildlife Inventory

The plant communities discussed above provide habitat for common wildlife species. Observations regarding the wildlife species present were made during the field visits to the study area, and a list of all species observed is provided in Appendix A of the BRA. Special-status wildlife species occurring or potentially occurring are discussed in Section 4.7.6, *Special-status Wildlife Species*, of the BRA.

Wildlife Movement

Wildlife corridors link together areas of suitable habitat that are otherwise separated by rugged terrain, changes in vegetation, or human disturbance. The fragmentation of open space areas by urbanization creates isolated "islands" of wildlife habitat. In the absence of habitat linkages that allow movement to adjoining open space areas, various studies have concluded that some wildlife species, especially the larger and more mobile mammals, will not likely persist over time in fragmented or isolated habitat areas because they prohibit the infusion of new individuals and genetic material.

Corridors effectively act as links between different populations of a species. A group of smaller populations (termed "demes") linked together via a system of corridors is termed a "metapopulation." The long-term health of each deme within the metapopulation is dependent upon its size and the frequency of interchange of individuals (immigration vs. emigration). The smaller the deme, the more important immigration becomes, because prolonged inbreeding with the same individuals can reduce genetic variability. Immigrant individuals that move into the deme from adjoining demes mate with individuals and supply that deme with new genes and gene combinations that increases overall genetic diversity. An increase in a population's genetic variability is generally associated with an increase in a population's health and long-term viability.

Corridors mitigate the effects of habitat fragmentation by: (1) allowing animals to move between remaining habitats, which allows depleted populations to be replenished and promotes genetic diversity; (2) providing escape routes from fire, predators, and human disturbances, thus reducing the risk that catastrophic events (such as fires or disease) will result in population or local species extinction; and (3) serving as travel routes for individual animals as they move within their home ranges in search of food, water, mates, and other needs.

Wildlife movement activities usually fall into one of three movement categories: (1) dispersal (e.g., juvenile animals from natal areas, individuals extending range distributions); (2) seasonal migration; and, (3) movements related to home range activities (foraging for food or water, defending territories, searching for mates, breeding areas, or cover). Although the nature of each of these types of movement is species specific, large open spaces will generally support a diverse wildlife community representing all types of movement. Each type of movement may also be represented at a variety of scales from non-migratory movement of amphibians, reptiles, and some birds on a "local" level to home ranges encompassing many square-miles for large mammals moving on a "regional" level. A number of terms have been used in various wildlife movement studies, such as "wildlife corridor," "travel route," and "wildlife crossing" to refer to areas in which wildlife move from one area to another. To clarify the meaning of these terms and facilitate the discussion on wildlife movement in this analysis, these terms are defined as follows:

Travel Route: A landscape feature (such as a ridgeline, drainage, canyon, or riparian strip) within a larger natural habitat area that is used frequently by animals to facilitate movement and provide access to necessary resources (e.g., water, food, cover, den areas). The travel route is generally preferred because it provides the least amount of topographic resistance in moving from one area to another; it contains adequate food, water, and/or cover while moving between habitat areas; and provides a relatively direct link between target habitat areas.

Wildlife Corridor: A piece of habitat, usually linear in nature, that connects two or more habitat patches that would otherwise be fragmented or isolated from one another. Wildlife corridors are usually bounded by urban land areas or other areas unsuitable for wildlife. The corridor generally contains suitable cover, food, and/or water to support species and facilitate movement while in the corridor. Larger, landscape-level corridors (often referred to as "habitat or landscape linkages") can provide both transitory and resident habitat for a variety of species.

Wildlife Crossing: A small, narrow area, relatively short in length and generally constricted in nature, that allows wildlife to pass under or through an obstacle or barrier that otherwise hinders or prevents movement. Crossings typically are manmade and include culverts, underpasses, drainage pipes, and tunnels to provide access across or under roads, highways, pipelines, or other physical obstacles. These are often "choke points" along a movement corridor.

Wildlife Movement Within the Study Area

As previously described, wildlife movement activities occur at a variety of scales from a "local" level to a "regional" level. Regional movement through the study area is restricted due to the urbanization of the region and the proximity to a major freeway (SR-60) (refer to Figures A-1 and A-2 in Attachment A of this Initial Study). The study area is immediately surrounded by residential development to the south and west. Although there is vacant land directly to the north and east of the study area, the land to the east is highly disturbed and mostly cleared of natural vegetation and there are a number of residential communities adjacent to the eastern boundary of the vacant land. Additionally, the study area is located about 0.5 mile to north of the SR-60. Although regional movement through this area is likely limited, there is some potential for local movement through the study area via the open area directly to the north which comprises the foothills of the Badlands. Although the study area connects to the open area to the north, the study area is dominated by ruderal and disturbed areas with limited native vegetation.

The Project site only supports one ephemeral drainage that conveys minor road runoff from Ironwood Avenue with no associated vegetation (Drainage A), which is unlikely to facilitate wildlife movement. Additionally, Drainage A initiates on-site and meanders for approximately

396 linear feet before exiting the Project site via a culvert beneath Ironwood Avenue. Drainage Complex B occurs within the off-site areas and comprises the mainstem Drainage B, which is a USGS mapped blueline stream, and five small tributaries (Drainages B1 through B5). The mainstem Drainage B does support some ruderal and non-native vegetation (e.g. giant reed). Drainage B appears to initiate in the foothills of the Badlands to the north of the off-site areas and becomes channelized just west of the off-site sewer line area.

Due to the limited vegetation within Drainage B and lack of connection to suitable habitat downstream due to development, Drainage B is not expected to function as a wildlife movement corridor. The smaller tributaries (Drainages B1 through B5) are also ephemeral drainages with limited upland vegetation, which initiate at the peak of a small ridge upstream from the off-site water line area and appear to support little to no surface connection to the mainstem Drainage B likely due to decades of disturbance from agriculture and/or weed abatement activities. Drainage B5 does not appear to support any natural watershed and appears to be relict in nature. Vegetation within the drainage appears to be supported by artificial discharges from the water tank blow-off pipe observed at the headwaters of Drainage B5. Due to the limited vegetation and watershed, as well as the disturbed nature of the downstream areas off-site, the tributaries do not facilitate wildlife movement through the study area.

The study area is not within any Core or Linkage areas as identified by the MSHCP. There is one proposed linkage (Proposed Linkage 4) approximately 2.1 miles to the north of the study area and one existing core (Core H) roughly 4.0 miles to the south of the study area. Proposed Linkage 4 would include upland habitat within Reche Canyon and provide connection to Box Springs Reserve, the Badlands, and San Bernardino County. The open area directly to the north of the study area does directly connect to Proposed Linkage 4. Existing Core H includes Lake Perris State Recreation Area and San Jacinto Wildlife Area. There is no direct connection from the study area to Core H, which are separated by urban development. The study area is not within any linkages identified by the South Coast Missing Linkages report; the nearest linkage design identified is for the San Bernardino–San Jacinto Connection located approximately 3.5 miles to the east. Since the study area is not identified as a linkage by the MSHCP or South Coast Wildlands, and it does not support habitat that connects two or more habitat patches that would otherwise be fragmented or isolated from one another, the study area is not considered a wildlife corridor. The study area may provide limited opportunities for wildlife movement, more likely for local wildlife movement as described below.

Movement on a smaller or “local” scale could occur within the study area for species that are less restricted in movement pathway requirements or are adapted to urban areas (e.g., raccoon [*Procyon lotor*], stripped skunk [*Mephitis mephitis*], coyote [*Canis latrans*], and bird species in general). Habitat within the study area is dominated by ruderal and disturbed areas with some portions supporting native vegetation, including brittlebush scrub, buckwheat scrub, and Riversidean sage scrub. As such, it likely supports some wildlife movement within the study area and/or nearby areas for foraging and shelter. Data gathered from the biological survey indicates that the study area contains habitat that supports common species of invertebrates, reptiles, birds, and small mammals. The home range and average dispersal distance of many of these species may be entirely contained within the study area and immediate vicinity.

Populations of animals such as insects, reptiles, small mammals, and a few bird species may find all their resource requirements without moving far or outside of the study area at all. Occasionally, individuals expanding their home range or dispersing from their parental range could attempt to move outside of the study area, if feasible, based on the surrounding restrictions to movement from development (see above). Bird species may fly over the development and freeways to utilize the study area for foraging, although this is expected to be limited due to the high level of human activity in the region and higher quality foraging habitats in nearby open areas with less human disturbance, particularly the Badlands to the north.

In summary, the study area may support live-in and movement habitat for species on a local scale (i.e., some live-in and at least marginal movement habitat for invertebrates, reptiles, birds, and small mammal species). However, due to surrounding development, the proximity to the I-60 freeway, and the ephemeral nature and limited watershed of the drainages, the study area likely provides little to no function to facilitate movement for wildlife species on a regional scale and it is not identified as a regionally important dispersal or seasonal migration corridor by the MSHCP or by South Coast Wildlands.

Jurisdictional Waters

An investigation of on- and off-site jurisdictional waters was performed by ESA PCR Regulatory Services staff on September 19, 2014. An additional site visit was conducted on December 10, 2014 following a series of storm events that occurred on December 2, 3, and 4, 2014 totaling nearly two inches of rain in that period.[3] Based on the results of the investigation, Drainage A and Drainage Complex B (Drainages B & B1through B5) were determined to support a total of approximately 0.057 acre of USACE/RWQCB "waters of the U.S." and 0.165 acre of CDFW jurisdictional streambed (see **Figure IV-4**, *Jurisdictional Features*, below). A summary of jurisdictional features assessed within the study area is provided in **Table IV-2**, *Jurisdictional Features*, below.

The study area is located within rolling valley topography located southeast of Reche Canyon and south/southwest of The Badlands mountain range. The study area is located within the San Jacinto Watershed and generally drains toward the south, eventually reaching the Perris Valley Storm Drain which ultimately reaches the San Jacinto River and then Canyon Lake. The USGS Sunnymead topographic Quadrangle depicts a blueline stream originating in the foothills to the north with headwaters located approximately 2,000 linear feet from the on-site study area. The mapped blueline drainage feature enters the Project site near the center of the northern Project boundary and bisects the property. The property has been subjected to seasonal dry-farming and/or weed abatement activities for several decades. Based on the jurisdictional assessments performed by ESA PCR, no discernible streambed or indicators of flow were observed within the area historically mapped as a blueline drainage feature during the September 19, 2014 jurisdictional delineation.

3 Based on WeatherCurrents.com precipitation data accessed at http://weathercurrents.com/morenovalley/ArchiveDec2014.do obtained on July 26, 2016.

TABLE IV-2
JURISDICTIONAL FEATURES

Drainage (Study Area)	Length (ft)	USACE/ RWQCB (acres)	CDFW (acres)	Flow Classification
A (On-Site)	285	0.023	0.046	Ephemeral
A (Off-Site)	111	0.007	0.013	Ephemeral
Drainage A Subtotal	***396***	***0.030***	***0.059***	
B (Off-Site)	306	0.026	0.069	Ephemeral
B1 (Off-Site)[b]	0[a]	N/A	0.001	Ephemeral
B2 (Off-Site)[b]	32	N/A	0.001	Ephemeral
B3 (Off-Site)[b]	25	N/A	0.001	Ephemeral
B4 (Off-Site)[b]	34	N/A	0.001	Ephemeral
B5 (Off-Site)	35	0.002	0.033	Ephemeral
Drainage Complex B Subtotal	***432***	***0.028***	***0.106***	
Total	**828**	**0.058**	**0.165**	

[a] Less than one linear foot of jurisdiction occurs within Drainage B1 as the majority of the drainage within the off-site study area is associated with an existing corrugated metal pipe that was not quantified.

[b] Drainage did not support jurisdictional field indicators associated with "waters of the U.S" regulated by the USACE and RWQCB pursuant to the Clean Water Act.

SOURCE: ESA PCR, 2014

In order to determine if jurisdictional field indicators reestablish following moderate rain events, ESA PCR staff returned to investigate the site following a series of early December 2014 storm events yielding nearly 2-inches of rain over three consecutive days. In our experience, this amount of rain would have reestablished some evidence of flow capable of eroding a streambed and/or supporting some jurisdictional field indicators based on the USACE's arid delineation guidelines.

However, no ordinary water mark, sediment deposition/sorting, debris wracks, bed/bank, streambed associated vegetation, or other jurisdictional field indicators were observed immediately following the consecutive rain events. As a result, it was determined that no jurisdiction occurs within the area mapped as a blueline drainage feature within the study area.

It was noted that the USGS Sunnymead Quadrangle depicts a small water feature at the off-site headwaters, located approximately 2,000 linear feet north of the site where the blueline feature initiates. As such, it is feasible that the mapped water feature is associated with a historic stock pond, which may have supported a small drainage that ultimately extended to the Project study area when water was historically discharged from the feature and/or significant storm events caused it to overflow. However, based on review of current aerial imagery in Google Earth, no water feature appears to persist within the off-site headwaters in the current condition capable of supporting a discernible streambed. Consequently, the only jurisdictional feature identified within the on-site study area during the December 2014 site visit is a minor roadside ditch identified as Drainage A.

SOURCE: Google Maps, 2015.

Ironwood Village Project
Figure IV-4
Jurisdictional Features

ESA PCR

Jurisdiction within the off-site study areas is limited to a mainstem drainage identified as Drainage B, and Drainage Complex B which is comprised of tributary Drainages B1through B5. No riparian and/or hydrophytic vegetation communities were observed on the study area that would warrant the need for a formal wetland analysis. Therefore, no jurisdictional wetlands or special aquatic sites were determined to occur within the Project study areas. The following provides a summary of jurisdictional drainage features identified within the Project study areas:

Drainage A

Drainage A is an unvegetated roadside ditch that establishes only when rain events generate sufficient runoff from Ironwood Avenue to erode a small channel through sandy disturbed soils. The ephemeral ditch enters the Ironwood Avenue Right-of-Way within the off-site study area then enters the on-site study area along the southern Project boundary, extending for approximately 285 linear feet. The ditch then enters a corrugated metal pipe ("CMP") beneath Ironwood Avenue which is ultimately conveyed through the rural residential development to the south and into a water quality basin adjacent to SR-60. Drainage A ranged from 2 to 3 feet in jurisdictional channel width and contains sandy loam soils that are periodically disturbed by weed abatement activities. A photograph of Drainage A is provided in Figure 11a of the Project BRA.

Drainage A within the on-and off-site study area supports a total of approximately 396 linear feet of ephemeral unvegetated roadside ditch, containing 0.023 acre of on-site and 0.007 acre of off-site non-wetland USACE "waters of the U.S" totaling 0.030 acre, as well as 0.46 acre of on-site and 0.013 acre of off-site CDFW jurisdictional streambed totaling 0.059 acre.

Drainage Complex B

Drainage B

Drainage B is an ephemeral sandy wash that originates off-site approximately 2 miles to the northwest along Reche Canyon Road. The drainage meanders along the road until it reaches the valley floor extending across Trust Way, crossing Kalmia Avenue, and then conveys runoff along the west side of Moreno Beach Drive for approximately a quarter-mile prior to crossing the off-site Water Line Alternative 1. The drainage feature then extends south/southwest for another quarter-mile before entering a culvert beneath Ironwood Avenue and meandering for another quarter-mile prior to entering the off-site sewer line study area. Drainage B then continues for approximately 700 linear feet toward the southwest ultimately entering a detention basin located directly northeast of the Nason Street exit of SR-60. Drainage B within the off-site study areas ranges from approximately 4-10 feet in USACE/CDFW channel width and is entirely unvegetated. Soils within the wash are comprised of loamy sands of the Tujunga series consistent with the mapping by NRCS. Photographs of Drainage B are provided in Figure 11a of the Project BRA.

Drainage B within the off-site sewer line and Water Line Alternative 1 total approximately 306 linear feet of unvegetated ephemeral sandy wash totaling approximately 0.026 acre of non-wetland USACE/RWQCB "waters of the U.S." and 0.069 acre of CDFW jurisdictional streambed.

Drainages B1- B5

Drainages B1through B5 are minor ephemeral drainages that with the exception of Drainage B5 (which appears to accept flow from a water tank bypass pipe) function to drain a very limited watershed west of the existing water district road that runs parallel to the eastern boundary of the Project site. Drainage B5 appears to support flows from two small slope v-ditches as well as a pipe at its headwaters that appears to drain the existing water tank directly to the west, and was likely formed by controlled releases from the water tank structure. Otherwise, no natural watershed capable eroding such an incised drainage feature occurs upstream. Drainages B1 through B3 have small CMP culverts that convey limited runoff west of the water district road and support very weak indicators of flow and/or bed and bank. Drainage B4 does not support a pipe culvert rather a small pipe that drains surface flow from a small v-ditch directly west of the road. No discernible indicators associated with “waters of the U.S.” such as an ordinary high water mark, sediment deposition/sorting, debris wracks, streambed associated vegetation, or other USACE jurisdictional field indicators indicative of the arid southwest region were observed within Drainages B1-B4 immediately following the consecutive rain events of early December 2014. However, Drainages B1 through B4 do support topographic low points with banks typical of headwater swales. Drainage B5 was presumed to support USACE/RWQCB jurisdiction due to the presence of an ordinary high water mark, which ultimately became indiscernible after approximately 1,000 linear feet. Given the reasonable proximity to Drainage B5 observed in the field in light of periodic disturbance to the sandy soils from weed abatement activities, Drainage B5 was presumed to be regulated as “waters of the U.S.” Drainages B1through B5 were all presumed to support CDFW jurisdictional streambed.

Drainages B1 through B4 exhibit sparse upland scrub vegetation and ruderal grasses and are otherwise unvegetated. Drainage B5 supports a small patch of mule fat along approximately 15 linear feet of the headwaters directly downstream of the water tank pipe and mostly upland scrub vegetation beyond. Drainages B1through B5 contain CDFW jurisdictional channel widths ranging from 0.5 to 3 feet, while Drainage B5 exhibits USACE jurisdiction averaging approximately 2 feet in channel width and a CDFW channel width approximately averaging 10 feet. Drainage Complex B drainage features all were observed to support sandy loam soils. Photographs of Drainage Complex B are provided in Figures 11a and 11b of the Project BRA.

Drainage B5 within the Water Line Alternative 2 study area totals approximately 0.002-acre of non-wetland ephemeral “waters of the U.S.” regulated by the USACE/RWQCB. Drainage Complex B (Drainages B1 through B5) total approximately 0.037 acre of CDFW jurisdictional streambed and associated vegetation.

Special-status Biological Resources and Regulations

The following discussion describes the plant and wildlife species present, or potentially present, within the study area that have been afforded special recognition by Federal, State, or local resource conservation agencies and organizations. These species have declining or limited population sizes, usually resulting from habitat loss. Also discussed are habitats that are unique, of relatively limited distribution, or of particular value to wildlife. Protected special-status species are classified by either Federal or State resource management agencies, or both, as threatened or endangered, under provisions of the Federal and State Endangered Species Acts (FESA and CESA, respectively).

Federal Special-status Resource Protection and Classifications

Federal ESA

The FESA of 1973 defines an endangered species as "any species which is in danger of extinction throughout all or a significant portion of its range." A threatened species is defined as "any species which is likely to become an Endangered species within the foreseeable future throughout all or a significant portion of its range." Under provisions of Section 9(a)(1)(B) of the FESA, unless properly permitted, it is unlawful to "take" any listed species. "Take" is defined in Section 3(18) of FESA: "...harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." Further, the USFWS, through regulation, has interpreted the terms "harm" and "harass" to include certain types of habitat modification as forms of "take." These interpretations, however, are generally considered and applied on a case-by-case basis and often vary from species to species. In a case where a property owner seeks permission from a federal agency for an action which could affect a federally listed plant or animal species, the property owner and agency are required to consult with USFWS pursuant to Section 7 of the ESA if there is a federal nexus, or pursuant to Section 10 of the ESA. Section 9(a)(2)(b) of the FESA addresses the protections afforded to listed plants.

All references to Federally-protected species herein and in the Project BRA include the most current published status or candidate category to which each species has been assigned by USFWS. For purposes of this assessment the following acronyms are used for Federal status species, as applicable:

- FE Federally-listed as Endangered
- FT Federally-listed as Threatened
- FPE Federally proposed for listing as Endangered
- FPT Federally proposed for listing as Threatened
- FPD Federally proposed for delisting
- FC Federal candidate species (former C1 species)

Some of the USFWS offices maintain a database of listed species within their jurisdiction, for example the Sacramento[4] and Carlsbad[5] offices. The Carlsbad USFWS Office jurisdiction encompasses the counties of Los Angeles, Orange, Riverside, San Bernardino, Imperial, and San Diego.

Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) protects individuals as well as any part, nest, or eggs of any bird listed as migratory. In practice, Federal permits issued for activities that potentially impact migratory birds typically have conditions that require pre-disturbance surveys for nesting

4 http://www.fws.gov/sacramento/ES_Species/Lists/es_species_lists-overview.htm
5 http://www.fws.gov/carlsbad/SpeciesStatusList/CFWO_Species_Status_List.htm

birds. In the event nesting is observed, a buffer area with a specified radius must be established, within which no disturbance or intrusion is allowed until the young have fledged and left the nest, or it has been determined that the nest has failed. If not otherwise specified in the permit, the size of the buffer area varies with species and local circumstances (e.g., presence of busy roads, intervening topography, etc.), and is based on the professional judgment of a monitoring biologist. A list of migratory bird species protected under the MBTA is published by USFWS.

Federal Clean Water Act, Section 404

Section 404 of the Clean Water Act (CWA) regulates the discharge of dredged or fill material into waters of the U.S. and authorizes the Secretary of the Army, through the Chief of Engineers, to issue permits for such actions. Implementing regulations for the CWA define waters of the U.S. as “rivers, creeks, streams, and lakes extending to their headwaters and any associated wetlands.” Wetlands are defined as “areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support a prevalence of vegetation typically adapted for life in saturated soil conditions.” The permit review process entails an assessment of potentially adverse impacts to USACE jurisdictional waters of the U.S.

Over the years, the USACE has modified its regulations, typically due to evolving policy or judicial decisions, through the issuance of Regulatory Guidance Letters, memorandums, or more expansive instruction guidebooks. These guidance documents help to update and define how jurisdiction is claimed, and how these waters of the U.S. will be regulated. The most recent, significant modification occurred on June 5, 2007, subsequently updated in December 2008, when the USACE and the U.S. Environmental Protection Agency (USEPA) issued a series of guidance documents outlining the requirements and procedures, effective immediately, to establish jurisdiction under Section 404 of the CWA and the Section 10 of the Rivers and Harbors Act of 1899. These documents are intended to be used for all jurisdictional delineations and provide specific guidance for the jurisdictional determination of potentially jurisdictional features affected by the U.S. Supreme Court rulings in *Rapanos v. the United States* and *Carabell v. the United States* 547 U.S. 715 (2006) (jointly referred to as *Rapanos*).

The *Rapanos* case outlines the conditions and criteria used by the USACE to assess and claim jurisdiction over non-isolated, non-navigable, ephemeral tributaries. Under a plurality ruling, the Court noted that certain “not relatively permanent” (i.e., ephemeral), non-navigable tributaries must have a “significant nexus” to downstream traditional navigable waters to be jurisdictional. An ephemeral tributary has a significant nexus to downstream navigable “waters” when it has “more than a speculative or an insubstantial effect on the chemical, physical, and/or biological integrity of a Traditional Navigable Water (TNW).” A significant nexus is established through the consideration of a variety of hydrologic, geologic and ecological factors specific to the particular drainage feature in question. For drainage features that do not meet the significant nexus criteria, a significant nexus determination is provided by the USACE to the USEPA for the final determination of federal jurisdiction. Drainage features that do not meet the significant nexus criteria based on completion of a jurisdictional delineation, and/or are determined to be isolated pursuant to the SWANCC ruling (see below), may still be regulated by California Department of Fish and Wildlife (CDFW) under Fish and Game Code Section 1600 or the Regional Water Quality Control Board (RWQCB) under the Porter-Cologne Water Quality Act.

On January 15, 2003, the USACE and USEPA issued a Joint Memorandum to provide clarifying guidance regarding the United States Supreme Court ruling in the *Solid Waste Agency of Northern Cook County v. United States Army Corps of Engineers*, No. 99-1178 (January 9, 2001) ("the SWANCC ruling"), (Federal Register: Vol. 68, No. 10.). This ruling held that the CWA does not give the federal government regulatory authority over non-navigable, isolated, intrastate waters. As a result of this decision, some previously regulated depressional areas such as mudflats, sandflats, wetlands, prairie potholes, wet meadows, playa lakes, natural ponds, and vernal pools, which are not hydrologically connected to other intra- or inter-state "waters of the U.S.," are no longer regulated by the USACE.

Federal Clean Water Act, Section 401

The mission of the RWQCB is to develop and enforce water quality objectives and implement plans that will best protect the beneficial uses of the state's waters, recognizing local differences in climate, topography, geology, and hydrology. The California RWQCB is responsible for implementing compliance not only with state codes such as the California Water Code, but also some federal acts such as Section 401 of the CWA. Section 401 of the CWA requires that any applicant for a federal permit for activities that involve a discharge to waters of the state shall provide the federal permitting agency with a certification from the state in which the discharge is proposed that states that the discharge will comply with the applicable provisions under the federal CWA.[6] As such, before the USACE will issue a CWA Section 404 permit, applicants must apply for and receive a Section 401 water quality certification (WQC) from the RWQCB. The RWQCB regulates "discharging waste, or proposing to discharge waste, within any region that could affect "waters of the state" (Water Code § 13260 (a)), pursuant to provisions of the Porter-Cologne Water Quality Control Act which defines RWQCB jurisdictional "waters of the state" as "any surface water or groundwater, including saline waters, within the boundaries of the state" (Water Code § 13050 (e)).

With the exception of isolated waters and wetlands, most discharges of fill to waters of the state are also subject to a CWA Section 404 permit. If a CWA Section 404 permit is not required for the Project, the RWQCB may still require issuance of Waste Discharge Requirements (WDR) under the Porter-Cologne Water Quality Control Act. The RWQCB may regulate isolated waters that are not under jurisdiction of the USACE through issuance of WDR's. However, projects that obtain a Section 401 WQC are simultaneously enrolled in a statewide general WDR. Processing of Section 401 WQC's generally requires submittal of 1) a construction storm water pollution prevention plan (SWPPP), 2) a final water quality technical report that demonstrates that post-construction storm water Best Management Practices (BMPs) comply with the local design standards for municipal storm drain permits (MS4 permits) implemented by the State Water Resources Control Board effective January 1, 2011, and 3) a conceptual Habitat Mitigation and Monitoring Plan (HMMP) to compensate for permanent impacts to RWQCB waters, if any. In addition to submittal of a draft CEQA document, a WQC application typically requires a discussion of avoidance and minimization of impacts to RWQCB jurisdictional resources, and efforts to protect beneficial uses as defined by the local RWQCB basin plan for the Project. The

[6] 33 USC 1341 *(a) (1)*.

RWQCB cannot issue a Section 401 WQC until the Project CEQA document is certified by the lead agency.

State of California Special-status Resource Protection and Classifications

California ESA

California's Endangered Species Act (CESA) defines an endangered species as:

> *…a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant which is in serious danger of becoming extinct throughout all, or a significant portion, of its range due to one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, or disease.*

The State defines a threatened species as:

> *…a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that, although not presently threatened with extinction, is likely to become an endangered species in the foreseeable future in the absence of the special protection and management efforts required by this chapter. Any animal determined by the commission as rare on or before January 1, 1985 is a threatened species.*

Candidate species are defined as:

> *…a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that the commission has formally noticed as being under review by the department for addition to either the list of endangered species or the list of threatened species, or a species for which the commission has published a notice of proposed regulation to add the species to either list.*

Candidate species may be afforded temporary protection as though they were already listed as threatened or endangered at the discretion of the Fish and Wildlife Commission. Unlike the FESA, CESA does not include listing provisions for invertebrate species.

Article 3, Sections 2080 through 2085, of the CESA addresses the taking of threatened or endangered species by stating:

> *…no person shall import into this State, export out of this State, or take, possess, purchase, or sell within this State, any species, or any part or product thereof, that the commission determines to be an endangered species or a threatened species, or attempt any of those acts, except as otherwise provided.*

Under the CESA, "take" is defined as, "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill."

Additionally, some special-status mammals and birds are protected by the State as Fully Protected Mammals or Fully Protected Birds, as described in the California Fish and Wildlife Code, Sections 4700 and 3511, respectively.

California Species of Special Concern are species designated as vulnerable to extinction due to declining population levels, limited ranges, and/or continuing threats. Informally listed species are not protected per se, but warrant consideration in the preparation of biological assessments. For some species, the CNDDB is only concerned with specific portions of the life history, such as roosts, rookeries, or nest areas.

For the purposes of the BRA and this Initial Study, the following acronyms are used for State status species, as applicable:

- SE State-listed as Endangered
- ST State-listed as Threatened
- SR State-listed as Rare
- SCE State candidate for listing as Endangered
- SCT State candidate for listing as Threatened
- SFP State Fully Protected
- SSC California Species of Special Concern

Protection of Birds

Section 3503.5 of the California Fish and Game Code states that it is "unlawful to take, possess, or destroy any birds in the order Falconiformes or Strigiformes (birds of prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by this code or any regulation adopted pursuant thereto." Activities that result in the abandonment of an active bird of prey nest may also be considered in violation of this code. In addition, California Fish and Game Code, Section 3511 prohibits the taking of any bird listed as fully protected, and California Fish and Game Code, Section 3515 states that is it unlawful to take any non-game migratory bird protected under the MBTA.

State of California Fish and Game Code, Section 1602

Section 1602 of the California Fish and Game Code requires any entity (e.g., person, state or local government agency, or public utility) who proposes a project that will substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake to notify the CDFW of the proposed project. In the course of this notification process, the CDFW will review the proposed project as it affects streambed habitats within the project area. The CDFW may then place conditions in the Section 1602 Streambed Alteration Agreement to avoid, minimize, and mitigate any potentially significant adverse impacts within CDFW jurisdictional limits.

California Native Plant Society

The CNPS is a private plant conservation organization dedicated to the monitoring and protection of special-status species in California. CNPS has compiled an inventory comprised of the information focusing on geographic distribution and qualitative characterization of Rare, Threatened, or Endangered vascular plant species of California. The list serves as the candidate list for listing as Threatened and Endangered by CDFW. CNPS has developed five categories of rarity, of which Ranks 1A, 1B, and 2 are particularly considered special-status:

- Rank 1A Presumed extinct in California.
- Rank 1B Plants Rare, Threatened, or Endangered in California and elsewhere.
- Rank 2 Plants Rare, Threatened, or Endangered in California, but more common elsewhere.
- Rank 3 Plants about which we need more information – a review list.
- Rank 4 Plants of limited distribution – a watch list.

The CNPS recently added "threat ranks" which parallel the ranks used by the CNDDB. These ranks are added as a decimal code after the CNPS List (e.g., Rank 1B.1). The threat codes are as follows:

- .1 – Seriously endangered in California (over 80% of occurrences threatened/high degree and immediacy of threat);
- .2 – Fairly endangered in California (20-80% occurrences threatened);
- .3 – Not very endangered in California (<20% of occurrences threatened or no current threats known).

Special-status species that occur or potentially could occur within the study area is based on one or more of the following: (1) the direct observation of the species within the study area during any field surveys; (2) a record reported in the CNDDB; and (3) the study area is within known distribution of a species and contains appropriate habitat.

Sensitive Plant Communities

Sensitive plant communities include those habitat types considered rare by resource agencies, namely the CDFW, due to their scarcity and/or their ability to support State and Federally-listed Endangered, Threatened, and Rare vascular plants, as well as several special-status bird and reptile species. CDFW maintains a natural plant community list, the *List of California Terrestrial Natural Communities*.[7] Special-status natural communities (also referred to by CDFW as 'rare' or 'special concern') are identified on the list by an asterisk and are considered high priority vegetation types.

Local Special-status Resource Protection and Classifications

Western Riverside County MSHCP

The study area is within the Western Riverside County MSHCP which was adopted by the Riverside County Board of Supervisors (June 17, 2003). The MSHCP functions as an Habitat Conservation Plan (HCP) pursuant to Section 10(a)(1)(B) of the FESA and as a Natural Communities Conservation Plan (NCCP) under the NCCP Act of 2001. The USFWS and CDFW have authorized the take of a number special-status plant and wildlife species (Covered Species) within the MSHCP Plan Area in exchange for the assembly and management of a coordinated MSHCP Conservation Area.

---

7 Available online at: http://www.dfg.ca.gov/biogeodata/vegcamp/natural_comm_list.asp.

Stephens' Kangaroo Rat Habitat Conservation Plan

The Stephens' kangaroo rat (SKR) HCP provides Take Authorization for SKR within its boundaries as implemented by legal agreements executed among the Riverside County Habitat Conservation Agency (RCHCA), its member agencies, USFWS, CDFW, BLM , U.S. Department of Interior, State of California Resources Agency, and other agencies as appropriate.[8] The MSHCP provides Take Authorization for SKR outside the boundaries of the SKR HCP, but within the MSHCP Plan Area boundaries. The seven core reserves established by the SKR HCP will be managed as part of the MSHCP Conservation Area consistent with the SKR HCP.

The study area is within the boundaries of the SKR HCP but is not within any of the core reserves. As such, the Project would be required to pay a SKR mitigation fee for coverage under the SKR HCP.

Sensitive Plant Communities

The study area does not support any communities considered by CDFW as sensitive habitats.

Special-status Plant Species

Special-status plants include those listed, or candidates for listing, by the USFWS and CDFW; and species considered special-status by the CNPS (particularly Lists 1A, 1B, and 2). Several special-status plant species were reported in the vicinity based on CNDDB and CNPS, totaling 65 species within the 9-quadrangle search (as indicated in Appendix B, *Special-Status Plant Species*, of the BRA). A total of 12 species were identified as having a potential to occur within the study area based on the literature review and existing habitat on the study area, as listed in Appendix B of the BRA. Focused plant surveys were conducted in 2015 on the Project site and off-site road improvement and sewer line areas and in 2016 on the off-site water line areas; none of the species determined to have a potential to occur on the Project site and off-site water and sewer line areas were observed. A summer focused survey was conducted within the off-site eastern manufactured slope area in 2016; however, a spring survey has not yet been conducted within this area. The western manufactured slope areas do not support suitable habitat for special-status plant species.

Special-status Wildlife Species

Special-status wildlife includes those species listed as Endangered or Threatened under the FESA or CESA, candidates for listing by the USFWS or CDFW, and species of special concern to the CDFW. Several special-status wildlife species were reported in the vicinity based on CNDDB, totaling 43 species within the 9-quadrangle search. A total of 19 species were identified as having a potential to occur within or use the study area based on the literature review and habitat present on the study area, as listed in Appendix C, *Special-status Wildlife Species*, of the BRA.

In addition, focused surveys were conducted for the burrowing owl in accordance with recommended protocols and the potential for foraging and nesting migratory bird and raptor species were also analyzed due to known presence within the study area or within the vicinity (see Appendix C of the BRA). The species with a potential to occur on the study area are

8 *http://www.skrplan.org/index.html*

discussed in detail in the BRA, including the results of the burrowing owl surveys and the migratory birds and raptors assessment.

Migratory Birds and Raptors

The study area supports some potential nesting and foraging habitat for nesting birds and raptors, primarily in the northwestern corner of the study area where there are shrubs and some trees. Several species of birds were observed on-site (see Appendix A of the BRA) and were identified by CNDDB as potentially occurring within the 9-quadrangle search area (see Appendix C of the BRA). Raptors observed on-site include Cooper's hawk (*Accipiter cooperii*), red-tailed hawk (*Buteo jamaicensis*), and American kestrel (*Falco sparverius*). There is also a foraging potential for listed raptors within the 9-quadrangle search area according to CNDDB, such as golden eagle (State Fully Protected) and Swainson's hawk (Federally Threatened), though the potential of foraging is considered low and neither are expected to nest on-site (see Appendix C of the BRA).

Study Area's Relationship to the Western Riverside County MSHCP

This section provides a discussion of the study area's relationship to the MSHCP policies, including the location within the MSHCP Area Plan, Criteria Cells, and cores and linkages, and the presence of MSHCP protected biological resources.

Location of the Study Area within the MSHCP Area Plan and Criteria Cells

The entire study area is within the Reche Canyon/Badlands Area Plan (see Figure IV-2 above) of the MSHCP but is not within a Criteria Cell, a designated Cell Group, or a subunit within the Southwest Area Plan that requires conservation of land for inclusion in the MSHCP Conservation Area.

Location of the Study Area within MSHCP Cores and Linkages

As mentioned previously, the study area is not within any cores or linkages (i.e., Special Linkage Areas) as identified in the Reche Canyon/Badlands Area Plan.

Riparian/Riverine Areas and Vernal Pools

Section 6.1.2, *Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools*, of the MSHCP provides for the protection of Riparian/Riverine Areas and Vernal Pools within the MSHCP Plan Area. Riparian/Riverine areas are defined in the MSHCP as "lands which contain habitat dominated by trees, shrubs, persistent emergents, or emergent mosses and lichens, which occur close to or which depend upon soil moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year." Vernal pools are defined in the MSHCP as "seasonal wetlands that occur in depression areas that have wetlands indicators of all three parameters (soils, vegetation, and hydrology) during the wetter portion of the growing season but normally lack wetlands indicators of hydrology and/or vegetation during the drier portion of the growing season."

As shown below in **Figure IV-5**, *MSHCP Riverine Areas*, and summarized in **Table IV-3**, *MSHCP Riverine Areas*, the Project study areas support a total 0.165 acre of MSHCP Riverine Areas including 0.059 acre in Drainage A (0.046 acre on-site and 0.013 acre off-site), 0.070 acre in Drainage B, 0.001 acre in Drainage B1, 0.001 acre in Drainage B2, 0.001 acre in Drainage B3, 0.002 acre in Drainage B4, and 0.033 acre in Drainage B5.

SOURCE: Google Maps, 2015 (Aerial).

Ironwood Village Project

Figure IV-5

MSHCP Riverine Areas

ESA PCR

Attachment: Initial Study/Mitigated Negative Declaration (IS/MND) (2437 : Ironwood Village (PEN16-0077 through PEN16-0081))

All drainages are considered MSHCP Riverine Areas (rather than MSHCP Riparian Areas) since they are supported by ephemeral[9] flows and do not support riparian vegetation communities. No vernal pools occur within the on- and off-site study areas. Due to the presence of MSHCP Riverine features, the Project will require a Determination of Biologically Equivalent or Superior Preservation (DBESP) analysis for any impacts proposed to these areas. The DBESP is required to provide details on any proposed impacts and compensatory mitigation for compliance with MSHCP requirements for submittal to the County of Riverside Environmental Programs Department (EPD), subject to approval by the County of Riverside Regional Conservation Authority (RCA) and the State and Federal Wildlife Agencies (CDFW and USFWS).

TABLE IV-3
MSHCP RIVERINE AREAS

Drainage (Study Area)	Length (ft)	Area (acres)	Riparian/Riverine Classification	Flow
A (On-Site)	285	0.046	Riverine	
A (Off-Site)	111	0.013	Riverine	
B (Off-Site)	306	0.069	Riverine	
B1 (Off-Site)	0*	0.001	Riverine	
B2 (Off-Site)	32	0.001	Riverine	
B3 (Off-Site)	25	0.001	Riverine	
B4 (Off-Site)	34	0.001	Riverine	
B5 (Off-Site)	35	0.033	Riverine	
Total	**828**	**0.165**		

** Less than one linear foot of jurisdiction occurs within Drainage B1 as the majority of the drainage within the off-site study area is associated with an existing corrugated metal pipe that was not quantified.*

Source: ESA PCR, 2014

The biological function and value of the on- and off-site Riverine Areas within Drainage A and Drainage Complex B include the transport of water, which is limited based on the ephemeral flows of the drainage and limited watershed. The function and value of the drainages are also limited since they are primarily unvegetated and support only some small patches of upland and/or ruderal vegetation. Other types of aquatic features that could provide suitable habitat for Riparian/Riverine species, such as fairy shrimp, are not present within the study area (i.e. vernal pools, swales, vernal pool-like ephemeral ponds, seasonal ponds, stock ponds, or other human-modified depressions such as tire ruts, etc.).

Riparian/Riverine Plant Species

A habitat assessment was conducted for species listed in Section 6.1.2, *Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools*, of the MSHCP. The results are presented below in **Table IV-4**, *MSHCP Riparian/Riverine Plant Species*. Only one

[9] Riparian drainages are streambeds that generally convey runoff during, and immediately after, a storm event.

Riparian/Riverine plant species was determined to have a potential to occur on the study area, namely smooth tarplant (*Centromadia pungens* ssp. *laevis*). This species was considered to have a potential to occur only within the riverine habitat associated with the on- and off-site drainages; however, smooth tarplant was not observed during any of the focused plant surveys and therefore was concluded to be absent from the Project site. The remaining MSHCP Riparian/Riverine plant species are not expected to occur within the study area due to the lack of suitable habitat or the location of the study area.

TABLE IV-4
MSHCP RIPARIAN/RIVERINE PLANT SPECIES

Species	Potential to Occur within the Study Area
Brand's phacelia *Phacelia stellaris*	Not expected to occur. This species has not been recorded in the Moreno Valley area. There is only one occurrence record in CNDDB within Riverside County, which was observed in 2000 in the City of Riverside near the Santa Ana River.
California Orcutt grass *Orcuttia californica*	Not expected to occur due to the lack of vernal pools.
Coulter's matilija poppy *Romneya coulteri*	Not expected to occur. This perennial plant has conspicuous flowers that would have been detected during the focused plant surveys if present.
Engelmann oak *Quercus engelmannii*	Not expected to occur. This is a conspicuous tree species that would have been detected during the focused plant surveys if present.
Fish's milkwort *Polygala cornuta* var. *fishiae*	Not expected to occur. The majority of occurrence records of this species on CNDDB are confined to the Santa Ana Mountains.
graceful tarplant *Holocarpha virgata* ssp. *Elongate*	Not expected to occur due to disturbance on-site. The study area is outside of the species' range; there are no known records of this species within the flatter agricultural areas east of the Santa Ana Mountains.
lemon lily *Lilium parryi*	Not expected to occur due to the lack of suitable habitat. Also, the study area is outside the species' range; this species is restricted to the San Jacinto Mountains. The study area is outside of species' elevation range.
Mojave tarplant *Deinandra mohavensis*	Not expected to occur. The study area is outside the species range; this species is restricted to the San Jacinto Mountains. The study area is outside of species' elevation range.
mud nama *Nama stenocarpum*	Not expected to occur due to the lack of wetlands. None were incidentally observed during any surveys (this species can occasionally occur in non-wetlands).
ocellated Humboldt lily *Lilium humboldtii* ssp. *ocellatum*	Not expected to occur due to high disturbance within the drainages and lack of shade. This species is typically found at higher elevations.
Orcutt's brodiaea *Brodiaea orcuttii*	Not expected to occur due to the lack of vernal pools.
Parish's meadowfoam *Limnanthes alba* ssp. *parishii*	Not expected to occur due to the lack of suitable habitat. Also, the study area is outside the species' range; this species is restricted to the Santa Rosa Plateau within the MSHCP Plan Area. The study area is outside of this species' elevation range.
prostrate navarretia *Navarretia prostrata*	Not expected to occur due to the lack of suitable habitat. Also, the study area is outside the species' range; this species is restricted to the Santa Rosa Plateau within the MSHCP Plan Area. The study area does not support suitable vernal pool habitat.
San Diego button-celery *Eryngium aristulatum* var. *parishii*	Not expected to occur. The study area is outside the species' range; this species is restricted to the Santa Rosa Plateau within the MSHCP Plan Area. The study area does not support suitable vernal pool habitat.

Species	Potential to Occur within the Study Area
San Jacinto Valley crownscale *Atriplex coronata* var. *notatior*	Not expected to occur due to the lack of suitable alkaline habitat.
San Miguel savory *Satureja chandleri*	Not expected to occur due to the lack of suitable metavolcanic substrate habitat.
Santa Ana River woollystar *Eriastrum densifolium* ssp. *sanctorum*	Not expected to occur due to lack of suitable habitat. The study area is outside the species range; this species is restricted to the Santa Ana River and alluvial fan sage scrub habitat.
slender-horned spineflower *Dodecahema leptoceras*	Not expected to occur due to the lack of alluvial fan habitat.
smooth tarplant *Centromadia pungens* ssp. *laevis*	Potential, but not observed. This species was not observed during the focused plant surveys.
southern California black walnut *Juglans californica*	Not expected to occur. This is a conspicuous tree species that would have been detected if present.
spreading navarretia *Navarretia fossalis*	Not expected to occur due to the lack of vernal pools.
thread-leaved brodiaea *Brodiaea filifolia*	Not expected to occur due to the lack of vernal pools.
vernal barley *Hordeum intercedens*	Not expected to occur due to the lack of vernal pools.

SOURCE: ESA PCR, 2016

Riparian/Riverine Wildlife Species

Habitat assessments were conducted for wildlife species listed in Section 6.1.2, *Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools*, of the MSHCP. The results are presented below in **Table IV-5**, *MSHCP Riparian/Riverine Wildlife Species*. No riparian/riverine wildlife species are expected to occur on the study area due to the lack of suitable habitat.

Narrow Endemic Plant Species Survey Area

The study area is not within the Narrow Endemic Plant Species Survey Area; therefore, no surveys were required for Narrow Endemic plant species.

Additional Survey Needs and Procedures

Section 6.3.2, *Additional Survey Needs and Procedures*, of the MSHCP provides for additional survey needs for the burrowing owl, as well as a number of special-status plant, amphibian, and mammal species.

TABLE IV-5
MSHCP RIPARIAN/RIVERINE WILDLIFE SPECIES

Species	Potential to Occur within the Study Area
arroyo toad *Anaxyrus californicus*	Not expected to occur due to the lack of suitable habitat (perennial streams).

Species	Potential to Occur within the Study Area
mountain yellow-legged frog *Rana muscosa*	Not expected to occur due to the lack of suitable habitat (perennial streams).
California red-legged frog *Rana aurora draytonii*	Not expected to occur due to the lack of suitable habitat (perennial streams).
bald eagle *Haliaeetus leucocephalus*	Not expected to occur due to the lack of suitable habitat for foraging and nesting.
least Bell's vireo *Vireo bellii pusillus*	Not expected to occur due to the lack of suitable habitat for foraging and nesting.
American peregrine falcon *Falco peregrinus anatum*	Not expected to occur due to the lack of suitable habitat for foraging and nesting (cliffs overlooking open areas or large bodies of water).
southwestern willow flycatcher *Empidonax traillii extimus*	Not expected to occur due to the lack of suitable habitat for foraging and nesting.
western yellow-billed cuckoo *Coccyzus americanus occidentalis*	Not expected to occur due to the lack of suitable habitat for foraging and nesting; outside of the species range.
Santa Ana sucker *Catostomus santaanae*	Not expected to occur due to the lack of suitable habitat (perennial streams).
Riverside fairy shrimp *Streptocephalus woottoni*	Not expected to occur due to the lack of suitable habitat (vernal pools).
vernal pool fairy shrimp *Branchinecta lynchi*	Not expected to occur due to the lack of suitable habitat (vernal pools).
Santa Rosa Plateau fairy shrimp *Linderiella santarosae*	Not expected to occur due to the lack of suitable habitat (vernal pools).

SOURCE: ESA PCR, 2016

Burrowing Owl Survey Area

The study area is within the Burrowing Owl Survey Area; therefore, in compliance with the Western Riverside County MSHCP, surveys are required for this species. As discussed in Section 4.7.6, *Special-status Wildlife Species*, of the Project BRA, Step I and Step II surveys conducted for the Project following Western Riverside County MSHCP protocol were negative. Although the site does not currently support burrowing owls, pre-construction surveys are required within 30 days of ground disturbance based on the presence of suitable habitat.

Criteria Area Species Survey Area

The study area is not within the Criteria Area Species Survey Area; therefore, no surveys were required for Criteria Area plant species.

Amphibian Species Survey Area

The study area is not within the Amphibian Species Survey Area; therefore, no surveys are required.

Mammal Species Survey Area

The study area is not within the Mammal Species Survey Area; therefore, no surveys are required.

Urban/Wildlands Interface

Section 6.1.4, *Guidelines Pertaining to the Urban/Wildlands Interface*, of the MSHCP presents a number of guidelines that are intended to address indirect effects associated with locating developments in proximity to a Western Riverside County MSHCP Conservation Area. These guidelines address the quantity and quality of any runoff generated by the development (i.e., drainage and toxics), night lighting, noise, non-native invasive plant species, barriers to humans and animal predators, and grading/land development encroachment.

The study area is not within or in the vicinity of any Criteria Cells (see Figure IV-2 above) and, as such, development of the site is not expected to result in indirect effects to MSHCP Conservation Areas related to night lighting, noise, and grading/land development, and barriers would not be necessary. Drainage A and Drainage Complex B ultimately drain to the San Jacinto River, which is a Constrained Linkage (19) and where Criteria Cells are located. Runoff from the site therefore has the potential to affect the quantity and quality of water downstream, in addition to the transport of plant seeds. Since the Project will be required to comply with flood and water quality standards[10], no indirect effects from the quantity and quality of run-off will occur to downstream areas. At minimum, no invasive, non-native plant species listed in Table 6-2 of the MSHCP, *Plants That Should Be Avoided Adjacent To The MSHCP Conservation Area*, will be utilized in the landscape plans. This will avoid dispersal of invasive plant seeds in the watershed. Despite the study area not being within any Criteria Cells or adjacent to any MSHCP Conservation Areas, it does support one on-site drainage and one off-site drainage complex that are considered Riverine Areas. The above measures will avoid indirect impacts to these drainages from runoff and invasive species.

Would the Project:

a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

Less Than Significant Impact With Mitigation Incorporated.

1. Special-Status Plant Species

Development of the study area would result in the direct removal of numerous common plant species; a list of plant species observed within the study area is included in Appendix A of the Project BRA. Common plant species present within the study area occur in large numbers throughout the region and their removal does not meet the significance thresholds defined by CEQA. Therefore, impacts to common plant species would not be considered a significant impact and no mitigation measures are required.

---

10 The project will be required to prepare a Water Quality Management Plan and Storm Water Pollution Prevention Plan consistent with Regional Water Quality Control Board and County requirements that will outline measures such as Best Management Practices (BMPS) to address water quantity and quality, and to address any potential flooding.

A total of 53 special-status plant species of the 65 species identified as occurring in the Project vicinity in available databases (see discussion above and Section 4.7.5 of the BRA for further details) are not expected to occur within the study area due to the lack of suitable habitat or because the site is outside the known distribution or elevation range for the species. These species are listed in Appendix B of the Project BRA. As discussed above, the remaining 12 special-status plant species were determined to have a potential to occur on the study area; however, these 12 species are not expected to occur within the Project site or off-site water and sewer line areas since focused surveys conducted within these areas were negative. As such, no impacts to special-status plant species would occur as a result development on the Project site and within the proposed off-site water and sewer lines and no mitigation is required.

Although a summer focused survey was performed within the off-site manufactured slope area to the east of the Project site, a spring focused survey has not been conducted within this off-site area. Of the 12 species with a potential to occur, seven (7) species are not expected to occur within the off-site manufactured slope area since these species were not detected during the summer focused survey or the area does not support suitable habitat, including California screw most (*Tortula californica*), smooth tarplant, San Bernardino aster (*Symphyotrichum defoliatum*), chaparral sand-verbena (*Abronia villosa* var. *aurita*), long-spined spineflower (*Chorizanthe polygonoides* var. *longispina*), salt spring checkerbloom (*Sidalcea neomexicana*), and mesa horkelia (*Horkelia cuneate* var. *puberula*). The blooming period of the remaining five (5) species with the potential to occur within the off-site manufactured slope area east of the Project boundary fall outside of the summer survey window, which include Nevin's barberry (*Berberis nevinii*), Jaeger's bush milk-vetch (*Astragalus pachypus* var. *jaegeri*), round-leaved filaree (*California macrophylla*), Parry's spineflower (*Chorizanthe parryi* var. *parryi*), and white-bracted spineflower (*Chorizanthe xanti* var. *leucotheca*). Of these five species, Nevin's barberry, Jaeger's bush milk-vetch, and round-leaved filaree are covered by the MSHCP. Parry's spineflower and white-bracted spineflower are not currently covered by the MSHCP and impacts to these individuals, if present, would be significant. As such, a MM BIO-1 is prescribed below, which requires a spring focused plant survey to be conducted within the off-site manufactured slope area located directly east of the site prior to ground disturbance in the appropriate blooming period (between April and June) to determine the presence/absence of Parry's spineflower and white-bracted spineflower. If either or both of these species are found within the off-site eastern manufactured slope area, MM BIO-1 outlines the necessary actions that are required to reduce impacts to the special-status plant species to less than significant.

2. Special-status Wildlife Species

Development of the study area would result in the disruption and removal of habitat and the loss and displacement of common wildlife species. A list of wildlife species observed within the study area is included in Appendix A of the Project BRA. Due to the limited amount of native habitat to be removed and the level of existing disturbance from human activity within the vicinity (e.g., nearby development), these impacts would not be expected to reduce the general wildlife populations below self-sustaining levels within the region and impacts to common wildlife species do not meet the significance thresholds defined in Section 5.0, *Thresholds of Significance*, of the BRA. Therefore, impacts to common wildlife species would not be considered a significant impact and no mitigation measures are required.

A total of 25 special-status wildlife species of the 43 species identified as occurring in the Project vicinity in available databases are not considered to have a potential to occur within the study area due to the lack of suitable habitat or because the site is outside the known distribution range for the species. These species are listed in Appendix C of the Project BRA. Since these species are not expected to be present on the study area, no impacts would occur as a result of Project development and no mitigation measures are required.

As discussed above, the remaining 19 special-status wildlife species were determined to have a potential to occur on the study area. Of these species, focused surveys were conducted for burrowing owl, which is conditionally covered by the MSHCP with additional surveys and mitigation required as discussed in further detail below. Of the remaining 17 potential special-status wildlife species, 12 species are covered by the MSHCP with no survey or conservation requirements for the study area, including coast horned lizard, orange-throated whiptail, red diamondback rattlesnake, golden eagle, Swainson's hawk, loggerhead shrike, coastal California gnatcatcher, northwestern San Diego pocket mouse, Stephens' kangaroo rat (covered by the SKR HCP), Los Angeles pocket mouse, San Diego black-tailed jackrabbit, and San Diego desert woodrat. Therefore, assuming payment of the applicable fees (the MSHCP Local Development Mitigation Fee and the SKR HCP fee for the Stephens' kangaroo rat) and compliance with required guidelines in the MSHCP, no additional mitigation is required for these species.

The remaining six (6) species, the southern grasshopper mouse, American badger, western mastiff bat, pocketed free-tailed bat, lesser long-nosed bat, and pallid bat are not covered by the MSHCP. These species are listed as species of special concern by the CDFW and do not carry a federal or state listing as threatened or endangered. These species are considered to have a low to very low potential to occur on the study area based on the limited habitat and/or quality of the habitat, and no significant impacts are anticipated to these species as described below. The study area also has the potential to support migratory birds and raptors that are discussed further in 6.2.4.2 of the Project BRA.

- No significant impact to southern grasshopper mouse since this species is only considered to have a low potential to occur as it has not been recorded on CNDDB within the vicinity of the study area since 1938.

- No significant impact to American badger since this species was considered to have low potential to occur. The majority of the site is surrounded by development and a large portion of suitable habitat is disturbed. Additionally, this species has not been recorded on CNDDB within the vicinity of the study area since 1908.

- No significant impact to western mastiff bat since this species was only considered to have a low potential to occur for foraging with no suitable roosting habitat on the study area. Although bats in this family are known to be strong fliers and can fly long distances to forage, there is only a low probability that these species will travel to the study area based on the disturbance present on the study area and presence of surrounding development. The nearest CNDDB occurrence record of this species was recorded in 1990 approximately 3.0 miles to the southwest of the study area.

- No significant impact to pocketed free-tailed bat since this species was only considered to have a very low potential to occur for roost with no suitable roosting habitat on the study area. The potential for roosting was considered very low since this species typically prefers steeper cliffs for roosting habitat. Although little is known regarding home range for this species, the potential for roosting is also unlikely since the study area does not support adjacent foraging habitat.[11] There are only two CNDDB occurrence records in the vicinity. The nearest record is from 1985 approximately 6.5 miles to the southwest of the study area near March Air Force Base.

- No significant impact to lesser long-nosed bat since this species was only considered to have a very low potential to roost and forage on the study area. The potential was considered low since this species is not typically found in California. Records in California are typically vagrant migrants. This species has only been recorded once on CNDDB within the vicinity of the study area, which was in 1993 approximately 9.5 miles to the northeast in a residential neighborhood of Yucaipa.

- No significant impact to pallid bat since this species was only considered to have a very low potential to roost and forage on the study area. The potential was considered very low because of evidence of disturbance on the study area and the presence of surrounding development to the south, northeast, and west; this species is highly sensitive to disturbance. Additionally, this species has not been recorded on CNDDB within the vicinity since 1929.

The above six species were not considered for coverage under the MSHCP, indicating that regionally significant populations of these species do not exist within the MSHCP boundaries. Based on the above discussion, the study area is not capable of supporting large populations of these species and a loss of a few individuals, if present, would not expect to reduce regional population numbers. Therefore, any impacts to these species would be less than significant and no mitigation measures are considered required.

Burrowing Owl

The study area supports potentially suitable burrowing owl (Species of Special Concern) habitat, but no active burrowing owl burrows, signs, or individuals were found on-site during the Step I and Step II surveys.

Although the study area does not currently support burrowing owls, a pre-construction survey is required in compliance with the MSHCP. Specifically, in accordance with the County of Riverside's *Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area* (County of Riverside, 2006), a pre-construction survey for burrowing owl within the study area is required within 30 days prior to ground disturbance to avoid potential direct take of burrowing owls in the future. A Project Design Feature, Condition of Approval ("COA") BIO-1, requiring this survey is provided below, in addition to recommended MM BIO-2, should burrowing owls be present in the future. Mitigation is proposed consistent with the burrowing owl mitigation guidelines published by CDFW.

---

[11] CDFW. 2000. California Wildlife Habitat Relationships System: Pocketed Free-tailed Bat. State of California, The Resources Agency. May 2000.

Project Design Features (Conditions of Approval)

COA BIO-1 Due to the presence of suitable habitat and in compliance with the MSHCP, a pre-construction survey for burrowing owl is required within 30 days prior to ground disturbance to determine the presence of burrowing owls and avoid potential direct take of burrowing owls if present.

Mitigation Measures

MM BIO-1 Due to the presence of suitable habitat within the proposed off-site manufactured slope area located directly east of the Project boundary, a spring focused plant survey to determine the presence/absence of Parry's spineflower and white-bracted spineflower is required to be conducted during the appropriate blooming periods of the two species (between April and June) prior to ground disturbance. If individuals are found, significant impacts would occur as a result of implementation of the Project and unless mitigation is implemented to reduce impacts to less than significant. Mitigation includes seed collection of individuals that would be significantly impacted by the Project at the end of the growing season and prior to ground disturbance. Collected seeds will be planted within an appropriate on-site or off-site mitigation area, which will be conserved as open space in perpetuity. Mitigation for significant impacts to Parry's spineflower and white-bracted spineflower will be implemented in consultation with the City of Moreno Valley and CDFW.

MM BIO-2 If burrowing owls are determined present during the 30-day pre-construction survey, occupied burrows shall be avoided to the greatest extent feasible, following the guidelines in the Staff Report on Burrowing Owl Mitigation published by Department of Fish and Wildlife including, but not limited to, conducting pre-construction surveys, avoiding occupied burrows during the nesting and non-breeding seasons, implementing a worker awareness program, biological monitoring, establishing avoidance buffers, and flagging burrows for avoidance with visible markers. If occupied burrows cannot be avoided, acceptable methods may be used to exclude burrowing owl either temporarily or permanently, pursuant to a Burrowing Owl Exclusion Plan that shall be prepared and approved by the County of Riverside Environmental Programs Department (EPD), in coordination with the CDFW. The Burrowing Owl Exclusion Plan shall be prepared in accordance with the guidelines in the Staff Report on Burrowing Owl Mitigation and the MSHCP.

b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in the local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Less Than Significant Impact.

1. Sensitive Plant Communities

Sensitive plant communities were not observed within the study area; therefore, no impacts would occur. There are seven native communities on the study area that total 9.48 acres, including brittlebush scrub, brittlebush scrub/ruderal, buckwheat scrub/ruderal, laurel sumac scrub/ruderal, Riversidean sage scrub, Riversidean sage scrub/ruderal, and rock outcrop/Riversidean sage scrub. Permanent impacts are proposed to 2.91 acres on-site, which is only 3.8 percent of the total proposed permanent impacts (75.81 acres) to plant communities. The majority of permanent impacts are proposed to ruderal (37.66 acres) and disturbed (30.54 acres) areas, which are dominated by non-native species. Impacts to these areas comprise 90% of the total impacts to communities on-site. In addition to permanent impacts, 0.83 acres of fuel modification and 1.25 acres of temporary impacts are proposed to native communities on the study area. Impacts to plant communities are shown in **Figure IV-6**, *Impacts to Plant Communities* and **Table IV-6**, *Existing and Proposed Impacts to Plant Communities*.

TABLE IV-6
EXISTING AND PROPOSED IMPACTS TO PLANT COMMUNITIES

Plant Communities	Existing (acres)	Permanent Impacts (acres)	Fuel Modification Impacts (acres)	Temporary Impacts (acres)
Brittlebush Scrub	2.61	0.92	0.32	0.69
Brittlebush Scrub/Ruderal	0.52	0.51	0.00	0.01

Impacts to Plant Communities

FSA PCR

2. CDFW Jurisdiction

The Project study areas support drainages that are considered CDFW jurisdictional streambeds pursuant to Section 1602 of the California Fish and Game Code and are proposed for impacts. Drainage A and Drainage Complex B are all jurisdictional, of which permanent impacts are proposed to Drainages A, B, B2, B3, B4, and B5 totaling 0.077 acre of permanent impacts (including 0.046 acre on-site and 0.031 acre off-site), as shown on **Figure IV-7**, *Impacts to Jurisdictional Features and MSHCP Riverine Areas*. Existing and impact acreages are summarized in **Table IV-7**, *Permanent Impacts to CDFW Jurisdictional Features and MSHCP Riverine Areas*. The permanent impacts total approximately 47 percent of the total 0.165 acre of CDFW jurisdiction identified within the on-site and off-site study areas. It should be noted that this analysis presumes combined impacts associated with the proposed water line alignment and two alternative alignments will occur. However, only one water line alignment will ultimately be implemented. Therefore, permanent and temporary impacts to CDFW jurisdictional waters will be slightly reduced once the final water line alignment is determined. Compensatory mitigation for permanent impacts to CDFW jurisdictional waters will be required for the Project based only on impacts associated with the final water line alignment as part of subsequent CDFW Section 1602 permitting requirements. Temporarily impacted CDFW jurisdictional areas will be restored to pre-Project conditions following completion of construction.

TABLE IV-7
IMPACTS TO CDFW JURISDICTIONAL FEATURES AND MSHCP RIVERINE AREAS[A]

Drainage (Study Area)	Existing (acres)	Permanent Impacts (acres)	Temporary Impacts (acres)
Drainage A (On-Site)	0.046	0.046	-
Drainage A (Off-Site)	0.013	0.013	-
Drainage B (Off-Site)	0.069	0.011	0.058
Drainage B1 (Off-Site)	0.001	0.000	0.001
Drainage B2 (Off-Site)	0.001	0.000[b]	0.001
Drainage B3 (Off-Site)	0.001	0.000[c]	0.001
Drainage B4 (Off-Site)	0.001	0.000[d]	0.001
Drainage B5 (Off-Site)	0.033	0.007	0.026
Total	**0.165**	**0.077**	**0.088**

NOTES:
[a] MSHCP Riverine Areas are presumed equivalent to CDFW jurisdiction.
[b] Impacts are considered negligible; actual acreage of impacts to four decimal places is 0.0003 acre.
[c] Impacts are considered negligible; actual acreage of impacts to four decimal places is 0.0001 acre.
[d] Impacts are considered negligible; actual acreage of impacts to four decimal places is 0.0004 acre.

SOURCE: ESA PCR, 2016.

Impacts to CDFW jurisdictional features would be required to comply with Section 1602 of the California Fish and Game Code, including applying for a permit and providing compensatory streambed mitigation as stated above. COA BIO-2/MM BIO-3, below, are proposed in order to comply with the compensatory mitigation requirement of this regulation, subject to approval by

CDFW. Compliance with Section 1602 of the California Fish and Game Code would reduce impacts to a less than significant level.

Project Design Features (Conditions of Approval)/Mitigation Measures

COA BIO-2/MM BIO-3 Prior to the issuance of any grading permit for permanent impacts in the areas designated as jurisdictional features, the Project applicant shall obtain regulatory permits from the USACE, RWQCB, and CDFW. The following shall be incorporated into the permitting, subject to approval by the regulatory agencies:

i. On-site or off-site creation, restoration and/or enhancement of USACE/RWQCB jurisdictional "waters of the U.S." within the San Jacinto watershed at a ratio no less than 1:1 or within an adjacent watershed at a ratio no less than 2:1 for permanent impacts, and for any temporary impacts to restore the impact area to pre-Project conditions (i.e. pre-Project contours). Off-site mitigation may occur on land acquired for the purpose of in-perpetuity preservation as approved by the resource agencies, or through the purchase of mitigation credits at a resource agency-approved off-site mitigation bank or in-lieu fee program.

ii. On-site or off-site creation, restoration, and/or enhancement of CDFW jurisdictional streambed within the San Jacinto watershed at a ratio no less than 1:1 or within an adjacent watershed at a ratio no less than 2:1 for permanent impacts, and for any temporary impacts to restore the impact area to pre-Project conditions (i.e. pre-Project contours). Off-site mitigation may occur on land acquired for the purpose of in-perpetuity preservation as approved by the resource agencies, or through the purchase of mitigation credits at a resource agency-approved off-site mitigation bank or in-lieu fee program.

Purchase of any mitigation credits through an agency-approved mitigation bank or in-lieu fee program should occur prior to any impacts to jurisdictional drainages. Any mitigation proposed on land acquired for the purpose of in-perpetuity mitigation that is not part of an agency-approved mitigation bank or in-lieu fee program shall include the creation, restoration, and/or enhancement of similar streambed habitat pursuant to a resource agency-approved Habitat Mitigation and Monitoring Plan (HMMP). The HMMP shall be prepared prior to any impacts to jurisdictional features, and shall provide details as to the implementation of the mitigation, maintenance, and future monitoring of mitigation areas. The goal of the mitigation shall be to create, restore, and/or enhance similar habitat with equal or greater function and value than the impacted habitat.

Ironwood Village Project

Figure IV-7

Impacts to Jurisdictional Features and MSHCP Riverine Areas

ESA PCR

c. Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Less Than Significant Impact.

The Project study areas do not support wetlands as defined by Section 404 of the Clean Water Act. However, the Project study areas do support USACE/RWQCB ephemeral non-wetland jurisdictional streambeds regulated under Sections 404/401 of the Clean Water Act (CWA) that are proposed for impacts. Drainage A and Drainage B5 are considered jurisdictional "waters of the U.S.", of which permanent impacts are proposed totaling 0.034 acre (0.023 acre on-site and 0.011 acre off-site), as shown on Figure IV-7 above. Existing and permanent impact acreages are summarized in **Table IV-8**, *Permanent Impacts to USACE/RWQCB Jurisdictional Features*. The permanent impacts total less than 60 percent of the total 0.058 acre of USACE/RWQCB jurisdiction on-site and off-site. Temporarily impacted areas will be restored to pre-Project conditions.

TABLE IV-8
IMPACTS TO USACE/RWQCB JURISDICTIONAL FEATURES

Drainage	Existing (acres)		Permanent Impacts (acres)		Temporary Impacts (acres)	
	Length (ft)	Area (acres)	Length (ft)	Area (acres)	Length (ft)	Area (acres)
Drainage A	285	0.023	285	0.023	0	0.000
Drainage A (off-site)	111	0.007	111	0.007	0	0.000
Drainage B (off-site)	306	0.026	40	0.004	266	0.022
Drainage B5 (off-site)	35	0.002	10	0.001	25	0.001
Total	**737**	**0.058**	**436**	**0.034**	**366**	**0.023**

SOURCE: ESA PCR, 2016

Impacts to USACE and RWQCB jurisdictional "waters of the U.S." would be required to comply with Sections 404 and 401 of the CWA, respectively, including applying for a permit and mitigation subject to approval by USACE and/or RWQCB. COA BIO-2 is proposed in order to comply with the compensatory mitigation requirement of these regulations, subject to approval by USACE and RWQCB. Compliance with Sections 404 and 401 of the CWA is intended to reduce impacts to a less than significant level.

d. Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Less Than Significant Impact With Mitigation Incorporated.

1. Wildlife Movement

As described above and in greater detail in Section 4.5.2 of the Project BRA, the study area supports potential live-in and movement habitat for species on a local scale (i.e., some limited live-in and at least marginal movement habitat for reptile, bird, and mammal species), but it likely provides little to no function to facilitate wildlife movement for wildlife species on a regional scale, and is not identified as a regionally important dispersal or seasonal migration corridor. Movement on a local scale likely occurs with species adapted to urban environments due to the development and disturbances in the vicinity of the study area. Although implementation of the Project would result in disturbances to local wildlife movement within the study area, those species adapted to urban areas would be expected to persist on-site following construction, particularly within the open space areas. As such, impacts would be less than significant and no mitigation measures would be required. Since the study area does not function as a regional wildlife corridor and are not known to support wildlife nursery area(s), no impacts would occur and no mitigation measures would be required.

2. Migratory Species

Migratory Birds and Raptors

As discussed in Section 4.7.6, *Special-status Wildlife Species*, of the Project BRA, the site supports potential nesting and foraging habitat for migratory birds, in addition to potential foraging habitat for raptors. Based on the disturbed nature of the site from agriculture and ongoing maintenance activities, the quality of foraging habitat is considered to be low. Higher quality foraging habitat is considered to occur in less developed areas with larger expanses of open space. The loss of a relatively small acreage of low quality foraging habitat as a result of the Project would not be expected to impact the foraging of these species. Therefore, impacts to foraging habitat would be considered less than significant and no mitigation measures are considered required.

The study area has the potential to support songbird and raptor nests due to the presence of shrubs, ground cover, and limited trees on-site. Nesting activity typically occurs from February 15 to August 31. Disturbing or destroying active nests is a violation of the MBTA (16 U.S.C. 703 et seq.). In addition, nests and eggs are protected under Fish and Wildlife Code Section 3503. As such direct impacts to breeding birds (e.g. through nest removal) or indirect impacts (e.g. by noise causing abandonment of the nest) is considered a potentially significant impact as defined by CEQA. Compliance with the MBTA, which is required by MM BIO-4 below, would reduce impacts to a less than significant level.

Mitigation Measures

> **MM BIO-4** Prior to the issuance of any grading permit that would remove potentially suitable nesting habitat for raptors or songbirds, the Project applicant shall demonstrate

to the satisfaction of the City of Moreno Valley that either of the following have been or will be accomplished:

1. Vegetation removal activities shall be scheduled outside the nesting season (September 1 to February 14 for songbirds; September 1 to January 14 for raptors) to avoid potential impacts to nesting birds.

2. Any construction activities that occur during the nesting season (February 15 to August 31 for songbirds; January 15 to August 31 for raptors) will require that all suitable habitat be thoroughly surveyed for the presence of nesting birds by a qualified biologist before commencement of clearing. If any active nests are detected a buffer of 300 feet (500 feet for raptors) around the nest adjacent to construction will be delineated, flagged, and avoided until the nesting cycle is complete. The buffer may be modified and/or other recommendations proposed as determined appropriate by the biological monitor to minimize impacts.

e. Conflict with any local policies or ordinances protecting biological resources, such as tree preservation policy or ordinance?

No Impact. The Project would not conflict with any local policies or ordinances protecting biological resources, such as tree preservations or ordinances. As such, no impact would occur in this regard.

f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Less Than Significant Impact With Mitigation Incorporated.

The study area is within the Western Riverside County MSHCP and requires payment of the Local Development Mitigation Fee, compliance with requirements of the MSHCP including the Burrowing Owl Survey Area guidelines (Section 6.3.2 of the MSHCP), and the Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools (Section 6.1.2 of the MSHCP). The study area is not within a cell, a designated cell group, or a subunit within the Reche Canyon/Badlands Area Plan; therefore, conservation of land on the study area is not required pursuant to the MSHCP. The study area is also not within the survey overlays for Criteria Area Species, Narrow Endemic Plant Species, Amphibian Species, or Mammal Species (Section 6.3.2 of the MSHCP). Since the study area is not within or in the vicinity of any Criteria Cells, the Project will not result in edge effects that will adversely and directly affect biological resources within the MSHCP Conservation Area. As such, the Project will not be subject to certain requirements outlined in the Guidelines Pertaining to the Urban/Wildlands Interface (Section 6.1.3 of the MSHCP) including those for the treatment and management of edge factors including night lighting, noise, barriers for public access and predators, and grading/land development limits. However, runoff from the site has the potential to indirectly affect MSHCP Conservation Areas downstream through the quantity and quality of water discharged from the site, in addition to the transport of plant seeds. Therefore compliance with the drainage, toxics, and invasive requirements outlined in Section 6.1.3 of the MSHCP would be required. COA

BIO-3 is proposed below, which requires the Project to comply with all provisions of the MSHCP prior to issuance of a grading permit. Compliance with COA BIO-3 would reduce impacts to a less than significant level.

Project compliance with the MSHCP pertaining to Burrowing Owl, Riparian/Riverine, and Urban/Wildlands Interface requirements for drainage, toxics and invasives are summarized below:

- The study area is within the Burrowing Owl Survey Area of the MSHCP. Focused burrowing owl surveys were conducted within all portions of the study area that support potentially suitable habitat for this species. No burrowing owls were observed on the study area. However, due to the presence of potentially suitable habitat, a 30-day pre-construction survey for burrowing owl is required pursuant to the MSHCP. If burrowing owls are found within the study area during the 30-day pre-construction survey, impacts to this species would be potentially significant. COA BIO-1 and MM BIO-2 would reduce this impact to a less than significant level and ensure consistency with the MSHCP.

- Drainage A and Drainage Complex B on the study area meet the definition of Riverine Areas pursuant to the MSHCP. The Project will result in permanent impacts to 0.078 acre of Riverine Areas, including 0.046 acre within the on-site portion of Drainage A, 0.013 acre in the off-site portion of Drainage A, and 0.018 acre within Drainage Complex B. The permanent impacts are equivalent to approximately 47 percent of the total 0.165 acre of Riverine Areas within the Project study areas. The proposed Riverine Areas impacts are summarized in Table IV-7 above.

- The biological function and value of the on- and off-site Riverine Areas within Drainage A and Drainage Complex B include the transport of water, which is restricted based on the ephemeral flows of the drainage and limited watershed. The function and value of the drainages are also limited since they support only small patches of upland and/or ruderal vegetation and are primarily unvegetated. Other types of aquatic features that could provide suitable habitat for Riparian/Riverine species, such as fairy shrimp, are not present within the study area (i.e. vernal pools, swales, vernal pool-like ephemeral ponds, seasonal ponds, stock ponds, or other human-modified depressions such as tire ruts, etc.).

- Impacts to Riverine Areas would be potentially significant based on requirements of the MSHCP. According to Section 6.1.2 of the MSHCP, if an avoidance alternative is not feasible a Determination of Biologically Equivalent or Superior Preservation (DBESP) shall be made by the Project applicant to ensure the replacement of any lost functions and values of habitat as it relates to MSHCP Covered Species. The condition of approval prescribed in this Initial Study and in Section 7.2.3 of the BRA pertaining to jurisdictional drainages ensures consistency with the MSHCP. The DBESP would be submitted to the Wildlife Agencies (CDFW & USFWS) for approval prior to issuance of a grading permit.

- The Project has the potential to affect the quantity and quality of water in downstream MSHCP Conservation Areas or Riverine areas via Drainage A and Drainage Complex B through runoff generated by the development and transport of invasive, non-native plants species from Project landscaping. Since the Project will be required to comply with flood and water quality standards[12], no indirect effects from the quantity and quality of run-off will occur to downstream areas. In addition, no invasive, non-native plant species listed in Table 6-2 of the MSHCP, *Plants That Should Be Avoided Adjacent To The MSHCP Conservation Area*, will be utilized in the landscape plans. These measures will avoid impacts to water quality and the dispersal of invasive plant seeds in the watershed and are outlined in the Conditions of Approval recommended in this Initial Study and in Section 7.2.5 of the Project BRA.

Project Design Features (Conditions of Approval)

COA BIO-3 Prior to the issuance of any grading permit the Project applicant shall comply with all of the provisions of the MSHCP, including payment of the MSHCP Local Development Mitigation Fee, compliance with Section 6.1.2 of the MSHCP pertaining to Riparian/Riverine Areas, implementation of drainage, toxics and non-native species guidelines pertaining to the Urban/Wildlands Interface in Section 6.1.4 of the MSHCP, and compliance with Section 6.3.2 of the MSHCP pertaining to Burrowing Owl Survey Area requirements. Compliance with Section 6.1.2 of the MSHCP will require approval of the project Determination of Biologically Equivalent or Superior Preservation (DBESP) analysis outlining the impacts and proposed compensatory mitigation for impacts to the Riparian/Riverine Areas for approval by the wildlife agencies prior to issuance of a grading permit. The DBESP will be submitted to the wildlife agencies concurrent to the processing of regulatory permits for jurisdictional streambed impacts, in order to ensure that mitigation requirements proposed under the DBESP are commensurate with the preferences of the resource agencies (USACE, CDFW, and RWQCB) as part of subsequent regulatory permit conditions to be issued following adoption of the project MND.

V. Cultural Resources

The following impact analysis pertaining to cultural resources is based on information contained in the *Phase I Cultural Resources Assessment of the Proposed Ironwood Residential Project; City of Moreno Valley, County of Riverside, California* (herein referred to as the "Cultural Resources Assessment"), prepared by ESA PCR, dated June 2016. The Cultural Resources Assessment is provided in Appendix C.

Would the Project:

a. Cause a substantial adverse change in significance of a historical resource as defined in §15064.5?

No Impact. A historical resource is defined in Section 15064.5(a)(3) of the CEQA Guidelines as any object, building, structure, site, area, place, record, or manuscript determined to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California. Historical

[12] The project will be required to prepare a Water Quality Management Plan and Storm Water Pollution Prevention Plan consistent with Regional Water Quality Control Board and County requirements that will outline measures such as Best Management Practices (BMPS) to address water quantity and quality, and to address any potential flooding.

resources are further defined as being associated with significant events, important persons, or distinctive characteristics of a type, period or method of construction; representing the work of an important creative individual; or possessing high artistic values. Resources listed in or determined eligible for the California Register, included in a local register, or identified as significant in a historic resource survey are also considered historical resources under CEQA.

A project with an effect that may cause substantial adverse change in the significance of a resource is a project that may have a significant impact on the environment. Substantial adverse change is defined as physical demolition, relocation, or alteration of a resource or its immediate surroundings such that the significance of an historical resource would be materially impaired. Direct impacts are those that cause substantial adverse physical change to a historic property. Indirect impacts are those that cause substantial adverse change to the immediate surroundings of a historic property such that the significance of a historical resource would be materially impaired.

The *Secretary of the Interior's Standards for Rehabilitation* (Standards) are codified at 36 Code of Federal Regulations (CFR) Section 67.7. In most circumstances, the Standards are relevant in assessing whether there is a substantial adverse change under CEQA. Section 15064.5b(3) of the CEQA Guidelines states in part that ". . . a project that follows the *Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings or the Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings* (1995), Weeks and Grimmer, shall be considered as mitigated to a level of less than a significant impact on the historic resource," and therefore may be considered categorically exempt.

The Cultural Resources Assessment included a records search through the California Historical Resources Information System-Eastern Information Center (CHRIS-EIC). Results from the CHRIS-EIC indicated that there were no previously recorded historical (or built environment) resources within the Study Area and no historical resources were identified during the pedestrian survey; therefore, no impact analysis of historical resources is necessary.

b. Cause a substantial adverse change in significance of an archaeological resource pursuant to §15064.5?

Less Than Significant Impact With Mitigation Incorporated. The results of the Cultural Resources Assessment revealed that two prehistoric cultural resources ((P-33-024882/CA-RIV-12,333 and P-33-024883) are located within the Study Area. Resource P-33-024882/CA-RIV-12,333 is a prehistoric archaeological resource that was previously recorded in the northwestern portion of the Study Area and was revisited by ESA PCR during the pedestrian survey. It consists of one boulder with one milling slick and one boulder with three milling slicks and measures 25 meters (north/south) x 6 meters (east-west). The Applicant has designed the Project to avoid this resource and it is located in an area that is planned for open space; therefore no additional work or mitigation would be warranted. Since the resource would be avoided by the proposed Project, no formal evaluation of the resource was performed by ESA PCR. Resource P-33-024883 was identified in a disturbed and isolated context and therefore the potential for intact subsurface archaeological deposits in the area where it was recorded by ESA PCR is low. As a result of these factors, P-33-024883 does not yield, or have the potential to yield information important to prehistory (Criterion 4 of the California Register) and therefore recommend as not eligible for listing in the California Register and does not qualify as a unique archaeological resource pursuant to CEQA. No additional work is necessary at this resource and impacts to it from the proposed Project are not considered a significant impact on the environment.

These findings, however, do not preclude the existence of undiscovered archaeological resources located below the ground surface and lacking surface manifestation, which may be encountered during construction excavations associated with the proposed Project. It is possible to encounter buried archaeological resources given the proven prehistoric occupation of the region, the identification of multiple surface archaeological resources within the vicinity of the Study Area (including two archaeological resources within the Study Area and numerous resources recorded in the Reche Hills Complex – see Section 4.1.5 of the Project Cultural Resources Assessment), and the favorable natural conditions (e.g., ephemeral drainages, natural spring, and vegetation communities) that would have attracted prehistoric inhabitants to the area. Therefore, despite the heavy disturbances of the Study Area that may have displaced archaeological resources on the surface, it is possible that intact archaeological resources exist at depth. As a result, MM CULT-1 through MM CULT-9 have been prescribed to reduce potentially significant impacts to previously undiscovered archaeological resources that may be accidentally encountered during Project implementation to a less than significant level.

Mitigation Measures

MM CULT 1: Archaeologist Retained/CRMP Prepared. Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a professional archaeological monitor has been retained by the Applicant to conduct monitoring of all mass grading and trenching activities and that the monitor has the authority to temporarily halt and redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project archaeologist, in coordination with the Consulting Tribes that have requested monitoring, shall prepare a Cultural Resources Monitoring Plan (CRMP) to document protocols for inadvertent finds, to determine potential protection measures from further damage and destruction for any identified archaeological resource(s)/ tribal cultural resources (TCRs), outline the process for monitoring and for completion of the final Phase IV Monitoring Report. If any archaeological and/or TCRs are identified during monitoring, these will also be documented and addressed per standard archaeological protocols in the Phase IV report, with the exception of human remains which will be addressed per MM CULT-13. The Project Archaeologist shall attend the pre-grading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.

MM CULT 2: Tribal Monitor Retained. At least 30 days prior to the issuance of a Grading permit the Applicant shall contact the consulting Tribe(s) that have requested monitoring, to develop Monitoring Agreement(s) for all mass grading and trenching activities and shall provide evidence of the agreement to the City of Moreno Valley. The Tribal representative(s) shall attend the pre-grading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.

MM CULT 3: Grading Plans. Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan:

"If any suspected archaeological resources are discovered during ground-disturbing activities and the archaeological monitor or Tribal representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal representatives to the site to assess the significance of the find."

MM CULT 4: Preservation Plan for CA-RIV-12,333. Prior to building permit issuance, the Project Applicant and the Consulting Tribe(s) shall prepare a Preservation and Maintenance Plan for the long-term care and maintenance of CA-RIV-12,333 and, if any, all new features identified during mass grading activities. The Plan shall indicate, at a minimum, the specific areas to be included in and excluded from long-term maintenance; prohibited activities; methods of preservation to be employed (fencing, vegetative deterrence, etc.); the entity(s) responsible for the long-term maintenance; maintenance scheduling and notification; appropriate avoidance protocols; monitoring by the Tribe and compensation for services if applicable; and necessary emergency protocols. The Project Applicant/Landowner shall submit a fully executed copy of the Preservation and Maintenance Plan to the City to ensure compliance with this mitigation measure.

MM CULT 5: Conduct Archaeological Sensitivity Training for Construction Personnel. The Applicant shall retain a qualified professional archaeologist who shall conduct an Archaeological Sensitivity Training for construction personnel prior to commencement of excavation activities, along with representatives from Tribes that have requested monitoring. The training session, shall be carried out by a cultural resources professional with expertise in archaeology, will focus on how to identify archaeological/cultural resources that may be encountered during earthmoving activities, and the procedures to be followed in such an event. The training session will include a Power Point presentation and/or handouts for all attendees. The basic topics to be addressed in the session include: a brief cultural and archaeological history of the area and the Applicant's and City's cultural resource compliance obligations; training in potential resources that may be encountered through the use of photographs or other illustrations; the duties of archaeological monitors; notification and other procedures to follow upon discovery of resources; and, the general steps that would be followed to conduct a salvage investigation if one is necessary. A sign-in sheet shall be compiled to track attendance and shall be submitted to the City with the Archaeological Monitoring Report.

MM CULT 6: Monitor Construction Excavations for Archeological Resources in Younger Alluvial Sediments. The Applicant shall retain a qualified archaeological monitor, who will work under the direction and guidance of a qualified professional archaeologist. The archaeological monitor shall be present during all construction excavations (e.g., grading, trenching, or clearing/grubbing) into non-fill younger Pleistocene alluvial sediments. Multiple earth-moving construction activities may require multiple archaeological monitors. The frequency of monitoring shall be based on the rate of excavation and grading activities, proximity to known archaeological resources, the materials being excavated (native versus artificial fill soils), and the depth of excavation, and if found, the abundance and type of archaeological resources encountered. Full-time monitoring can be reduced to part-time inspections, or ceased entirely, if determined adequate by the Project archaeologist.

MM CULT 7: Inadvertent Finds. If, during mass grading and trenching activities, the Archaeologist or Tribal representatives/monitors suspect that an archaeological resource and/or TCR may have been unearthed, the monitor identifying the potential resources, in consultation with the other monitor as appropriate, shall immediately halt and redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. The Native American monitor(s) or appropriate representative(s) and the archaeological monitor shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2. The archaeological monitor and tribal monitor(s) or appropriate representative(s), the Project Applicant, and the City Planning Division shall confer regarding mitigation of the discovered resource(s). All sacred sites, should they be encountered within the project area, shall be avoided and preserved as the preferred mitigation, if feasible. If preservation in place is not feasible, steps for treatment and disposition shall be carried out in accordance as set forth in per MM CULT-9.

MM CULT 8: Final Phase IV Monitoring Report. Prior to building permit issuance, the Project archaeologist shall prepare a final Phase IV Monitoring Report as outlined in the CRMP, which shall be submitted to the City Planning Division, the appropriate Native American tribe(s), and the Eastern Information Center at the University of California, Riverside. The report shall document project impacts to CA-RIV-857, CA-RIV-3159 and CA-RIV-3341, including the relocation area and protection measures taken for CA-RIV-3341.

MM CULT 9: Treatment and Disposition of Discoveries. In the event that Native American cultural resources are inadvertently discovered during the course of grading for this Project. The following procedures will be carried out for treatment and disposition of the discoveries:

1. **Treatment and Final Disposition**: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and non-human remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Moreno Valley Planning Department with evidence of same:

    a. Accommodate the process for Preservation In Place/Onsite reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloguing and basic recordation have been completed;

    b. A curation agreement with an appropriate qualified repository within Riverside County that meets federal standards per 36 CFR Part 79 and therefore would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility within Riverside County, to be accompanied by payment of the fees necessary for permanent curation:

    c. For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, they shall be curated at the Western Science Center by default.

c. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Less Than Significant Impact With Mitigation Incorporated. The Cultural Resources Assessment included a records search through the San Bernardino County Museum (SBCM). Results of the paleontological resources records search through SBCM indicate that no vertebrate fossil localities from the SBCM records have been previously recorded within the Study Area or within a one-mile radius. Moreover, no paleontological resources were identified by ESA PCR during the pedestrian survey. These findings; however, do not preclude the existence of undiscovered paleontological resources located below the ground surface and lacking surface manifestation, which may be encountered during construction excavations associated with the proposed Project. The Study Area has been previously mapped geologically as containing surface exposures of early Pleistocene-aged fan deposits, overlain across much of the Study Area by a thin sedimentary veneer of recent Holocene-aged alluvium. The northwestern portion of the Study Area is mapped as Cretaceous-aged tonalite. The tonalite and the surficial Holocene-aged alluvium have very limited to no potential to be conducive to retaining paleontological resources; however, the Pleistocene-aged fan deposits may have high a paleontological sensitivity, depending upon their lithology, as these sediments have yielded significant fossils of extinct animals from the Ice Age throughout the Inland Empire (Scott 2014). As a result, MM CULT-10 through MM CULT-12 have been prescribed to reduce potentially significant impacts to previously undiscovered paleontological resources and/or unique geological features that may be accidentally encountered during Project implementation to a less than significant level.

Mitigation Measures

MM CULT 10: Conduct Paleontological Sensitivity Training for Construction Personnel. The Applicant shall retain a qualified paleontologist who shall conduct a Paleontological Sensitivity Training for construction personnel prior to commencement of excavation activities. The training session, shall be carried out by a cultural resources professional with expertise in paleontology, will focus on how to identify paleontological resources that may be encountered during earthmoving activities, and the procedures to be followed in such an event. The training session will include a Power Point presentation and/or handouts for all attendees. The basic topics to be addressed in the session include: a brief cultural and geologic history of the area and the City cultural resource compliance obligations; training in potential resources that may be encountered through the use of photographs or other illustrations; the duties of paleontological monitors; notification and other procedures to follow upon discovery of resources; and, the general steps that would be followed to conduct a salvage investigation if one is necessary.

MM CULT 11: Monitor Construction Excavations for Paleontological Resources in Older Pleistocene Alluvial Deposits. The Applicant shall retain a qualified paleontological monitor, who will work under the guidance and direction of a qualified professional paleontologist. The paleontological monitor shall be present during all construction excavations (e.g., grading, trenching, or clearing/grubbing) into non-fill older Pleistocene alluvial deposits. Multiple earth-moving construction activities may require multiple paleontological monitors. The frequency of monitoring shall be based on the rate of excavation and grading activities, proximity to known paleontological resources and/or unique geological features, the materials being excavated (native versus artificial fill soils), and the depth of excavation, and if found, the abundance and type of paleontological resources and/or unique geological features encountered. Full-time monitoring can be reduced to part-time inspections if determined adequate by the qualified professional paleontologist.

MM CULT 12: Cease Ground-Disturbing Activities and Implement Treatment Plan if Paleontological Resources Are Encountered. In the event that paleontological resources and or unique geological features are unearthed during ground-disturbing activities, ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. A buffer area of at least 25 feet shall be established around the find where construction activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area. The Applicant and City shall coordinate with a qualified professional paleontologist to develop an appropriate treatment plan for the resources. Treatment may include implementation of paleontological salvage excavations to remove the resource along with subsequent laboratory processing and analysis or preservation in place. At the paleontologist's discretion and to reduce any construction delay, the grading and excavation contractor shall assist in removing rock samples for initial processing. Any fossils encountered and recovered shall be prepared to the point of taxonomic identification and catalogued and curated to a suitable museum or other repository with a research interest in the materials, such as the San Bernardino County Museum or Western Science Center. If no institution accepts the fossil collection, they shall be donated to a local school in the area for educational purposes. Accompanying notes, maps, and photographs shall also be filed at the repository and/or school.

d. Disturb any human remains, including those interred outside of formal cemeteries?

Less Than Significant Impact With Mitigation Incorporated. No known human remains have been identified from the CHRIS-EIC database within a half-mile radius of the Study Area. No human remains were identified during the pedestrian survey of the Study Area. However, these findings do not preclude the existence of previously unknown human remains located below the ground surface, which may be encountered during construction excavations associated with the proposed Project. Similar to the discussion regarding archaeological resources above, it is also possible to encounter buried human remains during construction given the proven prehistoric occupation of the region, the identification of multiple surface archaeological resources within a half-mile of the Study Area, and the favorable natural conditions that would have attracted prehistoric inhabitants to the area. As a result, MM CULT-13 has been prescribed to reduce potentially significant impacts to previously unknown human remains that may be unexpectedly discovered during Project implementation to a less than significant level.

Mitigation Measures

MM CULT 13: Cease Ground-Disturbing Activities and Notify County Coroner If Human Remains Are Encountered. If human remains are unearthed during implementation of the Proposed Project, the City shall comply with State Health and Safety Code Section 7050.5. The City shall immediately notify the County Coroner and no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to PRC Section 5097.98. If the remains are determined to be of Native American descent, the coroner has 24 hours to notify the Native American Heritage Commission (NAHC). The NAHC shall then identify the person(s) thought to be the Most Likely Descendent (MLD). The MLD may, with the permission of the landowner, inspect the site of the discovery of the Native American remains and may recommend to the landowner means for treating or disposing, with appropriate dignity, the human remains and any associated funerary objects. The MLD shall complete their inspection and make their recommendation within 48 hours of being granted access by the landowner to inspect the discovery. The recommendation may include the scientific removal and nondestructive analysis of human remains and cultural items associated with Native American burials. Upon the discovery of the Native American remains, the landowner shall ensure that the immediate vicinity, according to generally accepted cultural or archaeological standards or practices, where the Native American human remains are located, is not damaged or disturbed by further development activity until the landowner has discussed and conferred, as prescribed in this mitigation measure, with the MLD regarding their recommendations, if applicable, taking into account the possibility of multiple human remains. The landowner shall discuss and confer with the descendants all reasonable options regarding the descendants' preferences for treatment. MLDs in the region typically recommend reburial of the remains as close to the original burial location as feasible accompanied by a ceremony. The MLD shall file a record of the reburial with the NAHC and the Project archaeologist shall file a record of the reburial with the CHRIS-EIC.

If the NAHC is unable to identify a MLD, or the MLD identified fails to make a recommendation, or the landowner rejects the recommendation of the MLD and the mediation provided for in Subdivision (k) of Section 5097.94, if invoked, fails to provide measures acceptable to the landowner, the landowner or his or her authorized representative shall inter the human remains and items associated with Native American human remains with appropriate dignity on the facility property in a location not subject to further and future subsurface disturbance. A record of the reburial shall be filed with the NAHC and the CHRIS-EIC.

VI. Geology and Soils

The following impact analysis pertaining to the site's underlying geology and soils is based on information contained in the Due Diligence Level Preliminary Geotechnical Evaluation, Proposed Residential Development NWC Ironwood Avenue and Oliver Street, Moreno Valley, Riverside County, California *(herein referred to as the "Preliminary Geotechnical Evaluation"), prepared by EEI Geotechnical & Environmental Solutions, dated November 25, 2014; the* Supplemental Geotechnical Evaluation, Proposed Residential Development NWC Ironwood Avenue and Oliver Street & Tract No. 31556 Off-site Sewer Oliver Street Extension/60 Freeway Undercrossing Moreno Valley, Riverside County, California *(herein referred to as the "Supplemental Geotechnical Evaluation"), prepared by EEI Geotechnical & Environmental Solutions, dated May 18, 2005; and the* Moreno Valley Ironwood Rockfall Investigation City of Moreno Valley, Riverside County, California *(herein referred to as the "Rockfall Investigation"), prepared by KANE GeoTech, Inc, dated March 15, 2016. The Preliminary Geotechnical Evaluation, Supplemental Geotechnical Evaluation, and the Rockfall Investigation are provided in Appendix D.*

Would the Project:

a. Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:

i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

Less Than Significant Impact. Fault rupture is the displacement that occurs along the surface of a fault during an earthquake. Based on criteria established by the California Geological Survey (CGS), faults may be categorized as active, potentially active, or inactive. Active faults are those which show evidence of surface displacement within the last 11,000 years (Holocene-age). Potentially active faults are those that show evidence of most recent surface displacement within the last 1.6 million years (Quaternary-age). Faults showing no evidence of surface displacement within the last 1.6 million years are considered inactive. In addition, there are buried thrust faults, which are low angle reverse faults with no surface exposure. Due to their buried nature, the existence of buried thrust faults is usually not known until they produce an earthquake.

The CGS has established earthquake fault zones known as Alquist-Priolo Earthquake Fault Zones around the surface traces of active faults to assist cities and counties in planning, zoning, and building regulation functions. These zones, which extend from 200 to 500 feet on each side of a known active fault, identify areas where potential surface rupture along an active fault could prove hazardous and identify where special studies are required to characterize hazards to habitable structures.

The Project site is located in the seismically active Southern California region and could be subject to moderate to strong ground shaking in the event of an earthquake on one of the many active Southern California faults. The Preliminary Geotechnical Evaluation conducted for the Project indicates that no currently known active or potentially active surface faults traverse the Project site, and the site is not located within a designated Alquist-Priolo Earthquake Fault Zone. The faults in the vicinity of the Project site include the San Jacinto-San Jacinto Valley Fault and the San Jacinto-San Bernardino Fault, located approximately 1.5 miles and 5.8 miles of the site, respectively. As such, the potential for surface rupture due to faulting occurring on the Project site during the design life of the Project is considered low. Furthermore, Project buildings would be designed and constructed to resist the effects of seismic ground motions as provided in the City's Building Code and the 2013 California Building Code (CBC). Thus, a less than significant impact would occur in this regard.

ii. Strong seismic ground shaking?

Less Than Significant Impact With Mitigation Incorporated. Seismicity is the geographic and historical distribution of earthquakes, including their frequency, intensity, and distribution. The level of ground shaking at a given location depends on many factors, including the size and type of earthquake, distance `from the earthquake, and subsurface geologic conditions. The type of construction also affects how particular structures and improvements perform during ground shaking. A common measure of ground motion is the peak ground acceleration (PGA). It is not a measure of total energy of an earthquake, such as the Richter and moment magnitude scales, but rather of how hard the ground shakes in given geographic area. PGA is expressed as the percentage of the acceleration due to gravity (G), which is approximately 980 centimeters per second squared. According to the United States Geological Survey (USGS), the following chart provides the extent of perceived shaking and potential damage associated with a given acceleration:

Per the CBC, an estimated PGA is determined for a site of proposed construction based on the mapping by the USGS along with detailed analysis as an estimate of anticipated ground shaking for use by the Project structural engineer in design of the proposed structures to resist. There is potential for significant ground shaking at the Project site during a strong seismic event on the San Jacinto-San Jacinto Valley Fault and the San Jacinto-San Bernardino Fault, as well as on the other large active faults in the Southern California region. According to the Preliminary Geotechnical Evaluation, a maximum probable event could produce a PGA value at the Project site of 0.837g. This is a relatively high acceleration do to the proximity of the San Jacinto-San Jacinto Valley Fault and the San Jacinto-San Bernardino Fault. If this relatively high ground acceleration was not considered in the design and construction phase, ground shaking at this intensity could result in significant damage to buildings and improvements associated with Project implementation.

Acceleration (g)	Perceived Shaking	Potential Damage
< 0.0017	Not felt	None
0.0017 - 0.014	Weak None	None
0.014 - 0.039	Light	None
0.039 - 0.092	Moderate	Very Light
0.092 - 0.18	Strong	Light
0.18 - 0.34	Very Strong	Moderate
0.34 - 0.65	Severe	Moderate to Heavy
0.65 - 1.24	Violent	Heavy
> 1.24	Extreme	Very Heavy

SOURCE: United States Geological Survey. Accessed from website at: http://en.wikipedia.org/wiki/Peak_ground_acceleration, accessed August 2015.

The City requires that all new construction meet or exceed the City's Building Code and the latest standards of the 2013 CBC for construction which requires structural design that can accommodate maximum ground accelerations expected from known faults. Furthermore, the Project would comply with the CGS Special Publications 117, Guidelines for Evaluating and Mitigating Seismic Hazards in California, which provides guidance for evaluation and mitigation of earthquake-related hazards. While the Project would be required to comply with applicable seismic-related regulatory requirements, implementation of the site-specific structural and seismic design parameters and recommendations for foundations, retaining walls/shoring, and excavation of the both the Preliminary Geotechnical Evaluation and the Supplemental Geotechnical Evaluation per MM GEO-1 would further ensure that seismic-related ground shaking impacts would be less than significant.

Mitigation Measures

MM GEO-1: Site-specific structural and seismic design parameters and recommendations for foundations, retaining walls/shoring, and excavation shall be implemented per the Project's Preliminary Geotechnical Evaluation and the Supplemental Geotechnical Evaluation, subject to review and approval by the City of Moreno Valley Building Safety Department.

iii. Seismic-related ground failure, including liquefaction?

Less Than Significant Impact With Mitigation Incorporated. Liquefaction is a phenomenon in which saturated silty to cohesionless soils below the groundwater table are subject to a temporary loss of strength due to the buildup of excess pore pressure during cyclic loading conditions such as those induced by an earthquake. Liquefaction effects include loss of bearing strength, amplified ground oscillations, lateral spreading, and flow failures. Liquefaction typically occurs in areas where groundwater is less than 50 feet from the surface, and where the soils are composed of poorly consolidated, fine to medium-grained sand. In addition to the necessary soil conditions, the ground acceleration and duration of the earthquake must also be of a sufficient level to initiate liquefaction.

According to the Preliminary Geotechnical Evaluation, a seismic hazard zone map and report for the Sunnymead Quadrangle has not been issued by the CGS. As such, the depth to the historic high groundwater is not known and therefore; the Project site is not situated within a mapped liquefaction zone. Static groundwater is not expected and groundwater was not encountered in any of the exploratory borings or trenches excavated to a maximum explored depth of 50.5 feet below the existing ground surface at the Project site. The majority of the Project site is underlain by generally loose to medium dense alluvial and colluvial deposits that overlie relatively shallow granitic bedrock. The alluvial and colluvial soils are subject to removal and recompaction during Project grading. Due to the presence of shallow bedrock and the lack of shallow groundwater, the Project site is considered as having a low susceptibility to liquefaction. While the Project would be required to comply with applicable seismic-related regulatory requirements of the City's Building Code and the 2013 CBC, implementation of the site-specific design parameters and recommendations of the Preliminary Geotechnical Evaluation and the Supplemental Geotechnical Evaluation per MM GEO-1 to be implemented during construction would ensure that seismic-related ground failure impacts, including liquefaction, would be less than significant.

Mitigation Measures

Refer to MM GEO-1. No additional mitigation measures are necessary.

iv. Landslides?

Less Than Significant Impact. Elevations on-site range from approximately 1,840 feet above mean sea level (MSL) in the south-central portion of the site to approximately 1,980 feet above MSL in the northwestern portion of the site. From east to west across the site is a series of north-south-oriented ridges and alternating drainage gullies in the lower, southern portion of the site. The intervening ridges are generally about 5 to 10 feet higher in elevation them the adjacent drainage gullies. The overall surface gradient across the Project site is gently to moderately south or south-southeast.

A few of the planned residences are proposed on a flat area at the base of a rocky outcrop, which could potentially result in rockfall hazards. This slope adjacent to the proposed residences contains spheroidally weathered, large, rounded boulders. These boulders are comprised of biotite-hornblende tonalite. The tonalite is grey, medium-grained and in some areas contains mafic inclusions. The boulders are heavily weathered and when broken down, form the sandy soil present at the Project site. The majority of these boulders are embedded in the sediment or are actually exposed bedrock. There are some areas of exposed bedrock indicating the depth to bedrock, although varies, is shallow. According to the Rockfall Investigation, the rockfall source would continue to weather and erode and potentially produce rockfall onto the slope. However, based on the observations and modeling of the Rockfall Investigation, the proposed locations of these planned residences should not be impacted by potential rockfall hazards. Further, the Rockfall Investigation indicated rockfall mitigation would not be necessary, but would be beneficial to construct reinforced concrete or block privacy walls on Lots 36, 37, 38, 39, and 40 to provide supplementary protection and to prevent small, nuisance rockfall from accumulating in proposed residential areas (Project Design Feature GEO-1). As such, the Project site is located in an area with low potential for rockfall or landslides. Thus, based on the above design consideration and Project Design Feature GEO-1, a less than significant impact would occur in this regard.

Project Design Feature

> **PDF-GEO-1:** The Project applicant would construct reinforced concrete or block privacy walls on Lots 36, 37, 38, 39, and 40 to provide supplementary protection and to prevent small, nuisance rockfall from accumulating in proposed residential areas.

b. Result in substantial soil erosion or the loss of topsoil?

Less Than Significant Impact. Soil erosion refers to the process by which soil or earth material is loosened or dissolved and removed from its original location. Erosion can occur by varying processes and may occur in a Project area where bare soil is exposed to wind or moving water (both rainfall and surface runoff). The processes of erosion are generally a function of material type, terrain steepness, rainfall or irrigation levels, surface drainage conditions, and general land uses. Topsoil is used to cover surface areas for the establishment and maintenance of vegetation due to its high concentrations of organic matter and microorganisms.

The Project site is currently undeveloped though several unimproved trails/dirt roads traverse the property. Surrounding land uses include vacant land to the north and east with residential uses to the south and west. As the Project site is undeveloped, a majority of the site would include native topsoil. Project construction would result in ground surface disruption during excavation, grading, and trenching that would create the potential for erosion to occur. Wind erosion would be minimized through soil stabilization measures required by the SCAQMD Rule 403 (Fugitive Dust), such as daily watering. Potential for water erosion would be reduced by implementation of standard erosion control measures imposed during site preparation and grading activities. As discussed in more detail under Section IX, *Hydrology and Water Quality*, the Project would be subject to all existing regulations associated with the protection of water quality. Construction activities would be carried out in accordance with applicable City standard erosion control practices required pursuant to the California Building Code and the requirements of the National

Pollutant Discharge Elimination System (NPDES) General Construction Permit issued by the Santa Ana Regional Water Quality Control Board (RWQCB), as applicable. Consistent with these requirements, a Stormwater Pollution Prevention Plan (SWPPP) would be prepared that incorporates Best Management Practices (BMPs) to control water erosion during the Project's construction period. Thus, impacts due to erosion of topsoil would be less than significant with compliance to applicable regulatory requirements.

c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potential result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?

Less Than Significant Impact With Mitigation Incorporated. According to the Preliminary Geotechnical Evaluation, the Project site is underlain by weathered Cretaceous-age plutonic rocks composed of tonalite. This material was observed to extend beyond the maximum depth of 50.5 feet below existing grades of the exploratory borings and test pits. Alluvial soils up to 30 feet thick were observed to mantle the weathered tonalite bedrock within the lower lying channel/drainage areas. On the higher, elevated ridge areas of the Project site, colluvial soils were observed to mantle the weathered tonalite bedrock with a thickness varying between 3 and 14 feet. The weathered tonalite bedrock can generally be described as gray, white or black speckled or orange to dark grayish-orange with a granitic or phaneritic texture and was generally unweathered to highly weathered. Outcroppings of the weathered tonalite bedrock are exposed in the northwestern and northeastern portions of the Project site. Over the remainder of the Project site, the tonalite bedrock was found to be weathering into a medium dense to very dense silty sand soil with a decomposed granite texture at depth in the exploratory borings and test pits. The alluvial and colluvial soils are generally comprised of orange-brown or red-brown, medium brown or light gray brown, fine to coarse, damp to moist, loose to dense silty sand. The Project site is relatively undeveloped and artificial fill was not encountered during the field exploration.

Impacts related to liquefaction and landslides are discussed above in Responses VI.a.iii. and VI.a.iv. Lateral spreading is the downslope movement of surface sediment due to liquefaction in a subsurface layer. The downslope movement is due to the combination of gravity and earthquake shaking. Such movement can occur on slope gradients of as little as one degree. Lateral spreading typically damages pipelines, utilities, bridges, and structures. Lateral spreading of the ground surface during a seismic activity usually occurs along the weak shear zones within a liquefiable soil layer and has been observed to generally take place toward a free face (i.e. retaining wall, slope, or channel) and to a lesser extent on ground surfaces with a very gentle slope. As stated in Response VI.a.iii., due to the presence of shallow bedrock and the lack of shallow groundwater, the Project site is considered as having a low susceptibility to liquefaction. Further, due to the absence of any channel, slope, or river within or near the Project site, the potential for lateral spreading occurring on or off the site is considered to be negligible. No large-scale extraction of groundwater, gas, oil, or geothermal energy is occurring or planned at the Project site. Thus, there appears to be little or no potential for ground subsidence due to withdrawal of fluids or gases at the Project site.

While the Project construction and design would be required to comply with the 2013 CBC, which is designed to assure safe construction, implementation of the site-specific design measures including foundation design recommendations of the Preliminary Geotechnical Evaluation and the Supplemental Geotechnical Evaluation per MM GEO-1 would ensure that ground and soil stability hazards would be less than significant.

Mitigation Measures

Refer to MM GEO-1. No additional mitigation measures are necessary.

d. Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?

Less Than Significant Impact With Mitigation Incorporated. Soils with shrink-swell or expansive properties typically occur in fine-grained sediments and cause damage through volume changes as a result of a wetting and drying process. Structural damage may occur over a long period of time, usually the result of inadequate soil and foundation engineering or the placement of structures directly on expansive soils. According to the Preliminary Geotechnical Evaluation, the results of the laboratory expansion index testing indicated an expansion index of 0 and 2 for the tested soils which represents a very low expansion potential. Expansive soils, if encountered within the Project site, would be removed and/or replaced as part of standard construction practices pursuant to the City and/or 2013 CBC building requirements, as applicable. Furthermore, with incorporation of the site-specific design measures including foundation design slabs on grade recommendations of the Preliminary Geotechnical Evaluation and the Supplemental Geotechnical Evaluation per MM GEO-1, a less than significant impact would occur in this regard.

Mitigation Measures

Refer MM GEO-1. No additional mitigation measures are necessary.

e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

No Impact. The Project would not involve the use of septic tanks or alternative wastewater disposal systems. As such, no impact would occur in this regard.

VII. Greenhouse Gas Emissions

The following impact analysis pertaining to greenhouse gas emissions (GHGs) is based on information contained in the Ironwood Residential (TTM No. 37001), Greenhouse Gas Analysis, City of Moreno Valley *(herein referred to as the "GHG Analysis"), prepared by Urban Crossroads, dated August 31, 2015. The GHG Analysis is provided in Appendix E.*

Would the Project:

a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Less Than Significant Impact. Global Climate Change (GCC) is defined as the change in average meteorological conditions on the earth with respect to temperature, precipitation, and storms. GCC is currently one of the most controversial environmental issues in the United States, and much debate exists within the scientific community about whether or not GCC is occurring naturally or as a result of human activity. Some data suggests that GCC has occurred in the past over the course of thousands or millions of years. These historical changes to the Earth's climate have occurred naturally without human influence, as in the case of an ice age. However, many scientists believe that the climate shift taking place since the industrial revolution (1900) is occurring at a quicker rate and magnitude than in the past. Scientific evidence suggests that GCC is the result of increased concentrations of greenhouse gases in the earth's atmosphere, including carbon dioxide (CO_2), methane (CH_4), NO_x, and fluorinated gases. Many scientists believe that this increased rate of climate change is the result of greenhouse gases resulting from human activity and industrialization over the past 200 years.

An individual project like the proposed Project evaluated in this GHG Analysis would not generate enough greenhouse gas emissions to effect a discernible change in global climate. However, the Project may participate in the potential for GCC by its incremental contribution of greenhouse gasses combined with the cumulative increase of all other sources of greenhouse gases, which when taken together constitute potential influences on GCC. Because these changes may have serious environmental consequences, the GHG Analysis evaluated the potential for the Project to have a significant effect upon the environment as a result of its potential contribution to the greenhouse effect.

GCC refers to the change in average meteorological conditions on the earth with respect to temperature, wind patterns, precipitation and storms. Global temperatures are regulated by naturally occurring atmospheric gases such as water vapor, CO_2, N2O (Nitrous Oxide), CH_4, hydrofluorocarbons, perfluorocarbons and sulfur hexafluoride. These particular gases are important due to their residence time (duration they stay) in the atmosphere, which ranges from 10 years to more than 100 years. These gases allow solar radiation into the Earth's atmosphere, but prevent radioactive heat from escaping, thus warming the Earth's atmosphere. GCC can occur naturally as it has in the past with the previous ice ages. According to CARB, the climate change since the industrial revolution differs from previous climate changes in both rate and magnitude.

Gases that trap heat in the atmosphere are often referred to as greenhouse gases. Greenhouse gases are released into the atmosphere by both natural and anthropogenic (human) activity. Without the natural greenhouse gas effect, the Earth's average temperature would be approximately 61° Fahrenheit (F) cooler than it is currently. The cumulative accumulation of these gases in the earth's atmosphere is considered to be the cause for the observed increase in the earth's temperature. Although California's rate of growth of greenhouse gas emissions is slowing, the State is still a substantial contributor to the United States emissions inventory total. In 2004, California is estimated to have produced 492 million gross metric tons of carbon dioxide equivalent ($CO2_e$) greenhouse gas emissions. Despite a population increase of 16 percent between 1990 and 2004, California has significantly slowed the rate of growth of greenhouse gas emissions due to the implementation of energy efficiency programs as well as adoption of strict emission controls.

The City has not adopted a threshold of significant for GHG emissions. As such, a screening threshold of 3,000 metric ton of carbon dioxide equivalent ($MTCO2_e$) per year for residential land uses is applied herein, which is a widely accepted screening threshold used by the County of Riverside and numerous jurisdictions in the SCAB and based on the SCAQMD staff's proposed GHG screening threshold for stationary source emissions for non-industrial projects, as described in the SCAQMD's *Interim CEQA GHG Significance Threshold for Stationary Sources, Rules and Plans* ("SCAQMD Interim GHG Threshold"). The SCAQMD Interim GHG Threshold identifies a screening threshold to determine whether additional analysis is required. As noted by the SCAQMD:

"…the…screening level for stationary sources is based on an emission capture rate of 90 percent for all new or modified projects…the policy objective of [SCAQMD's] recommended interim GHG significance threshold proposal is to achieve an emission capture rate of 90 percent of all new or modified stationary source projects. A GHG significance threshold based on a 90 percent emission capture rate may be more appropriate to address the long-term adverse impacts associated with global climate change because most projects will be required to implement GHG reduction measures. Further, a 90 percent emission capture rate sets the emission threshold low enough to capture a substantial fraction of future stationary source projects that will be constructed to accommodate future statewide population and economic growth, while setting the emission threshold high enough to exclude small projects that will in aggregate contribute a relatively small fraction of the cumulative statewide GHG emissions. This assertion is based on the fact that [SCAQMD] staff estimates that these GHG emissions would account for slightly less than one percent of future 2050 statewide GHG emissions target (85 [$MMTCO2_e$/yr]). In addition, these small projects may be subject to future applicable GHG control regulations that would further reduce their overall future contribution to the statewide GHG inventory. Finally, these small sources are already subject to [Best Available Control Technology] (BACT) for criteria pollutants and are more likely to be single-permit facilities, so they are more likely to have few opportunities readily available to reduce GHG emissions from other parts of their facility."

Thus, based on guidance from the SCAQMD, if a residential project would emit GHGs less than 3,000 $MTCO2_e$ per year, the project is not considered a substantial GHG emitter and the GHG impact is less than significant, requiring no additional analysis and no mitigation. On the other hand, if a residential project would emit GHGs in excess of 3,000 $MTCO2_e$ per year, then the project could be considered a substantial GHG emitter, requiring additional analysis and potential mitigation.

CEQA Guidelines 15064.4 (b)(1) states that a lead agency may use a model or methodology to quantify *GHGs* associated with a project. On October 2, 2013, the SCAQMD in conjunction with CAPCOA released the latest version of the CalEEMod™ v2013.2.2. The purpose of this model is to more accurately calculate construction-source and operational-source criteria pollutants (NO_X, VOC, PM_{10}, $PM_{2.5}$, SO_X, and CO) and *GHGs* from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from mitigation measures. Accordingly, th*e latest version of* CalEEMod™ has been used for this Project to determine construction and operational air quality impacts.

Construction Emissions

Construction activities associated with the Project would result in emissions of CO2 and CH4. For construction phase Project emissions, GHGs are quantified and amortized over the life of the Project. To amortize the emissions over the life of the Project, the SCAQMD recommends calculating the total greenhouse gas emissions for the construction activities, dividing it by the 30-year Project life, and then adding that number to the annual operational phase GHG emissions. As such, construction emissions were amortized over a 30-year period and added to the annual operational GHG emissions.

Operational Emissions

Operational activities associated with the Project would result in emissions of CO2, CH4, and nitrogen dioxide (N20). Operational emissions would be expected from area source emissions, energy source emissions, mobile source emissions, solid waste, and water supply, treatment, and distribution. Refer to Response III.b., above, for defining area source emissions, energy source emissions, and mobile source emissions.

Solid Waste

Residential land uses would result in the generation and disposal of solid waste. A large percentage of this waste would be diverted from landfills by a variety of means, such as reducing the amount of waste generated, recycling, and/or composting. The remainder of the waste not diverted would be disposed of at a landfill. GHG emissions from landfills are associated with the anaerobic breakdown of material. GHG emissions associated with the disposal of solid waste associated with the Project were calculated by the CalEEMod™ model using default parameters.

Water Supply, Treatment and Distribution

Indirect GHG emissions result from the production of electricity used to convey, treat and distribute water and wastewater. The amount of electricity required to convey, treat and distribute water depends on the volume of water as well as the sources of the water. Unless otherwise noted, CalEEMod™ default parameters were used.

Emissions Summary

The annual GHG emissions associated with the operation of the Project are estimated to be 2,905.71 $MTCO2_e$ per year as summarized in **Table VII-1**, *Total Project Greenhouse Gas Emissions (Annual).* Direct and indirect operational emissions associated with the Project are compared with the SCAQMD threshold of significance for residential use projects, which is 3,000 $MTCO2_e$. As shown in Table VII-1, the Project would result in a less than significant impact with respect to GHG emissions.

TABLE VII-1
TOTAL PROJECT GREENHOUSE GAS EMISSIONS (ANNUAL)

Emission Source	Emissions (metric tons per year)			
	CO2	CH4	N2O	Total $CO2_e$
Annual construction-related emissions amortized over 30 years	40.79	4.06E-03	--	41.01
Area	46.51	3.81E-03	8.00E-04	46.84
Energy	589.38	2.00E-02	9.27E-03	592.75
Mobile Sources	2,197.25	0.07	--	2,063.59
Waste	43.11	2.55	--	96.62
Water Usage	53.76	0.39	9.70E-03	64.9
Total CO_2E (All Sources)	2,905.71			
SCAQMD Threshold	3,000			
Significant?	NO			

Note: Totals obtained from CalEEMod™ and may not total 100% due to rounding.
Table results include scientific notation. e is used to represent times ten raised to the power of (which would be written as x 10b") and is followed by the value of the exponent
a Includes emissions of landscape maintenance equipment and architectural coatings emissions
b Includes emissions of natural gas consumption
c Includes emissions of vehicle emissions and fugitive dust related to vehicular travel

SOURCE: CalEEMod™ model output, See Appendix 3.1 for detailed model outputs; Ironwood Residential (TTM No. 37001), Greenhouse Gas Analysis, City of Moreno Valley, prepared by Urban Crossroads, dated August 31, 2015.

b. Conflict with any applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Less Than Significant Impact. Although the City's General Plan does not identify specific GHG or climate change policies or goals, a number of measures identified in the General Plan's Air Quality Element act to reduce or control criteria pollutant emissions and peripherally reduce GHG emissions. The Project has been evaluated for consistency with the City's General Plan Air Quality Element as shown in **Table VII-2**, *City of Moreno Valley General Plan Consistency*. According to Table VII-2, the Project is consistent with the City's General Plan Air Quality Element.

TABLE VII-2
CITY OF MORENO VALLEY GENERAL PLAN CONSISTENCY

General Plan Objective/Policy	Consistency Analysis
Objective 6.6: Promote land use patterns that reduce daily automotive trips and reduce trip distance for work, shopping, school, and recreation.	**Consistent.** The Project site is developed approximately 0.50 miles north of a regional shopping center (Stoneridge Towne Center).
Objective 6.7: Reduce mobile and stationary source air pollutant emissions.	**Consistent.** The Project site is located proximate to existing and proposed major roadways, acting to generally reduce vehicle trip lengths, thereby reducing mobile source emissions.
Policy 6.7.5: Require grading activities to comply with South Coast Air Quality Management District's Rule 403 regarding the control of fugitive dust.	**Consistent.** The Project would be required to implement fugitive dust control measures consistent with SCAQMD Rule 403.

General Plan Objective/Policy	Consistency Analysis
Policy 6.7.6: Require building construction to comply with the energy conservation requirements of Title 24 of the California Administrative Code (California Code of Regulations).	**Consistent.** Pursuant to City and State Building Code requirements, the Project would meet or surpass applicable CCR Title 24 energy conservation requirements.

SOURCE: City of Moreno Valley General Plan, Safety Element; Ironwood Residential (TTM No. 37001), Greenhouse Gas Analysis, City of Moreno Valley, prepared by Urban Crossroads, dated August 31, 2015.

The City released an Energy Efficiency and Climate Action Strategy (CAS) and a Greenhous Gas Analysis for public review on May 8, 2012. The documents were approved on October 9, 2012. The CAS identifies ways that the City can reduce energy and water consumption and greenhouse gas emissions as an organization (its employees and the operation of its facilities) and outlines the actions that the City can encourage and community members can employ to reduce their own energy and water consumption and greenhouse gas emissions. The policies in the document are to reduce greenhouse gas emissions in 2010 by 15 percent by 2020. The Project has been evaluated for consistency with the City's Energy Efficiency and CAS as described in **Table VII-3**, *City of Moreno Valley Energy Efficiency and CAS Consistency.* According to Table VII-3, the Project is consistent with the applicable measures of the City's Energy Efficiency and CAS.

TABLE VII-3
CITY OF MORENO VALLEY ENERGY EFFICIENCY AND CAS CONSISTENCY

Energy Efficiency	Consistency Analysis
R2-T1: Land Use Based Trips and VMT Reduction Policies. Encourage the development of Transit Priority Projects along High Quality Transit Corridors identified in the SCAG Sustainable Communities Plan, to allow a reduction in vehicle miles traveled.	**Project Consistency:** Not applicable.
R2-T3: Employment-Based Trip Reductions. Require a Transportation Demand Management (TDM) program for new development to reduce automobile travel by encouraging ride-sharing, carpooling, and alternative modes of transportation.	**Project Consistency:** Not applicable.
R2-E1: New Construction Residential Energy Efficiency Requirements. Require energy efficient design for all new residential buildings to be 10 percent beyond the current Title 24 standards (Reach Code).	**Project Consistency:** Consistent. The Project would comply with this measure if adopted by the City.
R2-E2: New Construction Residential Renewable Energy. Facilitate the use of renewable energy (such as solar [photovoltaic] panels or small wind turbines) for new residential developments. Alternative approach would be the purchase of renewable energy resources off-site.	**Project Consistency:** Consistent. The Project would comply with this measure if adopted by the City.
R2-E5: New Construction Commercial Energy Efficiency Requirements. Require energy efficient design for all new commercial buildings to be 10 percent beyond the current Title 24 standards (Reach Code).	**Project Consistency**: Not applicable.
R3-E1: Energy Efficient Development, and Renewable Energy Deployment Facilitation and Streamlining. Updating of codes and zoning requirements and guidelines to further implement green building practices. This could include incentives for energy efficient projects.	**Project Consistency**: Not applicable.

Energy Efficiency	Consistency Analysis
R3-L2: Heat Island Plan. Develop measures that address "heat islands." Potential measures include using strategically placed shade trees, using paving materials with a Solar Reflective Index of at least 29, an open grid pavement system, or covered parking.	**Project Consistency:** Consistent. The Project would comply with the City of Moreno Valley's landscaping requirements.
R2-W1: Water Use Reduction Initiative. Consider adopting a per capita water use reduction goal, which mandates the reduction of water use of 20 percent per capita with requirements applicable to new development and with cooperative support of the water agencies.	**Project Consistency**: Consistent. California Green Building Standards Code, Chapter 5, Division 5.3, Section 5.3030.2 requires that indoor water use be reduced by 20 percent. The Project would be consistent with this measure.
R3-W1: Water Efficiency Training and Education. Work with EMWS and local water companies to implement a public information and education program that promotes water conservation.	**Project Consistency:** Not applicable.
R2-S1: City Diversion Program. For Solid Waste, consider a target of increasing the waste diverted from the landfill to a total of 75 percent by 2020.	**Project Consistency:** Consistent. The Project would comply with the City of Moreno Valley's citywide goal of solid waste reduction. Additionally, the Project would be compliant with the MVMC Section 8.80.030 by implementing a waste management plan.

SOURCE: Ironwood Residential (TTM No. 37001), Greenhouse Gas Analysis, City of Moreno Valley, prepared by Urban Crossroads, dated August 31, 2015.

Overall, as the Project is consistent with the City's General Plan Air Quality Element and the City's Energy Efficiency and CAS, the Project would not conflict with any applicable plan, policy, or regulation to reduce GHG emissions. As such, a less than significant impact would occur.

VIII. Hazards and Hazardous Materials

The following impact analysis pertaining to hazards and hazardous materials impacts is based on information contained in the Phase I Environmental Site Assessment Ironwood Avenue Property – 75.1-Acres Northwest of Ironwood Avenue and Oliver Street APN 473-160-004-5 City of Moreno Valley, Riverside County, California 92555 *(herein referred to as the "Phase I ESA"), prepared by EEI Geotechnical & Environmental Solutions, dated October 15, 2014. The Phase I ESA is provided in Appendix F.*

Would the Project:

a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less Than Significant Impact. Hazardous materials may be used during the construction phase of the Project. Hazardous materials that may be used include, but are not limited to, fuels (gasoline and diesel), paints and paint thinner, adhesives, surface coatings and possibly herbicides and pesticides. Generally, these materials would be used in concentrations that would not pose significant threats during the transport, use and storage of such materials. Furthermore, it is assumed that potentially hazardous materials would be contained, stored, and used in accordance with manufacturers' instructions and handled in compliance with applicable standards and regulations, including California Occupational Safety and Health Administration (OSHA) requirements, and Title 8 and Title 22 of the Code of California Regulations. Accordingly, risks associated with hazards to the public or environment posed by the transport, use or disposal of hazardous materials during construction are considered less than significant due to compliance with applicable and required standards and regulations.

Operation of the residential uses would involve the use and storage of small quantities of potentially hazardous materials in the form of cleaning solvents, painting supplies, pesticides for landscaping, and pool maintenance. These hazardous materials are regulated by stringent federal and State laws mandating the proper transport, use, and storage of hazardous materials in accordance with product labeling. The use and storage of these substances is not considered to present a health risk when used in accordance with manufacturer specifications and with compliance to applicable regulations.

Overall, based on the above, construction and operation of the Project would result in a less than significant impact with regard to routine transport, use, or disposal of hazardous materials relative to the safety of the public or the environment.

b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less Than Significant Impact. The main objective of the Phase I ESA was to identify the presence, or likely presence, use, or release of hazardous substances or petroleum products as defined in the American Testing and Materials Practice E 1527 as a "recognized environmental condition" (REC). RECs include property uses that may indicate the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. In order to identify RECs at the Project site, the Phase I included: (1) a review of readily available documents which included topographic, geologic, and hydrogeologic conditions associated with the Project site; (2) a review of readily available maps, aerial photographs and other documents relative to historical Project site usage and development; (3) a review of readily available federal, State, County, and City documents and database files concerning hazardous material storage, generation and disposal, active and inactive landfills, existing environmental concerns, and associated permits related to the Project site and/or immediately adjacent sites; (4) a site reconnaissance to ascertain current conditions of the Project site; interviews with persons(s) knowledgeable of the Project site; and (5) the preparation of the Phase I ESA which presents the findings, conclusions, and recommendations. The findings of the Phase I ESA are listed below.

According to the Phase I ESA and based on the historical use review, with the exception of several unimproved roadways, the Project site has been historically undeveloped. Residential and agricultural development likely began in the site vicinity during the 1930s. Sanborn Fire Insurance maps were not available for the Project site indicating little or no development on the Project site or vicinity occurred prior to 1950. The City's Building and Safety Department, County of Riverside Department of Environmental Health, the California Department of Toxic Substances Control (DTSC), and the State Water Resources Control Board (SWRCB) were contacted as well as State and federal databases reviewed to determine if the Project site, or any adjacent properties, were listed as hazardous waste generators, underground storage tank (UST) releases, or as having other environmental concerns (i.e., spill, leak, or aboveground storage tank [AST]). Neither the Project site nor adjacent properties were listed on any of the databases researched. As the Project site is currently undeveloped land, the presence of asbestos-containing materials or lead-based paint are not considered environmental concerns. On October 6, 2014, a site reconnaissance was conducted to physically observe the Project site and adjoining properties for conditions indicating a potential environmental concern. No evidence of an environmental concern was recorded during the site reconnaissance. A Vapor Encroachment Screen (VES) was performed on the Project site as part of the Phase I ESA. The purpose was to evaluate if the Project site or adjacent properties store of dispose potential chemicals of concern or has documented releases that may migrate as vapors onto the Project site, as a result of contaminated soil and/or groundwater which may be present on or near the site (i.e., a vapor encroachment condition [VEC]). Based on the VES, the Phase I ESA concluded that a VEC for the Project site could be ruled out as a VEC does not, or is not, likely to exist due to the lack of known or suspected contaminated properties within the area of concern. In summary, the Phase I ESA has revealed no evidence of RECs in connection with the Project site.

Overall, based on the above, the Project would result in a less than significant impact with regard to reasonably foreseeable upset and accident conditions involving the release of hazardous materials relative to the safety of the public or the environment into the environment.

c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Less Than Significant Impact. The Cloverdale Elementary School, located at 12050 Kitching Street, is located approximately 1.5 miles west of the Project site. The Palm Middle School, located at 11900 Swanson Avenue, is located approximately 1.25 miles west of the Project site. The Valley View High School, located at 13135 Nason Street, is located approximately 1.2 miles south of the Project site. As such, the Project site is not located within one-quarter mile of an existing or proposed school. Construction of the Project would involve the temporary use of hazardous substances in the form of paint, adhesives, surface coatings and other finishing materials, and cleaning agents, fuels, and oils. All materials would be used, stored, and disposed of in accordance with applicable laws and regulations and manufacturers' instructions.

Operation of the Project would not create a significant risk of exposure to hazardous materials for the public or the environment, including the schools. Occupancy of the residential uses would not cause hazardous substance emissions or generate hazardous waste. Types of hazardous materials to be used in association with the Project such as small quantities of potentially hazardous materials in the form of cleaning solvents, painting supplies, pesticides for landscaping, and pool maintenance would be contained, stored, and used in accordance with manufacturers' instructions and handled in compliance with applicable standards and regulations. Further, as discussed in Response VIII.b, the Phase I ESA has revealed no evidence of RECs in connection with the Project site. As such, the potential for creation of a significant hazard through handling or routine transport of hazardous materials or the release of hazardous materials into the environment within one-quarter mile of an existing or proposed school is considered less than significant.

d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Less Than Significant Impact. Government Code Section 65962.5, amended in 1992, requires the California Environmental Protection Agency (CalEPA) to develop and update annually the Cortese List, which is a list of hazardous waste sites and other contaminated sites. While Government Code Section 65962.5 makes reference to the preparation of a list, many changes have occurred related to web-based information access since 1992 and information regarding the Cortese List is now compiled on the websites of the DTSC, the State Water Board, and CalEPA. The DTSC maintains the EnviroStor database, which includes sites on the Cortese List and also identifies potentially hazardous sites where cleanup actions (such as a removal action) or extensive investigations are planned or have occurred. The database provides a listing of Federal Superfund sites [National Priorities List (NPL)]; State Response sites; Voluntary Cleanup sites; and School Cleanup sites. Geotracker is the State Water Resources Control Board's data management system for managing sites that impact groundwater, especially those that require groundwater cleanup [USTs, Department of Defense, Site Cleanup Program] as well as permitted facilities such as operating USTs and land disposal sites. CalEPA's database includes lists of sites with active Cease and Desist Orders (CDO) or Cleanup and Abatement Orders (CAO) from the State Water Board.

As part of the Phase I ESA, a search was conducted for available federal, State, and local environmental database records for the Project site and where practicable, adjoining properties and nearby properties or surrounding areas within approximate minimum search distances from the Project site. The site's property records were also reviewed by the City's Building and Safety Department, County of Riverside Department of Environmental Health, DTSC, and SWRCB. According to the Phase I ESA, the Project site was not listed on any of the databases reviewed as having an environmental concern. As such, a less than significant impact would occur in this regard.

e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?

f. For a project within the vicinity of a private airstrip, would the project result in a safety hazard for the people residing or working in the area?

No Impact (e and f). The Project site is not located within an airport land use plan or within two miles of a public or private airport. The nearest airport is the March Inland Port, a joint-use military and public airport, located approximately 5.15 miles southwest of the Project site. Therefore, the Project would not result in an airport-related safety hazard for people residing or working in the Project area, and no impact would occur in this regard.

g. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less Than Significant Impact. The Project site is located in an established rural area that is well served by the surrounding roadway network. While it is expected that the majority of construction activities for the Project would be confined on-site, construction activities may temporarily affect access on portions of adjacent streets during certain periods of the day. However, through-access for drivers, including emergency personnel, along all roads would still be provided. In these instances, the Project would implement traffic control measures (e.g., construction flagmen, signage, etc.) to maintain flow and access. Furthermore, in accordance with the City, the Project would develop a Construction Management Plan, which includes designation of a haul route, to ensure that adequate emergency access is maintained during construction. Therefore, construction is not expected to result in inadequate emergency access.

Project operation would generate traffic in the Project vicinity and would result in some modifications to access (i.e., street widening, new curb cuts for Project driveways) from the streets that surround the Project site. However, emergency access to the Project site and surrounding area would continue to be provided similar to existing conditions. Emergency vehicles and fire access would be provided from the primary driveway for the Project site located on Ironwood Avenue about mid-block between Nason Street and Oliver Street, immediately opposite from and north of Lantz Lane. Secondary site access would be provided by driveways on both Nason Street and Oliver Street just north of Ironwood Avenue. Future street widening, driveway, and building configurations would comply with applicable fire code requirements for emergency evacuation. Subject to review and approval of Project site access and circulation plans by the Moreno Valley Fire Department (MVFD), the Project would not impair implementation or physically interfere with adopted emergency response or emergency evacuation plans. Since the Project would not cause significant impediments along a designated emergency evacuation route, and the proposed residential uses would not impair implementation of the City's emergency response plan, the Project would have a less than significant impact with respect to these issues.

h. Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?

Less Than Significant Impact With Mitigation Incorporated. According to Figure 5.5-2, Floodplains and High Fire Hazard Areas, of the GP FEIR, the Project site is located in a very high fire hazard severity zone (VHFHSZ). Section XIV, *Public Services*, Response XIV.a, below, describes fire protection services and facilities that serve the Project site and evaluates the ability of the service providers to provide fire protection service to the Project site. The analysis below focuses on the potential for the Project to expose people and structures to wildland fire hazards. This impact is considered potentially significant given the site's designation and location adjacent to wildlands.

Development of the Project would require compliance with development designs, applicable provisions, and safety requirements of Title 8, Buildings and Construction, Chapter 8.36, International Fire Code (herein referred to as the "Fire Code").[13] Fuel modification zone areas are proposed on the north side of the Project site, which would be implemented pursuant to the Project-specific Fuel Modification Plan prepared for the Project in accordance with the *General Guidelines for Creating Defensible Space* prepared by the California Department of Forestry and Fire Protection (CDFFP).[14] The conceptual fuel modification zones for the Project are illustrated below in **Figure VIII-1**, *Preliminary Fuel* Modification *Plan*, which also specifies the applicable guidelines for vegetation removal, establishment of fire breaks, types of plantings, and the spacing, clearance, and maintenance of the fuel modification zones. In addition, it should be noted that the removal and/or preservation of plants and trees as part of the Project's Fuel Modification Plan would be subject to review and approval by the City's Fuel Management Officer and/or the Moreno Valley Fire Department (MVFD). Maintenance of the fuel modification zones pursuant to the approved Fuel Modification Plan would be the responsibility of the Ironwood Village HOA(s). The 20-foot-wide fire access road/multi-use trail that traverses along the northern edge of the developed portion of the Project would be incorporated into the final Fuel Modification Plan for the Project.

All landscaping within the Project would comply with the City's Landscape and Irrigation Standards Section 9.17.030 of the MVMC. Given implementation of an approved final Fuel Modification Plan, as required by MM HAZ-1 below, impacts related to wildland fire hazards would be reduced to less than significant.

Mitigation Measures

> **MM HAZ-1:** The Project applicant shall implement a Project-specific Fuel Modification Plan based on the *General Guidelines for Creating Defensible Space* prepared by the California Department of Forestry and Fire Protection (2006). The Fuel Modification Plan shall be subject to review and approval by the Moreno Valley Fire Department.

---

[13] Per Title 8, Buildings and Construction, Chapter 8.36, International Fire Code, Section 8.36.020, Adoption of the International Fire Code, the City adopted the 2012 Edition of the International Fire Code, California Fire Code 2013 Edition, California Code of Regulations Title 24, Part 9, Appendices Chapter 4, A, B, BB, C, CC, E, F, G, and H, the California Fire Code Standards and the body of code in its entirety, with the exception of Appendices D, I, and J of the California Fire Code as compiled and adopted by the International Code Council.

[14] State Board of Forestry and Fire Protection (BOF) California Department of Forestry and Fire Protection, "General Guidelines for Creating Defensible Space", Adopted by BOF on February 8, 2006, Approved by Office of Administrative Law on May 8, 2006.

This page intentionally blank.

FUEL TREATMENT GUIDELINES

THE FOLLOWING FUEL TREATMENT GUIDELINES COMPLY WITH THE REQUIREMENTS OF 14 CCR 1299 AND PRC 4291. ALL PERSONS USING THESE GUIDELINES TO COMPLY WITH CCR 1299 AND PRC 4291 SHALL IMPLEMENT GENERAL GUIDELINES 1., 2., 3., AND EITHER 4A OR 4B., AS DESCRIBED BELOW.

GENERAL GUIDELINES:

1. MAINTAIN A FIREBREAK BY REMOVING AND CLEARING AWAY ALL FLAMMABLE VEGETATION AND OTHER COMBUSTIBLE GROWTH WITHIN 30 FEET OF EACH BUILDING OR STRUCTURE, WITH CERTAIN EXCEPTIONS PURSUANT TO PRC §4291(A). SINGLE SPECIMENS OF TREES OR OTHER VEGETATION MAY BE RETAINED PROVIDED THEY ARE WELL-SPACED, WELL-PRUNED, AND CREATE A CONDITION THAT AVOIDS SPREAD OF FIRE TO OTHER VEGETATION OR TO A BUILDING OR STRUCTURE.
2. DEAD AND DYING WOODY SURFACE FUELS AND AERIAL FUELS WITHIN THE REDUCED FUEL ZONE SHALL BE REMOVED. LOOSE SURFACE LITTER, NORMALLY CONSISTING OF FALLEN LEAVES OR NEEDLES, TWIGS, BARK, CONES, AND SMALL BRANCHES, SHALL BE PERMITTED TO A DEPTH OF 3 INCHES. THIS GUIDELINE IS PRIMARILY INTENDED TO ELIMINATE TREES, BUSHES, SHRUBS AND SURFACE DEBRIS THAT ARE COMPLETELY DEAD OR WITH SUBSTANTIAL AMOUNTS OF DEAD BRANCHES OR LEAVES/NEEDLES THAT WOULD READILY BURN.
3. DOWN LOGS OR STUMPS ANYWHERE WITHIN 100 FEET FROM THE BUILDING OR STRUCTURE, WHEN EMBEDDED IN THE SOIL, MAY BE RETAINED WHEN ISOLATED FROM OTHER VEGETATION. OCCASIONAL (APPROXIMATELY ONE PER ACRE) STANDING DEAD TREES (SNAGS) THAT ARE WELL-SPACE FROM OTHER VEGETATION AND WHICH WILL NOT FALL ON BUILDINGS OR STRUCTURES OR ON ROADWAYS/DRIVEWAYS MAY BE RETAINED.
4. WITHIN THE REDUCED FUEL ZONE, ONE OF THE FOLLOWING FUEL TREATMENTS (4A. OR 4B.) SHALL BE IMPLEMENTED. PROPERTIES WITH GREATER FIRE HAZARDS WILL REQUIRE GREATER CLEARING TREATMENTS. COMBINATIONS OF THE METHODS MAY BE ACCEPTABLE UNDER §1299(C) AS LONG AS THE INTENT OF THESE GUIDELINES IS MET.

4A. REDUCED FUEL ZONE: FUEL SEPARATION

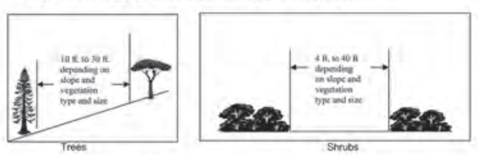
IN CONJUNCTION WITH GENERAL GUIDELINES 1., 2., AND 3., ABOVE, MINIMUM CLEARANCE BETWEEN FUELS SURROUNDING EACH BUILDING OR STRUCTURE WILL RANGE FROM 4 FEET TO 40 FEET IN ALL DIRECTIONS, BOTH HORIZONTALLY AND VERTICALLY.

CLEARANCE DISTANCES BETWEEN VEGETATION WILL DEPEND ON THE SLOPE, VEGETATION SIZE, VEGETATION TYPE (BRUSH, GRASS, TREES), AND OTHER FUEL CHARACTERISTICS (FUEL COMPACTION, CHEMICAL CONTENT ETC.). PROPERTIES WITH GREATER FIRE HAZARDS WILL REQUIRE GREATER SEPARATION BETWEEN FUELS. FOR EXAMPLE, PROPERTIES ON STEEP SLOPES HAVING LARGE SIZED VEGETATION WILL REQUIRE GREATER SPACING BETWEEN INDIVIDUAL TREES AND BUSHES (SEE PLANT SPACING GUIDELINES AND CASE EXAMPLES BELOW). GROUPS OF VEGETATION (NUMEROUS PLANTS GROWING TOGETHER LESS THAN 10 FEET IN TOTAL FOLIAGE WIDTH) MAY BE TREATED AS A SINGLE PLANT. FOR EXAMPLE, THREE INDIVIDUAL MANZANITA PLANTS GROWING TOGETHER WITH A TOTAL FOLIAGE WIDTH OF EIGHT FEET CAN BE "GROUPED" AND CONSIDERED AS ONE PLANT AND SPACED ACCORDING TO THE PLANT SPACING GUIDELINES IN THIS DOCUMENT.

GRASS GENERALLY SHOULD NOT EXCEED 4 INCHES IN HEIGHT. HOWEVER, HOMEOWNERS MAY KEEP GRASS AND OTHER FORBS LESS THAN 18 INCHES IN HEIGHT ABOVE THE GROUND WHEN THESE GRASSES ARE ISOLATED FROM OTHER FUELS OR WHERE NECESSARY TO STABILIZE THE SOIL AND PREVENT EROSION.

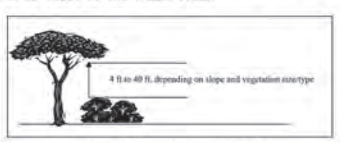
CLEARANCE REQUIREMENTS INCLUDE:

- HORIZONTAL CLEARANCE BETWEEN AERIAL FUELS, SUCH AS THE OUTSIDE EDGE OF THE TREE CROWNS OR HIGH BRUSH. HORIZONTAL CLEARANCE HELPS STOP THE SPREAD OF FIRE FROM ONE FUEL TO THE NEXT.



Horizontal clearance between aerial fuels

- VERTICAL CLEARANCE BETWEEN LOWER LIMBS OF AERIAL FUELS AND THE NEAREST SURFACE FUELS AND GRASS/WEEDS. VERTICAL CLEARANCE REMOVES LADDER FUELS AND HELPS PREVENT A FIRE FROM MOVING FROM THE SHORTER FUELS TO THE TALLER FUELS.



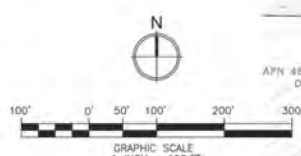
Vertical clearance between aerial fuels

Plant Spacing Guidelines

Guidelines are designed to break the continuity of fuels and be used as a "rule of thumb" for achieving compliance with Regulation 14 CCR 1299.

Trees	**Minimum horizontal space from edge of one tree canopy to the edge of the next**	
	Slope	Spacing
	0% to 20 %	10 feet
	20% to 40%	20 feet
	Greater than 40%	30 feet
Shrubs	**Minimum horizontal space between edges of shrub**	
	Slope	Spacing
	0% to 20 %	2 times the height of the shrub
	20% to 40%	4 times the height of the shrub
	Greater than 40%	6 times the height of the shrub
Vertical Space	**Minimum vertical space between top of shrub and bottom of lower tree branches:** 3 times the height of the shrub	

Adapted from: Gilmer, M. 1994. California Wildfire Landscaping



4B. REDUCED FUEL ZONE: DEFENSIBLE SPACE WITH CONTINUOUS TREE CANOPY TO ACHIEVE DEFENSIBLE SPACE WHILE RETAINING A STAND OF LARGER TREES WITH CONTINUOUS TREE CANOPY APPLY THE FOLLOWING TREATMENTS:

GENERALLY, REMOVE ALL SURFACE FUELS GREATER THAN 4 INCHES IN HEIGHT. SINGLE SPECIMENS OF TREES OR OTHER VEGETATION MAY BE RETAINED PROVIDED THEY ARE WELL-SPACED, WELL-PRUNED, AND CREATE A CONDITION THAT AVOIDS SPREAD OF FIRE TO OTHER VEGETATION OR TO A BUILDING OR STRUCTURE.

REMOVE LOWER LIMBS OF TREES ("PRUNE") TO AT LEAST 6 FEET UP TO 15 FEET (OR THE LOWER 1/3 BRANCHES FOR SMALL TREES). PROPERTIES WITH GREATER FIRE HAZARDS, SUCH AS STEEPER SLOPES OR MORE SEVERE FIRE DANGER, WILL REQUIRE PRUNING HEIGHTS IN THE UPPER END OF THIS RANGE.

IX. Hydrology and Water Quality

The following impact analysis pertaining to hydrology and water quality is based on information contained in the Preliminary Hydrology and Hydraulic Study for Tentative Tract Map 37001 Ironwood *(herein referred to as the "Preliminary Hydrology Study"), prepared by JLC Engineering & Consulting, Inc., dated June 17, 2016 and the* Project Specific Water Quality Management Plan *(herein referred to as the "WQMP"), prepared by JLC Engineering & Consulting, Inc., dated September 29, 2015. The Preliminary Hydrology Study and WQMP are provided in Appendix G of this Initial Study.*

Preliminary Hydrology Study Summary

The purpose of the Preliminary Hydrology Study was to determine the preliminary drainage improvements required to provide flood protection to the on-site area from the flows emanating from the on-site and off-site areas that drain into or across the Project site. Additionally, the study determined the preliminary drainage improvements required to convey the on-site flows to the two proposed on-site stormwater detention basins. The scope of the study includes the following: (1) determine the peak 100-year and 10-year flow rates for the existing condition watershed using the Riverside County Flood Control and Water Conservation District (RCFC & WCD) Rational Method; (2) determine the 100-year and 10-year flow rates for the post-Project condition on-site and off-site areas using the RCFC & WCD Rational Method; (3) determine the 2-year, 24-hour storm duration peak flow rates for the pre-Project and post-Project areas tributary to each basin using the RCFC & WCD Unit Hydrograph Method; (4) determine the 100-year, 1-hour peak flow rate for the on-site and off-site areas tributary to the basins using the RCFC & WCD Unit Hydrograph Method; (5) determine the existing condition flow rates tributary to the existing culverts, and perform a Hydrologic Engineering Center's River Analysis System ("HEC-RAS") analysis for the existing conditions regarding flooding; (6) determine the post-Project condition flow rates tributary to the existing culverts and streams based upon the proposed basin mitigation, and perform HEC-RAS analyses for the post-Project condition; (7) develop preliminary storm drain alignments and sizes required to flood protect the Project site from off-site and on-site flows; and (8) determine the required water quality volume to be treated and the required storage volume of the basins to address the hydrologic conditions of concern ("HCOCs") addressed in the Project WQMP.

Project Site Stormwater Drainage Overview

The Project proposes to collect all on-site and off-site stormwater flows via a subsurface storm drain system. A portion of the northerly Project boundary would enter the off-site storm drain system for the peak 100-year flow rate only. Low-flow pipes would be provided to divert the flow up to the 2-year, 24-hour flow rate into the basin prior to comingling with off-site flows for water quality treatment and mitigation of the HCOCs. The majority of the off-site flows would be conveyed to one of the two downstream culverts located at Ironwood Avenue. Flow-by structures would be utilized within the basins that allow for a certain flow rate to bypass downstream to the existing culvert crossing Ironwood Avenue, and the remaining flow to overtop into the basins for retention. This would ensure that the Project does not adversely impact downstream existing properties and streams. Analyses have been performed to demonstrate that flows leaving the Project site would not increase relative to existing conditions, and would actually decrease in the post-Project condition. Detailed basin routing analyses would be performed during final engineering.

The majority of the flows westerly off-site area would be conveyed directly to an existing culvert without passing through one of the basins. The flows in excess of the existing downstream culvert capacity would be collected within a storm drain system along Nason Street, which would allow flows to bubble out into Nason Street south of Ironwood Avenue.

The Project site is tributary to three existing culverts crossing Ironwood Avenue. Per a meeting with the City of Moreno Valley, the Project must mitigate the peak 100-year flow rates tributary to these three existing culverts to a maximum flow rate equal to the existing capacity of these culverts. Therefore, the basins would also serve to mitigate the 100-year storm event so that the existing culvert capacities are not exceeded.

Hydrology Analysis

Pre-Project Hydrology

The pre-Project condition rational method analysis has been included in Appendix A of the Preliminary Hydrology Study, and the pre-Project condition rational method hydrology map has been included as **Figure IX-1**, *Existing Hydrology Map*, below. The off-site areas were analyzed for the existing land use as undeveloped, poor cover, as recommended by the Riverside County Hydrology Manual.

The existing watershed areas were designated as Areas A, B, C, and D, as shown below in Figure IX-1. Area “A” is tributary to the existing 42-inch culvert westerly along Ironwood Avenue (Culvert A1), Area “B” is tributary to the existing 42-inch culvert midway between Nason Street and Oliver Street along Ironwood Avenue (Culvert B1), and Area C is tributary to the easterly 24-inch culvert along Ironwood Avenue (Culvert C1, see Figure IX-1 below for existing culvert locations). Downstream of Ironwood Avenue, Areas A, B, and C confluence within the natural channel. Area D consists of the most easterly area within the watershed boundary, and is tributary to an existing culvert east of Oliver Street.

Ironwood Village Project

Figure IX-1
Existing Hydrology Map

ESA PCR

Post-Project Hydrology

The rational method hydrology calculations for the post-Project condition have been included in Appendix B of the Preliminary Hydrology Study, and the post-Project condition hydrology maps have been included as **Figure IX-2**, *Proposed On-Site Hydrology Map*, and **Figure IX-3**, *Proposed Off-Site Hydrology Map*. The post-Project condition on-site and off-site rational method hydrology analyses were performed for five watershed areas designated as Areas A, B, C, D and E. As shown in Figures IX-2 and IX-3, Area A is the area tributary to Basin A1 and A2, Area B is tributary to Basin B, Areas C and D are tributary to the west side of Oliver Street, and Area E is tributary to the intersection of Nason Street and Ironwood Avenue.

The unit hydrograph calculations analyzed five different areas (as shown on Exhibit C and Exhibit D of the Preliminary Hydrology Study):

- Off-site Area "A" – Off-site Area A (30.79 acres) is the area tributary to the flow-by structure located within Basin A1, and discharges into Culvert B1. Off-site Area A was analyzed for the 100-year storm events only.

- Off-site Area "B" – Off-site Area B (73.03 acres) is tributary to the flow-by structure located in Basin A2, and discharges into Culvert B1. Off-site Area B was analyzed for the 100-year storm events only.

- On-site Area "A1" – On-site Area A1 (17.86 acres for the 100-year storm event and 25.15 acres for the Water Quality Area and 2-year, 24-hour storm event) is tributary to Basin A1. The areas differ between the 100-year and 2-year storm events due to the low-flow storm drain systems incorporated at Node 118 and node 121. These systems would be designed to by-pass the low-flows up to the 2-year, 24-hour storm duration so that the flows would not enter the off-site storm drain system, and rather be collected by the on-site systems that discharge the entire flow rate directly into Basin A. This would ensure that the entire on-site area is treated for water quality purposes and mitigated for the HCOCs.

- On-site Area "A2" - On-site Area A2 (23.24 acres for the 100-year storm event and 29.70 acres for the Water Quality Area and 2-year, 24-hour storm event) is tributary to Basin A2. The areas differ between the 100-year and 2-year storm events due to the low-flow storm drain systems incorporated at Node 145 and node 148 (see Figure IX-1). These systems would be designed to by-pass the low-flows up to the 2-year, 24-hour storm duration so that the flows would not enter the off-site storm drain system, and rather be collected by the on-site systems that discharge the entire flow rate directly into Basin A2. This would ensure that the entire on-site area is treated for water quality purposes and mitigated for the HCOCs.

- On-site Area "B" – On-site Area B is the area tributary to Basin B (15.65 acres), and includes the total rational method Area B watershed. This area was used for the water quality analysis for Basin B and for the 2-year, 24-hour unit hydrograph analysis for Basin B. The area for the water quality, 2-year, 24-hour unit hydrograph and the 100-year unit hydrograph are the same.

The unit hydrograph hydrology maps for the 100-year storm events and the 2-year, 24-hour storm duration have been included as Exhibits C and D, respectively, of the Preliminary Hydrology Study. The 100-year unit hydrograph calculations have been included in Appendix D of the

Preliminary Hydrology Study, while the pre-Project and post-Project 2-year, 24-hour unit hydrograph calculations have been included in Appendix C of the Preliminary Hydrology Study.

HEC-RAS Analyses

HEC-RAS analyses were performed for the existing condition flow rates and the post-Project condition flow rates to determine the flooding limits for both conditions. Two streams were identified in the HEC-RAS analysis, which are depicted in Exhibits K and L in the Preliminary Hydrology Study, and have been designated as the Main Channel and the Westerly Channel. The Main Channel collects flows from Culverts B1 and C1, and the Westerly Channel collects flows from A1.

Existing Condition Results

The existing condition HEC-RAS modeled the streams to four sections upstream of Ironwood Avenue to a point where flows enter a culvert at Darlene Drive. The flows were then modeled through the culverts traversing Ironwood Avenue. Based upon the HEC-RAS results, the flows would overtop the roadway at Culvert B1 (with 111.1 cubic feet per second [cfs] overtopping the roadway and the remaining 131.3 cfs passing through Culvert B1).

The flows would also overtop the roadway at the culvert crossing Walfred Way (with 149.5 cfs overtopping the roadway and the remaining 167.9 cfs passing through the culvert). Therefore the capacity for Culvert B1 is 131.3 cfs, and would be utilized as the maximum allowable flow rate that can be discharged from the Project site into Culvert B1.

The culvert crossing Lantz Lane does not have capacity to convey the tributary flow of 87.2 cfs. Based upon iterations with the HEC-RAS analyses, a total of 46.0 cfs can be conveyed through the culvert, and 41.2 cfs overtops Lantz Lane and is conveyed southerly within Lantz Lane.

The existing condition HEC-RAS flood plain has been delineated on Exhibit K of the Preliminary Hydrology Study, and the existing condition HEC-RAS calculations has been included in Appendix H of the study.

Post-Project Condition Results

The post-Project condition HEC-RAS modeled the streams from Ironwood Avenue to a point where flows enter a culvert at Darlene Drive. The starting flow rates for the post-Project condition are equal to the flows discharging from Culverts A1 and B1. A detailed discussion for the post-Project flow rates used in the HEC-RAS analyses has been provided in Section VI of the Preliminary Hydrology Study.

Based upon the HEC-RAS results, the flows at Walfred Lane would overtop the roadway, with 1.1 cfs overtopping the roadway and the remaining 150.5 cfs passing through the culvert.

The HEC-RAS results indicate that flows would break out at the culvert crossing Lantz Lane, as also determined in the existing condition HEC-RAS. The flow rate was decreased from 87.2 cfs until the flows no longer overtopped the roadway. The flow rate that would be conveyed through the culvert and not overtop the roadway is 46.0 cfs, and the remaining 41.2 cfs would be conveyed southerly down Lantz Lane.

The HEC-RAS calculations have been included in Appendix H of the Preliminary Hydrology Study and the flood plain delineation has been shown on Exhibit L of the report.

Existing Flooding Analysis

An existing condition rational method hydrology was performed for the area tributary to the natural streams upstream and downstream of Ironwood Avenue. Currently, as shown in Figure IX-1 above, there are three culverts crossing Ironwood Avenue, designated as Culvert A1 (the westerly 42-inch CMP Culvert), Culvert B1 (the easterly 42-inch CMP Culver) and Culvert C1 (the easterly 24-inch CMP Culvert). **Figure IX-4**, *Flow Rate Analyses*, below, summarizes the flow rate analyses, and the following paragraphs provide detailed descriptions of the analyses.

Point 1 is located at the intersection of Ironwood Avenue and Nason Street. The existing condition flow rate is 89.7 cfs per the existing condition rational method calculations at node 104 to 108 (see Figure IX-1 above). Capacity calculations were performed for the north and south sides of Ironwood Avenue to determine the amount of flow that would be conveyed to the east within Ironwood Avenue. The north side of Ironwood Avenue would discharge into the natural stream tributary to Culvert A1, and has a capacity of 33.6 cfs. The south side of Ironwood Avenue would discharge at the low-point on the south side of Culvert B1, and has a capacity of 21.6 cfs. The remaining 34.5 cfs, which overtops the Ironwood Avenue Centerline, would be conveyed in a southerly direction along Nason Street.

Point 2 is the upstream end of Culvert A1, and has a flow rate of 75.8 cfs. This flow rate was determined by taking the existing condition flow rate from the rational method calculations at nodes 107 to 108 of 42.2 cfs, and adding the 33.6 cfs from the north side of Ironwood Avenue. This flow rate would be conveyed to the south side of Ironwood, as the capacity of Culvert A1 based upon the nomographs is 78.0 cfs.

Point 3 is located downstream of Culvert A1, and has a flow rate equal to the existing condition flow rate at nodes 109-215 of 142.1 cfs, minus the 21.6 cfs conveyed easterly in the southerly half of Ironwood Avenue to the low-point on Ironwood Avenue and minus the 33.4 cfs splitting to the south along Nason Street, for a total flow rate within this channel of 87.2 cfs.

Point 4 is located downstream of the culvert crossing Lantz Lane. Based upon iterations with the HEC-RAS model, a total of 46.0 cfs can be conveyed through the culvert, and the remaining 41.2 cfs would overtop and split to the south along Lantz Lane.

Point 5 is the upstream point of Cuvert B1 which has a tributary flow rate of 241.6 cfs per the existing condition rational method calculations at Node 212 (see Figure IX-1). However, Culvert B1 has a capacity of 131.3 cfs per the HEC-RAS calculations, therefore the remaining flows would overtop the roadway. Since Ironwood Avenue is a low point at the Culvert B1 crossing, all flows overtopping Ironwood Avenue would enter the stream downstream of Culvert B1.

Point 6 is the upstream point of Culvert C1, which has an existing condition flow rate of 39.2 cfs at node 303. The capacity of Culvert C1 based upon the nomograph is 40.0 cfs, therefore all 39.2 cfs would be conveyed through the culvert. Both Culverts B1 and C1 are tributary to Point 7.

The flow rate at **Point 7**, which is the location upstream of the culvert crossing Walfred Way, was determined by taking the flow rate from the existing condition rational method calculations at node 214 of 295.8 cfs (which is the confluence point for Culvert B1 and C1 flows), and adding the flows from the south side of Ironwood Avenue of 21.6 cfs, resulting in a total tributary flow rate of 317.4 cfs.

This flow rate is conveyed to **Point 8**, which is downstream of the culvert crossing Walfred Way. Based upon the HEC-RAS analyses, the flows at this culvert would overtop the roadway, however, the roadway incorporates a low point at this location, and therefore all flows would continue to the south side of the culvert crossing.

Point 9 is the location where Point 4 and Point 8 flows confluence. The flow rate at this location was determined by taking the existing condition flow rate at node 216 of 489.0 cfs, and subtracting the 33.4 cfs that splits southerly along Nason Avenue and the 41.2 cfs that splits southerly along Lantz Lane, resulting in a total flow rate of 414.5 cfs at Point 9.

These flow rates were utilized in the HEC-RAS analyses for the existing condition, which is discussed in the HEC-RAS section below. The normal depth calculations for the street capacities of Ironwood Avenue have been included in Appendix I of the Preliminary Hydrology Study.

Post-Project Condition Flow Rate and Mitigation Analyses

Since the post-Project condition would implement basins and flow-by structures to mitigate runoff, unit hydrograph calculations were required in order to appropriately size the basins. The rational method calculations are utilized for the sizing of storm drain and for the HEC-RAS flood plain analyses.

Based upon the HEC-RAS analyses for the existing condition, the post-Project condition sends 75.8 cfs through Culvert A1, which is the existing condition flow rate for Culvert A1 and Culvert B1 can convey a total of 131.3 cfs. These flow rates are based upon the rational method hydrology analyses. In order to determine the rational method flow rate for each storm drain discharging from the splitter structure, the ratio of the two peak flow rates to each basin was determined. The 67.5 cfs tributary to the splitter structure within Basin A1 is 31.4% of the total flow rate tributary to Culvert B1 (67.5 cfs ÷ 215.3 cfs). The Basin A2 splitter structure has 68.6% of the total tributary flow rate. Therefore, each basin would contribute this percentage of the allowable flow rate. Basin A1 would discharge 31.4% of the allowable flow rate tributary to Culvert B1 and Basin A2 would discharge 68.6% of the allowable flow rate tributary to Culvert B1, resulting in 41.2 cfs for Basin A1 and 90.1 cfs for Basin A2.

Off-site Area E has a total flow rate at node 505 of 91.5 cfs in the post-Project condition. Since Culvert A1 has an existing condition flow rate of 75.8 cfs, a structure would be designed at Node 505 such that 75.8 cfs would enter the storm drain system and the remaining 15.7 cfs would overtop to inlets provided at the intersection of Nason Street and Ironwood Avenue.

Ironwood Village Project

Figure IX-4

Flow Rate Analyses

ESA PCR

Culvert B1 (Basins A2 an A1) has a total 100-year rational method tributary flow rate of 67.5 cfs from Off-site Area A at node 122 and 147.8 cfs from Off-site Area B at node 149, for a total tributary flow rate of 215.3 cfs, which is greater than the 131.3 cfs allowable for Culvert B1. Therefore, two flow-by structures would be required within Basins A1 and A2 to allow a limited amount of flow to bypass, and the remaining flow and volume to overtop into the basins. To determine the volume required to be stored in order to mitigate the flows, unit hydrograph calculations were required. In order to more appropriately compare the unit hydrograph flow rates and the rational method flow rates for the area, the ratio of the allowable rational method flow rate out (131.3 cfs) compared to the inflow rational method flow rate (215.3 cfs) was determined, and is equal to 61.0%. This percentage was multiplied by the peak unit hydrograph flow rates for the 100-year, 1-hour storm duration to determine the equivalent allowable flow rate to by-pass for the unit hydrograph calculations. The 100-year, 1-hour unit hydrograph for off-site area A resulted in a peak flow rate of 74.7 cfs and off-site area B resulted in a peak flow rate of 159.9 cfs. Taking 61.0% of these flows results in 45.6 cfs allowable to discharge from Basin A1, and 97.5 cfs to discharge from Basin A2. When comparing these allowable flow rates to the different durations for the 100-year storm event, the 1-hour storm duration for Basin A1 and the 1-hour and 3-hour durations for Basin A2 would require storage within Basins.

In order to determine the volume required to be stored for the applicable durations, corresponding flow rates were found within the unit hydrograph calculations on the rising and recess limbs of the hydrograph. The corresponding volumes for these flow rates were subtracted to obtain the volume that must overtop the splitter structure and be stored within the basin. The following tables summarizes the results:

Basin A1 – Area A1 Off-site Unit Hydrograph

100-Year, 1-hour Flow Rate	Maximum Allowable Flow Rate	Corresponding Flow Rates on limbs of hydrograph	Corresponding Volumes	Volume Required to Be Retained
74.7 cfs	45.6 cfs	31.08 cfs	1.0008 ac-ft	1.3661 ac-ft
		27.49 cfs	2.3669 ac-ft	

Basin A2 – Area A2 Off-site Unit Hydrograph

100-Year, 1-hour Flow Rate	Maximum Allowable Flow Rate	Corresponding Flow Rates on limbs of hydrograph	Corresponding Volumes	Volume Required to Be Retained
159.9 cfs	97.5 cfs	66.16 cfs	2.0783 ac-ft	3.1096 ac-ft
		69.92 cfs	5.1879 ac-ft	

100-Year, 3-hour Flow Rate	Maximum Allowable Flow Rate	Corresponding Flow Rates on limbs of hydrograph	Corresponding Volumes	Volume Required to Be Retained
98.6 cfs	97.5 cfs	89.63 cfs	5.3343 ac-ft	1.2671 ac-ft
		85.37 cfs	6.6014 ac-ft	

These additional volumes would be stored within the basin. A discussion and summary Table of the basin volumes and outflows has been provided in the following paragraphs.

Basin A1 (Unit Hydrograph Summary)

	100-Year Storm Events			
	1-Hour	3-Hour	6-Hour	24-Hour
On-site Flow Rate	41.6 cfs	25.5 cfs	21.8 cfs	8.1 cfs
Off-site Flow Rate	74.7 cfs	44.0 cfs	34.4 cfs	16.2 cfs
Allowable Off-site Flow-By	45.6 cfs	45.6 cfs	45.6 cfs	45.6 cfs
On-site Volume Generated	1.3901 ac-ft	1.8294 ac-ft	2.2213 ac-ft	3.9417 ac-ft
Off-site Volume Generated	2.6284 ac-ft	3.5390 ac-ft	3.828 ac-ft	6.3263 ac-ft
Basin Storage Volume	3.0960 ac-ft	3.0960 ac-ft	3.0960 ac-ft	3.0960 ac-ft
On-site Volume Retained [1]	1.3901 ac-ft	1.8294 ac-ft	2.2213 ac-ft	3.0960 ac-ft
Off-site Volume Retained [2]	1.3661 ac-ft	0 ac-ft	0 ac-ft	0 ac-ft
Total Volume Retained	2.7892 ac-ft	1.8294 ac-ft	2.2213 ac-ft	3.0960 ac-ft
Maximum Basin Outflow [3]	45.6 cfs	44.0 cfs	34.4 cfs	21.7 cfs

Notes:

1 – The onsite volume retained equals the total onsite volume generated, with the exception of the 24-hour storm duration. This duration resulted in a larger volume than available to store within the basin, therefore a corresponding flow rate was calculated on the recess limb of the hydrograph where the calculations reached 3.0960 ac-ft of volume generated, equaling 5.53 cfs of outflow.
2 – The offsite Volume retained for the basin was determined in the previous summary tables by taking the delta volume difference between the rising a recess limbs of the hydrograph where approximately 45.6 cfs occurs. The 3-hour, 6-hour and 24-hour durations have peak flows less than the 45.6 cfs allowable, therefore the entire flow rates for these durations will flow-by.
3 – The maximum basin outflow equals the maximum flow-by for the 1-hour storm duration, the peak flow rate for the offsite 3-hour and 6-hour storm duration, and the peak offsite flow rate plus the Basin A1 onsite outflow of 5.5 cfs, which is discussed in detail in the following paragraphs.

Since the on-site 24-hour storm duration volume generates more volume than the proposed basin can store, the corresponding flow rate that would discharge from the basin had to be determined. The basin storage volume is 3.096 ac-ft. The On-site Area A1 unit hydrograph calculations for the 100-year, 24-hour storm duration have a flow rate of 5.5 cfs at a volume of 3.0646 ac-ft, which is the closest volume to the basin volume without going over. Therefore this is the maximum flow rate that would discharge from the basin for the 100-year, 24-hour storm duration from the on-site area is 5.5 cfs. Adding this to the flow-by for the 100-year, 24-hour storm duration for the off-site area of 16.2 cfs results in a total outflow for the 24-hour storm duration of 21.7 cfs.

Basin A2 and Basin B (Unit Hydrograph Summary)

	100-Year Storm Events			
	1-Hour	3-Hour	6-Hour	24-Hour
On-site Flow Rate [4]	96.7 cfs	56.5 cfs	48.4 cfs	17.7 cfs
Off-site Flow Rate	159.9 cfs	98.6 cfs	82.6 cfs	36.0 cfs
Allowable Off-site Flow-By	97.5 cfs	97.5 cfs	97.5 cfs	97.5 cfs

	100-Year Storm Events			
	1-Hour	3-Hour	6-Hour	24-Hour
On-site Volume Generated [4]	3.0274 ac-ft	3.9614 ac-ft	4.7718 ac-ft	8.4048 ac-ft
Off-site Volume Generated	6.0253 ac-ft	7.7868 ac-ft	8.0310 ac-ft	12.9052 ac-ft
Basin Storage Volume	7.9900 ac-ft	7.9900 ac-ft	7.9900 ac-ft`	7.9900 ac-ft
On-site Volume Retained [1]	3.0274 ac-ft	3.9614 ac-ft	4.7718 ac-ft	7.9900 ac-ft
Off-site Volume Retained [2]	3.1096 ac-ft	1.2671 ac-ft	0 ac-ft	0 ac-ft
Total Volume Retained	6.1370 ac-ft	5.2285 ac-ft	4.7718 ac-ft	7.9900 ac-ft
Maximum Basin Outflow [3]	97.5 cfs	97.5 cfs	82.6 cfs	38.9 cfs

Notes:

1 – The onsite volume retained equals the total onsite volume generated, with the exception of the 24-hour storm duration. This duration resulted in a larger volume than available to store within the basin, therefore a corresponding flow rate was calculated on the recess limb of the hydrograph where the calculations reached 7.9900 ac-ft of volume generated, equaling 2.9 cfs of outflow. A detailed discussion on this is provided in the following paragraphs.
2 – The offsite volume retained for the basin was determined in the previous summary tables by taking the delta volume difference between the rising and recess limbs of the hydrograph where approximately 97.5 cfs occurs. The 6-hour and 24-hour durations have peak flows less than the 97.5 cfs allowable, therefore the entire flow rates for these durations will flow-by.
3 – The maximum basin outflow equals the maximum flow-by for the 1-hour and 3-hour storm durations, the peak flow rate for the 6-hour storm duration, and the peak offsite flow rate plus the Basin A2 and Basin B onsite outflow of 2.9 cfs, which is discussed in detail in the following paragraphs.
4 – The onsite flow rate and volume is equal to the summation of On-site Area A1 and On-site Area B flow rates and volumes.

Since the on-site 24-hour storm duration volume generates more volume than the proposed basin can store, the corresponding flow rate that would discharge from the basin had to be determined. The basin storage volume is 7.9900 ac-ft, and the summation of the volumes generated from both on-site Area A2 and B is 8.4048 ac-ft, resulting in a net excess volume of 0.4148 cfs. Since this basin has two tributary unit hydrographs that would equalize, this value was divided by two (equaling 0.2074 ac-ft) and subtracted from each on-site 100-year, 24-hour storm duration unit hydrograph total generated volume, which was 4.8091 ac-ft for Basin A2 and 3.1809 ac-ft for Basin B. The corresponding flow rates at these volumes for each hydrograph was utilized as the peak flow rate for the on-site areas that would leave the basins, 0.8 cfs and 2.1 cfs, respectively, totaling 2.9 cfs that would discharge into Culvert B1 from the on-site areas. Adding this to the 100-year, 24-hour peak flow rate for the off-site area results in a total flow rate of 38.9 cfs discharging into Culvert B1 for the 100-year, 24-hour storm duration.

At Point 1, the post-Project condition flow rate is 91.5 cfs per the post-Project rational method hydrology calculations at node 509 (see Exhibit B). A pipe and inlet would be designed to intercept 75.8 cfs of this flow rate, and discharge into Culvert A1. This would ensure that flows discharging from Culvert A1 would not exceed the pre-Project flow rates in the post-Project condition. The remaining 15.7 cfs would be intercepted on the north side and south sides of Ironwood Avenue on Nason Street, in addition to 1.6 cfs that is generated from Area E5. A special system would be constructed so that the flows intercepted by these catch basins would be allowed to bubble out of a parkway drain within Nason Street south of Ironwood Avenue.

There would be no flows at Point 2 entering the culvert system, since the maximum allowable flow for Culvert A1 would be collected at Nason Street and Ironwood Avenue via the proposed storm drain connecting to Culvert A1. Points 3 and 4 would have the same flow rates in the post-Project condition since the same flow rate would be discharging from Culvert A1.

Point 5 would collect the off-site flows from Area A and B. Area A has a 100-year, 1-hour flow rate of 41.2 cfs leaving the splitter structure within Basin A1, and Area B has a 100-year, 1-hour flow rate of 90.1 cfs leaving the splitter structure within Basin A2, which is a total of 131.3 cfs. It should be noted that the storm drain system collecting the flows from Off-site Area A also collects a portion of the on-site areas 100-year flow rate. The storm drain would convey the flows to a structure at Basin A1 in which 41.2 cfs would bypass to Culvert B1, and the remaining 100-year flows would overtop into Basin A1. It should also be noted that during the preliminary stages, no flows would be sent to Culvert C1. Should this culvert be required during final engineering, no more than 39.2 cfs would be tributary to this culvert, which is the existing condition tributary flow rate.

By sending a total flow rate of 75.8 cfs to Culvert A1, 131.3 cfs to Culvert B1, and nothing to Culvert C1, the flows leaving TTM 37001 would be less than the pre-Project condition and therefore improve the existing flooding downstream of Ironwood Avenue.

Based upon the analyses, Point 7 would have a post-Project flow rate of 151.6 cfs, which was determined by taking the 131.3 cfs discharging form Culvert B1, and adding 20.3 cfs generate by the existing Area B12 (node 214 to 215). This flow rate is conveyed to Point 8.

Point 9 has a post-Project flow rate of 256.5 cfs, which is the sum of the 151.6 cfs from Point 7, the 46.0 cfs from Point 4, and the existing condition flow rate for Area B13 (node 215 to 216) of 58.9 cfs.

These flow rates were utilized in the Post-Project Condition HEC-RAS analyses discussed previously. Summary tables for the increased runoff mitigation analyses have been provided in Appendix G of the Preliminary Hydrology Study.

Hydraulic Analysis

The proposed Project consists of subsurface storm drain systems and detention basins, as illustrated below in **Figure IX-5**, *Proposed Drainage Facilities Map*. The facilities would be utilized to flood protect the Project site, treat on-site flows for water quality purposes, and mitigate flows for increased runoff/address the HCOCs. During the preliminary stages, the storm drain systems were sized using normal depth.

The sizing of the preliminary storm drain systems utilized a minimum 1% slope, since this is the minimum slope of the in-tract streets. The off-site storm drain system Line A1 utilized a minimum slope of 1.5% due to the steepness of the terrain. The off-site systems utilized the adjacent roadway slope where applicable, and a 1%-2% slope in other locations.

Ironwood Village Project
Figure IX-5
Proposed Drainage Facilities Map

ESA PCR

In order to collect off-site flows tributary to the westerly Project boundary, a trapezoidal channel would be constructed adjacent to Nason Street north of Ironwood Avenue. This channel would collect the off-site flows, and discharge 75.8 cfs into Line A1. The remaining flows would be collected within one of two inlets provided at the intersection of Nason Street and Ironwood Avenue. The flows would be conveyed across Ironwood Avenue, and would bubble out of a proposed catch basin and 12-inch low-flow drain connected to a parkway drain. This modified design was provided at the request of the City of Moreno Valley to alleviate flooding at the intersection of Ironwood Avenue and Nason Street. Details for this design would be provided during final engineering.

Due to the requirement to provide a minimum 12-foot dry travel lane within the private streets for the 100-year storm event per the City of Moreno Valley Design Policy, Standard Plan MVSI-160A-0, catch basins were required in excess of those provided to meet the typical street flooding design criteria of:

- 10-year storm flows contained within the top-of-curb elevation
- 100-year storm flows contained within the right-of-way elevation

Since the hydrology calculations were based upon the 100-year storm event being contained within the top of curb elevation (which is the right-of-way), additional yield calculations and street capacity calculations were performed to determine the limits of storm drain in order to provide the 12-foot dry lane on-site. Figure IX-5, above, delineates the areas and summarizes the yield calculations. A spreadsheet has also been provided in Appendix J of the Preliminary Hydrology Study that summaries the yield calculations.

Water Quality and Hydrologic Conditions of Concern

The Project site would utilize three extended detention basins to treat for water quality purposes and to address the Hydrologic Conditions of Concern (“HCOCs”) and increased runoff mitigation.

The required water quality volume was determined by using the Santa Ana Watershed BMP Design Volume Spreadsheets. The effective impervious fraction utilized the impervious area determined by the rational method calculations for the on-site area, and multiplied the impervious fraction by 1.0 and the pervious fraction by 0.1 (which corresponds to landscaped area per the LID manual). The results are 0.55 effective impervious fraction for Area A1, 0.55 effective impervious fraction for Area A2, and 0.486 for Area B. Area B resulted in a slightly lower value due to the tributary open space area from the north easterly Project boundary.

The water quality volume, per the LID Manual, must be stored within a depth equal to or less than six inches above the surface of the soil media (which includes the voids within the soil media and gravel layer). The table below provides the required water quality volume and the volume provided within six inches of depth above the soil media:

Area	Water Quality Volume	Volume Provided with 6 Inches Above Soil Media
A1	23,805 ft^3/s	45,932 ft^3/s
A2	28,112 ft^3/s	35,159 ft^3/s
B	13,140 ft^3/s	50,949 ft^3/s

Areas A1 and A2 are greater than the maximum allowable tributary area of 25 acres, however, per meetings with the City of Moreno Valley, this additional area (0.15 acres for Area A1 and 4.7 acres for Area A2) is acceptable.

Pre-Project and Post-Project Unit hydrograph calculations were performed for the 2-year, 24-hour storm duration to determine the required storage volume to address the HCOCs. During the preliminary stages, the required volume to address the HCOCs was determined by taking the entire 2-year, 24-hour volume and retaining the volume within the basins. During final engineering, the mitigation would be validated using basin routing calculations. The following tables summarize the unit hydrograph results:

Area	Pre-Project 2-Year, 24-Hour Volume	Post-Project 2-Year, 24-Hour Volume	Basin Volume Provided
A1	**0.4191 ac-ft**	**2.0957 ac-ft**	**3.0960 ac-ft**
A2	**0.4950 ac-ft**	**2.4749 ac-ft**	**7.9900 ac-ft** [1]
B	**0.2608 ac-ft**	**1.1560 ac-ft**	**7.9900 ac-ft** [1]

Notes:

1 – Area A2 and B would be mitigated within Basins A2 and B, which would function together for addressing the hydrologic conditions of concern and increased runoff mitigation. The total 2-year, 24-hour volume to both basins from Areas A2 and B is 3.6309 ac-ft, and the basin has a total available volume of 7.9900 ac-ft, therefore the basins have sufficient volume to address the hydrologic conditions of concern.

The water quality calculations and the hydrologic conditions of concern mitigation have been included in Appendix G of the Preliminary Hydrology Study.

Hydrology and Drainage Conclusions

Drainage analyses were prepared for the Project site in order to determine the pre-Project and post-Project conditions, the required storm drain infrastructure to flood protect the Project site, and the required mitigation measures for the Project site. The following conclusions were derived from the hydrology and hydraulic results:

2. The proposed storm drain alignments would provide flood protection to the Project site for the 100-year storm events as well as provide a minimum 12-foot dry lane within the local streets during the 100-year storm event.

3. The proposed extended detention basins would adequately treat for water quality purposes and mitigate the 2-year, 24-hour storm duration post-Project condition to pre-Project levels.

4. The Project would discharge flows equal to the existing culvert capacities or existing tributary flow rates, whichever is less, for the 100-year storm event. During final engineering, detailed basin routing calculations would be performed to validate the basin and flow-by structure designs.

5. The Project site would not adversely impact downstream properties by mitigating increased flows to less than or equal to pre-Project levels.

Would the Project:

a. Violate any water quality standards or waste discharge requirements?

Less Than Significant Impact. During construction, the Project would be required to implement an approved Stormwater Pollution Prevention Plan (SWPPP) throughout all grading and building activities in accordance with the requirements of the National Pollutant Discharge Elimination System (NPDES) General Construction Permit. The SWPPP would prescribe various stormwater Best Management Practices ("BMPs") to be implemented on and around the Project site that would minimize the potential for adverse water quality impacts to downstream receiving water bodies. Given implementation of a Project-specific SWPPP during construction activities, as required by the City and the Santa Ana Regional Water Quality Control Board (RWQCB), Project-related construction activities would not violate any water quality standards or waste discharge requirements of the RWQCB and water quality-related impacts in this regard would be less than significant.

With regard to long-term operations, as discussed above, the proposed Project would be required to implement an approved WQMP that requires various stormwater features, most notably the proposed on-site detention basins, which are designed to address both hydrology/flooding and water quality issues. The proposed on-site stormwater facilities illustrated above in Figure IX-5 include catch basins, local storm drains, lateral drains, and Basins A1, A2, and B, all of which would be owned and maintained in perpetuity by the on-site Homeowners' Association(s). The Project-specific WQMP, which is included in Appendix G of this Initial Study, concludes that the provision of Basins A1, A2, and B, which are sized to accommodate stormwater flows from a 2-year, 24-hour event, would mitigate any HCOCs regarding stormwater volumes affecting downstream drainage areas. No HCOCs or other water quality-related issues are cited in the WQMP, and thus with implementation of the Project-specific WQMP, as approved by the City and/or the RWQCB, the Project would not violate any water quality standards or waste discharge requirements and water quality-related impacts in this regard would be less than significant.

b. Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned land uses for which permits have been granted)?

Less Than Significant Impact. As discussed in the Phase I Environmental Site Assessment (ESA) prepared for the Project, and included as Appendix F of this Initial Study, the California Department of Water Resources Water Data Library website does not indicate the presence of water supply wells located on the subject property (Township 02 South, Range 03 West, Section 34); however, two wells were indicated within one-mile of the subject property. Data indicated depth to groundwater in Well No. EMWD12003, located approximately three-quarter miles northeast, was 239 feet as measured in 2014. Data from the second nearby well, state Well No. 002S03W34C001S, located approximately eight-tenths of a mile north-northwest, indicated depth to groundwater was 240 feet, as measured in 2014. Based on these considerations, groundwater is neither expected to be encountered during construction, nor have a detrimental effect on the Project. Therefore, construction activities would not substantially deplete groundwater supplies or interfere with groundwater recharge.

No known aquifer conditions exist on the Project site or in the surrounding area which could be intercepted by excavation or development of the Project. The Project would not install any groundwater wells or otherwise directly withdraw groundwater. As discussed further below in Section XVII, Utilities and Service Systems, of this Initial Study, the Project would connect to the existing water supply system owned and operated by Eastern Municipal Water District ("EMWD"), which serves the Project site and surrounding areas. While the EMWD receives some its supply from groundwater, a significant portion of the water supply is imported water from the Metropolitan Water District ("MWD"). Under normal operation, the Project would use approximately 41,268 gpd, or 15,062,820 gallons per year (approximately 46 AFY) when fully occupied. The proposed water usage would be negligible in comparison to the overall water service provided by the EMWD and would not result in significant impacts from depletion of groundwater supplies. Compliance with water conservation measures such as those required by Titles 20 and 24 of the California Administrative Code and the City of Moreno Valley Energy Efficiency and Climate Action Strategy would help to reduce this projected water demand. Further, the Project does not propose to extract groundwater and therefore would not deplete groundwater supplies. As such, construction and operation of the Project would not substantially deplete groundwater supplies or result in a substantial net deficit in the aquifer volume or lowering of the local groundwater table. Thus, less than significant impacts would occur in this regard.

c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?

Less Than Significant Impact. As noted above, Project construction activities would be required to implement a Project-specific SWPPP, which addresses, among other issues, temporary erosion and sedimentation effects. As such, with implementation of an approved SWPPP for the Project, construction-related erosion and sedimentation impacts would be less than significant. In addition, the Project would permanently modify the existing drainage pattern of the Project site and surrounding area through development of a residential subdivision on the property. However, as discussed in detail above under Preliminary Hydrology Study Summary, the Project has been designed to include various on- and off-site stormwater facilities, most notably the on-site extended detention basins (Basins A1, A2, and B), which would retain stormwater flows for an extended period of time and also limit stormwater flows leaving the Project site to pre-Project levels. The proposed on- and off-site stormwater improvements and detention basins depicted above in Figure IX-5, which are required as part of the Project's

WQMP, would effectively preclude the potential for the Project to result in increased on- or off-site erosion or sedimentation during long-term Project operation. Thus, with implementation of the Project-specific WQMP, operation of the Project would not result in substantial erosion or siltation on- or off-site and impacts in this regard would be less than significant.

d. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off site?

Less Than Significant Impact. As discussed in Response IX.c., above, the Project would implement a Project-specific WQMP that requires construction of on-site extended detention basins to limit the volume and rate of stormwater flows leaving the Project site to pre-Project conditions. Thus, with implementation of the Project-specific WQMP, the amount of stormwater generated on-site or otherwise flowing from the site to downstream areas, most notably the residential neighborhood immediately south of the Project site across Ironwood Avenue, would not be increased relative to existing conditions. As such, implementation of the proposed Project and associated WQMP would not increase the rate or amount of surface runoff in a manner which would result in flooding on- or off site, and impacts would be less than significant.

e. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

Less Than Significant Impact. As discussed previously, the Project would implement a Project-specific WQMP and construct various stormwater facilities as shown in Figure IX-5 above that have been designed and sized to meet or exceed projected stormwater volumes during major storm events. The Project's detention basins would retain all stormwater in excess of existing flow volumes on-site and drain the excess volume into the City's storm drain system at a steady rate in a manner that does not exceed the capacity of these off-site facilities. Thus, the Project would not have the potential to exceed the capacity of existing or planned stormwater drainage systems. The proposed Project would involve the development of a single-family residential neighborhood on a currently vacant, undeveloped site, and thus the proposed development would not include land uses that would be expected to generate substantial pollutants that could potentially affect stormwater quality. Further, as noted above, the Project-specific WQMP would be implemented throughout Project operation and therefore would minimize the potential for the Project to generate substantial additional sources of polluted runoff. Therefore, impacts in this regard would be less than significant.

f. Otherwise substantially degrade water quality?

Less Than Significant Impact. The Project would not generate substantial pollutant volumes based on the nature of single-family residential developments and the lack of any known on-site hazardous materials conditions that could potentially result in increase pollutant loads in stormwater flows leaving the site. In addition, the Project would implement an approved WQMP and maintain required BMPs, including the on-site detention basins and other facilities, in perpetuity in order to ensure that the proposed development does not adversely affect water quality in stormwater runoff. As such, the Project would have little potential to otherwise substantially degrade water quality and impacts would be less than significant.

g. Place housing within a 100-year flood hazard area as mapped on federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?

No Impact. According to the Federal Emergency Management Agency (FEMA) National Flood Hazard Map data[15], the Project site is not located within the boundaries of a 100-year flood hazard area. Thus, the development of housing within the Project site would not result in a flood risk for people or property within the Project boundaries. As such, no impact would occur.

h. Place within a 100-year flood hazard area structures which would impede or redirect flood flows?

No Impact. As noted above, the Project site is not located within the boundaries of a 100-year flood hazard area. Thus, implementation of the proposed residential Project would not place structures which would impede or redirect flood flows within a 100-year flood hazard area. As such, no impact would occur.

i. Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?

No Impact. The Project site is not located in an area subject to flooding, and there are no reservoirs, lakes, or other water bodies, nor any dams or levees upstream of the Project site that could potentially result in flooding at this location. As such, the Project would not expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam, and no impact would occur in this regard.

j. Inundation by seiche, tsunami, or mudflow?

No Impact. A seiche is an oscillation of a body of water in an enclosed or semi-enclosed basin, such as a reservoir, harbor, lake, or storage tank. A tsunami is a great sea wave, commonly referred to as a tidal wave, produced by a significant undersea disturbance such as tectonic displacement of the sea floor associated with large, shallow earthquakes. Mudflows result from the downslope movement of soil and/or rock under the influence of gravity. The Project site is not located in a coastal area or near any inland bodies of water, and thus there would be no potential for the Project to affect or be affected by seiches or tsunamis.

As mentioned above in Section VII, Geology and Soils, of this Initial Study, the Project site is not located within an area identified as having a potential for mass slope instability such that sizeable landslides or mudflows could occur. Despite the incidental rock fall hazards along the rock outcroppings in the northwest portion of the property, there are no known landslides near the

[15] Federal Emergency Management Agency. *FEMA Flood Map Service Center*, https://msc.fema.gov/portal. Panels 06065C0755G and 06065C0760G. Accessed August 17, 2016.

Project site, nor is the site in the path of any known or potential landslides. Thus, no impact associated with inundation by seiche, tsunami, or mudflows would occur.

X. Land Use and Planning

Would the Project:

a. Physically divide an established community?

No Impact. The Project site is located on vacant land surrounded by existing single-family residential neighborhoods to the west and south and vacant land to the north and east. The proposed single-family homes would be consistent with the existing land use pattern in the area and would be designed to be compatible with the surrounding land uses. While the proposed Project would introduce new single-family residential uses to the currently undeveloped Project site, such development would be consistent with existing lower density residential development in the northern portion of the City of Moreno Valley and would be similar to future residential uses planned for surrounding parcels in the area. Thus, the proposed Project would not physically divide an established community and no impact would occur in this regard.

b. Conflict with applicable land use plan, policy or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

Less Than Significant Impact. The City of Moreno Valley General Plan designates the Project site as Residential 2, which is intended for low density land uses with a maximum of two dwelling units per acre, while the site is zoned RA2 which also limits single-family development density to a maximum density of two units per acre. As discussed in Attachment A, Project Description, of this Initial Study, the proposed Project would entail the construction of a new, 181-unit single-family residential development on the currently undeveloped approximately 75-acre Project site. Lot sizes for the proposed single-family homes would range from a minimum of 7,200 square feet to over 17,200 square feet, with an average lot size of approximately 9,260 square feet. In order to accommodate the proposed density on the Project site, which is currently zoned RA2 with a density of up to two units per acre, the applicant is requesting a General Plan Amendment to change the land use designation from Residential 2 to a mix of Residential 3 and Residential 5 (see Figure A-3 in Attachment A, Project Description, of this Initial Study), and similarly, a change of zone from RA2 to R3 (single-family residential up to 3 units per acre) on the western portion of the Project site and R5 (single-family residential uses up to 5 units per acre) on the eastern portion of the site. As such, the residential density would be lower on the western side of the Project site, to the west of a proposed open space and recreation corridor that would bisect the property in a north-south orientation, while higher density development would be located east of the of this corridor. According to Chapter 9, Goals and Objectives, of the City's 2006 General Plan, the primary purpose of areas designated Residential 3 is to provide a transition between rural and urban density development areas, and to provide for a suburban lifestyle on residential lots larger than those commonly found in suburban subdivisions (Policy 2.2.6), while the primary purpose of areas designated Residential 5 is to provide for single-family detached housing on standard sized suburban lots (Policy 2.2.7). The shift in density on-site under the proposed Project is intended to serve a transition between existing lower density R1 residential uses immediately to the west of the Project site across Nason Street and existing R2 residential uses to the south and farther to the east across Moreno Beach Drive, as well as R2 or potentially higher density residential uses immediately to the east of the Project site, and thus would be consistent with the intent of Policies 2.2.6 and 2.2.7 as relates to providing single-family residential uses that transition from lower density neighborhoods to higher density developments.

The proposed Project is proposed to be implemented in accordance with the Ironwood Village Design Guidelines (Design Guidelines), which would serve as a guide for implementation of the residential development. The Design Guidelines, which would be subject to review and approval by the City, would include site development regulations in order to provide cohesive design throughout the Ironwood Village Project, and would be consistent with Section 9.03.040 (Residential site development standards) of the Moreno Valley Municipal Code (MVMC). The Ironwood Village Project would conserve the northwestern hillside areas of the Project site and would not build any physical improvements in that area. The proposed Project is designed to respect the existing topography, maintain rock outcroppings where feasible and provide a transition into the hillside areas.

The land use and zoning designations for the site permit residential uses such as those proposed by the Project, albeit at a lower density. As such, the Project would require approval of a The proposed single-family residences would be a maximum of two-stories and up to 35 feet in height relative to lot grade, which is consistent with the two-story, 35-foot height limit for single-family residential uses within the R3 and R5 zones per Section 9.03.040 of the MVMC. Overall, by proposing 181 single-family residences and associated change of zone from R2 to R3 and R5 on the Project site, the Project would be consistent with the allowable uses set forth in the City's general plan and zoning code and would provide a logical extension of existing single-family residential development along Ironwood Avenue in the northern portion of the City of Moreno Valley. Thus, based on the preceding discussion, the proposed Project would not conflict with the City's General Plan or MVMC. It should be noted that because the Project proposes the construction of up to 181 new single-family homes on land already designated for similar uses, it is not considered regionally significant[16] and thus analysis of the Project's consistency with various Southern California Association of Governments (SCAG) plans and programs is not required. Therefore, less than significant land use impacts relative to consistency with plans, policies, or regulations of agencies with jurisdiction over the Project site would occur.

c. Conflict with any applicable habitat conservation plan or natural community conservation plan?

Less Than Significant Impact With Mitigation Incorporated. Refer to Response IV.f. above, under Section IV, *Biological Resources*, of this Initial Study.

---

16 Per California Environmental Quality Act Section 15206(b)(2)(A), Projects of Statewide, Regional, or Areawide Significance include proposed residential developments of more than 500 dwelling units.

XI. Mineral Resources

Would the Project:

a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

b. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

No Impact (a-b). Minerals are defined as any naturally occurring chemical elements or compounds formed from inorganic processes and organic substances. The California Surface Mining and Reclamation Act of 1975 (SMARA) requires that all cities address significant mineral resources, classified by the State Geologist and designated by the State Mining and Geology Board, in their General Plans. According to the GP FEIR, no regionally or statewide significant mineral resources are located within the City. As such, the potential of uncovering mineral resources during Project construction is considered low. Therefore, the Project would not result in the loss of availability of a known mineral resource delineated on a local general plan, specific plan, or other land use plan as there are no known mineral resources or mineral resource recovery sites on or near the Project site. No impact would occur in this regard.

XII. Noise

The following impact analysis pertaining to noise impacts is based on information contained in the Ironwood Residential (TTM No. 37001), Noise Impact Analysis, City of Moreno Valley *(herein referred to as the "Noise Impact Analysis"), prepared by Urban Crossroads, dated August 31, 2015. The Noise Impact Analysis is provided in Appendix H.*

Would the Project result in:

a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Less Than Significant Impact With Mitigation Incorporated.

Applicable Noise and Vibration Regulations

City of Moreno Valley General Plan Safety Element

The City's General Plan does not include a noise element or specific transportation-related noise standards. Rather, noise is considered in Section 6.4 of the Environmental Safety section of the General Plan Safety Element. While the General Plan provides background and noise fundamentals, it does not identify criteria to assess the impacts associated with off-site transportation-related noise impacts. Instead, the General Plan includes policies associated with each element in Chapter 9, Goals and Objectives. The objectives identified in Chapter 9 of the General Plan to address potential noise impacts are listed below:

Objective 6.3: Provide noise compatible land use relationships by establishing noise standards utilized for design and siting purposes.

Objective 6.4: Review noise issues during the planning process and require noise attenuation measures to minimize acoustic impacts to existing and future surrounding land uses.

Objective 6.5: Minimize noise impacts from significant noise generators such as, but not limited to, motor vehicles, trains, aircraft, commercial, industrial, construction, and other activities.

The General Plan's policies act to ensure that when exterior noise levels exceed 65 A-weighted decibels (dBA) community noise-equivalent level (CNEL) at sensitive land uses, mitigation is provided to ensure that interior noise levels of 45 dBA CNEL are maintained. The General Plan's policies in this regard are consistent with, and support, the California Building Code interior noise standards.

City of Moreno Valley Municipal Code Noise Standards

The most effective method to control community noise impacts from non-transportation noise sources (such as playgrounds, trash compactors, air-conditioning units, etc.) is through the application of a noise control ordinance. For the purpose of Noise Impact Analysis, the potential non-transportation noise impacts include Project-related short-term construction activities during the permitted hours of construction established in the MVMC. As a subset of its stationary-source noise regulations, the MVMC establishes restrictions on construction-source noise. More specifically, MVMC Section 11.80.030(D)(7), Construction and Demolition, provides the following:

No person shall operate or cause operation of any tools or equipment used in construction, drilling, repair, alteration or demolition work between the hours of eight p.m. and seven a.m. the following day such that the sound there from creates a noise disturbance, except for emergency work by public service utilities or for other work approved by the City manager or designee.

The City defines a "noise disturbance" as any sound which:

Disturbs a reasonable person of normal sensitivities; exceeds the sound level limits set forth in this chapter [Section 11.80.030(C)]; or is plainly audible as defined in this section. Where no specific distance is set forth for the determination of audibility, references to noise disturbance shall be deemed to mean plainly audible at a distance of two (200) feet from the real property line of the source of the sound, if the sound occurs on privately owned property, or from the source of the sound, if the sound occurs on public right of way, public space or other publicly owned property.

Therefore, Project construction shall be limited to the hours of 7:00 AM to 8:00 PM on any day and may not generate a noise level at 200 feet from the property line which exceeds the noise standards provided in the Noise Ordinance, Section 11.80.030(C), Non-impulsive Sound Decibel Limits, which states the following:

No person shall maintain, create, operate or cause to be operated on private property any source of sound in such a manner as to create any non-impulsive sound which exceeds the limits set forth for the source land use category in Table 11.80.030-2 when measured at a distance of two hundred (200) feet or more from the real property line of the source of the sound, if the sound occurs on privately owned property, or from the source of the sound, if the sound occurs on public right-of-way, public space or other publicly owned property. Any source of sound in violation of this subsection shall be deemed prima facie to be a noise disturbance.

Even though the MVMC does not identify specific construction noise limits, the Code does provide noise level limits for the source land use category when measured at a distance of 200 feet. For the purpose of Noise Impact Analysis, the Project is considered a residential land use since it is land primarily for dwelling units, as defined by the MVMC. For residential land uses, the City's 60 dBA equivalent continuous (average) sound level (Leq) noise level standard at a distance of 200 feet is used as the limit for this analysis to assess the construction noise level impacts at sensitive receivers in the Project study area. Therefore, to conform to the applicable provisions of the MVMC, the maximum allowable noise generated by on-site construction activities when measured at 200 feet from any property line, shall not exceed 60 dBA Leq.

Construction Vibration Standards

To analyze the vibration impacts originating from the construction of a project, vibration from construction activities are typically evaluated against standards established under a city's municipal code. The MVMC, however, does not identify specific vibration standards for construction. Therefore, the construction-related vibration standards provided by the United States Department of Transportation Federal Transit Administration (FTA) are used in this analysis to assess the potential vibration impacts due to Project construction.

FTA Vibration Standards

The FTA identifies guidelines for maximum-acceptable vibration criteria for different types of land uses. These guidelines allow 80 vibration decibels (VdB) for residential uses and buildings where people normally sleep. Construction activity can result in varying degrees of ground-borne vibration, depending on the equipment and methods used, distance to the affected structures and soil type. Construction vibration is generally associated with pile driving and rock blasting. Other construction equipment such as air compressors, light trucks, hydraulic loaders, etc., generates little to no ground vibration. Occasionally large bulldozers and loaded trucks can cause perceptible vibration levels at close proximity. While not enforceable regulations within the City, the FTA guidelines of 80 VdB for sensitive land uses provide the basis for determining the relative significance of potential Project-related vibration impacts. For this analysis, the FTA-provided 80 VdB vibration standard represents residential annoyance as perceived by the nearby sensitive receivers in the Project study area.

Thresholds of Significance

The following significance thresholds evaluate potential noise and vibration impacts of the Project based on the regulatory framework described above; refer to **Table XII-1**, *Significance*

Criteria Summary. The Project would result in potentially significant impacts under the following circumstances:

TABLE XII-1
SIGNIFICANCE CRITERIA SUMMARY

Analysis	Condition(s)	Significance Criteria Daytime	Significance Criteria Nighttime
Off-Site[a]	if ambient is < 60 dBA CNEL	≥ 5 dBA CNEL Project increase	
	if ambient is 60 - 65 dBA CNEL	≥ 3 dBA CNEL Project increase	
	if ambient is > 65 dBA CNEL	≥ 1.5 dBA CNEL Project increase	
On-Site[b]	Exterior residential land use	65 dBA CNEL	
	Interior residential land use	45 dBA CNEL	
Construction[c]	Permitted hours of 7:00 a.m. to 8:00 p.m. on any day.		
	Noise Level Threshold	60 dBA Leq @ 200[a]	n/a
	Vibration Level Threshold[d]	80 VdB	n/a

"Daytime" = 8:00 a.m. to 10:00 p.m.; "Nighttime" = 10:01 p.m. to 7:59 a.m.; "n/a" = No nighttime construction activity is permitted and therefore, no nighttime construction noise and vibration thresholds are identified.

SOURCE: Ironwood Residential (TTM No. 37001), Noise Impact Analysis, City of Moreno Valley, prepared by Urban Crossroads, dated August 31, 2015.

Off-Site Traffic Noise

If the off-site traffic noise levels at nearby noise-sensitive land uses adjacent to roadways conveying Project traffic:

- are less than 60 dBA CNEL and the Project creates a *readily perceptible* 5 dBA CNEL or greater Project related noise level increase; or
- range from 60 to 65 dBA CNEL and the Project creates a *barely perceptible* 3 dBA CNEL or greater Project noise level increase; or
- already exceeds 65 dBA CNEL, and the Project creates a community noise level impact of greater than 1.5 dBA CNEL.

On-Site Traffic Noise

If the on-site exterior noise levels exceed 65 dBA CNEL at the residential land uses within the Project site. Interior noise levels shall not exceed 45 dBA CNEL for residential land uses.

Construction Noise and Vibration

If Project-related construction activities:

- occur anytime other than between the permitted hours of 7:00 AM and 8:00 PM on any day; or
- create noise levels at sensitive residential receivers in the City of Moreno Valley which exceed the short-term construction noise level limit of 60 dBA Leq at 200 feet from the Project site; or
- if short-term Project generated construction vibration levels exceed the FTA maximum acceptable vibration standard of 80 VdB at sensitive receiver locations.

Existing Conditions.

To assess the existing noise level environment, five 24-hour noise level measurements were taken at sensitive receiver locations in the Project study area. The receiver locations were selected to describe and document the existing noise environment within the Project study area. **Figure XII-1**, *Noise Measurement Locations*, provides the boundaries of the Project study area and the noise level measurement locations. To fully describe the existing noise conditions, noise level measurements were collected on Wednesday, January 28, 2015. The noise measurements presented below focus on the Leq which represents a steady state sound level containing the same total energy as a time varying signal over a given sample period. **Table XII-2**, *24-Hour Ambient Noise Level Measurements*, identifies the hourly daytime (8:00 AM to 10:00 PM) and nighttime (10:01 PM to 7:59 AM) noise levels at each noise level measurement location.

Location L1: represents the noise levels at the northeastern corner of Ironwood Avenue and Nason Street near existing residential homes across Ironwood Avenue. The noise level measurements collected show an overall 24-hour exterior noise level of 63.6 dBA CNEL. The hourly noise levels measured at location L1 ranged from 55.5 to 61.9 dBA Leq during the daytime hours and from 45.3 to 62.8 dBA Leq during the nighttime hours. The energy (logarithmic) average daytime noise level was calculated at 60.1 dBA Leq with an average nighttime noise level of 57.1 dBA Leq.

Location L2: represents the noise levels in the northwestern portion of the Project site, east of existing residential homes across Nason Street. The noise level measurements collected show an overall 24-hour exterior noise level of 55.4 dBA CNEL. The hourly noise levels measured at location L2 ranged from 45.4 to 50.2 dBA Leq during the daytime hours and from 44.2 to 52.8 dBA Leq during the nighttime hours. The energy (logarithmic) average daytime noise level was calculated at 48.7 dBA Leq with an average nighttime noise level of 49.0 dBA Leq.

b Energy (logarithmic) average hourly levels. The long-term 24-hour measurement printouts are included in Appendix 5.2. "Daytime" = 8:00 a.m. to 10:00 p.m.; "Nighttime" = 10:01 p.m. to 7:59 a.m.

SOURCE: Ironwood Residential (TTM No. 37001), Noise Impact Analysis, City of Moreno Valley, prepared by Urban Crossroads, dated August 31, 2015.

Location L3: represents the noise levels at the southwestern corner of Ironwood Avenue and Oliver Street adjacent to an existing residential home. The 24-hour CNEL indicates that the overall exterior noise level is 63.0 dBA CNEL. At location L3 the background ambient noise levels ranged from 56.2 to 61.9 dBA Leq during the daytime hours to levels of 46.8 to 61.0 dBA Leq during the nighttime hours. The energy (logarithmic) average daytime noise level was calculated at 59.7 dBA Leq with an average nighttime noise level of 56.1 dBA Leq.

Location L4: located on the eastern Project site boundary, represents the noise levels north of Ironwood Avenue at the Project site. The noise level measurements collected show an overall 24-hour exterior noise level of 55.5 dBA CNEL. The hourly noise levels measured at location L4 ranged from 46.7 to 51.2 dBA Leq during the daytime hours and from 43.6 to 53.2 dBA Leq during the nighttime hours. The energy (logarithmic) average daytime noise level was calculated at 49.7 dBA Leq with an average nighttime noise level of 49.1 dBA Leq.

Location L5: represents the noise levels south of the Project site across Ironwood Avenue adjacent to existing residential homes. The 24-hour CNEL indicates that the overall exterior noise level is 73.2 dBA CNEL. At location L5 the background ambient noise levels ranged from 66.7 to 71.6 dBA Leq during the daytime hours to levels of 58.2 to 72.2 dBA Leq during the nighttime hours. The energy (logarithmic) average daytime noise level was calculated at 69.9 dBA Leq with an average nighttime noise level of 66.8 dBA Leq,

Table XII-2, provides the (energy average) noise levels used to describe the daytime and nighttime ambient conditions. These daytime and nighttime energy average noise levels represent the average of all hourly noise levels observed during these time periods expressed as a single number. The background ambient noise levels in the Project study area dominated by transportation related noise associated with the arterial roadway network. This includes the automobile and heavy truck activities near the noise level measurement locations. The 24-hour existing noise level measurements shown in Table XII-2 presents the worst-case existing unmitigated ambient noise conditions.

Sensitive Receivers

To assess the potential for short-term construction noise impacts, the following nine receiver locations, as shown on **Figure XII-2**, *Receiver Locations*, were identified as representative locations for the analysis. Sensitive receivers are generally defined as locations where people reside or where the presence of unwanted sound could otherwise adversely affect the use of the land. Noise-sensitive land uses are generally considered to include: schools, hospitals, single-family dwellings, mobile home parks, churches, libraries, and recreation areas. Moderately noise-sensitive land uses typically include: multi-family dwellings, hotels, motels, dormitories, out-patient clinics, cemeteries, golf courses, country clubs, athletic/tennis clubs, and equestrian clubs. Land uses that are considered relatively insensitive to noise include business, commercial, and professional developments. Land uses that are typically not affected by noise include: industrial, manufacturing, utilities, agriculture, natural open space, undeveloped land, parking lots, warehousing, liquid and solid waste facilities, salvage yards, and transit terminals.

Representative sensitive receivers in the vicinity of the Project site include existing residential homes represented by receiver locations R1 to R9. The nearest sensitive receiver is represented by location R1 where an existing residential home is located approximately 40 feet west of the Project site.

R1: Located approximately 40 west of the Project site, R1 represents existing residential homes at the northwest corner of Nason Street and Sandi Lane.

R2: Location R2 represents the existing single-family residential home located approximately 86 feet west of the Project site across Nason Street.

R3: Location R3 represents the existing residential homes situated west of the Project site across Nason Street at a distance of approximately 208 feet.

R4: Location R4 represents the existing residential home situated approximately 168 feet south of the Project site across Ironwood Avenue.

R5: At a distance of approximately 141 feet, location R5 represents single-family residential homes south of the Project site across Ironwood Avenue.

R6: At a distance of approximately145 feet south of the Project site, R6 describes the residential homes located at the southwest corner of Ironwood Avenue and Lantz Lane.

TENTATIVE TRACT MAP NO. 37001

PRELIMINARY FUEL MODIFICATION PLAN

AUGUST, 2016

FUEL TREATMENT GUIDELINES

THE FOLLOWING FUEL TREATMENT GUIDELINES COMPLY WITH THE REQUIREMENTS OF 14 CCR 1299 AND PRC 4291. ALL PERSONS USING THESE GUIDELINES TO COMPLY WITH CCR 1299 AND PRC 4291 SHALL IMPLEMENT GENERAL GUIDELINES 1., 2., 3., AND EITHER 4A OR 4B., AS DESCRIBED BELOW.

GENERAL GUIDELINES:

1. MAINTAIN A FIREBREAK BY REMOVING AND CLEARING AWAY ALL FLAMMABLE VEGETATION AND OTHER COMBUSTIBLE GROWTH WITHIN 30 FEET OF EACH BUILDING OR STRUCTURE, WITH CERTAIN EXCEPTIONS PURSUANT TO PRC §4291(A). SINGLE SPECIMENS OF TREES OR OTHER VEGETATION MAY BE RETAINED PROVIDED THEY ARE WELL-SPACED, WELL-PRUNED, AND CREATE A CONDITION THAT AVOIDS SPREAD OF FIRE TO OTHER VEGETATION OR TO A BUILDING OR STRUCTURE.
2. DEAD AND DYING WOODY SURFACE FUELS AND AERIAL FUELS WITHIN THE REDUCED FUEL ZONE SHALL BE REMOVED. LOOSE SURFACE LITTER, NORMALLY CONSISTING OF FALLEN LEAVES OR NEEDLES, TWIGS, BARK, CONES, AND SMALL BRANCHES, SHALL BE PERMITTED TO A DEPTH OF 3 INCHES. THIS GUIDELINE IS PRIMARILY INTENDED TO ELIMINATE TREES, BUSHES, SHRUBS AND SURFACE DEBRIS THAT ARE COMPLETELY DEAD OR WITH SUBSTANTIAL AMOUNTS OF DEAD BRANCHES OR LEAVES/NEEDLES THAT WOULD READILY BURN.
3. DOWN LOGS OR STUMPS ANYWHERE WITHIN 100 FEET FROM THE BUILDING OR STRUCTURE, WHEN EMBEDDED IN THE SOIL, MAY BE RETAINED WHEN ISOLATED FROM OTHER VEGETATION. OCCASIONAL (APPROXIMATELY ONE PER ACRE) STANDING DEAD TREES (SNAGS) THAT ARE WELL-SPACE FROM OTHER VEGETATION AND WHICH WILL NOT FALL ON BUILDINGS OR STRUCTURES OR ON ROADWAYS/DRIVEWAYS MAY BE RETAINED.
4. WITHIN THE REDUCED FUEL ZONE, ONE OF THE FOLLOWING FUEL TREATMENTS (4A. OR 4B.) SHALL BE IMPLEMENTED. PROPERTIES WITH GREATER FIRE HAZARDS WILL REQUIRE GREATER CLEARING TREATMENTS. COMBINATIONS OF THE METHODS MAY BE ACCEPTABLE UNDER §1299(C) AS LONG AS THE INTENT OF THESE GUIDELINES IS MET.

4A. REDUCED FUEL ZONE: FUEL SEPARATION

IN CONJUNCTION WITH GENERAL GUIDELINES 1., 2., AND 3., ABOVE, MINIMUM CLEARANCE BETWEEN FUELS SURROUNDING EACH BUILDING OR STRUCTURE WILL RANGE FROM 4 FEET TO 40 FEET IN ALL DIRECTIONS, BOTH HORIZONTALLY AND VERTICALLY.

CLEARANCE DISTANCES BETWEEN VEGETATION WILL DEPEND ON THE SLOPE, VEGETATION SIZE, VEGETATION TYPE (BRUSH, GRASS, TREES), AND OTHER FUEL CHARACTERISTICS (FUEL COMPACTION, CHEMICAL CONTENT ETC.). PROPERTIES WITH GREATER FIRE HAZARDS WILL REQUIRE GREATER SEPARATION BETWEEN FUELS. FOR EXAMPLE, PROPERTIES ON STEEP SLOPES HAVING LARGE SIZED VEGETATION WILL REQUIRE GREATER SPACING BETWEEN INDIVIDUAL TREES AND BUSHES (SEE PLANT SPACING GUIDELINES AND CASE EXAMPLES BELOW). GROUPS OF VEGETATION (NUMEROUS PLANTS GROWING TOGETHER LESS THAN 10 FEET IN TOTAL FOLIAGE WIDTH) MAY BE TREATED AS A SINGLE PLANT. FOR EXAMPLE, THREE INDIVIDUAL MANZANITA PLANTS GROWING TOGETHER WITH A TOTAL FOLIAGE WIDTH OF EIGHT FEET CAN BE "GROUPED" AND CONSIDERED AS ONE PLANT AND SPACED ACCORDING TO THE PLANT SPACING GUIDELINES IN THIS DOCUMENT.

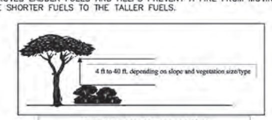
GRASS GENERALLY SHOULD NOT EXCEED 4 INCHES IN HEIGHT. HOWEVER, HOMEOWNERS MAY KEEP GRASS AND OTHER FORBS LESS THAN 18 INCHES IN HEIGHT ABOVE THE GROUND WHEN THESE GRASSES ARE ISOLATED FROM OTHER FUELS OR WHERE NECESSARY TO STABILIZE THE SOIL AND PREVENT EROSION.

CLEARANCE REQUIREMENTS INCLUDE:

- HORIZONTAL CLEARANCE BETWEEN AERIAL FUELS, SUCH AS THE OUTSIDE EDGE OF THE TREE CROWNS OR HIGH BRUSH. HORIZONTAL CLEARANCE HELPS STOP THE SPREAD OF FIRE FROM ONE FUEL TO THE NEXT.

Horizontal clearnce between aerial fuels

- VERTICAL CLEARANCE BETWEEN LOWER LIMBS OF AERIAL FUELS AND THE NEAREST SURFACE FUELS AND GRASS/WEEDS. VERTICAL CLEARANCE REMOVES LADDER FUELS AND HELPS PREVENT A FIRE FROM MOVING FROM THE SHORTER FUELS TO THE TALLER FUELS.



Vertical clearance between aerial fuels

Plant Spacing Guidelines

Guidelines are designed to break the continuity of fuels and be used as a "rule of thumb" for achieving compliance with Regulation 14 CCR 1299.

Trees	**Minimum horizontal space from edge of one tree canopy to the edge of the next**	
	Slope	Spacing
	0% to 20 %	10 feet
	20% to 40%	20 feet
	Greater than 40%	30 feet
Shrubs	**Minimum horizontal space between edges of shrub**	
	Slope	Spacing
	0% to 20 %	2 times the height of the shrub
	20% to 40%	4 times the height of the shrub
	Greater than 40%	6 times the height of the shrub
Vertical Space	**Minimum vertical space between top of shrub and bottom of lower tree branches:** 3 times the height of the shrub	

Adapted from: Gilmer, M. 1994. California Wildfire Landscaping

4B. REDUCED FUEL ZONE: DEFENSIBLE SPACE WITH CONTINUOUS TREE CANOPY TO ACHIEVE DEFENSIBLE SPACE WHILE RETAINING A STAND OF LARGER TREES WITH CONTINUOUS TREE CANOPY APPLY THE FOLLOWING TREATMENTS:

GENERALLY, REMOVE ALL SURFACE FUELS GREATER THAN 4 INCHES IN HEIGHT. SINGLE SPECIMENS OF TREES OR OTHER VEGETATION MAY BE RETAINED PROVIDED THEY ARE WELL-SPACED, WELL-PRUNED, AND CREATE A CONDITION THAT AVOIDS SPREAD OF FIRE TO OTHER VEGETATION OR TO A BUILDING OR STRUCTURE.

REMOVE LOWER LIMBS OF TREES ("PRUNE") TO AT LEAST 6 FEET UP TO 15 FEET (OR THE LOWER 1/3 BRANCHES FOR SMALL TREES). PROPERTIES WITH GREATER FIRE HAZARDS, SUCH AS STEEPER SLOPES OR MORE SEVERE FIRE DANGER, WILL REQUIRE PRUNING HEIGHTS IN THE UPPER END OF THIS RANGE.

R7: Location R7 represents existing single-family residential homes located south of the Project at a distance of approximately 227 feet on Walfred Way.

R8: Location R8 represents the existing residential home situated approximately 216 feet south of the Project site at the northwest corner of Walfred Way and Oliver Street.

R9: Location R9 represents the existing residential community located approximately 1,369 feet east of the Project site.

Short-Term Construction Noise

Noise generated by the Project construction equipment would include a combination of trucks, power tools, concrete mixers and portable generators that when combined, can reach high levels. The number and mix of construction equipment is expected to occur during grading, paving, building construction, and architectural coating. Noise levels generated by heavy construction equipment can range from approximately 62 dBA to 76 dBA when measured at 200 feet. However, these noise levels diminish with distance from the construction site at a rate of 6 dBA per doubling of distance. **Table XII-3**, *Grading Equipment Noise Levels*, **Table XII-4**, *Paving Equipment Noise Levels*, **Table XII-5**, *Building Construction Equipment Noise Levels*, and **Table XII-6**, *Architectural Coating Equipment Noise Levels*, present the short-term construction noise levels at a distance of 200 feet from the center of construction activity for each stage of construction. **Table XII-7**, *Unmitigated Construction Equipment Noise Level Summary*, provides a summary of the construction noise levels by phase at the nine noise receiver locations. Based on the four stages of construction, the noise impacts associated with the Project are expected to create temporary high noise levels at the nearby receiver locations. To assess the construction noise levels at each receiver location, this analysis shows the construction noise levels by phase when all heavy equipment is operating simultaneously at a distance of roughly 100 feet from the Project site boundary. Figure XII-2 displays the receiver locations and construction activity locations used in this analysis.

Construction activities are estimated to occur during the permitted hours of 7:00 AM to 8:00 PM on any day, based on the MVMC. As shown in Table XII-7, the unmitigated peak construction noise levels are expected to range from 46.2 dBA Leq to 66.6 dBA Leq. Based on the construction noise standards described above, the potential short-term unmitigated construction noise level impacts are expected to exceed the acceptable construction noise level threshold of 60 dBA Leq at nearby sensitive receiver locations R1, R2, R4, and R6 during the permitted hours of construction activity. Therefore, temporary noise abatement would be needed to reduce the potential construction noise impacts. With the installation of temporary exterior noise control barriers providing a minimum attenuation of 10 dBA, construction noise levels at the nearby residential receivers would be reduced, but not eliminated.

While noise attenuation of greater than 10 dBA may be possible to achieve with the use of temporary barriers, the noise barrier costs are expected to increase exponentially in relation to additional attenuation provided above 10 dBA. This suggests a point of diminishing return of noise attenuation for temporary noise barriers beyond 10 dBA. While a 10 dBA reduction in sound level is considered attainable, a reduction of 15 dBA is very difficult and a 20 dBA reduction is nearly impossible. Further noise attenuation strategies include the installation of temporary barriers or window inserts and treatments at each receiver location to reduce the noise levels and block the line of sight to the source. However, the ability to install such measures at the approval of nearby homeowners may not be feasible and will vary depending on each homeowner's willingness to allow for installation. Further, noise abatement at the receiver is usually only cost-effective if fewer residences are involved as each home may require different materials based on each home's specifications. Therefore, an attainable attenuation of 10 dBA through the use of temporary construction noise barriers is recommended to reduce construction noise levels at the nearby residential receivers.

TABLE XII-7
UNMITIGATED CONSTRUCTION EQUIPMENT NOISE LEVEL SUMMARY

Noise Receiver[a]	Distance To Construction Activity (Feet)	Construction Phase Hourly Noise Level (dBA Leq)					Potential Significant Impact c
		Grading	Paving	Building Const.	Arch. Coating	Peakb	
R1	140'	66.6	59.9	62.2	53.0	66.6	Yes
R2	186'	64.1	57.4	59.7	50.6	64.1	Yes
R3	308'	59.7	53.0	55.3	46.2	59.7	No
R4	269'	60.9	54.2	56.5	47.4	60.9	Yes
R5	241'	56.9	50.2	52.5	43.3	56.9	No
R6	245'	61.7	55.0	57.3	48.2	61.7	Yes
R7	327'	59.2	52.5	54.8	45.7	59.2	No
R8	316'	54.5	47.8	50.1	41.0	54.5	No

[a] Noise receiver locations are shown on Exhibit 10-A.
[b] Estimated construction noise levels during peak operating conditions.
[c] Do the peak construction noise levels exceed the City of Moreno Valley 60 dBA Leq threshold?

SOURCE: Ironwood Residential (TTM No. 37001), Noise Impact Analysis, City of Moreno Valley, prepared by Urban Crossroads, dated August 31, 2015.

Table XII-8, *Mitigated Construction Equipment Noise Level Summary*, indicates the peak construction noise levels are expected to range from 46.2 to 56.6 dBA Leq with the attenuation provided by the temporary construction noise barriers. With the temporary noise control barrier providing a minimum attenuation of 10 dBA, the construction noise levels will satisfy the 60 dBA Leq construction noise level threshold. Although construction noise is temporary, intermittent and of short duration, and would not present any long-term impacts, MM NOISE-1 through MM NOISE-5 would reduce any noise level increases produced by the construction equipment to nearby noise-sensitive residential uses. Therefore, with incorporation of the prescribed mitigation measures, Project construction would result in a less than significant impact.

Mitigation Measures

MM NOISE-1: Prior to approval of the grading plans and/or issuance of building permits, plans shall include a note indicating that noise-generating Project construction activities shall only occur between the hours of 7:00 AM and 7:00 PM, Monday through Friday, excluding holidays, and from 8:00 AM and 4:00 PM on Saturday, unless written approval is obtained from the City's building official or city engineer. The Project construction supervisor shall ensure compliance with the note and the City shall conduct periodic inspection at its discretion.

MM NOISE-2: The Project applicant shall install temporary noise control barriers that provide a minimum noise level attenuation of 10 dBA when Project construction occurs near existing noise-sensitive structures. The noise control barrier must present a solid face from top to bottom. The noise control barrier must be designed with appropriate height and length to block the view of the noise source. Unnecessary openings shall not be made.

The noise barrier may be constructed using an acoustical blanket (e.g. vinyl acoustic curtains or quilted blankets) attached to the construction site perimeter fence or equivalent temporary fence posts.

The noise barriers must be maintained and any damage promptly repaired. Gaps, holes, or weaknesses in the barrier or openings between the barrier and the ground shall be promptly repaired.

The noise control barriers and associated elements shall be completely removed and the site appropriately restored upon the conclusion of the construction activity.

MM NOISE-3: During all Project site construction, the construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers, consistent with manufacturers' standards. The construction contractor shall place all stationary construction equipment so that emitted noise is directed away from the noise sensitive receptors nearest the Project site.

MM NOISE-4: The construction contractor shall locate equipment staging in areas that would create the greatest distance between construction-related noise sources and noise-sensitive receivers nearest the Project site (i.e., to the northern center) during all Project construction.

> **MM NOISE-5**: The construction contractor shall limit haul truck deliveries to the same hours specified for construction equipment (between the hours of 7:00 AM and 7:00 PM, Monday through Friday, excluding holidays, and from 8:00 AM and 4:00 PM on Saturday, unless written approval is obtained from the City's building official or city engineer). The contractor shall design delivery routes to minimize the exposure of sensitive land uses or residential dwellings to delivery truck-related noise.

Off-Site Traffic Noise

Traffic generated by the Project would influence the traffic noise levels in surrounding off-site areas. To quantify the off-site traffic noise increases on the surrounding off-site areas, the changes in traffic noise levels on nine roadways segments surrounding the Project site were estimated based on the change in the average daily traffic (ADT) volumes. The traffic noise levels provided in this analysis are based on the traffic forecasts of the Project's Traffic Impact Analysis. To assess the off-site transportation CNEL noise level impacts associated with the Project, noise contours were developed based on the Project's Traffic Impact Analysis. Noise contour boundaries represent the equal levels of noise exposure and are measured in CNEL from the center of the roadway. Noise contour boundaries represent the equal levels of noise exposure and are measured in CNEL from the center of the roadway. Noise contours were developed for the following traffic scenarios:

<u>Existing Without/With Project</u>: This scenario refers to the existing present-day noise conditions, without the Project, and with the construction of the Project.

<u>Year 2020 Without/With Project</u>: This scenario refers to the background noise conditions at future year 2020 with and without the Project. The With Project scenario corresponds to Year 2020 conditions and includes all cumulative projects identified in the Traffic Impact Analysis.

<u>Year 2035 Without/With Project</u>: This scenario refers to the background noise conditions at Future Year 2035 With and Without the Project. The With Project scenario corresponds to Year 2035 conditions and includes all cumulative projects identified in the Traffic Impact Analysis.

Noise contours represent the distance to noise levels of a constant value and are measured from the center of the roadway for the 70, 65, and 60 dBA noise levels. The noise contours do not take into account the effect of any existing noise barriers or topography that may affect ambient noise levels. In addition, since the noise contours reflect modeling of vehicular noise on area roadways, the contours do not appropriately reflect noise contributions from any nearby stationary noise sources within the Project study area. **Table XII-9**, *Existing Without Project Conditions Noise Contours*, **Table XII-10**, *Existing With Project Conditions Noise Contours*, **Table XII-11**, *Year 2020 Without Project Conditions Noise Contours*, **Table XII-12**, *Year 2020 With Project Conditions Noise Contours*, **Table XII-13**, *Year 2035 Without Project Conditions Noise Contours*, **Tabled XII-14**, *Year 2035 With Project Conditions Noise Contours*, present a summary of the unmitigated exterior traffic noise levels for the nine study area roadway segments analyzed from the Without Project to the With Project conditions in each of the three timeframes: Existing, Year 2020, and Year 2035 conditions.

TABLE XII-9

Existing Condition Project Traffic Noise Level Contributions

Table XII-15, *Existing Project-Related Traffic Noise Impacts*, presents a comparison of the Existing Without and With Project conditions CNEL noise levels. Table XII-9, indicates that the exterior noise levels are expected to range from 64.9 to 71.0 dBA CNEL for Existing Without Project conditions. Table XII-10 presents the Existing With Project conditions noise level contours that are expected to range from 65.8 to 71.1 dBA CNEL. As shown on Table XII-15 the Project is expected to generate an exterior noise level increase of up to 0.9 dBA CNEL. Based on the significance criteria discussed in Table XII-1, the Project-related off-site traffic noise level increases are considered a less than significant impact for all roadway segments under Existing conditions.

Year 2020 Project Traffic Noise Level Contributions

Table XII-16, *Year 2020 Project-Related Traffic Noise Impacts*, presents a comparison of the Year 2020 Without and With Project conditions CNEL noise levels. Table XII-11 indicates that the exterior noise levels are expected to range from 68.1 to 72.5 dBA CNEL for Year 2020 Without Project conditions. Table XII-12 presents the Year 2020 With Project conditions noise level contours that are expected to range from 68.5 to 72.5 dBA CNEL. As shown on Table XII-16, the Project is expected to generate an exterior noise level increase of up to 0.5 dBA CNEL. Based on the significance criterion discussed in Table XII-1, the Project-related off-site traffic noise level increases are considered a less than significant impact for all roadway segments under Year 2020 conditions.

Year 2035 Project Traffic Noise Level Contributions

Table XII-17, *Year 2035 Project-Related Traffic Noise Impacts*, presents a comparison of the Year 2035 Without and With Project conditions CNEL noise levels. Table XII-13 indicates that the exterior noise levels are expected to range from 68.5 to 72.9 dBA CNEL for Year 2035 Without Project conditions. Table XII-14 presents the Year 2035 With Project conditions noise level contours that are expected to range from 68.9 to 72.9 dBA CNEL. As shown on Table XII-17, the Project is expected to generate an exterior noise level increase of up to 0.4 dBA CNEL. Based on the significance criterion discussed in Table XII-1, the Project-related off-site traffic noise level increases are considered a less than significant impact for all roadway segments under Year 2035 conditions.

Project Traffic Noise Level Contributions

The off-site traffic noise analysis identifies that the greatest Project-related noise level contribution of 0.9 dBA CNEL under Existing conditions would decrease 0.4 dBA CNEL under Year 2035 conditions. This shows that the Project's incremental traffic-related noise level increases at land uses adjacent to roadways conveying Project traffic would diminish over time. This occurs as the background traffic on the study area roadway segments increases and the Project represents a smaller percentage of the overall traffic volume. The off-site traffic noise analysis indicates that the Project's contributions to roadway noise levels would be less than significant.

TABLE XII-17

SOURCE: Ironwood Residential (TTM No. 37001), Noise Impact Analysis, City of Moreno Valley, prepared by Urban Crossroads, dated August 31, 2015.

On-Site Traffic Noise

An on-site exterior noise impact analysis has been completed to determine the traffic noise exposure and to identify potential necessary noise abatement measures for the Project. It is expected that the primary source of noise impacts to the Project site would be traffic noise from Ironwood Avenue. The Project would also experience some background traffic noise impacts from Nason Street, Oliver Street, and the Project's internal streets. However, due to the distance, topography and low traffic volume/speed, traffic noise from these roads would not make a significant contribution to the noise environment.

On-Site Exterior Noise Analysis

Table XII-18, *Exterior Noise Levels (CNEL)*, presents a summary of future exterior noise level impacts in the outdoor living areas (backyards) for the lots within the Project site. The on-site traffic noise level impacts indicate the lots adjacent to Ironwood Avenue would experience unmitigated exterior noise levels ranging from 63.3 to 67.0 dBA CNEL. To satisfy the City of Moreno Valley 65 dBA CNEL exterior noise level standards for residential land use, the construction of 4-foot high noise barriers for the outdoor living areas of lots 26 to 30 are required (MM NOISE-6). With the recommended noise barriers illustrated on **Figure XII-3**, *Summary of Recommendations*, the mitigated future exterior noise levels would range from 61.5 to 63.3 dBA CNEL. The Noise Impact Analysis states that the recommended noise barriers would satisfy the City of Moreno Valley 65 dBA CNEL exterior noise level standards. As such, with incorporation of MM NOISE-6, a less than significant impact to on-site exterior noise would occur.

TABLE XII-18
EXTERIOR NOISE LEVELS (CNEL)

[a] No exterior noise mitigation required to meet the City of Moreno Valley exterior noise standards.

SOURCE: Ironwood Residential (TTM No. 37001), Noise Impact Analysis, City of Moreno Valley, prepared by Urban Crossroads, dated August 31, 2015.

On-Site Interior Noise Analysis

The interior noise level is the difference between the predicted exterior noise level at the building façade and the noise reduction of the structure. Typical building construction would provide a Noise Reduction (NR) of approximately 12 dBA with "windows open" and a minimum 25 dBA NR with "windows closed." However, sound leaks, cracks and openings within the window assembly could greatly diminish its effectiveness in reducing noise. Several methods are used to improve interior NR, including weather-stripped solid core exterior doors; upgraded dual glazed windows; mechanical ventilation/air conditions; and exterior wall/roof assembles free of cut outs or openings.

To ensure the interior noise levels comply with the City of Moreno Valley 45 dBA CNEL interior noise standards, future noise levels were calculated at the first and second floor building facades. As such, a NR of up to 21.4 dBA and a windows closed condition requiring a means of mechanical ventilation (e.g. air conditions) are required for lots adjacent to Ironwood Avenue (MM NOISE-7). **Table XII-19**, *First Floor Interior Noise Impacts (CNEL)*, indicates that the future unmitigated noise levels at the first floor building façade are expected to range from 60.1 to 64.3 dBA CNEL. The first floor interior noise level analysis indicates the City of Moreno Valley 45 dBA CNEL interior noise level standards for the residential land uses could be satisfied using standard windows with a minimum sound transmission class (STC) rating of 27 for all lots adjacent to Ironwood Avenue. **Table XII-20**, *Second Floor Interior Noise Impacts (CNEL)*, indicates that the future unmitigated noise levels at the second floor building façade are expected to range from 63.0 to 66.4 dBA CNEL.

e Estimated interior noise level with minimum STC rating for all windows.

SOURCE: Ironwood Residential (TTM No. 37001), Noise Impact Analysis, City of Moreno Valley, prepared by Urban Crossroads, dated August 31, 2015.

The second floor interior noise level analysis shows that the City of Moreno Valley 45 dBA CNEL interior noise level standards for residential land use can be satisfied using standard windows with a minimum STC rating of 27 for all lots adjacent to Ironwood Avenue. The interior noise analysis indicates that with the recommended interior noise mitigation measures listed below, the Project would satisfy the City of Moreno Valley 45 dBA CNEL interior noise level standards for the Project. As such, with incorporation of MM NOISE-7, a less than significant impact to on-site interior noise would occur

Mitigation Measures

MM NOISE-6: Exterior Noise Mitigation: The Project applicant shall construct 4-foot high noise barriers for the outdoor living areas (backyards) of residential lots 26 to 30. The recommended noise control barriers shall be constructed so that the top of each wall extends to the recommended height above the pad elevation of the lit it is shielding. When the road is elevated above the pad elevation, the barrier shall extend to the recommended height above the highest point between the residential home and the road. The barriers shall provide a weight of at least 4 pounds per square foot of face area with no decorative cutouts or line-of-sight openings between shielded areas and the roadways. The noise barrier shall be constructed using one of the following materials: masonry block; stucco veneer over wood framing (or foam core), or 1-inch thick tongue and groove wood of sufficient weight per square foot; glass (1/4-inch thick), or other transparent material with sufficient weight per square feet; earthen berm; or any combination of these construction materials. The barrier must present a solid face from top to bottom. Unnecessary openings or decorative cutouts shall not be made. All gaps (except for weep holes) shall be filled with grout or caulking.

MM NOISE-7: Interior Noise Mitigation: The Project applicant shall provide the following or equivalent measures:

Windows: All windows and sliding glass doors shall be well fitted with well weather-stripped assemblies and a minimum STC rating of 27.

Doors: All exterior doors shall be well weather-stripped solid core assemblies at least 1 ¾-inch thick.

Roof: Roof sheathing of wood construction shall be well fitted or caulked plywood of at ½-inch thick. Ceilings shall be well fitted, well-sealed gypsum board of at least ½-inch thick.

Attic: Attic vents shall be oriented away from Ironwood Avenue. If such an orientation cannot be avoided, then an acoustical baffle shall be placed in the attic space behind the vents. Insulation with at least a rating of R-19 shall be used in the attic space.

Ventilation: When any habitable room is in use, arrangements shall be such that circulated air is received when any exterior door(s) or window(s) are closed. A forced air circulation system (e.g. air conditions) or active ventilation system (e.g. fresh air supply) shall be provided which satisfies the requirements of the Uniform Building Code.

b) Exposure of people to or generation of excessive groundborne vibration or groundborne noise levels?

Less Than Significant Impact.

Construction activity can result in varying degrees of ground vibration depending on the equipment and methods use, distance to the affected structures and soil type. It is expected that ground-borne vibration from Project construction activities would cause only intermittent, localized intrusion. The use of heavy construction equipment and trucks would most likely cause vibration impacts. Although all heavy mobile construction equipment has the potential of causing at least some perceptible vibration while operating close to buildings, the vibration is usually short-term and is not of sufficient magnitude to cause building damage. It is not expected that heavy equipment such as large bulldozers would operate in a distance close enough to residences to cause a vibration impact. Trucks hauling building materials to construction sites can be sources of vibration intrusion if the haul routes pass through residential neighborhoods on streets with bumps or potholes. Repairing the bumps and potholes generally eliminate the problem.

As discussed above, ground-borne vibration levels resulting from construction activities occurring within the Project were estimated by data published by the FTA. Construction activities that would have the potential to generate low levels of ground-borne vibration within the Project site including grading. Using the vibration source level of construction equipment and vibration assessment methodology published by the FTA, it is possible to estimate the Project vibration impacts. **Table XII-21**, *Construction Equipment Vibration Levels,* presents the expected Project-related vibration levels at each of the nine sensitive receiver locations.

TABLE XII-21
CONSTRUCTION EQUIPMENT VIBRATION LEVELS

Noise Receiver[a]	Distance To Construction Activity (Feet)	Receiver Vibration Levels (VdB)[b]					Potential Significant[c]

[a] Noise receiver locations are shown on Exhibit 10-A.
[b] Based on the Vibration Source Levels of Construction Equipment included on Table 6-6.
[c] Does the Peak Vibration exceed the FTA maximum acceptable vibration standard of 80 (VdB)?

SOURCE: SOURCE: Ironwood Residential (TTM No. 37001), Noise Impact Analysis, City of Moreno Valley, prepared by Urban Crossroads, dated August 31, 2015.

Based on the reference vibration levels provided by the FTA, a large bulldozer represents the peak source of vibration with a reference velocity of 87 VdB at a distance of 25 feet. At distances ranging from 140 to 1,469 feet from the Project site, construction vibration velocity levels are expected to approach 64.6 VdB, as shown on Table XII-21. Based on the FTA vibration standards, the Project site would not include or require equipment, facilities, or activities that would result in a barely perceptible human response (annoyance) for infrequent events.

Further, vibration levels at the site of the closest sensitive receiver are unlikely to be sustained during the entire construction period, but would occur rather only during the times that heavy construction equipment is operating simultaneously at a distance of 100 feet from the Project site perimeter. Moreover, construction at the Project site would be restricted to daytime hours consistent with City requirements; thereby eliminating potential vibration impacts during the sensitive nighttime hours. The results of this analysis indicate that the vibration impacts due to Project construction would be less than significant.

Post-construction on-site activities would be limited to residential uses that would not generate excessive groundborne noise or vibration. As such, ground-borne vibration and noise levels associated with Project would be less than significant.

c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?

Less Than Significant Impact. The existing noise environment in the Project area is dominated by traffic noise from nearby roadways and nearby residential activities. Long-term operation of the Project would not have a significant effect on the community noise environment in proximity to the Project site. Noise sources that would have potential noise impacts include off-site vehicle traffic, on-site parking lots, walking trails, the proposed park, and mechanical equipment (i.e., air-conditioning). Motor vehicle travel on local roadways attributable to the Project, as discussed in Response XII.a, would have a less than significant impact on community noise levels. Noise levels associated with on-site operations are also considered less than significant as discussed in Response XII.a. As such, noise impacts in this regard would be less than significant.

d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?

Less Than Significant Impact. The Project would result in a temporary increase in ambient noise near the Project site during the construction period. Construction noise impacts are discussed in Response XII.a. Noise generated by on-site construction activities would have a less than significant impact on surrounding uses.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. As discussed under Responses VIII.e and f, the Project site is not located within an airport land use plan or within two miles of a public or private airport. The nearest airport is the March Inland Port, a joint-use military and public airport, located approximately 5.15 miles southwest of the Project site. Therefore, construction or operation of the Project would not expose people to excessive airport related noise levels. As such, no impacts would occur.

f) For a project within the vicinity of a private airstrip, heliport or helistop, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. The Project site is not located within the vicinity of a private airstrip, heliport or helistop. Therefore, the Project would not expose people residing or working in the Project area to excessive noise levels from such uses. No impact would occur in this regard.

XIII. Population and Housing

Would the Project:

a. Induce substantial population growth in an area either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Less Than Significant Impact. The Project would introduce up to 181 single-family residential units that would generate a new residential population of up to approximately 708 persons.[17] The estimated 708 persons increase in the City's population would represent 0.35 percent increase to the existing population (202,976 persons) in the City.[18] Therefore, the new residents would not result in a substantial increase in the local population.

According to the Southern California Association of Governments (SCAG), the City's forecast population and household growth of 67,800 persons and 21,700 households is predicted between 2008 and 2035.[19] The estimated 708 Project generated increase in population and the proposed 181 single-family residential units are within SCAG's growth forecast. The City of Moreno Valley Housing Element 2014-2021 indicated the total housing growth need for the City during this planning period is 6,169 units.[20] The 6,169 units represents the City's share of the Regional Housing Needs Assessment (RHNA) approved by SCAG as a response to State mandated housing planning. As such, the 181 single-family residential units would contribute towards the

[17] 181 residential units X 3.91 persons = 708 residents (per the average household size of 3.91 persons/household for the City of Moreno Valley, U.S. Census Bureau, 2010 Census, http://www.census.gov/quickfacts/Table/PST045215/0649270,00, accessed May 2016.)

[18] U.S. Census Bureau, 2010 Census, population estimates as of July 1, 2014, http://www.census.gov/quickfacts/Table/PST045215/0649270,00, accessed May 2016.

[19] 2012-2035 Regional Transportation Plan/Sustainable Communities Strategy, Table 18, Proposed 2012-2035 RTP/SCS Growth Forecast, page 35, prepared by Southern California Association of Governments, adopted April 2012, http://rtpscs.scag.ca.gov/Documents/2012/final/SR/2012fRTP_GrowthForecast.pdf, accessed May 2016 and the Culver City October 2013-2021 Housing Element, https://www.culvercity.org/~/media/Files/Planning/GeneralPlan/2013-2021_HousingElement.ashx, accessed May 2016.

[20] City of Moreno Valley Housing Element 2014-2021, dated February 11, 2014, http://www.moreno-valley.ca.us/city_hall/general-plan/06gpfinal/gp/8-housing.pdf, accessed May 2016.

RHNA of the City. Furthermore, the Project would be located in an area already served by existing infrastructure and anticipated within applicable City infrastructure plans (i.e., roadways, utility lines, etc.). As such, the Project would not induce substantial population growth in the area either directly or indirectly and impacts would be less than significant.

b. Displace substantial numbers of existing housing necessitating the construction of replacement housing elsewhere?

c. Displace substantial numbers of people necessitating the construction of replacement housing elsewhere?

No Impact (b-c). The Project site consists of one single-family residential designated parcel (APN 473-160-004-5). There is no street address associated with the property, which is currently vacant land, though several unimproved trails/dirt roads traverse the property. As such, Project implementation would not displace existing housing or people. Therefore, no impact would occur to existing housing or local populations such that construction of replacement housing would be necessary.

XIV. Public Services

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, the need for new or physically altered governmental facilities, construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

a. Fire protection.

Less Than Significant Impact With Mitigation Incorporated. Fire protection for the City and the Project site is provided by the Moreno Valley Fire Department (MVFD), which is a part of the California Department of Forestry and Fire Protection (CAL FIRE)/Riverside County Fire Department's (RCFD) regional fire protection organization. The MVFD is the primary response for fires, emergency medical services, hazardous materials, incidents, traffic accidents, terrorist acts, catastrophic weather events, and technical rescues for the City. The MVFD also provides a full range of fire prevention services including public education, code enforcement, plan check and inspection services for new and existing construction, and fire investigation.[21]

The MVFD consists of the fire operations division, fire prevention bureau, and the Office of Emergency Management (OEM) allowing for a well-coordinated response to both natural and man-made disaster. The fire operations division is the largest division within the MVFD which includes 72 sworn personnel and two non-sworn personnel. The main mission of the fire operations division is to respond to emergency calls for service from the community and provide quality emergency services while protecting the life and property of the residents of the City.

21 City of Moreno Valley Fire Department Website, http://www.moreno-valley.ca.us/city_hall/departments/fire/index-fire.shtml, accessed July 2016.

Further support activities conducted by the fire operations division include fire company annual business/commercial fire inspections; development and management of the MVFD budget; coordinating and responding to non-emergency requests for MVFD services from both the City Council Office as well as the public; long range planning for the MVFD; and applying for assistance to firefighters grant and other grant opportunities. The City's Fire Marshal, under direction of the City's Fire Chief, manages the fire prevention bureau. The fire prevention bureau is the second largest division of the MVFD which includes five non-sworn personnel and six non-sworn part time personnel. The bureau also has five defunded positions due to budget constraints. The fire prevention bureau conducts fire and life safety inspections as well as plan reviews for new construction, existing building, and special events. The bureau also oversees the City's hazard abatement program and the multi-family residential inspection program to ensure multi-housing units receive state mandated annual inspections. The MVFD's OEM is responsible for minimizing the impact of natural and man-made disaster by establishing readiness through City-wide prevention, preparedness, response, recover and mitigation. This includes coordinating and conducting drills for the City's Emergency Operations Center (EOC) as well as providing a wide variety of training to both employees including community emergency response team (CERT) training, terrorism awareness training, and emergency preparedness training. As part of the MVFD as well as the RCFD, it is critical that the City's OEM collaborates projects, emergency management grants, emergency management exercises, and the management of declared local disasters with the RCFD Office of Emergency Services.[22] **Table XIV-1**, *MVFD Fire Stations*, provides information on the location, type of equipment, and the approximate distance/direction from the Project site for the City's seven fire stations. As shown in Table XIV-1, the nearest MVFD fire stations are Fire Station 58 and Fire Station 99, located approximately 0.80 miles southeast and 1.50 miles south of the Project site, respectively.

Construction activities associated with the Project may temporarily increase the demand for fire protection and emergency medical services, and may cause the occasional exposure of combustible materials, such as wood, plastics, sawdust, covering and coatings, to heat sources including machinery and equipment sparking, exposed electrical lines, welding activities, and chemical reactions in combustible materials and coatings. However, in compliance with the requirements of the California Occupational Safety and Health Administration (OSHA), all construction managers and personnel would be trained in fire prevention and emergency response. Further, fire suppression equipment specific to construction would be maintained on the Project site. As applicable, construction activities would be required to comply with the 2013 CBC; the 2013 California Fire Code (CFD); and Title 8, Buildings and Construction, Chapter 8.36, International Fire Code (herein referred to as the City's "Fire Code"), of the MVMC.

[22] Moreno Valley Fire Department Strategic Plan 2012-2022, prepared by Moreno Valley Fire Department, dated December 2011, http://www.moreno-valley.ca.us/city_hall/departments/fire/pdfs/fireStrat-plan0612.pdf, accessed July 2016.

TABLE XIV-1
MVFD FIRE STATIONS

Fire Station	Address	Daily Personnel/Apparatus Equipment	Approximate Distance/Direction from Project site[a]
Fire Station 58 (Moreno Beach)	28040 Eucalyptus Avenue	3 firefighters/1 engine, 1 rescue engine	0.80 miles southeast
Fire Station 99 (Morrison Park)	13400 Morrison Street	3 firefighters, 1 battalion chief/1 engine, 1 staff vehicle	1.50 miles south
Fire Station 2 (Sunnymead)	24935 Hemlock Avenue	7 firefighters/1 engine, 1 aerial ladder truck, 1 urban search & rescue trailer, 1 rescue squad	2.10 miles west
Fire Station 48 (Sunnymead Ranch)	10511 Village Road	3 firefighters/1 engine	3.75 miles northwest
Fire Station 65 (Kennedy Park)	15111 Indian Avenue	3 firefighters/1 engine, 1 reserve engine	4.00 miles southwest
Fire Station 91 (College Park)	16110 Lasselle Street	7 firefighters/1 engine, 1 rescue squad	4.11 miles south
Fire Station 6 (Towngate)	22250 Eucalyptus Avenue	3 firefighters/1 engine, 1 reserve aerial ladder truck, 1 reserve engine	4.88 miles west

[a] Approximate distance/direction from Project site in miles is a straight line distance, not a drive distance.

Sources: City of Moreno Valley Fire Department Website, Fire Station Locations, http://www.moreno-valley.ca.us/city_hall/departments/fire/fire-locs.shtml, accessed July 2016 and Abdul R. Ahmad, Fire Chief, Moreno Valley Fire Department, Letter Correspondence, dated July 25, 2016.

Construction activities may involve temporary lane closures of right-of-way frontage improvements and utility construction. Construction-related traffic could result in increased travel time due to flagging or stopping of traffic to accommodate trucks entering and existing the Project site during construction. As such, construction activities could increase response times for emergency vehicles to local business and/or residences within the Project vicinity, due to travel time delays to through traffic. However, the impacts of such construction activity would be temporary and on an intermittent basis. Further, a Construction Traffic Management Plan for the Project would be prepared in order to minimize disruptions to through traffic flow, maintain emergency vehicle access to the Project site and neighboring land uses, and schedule worker and construction equipment delivery to avoid peak traffic hours (MM PS-1). As a component of the Construction Traffic Management Plan, the times of day and locations of all temporary lane closures would be coordinated so that they do not occur during peak periods of traffic congestion, to the extent feasible. Truck routes for material and equipment deliveries, as well as for soil export and disposal, would require approval by the City's Department of Public Works prior to construction activities. The Construction Traffic Management Plan would be prepared for review and approval by the Department of Public Works prior to commencement of any construction activity. These practices, as well as techniques typically employed by emergency vehicles to clear or circumvent traffic, are expected to limit the potential for significant delays in emergency response times during Project construction. Therefore, impacts regarding emergency response times and emergency access during construction would be less than significant with the incorporation of the Project's Construction Traffic Management Plan (MM PS-1).

Overall, with compliance to applicable MVFD requirements and implementation of the prescribed mitigation measure, and due to the temporary nature of the necessary construction activities, construction impacts on fire protection and emergency medical services would be less than significant.

Operational activities associated with the Project would increase demand for fire protection and emergency medical services. As discussed in Section VIII, *Population and Housing*, the estimated 708 increase in population generated by the Project would represent a 0.35 percent increase in the existing population in the City. The estimated Project generated increase in population and the proposed 181 single-family residential units are within SCAG's growth forecast. According to the MVFD, the proposed structures within the Project site are considered to be in both the high fire risk category and non-fire high risk category. As mentioned above, the nearest MVFD fire station is Fire Station 58 located approximately 0.80 miles southeast of the Project site, or approximately two miles utilizing existing roads. Further, the MVFD participates in the regionalized cooperative fire protection delivery system of CAL FIRE/RCFD. This system provides assurances that the nearest and most appropriate resources are dispatched to all requests for fire protection and emergency medical services regardless of the jurisdiction. The MVFD's goal is for an engine company to arrive on scene within four minutes of travel time to fire incidents and emergency medical aid calls 90 percent of the time.[23] A complete first alarm fire assignment is to arrive on scene within eight minutes of travel time 90 percent of the time.[24] The estimated travel time from Fire Station 58 is approximately five minutes for the first arriving engine for any emergency incidents and a six minute response time for the first arriving aerial ladder truck company.[25] Emergency vehicles and fire access to the Project site is currently and would continue to be provided via Ironwood Avenue, Nason Street, and Oliver Street. The primary driveway for the Project site would be located on Ironwood Avenue about mid-block between Nason Street and Oliver Street, immediately opposite from and north of Lantz Lane. Secondary site access would be provided by driveways on both Nason Street and Oliver Street just north of Ironwood Avenue. According to the MVFD, the Department would be able to mitigate an emergency requiring the specialized services of either a fire engine or an aerial ladder truck with its current equipment and three nearest fire stations (i.e., Fire Stations 58, 99, and 2) in a timely manner.[26] The Project would not impact the MVFD fire protection services and service levels would be sufficient without the addition of equipment and/or fire station locations.[27] The Project would be designed, constructed and maintained in accordance with MVFD's development and construction requirements to minimize the risks associated with fires. Based on the considerations above, the increase in population from the Project would not be substantial enough to significantly impact fire and emergency services on a daily or annual basis. No new fire protection facilities would be necessary as a result of Project implementation.

---

25 Ibid.
26 Ibid.
27 Ibid.

The Project site is susceptible to wildland fire hazards and is located in a VHFHSZ. Section VIII, *Hazards and Hazardous Materials*, Response VIII.h, above, discusses the potential for impacts associated with wildland fires. As discussed in Response VIII.h, any significant risk of loss, injury or death involving wildland fires, would be minimized to the maximum extent feasible through implementation of a Project-specific Fuel Modification Plan that would be subject to review and approval by the MVFD. As importantly, because the existing site is not currently maintained as a fuel modification area and consists of uncontrolled vegetation, existing single-family residences to the south and west of the Project site would gain increased protection from the spread of fire. As such, the Project would reduce the threat of wildland fires to people and structures in the Project vicinity and thus, lessen the potential demand for fire services needed in the event of a wildland fire.

Another important component of ensuring fire protection services is the availability of adequate firefighting water flow. Fire flow requirements are closely related to land use. The quantity of water necessary for fire protection varies with the type of development, life hazard, occupancy, and the degree of fire hazards. The ability of the water service provider to provide water supply to the Project is discussed in Section XVII, *Utilities and Service Systems*, below. As discussed therein, adequate water supply would be available to serve the Project site, including minimum fire flow requirements.

Overall, given the Project's conformance to expected growth scenarios for the City, the existing number of MVFD staff, and the Project's planned on-site fire protection design features consistent with applicable regulatory requirements of the CBC, CFD, the MVMC, and the MVFD, the Project is not expected to be beyond the scope of available fire services. Accordingly, the MVFD's response times would not be substantially changed such that response time objectives are compromised in any significant manner. Further, no new or expanded fire facilities would be constructed as a result of the Project. Nonetheless, to further ensure impacts to fire protection services and facilities would be less than significant, the Project applicant shall comply with Title 3, Revenue and Finance, Chapter 3.38, Residential Development Impact Fees, Section 3.38.060, Fire Facilities Residential Development Impact Fees, of the MVMC. Compliance would offset the incremental cost of the increased demand to maintain adequate fire protection facilities and equipment, and/or personnel, resulting from the Project by payment of development fees per the MVMC. As such, impacts to fire protection services and facilities would be less than significant.

Mitigation Measures

MM PS-1: Construction Traffic Management Plan - A Construction Traffic Management Plan shall be developed by the Project contractor in consultation with the Project's traffic and/or civil engineer and approved by the City of Moreno Valley Department of Public Works prior to issuance of any Project demolition, grading or excavation permit. The Construction Traffic Management Plan shall also be reviewed and approved by the MVFD. The City of Moreno Valley Department of Public Works reserves the right to reject any engineer at any time and to require that the Plan be prepared by a different engineer. The construction management plan shall include, at a minimum, the following.

- The name and telephone number of a contact person who can be reached 24 hours a day regarding construction traffic complaints or emergency situations;
- An up-to-date list of local police, fire, and emergency response organizations and procedures for the continuous coordination of construction activity, potential delays, and any alerts related to unanticipated road conditions or delays, with local police, fire, and emergency response agencies. Coordination shall include the assessment of any alternative access routes that might be required through the site, and maps showing access to and within the site and to adjacent properties;
- Procedures for the training and certification of the flag persons used in implementation of the Construction Traffic Management Plan;
- The location, times, and estimated duration of any roadway closures, traffic detours, use of protective devices, warning signs, and staging or queuing areas;
- Identify the locations of the off-site truck parking and staging and provide measures to ensure that trucks use the specified haul route, and do not travel through nearby residential neighborhoods or schools;
- Schedule vehicle movements to ensure that there are no vehicles waiting off-site and impeding public traffic flow on surrounding streets;
- Establish requirements for loading/unloading and storage of materials on the Project site;
- During construction activities when construction worker parking cannot be accommodated on the Project site, a Construction Worker Parking Plan shall be prepared which identifies alternate parking location(s) for construction workers and the method of transportation to and from the Project site (if beyond walking distance) for approval by the City of Moreno Valley. The Construction Worker Parking Plan shall prohibit construction worker parking on residential streets and prohibit on-street parking, except as approved by the City.

b. Police protection.

Less Than Significant Impact With Mitigation Incorporated. Police protection for the City and the Project site is provided by the City of Moreno Valley Police Department (MVPD), which contracts with the Riverside County Sheriff's Department (RCSD). The MVPD serves a population of approximately 207,000 persons. Currently, the MVPD consists of 199 full time employees which includes 150 sworn officers and 49 non-sworn (i.e., front office staff, support personnel). The MVPD station is located 22850 Calle San Juan de Los Lagos, approximately 4.7 miles southwest of the Project site. At this time, there are no planned improvements for the MVPD facilities. As the City contracts their police protections services with the RCSD, the City has access to all of the RCSD services which include dispatch, a specials weapons and tactics (SWAT) team, a bomb squad, a dive team, off-highway enforcement team, and a helicopter. [28]

---

28 Deputy M. Reilly #4695, Community Services Unit, Moreno Valley Police Department, letter correspondence, dated June 7, 2016.

During construction, equipment and building materials could be temporarily stored on-site, which could result in theft, graffiti, and vandalism. However, the Project site is located in area with moderate vehicular activity from Ironwood Avenue. In addition, the construction site would be fenced along the perimeter, with the height and fence materials subject to review and approval by the City's Department of Public Works. Temporary lane closures may be required for right-of-way frontage improvements and utility construction. However, these closures would be temporary in nature and in the event of partial lane closures, both directions of travel on area roadways and access to the Project site would be maintained. Emergency vehicle drivers have a variety of options for advoiding traffic, such as using their sirens to clear a path of travel or driving in lanes of opposing traffic. Further, as discussed above, a Construction Traffic Management Plan for the Project would be prepared in order to minimize disruptions to through traffic flow, maintain emergency vehicle access to the Project site and neighboring land uses, and schedule worker and construction equipment delivery to avoid peak traffic hours (MM PS-1). Given the visibility of the Project site from adjacent roadways and surrounding properties, existing police presence in the City, maintained emergency access, construction fencing, and incorporation of MM PS-1, the Project is not expected to increase demand on existing police services to a meaningful extent. Therefore, the Project would have a less than significant temporary impact on police protection during the construction phases.

Operational activities associated with the Project would increase demand for police protection services. As discussed above, the estimated 708 increase in population generated by the Project would represent a 0.35 percent increase in the existing population in the City. The estimated Project generated increase in population and the proposed 181 single-family residential units are within SCAG's growth forecast.

With development on the site, patrol routes in the area would be slightly modified to include the site, as necessary. To ensure that police protection considerations are incorporated into the Project design, prior to the issuance of a building permit for the Project, the MVPD would be provided the opportunity to review and comment upon building plans in order to facilitate opportunities for improved emergency access and response; ensure the consideration of design strategies that facilitate public safety and police surveillance; and other specific design recommendations to enhance public safety and reduce potential demands upon police protection services. Upon initial review of the Project Description, the MVPD has provided the following recommendations: address numbers on all buildings/residences shall be placed in the most visible location on the building and illuminated as well as painted on the curb in front of each residence; the parking lots, walking trails, street and buildings shall have appropriate lighting and shadows casted by landscaping and trees shall be minimized on walkways and public areas; a City wide camera system shall be installed at the corner of Nason Street and Ironwood Avenue; if one or more community mailbox areas are proposed, these areas shall have appropriate lighting and be located in a highly visible public location and designed to resist mail theft; and speed bumps, dips, or similar traffic calming measures shall be constructed on the long south main street.[29]

Overall, given the Project's conformance to expected growth scenarios for the City, the existing number of police staff, and incorporation of the MVPD's recommendations, the Project is not expected to be beyond the scope of available police services. Accordingly, the MVPD's response times would not be substantially changed such that response time objectives are compromised in any significant manner. Further, according to the MVPD, Project implementation would not require the physical expansion of an existing police station or new police station, or additional staffing to the police protection facilities serving the Project site.[30] Nonetheless, to further ensure impacts to police protection services and facilities would be less than significant, the Project applicant shall comply with Title 3, Revenue and Finance, Chapter 3.38, Residential Development Impact Fees, Section 3.38.070, Police Facilities Residential Development Impact Fees, of the MVMC. Compliance would offset the incremental cost of the increased demand to maintain adequate police protection facilities and equipment, and/or personnel, resulting from the Project by payment of development fees per the MVMC. As such, impacts to police protection services and facilities would be less than significant.

Mitigation Measures

Refer to MM PS-1.

c. Schools.

Less Than Significant Impact. The Project would be served by the Moreno Valley Unified School District (MVUSD). The MVUSD includes 23 elementary schools, 6 middle schools, 4 high schools, and 9 specialized schools. The Project site is located within the attendance boundaries of the Cloverdale Elementary School, Palm Middle School, and Valley View High School. The Cloverdale Elementary School, transitional kindergarten through fifth grade (TK-5), is located at 12050 Kitching Street, approximately 1.5 miles west of the Project site. Cloverdale Elementary School currently has 12 portable classrooms and 22 permanent classrooms with an existing enrollment of 770 students and a projected enrollment of 800 students with a design capacity of 850 students during the school year 2019/2020 (Project buildout year 2020). The Palm Middle School, (grades 6-8), is located at 11900 Swanson Avenue, approximately 1.25 miles west of the Project site. Palm Middle School currently has 5 portable classrooms and 51 permanent classrooms with an existing enrollment of 1,243 students and a projected enrollment of 1,300 students with a design capacity of 1,465 students during the school year 2019/2020. The Valley View High School, (grades 9-12), is located at 13135 Nason Street, approximately 1.2 miles south of the Project site. Valley View High School currently has 27 portables classrooms and 73 permanent classrooms with an existing enrollment of 2,636 students and a projected enrollment of 2,636 students with a design capacity of 2,638 students during the school year 2019/2020. The MVUSD is in the process of construction an additional high school which would

---

29 Deputy M. Reilly #4695, Community Services Unit, Moreno Valley Police Department, letter correspondence, dated June 7, 2016.

30 Ibid.

serve the Project area. The land has been purchased and due diligence is currently being performed. The MVUSD's goal is to have the new high school ready for occupancy by year 2020, with a capacity of 2,400 students. Initial enrollment would be grade 9 only; second year grades 9 and 10; third year grades 9-11; and forth year grades 9-12.[31]

The MVUSD created and adopted the 2013/2014 Facilities Master Plan which identified improvements, dependent upon available funding, for schools within the MVUSD including the Cloverdale Elementary School, Palm Middle School, and Valley View High School. Improvements for the Cloverdale Elementary School include the following: removal of all 12 portable classrooms and one portable restroom building; construction of a 2-story permanent classroom building (10 classrooms and restrooms) to replace the 12 portable classrooms and one portable restroom building; addition of staff toilets to Classroom Building C and D; and 21st century technology upgrades. Improvements for the Palm Middle School include the following: parking expansion and reconfiguration; separate bus and parent drop off; replacement of drinking fountains; upgrade exterior fencing and gates; new enclosed gymnasium to replace existing pavilion; food service and locker room transformation; and classroom building transformation including science classrooms (interior finishes, ceilings and energy efficient lighting). Improvements for the Valley View High School including the following: classroom buildings transformation including science and special education (SDC Therapy) classrooms; new defined and secured point of entry; transformation of gymnasium, locker rooms and weight rooms; food service area transformation; new girls' softball field; new lunch shelter; new guard shack at main parking lot entrance; removal of portable classrooms after construction of the new high school (high school No. 5); new culinary arts program; and 21st century upgrades.[32]

Project operation would incrementally increase demand for school services. The estimated 708 increase in population generated by the Project would represent a 0.35 percent increase in the existing population in the City. The Project is estimated to generate 55 elementary school students, 27 middle school students, and 36 high school students for a total of 118 students.[33] Project impacts related to schools would be addressed through payment of required Senate Bill 50 (SB 50) development fees pursuant to Section 65995 of the California Government Code. In accordance with SB 50, the payment of these fees are deemed to provide full and complete mitigation for impacts to school facilities. Therefore, impacts to school services and facilities would be less than significant.

32 Sergio San Martin, Director, Facilities Planning and Development, MVUSD, letter correspondence dated May 18, 2016.

33 Student generation rates sourced from the Fee Justification Report for New Residential & Commercial/Industrial Development, dated April 21, 2016. Elementary: 0.3019 X 181 single-family units = 55 elementary school students. Middle: 0.1500 X 181 single-family units = 27 middle school students. High School: 0.1973 X 181 single-family units = 36 high school students. 55 + 27 + 36 = 118 total students. .Sergio San Martin, Director, Facilities Planning and Development, MVUSD, letter correspondence dated May 18, 2016.

d. Parks.

Less Than Significant Impact. The Moreno Valley Parks and Community Services Department (Parks Department) manages and provides maintenance services for the City's parks and facilities and provides a wide range of recreation activities, programs and services throughout the community. The City has two golf courses including the 27-hole Moreno Valley Ranch Golf Club. The City is the home to the 8,000-acre Lake Perris State Park. The State Park offers boating, fishing and camping facilities. The City's park system includes 32 parks and/or joint-use facilities (531.66 maintained acres) and includes a 9-hole executive golf course, 24 multi-use sports fields, 11 tennis courts, nine basketball courts, 28 play apparatus, and three recreation centers.[34] At this time, there are no planned improvements to the parks and recreational facilities in the service area of the Project site.[35]

The Project site is located within the vicinity of six park facilities. **Table XIV-2**, *City of Moreno Valley Parks Facilities Located in the Vicinity of the Project Site*, provides information on the park/facility, location, size, park amenities/activities, and the approximate distance/direction from the Project site.

The proposed Ironwood Village Park, which would be a private facility for exclusive use by Ironwood Village residents, would be located centrally within the Project site allowing residents to walk to the park safely using the Project-wide interconnected trails system. The park may include, but is not limited to, the following features and amenities: bench seating, an open play area, Bocce ball courts, picnic area and a tot lot "children's play equipment". The actual park amenities would be decided at time of buildout by the developer with approval from the City of Moreno Valley. Please refer to **Figure A-6**, *Conceptual Park Plan*, in the Project Description, for a conceptual illustration of the proposed on-site park.

The Project would include multi-use trails that would interconnect the Project neighborhoods to the interior open spaces and on-site park, as well as to the future City of Moreno Valley's off-site trails system, as illustrated in **Figure A-7**, *Trail Connection Map*, of the Project Description. There would be "nodes of interest" located along the central trail that leads from north to south to and from the proposed Ironwood Village Park. There would also be trail connections onto the central trail from trails leading off the adjacent cul-de-sacs. The central trail would provide areas to rest and enjoy the outdoors within walking distance of on-site residents' homes. Trails would provide connections through the central open space area and would branch off east and west along the north-south-oriented open space area, with additional trails connecting to neighborhood streets, as well as other off-site trails. All the trails would loop throughout the Project, which would allow pedestrian connections to the park and the proposed City Trails to the north, east and west of the Project site. The trails would be built per City of Moreno Valley Standards.

City of Moreno Valley Parks, Recreation and Open Space Comprehensive Master Plan, Table 3.1, Moreno Valley Parks, dated September 2010.
Tony Hetherman, Parks Projects Coordinator, Parks & Community Services, City of Moreno Valley, phone correspondence on June 8, 2016.

According to the Parks Department, Project implementation would not require the physical expansion of an existing park or new park facilities serving the Project site.[36] Nonetheless, to further ensure impacts to parks would be less than significant, the Project applicant would be responsible for meeting the parkland dedication or fee requirements as required by the Quimby Act and Title 3, Revenue and Finance, Chapter 3.38, Residential Development Impact Fees, Section 3.38.080, Park Improvements Residential Development Impact Fees, Section 3.38.090, Community/Recreation Center Residential Development Impact Fees, and Chapter 3.40, Dedication of Land for Park Facilities and Payment of in-lieu fees, of the MVMC. Compliance would offset the incremental cost of the increased demand to maintain adequate park facilities and equipment, resulting from the Project by parkland dedication or payment of development fees per the MVMC. As such, impacts to parks services and facilities would be less than significant.

36 Tony Hetherman, Parks Projects Coordinator, Parks & Community Services, City of Moreno Valley, phone correspondence on June 8, 2016.

e. Other public facilities.

Less Than Significant Impact. The Moreno Valley Public Library (MVPL) provides library services to the City and the Project site. The MVPL is located at 25480 Alessandro Boulevard, approximately 2.5 miles southwest of the Project site. The 15,000 square-foot Library includes a collection size of 82,405 items. The MVPL includes 23 full-time employees with an average of 32 volunteers per month.[37]

To address potential impacts to libraries, the Project applicant shall comply with Title 3, Revenue and Finance, Chapter 3.38, Residential Development Impact Fees, Section 3.38.100, Library Facilities and Materials Residential Development Impact Fees, of the MVMC. Compliance would offset the incremental cost of the increased demand to maintain adequate library facilities and materials, and/or personnel, resulting from the Project by payment of development fees per the MVMC. Further, according to the MVPL, Project implementation would not require the physical expansion of an existing library or a new library serving the Project site.[38] As such, impacts to library services and facilities would be less than significant.

The Project residents would utilize and, to some extent, impact the maintenance of public facilities, including roads. However, implementation of the Project would result in an inconsequential increase of 708 persons (0.35 percent population increase) in the type or frequency of uses of area governmental services and roadways. Therefore, development of the Project would not significantly increase the use of government services beyond current levels. Construction activities would result in a temporary increased use of the surrounding roads. However, the use of such facilities would not require maintenance of such facilities beyond normal requirements. The Project applicant would need to pay all City and/or County impact fees, as applicable, including the City of Moreno Valley Development Impact Fee (DIF) and the Transportation Uniform Mitigation Fee (TUMF) as described in Section XVI, *Transportation/Traffic*, below. Overall, less than significant impacts to governmental services, including roads, would occur.

XV. Recreation

a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Less Than Significant Impact (a-b). As described under Response XIV.d, operational activities associated with the Project would increase demand for parks services. However, the Project would include the Ironwood Village Park, multi-use trails that would interconnect the Project

---

37 Terrie Stevens, Administrative Services Director, Administrative Services, City of Moreno Valley, email correspondence on July 18, 2016.
38 Ibid.

neighborhoods to the interior open spaces and on-site park, as well as to the future City of Moreno Valley's off-site trails system. As such, the demand or use of nearby park facilities may be reduced at times by the Project. Nonetheless, to offset the Project's demand on park facilities and services, the Project applicant would be responsible for meeting the parkland dedication or fee requirements pursuant to the Quimby Act and Title 3, Revenue and Finance, Chapter 3.38, Residential Development Impact Fees, Section 3.38.080, Park Improvements Residential Development Impact Fees, Section 3.38.090, Community/Recreation Center Residential Development Impact Fees, and Chapter 3.40, Dedication of Land for Park Facilities and Payment of in-lieu fees, of the MVMC. Therefore, with the proposed park, trails, and open space features and parkland dedication or payment of development fees, the Project would not substantially deteriorate, or accelerate the deterioration of recreational facilities or resources. Impacts would be less than significant in this regard.

XVI. Transportation/Traffic

The following discussion, is based, in part, on the Ironwood Residential (TTM No. 37001) Traffic Impact Analysis City of Moreno Valley *(herein referred to as the "Traffic Impact Analysis"), prepared by Urban Crossroads, dated March 9, 2016. The Traffic Impact Analysis was conducted using procedures and criteria adopted by the City's Traffic Study Guidelines, and addressed the Project's trip generation and potential impacts to the surrounding roadway network. The Traffic Impact Analysis evaluates six Project scenarios: Existing (2015), Existing With Project (2015), Opening Year Cumulative Without Project (2020), Opening Year Cumulative With Project (2020), Horizon Year Without Project (2035), and Horizon Year With Project (2035). Future conditions take into account the potential development of 252 related projects in the general Project vicinity, as identified by the City. The Traffic Impact Analysis is provided in Appendix J.*

Would the Project:

Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?

Less Than Significant Impact With Mitigation Incorporated. Seven (7) study area intersections were selected for evaluation in consultation with the City's Traffic Engineering Division based on the City's traffic impact analysis methodology that requires analysis of intersection locations with 50 or more peak hour project trips; refer to **Table XVI-1**, *Study Area Intersections* and **Figure XVI-1**, *Intersection Location Map*.

TABLE XVI-1

Ten (10) study area roadways were selected for evaluation based on a review of the key roadway segments in which the Project is anticipated to contribute 50 or more peak hour trips; refer to **Table XVI-2**, *Study Area Roadways* and Figure XVI-1.

Level of Service Methodology

Traffic operations of roadway facilities are described using the term "level of service" (LOS). LOS is a qualitative description of traffic flow based on several factors such as speed, travel time, delay, and freedom to maneuver. Six levels are typically defined ranging from LOS "A", representing completely free-flow conditions, to LOS "F", representing breakdown in flow resulting in stop-and-go conditions. LOS "E" represents operations at or near capacity, an unstable level where vehicles are operating with the minimum spacing for maintaining uniform flow.

Intersection Capacity Analysis Methodology

The definitions of LOS for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The *Highway Capacity Manual* (HCM) 2010 methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. The HCM uses different procedures depending on the type of intersection control.

Signalized Intersections

The City requires signalized intersection operations analysis based on the methodology described in Chapter 18 and Chapter 31 of the HCM 2010. Intersections LOS operations are based on an intersection's average control delay. Control delay includes initial deceleration delay, queue move-up-time, stopped delay, and final acceleration delay. For signalized intersections LOS is directly related to the average control delay per vehicle and is correlated to a LOS designation as described in **Table XVI-3**, *Signalized Intersection LOS Thresholds.*

TABLE XVI-3
SIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay (Seconds) V/C ≤ 1.0	Level of Service V/C ≤ 1.0	Level of Service V/C > 1.0
Operations with very low delay occurring with favorable progression and/or short cycle length.	0 to 10.00	A	F
Operations with low delay occurring with good progression and/or short cycle lengths.	10.01 to 20.00	B	F
Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.01 to 35.00	C	F
Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.01 to 55.00	D	F
Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.01 to 80.00	E	F
Operations with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths.	80.01 and up	F	F

SOURCE: HCM 2010, Chapter 18; Ironwood Residential (TTM No. 37001) Traffic Impact Analysis City of Moreno Valley, *prepared by Urban Crossroads, dated March 9, 2016.*

Unsignalized Intersections

The City requires the operations of unsignalized intersections to be evaluated using the methodology described in Chapters 19, 20, and 32 of the HCM 2010. The LOS rating is based on the weighted average control delay expressed in seconds per vehicle; refer to **Table XVI-4**, *Unsignalized Intersection LOS Thresholds.* At two-way or side-street stop-controlled intersections, the LOS criteria apply to each lane on a given approach and to each approach on the minor street. LOS is not calculated for major street approaches or for the intersection as a whole. For all-way stop controlled intersections, LOS is based solely on control delay for assessment of LOS at the approach and intersection levels.

TABLE XVI-4
UNSIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay Per Vehicle (Seconds)	Level of Service V/C ≤ 1.0	Level of Service V/C > 1.0
Little or no delays.	0 to 10.00	A	F
Short traffic delays.	10.01 to 15.00	B	F
Average traffic delays.	15.01 to 25.00	C	F
Long traffic delays.	25.01 to 35.00	D	F
Very long traffic delays.	35.01 to 50.00	E	F
Extreme traffic delays with intersection capacity exceeded.	50.00	F	F

SOURCE: HCM 2010, Chapter 19, 20, and 32; Ironwood Residential (TTM No. 37001) Traffic Impact Analysis City of Moreno Valley, *prepared by Urban Crossroads, dated March 9, 2016.*

Roadway Segment Capacity Analysis Methodology

Roadway segment operations have been evaluated using the City's daily roadway capacity values provided in the *City of Moreno Valley Transportation Engineering Division Traffic Impact Analysis (TIA) Preparation Guide* (2007). Per the City's traffic impact analysis guidelines, roadway segments within the study area should maintain the LOS capacities illustrated in **Figure XVI-2**, *City of Moreno Valley Level of Service (LOS) Standards*. **Table XVI-5**, *Roadway Segment Capacity LOS Thresholds*, summarizes the daily roadway capacities for each type of roadway. These roadway capacities are "rule of thumb" estimates for planning purposes and are affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic) and pedestrian bicycle traffic. As such, where the ADT-based roadway segment analysis indicates a deficiency (unacceptable LOS), a review of the more detailed peak hour intersection analysis and progression analysis are undertaken. The more detailed peak hour intersection analysis explicitly accounts for factors that affect roadway capacity. Therefore, roadway segment widening is typically only recommended if the peak hour intersection analysis indicates the need for additional through lanes.

TABLE XVI-5
ROADWAY SEGMENT CAPACITY LOS THRESHOLDS

	Level of Service Capacity[a]				
Receptor Location	**A**	**B**	**C**	**D**	**E**
Six Lane Divided Arterial	33,900	39,400	45,000	50,600	56,300
Four Lane Divided Arterial	22,500	26,300	30,000	33,800	37,500
Four Lane Undivided Arterial	15,000	17,500	20,000	22,500	25,000
Two Lane Industrial Collector	7,500	8,800	10,000	11,300	12,500
Two Lane Undivided Residential	N/A	N/A	N/A	N/A	2,000

[a] These maximum roadway capacities have been extracted from the City of Moreno Valley's Transportation Division's TIA Preparation Guidelines (August 2007). These roadways capacities are "rule of thumb" estimates for planning purposes. The LOS "E" service volumes are estimated maximum daily capacity for respective roadway classifications. Capacity is affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic) and pedestrian and bicycle traffic.

SOURCE: Ironwood Residential (TTM No. 37001) Traffic Impact Analysis City of Moreno Valley, *prepared by Urban Crossroads, dated March 9, 2016*.

Traffic Signal Warrant Analysis Methodology

The term "signal warrants" refers to the list of established criteria used by Caltrans and other public agencies to quantitatively justify or ascertain the potential need for installation of a traffic signal at an otherwise unsignalized intersection. The Traffic Impact Analysis uses the signal warrant criteria presented in the latest edition of the Federal Highway Administration's (FHWA) *Manual on Uniform Traffic Control Devices (MUTCD)*, as amended by the *MUTCD 2012 California Supplement*, for all study area intersections. The signal warrant criteria for Existing conditions are based upon several factors, including volume of vehicular and pedestrian traffic, frequency of accidents, and location of school areas. Both the FHWA's *MUTCD* and the *MUTCD 2012 California Supplement* indicate that the installation of a traffic signal should be considered if one or more of the signal warrants are met. Specifically, the Traffic Impact Analysis utilized the peak hour volume-based Warrant 3 as the appropriate representative traffic signal warrant analysis for existing traffic conditions. Warrant 3 criteria are basically identical for both the FHWA's *MUTCD* and the *MUTCD 2012 California Supplement*. Warrant 3 is appropriate to use for the Traffic Impact Analysis as it provides specialized warrant criteria for intersections with rural characteristics (e.g. located in communities with populations of less than 10,000 persons or with adjacent major streets operating above 40 miles per hour). For the purposes of the Traffic Impact Analysis, the speed limit was the basis for determining whether urban or rural warrants were used for a given intersection. Future unsignalized intersections have been assessed regarding the potential need for new traffic signals based on the future average daily traffic (ADT) volumes, using the Caltrans planning level ADT-based signal warrant analysis worksheets. Traffic signal warrant analyses were performed for the following unsignalized study area intersections as identified in **Table XVI-6**, *Traffic Signal Warrant Analysis Locations.*

7	Oliver Street/Ironwood Avenue	Moreno Valley

SOURCE: Ironwood Residential (TTM No. 37001) Traffic Impact Analysis City of Moreno Valley, *prepared by Urban Crossroads, dated March 9, 2016.*

It is important to note that a signal warrant defines the minimum condition under which the installation of a traffic signal might be warranted. Meeting this threshold condition does not require that a traffic control signal be installed at a particular location, but rather that other traffic factors and conditions be evaluated in order to determine whether the signal is truly justified. It should also be noted that signal warrants do not necessarily correlate with LOS. An intersection may satisfy a signal warrant condition and operate at or above acceptable LOS or operate below acceptable LOS and not meet a signal warrant.

LOS Criteria

The definition of an intersection deficiency in the City is based on the City's General Plan Circulation Element. The City's General Plan states that target LOS "C" or LOS "D" be maintained along City roads (including intersections) wherever possible. Figure XVI-2 depicts the level of service standards within the City. A summary of the jurisdiction, LOS methodology and acceptable LOS for all study area intersection is described in **Table XVI-7**, *Summary of LOS Criteria and For Study Area Intersections.*

TABLE XVI-7
SUMMARY OF LOS CRITERIA AND FOR STUDY AREA INTERSECTIONS

#	Intersection	Traffic Control[1]	Jurisdiction	LOS Methodology[2]	Acceptable LOS
1	Nason Street/Street "A"	CSS	Moreno Valley	HCM 2010	C

SOURCE: Ironwood Residential (TTM No. 37001) Traffic Impact Analysis City of Moreno Valley, *prepared by Urban Crossroads, dated March 9, 2016.*

Local and Regional Funding Mechanisms

Transportation improvements throughout the City are funded through a combination of project mitigation, fair share contributions or development impact fee programs, such as Transportation Uniform Mitigation Fee (TUMF) program or the County's Development Impact Fee (DIF) program. Identification and timing of needed improvements is generally determined through local jurisdictions based upon a variety of factors.

Transportation Uniform Mitigation Fee (TUMF) Program

The Western Riverside Council of Governments (WRCOG) is responsible for establishing and updating TUMF rates. The County may grant to developers a credit against the specific components of fees for the dedication of land or the construction of facilities identified in the list of improvements funded by each of these programs. Fees are based upon projected land uses and a related transportation needs to address growth based upon a 2009 Nexus study.

TUMF is an ambitious regional program created to address cumulative impacts of growth throughout western Riverside County. Program guidelines are being handled on an iterative basis. Exemptions, credits, reimbursements and local administration are being deferred to primary agencies. The County serves the function for the proposed Project. Fees submitted to the County are passed on the WRCOG as the ultimate program administrator.

TUMF guidelines empower a local zone committee to prioritize and arbitrate certain projects. The Project is located within the Central Zone. This zone has developed a 5-year capital improvements program to prioritize public construction of certain roads. TUMF is focused on improvements necessitated by regional growth. The SR-60/Nason Street interchange, Nason Street, and Ironwood Avenue are designated TUMF roadways/facilities within the Project's study area.

City of Moreno Valley Development Impact Fee (DIF) Program

The City has created its own local DIF program to impose and collect fees from new residential, commercial and industrial development for the purpose of funding roadways and intersections necessary to accommodate City growth as identified in the City's General Plan Circulation Element. The City's DIF program includes facilities that are not part of, or which may exceed improvements identified and covered by the TUMF program. As a result, the pairing of the regional and local fee programs provides a more comprehensive funding and implementation plan to ensure an adequate and interconnected transportation system. Under the City's DIF program, the City may grant to developers a credit against specific components of fees when those developers construct certain facilities and landscaped medians identified in the list of improvements funded by the DIF program.

The timing to use the DIF fees is established through periodic capital improvement programs which are overseen by the City's Public Works Department. Periodic traffic counts, review of traffic accidents, and a review of traffic trends throughout the City are also periodically performed by City staff and consultants. The City uses this data to determine the timing of implementing the improvements listed in its facilities list.

Fair Share Contribution

Project mitigation may include a combination of fee payments to established programs (e.g., TUMF and/or DIF), construction of specific improvements, payment of a fair share contribution toward future development improvements or a combination of these approaches. Improvements constructed by development may be eligible for a fee credit or reimbursement through the program where appropriate (to be determined at the City's discretion). When off-site improvements are identified with a minor share of responsibility assigned to the proposed development, the approving jurisdiction may elect to collect a fair share contribution or require the development to construct improvements.

Existing Traffic Counts

The AM peak hour traffic volumes were determined by counting traffic volumes in the two hour period between 7:00 AM and 9:00 AM on January 29, 2015. Similarly, the PM peak hour traffic volumes were identified by counting traffic volumes in the two hour period between 4:00 PM and 6:00 PM on January 29, 2015. The Thursday, January 29, 2015 count data is representative of typical weekday peak hour traffic conditions in the study area. Exhibit 3-8, Existing (2015) Traffic Volumes, of the Traffic Impact Analysis, displays the Existing ADT, AM and PM peak hour intersection volumes.

Existing Conditions Intersection Operations Analysis

Existing peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodology discussed above. The intersection operations analysis results are summarized in **Table XVI-8**, *Intersection Analysis for Existing (2015) Conditions* and illustrated in Exhibit 3-9, Summary of Peak Hour Intersection LOS for Existing (2015) Conditions, of the Traffic Impact Analysis. Table XVI-8 indicates that the existing study area intersections are currently operating at an acceptable LOS during the peak hours, based on applicable jurisdiction's LOS criteria.

TABLE XVI-8
INTERSECTION ANALYSIS FOR EXISTING (2015) CONDITIONS

#	Intersection	Traffic Control [c]	Intersection Approach Lanes [a] Northbound	Southbound	Eastbound	Westbound	Delay (secs.) [b]		Level of Service	
			L T R	L T R	L T R	L T R	AM	PM	AM	PM
1	Nason St. / Street "A"		Future Intersection							
2	Nason St. / Ironwood Av.	TS	0 1 1	0 1 0	1 1 0	1 1 0	18.1	16.7	B	B
3	Nason St. / SR-60 WB Ramps	TS	1 2 1>	1 2 0	1 1 1>	1 1 1>	19.1	20.3	B	C

6	Oliver St. / Street "C"		Future intersection							
7	Oliver St. / Ironwood Av	CCS	0 1 0	0 1 0	0 1 d	0 1 0	11.5	11.2	B	B

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

[a] When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.
L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; d= Defacto Right Turn Lane

[b] Per the 2010 Highway Capacity Manual, overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

[c] CSS = Cross-street Stop; TS = Traffic Signal

SOURCE: Ironwood Residential (TTM No. 37001) Traffic Impact Analysis City of Moreno Valley, prepared by Urban Crossroads, dated March 9, 2016.

Existing Conditions Roadway Segment Capacity Analysis

The City's General Plan Circulation Element provides roadway volume capacity values as described in Table XVI-5, above. The roadway segment capacities are approximate figures only, and are used at the General Plan level to assist in determining the roadway functional classification (i.e., number of through lanes) needed to meet traffic demand. **Table XVI-9**, *Roadway Volume/Capacity Analysis for Existing (2015) Conditions***,** provides a summary of the Existing conditions roadway segment capacity analysis based on the City's General Plan Circulation Element Roadway Segment Capacity (LOS) Thresholds identified in Table XVI-5. As shown in Table XVI-9, all of the study area segments currently operate at acceptable LOS based on the City's planning level daily roadway capacity thresholds.

TABLE XVI-9
ROADWAY VOLUME/CAPACITY ANALYSIS FOR EXISTING (2015) CONDITIONS

#	Roadway	Segment Limits	Roadway Section	LOS Capacity [a]	Existing (2015)	V/C	LOS	Acceptable LOS
1		Street "A" to Ironwood Avenue	2U		N/A			C
2		South of Ironwood Avenue	4D	12,500	4,306	0.34	A	D
3	Nason St	North of SR-60 WB Ramps	4D	37,500	4,760	0.38	A	D
4		SR-60 WB Ramps to SR-60 EB Ramps	4D	37,500	12,687	0.34	A	D
5		South of SR-60 EB Ramps	2U	37,500	17,807	0.47	A	D
6		West of Nason Street	2U	12,500	6,754	0.54	A	C
7	Ironwood	Nason Street to Lantz Lane	2U	12,500	4,568	0.37	A	C
8	Ave	Lantz Lane to Oliver Street	2U	12,500	4,279	0.34	A	C
9		East of Oliver Street	2U	12,500	4,319	0.35	A	C
10	Oliver St	Between Street "C" and Ironwood Avenue			N/A			C

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS). N/A = Not Applicable; Segment does not exist.

[a] These maximum roadway capacities have been extracted from the City of Moreno Valley's Transportation Division's Traffic Impact Analysis
Transportation Division's Traffic Impact Analysis Preparation Guidelines (August 2007). These roadway capacities are "rule of thumb" estimates for planning purposes. The LOS "E" service volumes are estimated maximum daily capacity for respective classifications. Capacity is affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic) and pedestrian and bicycle traffic.

Existing Conditions Traffic Signal Warrants Analysis

Traffic signal warrants for Existing traffic conditions are based on existing peak hour intersection turning volumes. For Existing traffic conditions, no study area intersections appear to currently warrant a traffic signal.

Existing Conditions Off-Ramp Queuing Analysis

A queuing analysis was performed for the off-ramps at the SR-60 Freeway at the Nason Street interchange to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially "spill back" onto the SR-60 Freeway mainline. Queuing analysis findings are presented in **Table XVI-10**, *Peak Hour Freeway Off-Ramp Queuing Summary for Existing (2015)* Conditions. As shown on Table XVI-10, there are no queuing issues during the peak 95th percentile traffic flows under Existing traffic conditions.

TABLE XVI-10
PEAK HOUR FREEWAY OFF-RAMP QUEUING SUMMARY FOR EXISTING (2015) CONDITIONS

Intersection	Movement	Available Stacking Distance (feet)	95th Percentile Queue (Feet) [b]		Acceptable? [a]	
			AM Peak Hour	PM Peak Hour	AM	PM
Nason St. /SR 60 WB Ramps	WBL	1,370	83	132	YES	YES
	WBT	2,140	21	31	YES	YES
	WBR	190	0	0	YES	YES
Nason St. /SR-60 EB Ramps	EBL	805	27	96	YES	YES
	EBT	1,300	46	66	YES	YES
	EBR	225	45	63	YES	YES

[a] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this Table, where applicable.
[b] Maximum queue length for the approach reported.

Project Trip Generation

Trip generation represents the amount of traffic which is both attracted to and produced by a development. Determining traffic generation for a specific project is therefore based upon forecasting the amount of traffic that is expected to be both attracted to and produced by the specific land uses being proposed for a given development. Trip generation rates used to estimate Project traffic and a summary of the Project's trip generation are described in **Table XVI-11**, *Project Trip Generation Summary***.** The trip generation rates are based upon data collected by the Institute of Transportation Engineers (ITE) and presented in ITE's most recent edition of *Trip Generation Manual*. The Project is anticipated to generate a net total of approximately 1,723 trip-ends per day with 136 AM peak hour trips and 181 PM peak hour trips.

TABLE XVI-11
PROJECT TRIP GENERATION SUMMARY

Land Use	ITE Code	Units [b]	AM Peak Hour In	AM Peak Hour Out	AM Peak Hour Total	PM Peak Hour In	PM Peak Hour Out	PM Peak Hour Total	Daily
Project Trip Generation Rates[a]

SOURCE: Ironwood Residential (TTM No. 37001) Traffic Impact Analysis City of Moreno Valley, prepared by Urban Crossroads, dated March 9, 2016.

Project Trip Distribution

Trip distribution is the process of identifying the probable destinations, directions or traffic routes that would be utilized by Project traffic. The potential interaction between the planned land uses and surrounding regional access routes are considered, to identify the route where the Project traffic would distribute. The Project trip distribution was developed based on anticipated travel patterns to and from the Project site for the traffic associated with the proposed residential uses. The total volume on each roadway was divided by the total site traffic generation to indicate the percentage of Project traffic that would use each component of the regional roadway system in each relevant direction. The Project trip distribution patterns are illustrated on Exhibit 4-1, Project Trip Distribution, of the Traffic Impact Analysis.

Project Trip Assignment

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, Project ADT, AM and PM peak hour traffic volumes are illustrated on Exhibit 4-2, Project Only Traffic Volumes, of the Traffic Impact Analysis.

Existing Plus Project Traffic Analysis

The Existing Plus Project analysis determines significant traffic impacts that would occur on the existing roadway system with the addition of Project traffic. The Existing Plus Project analysis is intended to identify the Project-specific impacts associated solely with the development of the Project based on a comparison of the Existing Plus Project traffic conditions to Existing conditions.

Existing Plus Project Roadway Improvements

The lane configurations and traffic controls assumed to be in place for the Existing Plus Project conditions are consistent with those illustrated on Exhibit 3-1, Existing Number of Through Lanes and Intersection Controls, of the Traffic Impact Analysis, with the exception of Project streets assumed to be constructed by the Project to provide site access. No other off-site improvements are assumed beyond those that currently exist with the exception of the intersections and roadways that would be improved by the Project for access.

Existing Plus Project Traffic Volume Forecasts

This scenario includes Existing traffic volumes plus Project traffic. Exhibit 5-1, Existing Plus Project Traffic Volumes, Exhibit 3-1, Existing Number of Through Lanes and Intersection Controls, of the Traffic Impact Analysis, illustrates the ADT, AM and PM peak hour traffic volumes which can be expected for Existing Plus Project traffic conditions.

Existing Plus Project Intersection Operations Analysis

Existing Plus Project intersection analysis results are summarized in **Table XVI-12**, *Intersection Analysis for Existing Plus Project Conditions.* Table XVI-12 indicates all study area intersections are anticipated to continue to operate at acceptable LOS consistent with Existing traffic conditions. As such, the addition of Project traffic is not anticipated to result in any deficiencies. Consistent with Table XVI-12, a summary of peak hour intersection LOS for Existing Plus Project conditions are illustrated on Exhibit 5-2, Summary of Peak Hour Intersection LOS for Existing Plus Project Conditions, of the Traffic Impact Analysis.

Existing Plus Project Roadway Segment Capacity Analysis

Table XVI-13, *Roadway Volume/Capacity Analysis for Existing Plus Project Conditions*, provides a summary of the Existing Plus Project conditions roadway segment capacity. As shown in Table XVI-13, all the study roadway segments are anticipated to operate at acceptable LOS consistent with Exiting traffic conditions. As such, the addition of Project traffic is not anticipated to result in any deficiencies.

TABLE XVI-12
INTERSECTION ANALYSIS FOR EXISTING PLUS PROJECT CONDITIONS

#	Intersection	Traffic Control [b]	Existing 2015				Existing Plus Project			
			Delay (secs.) [a]		Level of Service		Delay (secs.) [a]		Level of Service	
			AM	PM	AM	PM	AM	PM	AM	PM
1	Nason St. / Street "A"	**CSS**	Future Intersection				8.9	8.9	A	A

Existing Plus Project Traffic Signal Warrants Analysis

Traffic signal warrants for Existing Plus Project traffic conditions are based on both Existing Plus Project Caltrans planning-level ADT and peak hour volumes. For Existing Plus Project conditions, there are no traffic signals that appear to be warranted.

Existing Plus Project Off-Ramp Queuing Analysis

Table XVI-14, *Peak Hour Freeway Off-Ramp Queuing Summary for Existing Plus Project Conditions*, the Existing Plus Project queuing analysis findings. As shown in Table XVI-14, there are no queuing issues during the peak 95th percentile traffic flows under Existing Plus Project traffic conditions consistent with Existing traffic conditions. As such, the addition of Project traffic is not anticipated to result in any potential off-ramp queues at the SR-60 Freeway and Nason Street.

TABLE XVI-14

SOURCE: Ironwood Residential (TTM No. 37001) Traffic Impact Analysis City of Moreno Valley, prepared by Urban Crossroads, dated March 9, 2016.

Opening Year Cumulative (2020) Traffic Analysis

To account for background traffic, other known cumulative development projects in the study area were included in addition to 10.41 percent of ambient growth for Opening Year Cumulative (2020) traffic conditions in conjunction with traffic associated with the proposed Project. Although it is unlikely that these cumulative projects would be fully built and occupied by Year 2020, these projects have been included in an effort to conduct a conservative analysis and overstate and opposed to understate potential cumulative traffic impacts.

The currently adopted Southern California Association of Governments (SCAG) 2012 Regional Transportation Plan (RTP) (April 2012) growth forecasts for the unincorporated areas of the City identifies projected growth in population of 187,400 in 2008 to 255,200 in 2035, or a 36.2 percent increase over the 27 year period. The change in population equates to roughly a 1.5 percent growth rate compounded annually. Similarly, growth over the same 27 year period in households is projected to increase by 42.5 percent, or 1.32 percent annual growth rate. Finally, growth in employment over the same 27 year period is projected to increase by 99.5 percent, or a 2.59 percent annual growth rate.

Based on a comparison of Existing traffic volumes to the Horizon Year (2035) forecasts, the average growth rate is estimated at approximately 3.17 percent compounded annually between Existing and Horizon Year (2035) traffic conditions. The annual growth rate at each individual intersection is not lower than 2.08 percent compounded annually to as high as 4.20 percent compounded annually over the same time period. Therefore, the annual growth rate utilized for the purposes of this analysis would appear to conservatively approximate the anticipated regional growth in traffic volumes in the City for both Opening Year Cumulative (2020) and Horizon Year (2035) traffic conditions, especially when considered along with the addition of Project-related traffic. As such, the growth in traffic volumes assumed would tend to overstate as opposed to understate the potential impacts to traffic and circulation.

Opening Year Cumulative (2020) Roadway Improvements

The lane configurations and traffic controls assumed to be in place for Opening Year Cumulative (2020) conditions are consistent with those previously shown on Exhibit 3-1, Existing Number of Through Lanes and Intersection Controls, of the Traffic Impact Analysis, with the exception of Project driveways assumed to be constructed by the Project to provide site access. No other off-site improvements are assumed beyond those that currently exist with the exception of the intersections and roadways that would be improved by the Project for access.

Opening Year Cumulative (2020) Without Project Traffic Volume Forecasts

Exhibit 6-1, Opening Year Cumulative (2020) Without Project Traffic Volumes, of the Traffic Impact Analysis, illustrates the ADT, AM and PM peak hour traffic volumes which can be expected for Opening Year (2020) Without Project traffic conditions.

Opening Year Cumulative (2020) With Project Traffic Volume Forecasts

Exhibit 6-2, Opening Year Cumulative (2020) With Project Traffic Volumes, of the Traffic Impact Analysis, illustrates the ADT, AM and PM peak hour traffic volumes which can be expected for Opening Year (2020) With Project traffic conditions.

Opening Year Cumulative (2020) Intersection Operations Analysis

Opening Year Cumulative (2020) intersection analysis results are summarized in **Table XVI-15,** *Intersection Analysis for Opening Year Cumulative (2020) Conditions***.** Table XVI-15 indicates all study area intersections are anticipated to continue to operate at acceptable LOS under both Opening Year Cumulative (2020) Without and Opening Year Cumulative (2020) With Project consistent with Project traffic conditions. A summary of peak hour intersection LOS for Opening Year Cumulative (2020) Without and With Project conditions are illustrated on Exhibit 6-3, Summary of Peak Hour Intersection LOS for Opening Year Cumulative (2020) Without Project Conditions and Exhibit 6-4, Summary of Peak Hour Intersection LOS for Opening Year Cumulative (2020) With Project Conditions, of the Traffic Impact Analysis, respectively.

TABLE XVI-15
INTERSECTION ANALYSIS FOR OPENING YEAR CUMULATIVE (2020) CONDITIONS

#	Intersection	Traffic Control [b]	2020 Without Project				2020 With Project

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).
[a] Per the 2010 Highway Capacity Manual, overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.
[b] CSS = Cross-street Stop; TS = Traffic Signal

SOURCE: Ironwood Residential (TTM No. 37001) Traffic Impact Analysis City of Moreno Valley, prepared by Urban Crossroads, dated March 9, 2016.

Opening Year Cumulative (2020) Roadway Segment Analysis

Table XVI-16, *Roadway Volume/Capacity Analysis for Opening Year Cumulative (2020) Project Conditions,* provides a summary of the Opening Year Cumulative (2020) Project conditions roadway segment capacity. As shown in Table XVI-16, all the study roadway segments are anticipated to operate at acceptable LOS with the exception of the segment of Ironwood Avenue, west of Nason Street.

As noted above under the Roadway Segment Capacity Analysis Methodology, where the ADT-based roadway segment analysis indicates a deficiency (unacceptable LOS), a review of the more detailed peak hour intersection analysis are undertaken. The more detailed peak hour intersection analysis explicitly accounts for factors that affect roadway capacity. As such, roadway segment widening is typically only recommended if the peak hour intersection analysis indicates the need for additional through lanes. The adjacent intersection of Nason Street at Ironwood Avenue is anticipated to operate at acceptable LOS under Opening Year Cumulative (2020) traffic conditions without roadway widening. As such, roadway widening or additional improvements to the eastbound approach at this intersection have not been recommended and impacts are considered less than significant.

Opening Year Cumulative (2020) Traffic Signal Warrants Analysis

Traffic signal warrants for Opening Year Cumulative (2020) traffic conditions are based on both Opening Year Cumulative Caltrans planning-level ADT and peak hour volumes. For Opening Year Cumulative (2020) Without and With Project traffic conditions, there are no study area intersections anticipated to meet traffic signal warrants.

Opening Year Cumulative (2020) Off-Ramp Queuing Analysis

Table XVI-17, *Peak Hour Freeway Off-Ramp Queuing Summary for Opening Year Cumulative (2020) Conditions***,** the Opening Year Cumulative (2020) Project queuing analysis findings. As shown in Table XVI-17, there are no queuing issues during the peak 95th percentile traffic flows under Opening Year Cumulative (2020) With Project traffic conditions and Opening Year Cumulative (2020) Without Project traffic conditions.

TABLE XVI-16
ROADWAY VOLUME/CAPACITY ANALYSIS FOR OPENING YEAR CUMULATIVE (2020) CONDITIONS

Horizon Year (2035) Traffic Analysis

The Horizon Year (2035) Without Project traffic conditions were derived from the Riverside County Transportation Analysis Model (RivTAM) modified to represent Horizon Year (2035) conditions for the City using accepted procedures for model forecast refinement and smoothing. The traffic forecasts reflect the area-wide growth anticipated between Existing conditions and Horizon Year (2035) conditions. The Horizon Year (2035) With Project traffic forecasts were determined by adding the Project traffic to the Horizon Year (2035) Without Project traffic forecasts from the RivTAM model. The Horizon Year (2035) traffic forecasts used in the traffic analysis were refined with existing peak hour traffic count data collected at intersection analysis locations. The initial estimate of the future peak hour turning movements has, therefore, been reviewed for reasonableness. The reasonableness checks performed include a review of traffic flow conservation in addition to comparison with the Existing and Opening Year (2020)

Cumulative traffic volumes. Where necessary, the Horizon Year (2035) volumes have been adjusted to achieve flow conservation, reasonable growth, and reasonable diversion between parallel routes.

The Horizon Year (2035) Without and With Project traffic conditions analysis would be utilized to determine if improvements funded through regional transportation mitigation fee programs, such as the TUMF and DIF programs, or other approved funding mechanisms can accommodate the long-range cumulative traffic at the target LOS identified in the City's General Plan. If the "funded" improvements can provide the target LOS, then the Project's payment into TUMF and/or DIF would be considered as long-range cumulative mitigation through the conditions of approval. Other improvements needed beyond the "funded" improvements (i.e. localized improvements to non-TUMF facilities) are identified as such.

Horizon Year (2035) Roadway Improvements

The lane configurations and traffic controls assumed to be in place for Horizon Year (2035) conditions are consistent with those previously shown on Exhibit 3-1, Existing Number of Through Lanes and Intersection Controls, of the Traffic Impact Analysis, with the exception of Project driveways assumed to be constructed by the Project to provide site access. No other off-site improvements are assumed beyond those that currently exist with the exception of the intersections and roadways that would be improved by the Project for access.

Horizon Year (2035) Without Project Traffic Volume Forecasts

Exhibit 7-1, Horizon Year (2035) Without Project Traffic Volumes, of the Traffic Impact Analysis, illustrates the ADT, AM and PM peak hour traffic volumes which can be expected for Horizon Year (2035) Without Project traffic conditions.

Horizon Year (2035) With Project Traffic Volume Forecasts

Exhibit 7-2, Horizon Year (2035) With Project Traffic Volumes, of the Traffic Impact Analysis, illustrates the ADT, AM and PM peak hour traffic volumes which can be expected for Horizon Year (2035) With Project traffic conditions.

Horizon Year (2035) Intersection Operations Analysis

Horizon Year (2035) intersection analysis results are summarized in **Table XVI-18,** *Intersection Analysis for Horizon Year (2035) Conditions***.** Table XVI-18 indicates all study area intersections are anticipated to continue to operate at acceptable LOS under both Horizon Year (2035) Without and With Project traffic conditions, with the exception of the intersection of Nason Street at Ironwood Avenue. A summary of peak hour intersection LOS Horizon Year (2035) Without and With Project conditions are illustrated on Exhibit 7-3, Summary of Peak Hour Intersection LOS for Horizon Year (2035) Without Project Conditions and Exhibit 7-4, Summary of Peak Hour Intersection LOS for Horizon Year (2035) With Project Conditions, of the Traffic Impact Analysis, respectively.

TABLE XVI-18
INTERSECTION ANALYSIS FOR HORIZON YEAR (2035) CONDITIONS

#	Intersection	Traffic Control [b]	2035 Without Project				2035 With Project			
			Delay (secs.) [a]		Level of Service		Delay (secs.) [a]		Level of Service	
			AM	PM	AM	PM	AM	PM	AM	PM
1	Nason St. / Street "A"	CSS	Future Intersection				9.0	9.0	A	A
2	Nason St. / Ironwood Av.	TS	**>200.0**	**141.2**	**F**	**F**	**>200.0**	**>200.0**	**F**	**F**
3	Nason St. / SR-60 WB Ramps	TS	23.9	31.1	C	C	27.5	31.5	C	C
4	Nason St. / SR-60 EB Ramps	TS	27.2	31.0	C	C	28.1	32.1	C	C
5	Lantz Ln. / Ironwood Av.	CCS	14.1	13.5	B	B	14.2	13.6	B	B

Horizon Year (2035) Roadway Segment Analysis

Table XVI-19, *Roadway Volume/Capacity Analysis for Horizon Year (2035) Project Conditions*, provides a summary of the Horizon Year (2035) Project conditions roadway segment capacity. As shown in Table XVI-19, all the study roadway segments are anticipated to operate at acceptable LOS with the exception of the segment of Ironwood Avenue, west of Nason Street.

As noted above under the Roadway Segment Capacity Analysis Methodology, where the ADT-based roadway segment analysis indicates a deficiency (unacceptable LOS), a review of the more detailed peak hour intersection analysis are undertaken. The more detailed peak hour intersection analysis explicitly accounts for factors that affect roadway capacity. As such, roadway segment widening is typically only recommended if the peak hour intersection analysis indicates the need for additional through lanes. The adjacent intersection of Nason Street at Ironwood Avenue is anticipated to operate at acceptable LOS under Horizon Year (2035) traffic conditions with turn lane improvements as identified in **Table XVI-20**, *Intersection Analysis for Horizon Year (2035) Conditions With Improvements*, but without additional through lanes. As such, roadway widening or additional improvements to the eastbound approach at this intersection have not been recommended beyond those needed to address peak hour intersection operational deficiencies and impacts are considered less than significant.

TABLE XVI-19
ROADWAY VOLUME/CAPACITY ANALYSIS FOR HORIZON YEAR (2035) CONDITIONS

#	Roadway	Segment Limits	Roadway Section	LOS Capacity [a]	2035 Without Project	V/C	LOS	2035 With Project	V/C	LOS	Acceptable LOS
1		Street "A" to Ironwood Avenue	**2U**	2,000	N/A			817	0.41	A	C
2		South of Ironwood Avenue	4D	12,500	9,846	0.79	C	10,793	0.86	D	D
3	Nason St	North of SR-60 WB Ramps	4D	37,500	10,398	.28	A	11,345	0.30	A	D
4		SR-60 WB Ramps to SR-60 EB Ramps	4D	37,500	20,617	0.55	A	21,262	0.57	A	D
5		South of SR-60 EB Ramps	2U	37,500	27,375	0.73	C	27,719	0.74	C	D
6		West of Nason Street	2U	12,500	**13,381**	**1.07**	**F**	**13,725**	**1.10**	**F**	C
7	Ironwood	Nason Street to Lantz Lane	2U	12,500	8,612	0.69	B	9,386	0.75	C	C
8	Ave	Lantz Lane to Oliver Street	2U	12,500	8.134	0.65	B	8.392	0.67	B	C
9		East of Oliver Street	2U	12,500	8,101	0.65	B	8,532	0.68	B	C
10	Oliver St	Between Street “C” and Ironwood Avenue	2U	2,000	N/A			517	0.26	A	C

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS). N/A = Not Applicable; Segment does not exist.

[a] These maximum roadway capacities have been extracted from the City of Moreno Valley's Transportation Division's Traffic Impact Analysis Transportation Division's Traffic Impact Analysis Preparation Guidelines (August 2007). These roadway capacities are "rule of thumb" estimates for planning purposes. The LOS "E" service volumes are estimated maximum daily capacity for respective classifications. Capacity is affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic) and pedestrian and bicycle traffic.

Horizon Year (2035) Traffic Signal Warrants Analysis

Traffic signal warrants for Horizon Year (2035) traffic conditions are based on both Horizon Year (2035) Caltrans planning-level ADT and peak hour volumes. For Horizon Year (2035) Without and With Project traffic conditions, there are no study area intersections anticipated to meet traffic signal warrants.

Horizon Year (2035) Off-Ramp Queuing Analysis

Table XVI-21, *Peak Hour Freeway Off-Ramp Queuing Summary for Horizon Year (2035) Conditions*, presents the Horizon Year (2035) Project queuing analysis findings. As shown in Table XVI-21, there are no queuing issues during the peak 95th percentile traffic flows under Horizon Year (2035) With Project traffic conditions and Horizon Year (2035) Without Project traffic conditions.

Recommended Improvements

As discussed in the Traffic Impact Analysis and included below as COA TRAF-1, potential all-way stop locations along Street "A" could be a relatively low cost solution to discourage speeding along this street segment, if speeding becomes an issue after the Project is constructed and occupied and appropriate warrants are met. As these particular street segments are bounded by private residential units on both sides, the use of midblock chokers or street narrowing measures were considered, but have not been recommended as they would reduce the amount of on-street parking in front or nearby the residential units. Potential speed hump locations have been recommended within three locations along Street "A".

TABLE XVI-21
PEAK HOUR FREEWAY OFF-RAMP QUEUING SUMMARY FOR HORIZON YEAR (2035) CONDITIONS

Intersection	Movement	Available Stacking Distance (feet)	95th Percentile Queue (Feet) [b] AM Peak Hour	95th Percentile Queue (Feet) [b] PM Peak Hour	Acceptable? [a] AM	Acceptable? [a] PM
Opening Year Cumulative (2035) Without Project						
Nason St. /SR 60 WB Ramps	WBL	1,370	94	308 [c]	YES	YES
	WBT	2,140	16	62	YES	YES
	WBR	190	0	25	YES	YES
Nason St. /SR-60 EB Ramps	EBL	805	42	129	YES	YES
	EBT	1,300	180 [c]	226 [c]	YES	YES
	EBR	225	171 [c]	220 [c]	YES	YES
Opening Year Cumulative (2035) With Project						
Nason St. /SR 60 WB Ramps	WBL	1,370	140	308 [c]	YES	YES
	WBT	2,140	35	62	YES	YES
	WBR	190	6	31	YES	YES
Nason St. /SR-60 EB Ramps	EBL	805	50	152	YES	YES
	EBT	1,300	202 [c]	232 [c]	YES	YES
	EBR	225	187 [c]	226 [c]	YES	YES

[a] Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this Table, where applicable.
[b] Maximum queue length for the approach reported.
[c] 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles

SOURCE: Ironwood Residential (TTM No. 37001) Traffic Impact Analysis City of Moreno Valley, prepared by Urban Crossroads, dated March 9, 2016.

Potential all-way stop locations have also been recommended in three locations along Street “A”. Please refer to Exhibit 1-5: Traffic Calming Recommendations, of the Traffic Impact Analysis, for recommended locations of speed humps and all-way stop locations.

Improvement strategies have been recommended at intersections that have been identified as deficient in an effort to reduce each location’s peak hour delay and to improve the associated LOS grade to an acceptable LOS (LOS “D” or better). The effectiveness of the recommended improvement strategies discussed below to address Horizon Year (2035) traffic deficiencies is illustrated in Table XVI-20. Further, the Project applicant shall participate in the funding of off-site improvements, including traffic signals that are needed to serve cumulative traffic conditions through the payment of TUMF and City DIF fees (if the improvements are included in the TUMF or DIF programs) or on a fair share basis (if the improvements are not included in the TUMF or

DIF programs). These fees shall be collected by the City, with the proceeds solely used as part of a funding mechanism used to ensure that regional highways and arterial expansions keep pace with the projected population increases (MM TRAF-1). There are no other applicable pre-existing funding programs for the study area aside from TUMF and DIF. As such, incorporation of the recommended improvements and strategies and implementation of MM TRAF-1, a less than significant impact would occur in this regard.

Project Design Features (Conditions of Approval)

COA TRAF-1 As recommended by the project's traffic consultant, prior to project occupancy, three potential speed hump locations have been proposed along Street "A". Final speed hump locations to be reviewed and approved by the City's Traffic Engineer. Further, prior to project occupancy, potential all-way stop locations, to be determined if warranted by the City's Traffic Engineer, have also been recommended in three locations along Street "A".

Mitigation Measures

MM TRAF-1: The Project applicant shall participate in the funding of off-site improvements, including traffic signals that are needed to serve cumulative traffic conditions through the payment of TUMF and City DIF fees (if the improvements are included in the TUMF or DIF programs) or on a fair share basis (if the improvements are not included in the TUMF or DIF programs). These fees shall be collected by the City, with the proceeds solely used as part of a funding mechanism used to ensure that regional highways and arterial expansions keep pace with the projected population increases.

b. Conflict with an applicable congestion management program, including, but not limited to, level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?

Less Than Significant Impact. The CMP is a State-mandated program enacted by the State legislature to address the impacts that urban congestion has on local communities and the region as a whole. The Riverside County Transportation Commission (RCTC) is the designated congestion management agency (CMA) for Riverside County, and holds responsibility for the development and implementation of the Riverside County CMP. New projects located in the City must comply with the requirements set forth in the County's CMP. These requirements include the provision that all freeway segments where a project could add 150 or more trips in each direction during the peak hours be evaluated. The guidelines also require evaluation of all designated CMP intersections where a project could add 50 or more trips during either peak hour.

The CMP intersection analysis locations for the Project include Nason Street and the SR-60 Westbound Ramps (Intersection ID #3) and Nason Street and the SR-60 Eastbound Ramps (Intersection ID #4); refer to Figure XVI-1. The Project would not add 150 or more trips (in either direction) during either the weekday AM or PM peak hours to CMP freeway monitoring locations which is the threshold for preparing a traffic impact assessment, as stated in the CMP manual. The Project would not add 50 or more trips during either the weekday AM or PM peak hours (i.e., of adjacent street traffic) at CMP monitoring intersections, as stated in the CMP manual as the threshold criteria for a traffic impact assessment. Therefore, no further review of potential impacts to freeway or intersection monitoring locations that are part of the CMP highway system is required. As such, based on the CMP guidelines for intersections and freeways, a less than significant impact would occur for any analysis scenario based on CMP criteria.

c. Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?

No Impact. As discussed under Responses VIII.e and f, the Project site is not located within an airport land use plan or within two miles of a public or private airport. The nearest airport is the March Inland Port, a joint-use military and public airport, located approximately 5.15 miles southwest of the Project site. The Project would not introduce structures substantial enough to interfere with existing flight paths, or result in a measureable increase in airport traffic that would result in substantial safety risks. As such, no impacts would occur.

d. Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Less Than Significant Impact. There are no existing hazardous design features such as sharp curves or dangerous intersections or incompatible uses on-site or within the Project vicinity. Vehicular access to the Project site currently and would continue to be provided via Ironwood Avenue, Nason Street, and Oliver Street. The Project's proposed access is located on Nason Street via Street "A", Ironwood Avenue via Street "B" (northern extension of Lantz Lane), and Oliver Street via Street "C". Ironwood Avenue is an east-west oriented roadway located along the Project's southern boundary. The Project proposes to widen Ironwood Avenue from Nason Street to Oliver Street to its half-section width of as a minor arterial (88-foot right-of-way). Nason Street is a north-south oriented roadway located along the Project's western boundary. The Project proposes to widen Nason Street from the Project's northern boundary to Ironwood Avenue to its half-section width as a collector (66-foot right-of-way). Oliver Street is a north-south oriented roadway located along the Project's eastern boundary. The Project proposes to widen Oliver Street from the Project's northern boundary to Ironwood Avenue to its half-section width as a local road (56-foot right-of-way). On-site traffic signing and striping would be implemented in conjunction with detailed construction plans for the Project site. Sight distance at each Project access point would be reviewed with respect to standard Caltrans and City sight distance standards at the time of preparation of final grading, landscape and street improvement plans. All on-site roadway and site access improvements would be designed in compliance with applicable City standards.

As discussed in Response XVI.a, a queuing analysis was performed of all six Project scenarios for the off-ramps at the SR-60 Freeway at the Nason Street interchange to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially "spill back" onto the SR-60 Freeway mainline. Further, a traffic signal warrant analysis was performed of all six Project scenarios to quantitatively justify or ascertain the potential need for installation of a traffic signal at an otherwise unsignalized intersection. As discussed therein, there are no queuing issues during the 95th percentile traffic flows and no study area intersections anticipated to meet traffic signal warrants under any of the six Project scenarios. As such, impacts would be less than significant in this regard.

e. Result in inadequate emergency access?

Less Than Significant Impact. The Project site is located in an established rural area that is well served by the surrounding roadway network. While it is expected that the majority of construction activities for the Project would be confined on-site, construction activities may temporarily affect access on portions of adjacent streets during certain periods of the day, including during construction of potential off-site infrastructure upgrades/improvements (i.e., street widening, water and sewer lines) (discussed below in Section 17, *Utilities and Service Systems*). However, through-access for drivers, including emergency personnel, along all roads would still be provided. In these instances, the Project would implement traffic control measures (e.g., construction flagmen, signage, etc.) to maintain flow and access. Furthermore, in accordance with the City, the Project would develop a Construction Management Plan, which includes designation of a haul route, to ensure that adequate emergency access is maintained during construction. Therefore, construction is not expected to result in inadequate emergency access.

Project operation would generate traffic in the Project vicinity and would result in some modifications to access (i.e., street widening, new curb cuts for Project driveways) from the streets that surround the Project site. However, emergency access to the Project site and surrounding area would continue to be provided similar to existing conditions. Emergency vehicles and fire access would be provided from the primary driveway for the Project site located on Ironwood Avenue about mid-block between Nason Street and Oliver Street, immediately opposite from and north of Lantz Lane. Secondary site access would be provided by driveways on both Nason Street and Oliver Street just north of Ironwood Avenue. Future street widening, driveway, and building configurations would comply with applicable fire code requirements for emergency evacuation. Subject to review and approval of Project site access and circulation plans by the MVFD, the Project would not result in inadequate emergency access. Therefore, Project operation would result in a less than significant impact in this regard.

f. Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?

Less Than Significant Impact. The Project site is not currently being served by a direct transit line. The Riverside Transit Agency (RTA) has existing bus services running along Nason Street, south of the SR-60 Freeway via Route 210. Transit service is reviewed and updated by the RTA periodically to address ridership, budget and community demand needs. Changes in land uses can affect these period adjustments which may lead to enhanced or reduced service where deemed appropriate. Currently, there are existing Class II bike lanes located on Nason Street south of the SR-60 westbound ramps interchange. A Class I bikeway is proposed along the west side of Nason Street south of Ironwood Avenue and through the SR-60 Freeway interchange.

Class II bikeways are proposed along Elder Avenue while Class III bikeways are proposed along Ironwood Avenue from west of Nason Street to east of Oliver Street. There are no existing pedestrian facilities (sidewalk and crosswalk) along the Project boundaries. Further, there are proposed trails long Ironwood Avenue east of Nason Street and along Oliver Street. Overall, the Project is not expected to interfere with or degrade the performance or safety of public transit, bicycle, or pedestrian facilities, and a less than significant impact would result.

XVII. Utilities and Service Systems

Would the Project:

a. Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?

Less Than Significant Impact. Under the NPDES permit system, all existing and future municipal and industrial discharges to surface waters within the City are subject to applicable local, State and/or federal regulations. The Project must comply with all provisions of the NPDES program and other applicable waste discharge requirements (WDRs), as enforced by the RWQCB. Therefore, implementation of the Project would not result in an exceedance of wastewater treatment requirements.

The Eastern Municipal Water District (EMWD) provides wastewater services to the City, including the Project site. The EMWD has four operational RWRFs located throughout the EMWD. Inter-connections between the local collections systems serving each treatment plant allow operational flexibility, improved reliability, and expanded deliveries of recycled water. All of EMWD's RWRF's produce tertiary effluent, suitable for all Department of Health Services permitted uses, including irrigation of food crops and full-body contact. The four RWRFs have a combined capacity of 81,800 acre-feet per year (AFY). In 2015, the EMWD collected and treated a total of 48,665 acre-feet (AF) of wastewater at its four regional water reclamation facilities (RWRFs). The Moreno Valley RWRF with a capacity of 17,900 AFY would treat the Project site. Compliance with applicable WDRs would ensure that Project implementation would not exceed the applicable wastewater treatment requirements of the CRRWQCB with respect to discharges to the sewer system. As such, impacts would be less than significant in this regard.

b. Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Wastewater

Less Than Significant Impact. During Project construction, a negligible amount of wastewater would be generated by construction workers. It is anticipated that portable toilets would be provided by a private company and the waste disposed off-site. Wastewater generation from construction activities is not anticipated to cause a measureable increase in wastewater flows at a point where, and at a time when, a sewer's capacity is already constrained or that would cause a sewer's capacity to become constrained. Additionally, construction is not anticipated to generate wastewater flows that would substantially or incrementally exceed the future scheduled collection of the Moreno Valley RWRF. Therefore, construction impacts to the local wastewater conveyance and treatment system would be less than significant.

Existing sewer lines within the City are maintained by the EMWD. No public sewers exist adjacent to the Project site, and thus the Project proposes the construction of a new off-site sewer main in addition to proposed on-site sewer collection improvements. The on-site sewer system, which would be owned and maintained by EMWD once constructed by the Project, would collect wastewater generated by the proposed residential units, which would be conveyed via a new sewer line extending from the Project site southward along Oliver Street to an existing sewer owned and operated by EMWD located south of the SR-60 freeway near Eucalyptus Avenue. Construction of the Project would include all necessary on and off-site sewer pipe improvements and connections to adequately link the Project to the existing City sewer system (refer to Figure A-11 in Attachment A of this Initial Study for the location of the proposed sewer improvements). The necessary improvements would be verified through the permit approval process of obtaining a sewer capacity and connection permit from the City. Construction-related impacts would be temporary and within the scope of impacts evaluated in this MND. However, the impacts of such construction activity would be temporary and on an intermittent basis. Further, a Construction Management Plan for the Project would be prepared in order to minimize disruptions to through traffic flow, which would consider any off-site utility improvements, as necessary.

Implementation of the Project would generate approximately 63,350 gallons per day (gpd) or about 71 AFY of wastewater.[39] The four EMWD RWRFs have a combined capacity of 81,800 AFY. The Moreno Valley RWRF has a capacity of 17,900 AFY. Given the current capacity of the Moreno Valley RWRF, the Project wastewater generation would account for a less than 0.4-percent increase in demand at the Moreno Valley RWFR, and thus there would be ample capacity to treat this increased volume.

Based on the above, and given existing and anticipated future capacity at the wastewater treatment facilities and wastewater generation expected from the Project, impacts regarding wastewater facilities would be less than significant.

Water

Less Than Significant Impact. During construction activities associated with the future development within the Project site, there would be temporary, intermittent demand for water for such activities as soil watering for site preparation, fugitive dust control, concrete preparation, paining, cleanup, and other short-term activities. Construction-related water usage is not

---

39 Total wastewater generation based on 181 residential units x 350 gpd/du = 63,350 gpd, and (63,350 gpd x 365 days/year)/(325,851 gallons/AF) = 70.96 AFY. Generation factors based on the Eastern Municipal Water District's *Sanitary Sewer System Planning & Design Guidelines*, dated September 1, 2006. Available at: *http://www.emwd.org/home/showdocument?id=744*. Accessed August 2016.

expected to have an adverse impact on available water supplies or the existing water distribution system, and impacts would be less than significant.

The EMWD provides water and water treatment to the City, including the Project site. Existing water lines within the City adjacent to the Project site include an existing 12-inch water line on Ironwood Avenue, an existing 8-inch water line on Nason Street, and an existing 24-inch water line on Oliver Street. It should be noted that these existing water lines are either not within the current pressure zone of the Project site or are in a restricted zone, and therefore, new off-site water service connections and associated pipelines would be required to be constructed as part of the Project. As such, water service would be provided by an on-site distribution system with supply provided via two new connections to existing EMWD pipelines, one from the southeast near the intersection of Oliver Street and Ironwood Avenue, and the other from the north via a new pipeline connection along Oliver Street at the western terminus of Kalmia Avenue (refer to Figure A-11 in Attachment A of this Initial Study for the locations of the proposed water lines). All connections and water-related infrastructure improvements would be provided by the Project in consultation with the EMWD and the City, as necessary. Further, all water line improvements and connections would be provided in consultation with MVFD to ensure that the minimum fire flow requirements would be provided to serve the proposed development.

The EMWD Urban Water Management Plan (UWMP), 2015 Update (May 2016), provides water demand and water supply projections in five-year increments through 2040, which are based on regional demographic data provided by SCAG, as well as billing data for each major customer class, weather, and conservation. The EMWD local supplies of water include recycled water, potable groundwater, and desalinated groundwater. In addition to local supplies, the EMWD received imported water from the Metropolitan Water District (MWD) by direct delivery as potable water, delivery as raw water and then treated at EMWD's two local filtration plants, or delivery as water for non-potable use and groundwater recharge. The EMWD depends on MWD for approximately half of its retail water supply. According to the UWMP, the EMWD will have sufficient supplies to meet both retail and wholesale demands from 2020 to 2040 under average year conditions, single-dry year conditions, and multiple-dry year conditions.

The Project would result in an estimated water demand of approximately 76,020 gpd, or about 85 AFY when fully occupied.[40] The estimated 85 AFY increase in water demand generated by the Project would constitute approximately less than 0.04-percent of the EMWD year 2020 water supply and water demand of 212,901 AFY. Further, the Project would comply with Title 9, Planning and Zoning, Chapter 9.17, Landscape and Water Efficiency Requirements, of the MVMC. The Project would also comply with the EMWD UWMP recommendations regarding drought management and water conservation. With implementation of water conservation measures per the requirements cited above, the Project's actual water demand would be well below the conservative amount stated above. Based on the above, no additional water treatment

40 The water demand would be consistent with the estimated wastewater generation of the Project. To be conservative, 20 percent was added (to account for outdoor water use). 65,350 gpd X 1.20 = 76,020 gpd. (76,020 gpd x 365 days/year) = 27,747,300 gallons per year; (27,747,300 gallons per year)/(325,851 gallons per AF) = 85.15 AFY.

facilities are required to meet the water supply demands associated with the Project, and the Project would not require the construction or expansion of water treatment facilities. Therefore, water infrastructure impacts associated with Project operation would be less than significant.

c. Require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?

Less Than Significant Impact. The Project would include a number of stormwater detention basins, as well as other stormwater management features and facilities, in accordance with applicable regulatory requirements as required by City and County. The proposed stormwater basins would be located along the southern edge of the Project site. The basins would not only provide a necessary function of retaining stormwater on-site to prevent run-off, but would also provide a transition and visual buffer to the existing residences south of Ironwood Avenue. The basins help make the transition softer and more visually appealing by having landscaping and open space, instead of walls and roof tops. The basins would be planted as appropriate to the Project site's climate and would incorporate drought-tolerant materials and irrigation systems. Hardscape areas are recommended to be constructed with pervious surfaces where feasible to reduce run off and allow water percolation and minimize stormwater runoff volumes requiring on-site retention. Environmental impacts associated with development of the Project, including on-site drainage facilities, have been evaluated throughout this document. As concluded in this document, all potentially significant impacts associated with development of the Project, including on-site stormwater drainage facilities, would be less than significant. Therefore, impacts would be less than significant in this regard.

d. Have sufficient water supplies available to serve the project from existing entitlements and resource, or are new or expanded entitlements needed?

Less Than Significant Impact. As described in Response XVII.b., above, the Project would fall within the 2015 EMWD UWMP available and projected water supplies. According to the UWMP, the EMWD will have sufficient supplies to meet both retail and wholesale demands from 2020 to 2040 under average year conditions, single-dry year conditions, and multiple-dry year conditions. As a result, the Project is within the capacity of the EMWD to serve the Project as well as existing and planned future water demands of its service area.

Sections 10910-10915 of the State Water Code (Senate Bill [SB] 610) requires the preparation of a water supply assessment (WSA) demonstrating sufficient water supplies for a project that is: 1) a shopping center or business establishment that will employ more than 1,000 persons or have more than 500,000 square feet of floor space; 2) a commercial office building that will employ more than 1,000 persons or have more than 250,000 square feet of space, or 3) any mixed-use project that would demand an amount of water equal to or greater than the amount of water needed to serve a 500 dwelling unit subdivision. In addition, similar to SB 610, SB 221 requires preparation of a Verification of Sufficient Water Supply for all residential subdivisions of 500 dwelling units or more. As discussed under Response XVII, the Project would generate a water demand of approximately 85 AFY (without accounting for water conservation features). With implementation of water conservation measures per the requirements cited above, the Project's actual water demand would be well below the conservative amount stated above. A typical 500 dwelling unit subdivision would have a water demand of approximately 154 AFY. As the Project does not propose construction of 500 or more dwelling units, and also does not meet the established thresholds regarding preparation of a WSA, no WSA pursuant to SB 610 or Verification of Sufficient Water Supply pursuant to SB 221 are required for this Project. As such, the Project would have a less than significant impact with respect to water entitlements and supply.

e. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Less Than Significant Impact. As indicated in the Response XVII.b, implementation of the Project would generate 63,350 gpd or 71 AFY. The four EMWD RWRFs have a combined capacity of 81,800 AFY. Given the current capacity of the Moreno Valley RWRF of 17,900 AFY, Project wastewater generation would account for a less than 0.4-percent increase in demand at the Moreno Valley RWFR and there would be ample capacity to treat this increase. Therefore, the Project would have a less than significant impact with respect to wastewater treatment capacity.

f. Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?

Less Than Significant Impact. The City's Public Works Department works with Waste Management of the Inland Empire to collect residential solid waste. Commercial and industrial solid waste is picked up by private haulers. The division also provides a curbside recycling program including paper, cardboard, cans/aluminum, plastic, and glass. The recyclable materials are hauled to private recyclable material companies. The City does not own or operate any landfill facilities, and the majority of its solid waste is disposed at the El Sobrante Landfill as well as the Badlands Landfill and the Lamb Canyon Landfill. The El Sobrante Landfill has a remaining capacity of 145,530,000 tons with a projected closing year of 2045.[41] The Badlands Landfill has a remaining capacity of 15,748,799 cubic yards with a projected closing year of 2022.[42] Lamp Canyon has a remaining capacity of 19,242,950 cubic yards with a projected closing year of 2029.[43]

Based on solid waste generation factors from the California Integrated Waste Management Board (CIWMB), the Project could generate approximately 724 lbs/day 0.362 tons/day or 132 tons/year)

41 CalRecycle Website, El Sobrante Landfill, http://www.calrecycle.ca.gov/SWFacilities/Directory/33-AA-0217/Detail/, accessed June 2016.
42 CalRecycle Website, Badlands Sanitary Landfill, http://www.calrecycle.ca.gov/SWFacilities/Directory/33-AA-0006/Detail/, accessed June 2016.
43 CalRecycle Website, Lamb Canyon Sanitary Landfill, http://www.calrecycle.ca.gov/SWFacilities/Directory/33-AA-0007/Detail/, accessed June 2016.

of solid waste.[44] The annual amount of solid waste generated by the Project would represent a minor amount of the estimated remaining capacities of the El Sobrante Landfill, Badlands Landfill, and Lamb Canyon Landfill. As such, the solid waste generated by the Project could be accommodated by the County's available regional landfills.

The California Department of Resources and Recycling and Recovery (CalRecycle) is the California State Agency that promotes the importance of reducing waste and oversees California's waste management and recycling efforts. CalRecycle has issued jurisdiction waste diversion rate targets equivalent to 50 percent of the waste stream as expressing in pounds per person per day. Thus, it is important to note that the estimate of solid waste generated by the Project is conservative, in that the amount of solid waste that would need to be landfilled would likely be less than this forecast based on the City's implementation of solid waste diversion targets.

Construction of the Project would result in generation of solid waste such as scrap, lumber, concrete, residual wastes, packing materials, and plastics which could require disposal of construction associated debris at the landfills. It is anticipated that a large amount of the construction debris would be recycled. Disposal and recycling of the construction debris would be required to comply with all federal, State, and local regulations. In addition, the Project would comply with Title 6: Health and Sanitation, Chapter 6.02, Refuse Collection, Transfer, and Disposal, of the MVMC. Therefore, the Project would not cause any significant impacts from conflicting with statutes or regulations related to solid waste.

Based on the above, a less than significant impact regarding solid waste would occur.

g. Comply with federal, state, and local statutes and regulations related to solid waste?

Less Than Significant Impact. All local governments, including the City, are required under Assembly Bill 939 (AB 939), the Integrated Waste Management Act of 1989, to develop source reduction, reuse, recycling, and composting programs to reduce tonnage of solid waste going to landfills. Cities must divert at least 50 percent of their solid waste generation into recycling. If the City's target is exceeded, the City would be required to pay fines or penalties from the State for not complying with AB 939. The waste generated by the Project would be incorporated into the waste stream of the City, and diversion rates would not be substantially altered. The Project does not include any component that would conflict with state laws governing construction or operational solid waste diversion and would comply pursuant to local implementation requirements. Thus, less than significant impacts regarding compliance with AB 939 would occur with Project implementation.

---

44 181 residential units X 4 lbs/unit/day = 724 lbs/day = 0.362 tons/day X 365 days = 132 tons per year. Generation factors provided by the CalRecycle website, refer to Estimated Solid Waste Generation Rates. http://www.calrecycle.ca.gov/WasteChar/WasteGenRates/default.htm, accessed June 2016.

XVIII. Mandatory Findings of Significance

a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

Less Than Significant Impact With Mitigation Incorporated. As discussed above in Sections IV, *Biological Resources*, and Section V, *Cultural Resources*, of this Initial Study, implementation of the Project would not result in significant impacts to known or undiscovered biological or cultural resources given implementation of applicable mitigation measures and Project Design Features (including Conditions of Approval). As such, the Project would not have the potential to degrade the quality of the environment, substantially reduce the habitat of fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory; therefore, impacts in this regard would be less than significant with mitigation.

b. Does the project have impacts which are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)

Less Than Significant Impact With Mitigation Incorporated. Cumulative impacts are defined as the direct and indirect effects of a proposed Project which, when considered alone, would not be deemed a substantial impact, but when considered in addition to the impacts of related projects in the area, would be considered significant. "Related projects" refers to past, present, and reasonably foreseeable probable future projects, which would have similar impacts to the proposed Project. CEQA deems a cumulative impact analysis to be adequate if a list of "related projects" is included in the CEQA document or the proposed project is consistent with an adopted general, specific, master, or comparable programmatic plan [Section 15130(b)(1)(B)]. CEQA also states that no further cumulative impact analysis is necessary for impacts of a proposed project consistent with an adopted general, specific, master, or comparable programmatic plan [Section 15130(d)].

The approach for the analysis of cumulative impacts varies for various environmental issues depending on the potential for additive effects from other development in the area, the physical extent and intensity of such effects, and the nature of the resources affected. The project would generally result in nominal environmental impacts, as discussed in the analysis of impacts presented above for each environmental topic. Construction-related impacts related to noise and pollutant emissions would be at less than significant levels and therefore would not contribute substantially to any other concurrent construction programs that may be occurring in the vicinity. The project's contribution to long-term, cumulative impacts would not be substantial with implementation of the City's existing policies, programs, conditions of approval, regulatory requirements, and/or mitigation measures. Particularly, the project is subject to development impact fees and property taxes to offset project-related impacts to public services and utility systems, such as fire protection services, traffic control and roadways, storm drain facilities, and other public facilities and equipment. Where impacts have been identified, mitigation measures have been crafted and will be made a part of the Project's conditions of approval. Further, consistent with CEQA, since the Project would not result in significant and unavoidable impacts, it would not result in impacts that are cumulative considerable.

With regard to cumulative biological resources impacts, the Western Riverside MSHCP identifies areas for long-term conservation and management. As such, cumulative impacts of proposed projects within authorized take lands are minimized through the conservation of land. Cumulative impacts to the biological resources listed below for the study area are considered to be less than significant based on compliance with the Western Riverside County MSHCP, and regulations for jurisdictional waters. This includes implementation of the mitigation measures and conditions of approval outlined above in Section IV of this Initial Study. Since the study area was determined not to function as a regional wildlife movement corridor, this biological resource is not included below.

- Special-status plant species (Parry's spineflower and white-bracted spineflower);
- Burrowing owl;
- Migratory and/or nesting birds; and
- Drainage features (including USACE, RWQCB and CDFW jurisdictional features and MSHCP Riparian/Riverine areas).

The proposed mitigation would result in a minimum no-net-loss of the biological function and value of these resources, and the conditions of approval would ensure compliance with existing regulations (such as the Western Riverside County MSHCP) and regulations for jurisdictional drainages. Therefore, with the proposed mitigation and conditions of approval, impacts would not be considered cumulatively significant. A summary is provided below.

<u>Special-Status Plant Species:</u> Mitigation is proposed and includes a spring focused survey prior to ground disturbance to determine the presence/absence of Parry's spineflower and white-bracted spineflower within the off-site eastern manufactured slope area. If either or both of these species are observed, collection of seed and planting within an on-site or off-site mitigation site is required. The mitigation site is required to be preserved as open space in perpetuity. With this mitigation measure, any impacts to Parry's spineflower and white-bracted spineflower would not be considered cumulatively significant.

<u>Special-Status Wildlife Species:</u> Mitigation is proposed if burrowing owls are observed on the study area in the future, which would avoid direct impacts in compliance with the Western Riverside County MSHCP. Mitigation is also proposed to avoid direct impacts to raptors and migratory bird species through compliance with the MBTA. With these mitigation measures, any impacts would not be considered cumulatively significant.

Jurisdictional Drainages: Impacts to jurisdictional features would be subject to permitting with the regulatory agencies, including USACE, RWQCB and/or CDFW, including compensatory mitigation. With the proposed compliance of existing regulations through the permitting process, impacts would not be considered cumulatively significant.

Riparian/Riverine Areas: Impacts to MSHCP Riparian/Riverine areas would be subject to approval of a DBESP by the City of Moreno Valley and Wildlife Agencies, as required in Section 6.1.2 of the Western Riverside County MSHCP. With the approval and implementation of the DBESP impacts would not be considered cumulatively significant. Mitigation is proposed as compensation for impacts to jurisdictional drainages through the regulatory process as described above.

Based on the discussion above, the City hereby finds that with mitigation measures incorporated the contribution of the Project to cumulative impacts would be less than significant.

c. Does the project have environmental effects which cause substantial adverse effects on human beings, either directly or indirectly?

Less Than Significant Impact With Mitigation Incorporated. Based on the analysis of the Project's impacts provided above in Sections I through XVII of this Initial Study, there is no indication that this Project could result in substantial adverse effects on human beings. While there would be a variety of effects during construction related to traffic, noise and air quality, these impacts would be less than significant based on compliance with applicable regulatory requirements and established impact thresholds, as well as the prescribed mitigation measures, where applicable. Long-term effects would include increased vehicular traffic, traffic-related noise, periodic on-site operational noise, various changes to on-site drainage, and changing of the visual character of the site, with a majority of these impacts affecting adjacent roadway segments and intersections in the immediate area. The analysis herein concludes that direct and indirect environmental effects will at most require mitigation to reduce to less than significant levels. Generally, environmental effects will result in less than significant impacts. Based on the analysis in this Initial Study, the City finds that direct and indirect impacts to human beings will be less than significant with mitigation incorporated, as necessary.

OUR COMMITMENT TO SUSTAINABILITY | ESA helps a variety of public and private sector clients plan and prepare for climate change and emerging regulations that limit GHG emissions. ESA is a registered assessor with the California Climate Action Registry, a Climate Leader, and founding reporter for the Climate Registry. ESA is also a corporate member of the U.S. Green Building Council and the Business Council on Climate Change (BC3). Internally, ESA has adopted a Sustainability Vision and Policy Statement and a plan to reduce waste and energy within our operations. This document was produced using recycled paper.

from	David Crook, ESA
subject	Ironwood Residential Project IS/MND Public Comment Summary

Based on a review of the public and agency comments received on the Draft Initial Study/Mitigated Negative Declaration (IS/MND) prepared for the proposed Ironwood Village Residential Project, ESA has prepared the following summary of the comments received and general responses to those comment on an issue-by-issue basis. The following discussion provides an overview of the key issues raised in the comments and ESA's responses to those comments, with evidence cited in the IS/MND and supporting technical reports to substantiate those responses. The format of the comment summary and responses generally follows that of the IS/MND, with issues presented in the order they are discussed in that document, as well as other issues regarding compliance with CEQA and those that are not germane to the discussion of impacts provided in the IS/MND. Each of these issues is addressed individually below. If warranted, a more detailed response to individual comments can be prepared prior to City Council hearing based on testimony gathered at the Planning Commission public hearing.

1. **Preparation of an Environmental Impact Report vs. Mitigated Negative Declaration**

A number of comment letters were received from the public that suggest that an IS/MND is not the appropriate level of CEQA documentation for the project, but suggest that an Environmental Impact Report (EIR) must be prepared. To the contrary, based on the nature of the proposed single-family development and the City's review of initial technical studies, it was determined that the proposed project would not result in any environmental impacts that cannot be mitigated to a level less than significant. Specifically, though the Initial Study process, during which each of the checklist items contained Appendix G of the State CEQA Guidelines were thoroughly addressed, the City concluded that based on the analysis and supporting documentation contained in the Initial Study, the project would not result in any significant impacts with implementation of applicable mitigation.

Despite some comments indicating that the project should require preparation of an EIR due to the proposed General Plan Amendment and Zone Change, there is no specific requirement in cases where a project involves such requests that an EIR must be prepared, but instead this should be determined through the Initial Study process as required by CEQA. While some may argue that an EIR is a more appropriate level of CEQA documentation for the proposed project, there is no factual basis for this claim, and thus the City maintains that the IS/MND is adequate and the appropriate documentation for the project.

2. Growth Inducement

A number of comment letters were received that suggest that the proposed project is growth-inducing and that this was not adequately addressed in the IS/MND. First, the project site is located adjacent to existing single-family urban development to the west and south, with rock outcroppings and undeveloped land (zoned RA2 and HR) to the north, and undeveloped land zoned for low-density residential uses (RA2) to the east. While much of the land surrounding the project site is undeveloped, it is nonetheless zoned for residential uses and it is reasonable to assume that such uses may be developed at some point in the future as development applications are submitted. While the proposed project would require extensions of infrastructure to serve the proposed residential uses, such improvements are intended to serve the project site and would not be sized to accommodate additional development in the area; however, the location and sizing of water and sewer lines to serve the project are under the control of the Eastern Municipal Water District (EMWD) and thus the specific alignment and capacity of proposed facilities would be determined by EMWD. Nonetheless, the provision of water, sewer, electrical, natural gas, and telecommunications services to the project site does not necessarily mean that the project would induce substantial growth in the area since these services are generally available within the City and in the surrounding developed properties, and the project would simply require extension of those services to serve proposed uses. With regard to sewer service, given that no other development proposals for adjacent parcels have been submitted, it is speculative to assume that future development on these properties would require sewer service, as each project application must be reviewed by the City to determine the appropriateness of the site for septic systems or sewer service (e.g., adequacy of soils to support septic systems). Thus it is not anticipated that the provision of sewer infrastructure to serve the project site would result in unforeseen growth in the area, beyond what is already anticipated in the City's General Plan. As is the case with the proposed project, any future development applications, including those that may request changes in the General Plan or zoning for those properties near the site, must also undergo the same site plan review and environmental review processes. At that point in time, the decision makers will determine if such proposals are appropriate in the context of the surrounding development and the City's goals and policies for managing future growth. Nonetheless, the development of up to 181 single-family residential units on the project site and provision of necessary infrastructure to serve the associated project demands would not induce substantial growth beyond that proposed as part of the project, the approval of which is at the discretion of the decision makers.

3. Project Description

A number of comments received on the IS/MND suggested that the Project Description provided as Attachment A is not adequate to allow for meaningful understanding of the project. However, this suggestion is not supported by evidence. For instance, some comments state that the Project Description did not discuss the proposed General Plan Amendment and zone change, but only described the proposed physical improvements on-site, and that the off-site infrastructure improvements were also not addressed. To the contrary, as discussed on page A-4 in Attachment A, "[i]n order to accommodate the proposed density on the Project site, which is currently zoned RA2 with a density of up to two units per acre, the applicant is requesting a change of zone to R3 (single-family residential up to 3 units per acre) on the western portion of the Project site, and R5 (single-family residential uses up to 5 units per acre) on the eastern portion of the site." The proposed zoning on-site is also illustrated in Figure A-3, *Conceptual Land Use Plan*, in the same section. The requested entitlements and approvals necessary for the project are also clearly identified on page A-18 in Attachment A, while the off-site improvements are described on page A-16 under Infrastructure and Utilities and illustrated in Figure A-11. In addition, comments suggesting that the IS/MND should have evaluated the development potential on-site under the proposed zoning, but in the absence of the proposed project is not appropriate or warranted since the GPA and zone change would not be sought by the applicant if the proposed Tentative Tract Map were not approved. As such, it is speculative and unnecessary to evaluate the potential development on-site without approval of the project itself. With regard to the northwest portion of the project site planned to remain as open space, while the IS/MND does not specifically state that this portion of the property would continue to be zoned HR, this fact is indicated clearly in Figure A-4, *Project Site Plan*, in Attachment A, in which that portion of the site is labeled "Proposed HR". As no development would occur in this area, no further discussion of potential effects of the proposed project as it relates to this portion of the site is warranted.

4. Aesthetics

A number of comments received suggest that the aesthetic impacts of the project would be significant due to the intensification of land use on the project site, obstruction of valued scenic resources, and introduction of light and glare to the undeveloped site. However, as discussed in detail on pages B-1 through B-11 of the IS/MND, and illustrated in the site photos provided in Figures 1-2 through 1-5, the project site is characterized by varying topography and thus views of and across the project site from publicly available vantage points such as along Ironwood Avenue are intermittent due to this circumstance. Although the IS/MND does not provide photo-realistic simulations or renderings of the proposed project, the evaluation of impacts to views and visual character are based, in part, on the relative size and visual prominence of the property as viewed from public vantage points, particularly from designated Scenic Routes or View Corridors identified in the City's General Plan. Based on these designated viewpoints, which are located at some distance from the project site, views of the project site are obscured or obstructed by intervening topography, vegetation, or existing development, or the project site represents a small percentage of the overall view field (i.e., the project site is very small in the context of the overall view field and thus does not constitute a visually prominent feature). Specifically, with regard to views eastward from Ironwood Avenue just west of Avocado Lane (i.e., a designated view corridor indicated in Figure 7-2, Major Scenic Resources, of the City's General Plan Conservation Element), views of the project site are completely obstructed, and thus implementation of the project would have no effect on views at this location. Similarly, views northward from Alessandro Boulevard west of Moreno Beach Drive (i.e., another designated view corridor in relative proximity to the project site indicated in Figure 7-2 of the General Plan) would not be affected by project implementation, as the project site is not visible from this location given the presence of Moreno Peak and intervening topography, vegetation, and development. Likewise, views westward from Ironwood Avenue to the east of Moreno Beach Drive (i.e., another designated view corridor in relative proximity to the project site indicated in Figure 7-2 of the General Plan) would not be affected by project implementation, as the project site is not visible from this location given the presence of vegetation and development, as well as the distance to the project site which also diminishes its visual prominence. Lastly, as discussed on page B-8 of the IS/MND and illustrated in Figure I-5, while relatively unobstructed views of the project site are available from Moreno Beach Drive, a designated Scenic Route in the City's General Plan, the project site represents such a small portion of the view field that even with implementation of the proposed project with structures up to 35 feet in height, the development would not have the potential to obstruct views of valued scenic resources such as the Reche Mountains, Box Spring Mountains, and Moreno Peak, and long-distance views of the San Gabriel Mountains. Thus, impacts to views were determined to be less than significant.

Next, with regard to visual character, the conversion of the project site from undeveloped land to a single-family residential community does not necessarily constitute an adverse impact to visual character or quality. Rather, the project site, while undeveloped, does not contain any notable visual features, such as vegetation or habitat areas, and is devoid of any structures. The proposed project would be implemented in accordance with the Moreno Valley Municipal Code (MVMC) and/or the proposed project Design Guidelines, as applicable, which would ensure that the proposed improvements are visually attractive and compatible with surrounding development to the extent feasible. Similarly, all project-related lighting would be designed and installed in compliance with the MVMC and applicable Design Guidelines provisions regarding lighting. Accordingly, despite the conversion of the project site from undeveloped land to a single-family residential subdivision, impacts related to visual character and quality and light and glare were concluded to be less than significant.

5. Agriculture and Forestry Resources

Comments received on the IS/MND suggest that although the project would not result in direct effects on agricultural land or activities, and no portion of the project site is designated as Farmland by the California Department of Conservation, the document failed to analyze the potential of the project to result in additional development that could indirectly affect designated Farmland elsewhere in the area. The consideration of such indirect effects would be purely speculative and not supported by any evidence, and further is not required by CEQA. The project site does not contain any designated Farmland and the project's implementation would have no potential to result in the conversion of Farmland to non-agricultural use. As such, no further analysis of this issue is necessary.

6. Air Quality

The air quality study was prepared consistent with the methodology available from the South Coast Air Quality Management District and other air quality studies conducted in the City of Moreno Valley and the County of Riverside. This includes the use of the SCAQMD's look-up tables for determining localized impacts. At the time the air study was prepared, no rock blasting construction activities were planned, and therefore, were not analyzed in the air study. In addition, the site is expected to balance all grading quantities on-site and thus no additional air quality analysis of import or export of soil is required. As noted in the Air Quality report, consistency with the AQMP is determined by the fact that the project does not have a significant direct impact with respect to the adopted AQMD thresholds and therefore does not result in a cumulatively considerable impact. As such, the air quality study correctly finds that there would be less than significant impacts resulting from the project.

7. Biological Resources

Numerous comments received on the IS/MND suggest that impacts to biological resources resulting from the proposed project would be significant. The IS/MND included as technical appendices including both the project Biological Resources Assessment (BRA) dated August 2016 and the Determination of Biologically Equivalent or Superior Preservation (DBESP) dated September 2016. The BRA served as the biological technical study while the DBESP was included at the lead agency's request in order to provide more detailed and specific mitigation measures implemented for compliance with the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP). These biological documents provided a thorough evaluation of existing conditions, impacts, and mitigation, proposed as part of the Ironwood Village residential development. The assessment of biological resources included the quantification of off-site impacts to streambeds. The streambed impact analysis assessed three (3) potential water line alignments (proposed and two alternatives) and one sewer alignment, while acknowledging that only one water line alignment would ultimately be selected for construction; therefore; the final acreage of actual impacts would be much less than that evaluated in the discussion (see Section 1.3, "Study Area Location" on page 7 of the BRA, and Section 6.3.2.2, "CDFW Jurisdiction" on page 69 of the BRA). Although COA BIO-2 on page 78 of the BRA requires the processing of regulatory permits from the U.S. Army Corps of Engineers, Regional Water Quality Control Board, and California Department of Fish and Wildlife (CDFW), the measure also includes specific mitigation ratios and habitat types required to adequately mitigate for the loss of jurisdictional streambeds to ensure no deferral of mitigation under CEQA. It should be noted that CDFW jurisdiction within the project study areas was found to be commensurate with the limits of MSHCP Riparian/Riverine Areas associated with the project, which is common. No other impacts to sensitive biological resources were identified within these off-site areas or anywhere else within the on or off-site disturbance areas.

Section 2.1, "Project Description," on page 7 of the BRA and Section 2.1, "Proposed Project," on page 11 of the DBESP, included an erroneous typo indicating that, "The 78.48-acre project site is a single-family residential development occupying approximately *38.5 acres*..." However, the BRA and DBESP accurately assessed existing conditions and proposed impacts to the correct development footprint of 68.5 acres which is evidenced on the corresponding study area maps and site plans, biological impact maps and tables. Therefore, no overestimation of open space or lack of appropriate assessments of biological resources occurred as part of the BRA or the DBESP. Impacts to biological resources in the DBESP were based on disturbance areas which would be presumed to be the same regardless of lot densities or other design features.

As documented in Section 6.2.6, "Consistency with Adopted Natural Community Conservation Plan," on page 73 of the BRA, the project study areas are not located within, or within vicinity to, MSHCP cells, designated cell groups, or a subunit within the Reche Canyon/Badlands Area Plan, and will not be subject to certain requirements outlined in Section 6.1.3 of the MSHCP associated with "Guidelines Pertaining to the Urban/Wildlands Interface." Section 6.2.6 of the BRA also indicated that the project study areas are not within the survey overlays for Criteria Area Species, Narrow Endemic Plant Species, Amphibian Species, or Mammal Species. The fact that the study areas are not within MSHCP conservation cells is further supported by entering the project APN (473-160-004) into the Riverside County Integrated Project (RCIP) MSHCP Summary Report Generator found online at http://rctlma.org/Online-Services/rcip-report-generator as well as Figure 5 of the project DBESP (Figure 5, Relationship to the MSHCP). Compliance with Section 6.1.2 of the MSHCP, is thoroughly documented in Section 5, "Assessment of Riparian/Riverine and Vernal Pool Resources," on pages 27-36 for existing MSHCP resource conditions and Section 7.3, "Mitigation for Direct Impacts to MSHCP Riverine Resources," on pages 45-57 for MSHCP resource impacts and mitigation. Focused surveys for burrowing owl required by the MSHCP were negative as documented in Section 6.3.1.2, "Special-status Wildlife Species," on page 66 of the BRA, while COA BIO-1 and MM BIO-2 on page 78 of the BRA require a 30-day pre-construction survey and outline measures to be taken in the event that burrowing owls are found, respectively.

Although no plant surveys were required by the MSHCP, the project proponent took the additional step of conducting plant surveys for plants potentially sensitive by CEQA standards. Based on Section 4.7.5, "Special-Status Plant Species," on page 43 of the BRA and Section 6.3.2.1, "Sensitive Plant Communities," on page 67 of the BRA, no special-status plants or sensitive vegetation communities, respectively, were determined to occur within the study areas based on focused plant surveys conducted in 2015 and 2016, and based on vegetation communities mapping conducted by ESA PCR as part of the BRA. Focused plant surveys for the easterly manufactured slope area located off-site were not completed prior to preparation of the BRA but will be completed in spring 2017 as documented. In addition, MM BIO-1, on page 77 of the BRA includes specific mitigation measures for Parry's spineflower and white-bracted spineflower in the event individual plants are found during the spring 2017 surveys. Riversidean sage scrub habitat mapped within the study areas does not warrant any special protections under the MSHCP or the California Environmental Quality Act.

8. Cultural Resources

Comments received from affected tribal groups and the California Native American Heritage Commission (NAHC) indicate that the City must provide evidence of formal consultation with tribal groups and also provide a discussion of Tribal Cultural Resources (TCRs), the requirement for which was recently enacted in late 2016. While the City has engaged in formal consultation with affected tribal groups in the area that requested such consultation, and has also worked with these tribal groups to revise proposed mitigation measures provided in the IS/MND regarding cultural resources, the determinations in the IS/MND regarding impacts to cultural resources found impacts to be less than significant with implementation of applicable mitigation measures. However, per the request of affected tribal groups and at the suggestion of the NAHC, the City will provide additional discussion of impacts to TCRs as well as revised mitigation based on input from the tribe(s), to be included in the Final IS/MND and associated Mitigation Monitoring and Reporting Program (MMRP). The Final IS/MND will also include documentation of the City's consultation efforts with the affected tribes, as requested by the NAHC.

9. Geology and Soils

A number of comments suggest that the IS/MND indicates that the site is not located within an earthquake fault zone and further suggest that there is no analysis of whether the existence of a feldspar vein would require modification of the recommendations in the geotechnical report (including blasting). It is the opinion of the project's engineering geologist that faulting and seismicity at the subject property have been adequately addressed in the referenced geotechnical reports prepared by EEI for the proposed project (included as Appendix D of the IS/MND). Those reports indicated that the closest active fault to the subject property is the San Jacinto Valley segment of the San Jacinto Fault Zone, located approximately 1.5 miles to the northeast. A review of the State of California Special Studies Zone map for the Sunnymead Quadrangle (CDMG, 1974) indicates that the project site is not located within a State of California Earthquake Fault Zone. Additionally, the subject property is not located within a designated County of Riverside Fault Zone (Riverside County, 2017). It is unclear which four faults ("Faults" "F", "G", "H" and "J") the comments are referring to based on a review of the Special Studies Zone map, regional geologic mapping (Morton, 2004), regional fault mapping (Jennings, 1994) and review of the County of Riverside website. Based on EEI's review, there are no mapped faults crossing the subject property or located offsite in the nearby vicinity. Additionally, no evidence of surface faulting was observed onsite during the geotechnical evaluations of the subject property. Based on the results of the geotechnical evaluations, the subject property is underlain by continuous, unbroken, massive Cretaceous age plutonic rocks composed of weathered tonalite partially covered by surficially alluvial and colluvial sediments which show no evidence of faulting on the subject property.

With regard to the feldspar vein, based on the results of EEI's geotechnical evaluations at the site, the tonalite bedrock at the site is generally moderately to highly weathered and should in general be rippable and excavatable with standard earth moving equipment with minimal difficulty. There are likely to be small areas/pockets of more resistant bedrock that may be encountered during grading, but this was not encountered during the subsurface investigation to a maximum depth of 50.5 feet below existing grade where drilling refusal was not encountered within the relatively soft, highly weathered tonalite bedrock. Based on the results of EEI's geotechnical evaluations at the site regarding the weathered character of the underlying tonalite bedrock, it appears that blasting during site grading for excavation purposes is unlikely. The feldspar vein was a surficial reference provided by Kane Geotechnical during field study for the Rockfall Investigation Report, the EEI Geotechnical Report is considered more exhaustive, with their subsurface explorations.

In addition, other comments suggest that the IS fails to consider hazards from site preparation work to include removal of oversized rock materials and the feldspar vein, as well as related rock fall hazards. The potential hazards due to rockfall were investigated by Kane Geotechnical and their methodology and recommendations were described in their corresponding report dated March 15, 2015. Kane concluded that the residences should not be affected and that no formal rockfall measures would be required. Rock fall hazards are discussed on pages B-79 and B-80 of the IS/MND with specific mitigation provided to address such hazards.

With regard to comments received that suggest that "a more complete geotechnical study needs to be done," as stated in Section 10.0 of the project geotechnical report (EEI, 2014) contained in Appendix D of the IS/MND, "Once detailed site and grading plans are available, they should be submitted to this office for review and comment, to reduce the potential for discrepancies between plans and the preliminary recommendations presented herein. If conditions are found to differ substantially from those stated, appropriate recommendations would be provided. Additional field studies may be warranted." As stated in Section 11.0 of the geotechnical report (EEI, 2014), "Site conditions, land use (both onsite and offsite), or other factors may change as a result of man-made influences, and additional work may be required with the passage of time." Additionally, EEI expects that site conditions remain essentially unchanged since performing the geotechnical evaluations at the site. Therefore, additional geotechnical evaluation of the project site is unwarranted at this time.

It is EEI's opinion that seismicity and faulting issues for the subject property and vicinity have been adequately addressed in the referenced geotechnical reports and associated discussion presented in the IS/MND. As such, no further analysis or response is warranted.

10. Greenhouse Gas Emissions

Comments received suggest, as for Air Quality impacts, that impacts regarding greenhouse gas emissions (GHG) are not adequately analyzed, but these comments provide no evidence to support this notion, other than speculation that the analysis did not assume worst-case conditions. However, the analysis of air quality and greenhouse gas emissions impacts are based on peak construction activities on-site, the phasing of which is summarized in Table III-1, *Construction Duration*, on page B-15 of the IS/MND, which shows overlapping activities associated with building construction and architectural coatings to represent a worst-case scenario. In addition, the analysis is considered conservative in that it assumes current emission rates over the course of construction activities, while in fact, emissions tend to decrease over time as equipment efficiency increases, which would result in lower emissions than stated in the IS/MND. However, the IS/MND analysis does not rely on any such future emission reductions but rather provides what is likely an overestimation of actual project-related GHG construction emissions. Thus, impacts were determined to be less than significant.

11. Hazards and Hazardous Materials

Some comments on the IS/MND suggest that the document did not adequately analyze potential wildfire hazards at the project site. However, to the contrary, the IS/MND discussed this issue in detail on pages B-92 and B-93 and provided mitigation to ensure that wildfire hazard impacts remain less than significant, with the preliminary

Fuel Modification Plan illustrated in Figure VIII-1, *Preliminary Fuel Modification Plan*. As concluded on page B-93, with implementation of a Fire Department-approved Fuel Modification Plan, impacts would be reduced to less than significant.

12. Hydrology and Water Quality

Various comments received claim that the analysis of hydrology/drainage, flooding, and water quality presented in the IS/MND and associated technical appendix (Appendix G of the IS/MND) is not adequate but do not offer any specific evidence to support this suggestion, only anecdotal statements regarding historic flooding in the area. The Preliminary Hydrology Study contained in Appendix G of the IS/MND provides all the technical information utilized to evaluate the project's impacts to hydrology and drainage, which prepared in accordance with the County of Riverside's accepted methodology; furthermore, the sizing and design of proposed project's stormwater facilities (including proposed on-site basins) are subject to review and approval by the County. The analysis presented in the IS/MND evaluates potential impacts both on- and off-site, and as concluded therein, stormwater flows to downstream areas in the post-development condition would be no greater than under existing conditions. As such, the project would provide on-site retention for all upstream flows entering the project site, as well as all flows generated on-site, such that downstream discharges would be no greater than under existing conditions. Thus, the project would not have the potential to result in increased potential for flooding, exceedances of the capacity of downstream stormwater conveyance facilities, or substantial erosion or siltation. With regard to mapped floodplains, per Flood Insurance Rate Maps (FIRMs) issued by FEMA, some comments suggested that a portion of the project site is located within a 100-year flood hazard area; however, per the applicable FIRMs for the project site (FIRM No. 06065C0755G and 06065C0760G), no portion of the property is located within a designated floodplain.

13. Land Use and Planning

A number of comments were submitted that suggest that the proposed project is not consistent with applicable land use plans, policies, and/or regulations including the City's General Plan and the County of Riverside MSHCP. Specifically, comments indicate that the project would not be consistent with Objective 2.1 in the Community Development Element of the General Plan, which suggests that future development "[b]alance the provision of urban and rural lands within Moreno Valley by providing adequate land for present and future urban and economic development needs, while retaining the significant natural features and the rural character and lifestyle of the northeastern portion of the community." The proposed project, contrary to the commenters' suggestion, would retain the most significant natural features on the project site, namely the existing rock outcroppings in the northwest portion of the site, and would provide a single-family residential community with varying densities on the balance of the site. While the overall density on the project site would be higher than in the existing adjacent residential neighborhoods, the increase in density would not affect the rural character and lifestyle in the surrounding area, as the proposed single-family development is not a substantial departure from the larger lot single-family development in the area. In any case, however, to the extent that a project is not fully consistent with any one adopted goal or policy of the General Plan, this does not necessarily constitute a significant impact on the environment under CEQA. Rather, should such an inconsistency result in significant adverse physical impacts, it may be construed to have a significant effect; however, as demonstrated by the various analyses presented in the IS/MND, the proposed project would not result in significant adverse environmental effects with implementation of applicable mitigation measures.

With regard to consistency with the MSHCP, please see the discussion above under Biological Resources.

14. Mineral Resources

Comments received suggest that the IS/MND does not adequately evaluate impacts to mineral resources due to the presence of a feldspar vein in the rock outcroppings in the northwest portion of the site. However, despite the potential presence of feldspar in the on-site geologic formations, this does not constitute a mineral resource that would be of value to the region and the residents of the state, or suggest that the project site be considered a locally important mineral resource recovery site. The project site is not delineated as locally important mineral resource recovery site in the City's General Plan or other land use plan, and no mineral recovery operations currently occur on-site or in the project vicinity that could be potentially affected by implementation of the proposed project. As such, no impact would occur in this regard and no further analysis or response is warranted.

15. Noise

The noise study was prepared consistent with the methodology of the Federal Highway Administration guidelines for noise analysis and other noise studies conducted in the City of Moreno Valley and the County of Riverside. This includes the use of the City of Moreno Valley Municipal Code noise level standards and the significance criteria identified in the noise study. Further, the construction noise analysis represents worst-case conditions with all construction equipment for a given phase of Project construction operating simultaneously from a single point closest to each sensitive receiver location. In reality, this scenario is unlikely to occur since the mobile equipment will traverse the site as it operates throughout the day. At the time the noise study was prepared, no rock blasting construction activities were planned, and therefore, were not analyzed in the noise study. In addition, the site is expected to balance and no additional noise analysis of import or export of soil is required. Therefore, using significance criteria consistent with other environmental documents in the City of Moreno Valley and the County of Riverside, and standard practices for traffic and construction noise analyses, the noise study found that the Project will result in less than significant impacts.

16. Population and Housing

Several comments submitted in response to the IS/MND state that the analysis did not evaluate the project's potential to result in substantial growth (please also see discussion above regarding growth inducement). However, as discussed on pages B-152 and B-153 of the IS/MND, the project-related population and housing growth would be within the growth projections for the City. While these projections are based on the anticipated growth anticipated in the City's General Plan, the proposed project would result in greater population and housing growth on the project site than that assumed in the SCAG projections. However, as is the case for any projects that request a General Plan Amendment and/or zone change that could result in additional development than allowable under the existing land use and zoning designations, the City decision makers must weigh the relative benefits of increasing development type and intensity on a project-by-project basis, and make a determination if the change is appropriate for the site. Nonetheless, the projected growth at the project site, irrespective of the allowable development under the existing R2 General Plan land use designation and RA2 zoning, would be well within the growth projections for the City and thus impacts were determined to be less than significant.

17. Public Services

Comments regarding public services indicate that the project would result in deficiencies in public service ratios and/or response times, but offer no evidence to support this claim. As discussed on pages B-153 through B-164, the proposed project would either provide on-site improvements or pay requisite developer fees to address project-related impacts of the proposed project on fire protection, police protection, schools, parks, and libraries. As further discussed therein, the project would result in less than significant impacts to these public services with implementation of applicable mitigation measures (fire and police protection) and/or payment of developer fees as required by the Moreno Valley Municipal Code and State law, as applicable.

18. Recreation

Comments received have suggested that the use of the project site by off-site residents for recreation translates to a loss of recreational facilities should the project be implemented. However, this is not what is required by CEQA as pertains to recreational facilities, and further, the use of the project site (which is private property) by local residents would be considered trespassing. As stated on page B-163 of the IS/MND, according to the City's Parks Department, Project implementation would not require the physical expansion of an existing park or new park facilities serving the Project site. Nonetheless, to further ensure impacts to parks would be less than significant, the Project applicant would be responsible for meeting the parkland dedication or fee requirements as required by the Quimby Act and Title 3, Revenue and Finance, Chapter 3.38, Residential Development Impact Fees, Section 3.38.080, Park Improvements Residential Development Impact Fees, Section 3.38.090, Community/Recreation Center Residential Development Impact Fees, and Chapter 3.40, Dedication of Land for Park Facilities and Payment of in-lieu fees, of the MVMC. Compliance would offset the incremental cost of the increased demand to maintain adequate park facilities and equipment, resulting from the Project by parkland dedication or payment of development fees per the MVMC. As such, impacts to recreation were determined to be less than significant in the IS/MND.

19. Transportation/Traffic

The Traffic Impact Analysis was prepared consistent with the City of Moreno Valley Transportation Engineering Division's Traffic Impact Analysis Preparation Guide and other traffic studies conducted in the City of Moreno Valley and the County of Riverside. The study area includes all the intersections for "Collector" or higher classification street where the proposed project will add 50 or more peak hour trips. The "50 peak hour trip" criteria is consistent with the methodology employed by City of Moreno Valley and other jurisdictions throughout Riverside County and generally represents a threshold of trips at which a typical intersection would have been impacted. A project's trip distribution does not necessarily correlate directly with the turning movement counts collected at a particular intersection on one day. The project trip distribution was developed based on interaction of proposed residential use with the commercial uses south of SR-60 and the project's location in relation to the SR-60 freeway. The project trip distribution was developed in consultation with and approved by the City staff and is appropriate for determining the project's impacts and mitigation measures. Project's potential impacts to traffic was assessed for Existing, Opening Year Cumulative (2020) and Horizon Year (2040) traffic conditions and improvements were recommended, where applicable, to maintain acceptable level of service.

The half-section improvements on site adjacent streets are consistent with the City of Moreno Valley General Plan Circulation Element and is typically required by the City for all development projects. The design feature (curve) on Ironwood Avenue is an existing off-site condition. As previously noted, the project contributes less than 50 peak hour trips to this roadway segment and would not have a significant impact on safety or operations of the roadway.

20. Utilities and Service Systems

Comments received on the IS/MND also indicate that impacts related to water and wastewater utilities would be significant, but offer no evidence to support this conclusion. As discussed on pages B-196 through B-200, the projected water and wastewater demands of the project would represent nominal quantities relative to the projected water supplies and wastewater treatment capacity of EMWD's facilities. It should also be noted that the proposed project does not trigger the requirement to prepare a formal assessment of water supply pursuant to SB221 or SB610. Furthermore, all project-related utility improvements would be subject to review and approval by EMWD to ensure that such improvements are consistent with EMWD's facility plans for the project area. Contrary to other comments received, the IS/MND evaluated all potential off-site improvements that were contemplated by EMWD to serve the project site at the time the IS/MND was prepared. EMWD will determine which of the potential alignments would be the preferred alignments and only those would actually be constructed. As such, to the extent that the IS/MND evaluated impacts associated with all potential pipeline alignments, but only a subset of those would be implemented to serve the project, the analysis of off-site impacts is considered conservative. In addition, it should be noted that all off-site improvements would be located underground and thus their implementation would only result in temporary physical impacts associated with construction activities, which would be carried out in the context of the overall project construction effort.

MITIGATION MONITORING AND REPORTING PROGRAM

This Mitigation Monitoring and Reporting Program (MMRP) has been prepared for the Ironwood Residential Project in compliance with Section 21081.6 of the Public Resources Code and Section 15097 of the CEQA *Guidelines*, which is required for all projects where an Environmental Impact Report or Mitigated Negative Declaration (MND) has been prepared. Section 21081.6 of the Public Resources Code sates: " …the [lead] agency shall adopt a reporting or monitoring program from the changes made to the project or conditions of project approval, adopted in order to mitigate or avoid significant effects on the environment…[and the program] shall be designed to ensure compliance during project implementation". The primary purpose of this MMRP is to ensure that the mitigation measures identified in the MND are implemented, thereby minimizing identified environmental effects. The City of Moreno Valley (City) is the Lead Agency for the proposed project.

The MMRP for the proposed project will be in place through all phases of project implementation. The City shall be responsible for administering the MMRP activities to its staff, other City departments (e.g., Fire Department), consultants, and/or contractors. The City will also ensure that mitigation monitoring is documented through reports and that deficiencies are promptly corrected. The designated environmental monitor (e.g., City building inspector, project contractor, certified professionals, etc., depending on the provisions specified below) will track and document compliance with mitigation measures, note any problems that may result, and take appropriate action to remedy problems. The MMRP lists mitigation measures according to the same numbering system contained in the MND sections. Each mitigation measure is categorized by topic, with an accompanying discussion of the following:

- The monitoring phase of the project during which the mitigation measure should be monitored (i.e., Operation, Construction, or Prior to Construction Activities);
- The monitoring frequency of the mitigation measures (i.e., during periodic field inspection); and
- The enforcement agency (i.e., the agency with the authority to enforce the mitigation measure).

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
Air Quality			
MM AQ-1 The Project shall comply with the provisions of South Coast Air Quality Management District Rule 403, "Fugitive Dust." Rule 403 requires implementation of best available dust control measures during construction activities that generate fugitive dust, such as earth moving, grading, and equipment travel on unpaved roads. Prior to grading permit issuance, the City of Moreno Valley shall verify that the following notes are specified on the grading plan. Project construction contractors shall be required to ensure compliance with the notes and permit periodic inspection of the construction site by City of Moreno Valley staff or its designee to confirm compliance. These notes shall also be specified in bid documents issued to prospective construction contractors. a) All clearing, grading, earth-moving, and excavation activities shall cease when winds exceed 25 miles per hour; b) During grading and ground-disturbing construction activities, the construction contractor shall ensure that all unpaved roads, active soil stockpiles, and areas undergoing active ground disturbance within the Project site are watered at least three (3) times daily during dry weather. Watering, with complete coverage of disturbed areas by water truck, sprinkler system, or other comparable means, shall occur in the mid-morning, afternoon, and after work is done for the day; c) Temporary signs shall be installed on the construction site along all unpaved roads indicating a maximum speed limit of 15 miles per hour (MPH). The signs shall be installed before construction activities commence and remain in place for the duration of construction activities that include vehicle activities on	Throughout Construction Activities	As needed during construction or in response to complaints	City of Moreno Valley

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
unpaved roads; and d) The cargo area of all vehicles hauling soil, sand, or other loose earth materials shall be covered.			
MM AQ-2 The Project shall comply with the provisions of South Coast Air Quality Management District Rule 1186 "PM10 Emissions from Paved and Unpaved Roads and Livestock Operations" and Rule 1186.1, "Less-Polluting Street Sweepers" by complying with the following requirements. To ensure and enforce compliance with these requirements and reduce the release of criteria pollutant emissions into the atmosphere during construction, prior to grading and building permit issuance, the City of Moreno Valley shall verify that the following notes are included on the grading and building plans. Project construction contractors shall be required to ensure compliance with the notes and permit periodic inspection of the construction site by City of Moreno Valley staff or its designee to confirm compliance. The notes also shall be specified in bid documents issued to prospective construction contractors. a) If visible dirt or accumulated dust is carried onto paved roads during construction, the contractor shall remove such dirt and dust at the end of each work day by street cleaning and b) Street sweepers shall be certified by the South Coast Air Quality Management District as meeting the Rule 1186 sweeper certification procedures and requirements for PM10-efficient sweepers. All street sweepers having a gross vehicle weight of 14,000 pounds or more shall be powered with alternative (non-diesel) fuel or otherwise comply with South Coast Air Quality	Throughout Construction Activities	As needed during construction or in response to complaints	City of Moreno Valley

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
Management District Rule 1186.1.			
MM AQ-3 The Project is required to comply with the provisions of South Coast Air Quality Management District Rule 402 "Nuisance." To ensure and enforce compliance with this requirement, which applies to the release of odorous emissions into the atmosphere, prior to the issuance of grading and building permits, the City of Moreno Valley shall verify that the following note is included on grading and building plans. During Project construction, contractors shall be required to ensure compliance with Rule 402 and permit periodic inspection of the construction site by the City of Moreno Valley staff or its designee to confirm compliance.	Throughout Construction Activities	As needed during construction or in response to complaints	City of Moreno Valley
Biological Resources			
Condition of Approval BIO-1 Due to the presence of suitable habitat and in compliance with the MSHCP, a pre-construction survey for burrowing owl is required within 30 days prior to ground disturbance to determine the presence of burrowing owls and avoid potential direct take of burrowing owls if present.	Within 30 days prior to site disturbance	Once within 30 days prior to site clearing activities; review survey results	City of Moreno Valley/ Resource Agency(ies)
MM BIO-1 Due to the presence of suitable habitat within the proposed off-site manufactured slope area located directly east of the Project boundary, a spring focused plant survey to determine the presence/absence of Parry's spineflower and white-bracted spineflower is required to be conducted during the appropriate blooming periods of the two species (between April and June) prior to ground disturbance. If individuals are found, significant impacts would occur as a result of implementation of the Project and unless mitigation is implemented to reduce impacts to less than significant. Mitigation includes seed collection of individuals	Prior to site disturbance	Once prior to site clearing activities	City of Moreno Valley/ Resource Agency(ies)

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
that would be significantly impacted by the Project at the end of the growing season and prior to ground disturbance. Collected seeds will be planted within an appropriate on-site or off-site mitigation area, which will be conserved as open space in perpetuity. Mitigation for significant impacts to Parry's spineflower and white-bracted spineflower will be implemented in consultation with the City of Moreno Valley and CDFW.			
MM BIO-2 If burrowing owls are determined present during the 30-day pre-construction survey, occupied burrows shall be avoided to the greatest extent feasible, following the guidelines in the Staff Report on Burrowing Owl Mitigation published by Department of Fish and Wildlife including, but not limited to, conducting pre-construction surveys, avoiding occupied burrows during the nesting and non-breeding seasons, implementing a worker awareness program, biological monitoring, establishing avoidance buffers, and flagging burrows for avoidance with visible markers. If occupied burrows cannot be avoided, acceptable methods may be used to exclude burrowing owl either temporarily or permanently, pursuant to a Burrowing Owl Exclusion Plan that shall be prepared and approved by the County of Riverside Environmental Programs Department (EPD), in coordination with the CDFW. The Burrowing Owl Exclusion Plan shall be prepared in accordance with the guidelines in the Staff Report on Burrowing Owl Mitigation and the MSHCP.	Prior to site disturbance; throughout site clearing, grading, and construction activities	Once prior to site clearing activities; as needed during grading and construction/ review Exclusion Plan	City of Moreno Valley/ Resource Agency(ies)
Condition of Approval BIO-2/MM BIO-3 Prior to the issuance of any grading permit for permanent impacts in the areas designated as jurisdictional features, the Project applicant shall obtain regulatory permits from the USACE, RWQCB, and CDFW. The following shall be incorporated into the permitting, subject to approval by the regulatory agencies:	Prior to issuance of grading permit	Once prior to issuance of grading permit; review agency permit(s)	City of Moreno Valley/ Resource Agency(ies)

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
1. On-site or off-site creation, restoration and/or enhancement of USACE/RWQCB jurisdictional "waters of the U.S." within the San Jacinto watershed at a ratio no less than 1:1 or within an adjacent watershed at a ratio no less than 2:1 for permanent impacts, and for any temporary impacts to restore the impact area to pre-Project conditions (i.e. pre-Project contours). Off-site mitigation may occur on land acquired for the purpose of in-perpetuity preservation as approved by the resource agencies, or through the purchase of mitigation credits at a resource agency-approved off-site mitigation bank or in-lieu fee program. 2. On-site or off-site creation, restoration, and/or enhancement of CDFW jurisdictional streambed within the San Jacinto watershed at a ratio no less than 1:1 or within an adjacent watershed at a ratio no less than 2:1 for permanent impacts, and for any temporary impacts to restore the impact area to pre-Project conditions (i.e. pre-Project contours). Off-site mitigation may occur on land acquired for the purpose of in-perpetuity preservation as approved by the resource agencies, or through the purchase of mitigation credits at a resource agency-approved off-site mitigation bank or in-lieu fee program. Purchase of any mitigation credits through an agency-approved mitigation bank or in-lieu fee program should occur prior to any impacts to jurisdictional drainages. Any mitigation proposed on land acquired for the purpose of in-perpetuity mitigation that is not part of an agency-approved mitigation bank or in-lieu fee program shall include the creation, restoration, and/or enhancement of similar streambed habitat pursuant to a resource agency-approved Habitat Mitigation and Monitoring Plan (HMMP). The HMMP shall be prepared prior to any impacts to jurisdictional features, and shall provide details as to the implementation of the			

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
mitigation, maintenance, and future monitoring of mitigation areas. The goal of the mitigation shall be to create, restore, and/or enhance similar habitat with equal or greater function and value than the impacted habitat.			
MM BIO-4 Prior to the issuance of any grading permit that would remove potentially suitable nesting habitat for raptors or songbirds, the Project applicant shall demonstrate to the satisfaction of the City of Moreno Valley that either of the following have been or will be accomplished: 1. Vegetation removal activities shall be scheduled outside the nesting season (September 1 to February 14 for songbirds; September 1 to January 14 for raptors) to avoid potential impacts to nesting birds. 2. Any construction activities that occur during the nesting season (February 15 to August 31 for songbirds; January 15 to August 31 for raptors) will require that all suitable habitat be thoroughly surveyed for the presence of nesting birds by a qualified biologist before commencement of clearing. If any active nests are detected a buffer of 300 feet (500 feet for raptors) around the nest adjacent to construction will be delineated, flagged, and avoided until the nesting cycle is complete. The buffer may be modified and/or other recommendations proposed as determined appropriate by the biological monitor to minimize impacts.	Prior to issuance of grading permit; throughout grading and construction where vegetation removal would occur	Once prior to issuance of grading permit; as needed during site clearing, grading, or construction activities	City of Moreno Valley/ Resource Agency(ies)
Condition of Approval BIO-3 Prior to the issuance of any grading permit the Project applicant shall comply with all of the provisions of the MSHCP, including payment of the MSHCP Local Development Mitigation Fee, compliance with Section 6.1.2 of the MSHCP pertaining to Riparian/Riverine Areas, implementation of drainage, toxics and non-native species guidelines pertaining to the	Prior to issuance of grading permit	Once prior to issuance of grading permit; confirmation of fee payment	City of Moreno Valley/ Resource Agency(ies)

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
Urban/Wildlands Interface in Section 6.1.4 of the MSHCP, and compliance with Section 6.3.2 of the MSHCP pertaining to Burrowing Owl Survey Area requirements. Compliance with Section 6.1.2 of the MSHCP will require approval of the project Determination of Biologically Equivalent or Superior Preservation (DBESP) analysis outlining the impacts and proposed compensatory mitigation for impacts to the Riparian/Riverine Areas for approval by the wildlife agencies prior to issuance of a grading permit. The DBESP will be submitted to the wildlife agencies concurrent to the processing of regulatory permits for jurisdictional streambed impacts, in order to ensure that mitigation requirements proposed under the DBESP are commensurate with the preferences of the resource agencies (USACE, CDFW, and RWQCB) as part of subsequent regulatory permit conditions to be issued following adoption of the project MND.			
Cultural Resources			
MM CULT 1: Archaeologist Retained/CRMP Prepared. Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a professional archaeological monitor has been retained by the Applicant to conduct monitoring of all mass grading and trenching activities and that the monitor has the authority to temporarily halt and redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project archaeologist, in coordination with the Consulting Tribes that have requested monitoring, shall prepare a Cultural Resources Monitoring Plan (CRMP) to document protocols for inadvertent finds, to determine potential protection measures from further damage and destruction for any identified archaeological resource(s)/ tribal cultural resources (TCRs), outline the process for monitoring and for completion of the final Phase IV Monitoring Report. If any archaeological and/or TCRs are identified during monitoring, these will also	Prior to issuance of grading permit; throughout ground disturbing activities	Once prior to grading activities; as needed during grading and construction activities	City of Moreno Valley and Consulting Tribe(s)

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
be documented and addressed per standard archaeological protocols in the Phase IV report, with the exception of human remains which will be addressed per MM CULT-13. The Project Archaeologist shall attend the pre-grading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.			
MM CULT 2: Tribal Monitor Retained. At least 30 days prior to the issuance of a Grading permit the Applicant shall contact the consulting Tribe(s) that have requested monitoring, to develop Monitoring Agreement(s) for all mass grading and trenching activities and shall provide evidence of the agreement to the City of Moreno Valley. The Tribal representative(s) shall attend the pre-grading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.	At least 30 days prior to issuance of grading permit	Once at least 30 days prior to prior to grading activities	City of Moreno Valley and Consulting Tribe(s)
MM CULT 3: Grading Plans. Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan: "If any suspected archaeological resources are discovered during ground-disturbing activities and the archaeological monitor or Tribal representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal representatives to the site to assess the significance of the find."	Prior to issuance of grading permit	Once at plan check/review of grading plans	City of Moreno Valley
MM CULT 4: Preservation Plan for CA-RIV-12,333. Prior to building permit issuance, the Project Applicant and the Consulting Tribe(s) shall prepare a Preservation and Maintenance Plan for the long-term care and maintenance of CA-RIV-12,333 and, if any, all new features identified during mass grading activities. The Plan shall indicate, at a minimum, the specific areas to be included in and	Prior to issuance of building permit	Prior to issuance of building permit/ review of Preservation and Maintenance Plan	City of Moreno Valley and Consulting Tribe(s)

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
excluded from long-term maintenance; prohibited activities; methods of preservation to be employed (fencing, vegetative deterrence, etc.); the entity(s) responsible for the long-term maintenance; maintenance scheduling and notification; appropriate avoidance protocols; monitoring by the Tribe and compensation for services if applicable; and necessary emergency protocols. The Project Applicant/Landowner shall submit a fully executed copy of the Preservation and Maintenance Plan to the City to ensure compliance with this mitigation measure.			
MM CULT 5: Conduct Archaeological Sensitivity Training for Construction Personnel. The Applicant shall retain a qualified professional archaeologist who shall conduct an Archaeological Sensitivity Training for construction personnel prior to commencement of excavation activities, along with representatives from Tribes that have requested monitoring. The training session, shall be carried out by a cultural resources professional with expertise in archaeology, will focus on how to identify archaeological/cultural resources that may be encountered during earthmoving activities, and the procedures to be followed in such an event. The training session will include a Power Point presentation and/or handouts for all attendees. The basic topics to be addressed in the session include: a brief cultural and archaeological history of the area and the Applicant's and City's cultural resource compliance obligations; training in potential resources that may be encountered through the use of photographs or other illustrations; the duties of archaeological monitors; notification and other procedures to follow upon discovery of resources; and, the general steps that would be followed to conduct a salvage investigation if one is necessary. A sign-in sheet shall be compiled to track attendance and shall be submitted to the City with the Archaeological Monitoring Report.	Prior to grading and construction activities; as needed during site ground disturbing activities	Once prior to grading and construction activities; as needed during site ground disturbing activities	City of Moreno Valley and Consulting Tribe(s)

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
MM CULT 6: Monitor Construction Excavations for Archeological Resources in Younger Alluvial Sediments. The Applicant shall retain a qualified archaeological monitor, who will work under the direction and guidance of a qualified professional archaeologist. The archaeological monitor shall be present during all construction excavations (e.g., grading, trenching, or clearing/grubbing) into non-fill younger Pleistocene alluvial sediments. Multiple earth-moving construction activities may require multiple archaeological monitors. The frequency of monitoring shall be based on the rate of excavation and grading activities, proximity to known archaeological resources, the materials being excavated (native versus artificial fill soils), and the depth of excavation, and if found, the abundance and type of archaeological resources encountered. Full-time monitoring can be reduced to part-time inspections, or ceased entirely, if determined adequate by the Project archaeologist.	Prior to grading activities; throughout site ground disturbing activities	Once prior to grading activities; as needed throughout site ground disturbing activities	City of Moreno Valley and Consulting Tribe(s)
MM CULT 7: Inadvertent Finds. If, during mass grading and trenching activities, the Archaeologist or Tribal representatives/monitors suspect that an archaeological resource and/or TCR may have been unearthed, the monitor identifying the potential resources, in consultation with the other monitor as appropriate, shall immediately halt and redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. The Native American monitor(s) or appropriate representative(s) and the archaeological monitor shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2. The archaeological monitor and tribal monitor(s) or appropriate representative(s), the Project Applicant, and the City Planning Division shall confer regarding mitigation of the discovered resource(s). All sacred sites, should they be encountered within the project area, shall be avoided and preserved as the preferred mitigation, if feasible. If preservation in place is not feasible, steps for treatment	Throughout site ground disturbing activities	As needed during site ground disturbing activities	City of Moreno Valley and Consulting Tribe(s)

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
and disposition shall be carried out in accordance as set forth in per MM CULT-9.			
MM CULT 8: Final Phase IV Monitoring Report. Prior to building permit issuance, the Project archaeologist shall prepare a final Phase IV Monitoring Report as outlined in the CRMP, which shall be submitted to the City Planning Division, the appropriate Native American tribe(s), and the Eastern Information Center at the University of California, Riverside. The report shall document project impacts to CA-RIV-857, CA-RIV-3159 and CA-RIV-3341, including the relocation area and protection measures taken for CA-RIV-3341.	Prior to issuance of building permit	Once prior to issuance of building permit/ review of Phase IV Report	City of Moreno Valley and Consulting Tribe(s)
MM CULT 9: Treatment and Disposition of Discoveries. In the event that Native American cultural resources are inadvertently discovered during the course of grading for this Project. The following procedures will be carried out for treatment and disposition of the discoveries: 1. **Treatment and Final Disposition**: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and non-human remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Moreno Valley Planning Department with evidence of same: a. Accommodate the process for Preservation In Place/Onsite reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloguing and basic recordation have been	Throughout site ground disturbing activities	As needed during site ground disturbing activities	City of Moreno Valley and Consulting Tribe(s)

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
completed; b. A curation agreement with an appropriate qualified repository within Riverside County that meets federal standards per 36 CFR Part 79 and therefore would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility within Riverside County, to be accompanied by payment of the fees necessary for permanent curation: c. For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, they shall be curated at the Western Science Center by default.			
MM CULT 10: Conduct Paleontological Sensitivity Training for Construction Personnel. The Applicant shall retain a qualified paleontologist who shall conduct a Paleontological Sensitivity Training for construction personnel prior to commencement of excavation activities. The training session, shall be carried out by a cultural resources professional with expertise in paleontology, will focus on how to identify paleontological resources that may be encountered during earthmoving activities, and the procedures to be followed in such an event. The training session will include a Power Point presentation and/or handouts for all attendees. The basic topics to be addressed in the session include: a brief cultural and geologic history of the area and the City cultural resource compliance obligations; training in potential resources that may be encountered through the use of photographs or other illustrations; the duties of paleontological monitors;	Prior to grading activities; throughout site ground disturbing activities	Once prior to grading activities; as needed throughout site ground disturbing activities	City of Moreno Valley

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
notification and other procedures to follow upon discovery of resources; and, the general steps that would be followed to conduct a salvage investigation if one is necessary.			
MM CULT 11: Monitor Construction Excavations for Paleontological Resources in Older Pleistocene Alluvial Deposits. The Applicant shall retain a qualified paleontological monitor, who will work under the guidance and direction of a qualified professional paleontologist. The paleontological monitor shall be present during all construction excavations (e.g., grading, trenching, or clearing/grubbing) into non-fill older Pleistocene alluvial deposits. Multiple earth-moving construction activities may require multiple paleontological monitors. The frequency of monitoring shall be based on the rate of excavation and grading activities, proximity to known paleontological resources and/or unique geological features, the materials being excavated (native versus artificial fill soils), and the depth of excavation, and if found, the abundance and type of paleontological resources and/or unique geological features encountered. Full-time monitoring can be reduced to part-time inspections if determined adequate by the qualified professional paleontologist.	Throughout site ground disturbing activities	As needed during site ground disturbing activities	City of Moreno Valley
MM CULT 12: Cease Ground-Disturbing Activities and Implement Treatment Plan if Paleontological Resources Are Encountered. In the event that paleontological resources and or unique geological features are unearthed during ground-disturbing activities, ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. A buffer area of at least 25 feet shall be established around the find where construction activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area. The Applicant and City shall coordinate with a qualified professional paleontologist to develop an appropriate treatment plan for	Throughout site ground disturbing activities	As needed during site ground disturbing activities	City of Moreno Valley

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
the resources. Treatment may include implementation of paleontological salvage excavations to remove the resource along with subsequent laboratory processing and analysis or preservation in place. At the paleontologist's discretion and to reduce any construction delay, the grading and excavation contractor shall assist in removing rock samples for initial processing. Any fossils encountered and recovered shall be prepared to the point of taxonomic identification and catalogued and curated to a suitable museum or other repository with a research interest in the materials, such as the San Bernardino County Museum or Western Science Center. If no institution accepts the fossil collection, they shall be donated to a local school in the area for educational purposes. Accompanying notes, maps, and photographs shall also be filed at the repository and/or school.			
MM CULT 13: Cease Ground-Disturbing Activities and Notify County Coroner If Human Remains Are Encountered. If human remains are unearthed during implementation of the Proposed Project, the City shall comply with State Health and Safety Code Section 7050.5. The City shall immediately notify the County Coroner and no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to PRC Section 5097.98. If the remains are determined to be of Native American descent, the coroner has 24 hours to notify the Native American Heritage Commission (NAHC). The NAHC shall then identify the person(s) thought to be the Most Likely Descendent (MLD). The MLD may, with the permission of the landowner, inspect the site of the discovery of the Native American remains and may recommend to the landowner means for treating or disposing, with appropriate dignity, the human remains and any associated funerary objects. The MLD shall complete their inspection and make their recommendation within 48 hours of being granted access by the landowner to inspect the discovery. The recommendation may include the scientific removal and nondestructive analysis of human remains and cultural items	Throughout site ground disturbing activities	As needed during site ground disturbing activities	City of Moreno Valley and Consulting Tribe(s)

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
associated with Native American burials. Upon the discovery of the Native American remains, the landowner shall ensure that the immediate vicinity, according to generally accepted cultural or archaeological standards or practices, where the Native American human remains are located, is not damaged or disturbed by further development activity until the landowner has discussed and conferred, as prescribed in this mitigation measure, with the MLD regarding their recommendations, if applicable, taking into account the possibility of multiple human remains. The landowner shall discuss and confer with the descendants all reasonable options regarding the descendants' preferences for treatment. MLDs in the region typically recommend reburial of the remains as close to the original burial location as feasible accompanied by a ceremony. The MLD shall file a record of the reburial with the NAHC and the Project archaeologist shall file a record of the reburial with the CHRIS-EIC. If the NAHC is unable to identify a MLD, or the MLD identified fails to make a recommendation, or the landowner rejects the recommendation of the MLD and the mediation provided for in Subdivision (k) of Section 5097.94, if invoked, fails to provide measures acceptable to the landowner, the landowner or his or her authorized representative shall inter the human remains and items associated with Native American human remains with appropriate dignity on the facility property in a location not subject to further and future subsurface disturbance. A record of the reburial shall be filed with the NAHC and the CHRIS-EIC.			
Geology and Soils			
MM GEO-1: Site-specific structural and seismic design parameters and recommendations for foundations, retaining walls/shoring, and excavation shall be implemented per the Project's Preliminary Geotechnical Evaluation and the	Prior to issuance of grading permit; foundation and building	Plan check; on-site inspection.	City of Moreno Valley

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
Supplemental Geotechnical Evaluation, subject to review and approval by the City of Moreno Valley Building Safety Department.	construction		
Project Design Feature-GEO-1: The Project applicant would construct reinforced concrete or block privacy walls on Lots 36, 37, 38, 39, and 40 to provide supplementary protection and to prevent small, nuisance rockfall from accumulating in proposed residential areas.	Prior to issuance of Certificate of Occupancy	Plan check; on-site inspection.	City of Moreno Valley
Hazards and Hazardous Materials			
MM HAZ-1: The Project applicant shall implement a Project-specific Fuel Modification Plan based on the *General Guidelines for Creating Defensible Space* prepared by the California Department of Forestry and Fire Protection (2006). The Fuel Modification Plan shall be subject to review and approval by the Moreno Valley Fire Department.	Prior to issuance of grading permit	Plan check; approval of Fuel Modification Plan	Moreno Valley Fire Department
Noise			
MM NOISE-1: Prior to approval of the grading plans and/or issuance of building permits, plans shall include a note indicating that noise-generating Project construction activities shall only occur between the hours of 7:00 AM and 7:00 PM, Monday through Friday, excluding holidays, and from 8:00 AM and 4:00 PM on Saturday, unless written approval is obtained from the City's building official or city engineer. The Project construction supervisor shall ensure compliance with the note and the City shall conduct periodic inspection at its discretion.	Prior to issuance of grading permit; Throughout construction activities	Plan check/construction bid documents; As needed during construction or in response to complaints	City of Moreno Valley

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
MM NOISE-2: The Project applicant shall install temporary noise control barriers that provide a minimum noise level attenuation of 10 dBA when Project construction occurs near existing noise-sensitive structures. The noise control barrier must present a solid face from top to bottom. The noise control barrier must be designed with appropriate height and length to block the view of the noise source. Unnecessary openings shall not be made. The noise barrier may be constructed using an acoustical blanket (e.g. vinyl acoustic curtains or quilted blankets) attached to the construction site perimeter fence or equivalent temporary fence posts. The noise barriers must be maintained and any damage promptly repaired. Gaps, holes, or weaknesses in the barrier or openings between the barrier and the ground shall be promptly repaired. The noise control barriers and associated elements shall be completely removed and the site appropriately restored upon the conclusion of the construction activity.	Throughout construction activities	As needed during construction or in response to complaints	City of Moreno Valley
MM NOISE-3: During all Project site construction, the construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers, consistent with manufacturers' standards. The construction contractor shall place all stationary construction equipment so that emitted noise is directed away from the noise sensitive receptors nearest the Project site.	Throughout construction activities	As needed during construction or in response to complaints	City of Moreno Valley
MM NOISE-4: The construction contractor shall locate equipment staging in areas that would create the greatest distance between construction-related noise sources and noise-sensitive receivers nearest the Project site (i.e., to the northern	Throughout construction activities	As needed during construction or in response to complaints	City of Moreno Valley

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
center) during all Project construction.			
MM NOISE-5: The construction contractor shall limit haul truck deliveries to the same hours specified for construction equipment (between the hours of 7:00 AM and 7:00 PM, Monday through Friday, excluding holidays, and from 8:00 AM and 4:00 PM on Saturday, unless written approval is obtained from the City's building official or city engineer). The contractor shall design delivery routes to minimize the exposure of sensitive land uses or residential dwellings to delivery truck-related noise.	Throughout construction activities	As needed during construction or in response to complaints	City of Moreno Valley
MM NOISE-6: <u>Exterior Noise Mitigation</u>: The Project applicant shall construct 4-foot high noise barriers for the outdoor living areas (backyards) of residential lots 26 to 30. The recommended noise control barriers shall be constructed so that the top of each wall extends to the recommended height above the pad elevation of the lit it is shielding. When the road is elevated above the pad elevation, the barrier shall extend to the recommended height above the highest point between the residential home and the road. The barriers shall provide a weight of at least 4 pounds per square foot of face area with no decorative cutouts or line-of-sight openings between shielded areas and the roadways. The noise barrier shall be constructed using one of the following materials: masonry block; stucco veneer over wood framing (or foam core), or 1-inch thick tongue and groove wood of sufficient weight per square foot; glass (1/4-inch thick), or other transparent material with sufficient weight per square feet; earthen berm; or any combination of these construction materials. The barrier must present a solid face from top to bottom. Unnecessary openings or decorative cutouts shall not be made. All gaps (except for weep holes) shall be filled with grout or caulking.	Prior to Certificate of Occupancy	Plan check; on-site inspection	City of Moreno Valley

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
MM NOISE-7: Interior Noise Mitigation: The Project applicant shall provide the following or equivalent measures: Windows: All windows and sliding glass doors shall be well fitted with well weather-stripped assemblies and a minimum STC rating of 27. Doors: All exterior doors shall be well weather-stripped solid core assemblies at least 1 ¾-inch thick. Roof: Roof sheathing of wood construction shall be well fitted or caulked plywood of at ½-inch thick. Ceilings shall be well fitted, well-sealed gypsum board of at least ½-inch thick. Attic: Attic vents shall be oriented away from Ironwood Avenue. If such an orientation cannot be avoided, then an acoustical baffle shall be placed in the attic space behind the vents. Insulation with at least a rating of R-19 shall be used in the attic space. Ventilation: When any habitable room is in use, arrangements shall be such that circulated air is received when any exterior door(s) or window(s) are closed. A forced air circulation system (e.g. air conditions) or active ventilation system (e.g. fresh air supply) shall be provided which satisfies the requirements of the Uniform Building Code.	Prior to Certificate of Occupancy	Plan check; on-site inspection	City of Moreno Valley
Public Services			
MM PS-1: Construction Traffic Management Plan - A Construction Traffic Management Plan shall be developed by the Project contractor in consultation with	Prior to issuance of grading or building permit; throughout	Prior to construction activities; As needed during construction	City of Moreno Valley

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
the Project's traffic and/or civil engineer and approved by the City of Moreno Valley Department of Public Works prior to issuance of any Project demolition, grading or excavation permit. The Construction Traffic Management Plan shall also be reviewed and approved by the MVFD. The City of Moreno Valley Department of Public Works reserves the right to reject any engineer at any time and to require that the Plan be prepared by a different engineer. The construction management plan shall include, at a minimum, the following: ▪ The name and telephone number of a contact person who can be reached 24 hours a day regarding construction traffic complaints or emergency situations; ▪ An up-to-date list of local police, fire, and emergency response organizations and procedures for the continuous coordination of construction activity, potential delays, and any alerts related to unanticipated road conditions or delays, with local police, fire, and emergency response agencies. Coordination shall include the assessment of any alternative access routes that might be required through the site, and maps showing access to and within the site and to adjacent properties; ▪ Procedures for the training and certification of the flag persons used in implementation of the Construction Traffic Management Plan; ▪ The location, times, and estimated duration of any roadway closures, traffic detours, use of protective devices, warning signs, and staging or queuing areas; ▪ Identify the locations of the off-site truck parking and staging and provide measures to ensure that trucks use the specified haul route, and do not travel through nearby residential neighborhoods or schools;	construction		

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
▪ Schedule vehicle movements to ensure that there are no vehicles waiting off-site and impeding public traffic flow on surrounding streets; ▪ Establish requirements for loading/unloading and storage of materials on the Project site; ▪ During construction activities when construction worker parking cannot be accommodated on the Project site, a Construction Worker Parking Plan shall be prepared which identifies alternate parking location(s) for construction workers and the method of transportation to and from the Project site (if beyond walking distance) for approval by the City of Moreno Valley. The Construction Worker Parking Plan shall prohibit construction worker parking on residential streets and prohibit on-street parking, except as approved by the City.			
Transportation/Traffic			
Condition of Approval TRAF-1 : As recommended by the project's traffic consultant, prior to project occupancy, three potential speed hump locations have been proposed along Street "A". Final speed hump locations to be reviewed and approved by the City's Traffic Engineer. Further, prior to project occupancy, potential all-way stop locations, to be determined if warranted by the City's Traffic Engineer, have also been recommended in three locations along Street "A".	Prior to Certificate of Occupancy	Plan check; on-site inspection	City of Moreno Valley
MM TRAF-1: The Project applicant shall participate in the funding of off-site improvements, including traffic signals that are needed to serve cumulative traffic conditions through the payment of TUMF and City DIF fees (if the improvements are included in the TUMF or DIF programs) or on a fair share basis (if the improvements are not included in the TUMF or DIF programs). These fees shall be	Prior to Certificate of Occupancy	Review Proof of Fee Payment	City of Moreno Valley

Mitigation Monitoring and Reporting Program

Mitigation Measure	Monitoring Phase	Monitoring Frequency	Enforcement Agency
collected by the City, with the proceeds solely used as part of a funding mechanism used to ensure that regional highways and arterial expansions keep pace with the projected population increases.

Notice of
PUBLIC HEARING

Notice is hereby given that a Public Hearing will be held by the Planning Commission of the City of Moreno Valley on the following item(s):

Project: PEN16-0077 (PA15-0037, General Plan Amendment), PEN16-0078 (PA15-0038, Change of Zone), PEN16-0079 (PA15-0039, Tentative Tract Map 37001), PEN16-0080 (PA15-0040, Plot Plan for Design Guidelines) and PEN16-0081 (P15-087, Expanded Environmental Review/Initial Study)

Applicant: Global Investment & Development LLC

Owner: Ironwood 8 Properties LP

Representative: Anderson Consulting Engineers, Inc.

A.P. No(s): 473-160-004

Location: Ironwood Avenue, east of Nason Street and west of Oliver Street

Proposal: The project proposes to develop a 181 lot single-family residential development on approximately 68.5 net acres. Lot sizes for the proposed single-family homes would range from a minimum of 7,200 square feet to over 17,200 square feet with an average lot size of approximately 9,260 square feet. The proposed General Plan Amendment will change the existing land use designation from Residential 2 (R2) to Residential 3 (R3) and Residential 5 (R5). The proposed Change of Zone will change the underlying zoning from Residential Agriculture 2 (RA2) to Residential 3 (R3) and Residential 5 (R5). The existing approximately 10.3 acres of Hillside Residential (HR) in the northwest corner of the site will remain as open space. The Design Guidelines include site development regulations in order to provide cohesive design throughout the Ironwood Village Project. The proposed Project is intended to encourage a range of housing alternatives with a variety of lot sizes intermixed with trails, a park, open space areas and water quality features.

Council District: 2

Environmental Determination: Mitigated Negative Declaration. The City of Moreno Valley has reviewed the above project in accordance with California Environmental

Quality Act (CEQA) Guidelines Section 15070 and has determined that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because mitigation measures have been required of the project that will reduce potential impacts to a less than significant level. The 30-day public review period commenced on November 15, 2016 and concluded on December 14, 2016. The MND was mailed to interested parties, public agencies and to the State Clearinghouse (#2016111039). The public comments received have been considered fully in preparing the final MND. Any public agency which commented on the MND has been notified in writing of the scheduled public hearing on the project.

A public hearing before the Planning Commission has been scheduled for the proposed project. Any person interested in commenting on the proposal and recommended environmental determination may speak at the hearing or provide written testimony at or prior to the hearing. The project application, supporting plans and environmental documents may be inspected at the Community Development Department at 14177 Frederick Street, Moreno Valley, California during normal business hours (7:30 a.m. to 5:30 p.m., Monday through Thursday 7:30 a.m. to 4:30 p.m., Friday), or you may telephone (951) 413-3206 for further information.

The Planning Commission, at the Hearing or during deliberations, could approve changes or alternatives to the proposal. If you challenge any of these items in court, you may be limited to raising only those items you or someone else raised at the Public Hearing described in this notice or in written correspondence delivered to the Planning Commission at, or prior to, the Public Hearing.

See reverse side for site map

PLANNING COMMISSION HEARING

City Council Chamber, City Hall
14177 Frederick Street
Moreno Valley, Calif. 92553

DATE AND TIME: January 26, 2017 at 7 PM
CONTACT PLANNER: Claudia Manrique
PHONE: (951) 413-3225

Upon request and in compliance with the Americans with Disabilities Act of 1990, any person with a disability who requires a modification or accommodation in order to participate in a meeting should direct such request to Guy Pegan, ADA Coordinator, at 951.413.3120 at least 48 hours before the meeting. The 48-hour notification will enable the City to make reasonable arrangements to ensure accessibility to this meeting.

PLANNING COMMISSION RESOLUTION NO. 2017-05

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY RECOMMENDING THAT THE CITY COUNCIL APPROVE APPLICATION NO. PEN16-0077 (PA15-0037): AN AMENDMENT TO THE GENERAL PLAN LAND USE MAP, CHANGING THE LAND USE DESIGNATION FROM RESIDENTIAL 2 (R2) TO RESIDENTIAL 3 (R3), RESIDENTIAL 5 (R5) AND HILLSIDE RESIDENTIAL (HR) AND AMENDING GENERAL PLAN FIGURE 4-2 FUTURE PARKLAND ACQUISTION MAP AND GENERAL PLAN FIGURE 4-3 MASTER PLAN OF TRAILS IN THE PARKS, RECREATION AND OPEN SPACE ELEMENT INVOLVING AN APPROXIMATELY 78.4 ACRES PARCEL LOCATED AT THE NORTHEAST CORNER OF NASON STREET AND IRONWOOD AVENUE.

WHEREAS, the applicant, Global Investment & Development LLC, filed Application No. PEN16-0077 (PA15-0037), requesting an amendment to the Moreno Valley General Plan, as described in the title of this Resolution and the attached Exhibit A, Exhibit B and Exhibit C; and

WHEREAS, the application has been evaluated in accordance with established City of Moreno Valley (City) procedures, and with consideration of the General Plan and other applicable regulations; and

WHEREAS, the City has prepared an Initial Study and Mitigated Negative Declaration consistent with the California Environmental Quality Act (CEQA) based on a thorough analysis of potential environmental impacts; and

WHEREAS, upon completion of a thorough development review process the project was appropriately agendized and noticed for a public hearing before the Planning Commission of the City of Moreno Valley (Planning Commission); and

WHEREAS, the public hearing notice for this project was published in the local newspaper on January 15, 2017. Public notice was sent to all property owners of record within 300 feet of the project site on January 13, 2017. The public hearing notice for this project was also posted on the project site on January 13, 2017;

WHEREAS, on January 26, 2017, the Planning Commission held a public hearing to consider the application; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred; and

WHEREAS, pursuant to Government Code Section 66020(d)(1), **NOTICE IS HEREBY GIVEN** that this project is subject to certain fees, dedications, reservations and other exactions as provided herein.

NOW, THEREFORE, BE IT RESOLVED, it is hereby found, determined and resolved by the Planning Commission as follows:

A. This Planning Commission hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this Planning Commission during the above-referenced meeting on January 26, 2017, including written and oral staff reports, public testimony and the record from the public hearing, this Planning Commission hereby specifically finds as follows:

1. **Conformance with General Plan Policies –** The proposed general plan amendment and zone change are consistent with the General Plan, and its goals, objectives, policies and programs.

   FACT: The project proposes development of a 181 lot single family tract (TTM 37001) on an approximately 78 acres parcel (APN: 473-160-004). The General Plan land use designations for the project site are Hillside Residential (HR), Residential 3 (R3), and Residential 5 (R5). No development will occur within the Hillside Residential (HR) portion of the site. All development related to the apartments will occur within the R30 portion of the property.

   The project is consistent with General Plan policies and objectives. General Plan Policy 2.2.2 states that the primary purpose of areas designated Hillside Residential (HR) is to balance the preservation of hillside areas with the development of view-oriented residential uses. General Plan Policy 2.2.2.c goes on to require development in the Hillside Residential (HR) designation to maximize preservation of natural hillside contours, vegetation and other characteristics. The proposed Hillside Residential (HR) portion of the site provides for conservation of the steeper slopes more so than afforded by the existing Residential 2 (R2) General Plan designation and the related TTM 37001 will have no development occurring within the Hillside Residential (HR) portion of the site.

   General Plan Policy 2.2.6 states that the primary purpose of areas designated Residential 3 (R3) is to provide a transition between rural and urban density development areas, and to provide for a suburban lifestyle on residential lots larger than those commonly found in suburban subdivisions. The Residential 3 (R3) zoning will still allow for suburban lifestyles on lots larger than commonly available in suburban subdivisions. The project provides opportunity for active lifestyle living with trail linkages, recreational, and open space amenities. In addition, the proposed Residential 3 (R3) General Plan designation on the westerly portion of the site will provide an appropriate transition from the proposed Residential 5 (R5) area of the project to the existing

Residential 2 (R2) General Plan designated land to the immediate west of the project site.

General Plan Policy 2.2.7 states that the primary purpose of areas designated Residential 5 (R5) is to provide for single-family detached housing on standard sized suburban lots. The Residential 5 (R5) zoning mixture along with Residential 3 (R3) will still allow for suburban lifestyles on lots larger than commonly available in suburban subdivisions. The project provides opportunity for active lifestyle living with trail linkages, recreational, and open space amenities.

The project as designed and conditioned meets the stated General Plan policies for Hillside Residential (HR), Residential 3 (R3) and Residential 5 (R5).

The Goals and Objectives of the Community Development Element of the General Plan include providing a wide range of housing types in sufficient numbers suitable to meet the diverse needs of present and future residents of all socioeconomic groups and to support healthy economic development without creating an oversupply of any particular type of housing (Goal 2.4 and Objective 2.2). The proposal will provide a wider range of housing types than currently permitted under the R2 General Plan designation by clustering development on the flatter portions of the site, and protecting the hillside areas.

As a component of the proposed General Plan Amendment, the project proposes to remove the site from the “General Plan Figure 4-2 Future Parkland Acquisition Area” map and proposes to revise “General Plan Figure 4-3 Master Plan of Trails”. The current Master Plan of Trails identifies a theoretical future public trail running north and south through the center of the project parcel connecting to a forked future trail just north of the project limits. This central City trail section is proposed to be replaced with private, HOA maintained multi-use trails that would connect the Ironwood Village Project neighborhoods, interior open spaces and on-site park, and will connect to the future City of Moreno Valley public off-site trails on Ironwood Avenue, Oliver Street and to the north of the project site. Parks, Recreation and Open Space Element Policy 4.2.8 encourages the development of recreational facilities within private developments, with appropriate mechanisms to ensure that such facilities are properly maintained and that they remain available to residents in perpetuity.

Based upon the information presented above, the proposed change in land use and trail system are compatible and would not conflict with the goals, objectives, policies or programs of the General Plan. Ironwood Village exhibits a balanced land use pattern that accommodates a range of residential opportunities (Goal 9.1.I), provides recreational amenities including a park, multi-use trails and open space (Goal 9.1.V), and recognizes the need to conserve natural resources by preserving 10.3 acres of the project site as open space (Goal 9.1.VIII).

2. **Health, Safety and Welfare –** The proposed general plan amendment will not be detrimental to the public health, safety or welfare.

FACT: The proposed General Plan Amendment will not result in unacceptable levels of protection from natural and man-made hazards to life, health, and property and is therefore consistent with General Goal 9.6.1. The project site is located within approximately 1.3 miles of Fire Station #58 and within close proximity to emergency services which is consistent with General Plan Goal 9.6.2 which requires emergency services that are adequate to meet minor emergency and major catastrophic situations. The proposed General Plan Amendment will not allow for development that would be inconsistent with General Plan Objective 6.1 to minimize the potential for loss of life and protect residents, workers, and visitors to the City from physical injury and property damage due to seismic ground shaking and secondary effects or General Plan Objective 6.2 to minimize the potential for loss of life and protect residents, workers, and visitors to the City from physical injury and property damage, and to minimize nuisances due to flooding.

The California Environmental Quality Act (CEQA) is a statewide environmental law contained in Public Resources Code §§21000-21177. CEQA applies to most public agency decisions to carry out, authorize, or approve actions that have the potential to affect the environment. CEQA requires that public agencies analyze and acknowledge the environmental consequences of their discretionary actions and consider alternatives and mitigation measures that could avoid or reduce significant adverse impacts to the environment when avoidance or reduction is feasible. The CEQA compliance process provides public agencies and the general public an opportunity to comment on a proposed project's environmental effects. The proposed project is not exempt from CEQA. It was determined that an Initial Study would be prepared to determine whether the proposed project may have a significant effect on the environment.

An Initial Study/Mitigated Negative Declaration were prepared which assessed the potential of the proposed General Plan Amendment and the related Change of Zone, Tentative Tract Map (TTM 37001), and Plot Plan for Ironwood Village Design Guidelines applications to impact the environment. The proposed project includes the development of the project site with 181 single family lots on approximately 78.4 acres. The project site is located in the City of Moreno Valley, County of Riverside and State of California.

The Initial Study provided the documentation of the factual basis for the finding in the Mitigated Negative Declaration that the proposed project will not have a significant effect on the environment with the implementation of mitigation measures. The City as the Lead Agency has prepared a Mitigated Negative Declaration (MND) pursuant to Sections 15070 et seq. of the State CEQA Guidelines.

The Mitigated Negative Declaration is an informational document that provides the City, other public agencies, and the public at-large with an objective assessment of the potential environmental impacts that could result from implementation of the proposed project. The preparation and review of the Initial Study/Mitigated Negative Declaration reflects the independent judgment of the City.

The MND has been considered by the Planning Commission and prepared as there is no evidence that the proposed project will have a significant impact on public health or be materially injurious to surrounding properties of the environment as a whole.

BE IT FURTHER RESOLVED that the Planning Commission **HEREBY RECOMMENDS** that the City Council:

1. **ADOPT** a Mitigated Negative Declaration for Application No. PEN16-0077 (PA15-0037) pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

2. **ADOPT** the Mitigation Monitoring and Reporting Program prepared for General Plan Amendment Application No. PEN16-0077 (PA15-0037), pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

3. **APPROVE** General Plan Amendment Application No. PEN16-0077 (PA15-0037), based on the findings contained in this resolution.

APPROVED this 26th day of January, 2017.

PLANNING COMMISSION RESOLUTION NO. 2017-06

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY RECOMMENDING THAT THE CITY COUNCIL APPROVE APPLICATION NO. PEN16-0078 (PA15-0038): AN AMENDMENT TO THE OFFICIAL ZONING ATLAS, CHANGING THE ZONING CLASSIFICATION FROM RESIDENTIAL AGRICULTURE (RA2) TO RESIDENTIAL 3 (R3) AND RESIDENTIAL 5 (R5) OF AN APPROXIMATELY 68 ACRES OF A 78.4 ACRES PARCEL AND REMOVAL OF THE PARCEL FROM THE PRIMARY ANIMAL KEEPING OVERLAY (PAKO). PARCEL LOCATED AT THE NORTHEAST CORNER OF NASON STREET AND IRONWOOD AVENUE.

WHEREAS, the applicant, Global Investment & Development LLC, filed Application No. PEN16-0078 (PA15-0038), requesting an amendment to Pages 39 and 50 of the Official Zoning Atlas to the zoning classification for Assessor Parcel Number 473-160-004 and withdrawal from the Primary Animal Keeping Overlay (PAKO), as described in the title of this resolution and the attached Exhibit A: Proposed Changes to the Zoning Atlas, Exhibit B: Change of Zone Map and Exhibit: PAKO Map; and

WHEREAS, the application has been evaluated in accordance with established City of Moreno Valley (City) procedures, and with consideration of the General Plan and other applicable regulations; and

WHEREAS, the City has prepared an Initial Study and Mitigated Negative Declaration consistent with the California Environmental Quality Act (CEQA) based on a thorough analysis of potential environmental impacts; and

WHEREAS, upon completion of a thorough development review process the project was appropriately agendized and noticed for a public hearing before the Planning Commission of the City of Moreno Valley (Planning Commission); and

WHEREAS, the public hearing notice for this project was published in the local newspaper on January 15, 2017. Public notice was sent to all property owners of record within 300 feet of the project site on January 13, 2017. The public hearing notice for this project was also posted on the project site on January 13, 2017;

WHEREAS, on January 26, 2017, the Planning Commission held a public hearing to consider the application; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred; and

WHEREAS, pursuant to Government Code Section 66020(d)(1), **NOTICE IS HEREBY GIVEN** that this project is subject to certain fees, dedications, reservations and other exactions as provided herein.

NOW, THEREFORE, BE IT RESOLVED, it is hereby found, determined and resolved by the Planning Commission as follows:

A. This Planning Commission hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this Planning Commission during the above-referenced meeting on January 26, 2017, including written and oral staff reports, public testimony and the record from the public hearing, this Planning Commission hereby specifically finds as follows:

1. **Conformance with General Plan Policies –** The proposed amendment and pre-zoning is consistent with the General Plan, and its goals, objectives, policies and programs.

FACT: The project includes four (4) applications, a General Plan Amendment and Zone Change, to allow the modification of the existing land use of Assessor's Parcel Number 473-160-004, a Tentative Tract Map (TTM 37001) for a 181 single family lot divisions and a Plot Plan for the Ironwood Village Design Guidelines. This project proposes to change the General Plan designation for approximately 68 acres of a 78 acres parcel from Residential Agriculture 2 (RA2) to Residential 3 (3) and Residential 5 (R5). The existing 10.3 acres of Hillside Residential (HR) in the northwest corner of the site will remain undeveloped and zoned as Hillside Residential (HR). Change of Zone will withdraw the parcel from the Primary Animal Keeping Overlay (PAKO) as well.

The maximum density allowed in Residential Agriculture 2 (RA2) zones is two (2) units per acre. As an innovative approach, which attempts to respect the integrity of the current general plan and zoning designations for larger residential lots while also respecting present and anticipated market demands for efficient residential subdivisions, the applicant has proposed a blended zoning modification. The applicant is requesting a change of zone to Residential 3 (R3), which allows up to 3 dwelling units per acre, on the western portion of the Project site and Residential 5 (R5), which allows up to 5 dwelling units per acre, on the eastern portion of the site. A proposed open space and recreation corridor would bisect the property in a north-south orientation, thereby separating the lower density and higher density components. As a result, the tentative tract is proposed at an overall density of 2.7 dwelling units per acre with overall average lot sizes of 9,260 square feet, some lots over 17,000 square feet, and considerate use of open space and trails.

The project will provide a transition between existing lower density Residential 1 (R1) zoned residential uses immediately to the west of the Project site across Nason Street. Existing parcels to the west range in parcel size from roughly one-half acre to over an acre. The project provides for thoughtful transition to the existing Residential 2 (R2) residential development to the south and farther to the east across Moreno Beach Drive, as well as Residential Agriculture 2 (RA2), zoning immediately to the east of the Project site.

The Change of Zone includes withdrawal of the 78.4 acres of the project area from the Primary Animal Keeping Overlay (PAKO). Residential 3 (R3) and Residential 5 (R5) zoning do not allow for medium and large animal keeping. The purpose of the PAKO district is to provide for animal keeping in areas of the City with rural characteristics. The PAKO apply to animal keeping activities in the Rural Residential (RR), Residential 1 (R1) and Residential Agriculture 2 (RA2) land use districts only within an area bounded by Nason Street to the west, Theodore Street to the east, the city limit line to the north and Cottonwood Avenue to the south. This boundary of available land designated in the City for PAKO is quite large (estimated at 2,500 acres); the withdrawal of the 78.4 acres does not preclude all opportunity for PAKO. Furthermore, the residential market trend in the City over the last decade demonstrates almost no measurable interest/demand for PAKO development.

The residential areas to the west and south of the site are not currently designated as within the PAKO. The existing designated areas within the PAKO overlay in proximity to the project area are immediate north, east, and southeast.

The Goals and Objectives of the Community Development Element of the General Plan include providing a wide range of housing types in sufficient numbers suitable to meet the diverse needs of present and future residents of all socioeconomic groups and to support healthy economic development without creating an oversupply of any particular type of housing (Goal 2.4 and Objective 2.2). The proposal is consistent with the General Plan and will provide a wider range of housing types than currently permitted under the R2 General Plan designation by clustering development on the flatter portions of the site, and protecting the hillside areas.

2. **Conformance with the Zoning Regulations –** The proposed zoning is consistent with the purposes and intent of Title 9 of the City of Moreno Valley Municipal Code.

FACT: As proposed, the Change of Zone from Residential Agriculture 2 (RA2) for approximately 68 acres of the 78 acre project site is consistent with the purposes and intent of Title 9. A residential development under Residential 3 (R3) and Residential 5 (R5) zoning would continue to further the comprehensive and orderly development of the site and surrounding areas.

The surrounding land uses near the site include single-family residential development to the west (Residential 1 (R1) large-lot residential uses, one acre and larger in size) and south (Residential 2 (R2) residential uses up to 2 units per acre). To the east and northeast of the site there vacant land zoned for single-family residential uses (Residential Agriculture 2 (RA2) residential agriculture up to 2 units per acre) and to the north and northeast vacant land zoned for single-family residential uses (Residential Agriculture 2 (RA2) and Hillside Residential (HR) uses). Further east of Moreno Beach Drive and Pettit Street is mix of developed Residential 2 (R2) and Residential Agriculture 2 (RA2) as well as the Calvary Chapel Church of Moreno Valley and School.

The proposed Residential 3 (R3) and Residential 5 (R5) uses are compatible with the established land use designations of the parcels in the area, allowing for suburban lifestyles on lots larger than commonly available in suburban subdivisions. The project provides opportunity for active lifestyle living with trail linkages, recreational, and open space amenities. The change is reflective of a reconsideration of land use patterns in this area of the community.

3. **Health, Safety and Welfare –** The proposal will not be detrimental to the public health, safety or welfare.

FACT: The proposed Change of Zone will not result in unacceptable levels of protection from natural and man-made hazards to life, health, and property and is therefore consistent with General Goal 9.6.1. The project site is located within approximately 1.3 miles of Fire Station #58 and within close proximity to emergency services which is consistent with General Plan Goal 9.6.2 which requires emergency services that are adequate to meet minor emergency and major catastrophic situations. The proposed General Plan Amendment will not allow for development that would be inconsistent with General Plan Objective 6.1 to minimize the potential for loss of life and protect residents, workers, and visitors to the City from physical injury and property damage due to seismic ground shaking and secondary effects or General Plan Objective 6.2 to minimize the potential for loss of life and protect residents, workers, and visitors to the City from physical injury and property damage, and to minimize nuisances due to flooding.

The California Environmental Quality Act (CEQA) is a statewide environmental law contained in Public Resources Code §§21000-21177. CEQA applies to most public agency decisions to carry out, authorize, or approve actions that have the potential to affect the environment. CEQA requires that public agencies analyze and acknowledge the environmental consequences of their discretionary actions and consider alternatives and mitigation measures that could avoid or reduce significant adverse impacts to the environment when avoidance or reduction is feasible. The CEQA compliance process provides public agencies and the general public an opportunity to comment on a proposed project's environmental effects. The proposed project is not exempt from CEQA. It was determined that an Initial Study would be prepared to determine whether the proposed project may have a significant effect on the environment.

An Initial Study/Mitigated Negative Declaration were prepared which assessed the potential of the proposed General Plan Amendment and the related Change of Zone, Tentative Tract Map (TTM 37001), and Plot Plan for Ironwood Village Design Guidelines applications to impact the environment. The proposed project includes the development of the project site with 181 single family lots on approximately 78.4 acres. The project site is located in the City of Moreno Valley, County of Riverside and State of California.

The Initial Study provided the documentation of the factual basis for the finding in the Mitigated Negative Declaration that the proposed project will not have a significant effect on the environment with the implementation of mitigation measures. The City as the Lead Agency has prepared a Mitigated Negative Declaration (MND) pursuant to Sections 15070 et seq. of the State CEQA Guidelines.

The Mitigated Negative Declaration is an informational document that provides the City, other public agencies, and the public at-large with an objective assessment of the potential environmental impacts that could result from implementation of the proposed project. The preparation and review of the Initial Study/Mitigated Negative Declaration reflects the independent judgment of the City.

The MND has been considered by the Planning Commission and prepared as there is no evidence that the proposed project will have a significant impact on public health or be materially injurious to surrounding properties of the environment as a whole.

BE IT FURTHER RESOLVED that the Planning Commission **HEREBY RECOMMENDS** that the City Council:

1. **ADOPT** a Mitigated Negative Declaration for Application No. PEN16-0078 (PA15-0038) pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

2. **ADOPT** the Mitigation Monitoring and Reporting Program prepared for Change of Zone Application No. PEN16-0078 (PA15-0038) pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

3. **APPROVE** Change of Zone Application No. PEN16-0078 (PA15-0038), based on the findings contained in this resolution.

APPROVED this 26th day of January, 2017**.**

PLANNING COMMISSION RESOLUTION NO. 2017-07

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY RECOMMENDING THAT THE CITY COUNCIL APPROVE APPLICATION NO. PEN16-0079 (PA15-0039): TENTATIVE TRACT MAP 37001, TO SUBDIVIDE 78.4 GROSS ACRES INTO 181 SINGLE FAMILY RESIDENTIAL LOTS WITHIN THE RESIDENTIAL 3 (R3) AND RESIDENTIAL 5 (R5) ZONING DISTRICTS AND APPLICATION NO. PEN16-0080 (PA15-0040): PLOT PLAN FOR THE IRONWOOD VILLAGE DESIGN GUIDELINES. THE PROJECT IS LOCATED AT THE NORTHEAST CORNER OF IRONWOOD AVENUE AND NASON STREET (ASSESSORS PARCEL NUMBER 473-160-004)

Section 1:

WHEREAS, the applicant, Global Investment & Development LLC, filed Application No. PEN16-0079 (PA15-0039), has filed an application for the approval of Tentative Tract Map 37001 for development of a 181 single family lot subdivision located at the northeast corner of Ironwood Avenue and Nason Street as described in the title of this resolution and the attached Exhibit A:Conditions of Approval; and

WHEREAS, the application has been evaluated in accordance with established City of Moreno Valley (City) procedures, and with consideration of the General Plan and other applicable regulations; and

WHEREAS, the City has prepared an Initial Study and Mitigated Negative Declaration consistent with the California Environmental Quality Act (CEQA) based on a thorough analysis of potential environmental impacts; and

WHEREAS, upon completion of a thorough development review process the project was appropriately agendized and noticed for a public hearing before the Planning Commission of the City of Moreno Valley (Planning Commission); and

WHEREAS, the public hearing notice for this project was published in the local newspaper on January 15, 2017. Public notice was sent to all property owners of record within 300 feet of the project site on January 13, 2017. The public hearing notice for this project was also posted on the project site on January 13, 2017;

WHEREAS, on January 26, 2017, the Planning Commission held a public hearing to consider the application; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred; and

WHEREAS, pursuant to Government Code Section 66020(d)(1), **NOTICE IS HEREBY GIVEN** that this project is subject to certain fees, dedications, reservations and other exactions as provided herein.

NOW, THEREFORE, BE IT RESOLVED, it is hereby found, determined and resolved by the Planning Commission as follows:

A. This Planning Commission hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this Planning Commission during the above-referenced meeting on January 26, 2017, including written and oral staff reports, public testimony and the record from the public hearing, this Planning Commission hereby specifically finds as follows:

1. **Conformance with General Plan Policies –** The proposed use is consistent with the General Plan, and its goals, objectives, policies and programs.

   FACT: The project includes four (4) applications, a General Plan Amendment and Zone Change, to allow the modification of the existing land use of Assessor's Parcel Number 473-160-004, a Tentative Tract Map (TTM 37001) for a 181 single family lot divisions and a Plot Plan for the Ironwood Village Design Guidelines. This project proposes to change the General Plan designation for approximately 68 acres of a 78 acres parcel from Residential Agriculture 2 (RA2) to Residential 3 (3) and Residential 5 (R5). The existing 10.3 acres of Hillside Residential (HR) in the northwest corner of the site will remain undeveloped and zoned as Hillside Residential (HR). Change of Zone will withdraw the parcel from the Primary Animal Keeping Overlay (PAKO) as well.

   The maximum density allowed in Residential Agriculture 2 (RA2) zones is two (2) units per acre. As an innovative approach, which attempts to respect the integrity of the current general plan and zoning designations for larger residential lots while also respecting present and anticipated market demands for efficient residential subdivisions, the applicant has proposed a blended zoning modification. The applicant is requesting a change of zone to Residential 3 (R3), which allows up to 3 dwelling units per acre, on the western portion of the Project site and Residential 5 (R5), which allows up to 5 dwelling units per acre, on the eastern portion of the site. A proposed open space and recreation corridor would bisect the property in a north-south orientation, thereby separating the lower density and higher density components. As a result, the tentative tract is proposed at an overall density of 2.7 dwelling units per acre with overall average lot sizes of 9,260 square feet, some lots over 17,000 square feet, and considerate use of open space and trails.

The Goals and Objectives of the Community Development Element of the General Plan include providing a wide range of housing types in sufficient numbers suitable to meet the diverse needs of present and future residents of all socioeconomic groups and to support healthy economic development without creating an oversupply of any particular type of housing (Goal 2.4 and Objective 2.2). The proposal is consistent with the General Plan and will provide a wider range of housing types than currently permitted under the R2 General Plan designation by clustering development on the flatter portions of the site, and protecting the hillside areas.

Tentative Tract Map 37001 as designed and conditioned meets the stated General Plan policies for Hillside Residential (HR), Residential 3 (R3) and Residential 5 (R5).

2. **Conformance with Zoning Regulations –** The proposed use complies with all applicable zoning and other regulations.

FACT: As proposed, Tentative Tract Map 37001 is consistent with the purposes and intent of Title 9. A residential development under Residential 3 (R3) and Residential 5 (R5) zoning would continue to further the comprehensive and orderly development of the site and surrounding areas.

The surrounding land uses near the site include single-family residential development to the west (Residential 1 (R1) large-lot residential uses, one acre and larger in size) and south (Residential 2 (R2) residential uses up to 2 units per acre). To the east and northeast of the site there vacant land zoned for single-family residential uses (Residential Agriculture 2 (RA2) residential agriculture up to 2 units per acre) and to the north and northeast vacant land zoned for single-family residential uses (Residential Agriculture 2 (RA2) and Hillside Residential (HR) uses). Further east of Moreno Beach Drive and Pettit Street is mix of developed Residential 2 (R2) and Residential Agriculture 2 (RA2) as well as the Calvary Chapel Church of Moreno Valley and School.

The proposed Residential 3 (R3) and Residential 5 (R5) uses are compatible with the established land use designations of the parcels in the area, allowing for suburban lifestyles on lots larger than commonly available in suburban subdivisions. The project provides opportunity for active lifestyle living with trail linkages, recreational, and open space amenities. The change is reflective of a reconsideration of land use patterns in this area of the community.

3. **Health, Safety and Welfare –** The proposed use will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity.

FACT: : The proposed Tentative Tract Map 37001 will not result in unacceptable levels of protection from natural and man-made hazards to life, health, and property and is therefore consistent with General Goal 9.6.1. The project site is located within approximately 1.3 miles of Fire Station #58 and within close proximity to emergency services which is consistent with General Plan Goal 9.6.2 which requires emergency services that are adequate to meet minor emergency and major catastrophic situations. The proposed General Plan Amendment will not allow for development that would be inconsistent with General Plan Objective 6.1 to minimize the potential for loss of life and protect residents, workers, and visitors to the City from physical injury and property damage due to seismic ground shaking and secondary effects or General Plan Objective 6.2 to minimize the potential for loss of life and protect residents, workers, and visitors to the City from physical injury and property damage, and to minimize nuisances due to flooding.

The California Environmental Quality Act (CEQA) is a statewide environmental law contained in Public Resources Code §§21000-21177. CEQA applies to most public agency decisions to carry out, authorize, or approve actions that have the potential to affect the environment. CEQA requires that public agencies analyze and acknowledge the environmental consequences of their discretionary actions and consider alternatives and mitigation measures that could avoid or reduce significant adverse impacts to the environment when avoidance or reduction is feasible. The CEQA compliance process provides public agencies and the general public an opportunity to comment on a proposed project's environmental effects. The proposed project is not exempt from CEQA. It was determined that an Initial Study would be prepared to determine whether the proposed project may have a significant effect on the environment.

An Initial Study/Mitigated Negative Declaration were prepared which assessed the potential of the proposed General Plan Amendment and the related Change of Zone, Tentative Tract Map (TTM 37001), and Plot Plan for Ironwood Village Design Guidelines applications to impact the environment. The proposed project includes the development of the project site with 181 single family lots on approximately 78.4 acres. The project site is located in the City of Moreno Valley, County of Riverside and State of California.

The MND has been considered by the Planning Commission and prepared as there is no evidence that the proposed project will have a significant impact on public health or be materially injurious to surrounding properties of the environment as a whole.

4. **Location, Design and Operation –** The location, design and operation of the proposed project will be compatible with existing and planned land uses in the vicinity.

FACT: The surrounding land uses near the site include single-family residential development to the west (Residential 1 (R1) large-lot residential uses, one acre and larger in size) and south (Residential 2 (R2) residential uses up to 2 units per acre). To the east and northeast of the site there vacant land zoned for single-family residential uses (Residential Agriculture 2 (RA2) residential agriculture up to 2 units per acre) and to the north and northeast vacant land zoned for single-family residential uses (Residential Agriculture 2 (RA2) and Hillside Residential (HR) uses). Further east of Moreno Beach Drive and Pettit Street is mix of developed Residential 2 (R2) and Residential Agriculture 2 (RA2) as well as the Calvary Chapel Church of Moreno Valley and School.

The site is within a mile of the Stoneridge Towne Centre that will serve the retail/commercial needs of residents. Valley View High School and Mountain View Middle School are located approximately 1 mile to the south on Nason Street.

The project is in close proximity to regional transportation corridors. State Route 60 is located approximately one-half mile to the south on Nason Street and the I-215 freeway is located approximately six miles to the west on Ironwood Avenue/Box Springs Road. Other land uses in the vicinity include the Moreno Valley Auto Mall to the southeast, off of Moreno Beach Drive.

As designed and conditioned and with the implementation of required mitigation measures, the proposed Tentative Tract Map 37001 is compatible with existing and proposed land uses in the vicinity.

Section 2:

WHEREAS, the applicant, Global Investment & Development LLC, filed Application No. PEN16-0080 (PA15-0040), has filed an application for the approval of a Plot Plan for the Ironwood Village Design Guidelines that are related to Tentative Tract Map 37001 for development of a 181 single family lot subdivision located at the northeast corner of Ironwood Avenue and Nason Street and as described in the title of this resolution and the attached Exhibit B: Ironwood Village Design Guidelines; and

WHEREAS, the application has been evaluated in accordance with established City of Moreno Valley (City) procedures, and with consideration of the General Plan and other applicable regulations; and

WHEREAS, the City has prepared an Initial Study and Mitigated Negative Declaration consistent with the California Environmental Quality Act (CEQA) based on a thorough analysis of potential environmental impacts; and

WHEREAS, upon completion of a thorough development review process the project was appropriately agendized and noticed for a public hearing before the Planning Commission of the City of Moreno Valley (Planning Commission); and

WHEREAS, the public hearing notice for this project was published in the local newspaper on January 15, 2017. Public notice was sent to all property owners of record within 300 feet of the project site on January 13, 2017. The public hearing notice for this project was also posted on the project site on January 13, 2017;

WHEREAS, on January 26, 2017, the Planning Commission held a public hearing to consider the application; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred; and

WHEREAS, pursuant to Government Code Section 66020(d)(1), **NOTICE IS HEREBY GIVEN** that this project is subject to certain fees, dedications, reservations and other exactions as provided herein.

NOW, THEREFORE, BE IT RESOLVED, it is hereby found, determined and resolved by the Planning Commission as follows:

A. This Planning Commission hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this Planning Commission during the above-referenced meeting on January 26, 2017, including written and oral staff reports, public testimony and the record from the public hearing, this Planning Commission hereby specifically finds as follows:

1. **Conformance with General Plan Policies –** The proposed use is consistent with the General Plan, and its goals, objectives, policies and programs.

   FACT: The project includes four (4) applications, a General Plan Amendment and Zone Change, to allow the modification of the existing land use of Assessor's Parcel Number 473-160-004, a Tentative Tract Map (TTM 37001) for a 181 single family lot divisions and a Plot Plan for the Ironwood Village Design Guidelines. This project proposes to change the General Plan designation for approximately 68 acres of a 78 acres parcel from Residential Agriculture 2 (RA2) to Residential 3 (3) and Residential 5 (R5). The existing 10.3 acres of Hillside Residential (HR) in the northwest corner of the site will remain undeveloped and zoned as Hillside Residential (HR). Change of Zone will withdraw the parcel from the Primary Animal Keeping Overlay (PAKO) as well.

The maximum density allowed in Residential Agriculture 2 (RA2) zones is two (2) units per acre. As an innovative approach, which attempts to respect the integrity of the current general plan and zoning designations for larger residential lots while also respecting present and anticipated market demands for efficient residential subdivisions, the applicant has proposed a blended zoning modification. The applicant is requesting a change of zone to Residential 3 (R3), which allows up to 3 dwelling units per acre, on the western portion of the Project site and Residential 5 (R5), which allows up to 5 dwelling units per acre, on the eastern portion of the site. A proposed open space and recreation corridor would bisect the property in a north-south orientation, thereby separating the lower density and higher density components. As a result, the tentative tract is proposed at an overall density of 2.7 dwelling units per acre with overall average lot sizes of 9,260 square feet, some lots over 17,000 square feet, and considerate use of open space and trails.

The Goals and Objectives of the Community Development Element of the General Plan include providing a wide range of housing types in sufficient numbers suitable to meet the diverse needs of present and future residents of all socioeconomic groups and to support healthy economic development without creating an oversupply of any particular type of housing (Goal 2.4 and Objective 2.2). The proposal is consistent with the General Plan and will provide a wider range of housing types than currently permitted under the R2 General Plan designation by clustering development on the flatter portions of the site, and protecting the hillside areas.

The proposed Project is proposed to be implemented in accordance with the Ironwood Village Design Guidelines (Design Guidelines). The Design Guidelines serve as the codified site development regulations that will ensure cohesive design throughout the Ironwood Village Project. The Design Guidelines respect the intended and desired diversity of housing choices not available with typical tract developments. The Design Guidelines consider the variety of lot sizes available, the intermixed with trails, the park, open space areas and water quality features.

The development standards included in the Ironwood Village Design Guidelines call for a quality mix of floor plans, elevations, colors and materials, and create a walkable neighborhood with access to trails, outdoor recreation and open space opportunities. The proposed Project Guidelines respect the existing topography, maintain rock outcroppings where feasible and provide a transition into the hillside areas.

The Design Guidelines with Tentative Tract Map 37001 as designed and conditioned meets the stated General Plan policies for Hillside Residential (HR), Residential 3 (R3) and Residential 5 (R5).

2. **Conformance with Zoning Regulations –** The proposed use complies with all applicable zoning and other regulations.

FACT: As proposed, Design Guidelines are attached to Tentative Tract Map 37001 and consistent with the purposes and intent of Title 9. A residential development under Residential 3 (R3) and Residential 5 (R5) zoning would continue to further the comprehensive and orderly development of the site and surrounding areas.

The surrounding land uses near the site include single-family residential development to the west (Residential 1 (R1) large-lot residential uses, one acre and larger in size) and south (Residential 2 (R2) residential uses up to 2 units per acre). To the east and northeast of the site there vacant land zoned for single-family residential uses (Residential Agriculture 2 (RA2) residential agriculture up to 2 units per acre) and to the north and northeast vacant land zoned for single-family residential uses (Residential Agriculture 2 (RA2) and Hillside Residential (HR) uses). Further east of Moreno Beach Drive and Pettit Street is mix of developed Residential 2 (R2) and Residential Agriculture 2 (RA2) as well as the Calvary Chapel Church of Moreno Valley and School.

The proposed Residential 3 (R3) and Residential 5 (R5) uses are compatible with the established land use designations of the parcels in the area, allowing for suburban lifestyles on lots larger than commonly available in suburban subdivisions. The project provides opportunity for active lifestyle living with trail linkages, recreational, and open space amenities. The change is reflective of a reconsideration of land use patterns in this area of the community.

3. **Health, Safety and Welfare –** The proposed use will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity.

FACT: The proposed Ironwood Village Design Guidelines will not result in unacceptable levels of protection from natural and man-made hazards to life, health, and property and is therefore consistent with General Goal 9.6.1. The project site is located within approximately 1.3 miles of Fire Station #58 and within close proximity to emergency services which is consistent with General Plan Goal 9.6.2 which requires emergency services that are adequate to meet minor emergency and major catastrophic situations. The proposed General Plan Amendment will not allow for development that would be inconsistent with General Plan Objective 6.1 to minimize the potential for loss of life and protect residents, workers, and visitors to the City from physical injury and property damage due to seismic ground shaking and secondary effects or General Plan Objective 6.2 to minimize the potential for loss of life and protect residents, workers, and visitors to the City from physical injury and property damage, and to minimize nuisances due to flooding.

The California Environmental Quality Act (CEQA) is a statewide environmental law contained in Public Resources Code §§21000-21177. CEQA applies to most public agency decisions to carry out, authorize, or approve actions that have the potential to affect the environment. CEQA requires that public agencies analyze and acknowledge the environmental consequences of their discretionary actions and consider alternatives and mitigation measures that could avoid or reduce significant adverse impacts to the environment when avoidance or reduction is feasible. The CEQA compliance process provides public agencies and the general public an opportunity to comment on a proposed project's environmental effects. The proposed project is not exempt from CEQA. It was determined that an Initial Study would be prepared to determine whether the proposed project may have a significant effect on the environment.

An Initial Study/Mitigated Negative Declaration were prepared which assessed the potential of the proposed General Plan Amendment and the related Change of Zone, Tentative Tract Map (TTM 37001), and Plot Plan for Ironwood Village Design Guidelines applications to impact the environment. The proposed project includes the development of the project site with 181 single family lots on approximately 78.4 acres. The project site is located in the City of Moreno Valley, County of Riverside and State of California.

The MND has been considered by the Planning Commission and prepared as there is no evidence that the proposed project will have a significant impact on public health or be materially injurious to surrounding properties of the environment as a whole.

4. **Location, Design and Operation –** The location, design and operation of the proposed project will be compatible with existing and planned land uses in the vicinity.

FACT: The surrounding land uses near the site include single-family residential development to the west (Residential 1 (R1) large-lot residential uses, one acre and larger in size) and south (Residential 2 (R2) residential uses up to 2 units per acre). To the east and northeast of the site there vacant land zoned for single-family residential uses (Residential Agriculture 2 (RA2) residential agriculture up to 2 units per acre) and to the north and northeast vacant land zoned for single-family residential uses (Residential Agriculture 2 (RA2) and Hillside Residential (HR) uses). Further east of Moreno Beach Drive and Pettit Street is mix of developed Residential 2 (R2) and Residential Agriculture 2 (RA2) as well as the Calvary Chapel Church of Moreno Valley and School.

The site is within a mile of the Stoneridge Towne Centre that will serve the retail/commercial needs of residents. Valley View High School and

Mountain View Middle School are located approximately 1 mile to the south on Nason Street.

The project is in close proximity to regional transportation corridors. State Route 60 is located approximately one-half mile to the south on Nason Street and the I-215 freeway is located approximately six miles to the west on Ironwood Avenue/Box Springs Road. Other land uses in the vicinity include the Moreno Valley Auto Mall to the southeast, off of Moreno Beach Drive.

As designed and conditioned and with the implementation of required mitigation measures, the proposed Ironwood Village Design Guidelines with Tentative Tract Map 37001 is compatible with existing and proposed land uses in the vicinity.

FEES, DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

1. FEES

Impact, mitigation and other fees are due and payable under currently applicable ordinances and resolutions. These fees may include but are not limited to: Development Impact Fee, Transportation Uniform Mitigation Fee (TUMF), Multi-species Habitat Conservation Plan (MSHCP) Mitigation Fee, Stephens Kangaroo Habitat Conservation fee, Underground Utilities in lieu Fee, Area Drainage Plan fee, Bridge and Thoroughfare Mitigation fee (Future) and Traffic Signal Mitigation fee. The final amount of fees payable is dependent upon information provided by the applicant and will be determined at the time the fees become due and payable.

Unless otherwise provided for by this Resolution, all impact fees shall be calculated and collected at the time and in the manner provided in Chapter 3.32 of the City of Moreno Valley Municipal Code or as so provided in the applicable ordinances and resolutions. The City expressly reserves the right to amend the fees and the fee calculations consistent with applicable law.

2. DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

The adopted Conditions of Approval for PEN16-0079 (PA15-0039) and PEN16-0080 (PA15-0040), incorporated herein by reference, may include dedications, reservations, and exactions pursuant to Government Code Section 66020 (d) (1).

3. CITY RIGHT TO MODIFY/ADJUST; PROTEST LIMITATIONS

The City expressly reserves the right to establish, modify or adjust any fee, dedication, reservation or other exaction to the extent permitted and as authorized by law.

Pursuant to Government Code Section 66020(d)(1), NOTICE IS FURTHER GIVEN that the 90 day period to protest the imposition of any impact fee, dedication, reservation, or other exaction described in this Resolution begins on the effective date of this Resolution and any such protest must be in a manner that complies with Section 66020(a) and failure to timely follow this procedure will bar any subsequent legal action to attack, review, set aside, void or annul imposition.

The right to protest the fees, dedications, reservations, or other exactions does not apply to planning, zoning, grading, or other similar application processing fees or service fees in connection with this project and it does not apply to any fees, dedication, reservations, or other exactions of which a notice has been given similar to this, nor does it revive challenges to any fees for which the applicable statute of limitations has previously expired.

BE IT FURTHER RESOLVED that the Planning Commission **HEREBY RECOMMENDS** that the City Council:

1. **ADOPT** a Mitigated Negative Declaration for Application Numbers PEN16-0079 (PA15-0039) and PEN16-0080 (PA15-0040) pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

2. **ADOPT** the Mitigation Monitoring and Reporting Program prepared for Tentative Tract Map 37001 Application No. PEN16-0079 (PA15-0039) and Plot Plan Application PEN16-0080 (PA15-0040) for the Ironwood Village Design Guidelines pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

3. **APPROVE** Tentative Tract Map 37001 Application No. PEN16-0079 (PA15-0039) based on the findings contained in this resolution, and subject to the attached conditions of approval included as Exhibit A.

4. **APPROVE** Plot Plan Application PEN16-0080 (PA15-0040) for the Ironwood Village Design Guidelines based on the findings contained in this resolution.

APPROVED this 26th day of January, 2017.

Brian Lowell
Chair, Planning Commission

ATTEST:

Richard J. Sandzimier, Planning Official

APPROVED AS TO FORM:

City Attorney

COMMUNITY DEVELOPMENT DEPARTMENT

Planning Division

P1. This approval shall comply with all applicable requirements of the City of Moreno Valley Municipal Code.

P2. Approval of PEN16-0079 (PA15-0039) - Tentative Tract 37001 and PEN16-0080 (PA15-0040) – Ironwood Village Design Guidelines are subject to the approval of the related PEN16-0077 (PA15-0037) - General Plan Amendment and PEN16-0078 (PA15-0038) - Change of Zone applications.

P3. Tentative Tract Map 37001 (PEN16-0079/PA15-0039) shall expire three years after the approval date of this tentative map unless extended as provided by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever in the event the applicant or any successor in interest fails to properly file a final map before the date of expiration. (MC 9.02.230, 9.14.050, 080)

Timing Mechanisms for Conditions (see abbreviation at beginning of affected condition):

R - Map Recordation
GP - Grading Permits
CO - Certificate of Occupancy or building final
WP - Water Improvement Plans
BP - Building Permits
P - Any permit

Governing Document (see abbreviation at the end of the affected condition):

GP - General Plan
MC - Municipal Code
CEQA - California Environmental Quality Act
Ord – Ordinance
DG - Design Guidelines
Ldscp - Landscape Development Guidelines and Specs
Res – Resolution
UFC - Uniform Fire Code
UBC - Uniform Building Code
SBM - Subdivision Map Act

P4. The Ironwood Village Design Guidelines (PEN16-0080/PA15-0040) shall expire three years after the approval date of this plot plan unless extended as provided by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever in the event the applicant or any successor in interest fails to properly file the related final map (TTM 37001) before the date of expiration. (MC 9.02.230, 9.14.050, 080)

P5. The site shall be developed in accordance with the approved tentative map and design guidelines on file in the Community Development Department -Planning Division, the Municipal Code regulations, General Plan, and the conditions contained herein. (MC 9.14.020)

P6. A drought tolerant, low water using landscape palette shall be utilized throughout the tract to the extent feasible.

P7. All undeveloped portions of the site shall be maintained in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)

P8. Development of the project requires both an architectural review and model home complex application for approval of the design of the future single-family homes. The architecture must be consistent with the Ironwood Village Design Guidelines including the residences, fencing and walls.

P9. All site plans, grading plans, landscape and irrigation plans, and street improvement plans shall be coordinated for consistency with this approval.

P10. Any signs indicated in the Ironwood Village Design Guidelines are not included with this approval. Any signs, whether permanent (e.g. wall, monument) or temporary (e.g. banner, flag), proposed for this development shall be designed in conformance with the sign provisions of the Development Code or approved sign program, if applicable, and shall require separate application and approval by the Planning Division. No signs are permitted in the public right of way. (MC 9.12)

PRIOR TO GRADING

P11. (GP) Prior to issuance of grading permits, the developer shall pay the applicable Stephen's' Kangaroo Rat (SKR) Habitat Conservation Plan mitigation fee. (Ord)

P12. Due to the presence of suitable habitat and in compliance with the MSHCP, a pre-construction survey for burrowing owl is required within 30 days prior to ground disturbance to determine the presence of burrowing owls and avoid potential direct take of burrowing owls if present.

P13. (GP) Prior to the issuance of grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein. A mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant within 30 days of project or tentative map approval. No City permit or approval shall be issued until such fee is paid. (CEQA)

P14. (GP) Prior to the issuance of grading permits, final erosion control landscape and irrigation plans for all cut or fill slopes over 3 feet in height shall be submitted to the Planning Division for review and approval for the phase in process. The plans shall be designed in accordance with the slope erosion plan as required by the City Engineer for that phase. Man-made slopes greater than 10 feet in height shall be "land formed" to conform to the natural terrain and shall be landscaped and stabilized to minimize visual scarring. (GP Objective 1.5, MC 9.08.080, DG)

P15. (GP) Prior to approval of precise grading plan, final front and street side yard landscape and irrigation plans shall be submitted to the Planning Division for review. The plans shall be prepared in accordance with the City's Municipal Code and landscape specifications, and include required street trees.

P16. (GP) Prior to issuance of grading permits, the developer shall submit wall/fence plans to the Planning Division for review and approval that are consistent with the Ironwood Village Design Guidelines.

P17. (GP) Prior to the issuance of any grading permit for permanent impacts in the areas designated as jurisdictional features, the Project applicant shall obtain regulatory permits from the USACE, RWQCB, and CDFW. The following shall be incorporated into the permitting, subject to approval by the regulatory agencies:

1. On-site or off-site creation, restoration and/or enhancement of USACE/RWQCB jurisdictional “waters of the U.S.” within the San Jacinto watershed at a ratio no less than 1:1 or within an adjacent watershed at a ratio no less than 2:1 for permanent impacts, and for any temporary impacts to restore the impact area to pre-Project conditions (i.e. pre-Project contours). Off-site mitigation may occur on land acquired for the purpose of in-perpetuity preservation as approved by the resource agencies, or through the purchase of mitigation credits at a resource agency-approved off-site mitigation bank or in-lieu fee program.

2. On-site or off-site creation, restoration, and/or enhancement of CDFW jurisdictional streambed within the San Jacinto watershed at a ratio no less than 1:1 or within an adjacent watershed at a ratio no less than 2:1 for permanent impacts, and for any temporary impacts to restore the impact area to pre-Project conditions (i.e. pre-Project contours). Off-site mitigation may occur on land acquired for the purpose of in-perpetuity

preservation as approved by the resource agencies, or through the purchase of mitigation credits at a resource agency-approved off-site mitigation bank or in-lieu fee program.

Purchase of any mitigation credits through an agency-approved mitigation bank or in-lieu fee program should occur prior to any impacts to jurisdictional drainages. Any mitigation proposed on land acquired for the purpose of in-perpetuity mitigation that is not part of an agency-approved mitigation bank or in-lieu fee program shall include the creation, restoration, and/or enhancement of similar streambed habitat pursuant to a resource agency-approved Habitat Mitigation and Monitoring Plan (HMMP). The HMMP shall be prepared prior to any impacts to jurisdictional features, and shall provide details as to the implementation of the mitigation, maintenance, and future monitoring of mitigation areas. The goal of the mitigation shall be to create, restore, and/or enhance similar habitat with equal or greater function and value than the impacted habitat.

P18. Prior to the issuance of any grading permit the Project applicant shall comply with all of the provisions of the MSHCP, including payment of the MSHCP Local Development Mitigation Fee, compliance with Section 6.1.2 of the MSHCP pertaining to Riparian/Riverine Areas, implementation of drainage, toxics and non-native species guidelines pertaining to the Urban/Wildlands Interface in Section 6.1.4 of the MSHCP, and compliance with Section 6.3.2 of the MSHCP pertaining to Burrowing Owl Survey Area requirements. Compliance with Section 6.1.2 of the MSHCP will require approval of the project Determination of Biologically Equivalent or Superior Preservation (DBESP) analysis outlining the impacts and proposed compensatory mitigation for impacts to the Riparian/Riverine Areas for approval by the wildlife agencies prior to issuance of a grading permit. The DBESP will be submitted to the wildlife agencies concurrent to the processing of regulatory permits for jurisdictional streambed impacts, in order to ensure that mitigation requirements proposed under the DBESP are commensurate with the preferences of the resource agencies (USACE, CDFW, and RWQCB) as part of subsequent regulatory permit conditions to be issued following adoption of the project MND.

PRIOR TO RECORDATION OF FINAL MAP

P19. (R) Prior to final map recordation, subdivision phasing (including any proposed common open space or improvement phasing, if applicable), shall be subject to the Planning Division approval. Any proposed phasing shall provide for adequate vehicular access to all lots in each phase as determined by the City Transportation Engineer or designee and shall substantially conform to all intent and purpose of the subdivision approval. (MC 9.14.080)

P20. (R) Prior to recordation of the final subdivision map, the developer shall submit for review and approval the following documents to the Planning Division which shall demonstrate that the project will be developed and maintained in accordance with the intent and purpose of the approval:

a. The document to convey title
b. Deed restrictions, easements, or Covenants, Conditions and Restrictions to be recorded

The approved documents shall be recorded at the same time that the subdivision map is recorded. The documents shall contain provisions for general maintenance of the site, water quality basins, onsite park, private trails, and landscaping. The approved documents shall also contain a provision, which provides that they may not be terminated and/or substantially amended without the consent of the City and the developer's successor-in-interest. (MC 9.14.090)

In addition, the following deed restrictions and disclosures shall be included within the document and grant deed of the properties:

- The developer, Ironwood Village Design Guidelines and Homeowners Association (HOA) shall promote the use of native plants and trees and drought tolerant species to the extent feasible.

- All lots designated for water quality basins, shall be dedicated to and maintained by a Homeowners Association (HOA). The HOA shall contract with a private maintenance entity or establish a funding mechanism approved by the City in a maintenance agreement for City maintenance. Language to this effect shall be included and reviewed within the required Covenant Conditions and Restrictions (CC&Rs) prior to the approval of the final map.

- All reverse frontage property and public right-of-way landscape areas, shall be maintained by a Homeowners Association (HOA) or through a property owner funded landscaping district maintained by the City. Language to this effect shall be included and reviewed within the required Covenant Conditions and Restrictions (CC&Rs) prior to the approval of the final map.

- A conservation easement for lettered lots shall be recorded on the deed of the property and shown on the final map. Said easement shall include access restrictions prohibiting motorized vehicles from these areas except on the maintenance road and access driveways for the water quality basins.

PRIOR TO BUILDING PERMIT

P21. (BP) Prior to issuance of building permits, the developer or developer's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), Multi-species Habitat Conservation Plan (MSHCP) mitigation fees, and the City's adopted Development Impact Fees. (Ord)

P22. (BP) Prior to issuance of building permits, final front and street side yard landscape and irrigation plans, and slope landscape plans and basin landscape plans, shall be approved.

P23. (BP) Prior to issuance of building permits, landscape plans (trees, shrubs and groundcover) for basins maintained by an HOA, or other private entity, shall be approved for the sides and or slopes of all water quality basins and drainage areas. Fencing consistent with the Ironwood Village Design Guidelines and approved by the Community Development Director is required to secure all water quality and detention basins more than 18 inches in depth.

PRIOR TO CERTIFICATE OF OCCUPANCY

P24. (CO) Prior to the issuance of Certificates of Occupancy or building final, slope landscape and irrigation shall be installed. Landscaping on lots not yet having dwelling units shall be maintained by the developer weed and disease free. (MC 9.03.040)

P25. (CO) Prior to the issuance of Certificates of Occupancy or building final, all required and proposed fences and walls shall be constructed per the approved plans on file in the Planning Division. (MC 9.080.070)

P26. (CO) For a basin maintained by an HOA or other private entity, landscape (trees, shrubs and groundcover) and irrigation shall be installed, and maintained by the HOA or other private entity.

MITIGATION MEASURES

Air Quality

P27. MM AQ-1: The Project shall comply with the provisions of South Coast Air Quality Management District Rule 403, "Fugitive Dust." Rule 403 requires implementation of best available dust control measures during construction activities that generate fugitive dust, such as earth moving, grading, and equipment travel on unpaved roads. Prior to grading permit issuance, the City of Moreno Valley shall verify that the following notes are specified on the grading plan. Project construction contractors shall be required to ensure compliance with the notes and permit periodic inspection of the construction site by City of Moreno Valley staff or its designee to confirm compliance. These notes shall also be specified in bid documents issued to prospective construction contractors.

a) All clearing, grading, earth-moving, and excavation activities shall cease when winds exceed 25 miles per hour;

b) During grading and ground-disturbing construction activities, the construction contractor shall ensure that all unpaved roads, active soil stockpiles, and areas undergoing active ground disturbance within the Project site are watered at least three (3) times daily during dry weather. Watering, with complete coverage of disturbed areas by water truck, sprinkler system, or other comparable means, shall occur in the mid-morning, afternoon, and after work is done for the day;

c) Temporary signs shall be installed on the construction site along all unpaved roads indicating a maximum speed limit of 15 miles per hour (MPH). The signs shall be installed before construction activities commence and remain in place for the duration of construction activities that include vehicle activities on unpaved roads; and

d) The cargo area of all vehicles hauling soil, sand, or other loose earth materials shall be covered.

P28. **MM AQ-2:** The Project shall comply with the provisions of South Coast Air Quality Management District Rule 1186 "PM10 Emissions from Paved and Unpaved Roads and Livestock Operations" and Rule 1186.1, "Less-Polluting Street Sweepers" by complying with the following requirements. To ensure and enforce compliance with these requirements and reduce the release of criteria pollutant emissions into the atmosphere during construction, prior to grading and building permit issuance, the City of Moreno Valley shall verify that the following notes are included on the grading and building plans. Project construction contractors shall be required to ensure compliance with the notes and permit periodic inspection of the construction site by City of Moreno Valley staff or its designee to confirm compliance. The notes also shall be specified in bid documents issued to prospective construction contractors.

a) If visible dirt or accumulated dust is carried onto paved roads during construction, the contractor shall remove such dirt and dust at the end of each work day by street cleaning and

b) Street sweepers shall be certified by the South Coast Air Quality Management District as meeting the Rule 1186 sweeper certification procedures and requirements for PM10-efficient sweepers. All street sweepers having a gross vehicle weight of 14,000 pounds or more shall be powered with alternative (non-diesel) fuel or otherwise comply with South Coast Air Quality Management District Rule 1186.1.

P29. **MM AQ-3:** The Project is required to comply with the provisions of South Coast Air Quality Management District Rule 402 "Nuisance." To ensure and enforce compliance with this requirement, which applies to the release of odorous emissions into the atmosphere, prior to the issuance of grading and building permits, the City of Moreno Valley shall verify that the following note is included on grading and building plans. During Project construction, contractors shall be required to ensure compliance with Rule 402 and permit periodic inspection of the construction site by the City of Moreno Valley staff or its designee to confirm compliance.

Biological Resources

P30. **MM BIO-1:** Due to the presence of suitable habitat within the proposed off-site manufactured slope area located directly east of the Project boundary, a spring focused plant survey to determine the presence/absence of Parry's spineflower and white-bracted spineflower is required to be conducted during the appropriate blooming periods of the two species (between April and June) prior to ground disturbance. If individuals are found, significant impacts would occur as a result of implementation of the Project and unless mitigation is implemented to reduce impacts to less than significant. Mitigation includes seed collection of individuals that would be significantly impacted by the Project at the end of the growing season and prior to ground disturbance. Collected seeds will be planted within an appropriate on-site or off-site mitigation area, which will be conserved as open space in perpetuity. Mitigation for significant impacts to Parry's spineflower and white-bracted spineflower will be implemented in consultation with the City of Moreno Valley and CDFW.

P31. **MM BIO-2:** If burrowing owls are determined present during the 30-day pre-construction survey, occupied burrows shall be avoided to the greatest extent feasible, following the guidelines in the Staff Report on Burrowing Owl Mitigation published by Department of Fish and Wildlife including, but not limited to, conducting pre-construction surveys, avoiding occupied burrows during the nesting and non-breeding seasons, implementing a worker awareness program, biological monitoring, establishing avoidance buffers, and flagging burrows for avoidance with visible markers. If occupied burrows cannot be avoided, acceptable methods may be used to exclude burrowing owl either temporarily or permanently, pursuant to a Burrowing Owl Exclusion Plan that shall be prepared and approved by the County of Riverside Environmental Programs Department (EPD), in coordination with the CDFW. The Burrowing Owl Exclusion Plan shall be prepared in accordance with the guidelines in the Staff Report on Burrowing Owl Mitigation and the MSHCP.

P32. **MM BIO-3:** Prior to the issuance of any grading permit for permanent impacts in the areas designated as jurisdictional features, the Project applicant shall obtain regulatory permits from the USACE, RWQCB, and CDFW. The following shall be incorporated into the permitting, subject to approval by the regulatory agencies:

1. On-site or off-site creation, restoration and/or enhancement of USACE/RWQCB jurisdictional "waters of the U.S." within the San Jacinto watershed at a ratio no less than 1:1 or within an adjacent watershed at a ratio no less than 2:1 for permanent impacts, and for any temporary impacts to restore the impact area to pre-Project conditions (i.e. pre-Project contours). Off-site mitigation may occur on land acquired for the purpose of in-perpetuity preservation as approved by the resource agencies, or through the purchase of mitigation credits at a resource agency-approved off-site mitigation bank or in-lieu fee program.

2. On-site or off-site creation, restoration, and/or enhancement of CDFW jurisdictional streambed within the San Jacinto watershed at a ratio no less than 1:1 or within an adjacent watershed at a ratio no less than 2:1 for permanent impacts, and for any temporary impacts to restore the impact area to pre-Project conditions (i.e. pre-Project contours). Off-site mitigation may occur on land acquired for the purpose of in-perpetuity preservation as approved by the resource agencies, or through the purchase of mitigation credits at a resource agency-approved off-site mitigation bank or in-lieu fee program.

Purchase of any mitigation credits through an agency-approved mitigation bank or in-lieu fee program should occur prior to any impacts to jurisdictional drainages. Any mitigation proposed on land acquired for the purpose of in-perpetuity mitigation that is not part of an agency-approved mitigation bank or in-lieu fee program shall include the creation, restoration, and/or enhancement of similar streambed habitat pursuant to a resource agency-approved Habitat Mitigation and Monitoring Plan (HMMP). The HMMP shall be prepared prior to any impacts to jurisdictional features, and shall provide details as to the implementation of the mitigation, maintenance, and future monitoring of mitigation areas. The goal of the mitigation shall be to create, restore, and/or enhance similar habitat with equal or greater function and value than the impacted habitat.

P33. **MM BIO-4:** Prior to the issuance of any grading permit that would remove potentially suitable nesting habitat for raptors or songbirds, the Project applicant shall demonstrate to the satisfaction of the City of Moreno Valley that either of the following have been or will be accomplished:

1. Vegetation removal activities shall be scheduled outside the nesting season (September 1 to February 14 for songbirds; September 1 to January 14 for raptors) to avoid potential impacts to nesting birds.

2. Any construction activities that occur during the nesting season (February 15 to August 31 for songbirds; January 15 to August 31 for raptors) will require that all suitable habitat be thoroughly surveyed for the presence of nesting birds by a qualified biologist before commencement of clearing. If any active nests are detected a buffer of 300 feet (500 feet for raptors) around the nest adjacent to construction will be delineated, flagged, and avoided until the nesting cycle is complete. The buffer may be modified and/or other recommendations proposed as determined appropriate by the biological monitor to minimize impacts.

P34. **BIO-5:** Prior to the issuance of any grading permit the Project applicant shall comply with all of the provisions of the MSHCP, including payment of the MSHCP Local Development Mitigation Fee, compliance with Section 6.1.2 of the MSHCP pertaining to Riparian/Riverine Areas, implementation of drainage, toxics and non-native species guidelines pertaining to the Urban/Wildlands Interface in Section 6.1.4 of the MSHCP, and compliance with Section 6.3.2 of the MSHCP pertaining to Burrowing Owl Survey Area requirements. Compliance with Section 6.1.2 of the MSHCP will require approval of the project Determination of Biologically Equivalent or Superior Preservation (DBESP) analysis outlining the impacts and proposed compensatory mitigation for impacts to the Riparian/Riverine Areas for approval by the wildlife agencies prior to issuance of a grading permit. The DBESP will be submitted to the wildlife agencies concurrent to the processing of regulatory permits for jurisdictional streambed impacts, in order to ensure that mitigation requirements proposed under the DBESP are commensurate with the preferences of the resource agencies (USACE, CDFW, and RWQCB) as part of subsequent regulatory permit conditions to be issued following adoption of the project MND.

P35. **MM CULT 1:** Archaeologist Retained/CRMP Prepared. Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a professional archaeological monitor has been retained by the Applicant to conduct monitoring of all mass grading and trenching activities and that the monitor has the authority to temporarily halt and redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project archaeologist, in coordination with the Consulting Tribes that have requested monitoring, shall prepare a Cultural Resources Monitoring Plan (CRMP) to document protocols for inadvertent finds, to determine potential protection measures from further damage and destruction for any identified archaeological resource(s)/ tribal cultural resources (TCRs), outline the process for monitoring and for completion of the final Phase IV Monitoring Report. If any archaeological and/or TCRs are identified during monitoring, these will also be documented and addressed per standard archaeological protocols in the Phase IV report, with the exception of human remains which will be addressed per MM CULT-13. The Project Archaeologist shall attend the pre-grading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.

P36. **MM CULT 2:** Tribal Monitor Retained. At least 30 days prior to the issuance of a Grading permit the Applicant shall contact the consulting Tribe(s) that have requested monitoring, to develop Monitoring Agreement(s) for all mass grading and trenching activities and shall provide evidence of the agreement to the City of Moreno Valley. The Tribal representative(s) shall attend the pre-grading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.

P37. **MM CULT 3:** Grading Plans. Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan:

"If any suspected archaeological resources are discovered during ground-disturbing activities and the archaeological monitor or Tribal representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal representatives to the site to assess the significance of the find."

P38. **MM CULT 4:** Preservation Plan for CA-RIV-12,333. Prior to building permit issuance, the Project Applicant and the Consulting Tribe(s) shall prepare a Preservation and Maintenance Plan for the long-term care and maintenance of CA-RIV-12,333 and, if any, all new features identified during mass grading activities. The Plan shall indicate, at a minimum, the specific areas to be included in and excluded from long-term maintenance; prohibited activities; methods of preservation to be employed (fencing, vegetative deterrence, etc.); the entity(s) responsible for the long-term maintenance; maintenance scheduling and notification; appropriate avoidance protocols; monitoring by the Tribe and compensation for services if applicable; and necessary emergency protocols. The Project Applicant/Landowner shall submit a fully executed copy of the Preservation and Maintenance Plan to the City to ensure compliance with this mitigation measure.

P39. **MM CULT 5:** Conduct Archaeological Sensitivity Training for Construction Personnel. The Applicant shall retain a qualified professional archaeologist who shall conduct an Archaeological Sensitivity Training for construction personnel prior to commencement of excavation activities, along with representatives from Tribes that have requested monitoring. The training session, shall be carried out by a cultural resources professional with expertise in archaeology, will focus on how to identify archaeological/cultural resources that may be encountered during earthmoving activities, and the procedures to be followed in such an event. The training session will include a Power Point presentation and/or handouts for all attendees. The basic topics to be addressed in the session include: a brief cultural and archaeological history of the area and the Applicant's and City's cultural resource compliance obligations; training in potential resources that may be encountered through the use of photographs or other illustrations; the duties of archaeological monitors; notification and other procedures to follow upon discovery of resources; and, the general steps that would be followed to conduct a salvage investigation if one is necessary. A sign-in sheet shall be compiled to track attendance and shall be submitted to the City with the Archaeological Monitoring Report.

P40. **MM CULT 6:** Monitor Construction Excavations for Archeological Resources in Younger Alluvial Sediments. The Applicant shall retain a qualified archaeological monitor, who will work under the direction and guidance of a qualified professional archaeologist. The archaeological monitor shall be present during all construction excavations (e.g., grading, trenching, or clearing/grubbing) into non-fill younger Pleistocene alluvial sediments. Multiple earth-moving construction activities may require multiple archaeological monitors. The frequency of monitoring shall be based on the rate of excavation and grading activities, proximity to known archaeological resources, the materials being excavated (native versus artificial fill soils), and the depth of excavation, and if found, the abundance and type of archaeological resources encountered. Full-time monitoring can be reduced to part-time inspections, or ceased entirely, if determined adequate by the Project archaeologist.

P41. **MM CULT 7:** Inadvertent Finds. If, during mass grading and trenching activities, the Archaeologist or Tribal representatives/monitors suspect that an archaeological resource and/or TCR may have been unearthed, the monitor identifying the potential resources, in consultation with the other monitor as appropriate, shall immediately halt and redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. The Native American monitor(s) or appropriate representative(s) and the archaeological monitor shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2. The archaeological monitor and tribal monitor(s) or appropriate representative(s), the Project Applicant, and the City Planning Division shall confer regarding mitigation of the discovered resource(s). All sacred sites, should they be encountered within the project area, shall be avoided and preserved as the preferred mitigation, if feasible. If preservation in place is not feasible, steps for treatment and disposition shall be carried out in accordance as set forth in per MM CULT-9.

P42. **MM CULT 8:** Final Phase IV Monitoring Report. Prior to building permit issuance, the Project archaeologist shall prepare a final Phase IV Monitoring Report as outlined in the CRMP, which shall be submitted to the City Planning Division, the appropriate Native American tribe(s), and the Eastern Information Center at the University of California, Riverside. The report shall document project impacts to CA-RIV-857, CA-RIV-3159 and CA-RIV-3341, including the relocation area and protection measures taken for CA-RIV-3341.

P43. **MM CULT 9:** Treatment and Disposition of Discoveries**.** In the event that Native American cultural resources are inadvertently discovered during the course of grading for this Project. The following procedures will be carried out for treatment and disposition of the discoveries:

1. Treatment and Final Disposition: The landowner(s) shall relinquish ownership of all cultural resources, including sacred items, burial goods, and all archaeological artifacts and non-human remains as part of the required mitigation for impacts to cultural resources. The applicant shall relinquish the artifacts through one or more of the following methods and provide the City of Moreno Valley Planning Department with evidence of same:

    a. Accommodate the process for Preservation In Place/Onsite reburial of the discovered items with the consulting Native American tribes or bands. This shall include measures and provisions to protect the future reburial area from any future impacts. Reburial shall not occur until all cataloguing and basic recordation have been completed;

    b. A curation agreement with an appropriate qualified repository within Riverside County that meets federal standards per 36 CFR Part 79 and therefore would be professionally curated and made available to other archaeologists/researchers for further study. The collections and associated records shall be transferred, including title, to an appropriate curation facility within Riverside County, to be accompanied by payment of the fees necessary for permanent curation:

    c. For purposes of conflict resolution, if more than one Native American tribe or band is involved with the project and cannot come to an agreement as to the disposition of cultural materials, they shall be curated at the Western Science Center by default.

P44. **MM CULT 10:** Conduct Paleontological Sensitivity Training for Construction Personnel. The Applicant shall retain a qualified paleontologist who shall conduct a Paleontological Sensitivity Training for construction personnel prior to commencement of excavation activities. The training session, shall be carried out by a cultural resources professional with expertise in paleontology, will focus on how to identify paleontological resources that may be encountered during earthmoving activities, and the procedures to be followed in such an event. The training session will include a Power Point presentation and/or handouts for all attendees. The basic topics to be addressed in the session include: a brief cultural and geologic history of the area and the City cultural resource compliance obligations; training in potential resources that may be encountered through the use of photographs or other illustrations; the duties of paleontological monitors; notification and other procedures to follow upon discovery of resources; and, the general steps that would be followed to conduct a salvage investigation if one is necessary.

P45. **MM CULT 11:** Monitor Construction Excavations for Paleontological Resources in Older Pleistocene Alluvial Deposits. The Applicant shall retain a qualified paleontological monitor, who will work under the guidance and direction of a qualified professional paleontologist. The paleontological monitor shall be present during all construction excavations (e.g., grading, trenching, or clearing/grubbing) into non-fill older Pleistocene alluvial deposits. Multiple earth-moving construction activities may require multiple paleontological monitors. The frequency of monitoring shall be based on the rate of excavation and grading activities, proximity to known paleontological resources and/or unique geological features, the materials being excavated (native versus artificial fill soils), and the depth of excavation, and if found, the abundance and type of paleontological resources and/or unique geological features encountered. Full-time monitoring can be reduced to part-time inspections if determined adequate by the qualified professional paleontologist.

P46. **MM CULT 12:** Cease Ground-Disturbing Activities and Implement Treatment Plan if Paleontological Resources Are Encountered. In the event that paleontological resources and or unique geological features are unearthed during ground-disturbing activities, ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. A buffer area of at least 25 feet shall be established around the find where construction activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area. The Applicant and City shall coordinate with a qualified professional paleontologist to develop an appropriate treatment plan for the resources. Treatment may include implementation of paleontological salvage excavations to remove the resource along with subsequent laboratory processing and analysis or preservation in place. At the paleontologist's discretion and to reduce any construction delay, the grading and excavation contractor shall assist in removing rock samples for initial processing. Any fossils encountered and recovered shall be prepared to the point of taxonomic identification and catalogued and curated to a suitable museum or other repository with a research interest in the materials, such as the San Bernardino County Museum or Western Science Center. If no institution accepts the fossil collection, they shall be donated to a local school in the area for educational purposes. Accompanying notes, maps, and photographs shall also be filed at the repository and/or school.

P47. **MM CULT 13:** Cease Ground-Disturbing Activities and Notify County Coroner If Human Remains Are Encountered. If human remains are unearthed during implementation of the Proposed Project, the City shall comply with State Health and Safety Code Section 7050.5. The City shall immediately notify the County

Coroner and no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to PRC Section 5097.98. If the remains are determined to be of Native American descent, the coroner has 24 hours to notify the Native American Heritage Commission (NAHC). The NAHC shall then identify the person(s) thought to be the Most Likely Descendent (MLD). The MLD may, with the permission of the landowner, inspect the site of the discovery of the Native American remains and may recommend to the landowner means for treating or disposing, with appropriate dignity, the human remains and any associated funerary objects. The MLD shall complete their inspection and make their recommendation within 48 hours of being granted access by the landowner to inspect the discovery. The recommendation may include the scientific removal and nondestructive analysis of human remains and cultural items associated with Native American burials. Upon the discovery of the Native American remains, the landowner shall ensure that the immediate vicinity, according to generally accepted cultural or archaeological standards or practices, where the Native American human remains are located, is not damaged or disturbed by further development activity until the landowner has discussed and conferred, as prescribed in this mitigation measure, with the MLD regarding their recommendations, if applicable, taking into account the possibility of multiple human remains. The landowner shall discuss and confer with the descendants all reasonable options regarding the descendants' preferences for treatment. MLDs in the region typically recommend reburial of the remains as close to the original burial location as feasible accompanied by a ceremony. The MLD shall file a record of the reburial with the NAHC and the Project archaeologist shall file a record of the reburial with the CHRIS-EIC.

If the NAHC is unable to identify a MLD, or the MLD identified fails to make a recommendation, or the landowner rejects the recommendation of the MLD and the mediation provided for in Subdivision (k) of Section 5097.94, if invoked, fails to provide measures acceptable to the landowner, the landowner or his or her authorized representative shall inter the human remains and items associated with Native American human remains with appropriate dignity on the facility property in a location not subject to further and future subsurface disturbance. A record of the reburial shall be filed with the NAHC and the CHRIS-EIC.

Geology and Soils

P48. **MM GEO-1:** Site-specific structural and seismic design parameters and recommendations for foundations, retaining walls/shoring, and excavation shall be implemented per the Project's Preliminary Geotechnical Evaluation and the Supplemental Geotechnical Evaluation, subject to review and approval by the City of Moreno Valley Building Safety Department.

P49. **Project Design Feature-GEO-1:** The Project applicant would construct reinforced concrete or block privacy walls on Lots 36, 37, 38, 39, and 40 to provide supplementary protection and to prevent small, nuisance rockfall from accumulating in proposed residential areas.

Hazards and Hazardous Materials

P50. **MM HAZ-1:** The Project applicant shall implement a Project-specific Fuel Modification Plan based on the *General Guidelines for Creating Defensible Space* prepared by the California Department of Forestry and Fire Protection (2006). The Fuel Modification Plan shall be subject to review and approval by the Moreno Valley Fire Department.

Noise

P51. **MM NOISE-1**: Prior to approval of the grading plans and/or issuance of building permits, plans shall include a note indicating that noise-generating Project construction activities shall only occur between the hours of 7:00 AM and 7:00 PM, Monday through Friday, excluding holidays, and from 8:00 AM and 4:00 PM on Saturday, unless written approval is obtained from the City's building official or city engineer. The Project construction supervisor shall ensure compliance with the note and the City shall conduct periodic inspection at its discretion.

P52. **MM NOISE-2**: The Project applicant shall install temporary noise control barriers that provide a minimum noise level attenuation of 10 dBA when Project construction occurs near existing noise-sensitive structures. The noise control barrier must present a solid face from top to bottom. The noise control barrier must be designed with appropriate height and length to block the view of the noise source. Unnecessary openings shall not be made.

The noise barrier may be constructed using an acoustical blanket (e.g. vinyl acoustic curtains or quilted blankets) attached to the construction site perimeter fence or equivalent temporary fence posts.

The noise barriers must be maintained and any damage promptly repaired. Gaps, holes, or weaknesses in the barrier or openings between the barrier and the ground shall be promptly repaired.

The noise control barriers and associated elements shall be completely removed and the site appropriately restored upon the conclusion of the construction activity.

P53. **MM NOISE-3**: During all Project site construction, the construction contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers, consistent with manufacturers' standards. The construction contractor shall place all stationary construction equipment so that emitted noise is directed away from the noise sensitive receptors nearest the Project site.

P54. **MM NOISE-4**: The construction contractor shall locate equipment staging in areas that would create the greatest distance between construction-related noise sources and noise-sensitive receivers nearest the Project site (i.e., to the northern center) during all Project construction.

P55. **MM NOISE-5**: The construction contractor shall limit haul truck deliveries to the same hours specified for construction equipment (between the hours of 7:00 AM and 7:00 PM, Monday through Friday, excluding holidays, and from 8:00 AM and 4:00 PM on Saturday, unless written approval is obtained from the City's building official or city engineer). The contractor shall design delivery routes to minimize the exposure of sensitive land uses or residential dwellings to delivery truck-related noise.

P56. **MM NOISE-6**: Exterior Noise Mitigation: The Project applicant shall construct 4-foot high noise barriers for the outdoor living areas (backyards) of residential lots 26 to 30. The recommended noise control barriers shall be constructed so that the top of each wall extends to the recommended height above the pad elevation of the lit it is shielding. When the road is elevated above the pad elevation, the barrier shall extend to the recommended height above the highest point between the residential home and the road. The barriers shall provide a weight of at least 4 pounds per square foot of face area with no decorative cutouts or line-of-sight openings between shielded areas and the roadways. The noise barrier shall be constructed using one of the following materials: masonry block; stucco veneer over wood framing (or foam core), or 1-inch thick tongue and groove wood of sufficient weight per square foot; glass (1/4-inch thick), or other transparent material with sufficient weight per square feet; earthen berm; or any combination of these construction materials. The barrier must present a solid face from top to bottom. Unnecessary openings or decorative cutouts shall not be made. All gaps (except for weep holes) shall be filled with grout or caulking.

P57. **MM NOISE-7**: Interior Noise Mitigation: The Project applicant shall provide the following or equivalent measures:

- Windows: All windows and sliding glass doors shall be well fitted with well weather-stripped assemblies and a minimum STC rating of 27.
- Doors: All exterior doors shall be well weather-stripped solid core assemblies at least 1 ¾-inch thick.
- Roof: Roof sheathing of wood construction shall be well fitted or caulked plywood of at ½-inch thick. Ceilings shall be well fitted, well-sealed gypsum board of at least ½-inch thick.
- Attic: Attic vents shall be oriented away from Ironwood Avenue. If such an orientation cannot be avoided, then an acoustical baffle shall be placed in the attic space behind the vents. Insulation with at least a rating of R-19 shall be used in the attic space.

- Ventilation: When any habitable room is in use, arrangements shall be such that circulated air is received when any exterior door(s) or window(s) are closed. A forced air circulation system (e.g. air conditions) or active ventilation system (e.g. fresh air supply) shall be provided which satisfies the requirements of the Uniform Building Code.

<u>Public Services</u>

P58. **MM PS-1:** Construction Traffic Management Plan - A Construction Traffic Management Plan shall be developed by the Project contractor in consultation with the Project's traffic and/or civil engineer and approved by the City of Moreno Valley Department of Public Works prior to issuance of any Project demolition, grading or excavation permit. The Construction Traffic Management Plan shall also be reviewed and approved by the MVFD. The City of Moreno Valley Department of Public Works reserves the right to reject any engineer at any time and to require that the Plan be prepared by a different engineer. The construction management plan shall include, at a minimum, the following:

- The name and telephone number of a contact person who can be reached 24 hours a day regarding construction traffic complaints or emergency situations;
- An up-to-date list of local police, fire, and emergency response organizations and procedures for the continuous coordination of construction activity, potential delays, and any alerts related to unanticipated road conditions or delays, with local police, fire, and emergency response agencies. Coordination shall include the assessment of any alternative access routes that might be required through the site, and maps showing access to and within the site and to adjacent properties;
- Procedures for the training and certification of the flag persons used in implementation of the Construction Traffic Management Plan;
- The location, times, and estimated duration of any roadway closures, traffic detours, use of protective devices, warning signs, and staging or queuing areas;
- Identify the locations of the off-site truck parking and staging and provide measures to ensure that trucks use the specified haul route, and do not travel through nearby residential neighborhoods or schools;
- Schedule vehicle movements to ensure that there are no vehicles waiting off-site and impeding public traffic flow on surrounding streets;
- Establish requirements for loading/unloading and storage of materials on the Project site;
- During construction activities when construction worker parking cannot be accommodated on the Project site, a Construction Worker Parking Plan shall be prepared which identifies alternate parking location(s) for construction workers and the method of transportation to and from the

Project site (if beyond walking distance) for approval by the City of Moreno Valley. The Construction Worker Parking Plan shall prohibit construction worker parking on residential streets and prohibit on-street parking, except as approved by the City.

Transportation/Traffic

P59. **MM TRAF-1**: The Project applicant shall participate in the funding of off-site improvements, including traffic signals that are needed to serve cumulative traffic conditions through the payment of TUMF and City DIF fees (if the improvements are included in the TUMF or DIF programs) or on a fair share basis (if the improvements are not included in the TUMF or DIF programs). These fees shall be collected by the City, with the proceeds solely used as part of a funding mechanism used to ensure that regional highways and arterial expansions keep pace with the projected population increases.

P60. **Project Design Feature-TRAF-1:** As recommended by the project's traffic consultant, prior to project occupancy, three potential speed hump locations have been proposed along Street "A". Final speed hump locations to be reviewed and approved by the City's Traffic Engineer. Further, prior to project occupancy, potential all-way stop locations, to be determined if warranted by the City's Traffic Engineer, have also been recommended in three locations along Street "A".

Building and Safety Division

B1. New buildings/structures shall comply with the current California Building Standards Code (CBC, CEC, CMC, CPC and Green Building Standards) as well as City ordinances. Plans shall be submitted to the Building and Safety Division as a separate submittal and shall include a soils report at time of first submittal.

B2. Prior to the issuance of a building permit, the applicant shall submit a properly completed "Waste Management Plan" (WMP), as required, as a portion of the building or demolition permit process.

B3. Building plans and instruments of service submitted with a building permit application shall be signed and sealed by a California licensed design professional as required by the State Business and Professions Code.

B4. The proposed new development may be subject to the payment of development fees as required by the City's Fee Ordinance at the time an application is submitted or prior to the issuance of permits as determined by the City.

SCHOOL DISTRICT – Moreno Valley Unified School District

S1. (BP) Prior to issuance of building permits, the developer shall provide to the Community Development Director a written certification by the affected school district that either: (1) the project has complied with the fee or other exaction levied on the project by the governing board of the district, pursuant to Government Code Section 65996; or (2) the fee or other requirement does not apply to the project.

UNITED STATES POSTAL SERVICE

PO1. (BP) Prior to the issuance of building permits, the developer shall contact the U.S. Postal Service to determine the appropriate type and location of mailboxes.

PUBLIC WORKS DEPARTMENT – LAND DEVELOPMENT DIVISION

The following are the Public Works Department – Land Development Division Conditions of Approval for this project and shall be completed at no cost to any government agency. All questions regarding the intent of the following conditions shall be referred to the Land Development Division.

General Conditions

LD1. (G) The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). [MC 9.14.010]

LD2. (G) The tentative map shall correctly show all existing easements, traveled ways, and drainage courses. Any omission may require the map or plans associated with this application to be resubmitted for further consideration. [MC 9.14.040(A)]

LD3. (G) In the event right of way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right of way in accordance with the Land Development Division's administrative policy. If unsuccessful, the Developer shall enter into an agreement with the City to acquire the necessary right of way or offsite easements and complete the improvements at such time the City acquires the right of way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right of way or easement acquisition. [GC 66462.5]

LD4. (G) If improvements associated with this project are not initiated within two (2) years of the date of approval of the Public Improvement Agreement (PIA), the City Engineer may require that the engineer's estimate for improvements associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the PIA or issuance of a permit.

LD5. (G) The developer shall monitor, supervise and control all construction and construction supportive activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:

a. Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.

b. Observance of working hours as stipulated on permits issued by the Land Development Division.

c. The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.

d. All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements during the grading operations.

Violation of any condition, restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedy as noted in City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.

LD6. (G) The developer shall protect downstream properties from damage caused by alteration of drainage patterns (i.e. concentration or diversion of flow, etc.). Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. [MC 9.14.110]

LD7. (G) Public drainage easements, when required, shall be a minimum of 25 feet wide and shall be shown on the map and plan, and noted as follows: *“Drainage Easement – no structures, obstructions, or encroachments by landfills are allowed.”* In addition, the grade within the easement area shall not exceed a 3:1 (H:V) slope, unless approved by the City Engineer.

LD8. (G) For single family residential subdivisions, all lots shall drain toward the street unless otherwise approved by the City Engineer. Residential lot drainage to the street shall be by side yard swales, and must be directed to a driveway or drainage devices located outside the right of way in accordance with City Standard MVSI-154-0. No cross-lot or over the sidewalk drainage shall be allowed.

LD9. (G) Prior to any plan approval, a final detailed drainage study (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer. The study shall include existing and proposed hydrologic conditions as well as hydraulic calculations for all drainage control devices and storm drain lines. [MC 9.14.110(A.1)]. **The post-development flowrates shall not exceed the pre-development flowrates exiting the tract.** A digital (pdf) copy of the approved drainage study shall be submitted to the Land Development Division.

LD10. (G) Water quality best management practices (BMPs) designed to meet Water Quality Management Plan (WQMP) requirements for single-family residential development shall not be used as a construction BMP. Water quality BMPs shall be maintained for the entire duration of the project construction and be used to treat runoff from those developed portions of the project. Water quality BMPs shall be protected from upstream construction related runoff by having proper best management practices in place and maintained. Water quality BMPs shall be graded per the approved design plans and once landscaping and irrigation has been installed, it and its maintenance shall be turned over to an established Homeowner's Association (HOA). The Homeowner's Association shall enter into an agreement with the City for basin maintenance.

LD11. (G) The final approved conditions of approval (COAs) and any applicable Mitigation Measures issued by the Planning Division shall be photographically or electronically placed on Mylar sheets and included in the Grading and Street Improvement plans.

LD12. (G) Aggregate slurry, as defined in Section 203-5 of Standard Specifications for Public Works Construction, may be required just prior to the end of the one-year warranty period of the public streets at the discretion of the City Engineer. If slurry is required, a slurry mix design shall be submitted for review and approved by the City Engineer. The latex additive shall be Ultra Pave 70 (for anionic) or Ultra Pave 65 K (for cationic) or an approved equal per the geotechnical report. The latex shall be added at the emulsion plant after weighing the asphalt and before the addition of mixing water. The latex shall be added at a rate of two to two-and-one-half (2 to 2½) parts to one-hundred (100) parts of emulsion by volume. Any existing striping shall be removed prior to slurry application and replaced per City standards.

Prior to Grading Plan Approval

LD13. (GPA) Grading plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

LD14. (GPA) Landscape & Irrigation plans (prepared by a registered/licensed landscape architect) for water quality BMPs shall be submitted for review and approved by the City Engineer per the current submittal requirements, if applicable.

LD15. (GPA) The developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:

a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.

b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.

c. All improvement plans are substantially complete and appropriate clearance letters are provided to the City.

d. A soils/geotechnical report (addressing the soil's stability and geological conditions of the site) shall be submitted to the Land Development Division for review. A digital (pdf) copy of the soils/geotechnical report shall be submitted to the Land Development Division.

LD16. (GPA) The developer shall select Low Impact Development (LID) Best Management Practices (BMPs) designed per the latest version of the Water Quality Management Plan (WQMP) - a guidance document for the Santa Ana region of Riverside County.

LD17. (GPA) For projects that will result in discharges of storm water associated with construction with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID#) from the State Water Quality Control Board (SWQCB) which shall be noted on the grading plans.

LD18. (GPA) Two (2) copies of the final project-specific Water Quality Management Plan (WQMP) shall be submitted for review and approved by the City Engineer, which:

a. Addresses Site Design Best Management Practices (BMPs) such as minimizing impervious areas, maximizing permeability, minimizes directly connected impervious areas to the City's street and storm drain systems, and conserves natural areas;

b. Incorporates Source Control BMPs and provides a detailed description of their implementation;

c. Describes the long-term operation and maintenance requirements for BMPs requiring maintenance; and

d. Describes the mechanism for funding the long-term operation and maintenance of the BMPs.

A copy of the final WQMP template can be obtained on the City's Website or by contacting the Land Development Division. A digital (pdf) copy of the approved final project-specific Water Quality Management Plan (WQMP) shall be submitted to the Land Development Division.

LD19. (GPA) A Storm Water Pollution Prevention Plan (SWPPP) shall be prepared in conformance with the State's current Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request.

LD20. (GPA) The developer shall pay all remaining plan check fees.

LD21. (GPA) Resolution of all drainage issues shall be as approved by the City Engineer.

Prior to Grading Permit

LD22. (GP) The developer shall submit recorded slope easements from adjacent property owners in all areas where grading resulting in slopes is proposed to take place outside of the project boundaries, if applicable. For all other offsite grading, written permission from adjacent property owners shall be submitted, if applicable.

LD23. (GP) A receipt showing payment of the Area Drainage Plan (ADP) fee to Riverside County Flood Control and Water Conservation District shall be submitted. [MC 9.14.100(O)]

LD24. (GP) Security, in the form of a cash deposit (preferable), or letter of credit shall be submitted as a guarantee of the completion of the grading operations for the project. [MC 8.21.070]

LD25. (GP) Security, in the form of a cash deposit (preferable), or letter of credit shall be submitted as a guarantee of the implementation and maintenance of erosion control measures. At least twenty-five (25) percent of the required security shall be in the form of a cash deposit with the City. [MC 8.21.160(H)]

LD26. (GP) The developer shall pay all applicable inspection fees.

LD27. (GP) A digital (pdf) copy of the approved grading plans shall be submitted to the Land Development Division.

LD28. (GP) Prior to the payment of the Development Impact Fee (DIF), the developer may enter into a DIF Improvement Credit Agreement to secure credit for the construction of applicable improvements, if applicable. If the developer fails to complete this agreement prior to the timing specified above, no credits will be given. The developer shall pay current DIF fees adopted by the City Council. [Ord. 695 § 1.1 (part), 2005] [MC 3.38.030, 040, 050]

LD29. (BP) Prior to the payment of the Transportation Uniform Mitigation Fee (TUMF), the developer may enter into a TUMF Improvement Credit Agreement to secure credit for the construction of applicable improvements, if applicable. If the developer fails to complete this agreement by the timing specified above, no credits will be given. The developer shall pay current TUMF fees adopted by the City Council. [Ord. 835 § 2.1, 2012] [MC 3.44.060]

Prior to Map Approval

LD30. (MA) Final maps (prepared by a registered civil engineer and/or licensed surveyor) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

LD31. (MA) Resolution of all drainage issues shall be as approved by the City Engineer.

LD32. (MA) A copy of the Covenants, Conditions and Restrictions (CC&Rs) shall be submitted for review and approved by the City Engineer. The CC&Rs shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project. In addition, for single-family residential development, bylaws and articles of incorporation shall also be included as part of the maintenance agreement for any water quality BMPs.

LD33. (MA) All street dedications shall be free of all encumbrances, irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer.

LD34. (MA) The developer shall guarantee the completion of all related improvements required for this project by executing a Public Improvement Agreement (PIA) with the City and posting the required security. [MC 9.14.220]

LD35. (MA) All public improvement plans required for this project shall be approved by the City Engineer in order to execute the Public Improvement Agreement (PIA).

LD36. (MA) The developer shall enter into a Cooperative Agreement with the City and Riverside County Flood Control and Water Conservation District establishing the terms and conditions covering the inspection, operation and maintenance of Master Drainage Plan facilities required to be constructed as part of the project, if applicable.

LD37. (MA) The developer shall comply with the requirements of the City Engineer based on recommendations of the Riverside County Flood Control District regarding the construction of County Master Plan Facilities.

LD38. (MA) If the project involves the subdivision of land, maps may be developed in phases with the approval of the City Engineer. Financial security shall be provided for all public improvements associated with each phase of the map. The boundaries of any multiple map increment shall be subject to the approval of the City Engineer. The City Engineer may require the dedication and construction of necessary utility, street or other improvements beyond the project boundary, if the improvements are needed for circulation, parking, access, or for the welfare or safety of the public. [MC 9.14.080(B)(C), GC 66412 & 66462.5]

LD39. (MA) All proposed street names shall be submitted for review and approved by the City Engineer, if applicable. [MC 9.14.090(E.2.k)]

LD40. (MA) Under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System (NPDES) as mandated by the Federal Clean Water Act, this project is subject to the following requirements:

a. Establish a Home Owners Association (HOA) to finance the maintenance of the “Water Quality BMPs”. Any lots which are identified as “Water Quality BMPs” shall be owned in fee by the HOA.

b. Dedicate a maintenance easement to the City of Moreno Valley.

c. Execute a maintenance agreement between the City of Moreno Valley and the HOA, which shall be approved by City Council.

d. Provide a certificate of insurance per the terms of the maintenance agreement.

e. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation, maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.

i. Participate in the mail ballot proceeding in compliance with Proposition 218, for the Residential NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process, or

ii. Establish an endowment to cover future maintenance costs for the Residential NPDES Regulatory Rate Schedule.

f. Notify the Special Districts Division of the intent to record the final map 90 days prior to City Council action authorizing recordation of the final map and the financial option selected. The final option selected shall be in place prior to the issuance of certificate of occupancy. [California Government Code & Municipal Code]

LD41. (MA) After recordation, a digital (pdf) copy of the recorded map shall be submitted to the Land Development Division.

Prior to Improvement Plan Approval

LD42. (IPA) All public improvement plans (prepared by a licensed/registered civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

LD43. (IPA) The developer shall submit clearances from all applicable agencies, and pay all applicable plan check fees.

LD44. (IPA) The street improvement plans shall comply with current City policies, plans and applicable City standards (i.e. MVSI-160 series, etc.) throughout this project.

LD45. (IPA) The design plan and profile shall be based upon a centerline, extending beyond the project boundaries a minimum distance of 300 feet at a grade and alignment approved by the City Engineer.

LD46. (IPA) The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts for trench repairs may be allowed for emergency repairs or as specifically approved by the City Engineer.

LD47. Prior to precise grading plan approval, all dry and wet utilities shall be shown on the plans and any crossings shall be potholed to determine actual location and elevation. Any conflicts shall be identified and addressed on the plans. The pothole survey data shall be submitted to Land Development with the public improvement plans for reference purposes only. The developer is responsible to coordinate with all affected utility companies and bear all costs of any utility relocation.

LD48. (IPA) The developer is required to bring any existing access ramps adjacent to and fronting the project to current ADA (Americans with Disabilities Act) requirements. However, when work is required in an intersection that involves or impacts existing access ramps, all access ramps in that intersection shall be retrofitted to comply with current ADA requirements, unless approved otherwise by the City Engineer.

LD49. (IPA) Drainage facilities (i.e. catch basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.

LD50. (IPA) The hydrology study shall be designed to accept and properly convey all off-site drainage flowing onto or through the site. All storm drain design and improvements shall be submitted for review and approved of the City Engineer. In the event that the City Engineer permits the use of streets for drainage purposes, the provisions of current City standards shall apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, as in the case where one travel lane in each direction shall not be used for drainage conveyance for emergency vehicle access on streets classified as minor arterials and greater, the developer shall provide adequate facilities as approved by the City Engineer. [MC 9.14.110 A.2]

Prior to Encroachment Permit

LD51. (EP) All work performed within public right of way requires an encroachment permit. Security (in the form of a cash deposit or other approved means) may be required as determined by the City Engineer. All inspection fees shall be paid prior to issuance of construction permit. [MC 9.14.100(C.4)]

LD52. (EP) A digital (pdf) copy of all approved improvement plans shall be submitted to the Land Development Division.

LD53. (EP) All applicable inspection fees shall be paid.

Prior to Building Permit

LD54. (BP) For all subdivision projects, the map shall be recorded (excluding model homes). [MC 9.14.190]

LD55. (BP) Certification to the line, grade, flow test, and system invert elevations for the water quality control BMPs shall be submitted or review and approved by the City Engineer (excluding models homes).

LD56. (BP) Residential subdivision projects are subject to the following requirements under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System (NPDES) as mandated by the Federal Clean Water Act:

a. Establish a Home Owners Association (HOA) to finance the maintenance of the “Water Quality BMPs”. Any lots which are identified as “Water Quality BMPs” shall be owned in fee by the HOA.

b. Dedicate a maintenance easement to the City of Moreno Valley.

c. Execute a maintenance agreement between the City of Moreno Valley and the HOA, which shall be approved by City Council.

d. Provide a certificate of insurance per the terms of the maintenance agreement.

e. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation, maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.

i. Participate in the mail ballot proceeding in compliance with Proposition 218, for the Residential NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process, or

ii. Establish an endowment to cover future maintenance costs for the Residential NPDES Regulatory Rate Schedule.

f. Notify the Special Districts Division of the intent to obtain a building permit 90 days prior to the City's issuance of a building permit and the financial option selected. [California Government Code & Municipal Code]

LD57. (BP) An engineered-fill certification, rough grade certification and compaction report shall be submitted for review and approved by the City Engineer. A digital (pdf) copy of the approved compaction report shall be submitted to the Land Development Division. All pads shall meet pad elevations per approved grading plans as noted by the setting of "blue-top" markers installed by a registered land surveyor or licensed civil engineer.

Prior to Occupancy

LD58. (CO) The engineered final/precise grade certification shall be submitted for review and approved by the City Engineer.

LD59. (CO) All outstanding fees shall be paid.

LD60. (CO) The developer shall complete all public improvements in conformance with current City standards, except as noted in the Special Conditions, including but not limited to the following:

a. Street improvements including, but not limited to: pavement, base, curb and/or gutter, cross gutters, spandrel, sidewalks, drive approaches, pedestrian ramps, street lights, signing, striping, under sidewalk drains, landscaping and irrigation, medians, redwood header boards, pavement tapers/transitions and traffic control devices as appropriate.

b. Storm drain facilities including, but not limited to: storm drain pipe, storm drain laterals, open channels, catch basins and local depressions.

c. City-owned utilities.

d. Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.

e. Under grounding of all existing and proposed utilities adjacent to and on-site. [MC 9.14.130]

f. Relocation of overhead electrical utility lines including, but not limited to: electrical, cable and telephone.

LD61. (CO) For residential subdivisions, prior to releasing the last 20% or last 5 permitted structures (whichever is greater, unless otherwise determined by the City Engineer) of any Map Phase, punch list work for improvements and capping of streets in that phase shall be completed and approved for acceptance by the City Engineer.

LD62. (CO) The Developer shall comply with the following water quality related items:

a. Notify the Land Development Division prior to construction and installation of all structural BMPs so that an inspection can be performed.

b. Demonstrate that all structural BMPs described in the approved final project-specific WQMP have been constructed and installed in conformance with the approved plans and specifications;

c. Demonstrate that Developer is prepared to implement all non-structural BMPs described in the approved final project-specific WQMP; and

d. Demonstrate that an adequate number of copies of the approved final project-specific WQMP are available for future owners/occupants.

e. Clean and repair the water quality BMP's, including re-grading to approved civil drawings if necessary.

f. Provide City with updated Engineer's Line and Grade Certification.

g. Obtain approval and complete installation of the irrigation and landscaping.

LD63. (CO) The applicant shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit:

a. Field verification that structural Site Design, Source Control and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP).

b. Certification of best management practices (BMPs) from a state licensed civil engineer. An original WQMP BMP Certification shall be submitted for review and approved by the City Engineer.

Special Conditions

LD77. The following project engineering design plans (24"x36" sheet size) shall be submitted for review and approval as well as additional plans deemed necessary by the City during the plan review process:

a. Rough Grading Plan
b. Precise Grading Plan
c. Street Improvement Plan

d. Signing and Striping Plan
e. Final Drainage Study
f. As-Built Plans of all “plans” listed above.

LD78. Developer shall coordinate with the City regarding maintenance responsibilities of the water quality basins for this project.

LD79. All multi-use trails shall be shall be constructed per City Standard Series No. MVGF-610 Series, as applicable.

LD80. As-built drawings for precise grading plans shall be submitted for review and approval prior to the last issuance of certificate of occupancy for any construction phase or as determined by the City Engineer.

LD81. The developer shall be required to grade and build the water quality basins to allow maintenance vehicles access. This will be accomplished by separate designated road that permits vehicles the ability to drive into the basin. The City of Moreno Valley Land Development division, Storm Water Management Program section shall have final determination regarding the basin configuration and slope ratios. Signature on the grading plans by the Storm Water Management Program shall be required per the conditions of approval.

LD82. Prior to street improvement plan approval, pavement core samples of existing pavement may be taken and findings submitted to the City for review and consideration of pavement improvements. The City will determine the adequacy of the existing pavement structural section. If the existing pavement structural section is found to be adequate, the developer may still be required to perform a one-tenth inch grind and overlay or slurry seal depending on the severity of existing pavement cracking, as required by the City Engineer. If the existing pavement section is found to be inadequate, the Developer shall replace the pavement to meet or exceed the City’s pavement structural section standard.

LD83. Prior to approval of any grading plan, the plans and the submitted drainage study shall clearly demonstrate this project’s increased runoff mitigation. This project shall not discharge runoff at a rate greater in the post developed condition than that in the pre-developed condition, for any given storm event. The storms to be studied include the 1-hour, 3-hour, 6-hour and 24-hour duration events for the 2-year, 5-year, 10-year and 100-year return frequencies.

LD84. Prior to rough grading plan approval, the grading plans shall clearly demonstrate, with detail, the proper function and design of the water quality basins). The design of the basin shall conform to City guidelines as found on the City’s website. The water quality basin design, including inlet/outlet/overflow/maintenance access locations, shall be designed per the approval of the City engineer.

LD85. Prior to rough grading plan approval, steep street grades such as those shown on the tentative tract map shall be approved by the City Engineer. Street intersection approach grades shall be designed per Standard MVSI-160C-0 to achieve adequate line of sight and stopping sight distances as approved by the City Engineer.

LD86. Prior to rough grading plan approval, the grading plan shall show all offsite flows being intercepted and directed to storm drain systems.

LD87. Prior to the issuance of the first building permit, a Construction Phasing Plan shall be submitted to the Land Development Division for review and approval, if applicable.

LD88. Prior to issuance of a building permit, the Developer shall submit Covenant Conditions and Restrictions (CCR's) stating that an HOA will be responsible for maintaining the open space areas as well as any other common facilities identified by the City Engineer.

LD89. Prior to issuance of a building permit, the Developer shall submit Covenant Conditions and Restrictions (CCR's) stating that an HOA will be responsible for maintaining open space areas and any other common facilities identified by the City Engineer.

LD90. Prior to final map approval, Lot "A shall be designated Open Space as shown on the tentative tract map.

LD91. Prior to final map approval, Lots "B", "C", "D", "E", "F", "G", "H", "L"and "P" shall be designated as landscape/walkway areas as determined by the Planning Division.

LD92. Prior to final map approval, Lots "J", "N", "O", shall be designated as trails as determined by the Parks and Community Services Department.

LD93. Prior to final map approval, the Developer shall guarantee the construction of the following improvements by entering into a public improvement agreement and posting security. The improvements shall be completed prior to occupancy of the first building or as otherwise determined by the City Engineer.

a. Nason St (66' RW / 44' CC) shall be constructed to half-width plus 12' per City Standard No. MVSI-106B-0. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, cross gutter, any necessary drainage structures including catch basins, local depressions, storm drain, streetlights, pedestrian access ramps, and dry and wet utilities street dedication.

b. Oliver St (66' RW / 44' CC) shall be constructed to half-width plus 12' per City Standard No. MVSI-106B-0. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, cross gutter, any necessary drainage structures including catch basins, local depressions, storm drain, streetlights, pedestrian access ramps, and dry and wet utilities and street dedication.

c. Ironwood Ave (88' RW / 64' CC) shall be constructed to half-width plus 12' per City Standard No. MVSI-105A-0. Improvements shall consist of, but not be limited to, pavement, base, curb, gutter, sidewalk, driveway approaches, cross gutter, any necessary drainage structures including catch basins, local depressions, storm drain, streetlights, pedestrian access ramps, and dry and wet utilities and street dedication, if applicable.

LD94. The Applicant shall substantiate all applicable Hydrologic Condition of Concern (HCOC) issues in the first submittal of the F-WQMP, if applicable.

LD95. The Applicant has proposed to incorporate the use of Extended Detention Basins. Final design details of the LID BMPs must be provided in the first submittal of the F-WQMP. The sizes of all LID BMPs are to be determined using the current procedures set forth the Riverside County Flood Control and Water Conservation District's Design Handbook for Low Impact Development Best Management Practices. The Applicant acknowledges that there are discrepancies between the basin routing calculations and the BMP worksheets. Address and coordinate all calculations in the document with the LID BMP worksheets for the F-WQMP submittal.

LD96. Prior to Occupancy Permit issuance, all overhead utilities including utility lines less than 115,000 volts fronting or within the entire project site boundary shall be placed underground per Section 9.14.130C of the City Municipal Code.

LD97. Prior to Occupancy Permit issuance, the Developer is required to repair, replace or install any damaged, substandard or missing improvements on Ironwood Ave. along the project frontage on Ironwood Ave, Nason St and Oliver St.

PUBLIC WORKS DEPARTMENT – SPECIAL DISTRICTS DIVISION

Conditions are standard to all or most development projects. Some special conditions, modified conditions or clarification of conditions may be included. Please review conditions as listed and contact the Division at 951.413.3480 for any questions.

Acknowledgement of Conditions

The following are the Special Districts Division's Conditions of Approval for PEN16-0079 this project shall be completed at no cost to any Government Agency. All questions regarding the following Conditions including but not limited to intent, requests for change/modification, variance and/or request for extension of time shall be sought from the Special Districts Division of the Public Works Department 951.413.3480 or by emailing specialdistricts@moval.org.

General Conditions

SD-1 The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services District Zone A (Parks & Community Services) and Zone C (Arterial Street Lighting). All assessable parcels therein shall be subject to annual parcel taxes for Zone A and Zone C for operations and capital improvements.

SD-2 Plans for parkway landscape areas designated in the project's Conditions of Approval for incorporation into a City coordinated landscape maintenance program, shall be prepared and submitted in accordance with the City of Moreno Valley Public Works Department Landscape Design Guidelines. The guidelines are available on the City's website at www.moval.org/sd or from the Special Districts Division (951.413.3480 or specialdistricts@moval.org).

SD-3 In the event the City of Moreno Valley determines that funds authorized by any Proposition 218 mail ballot proceeding are insufficient to meet the costs for parkway, slope, and/or open space maintenance and utility charges, the City shall have the right, at its option, to terminate the grant of any or all parkway, slope, and/or open space maintenance easements. This power of termination, should it be exercised, shall be exercised in the manner provided by law to quit claim and abandon the property so conveyed to the District, and to revert to the Developer or the Developer's successors in interest, all rights, title, and interest in said parkway, slope, and/or open space areas, including but not limited to responsibility for perpetual maintenance of said areas.

SD-4 The Developer, or the Developer's successors or assignees shall be responsible for all parkway landscape maintenance for a period of one (1) year commencing from the time all items of work have been completed to the satisfaction of Special Districts staff as per the City of Moreno Valley Public Works Department Landscape Design Guidelines, or until such time as the District accepts maintenance responsibilities.

SD-5 Plan check fees for review of parkway landscape plans for improvements that shall be maintained by the City of Moreno Valley are due upon the first plan submittal. (MC 3.32.040)

SD-6 Inspection fees for the monitoring of landscape installation associated with the City of Moreno Valley maintained parkways are due prior to the required pre-construction meeting. (MC 3.32.040)

SD-7 Street Light Authorization forms for all street lights that are conditioned to be installed as part of this project must be submitted to the Special Districts Division for approval, prior to street light installation. The Street Light Authorization form can be obtained from the utility company providing electric service to the project, either Moreno Valley Utility or Southern California Edison. For questions, contact the Special Districts Division at 951.413.3480 or specialdistricts@moval.org.

SD-8 Parkway landscape areas maintained as part of the City of Moreno Valley Community Facilities District 2014-01 shall be required to have independent utility systems, including but not limited to water, electric, and telephone services. An independent irrigation controller and pedestal will also be required. Combining utility systems with existing or future landscape areas not associated with the City of Moreno Valley Community Facilities District (CFD) landscaping will not be permitted.

Prior to Recordation of Final Map

SD-9 (R) This project has been conditioned to provide a funding source for the continued maintenance, enhancement, and/or retrofit of parks, open spaces, linear parks, and/or trail systems. The Developer shall satisfy this condition with one of the options below.

a. Participate in a special election for annexation into Community Facilities District No. 1 and pay all associated costs of the special election process and formation, if any; or

b. Establish an endowment fund to cover future maintenance costs for new neighborhood parks.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. A minimum of 90 days is needed to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

Annexation to CFD No. 1 shall be completed or proof of payment to establish the endowment fund shall be provided prior to the issuance of the first building permit for this project.

SD-10 (R) This project has been identified to be included in the formation of a Community Facilities District for Public Safety services including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. The property owner(s) shall not protest the formation; however, they retain the right to object to the rate and method of maximum special tax. In compliance with Proposition 218, the property owner shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district that may already be established. The Developer must notify the Special Districts Division at 951.413.3480 or specialdistricts@moval.org of its intent to record the final map for the development 90 days prior to City Council action authorizing recordation of the map. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution. (California Government Code Section 53313 et. seq.)

SD-11 (R) This project is conditioned to provide a funding source for the following special financing program(s):

a. Street Lighting Services for capital improvements, energy charges, and maintenance.
b. Landscape Maintenance Services for parkway landscaping on Ironwood Avenue, Nason Street, and Oliver Street.

The Developer's responsibility is to provide a funding source for the capital improvements and the continued maintenance of the landscaped area. The Developer shall satisfy this condition with one of the options below.

i. Participate in a special election (mail ballot proceeding) and pay all associated costs of the special election and formation, if any. Financing may be structured through a Community Services District zone, Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

ii. Establish a Property Owner's Association (POA) or Home Owner's Association (HOA) which will be responsible for any and all operation and maintenance costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. The option for participating in a special election requires approximately 90 days to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

The financial option selected shall be in place prior to the issuance of the first building permit for this project.

SD-12 (R) This project is conditioned to provide a funding source for the operation and maintenance of public improvements and/or services associated with new development in that territory. The Developer shall satisfy this condition with one of the options below.

a. Participate in a special election for maintenance/services and pay all associated costs of the election process and formation, if any. Financing may be structured through a Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

b. Establish an endowment fund to cover the future maintenance and/or service costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. A minimum of 90 days is needed to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

The financial option selected shall be in place prior to the issuance of the first building permit for the project.

SD-13 *Residential* (R) If Land Development, a Division of the Public Works Department, requires this project to supply a funding source necessary to provide for, but not limited to, stormwater utilities services for the required continuous operation, maintenance, monitoring, systems evaluation and enhancements of on-site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated storm water regulations, a funding source needs to be established. The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option for the National Pollution Discharge Elimination System (NPDES) program (see Land Development's related condition). Participating in a special election the process requires a 90 day period prior to City Council action authorizing recordation of the final map for the development and to participate in a special election process. This allows adequate time to be in compliance with the provisions of Article 13D of the California Constitution. California Health and Safety Code Sections 5473 through 5473.8 (Ord. 708 Section 3.1, 2006) & City of Moreno Valley Municipal Code Title 3, Section 3.50.050.)

SD-14 (R) Easements for reverse frontage parkway and slope landscape areas abutting Ironwood Avenue, Nason Street, and Oliver Street shall be 6 ft. or to top of parkway facing slope or to face of perimeter tract wall, whichever is greater. Easements shall be dedicated to the City of Moreno Valley for landscape maintenance purposes, and shall be depicted on the final map, and an offer of their dedication made thereon.

Prior to Building Permit Issuance

SD-15 (BP) This project has been identified to potentially be included in the formation of a Map Act Area of Benefit Special District for the construction of major thoroughfares and/or freeway improvements. The property owner(s) shall participate in such District and pay any special tax, assessment, or fee levied upon the project property for such District. At the time of the public hearing to consider formation of the district, the property owner(s) will not protest the formation, but will retain the right to object any eventual assessment that is not equitable should the financial burden of the assessment not be reasonably proportionate to the benefit the affected property obtains from the improvements to be installed. The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option when submitting an application for the first building permit to determine whether the development will be subjected to this condition. If subject to the condition, the special election requires a 90 day process in compliance with the provisions of Article 13C of the California Constitution. (Street & Highway Code, GP Objective 2.14.2, MC 9.14.100).

SD-16 (BP) Prior to the issuance of the first building permit for this project, the Developer shall pay Advanced Energy fees for all applicable Residential and Arterial Street Lights required for this development. Payment shall be made to the City of Moreno Valley and collected by the Land Development Division. Fees are based upon the Advanced Energy fee rate in place at the time of payment, as set forth in the current Listing of City Fees, Charges, and Rates adopted by City Council. The Developer shall provide a copy of the receipt to the Special Districts Division *(specialdistricts@moval.org).* Any change in the project which may increase the number of street lights to be installed will require payment of additional Advanced Energy fees at the then current fee. Questions may be directed to the Special Districts Division at 951.413.3480 or specialdistricts@moval.org.

SD-17 (BP) For those areas to be maintained by the City and prior to the issuance of the first Building Permit, Planning Division (Community Development Department), Special Districts Division (the Public Works Department) and Transportation Division (the Public Works Department) shall review and approve the final parkway landscape/irrigation plans as designated on the tentative map or in these Conditions of Approval prior to the issuance of the first Building Permit.

SD-18 (BP) Parkway landscaping specified in the project's Conditions of Approval shall be constructed in compliance with the City of Moreno Valley Public Works Design Guidelines and completed prior to the issuance of 25% (or 46) of the dwelling permits for this tract or 12 months from the issuance of the first dwelling permit, whichever comes first. In cases where a phasing plan is submitted, the actual percentage of dwelling permits issued prior to the completion of the landscaping shall be subject to the review of the construction phasing plan.

Prior to Certificate of Occupancy

SD-19 (CO) Landscape and irrigation plans for parkway landscape areas designated to be maintained by the City shall be placed on compact disk (CD) in pdf format. The CD shall include "As Built" plans, revisions, and changes. The CD will become the property of the City of Moreno Valley and the Moreno Valley Community Services District.

PUBLIC WORKS DEPARTMENT – TRANSPORTATION DIVISION

GENERAL CONDITIONS

TE1. Ironwood Avenue is classified as a Minor Arterial (88'RW/64'CC) per City Standard Plan No. MVSI-105A-0. Traffic Signal Interconnect along project frontage shall be required per City Standard Plan No. MVSI-186-0. Any improvements undertaken by this project shall be consistent with the City's standards for this facility.

TE2. Oliver Street is designated as a Collector (66'RW/44'CC) per City Standard Plan No. MVSI-106B-0. Any improvements undertaken by this project shall be consistent with the City's standards for this facility.

TE3. Nason Street, north of Ironwood Avenue, is designated as a Collector (66'RW/44'CC) per City Standard Plan No. MVSI-106B-0. Any improvements undertaken by this project shall be consistent with the City's standards for this facility.

TE4. Sight distance at the proposed roadways and driveways shall conform to City of Moreno Valley Standard No. MVSI-164A,B,C-0 at the time of preparation of final grading, landscape, and street improvement plans.

TE5. Conditions of approval may be modified if project is phased or altered from any approved plans.

PRIOR TO IMPROVEMENT PLAN APPROVAL OR CONSTRUCTION PERMIT

TE7. Traffic calming features shall be required for Street "A". Prior to the final approval of the street improvement plans, a traffic calming plan prepared by a qualified, registered Civil or Traffic Engineer shall be required for plan approval or as required by the City Traffic Engineer.

TE8. Prior to the final approval of the street improvement plans, traffic signal modification plans shall be required for the existing traffic signal located at Nason Street and Ironwood Avenue intersection. Modifications may include but not limited to new signal poles, new pull boxes, new traffic detector loops or video detection system, relocation of signal controller cabinet, etc. Specific modifications shall be determined during plan check review.

TE9. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per the latest edition of the California Manual on Uniform Traffic Control Devices (CAMUTCD) and City of Moreno Valley Standard Plans for Nason Street, Inrowood Avenue, Oliver Street, and all interior streets.

TE10. Prior to the final approval of the street improvement plans, a bus stop/bus bay shall be designed, per the latest City of Moreno Valley Standard Plans, for westbound traffic and shall be located on the north side of Ironwood Avenue, just west of Oliver Street.

TE11. Prior to issuance of a construction permit, construction traffic control plans prepared by a qualified, registered Civil or Traffic Engineer shall be required for plan approval or as required by the City Traffic Engineer.

TE12. Prior to final approval of the street improvement plans, the project plans shall demonstrate that sight distance at proposed streets and driveways conforms to City Standard Plan No. MVSI-164A-0 through MVSI-164C-0.

PRIOR TO CERTIFICATE OF OCCUPANCY OR BUILDING FINAL

TE13. (CO) Prior to issuance of Certificate of Occupancy, improvements identified in TE7, TE8, TE9, and TE10 shall be completed per the approved plans to the satisfaction of the City Engineer.

TE14. (CO) Prior to issuance of Certificate of Occupancy, all signing and striping shall be installed per current City Standards and the approved plans.

PRIOR TO ACCEPTANCE OF STREETS INTO THE CITY-MAINTAINED ROAD SYSTEM

TE15. Prior to acceptance of streets into the City-maintained road system, all approved signing and striping shall be installed per current City Standards and the approved plans.

FIRE PREVENTION BUREAU

With respect to the conditions of approval, the following fire protection measures shall be provided in accordance with Moreno Valley City Ordinances and/or recognized fire protection standards:

F1. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in force at the time of building plan submittal.

F2. The Fire Prevention Bureau is required to set a minimum fire flow for the remodel or construction of all commercial buildings per CFC Appendix B and Table B105.1. The applicant/developer shall provide documentation to show there exists a water system capable of delivering 1000 GPM for 1 hour(s) duration at 20-PSI residual operating pressure. The required fire flow may be adjusted during the approval process to reflect changes in design, construction type, or automatic fire protection measures as approved by the Fire Prevention Bureau. Specific requirements for the project will be determined at time of submittal. (CFC 507.3, Appendix B).

F3. Single Family Dwellings. Schedule "A" fire prevention approved standard fire hydrants (6” x 4” x 2 ½”) located at each intersection of all residential streets and spaced no more than 500 feet apart in any direction, more than 250 feet from any portion of the building as measured along approved emergency vehicular travel ways. Minimum fire flow shall be 1000 GPM for 1 hour duration of 20 PSI. Where new water mains are extended along streets where hydrants are not needed for protection of structures or similar fire problems, serving one and two-family residential developments, standard fire hydrants shall be provided at spacing not to exceed 1000 feet along the tract boundary for transportation hazards. (CFC 507.3, Appendix B, MVMC 8.36.060).

F4. Prior to issuance of Certificate of Occupancy or Building Final, “Blue Reflective Markers” shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 509.1 and MVLT 440A-0 through MVLT 440C-0)

F5. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)

F6. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4)

F7. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire Prevention Bureau with an approved site plan for Fire Lanes and signage. (CFC 501.3)

F8. Prior to construction and issuance of building permits, all locations where structures are to be built shall have an approved Fire Department emergency vehicular access road (all weather surface) capable of sustaining an imposed load of 80,000 lbs. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4 and MV City Standard Engineering Plan 108d)

F9. Prior to construction and issuance of Building Permits, fire lanes and fire apparatus access roads shall have an unobstructed width of not less than twenty–four (24) feet as approved by the Fire Prevention Bureau and an unobstructed vertical clearance of not less the thirteen (13) feet six (6) inches. (CFC 503.2.1 and MVMC 8.36.060[E])

F10. Prior to construction, all roads, driveways and private roads shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.060[G])

F11. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4)

F12. Prior to building construction, dead end roadways and streets which have not been completed shall have a turnaround capable of accommodating fire apparatus. (CFC 503.2.5)

F13. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft (0.3 m drop in 6 m), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503 and MVMC 8.36.060)

F14. Prior to issuance of the building permit for development, independent paved access to the nearest paved road, maintained by the City shall be designed and constructed by the developer within the public right of way in accordance with City Standards. (MVMC 8.36.060, CFC 501.4)

F15. Prior to construction, "private" driveways over 150 feet in length shall have a turn-around as determined by the Fire Prevention Bureau capable of accommodating fire apparatus. Driveway grades shall not exceed 12 percent. (CFC 503 and MVMC 8.36.060, CFC 501.4)

F16. Prior to issuance of Certificate of Occupancy or Building Final, all residential dwellings shall display street numbers in a prominent location on the street side of the residence in such a position that the numbers are easily visible to approaching emergency vehicles. The numbers shall be located consistently on each dwelling throughout the development. The numerals shall be no less than four (4) inches in height and shall be low voltage lighted fixtures. (CFC 505.1, MVMC 8.36.060[I])

F17. Prior to Certificate of Occupancy or Building Final, all structures shall have fire retardant roofing materials (Class A roofs) as described in CBC Chapter 7A, CRC R327, and CFC Chapter 49.

F18. Preliminary fuel modification plans shall be reviewed and approved by the fire code official prior to recording of the final map. Final fuel modification plans shall be submitted to and approved by the fire code official prior to the issuance of a grading permit.

F19. Prior to issuance of Building Permits, plans for structural protection from vegetation fires shall be submitted to the Fire Prevention Bureau for review and approval. Measures shall include, but are not limited to: noncombustible barriers (cement or block walls), fuel modification zones, etc. (CFC Chapter 49)

F20. Prior to issuance of Building Permits, the applicant/developer shall participate in the Fire Impact Mitigation Program. (Fee Resolution as adopted by City Council)

F21. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9, MVMC 8.36.100[D])

F22. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall:

a) Be signed by a registered civil engineer or a certified fire protection engineer;
b) Contain a Fire Prevention Bureau approval signature block; and
c) Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau.

After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 507, 501.3)

F23. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.

F24. Provide to the Fire Department a copy of the fire flow verification report from the water purveyor. See the fire flow letter attached that specifies the minimum fire flow required for this project.

FIRE FLOW LETTER

Date:		**Address:**	Northside of Ironwood Ave. East of Nason Street and West of Oliver Street
Case Number:	TTM 37001 Case # PEN16-0079 (PA15-0039)	**A.P.N.:**	473-160-004

This is certification the water system is capable of meeting the following required fire flows as determined by the California Fire Code Appendix B.

Based on the information provided on the above referenced case. The fire flow required for this project will be 1000 G.P.M. for duration of 1-HOUR measured at 20-psi residual pressure.

The required fire flow may be adjusted during the approval process to reflect changes in design, construction type or automatic fire protection measures as approved by the Fire Prevention Bureau.

Applicant/ Developer: ______________________________

Title: ______________________________

WATER AGENCY APPROVAL

Name of Agency: ______________________________

Address: ______________________________

Telephone: ______________________________ **Date:** ______________

By: ______________________________ **Title:** ______________

NOTE: THE COMPLETION AND SUBMITTAL OF THIS LETTER TO THE FIRE PREVENTION BUREAU SHALL NOT BE CONSTRUED AS APPROVAL FOR THE INSTALLATION OF THE REQUIRED FIRE HYDRANT (S) AND/OR WATER SYSTEM.

FINANCE AND MANAGEMENT SERVICES DEPARTMENT

Moreno Valley Utility

The following items are Moreno Valley Utility's Conditions of Approval for project PA15-0037, 0038, 0039, 0040 & P15-087; this project shall be completed at no cost to any Government Agency. All questions regarding Moreno Valley Utility's Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from Moreno Valley Utility (the Electric Utility Division) of the Finance and Management Services Department 951.413.3500, mvuengineering@moval.org. The applicant is fully responsible for communicating with Moreno Valley Utility staff regarding their conditions.

PRIOR TO ENERGIZING MVU ELECTRIC UTILITY SYSTEM AND CERTIFICATE OF OCCUPANCY

MVU-1 (R) This project requires the installation of electric distribution facilities. A non-exclusive easement shall be provided to Moreno Valley Utility and shall include the rights of ingress and egress for the purpose of operation, maintenance, facility repair, and meter reading.

MVU-2 (BP) **City of Moreno Valley Municipal Utility Service – Electrical Distribution**: Prior to constructing the MVU Electric Utility System, the developer shall submit a detailed engineering plan showing design, location and schematics for the utility system to be approved by the City Engineer. In accordance with Government Code Section 66462, the Developer **shall** execute an agreement with the City providing for the installation, construction, improvement and dedication of the utility system following recordation of final map and concurrent with trenching operations and other subdivision improvements so long as said agreement incorporates the approved engineering plan and provides financial security to guarantee completion and dedication of the utility system.

The Developer **shall** coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to the City, or the City's designee, all utility infrastructure (including but not limited to conduit, equipment, vaults, ducts, wires, switches, conductors, transformers, and "bring-up" facilities including electrical capacity to serve the identified development and other adjoining/abutting/ or benefiting projects as determined by Moreno Valley Utility) – collectively referred to as "utility system" (to and through the development), along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and /or delivery of any and all "utility services" to each lot and unit within the Tentative Map. For purposes of this condition, "utility services" shall mean electric, cable television, telecommunication (including video, voice, and data) and other similar services designated by the City Engineer. "Utility services" shall not include sewer, water, and natural gas services, which are addressed by other conditions of approval.

The City, or the City's designee, shall utilize dedicated utility facilities to ensure safe, reliable, sustainable and cost effective delivery of utility services and maintain the integrity of streets and other public infrastructure. Developer shall, at developer's sole expense, install or cause the installation of such interconnection facilities as may be necessary to connect the electrical distribution infrastructure within the project to the Moreno Valley Utility owned and controlled electric distribution system.

MVU-3 For all new projects, existing Moreno Valley Utility electrical infrastructure shall be preserved in place. The developer will be responsible, at developer expense, for any and all costs associated with the relocation of any of Moreno Valley Utility's underground electrical distribution facilities, as determined by Moreno Valley Utility, which may be in conflict with any developer planned construction on the project site.

POLICE DEPARTMENT

Standard Conditions

PD1. Prior to the start of any construction, temporary security fencing shall be erected. The fencing shall be a minimum of six (6) feet high with locking, gated access and shall remain through the duration of construction. Security fencing is required if there is: construction, unsecured structures, unenclosed storage of materials and/or equipment, and/or the condition of the site constitutes a public hazard as determined by the Public Works Department. If security fencing is required, it shall remain in place until the project is completed or the above conditions no longer exist. (DC 9.08.080)

PD2. (GP) Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:

a. The name (if applicable) and address of the development.

b. The developer's name, address, and a 24-hour emergency telephone number. (DC 9.08.080)

PD3. (CO) Prior to the issuance of a Certificate of Occupancy, an Emergency Contact information Form for the project shall be completed at the permit counter of the Community and Economic Development Department - Building Division for routing to the Police Department. (DC 9.08.080)

PD4. Addresses needs to be in plain view visible from the street and visible at night. It needs to have a backlight, so the address will reflect at night or a lighted address will be sufficient.

PARKS AND COMMUNITY SERVICES DEPARTMENT

The following items are Parks and Community Services Department Conditions of Approval for TTM 37001. This project shall be completed at no cost to any Government Agency. All questions regarding Parks and Community Services Department Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from the Parks and Community Services Department 951.413.3280. The applicant is fully responsible for communicating with the Parks and Community Services Department regarding comments provided.

SPECIFIC CONDITIONS:

PCS-1:

A. City multi-use trails are required for this development, per the Master Plan of Trails. All City trails shall be located on HOA owned lettered lots, with an easement to the Moreno Valley Community Services District for trail purposes. Vertical utilities or access cabinets shall not be located in the trail easement. Trail locations on the master plan are approximate and some deviations may be approved. However, trails must be accessible to future trails shown on the City's Master Plan of Trails. Any trail that deviates from the master plan shall be presented to the Recreation Trails Board for review/discussion. Changes to the City's Master Plan of Trails require an amendment to the General Plan. The applicant is responsible for any associated costs in preparing the General Plan Amendment.
B. Minimum City trail locations are: north side of Ironwood Street; west side of Oliver Street; south side of Juniper Street alignment or northern side of the property, connecting to the future trail perpendicular north. Fire access may be required along the Juniper Street aligned trail. Please see Fire Prevention for details. Fire access requires a flat clear width of 20' – 24'. All access points to this section of fire access/trail shall meet the minimum fire code.
C. Multi-use trail sections shall not span across street cul-de-sacs. 11' trails sections at these locations shall be off the street. Applicable City Standard Plans shall be utilized for all trails, access areas, and specifications.
D. Feeder trails are required in this development. Feeder trails shall be HOA owned and maintained. See the Planning Division for full details.
E. Applicant shall only utilize authorized City Standard Plans for trail design. Alternate design types shall be approved by Parks and Community Services. Unauthorized modification of City Standard Plans is prohibited.

PCS-2: Trail construction shall commence with street and sidewalk improvements. Trail improvements shall be completed and accepted prior to the issuance of the 126th building permit of the 181 total units.

STANDARD CONDITIONS:

PCS-SC-1 A restriction shall be placed on lots that back up to City/CSD owned or maintained parks, trails, bikeways, and landscaped areas, preventing openings or gates accessing the City/CSD owned or maintained property. This shall be documented through Covenants, Conditions, and Restrictions (CC&R's). A copy of the CC&R's with this restriction noted shall be submitted and approved by the Director of Parks and Community Services or his/her designee, prior to the recordation of the Final Map.

PCS-SC-2 Within the improvements for PCS, the applicant shall show all existing and planned easements on all maps and plans. Easements on City/CSD owned or maintained parks, trails, bikeways, and landscape shall be identified on each of these plans with the instrument number of the recorded easement.

PCS-SC-3 The following plans require PCS written approval: Tentative tract/parcel maps; rough grading plans (including all Delta changes); Final Map; precise grading plans; street improvement plans; traffic signal plans; fence and wall plans; landscape plans for areas adjacent to bikeways; trail improvement plans. PCS will not approve any permits without review and approval of the above items.

PCS-SC-4 Prior to recordation of the Final Map, the applicant shall post security to guarantee construction or modification of parks, trails and/or bikeways for the City/CSD. Copies of said documentation shall be provided to PCS, prior to the approval of the Final Map.

PCS-SC-5 Detailed final plans (mylars, PDF, and AutoCAD file on a DVD-R) for parks, trails/bikeways, fencing, and adjoining landscaped areas shall be submitted to and approved by the Director of Parks and Community Services, or his/her designee, prior to the issuance of any building permits. All plans are to include a profile showing grade changes.

PCS-SC-6 Applicable plan check and inspection fees shall be paid, per the approved City fee schedule.

GENERAL CONDITIONS:

PCS-GC-1 This project may be required to supply a funding source for the continued maintenance, enhancement, and or retrofit of neighborhood parks, open spaces, linear parks, and/or trails systems. This can be achieved through annexing into Community Facilities District No. 1 (Park Maintenance). Please contact the Special Districts Division at 951.413.3480 or specialdistricts@moval.org to complete the annexation process.

PCS-GC-2 The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services District Zone A (Parks and Community Services). All assessable parcels therein shall be subject to the annual Zone 'A' charge for operations and capital improvements. Proof of such shall be supplied to Parks and Community Services upon Final Map and at Building Permits.

PCS-GC-3 This project is subject to current Development Impact Fees, at time of building permit issuance.

PCS-GC-4 This project is subject to current Quimby Fees, at time of building permit issuance.

LIST OF FIGURES *Page*

Ironwood Village Design Guidelines:
Tentative Tract 31007

Project Location

The location of the *Ironwood Village* Tentative Tract Number 31007 (TTM 31007) is North of Ironwood Avenue, East of Nason Street, West of Oliver Street and the northern boundary is just north of the proposed Juniper Avenue alignment in the City of Moreno Valley, California. ***Please refer to Figure 1-1 Site Location.***

Purpose

The purpose of the *Ironwood Village* TTM 31007 Design Guidelines (site development regulations) is to provide cohesive design throughout the *Ironwood Village* project. Creating a diversity of housing choices not available with a standard tract map, the project will encourage a range of housing alternatives with a variety of lot sizes intermixed with trails, a park, trail head, open space areas and water quality features. The design guidelines will require a quality mix of products, while creating walkable neighborhood with access to trails and other outdoor recreation / open space opportunities. The *Ironwood Village* project will conserve the northwestern hillside areas and will not be building on that portion of the site. The project is designed to respect the existing topography, maintain rock outcroppings where feasible and provide a transition into the hillside areas. The Design Guidelines provide the development standards, architecture, and landscaping standards necessary to create this unique housing project within the City of Moreno Valley. The *Ironwood Village* project will provide a buffer with the appropriate use of natural open space, landscaping, trails, right-of-ways and fire access creating a pleasing visual transition between the existing rural residential uses. While providing for a suburban life-style in a cohesively planned community with amenities not commonly found in typical subdivisions. The proposed *Ironwood Village* anticipates one hundred eighty-one (181) units on approximately thirty-eight and one half (38.5) acres, along with approximately twenty-nine point three (29.3) acres of open space and basin areas, and an additional ten point six (10.6) acres of natural open space (i.e. hillsides and rock outcroppings) with a mix of lot sizes range from ten thousand (10,000) square feet minimum down to seven thousand two hundred (7,200) square feet minimum lot sizes.

Ironwood Village

Theme

The theme for *Ironwood Village* will be typical traditional California styles of architecture (i.e. Monterey, Spanish Colonial, Santa Barbara, Napa, & Tuscan.) The theme is broad enough to allow for a diversity of architectural and landscape details, elements and styles to create a cohesive but, unique residential community. The architecture and overall project theme allows for varied streetscapes, while keeping a consistent and welcoming community atmosphere that will be inviting and comfortable for the residents and visitors alike.

1. Site Planning and Design

The following section includes the *Ironwood Village* development standards that encourages innovative housing development, with a diversity of housing choices, not typically found in a standard housing tract. To ensure that the neighborhoods are interesting and varied in appearance, at least one (1) single-story design is required. The addition of a single-story elements help to create a mix of not only architectural styles but, an array of building heights and building articulation avoiding the creation of a monotonous streetscape. The project is designed to respect the existing topography and provide a transition to the steeper hillside areas, within and adjacent to the project site. ***Please refer to Figure 1- 2 Land Use Plan.***

a. Setbacks

Table 1-1 lists the development standards required for development within the *Ironwood Village* project area.

TABLE 1-1

Summary of Setback Requirements		
Minimum Lot Size (sq. ft. net area)	10,000 sf **(R3)**	7,200 sf **(R5)**
Minimum Lot Width	90'	70'
Minimum Lot width Cul-De-Sac / Knuckle Frontage	50'	50'
Minimum Lot Depth	100'	100'
Typical House Width		
Front Setbacks		
Minimum Typical Front yard setback	25'	20'
Minimum Front Facing Garage	25'	20'
Minimum Swing-in Garage	16'	16'

Rear Setbacks		
Minimum Rear	30'	15'
Side Setbacks		
Minimum Interior Side Yard	*combined 20'	**combined 15'
Minimum Street Side yard	15'	15'
Maximum Building Height		
Dwelling Unit Maximum two stories	35'	35'
Accessory Structures	35'	35'
Miscellaneous		
Maximum Lot Coverage	50%	50%
Minimum Dwelling Size, (sq. ft.)	1,250 sf	1,250 sf
Minimum Distance Between buildings	10'	10'

* Combined interior side yard setbacks of 20' shall be provided with a minimum of 5' on one side.
** Combined interior side yard setbacks of 15' shall be provided with a minimum of 5' on one side.

All of the setbacks are minimums unless noted as otherwise and shall be measured from the property line.

Side yard setbacks shall have a minimum of five feet (5′) of flat usable pad area in all conditions as measured to the center of any wall or fence, or top of slope, or toe of slope.

Vary front setbacks up to five feet (5′) to the extent flat useable pad depths exceed one-hundred ten feet (110′) (at their narrowest point) when possible.

Where feasible, center the house within the buildable pad width to maximize separation between adjacent houses.

Maximum lot coverage including garage shall be fifty percent (50%.)

Side-on garages are one of the optional architectural design elements that can increase the architectural variation, enhancing the project's overall visual appeal.

Figure 1- 3 10,000 sf building footprint (R3)

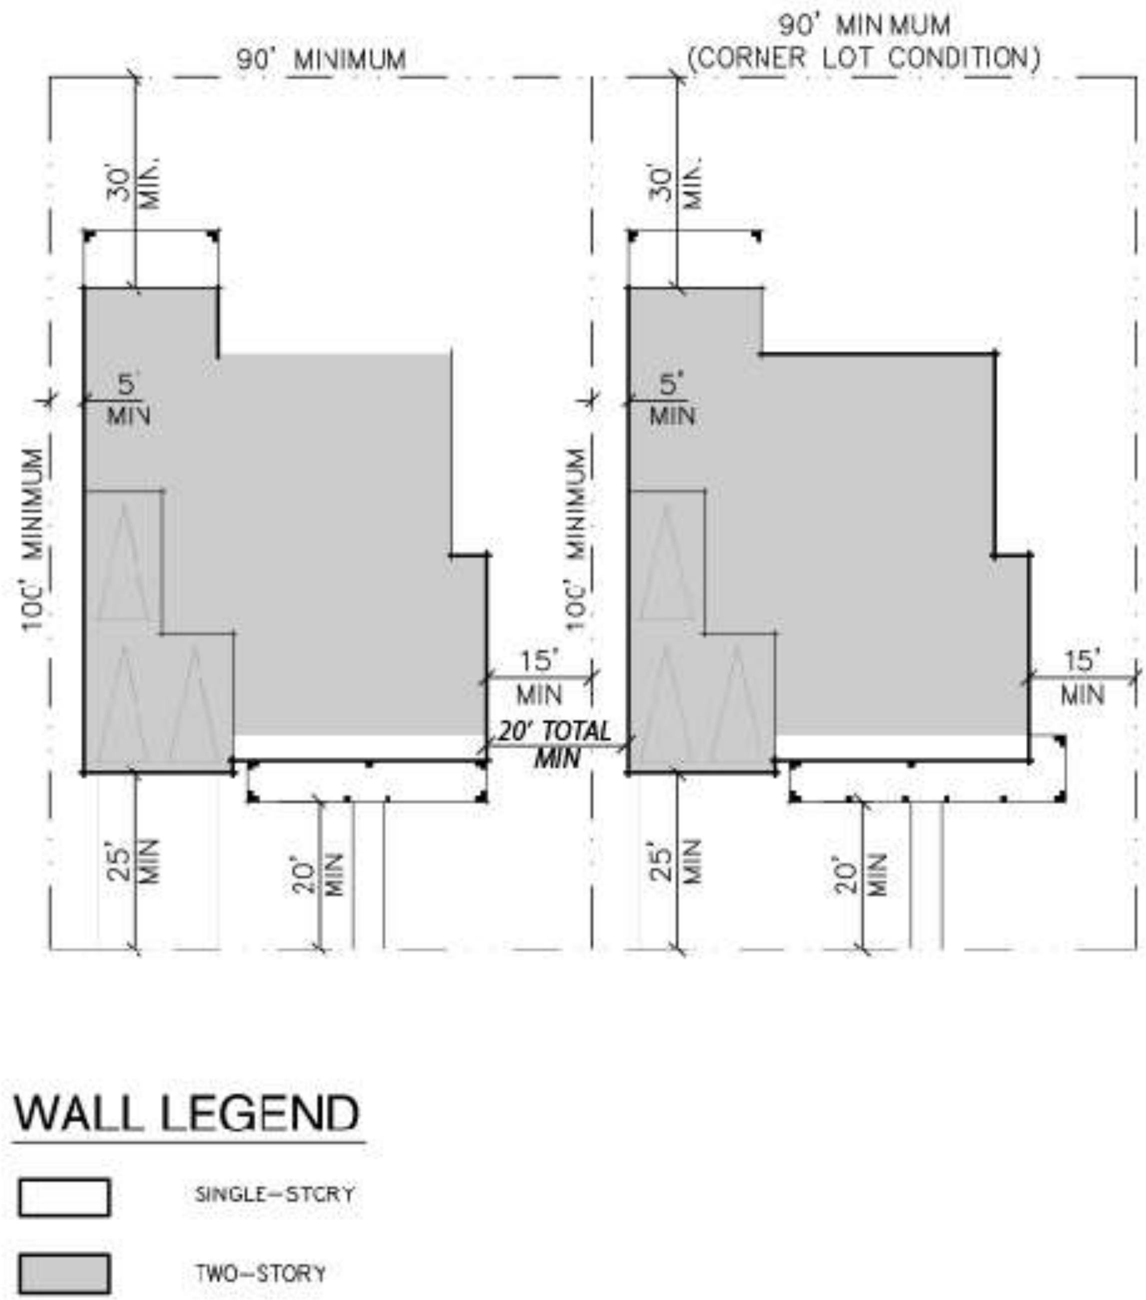

Figure 1- 4 7,200 sf building footprint (R5)

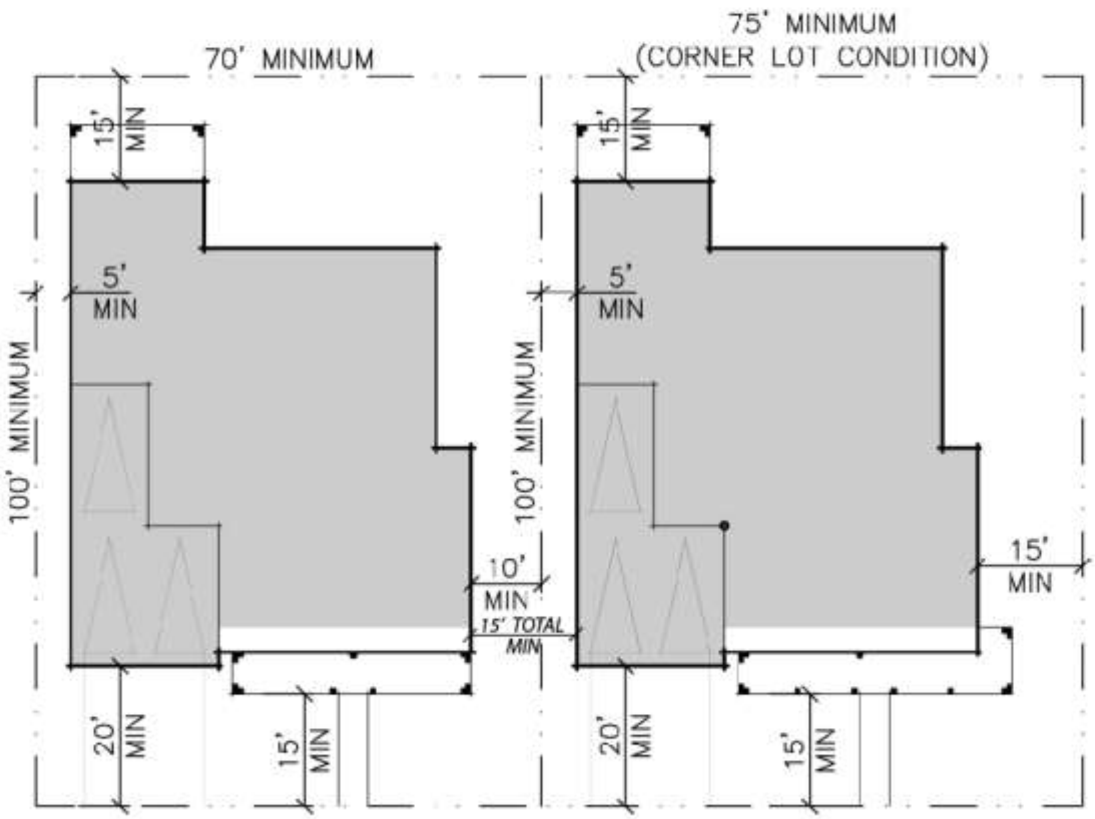


b. Plotting Requirements

A mix of dwelling unit sizes, floor plans, and elevations shall be provided (*Refer to Section 3 Architectural Style*).

To create a varied and unique streetscape, neither the same floor plan nor the same elevation style shall be plotted next to or directly across the street from itself. "Directly across the street" is defined as more than one half (½) of the narrower lot overlapping the wider lot across the street from the lot in question.

- Repetitive patterns of garage placement shall be avoided when possible.
- Unless street slope prevents otherwise, a left or right side on garage may not be plotted more than three (3) times in a row.
- Corner lots shall incorporate single-story elements into their design to minimize visual impacts.

2. Architectural Design

The *Ironwood Village* Architectural Design Guidelines are envisioned as just that "guidelines"; they are intentionally created to allow ultimate flexibility to the builder and are purely illustrative in character for the final buildout. The guidelines provide the builder with a palette of options of design features and elements to be mixed and matched to create a comprehensive project that has one personality throughout, although is not boring or repetitive. The actual detailed architectural design elements and details that will be used within the *Ironwood Village* community will be decided at time of buildout by the builder with approval by the City of Moreno Valley.

a. Design Principals

While these design guidelines suggest architectural styles, the styles utilized should be authentic and distinct. Traditional styles tend to have defining features that should be consistently implemented throughout the *Ironwood Village* development. These guidelines allow for updated styles as long as the defining features can be identified and applied to the floor plans.

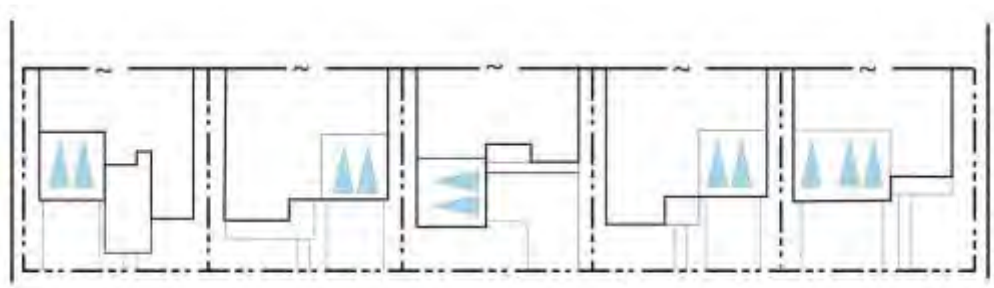
Architectural styles should be dictated by the massing of the floor plans and a certain style should not be forced upon every floor plan. By emphasizing authentic styles, these guidelines discourage similarity and uniformity of residential buildings. The street scene should be diverse as to form, massing, features, windows, front doors, garage doors, materials and colors.

As appropriate resource efficiency should influence architectural styles. The concept of resource efficiency includes reduction of wasteful elements in the design and construction of the house as well as conservation of energy, natural resources and water during occupancy of the home.

b. Form and Massing

Building mass and scale are key design elements that affect how a structure and the immediate surrounding areas are perceived. Controlling the mass of a building through design articulation of the building facades, attention to rooflines and variation in vertical and horizontal planes reduces the visual mass of a building. Building massing should be varied to provide interesting form, proportion and scale. Monolithic forms are discouraged; massing variety should be three dimensional. The perception of a buildings massing may be altered through the use of landscaping as well as the use of light and shadows.

Figure 2- 1 Varied Massing Diagram



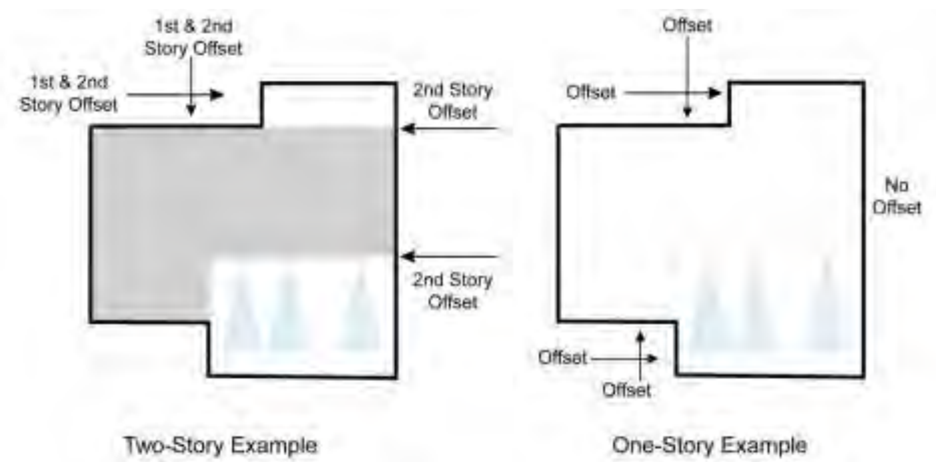
The Varied Massing Diagram is for illustrative purposes only, the floor plans and mix of two (2) and three (3) car garages may vary.

Design details should be included on the rear and sides of homes, creating four (4) sided architecture. Neighborhood housing should be arranged to create a varied appearance of building heights, articulation and setbacks for a comprehensive and integrated street scene.

Special design features (i.e. recessed entry ways, covered front porches, window and door articulation, variety of masonry accents, balcony's, courtyards, extended overhangs and varied building setbacks) are expected. General massing should vary perceptibly among the distinct floor plans. Together with variable setbacks, massing variation will create visual diversity along neighborhood streets.

- Every side of a two-story house must have at least one plane break "offset" at the first and/or second story in order to avoid monolithic elevations. A plane break must be at least two feet (2').
- Three (3) sides of a single-story floor plan must have at least one (1) plane break "offset". A plane break must be at least two feet (2').
- The floor area of a second story, including the stairs, may not exceed eighty percent (80%) of the floor area of the first story including the garage and any porch areas.
- Shadow patterns created by architectural details such as overhangs, projections and recesses of stories, balconies, reveals and/or awnings are encouraged, adding interest and aiding in climate control.

Figure 2-2 Example of Offsets



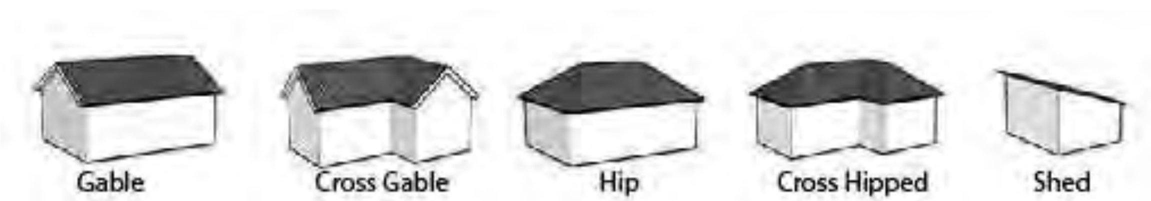
The Example Offsets are for illustrative purposes only, the floor plans and actual offsets may vary.

c. Roofs

Rows of homes backing onto a hillside are perceived by their contrast against the hillside area. The prevailing impact is the shape of the house and roofline. The house mass shall be varied to minimize the visual impact of similar housing silhouettes and similar ridge heights. This can be achieved by using a variety of roof structure designs such as; front-to-rear, side-to-side, gables and hipped roofs and/or by the introduction of single-story elements.

- Roof pitches should vary according to the architectural style. Primary roof pitches may be three to twelve (3:12), four to twelve (4:12), five to twelve (5:12) or six to twelve (6:12) (*for solar panel efficiency*). Secondary roof pitches can vary from primary roof pitches but only if such variation is consistent with the architectural style.
- To the extent they are consistent with an architectural style; hipped roofs are encouraged in order to accommodate solar panels and to cast shade over windows.
- Simplified rooflines are encouraged in order to accommodate integrated solar panels. Provide large enough unbroken roof planes to be sufficient to meet the state code for "solar zones."
- Eave depths should vary according to the architectural style and may range in depth from twelve to twenty-four inches (12 – 24").
- Porches and balconies are encouraged when consistent with the architectural style of the house. The minimum porch depth shall be five feet (5') to edge of the porch.

Figure 2-3 Varied roof examples



The variety of roof examples shown may be utilized for both single-story and two-story floor plans. These roof types are found within the architectural styles to be used within the *Ironwood Village* community.

d. Garage Orientation / Location and Design

The visual impact of three-car garages should be reduced wherever feasible. Although not necessarily depicted on the architectural elevations (see Section 3 Architectural Styles), the builder(s) of *Ironwood Village* will pay attention to the design, placement, and orientation of garages. Depending on the lot size, this can be achieved in a number of ways including but not limited to the following:

- Garage setback greater than the front of the house.
- Side-on a side-on garage shall have a minimum back-up area of twenty-eight feet (28'). (*Side-on garages are one of the optional architectural design elements that can increase the architectural variation, enhancing the project's overall visual appeal.)*
- Porte-cochere architectural element (covered parking area).
- Tandem garages allow for parking a boat or two vehicles (one behind the other) inside "one stall" of the garage that is twice the depth.
- Garage door details shall vary in manner that is consistent with the architectural style.
- Garage door windows are standard.
- Front-facing garages shall not be wider than sixty-five percent (65%) of the house width.
- Exclusive use of three-car front-facing garages in all floor plans is not permitted. Three-car front-facing garages may only be utilized if a single garage door is offset from the double garage door.

e. Architectural Elements

Architectural styles for *Ironwood Village* should be chosen in part as an opportunity to introduce a variety of exterior accent details and materials (i.e. brick, wood siding, masonry, metal, pre-cast concrete, timber, stucco or ceramic tile).

- Color schemes should be simple, attractive and consistent with the architectural style.
- Front door details shall vary according to architectural style.
- Feature window shapes shall vary according to architectural style.
- Acceptable roof materials include concrete tiles, and metal but exclude composition shingles and should be consistent with the architectural style of the building.

- Chimneys, which may cast shadows over solar panels, are optional and should be consistent with the architectural style.
- A minimum of two (2) photosensitive carriage lights per house are required and the style should vary according to architectural style.
- Shutters are not required; but to the extent they are used, shutter sizes should be proportional to the window and shutter styles should vary in accordance with the architectural style.
- Trim details from the front elevation should be applied to the sides and rear elevations of the house for continuity and vary in accordance with the architectural style.

f. Mechanical Equipment

All mechanical equipment for individual dwelling units (i.e. air conditioners, heating, cooling and ventilation equipment and/or all other such equipment) will not be roof mounted and shall be screened from surrounding properties and streets (by using screening, privacy fencing/walls and/or landscaping) and shall not be located in the front yard or street side yard outside of building setbacks.

Architectural Style

Architecture within *Ironwood Village* reflects the diversity of architectural styles found throughout California. The architectural elements and details provided within this Design Guidelines document are guidelines, not required details and/or elements. The implementation of modern interpretations of the historical architectural styles are allowed as appropriate.

The Architectural styles and the design elements shown in this document are purely for illustrative purposes and the actual product may vary. It is required that the chosen architectural styles be utilized and the elevations are identifiable and the street scene is varied. Generic box architecture that has an unidentifiable style or detailing is not permitted. The actual detailed architectural designs and details that will be used within the *Ironwood Village* community will be decided at time of buildout by the builder with approval by the City of Moreno Valley.

ARCHITECTURAL STYLES

Architectural Styles

Ironwood Village is envisioned as a community with a variety of home styles where architectural massing, roof forms, detailing, walls and landscape are integrated to reflect historic, regional, and climate-appropriate styles. Five styles have been chosen for the Ironwood Village community.

- Monterey
- Spanish Colonial
- Santa Barbara
- Napa
- Tuscan

ARCHITECTURAL STYLES

1. *Monterey*

The Monterey style emerged in the town of Monterey on California's central coast in the mid-19th Century. The style developed from a combination of two-story New England colonial house with an Adobe brick exterior. Later, the Monterey style was merged with elements from the Spanish Eclectic and Colonial Revival styles. Regardless of this evolution, the defining feature of the Monterey style remained the same: a prominent second-floor balcony.

Identifying Characteristics

- Simple 2-story building forms
- Cantilevered balconies on front facades
- Pot shelves and decorative vents

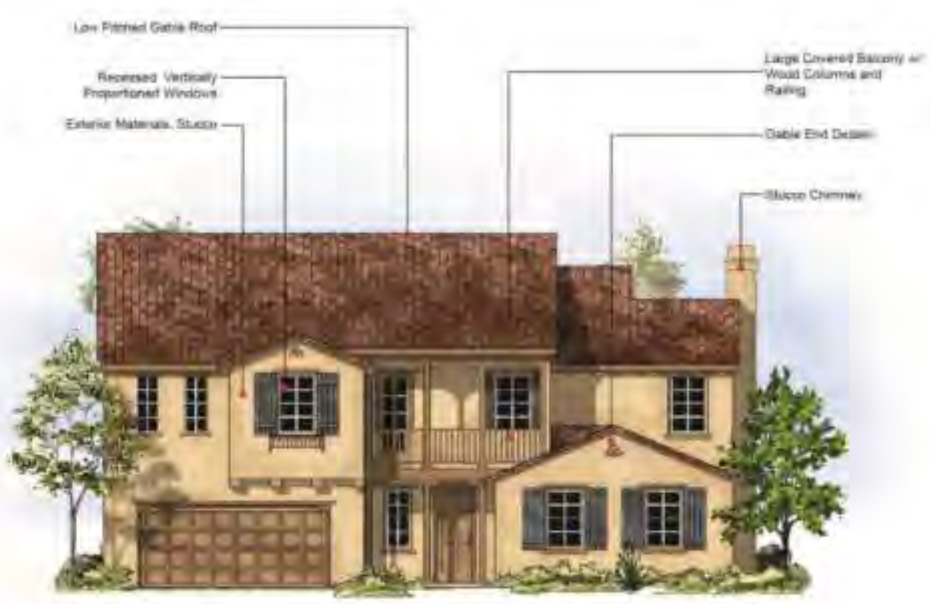


Figure 3-1 Monterey Style

ARCHITECTURAL STYLES

Style Elements	Required
Form	• Typically two stories with simple building massing
Roof	• Low pitched gable roofs (occasionally hipped), 3.5:12 to 4:12 • 12" to 24" overhangs • Shallow sloped, concrete 'S' tile roofs in variegated colors (red clay is predominant color) • Flat concrete shingle
Walls	• Stucco exterior walls, smooth to light sand finish • Brick or siding (shingle, or vertical board-and-batten) • First and second stories frequently have different finish materials, with wood over brick being most common
Windows	• Rectangular, vertically proportioned windows • Paired windows • Full length window opening onto balcony • Simple window trim
Details	• Wood balcony and railing • Decorative shaped rafter tails • Ornate chimney cap • Round tile attic vents • Shutters as occasional accents
Colors	• Whites, painted brick building color • White or dark brown trim

Cantilevered Second

Shutter and Window

Pot Shelves

Graphics shown are for illustrative purpose only

ARCHITECTURAL STYLES

2. *Spanish Colonial*

The Spanish Colonial style was popular during the 1920s and early 1930s. This style evolved in California and the southwest as an adaptation of Mission Revival infused with additional elements and details from Latin America. It is common in California, Arizona, Texas and Florida. The key elements of this style were adapted to the California lifestyle. Plans were informally organized around a courtyard with the front elevation simply articulated and detailed.

Identifying Characteristics

- Terra cotta or red concrete tile roofs
- Entry courtyards with gates
- Decorative elements, including wrought iron, clay vents, ceramic tiles, etc.

Figure 3-2 Spanish Colonial Style

ARCHITECTURAL STYLES

Style Elements	Required
Form	• One-and Two-story building massing, often asymmetrical in form
Roof	• Typical 4:12 roof pitch • Predominant gable and shed with tight rake and 12"-18" eaves • Full 'S' concrete tile • Limited use of conical roofs on circular towers
Walls	• Stucco exterior walls, smooth to light sand finish • Shaped stucco eave details
Windows	• Recessed Feature windows • Square, rectilinear or round accent window • Vertical proportioned windows • Simple window trim • Tile or pre-cast window trim at select locations
Details	• Decorative iron lanterns, sconces, hinges, railing and hardware • Fabric or metal awnings • Sculpted walls and chimneys • Gable end roof vents • Pre-cast concrete accents • Round pre-cast concrete columns, or stucco pilaster with decorative cornice trim
Colors	• Off-white or cream building color • Dark brown trim • Bright accent color on entry door, shutters and awnings

Decorative Tile

Recessed Window

Decorative Wrought Iron

Graphics shown are for illustrative purpose only

ARCHITECTURAL STYLES

3. *Santa Barbara*

This style was established in the City of Santa Barbara. After the devastating earthquake of 1925, the City adopted the Hispanic style as its official style. The Santa Barbara style has its roots in the Spanish colonial revival style. White-washed stucco walls are inherent to the Santa Barbara style, which also features boxy, simple forms, low-pitched gable roof form, and the use of wood and tile as accent details.

Identifying Characteristics

- Stucco with light sand finish
- Boxy, simple massing
- Fully rounded arch elements
- Deeply recessed wall fenestration and asymmetrical volumes grouped about courtyards
- Dark wood exposed rafter tails
- Wrought iron accents

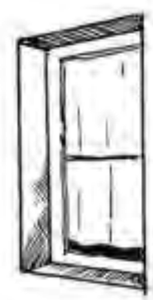
Figure 3-3 Santa Barbara Style

ARCHITECTURAL STYLES

Style Elements	Required
Form	• Boxy, simple massing • One- and two-story stacked elements • Recessed entry or covered porch
Roof	• Roof pitch: 4:12 to 5:12 • 0-6" rake and 18"-24" eaves • Full 'S' concrete tile • Hip or intersecting gable roof
Walls	• Stucco exterior walls, smooth to light sand finish • Stucco eave details
Windows	• Vertical multi-paned windows • Accent recessed window • Simple window trim
Details	• Decorative wrought iron accent details • Decorative shaped rafter tails • Sculpted walls and chimneys • Gable end roof vents • Full round arched arcades or openings • Juliette balconies
Colors	• Off-white and cream building color • Cream and earth tone trim • Dark colored eaves and fascia

Window Headers

Balcony



Recessed Windows

Graphics shown are for illustrative purpose only

ARCHITECTURAL STYLES

4. *Napa*

This style has evolved in California's Napa Valley. The architecture shares elements of California Eclectic and Mediterranean historical styles. To respond to the local climate environment, large overhangs are incorporated into the style in order to shield the house from sun in summer and warm the house in winter. Deep earth tone colors help to ground the Architecture and blend into the landscape design.

Identifying Characteristics

- Deep earth tone
- 'S'- shaped or flat concrete roof tiles
- Large overhang
- Stucco finish
- Masonry veneer accents

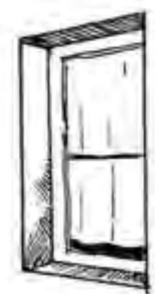
Figure 3-4 Napa Style

ARCHITECTURAL STYLES

Style Elements	Required
Form	• Informal arrangement of one- and two-story building forms
Roof	• Roof pitch: 4:12 to 6:12 • 12" to 24" overhangs at eaves • 6" to 12" overhangs at rakes • Full 'S' concrete tile or flat shingle w/ barrel tile hips/ridges • Main hip or gable roof with secondary shed or gable roofs over one-story elements
Walls	• Stucco finish with masonry veneer accents
Windows	• Recessed windows • Vertically oriented, multi-light window • Simple window trim
Details	• Decorative iron accents • Decorative shaped rafter tails • Pre-cast door or window trims
Colors	• Deep earth tone building color • Lighter or darker contrasting trim color • Dark or rich accent color

Window with Louvered Shutters

Overhang



Recessed Windows

Graphics shown are for illustrative purpose only

ARCHITECTURAL STYLES

5. *Tuscan*

The Tuscan style home originates from the Tuscany region of Italy and has become a highly sought-after style of architecture. The style represents the unique heritage of the region and is true to its original design created during the Middle Ages. Tuscan style homes incorporate accent materials such as stone, fieldstone, brick, or other rustic materials. Shed and hip roofs or occasional gable or cross gables help identify the Tuscan style as well.

Identifying Characteristics

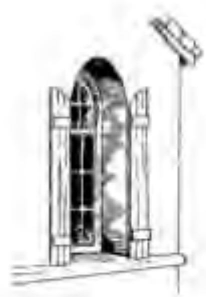
- Stucco wall materials with stone accent wall planes
- Typically shallower pitched hip or gable roofs with "S" tile
- Exposed rafter tails with decorative end cuts
- Front entries typically detailed with a pre-cast trim surround and wood head trim

Figure 3-5 Tuscan Style

ARCHITECTURAL STYLES

Style Elements	Required
Form	• Informal arrangement of one- and two-story building forms
Roof	• Low pitched roofs, 3:12 to 4:12 • Tight to 18" overhangs at eaves • Tight to 12" overhangs at rakes • Full 'S' concrete tile • Shed and hip roofs or occasional gable or cross gable
Walls	• Stucco exterior walls, smooth to light sand finish • Hill stone accents
Windows	• Recessed windows • Shaped window trim
Details	• Decorative "lacy" wrought iron grille work • Entry door patterns shall reflect architectural style of the building • Decorative iron accents • Decorative shutters and awnings • Arched windows or openings • Decorative shaped rafter tails
Colors	• Variety of rich earth tone building color • Lighter or darker contrasting trim color • Dark or bright accent color

Round Arches



Recessed Window

Decorative Balcony

Graphics shown are for illustrative purpose only

a. Variation Requirements

The variation requirements below have been determined by fixing the maximum average frequency of a given house at two (2) times per development. The frequency equals the number of lots in a planning area divided by the number of required house footprint combinations. These variation requirements, along with the mix requirements, will help to ensure development of an architecturally diverse community.

Table 2-1 Summary of Variation Requirements

Summary of Footprint Variation Requirements		
Number of Lots	**Minimum Footprints**	**Minimum Elevation Footprints**
181	6	6

Note: These minimum Footprints are per the City of Moreno Valley Municipal Code 9.16.130 (Table 9.16.130B)

If the project is split into two or more planning areas, ***Table 2-1 Summary of variation requirements*** for the revised number of lots will meet or exceed the City of Moreno Valley Municipal Code Section 9.16.130 Table B which applies to all projects within the City of Moreno Valley.

The table should be regarded as a minimum, reverse versions of each floor plan must be provided.

To minimize visual impact, corner residential structures shall be single-story or if two-story, shall incorporate single-story elements into the design. The short and low side of the home should be sited fronting the street corner.

b. Mix Requirements

A single floor plan may not be plotted with less than fifteen percent (15%) or more than a twenty-five percent (25%) frequency, unless otherwise directed to do so by City of Moreno Valley staff.

c. Colors and Materials

A range colors and textures of building materials are required to lend to the appearance of a varied street scene. The use of appropriate building materials and colors helps to maintain a specific architectural style, as well as providing a diverse neighborhood design. Material breaks, transitions and terminations should produce clear definitions of separation while maintaining a defined color and/or materials theme. This is important when transitioning from stucco and/or siding to masonry veneers. Colors and materials should visually blend with the hillsides. The actual colors and materials to be used within the *Ironwood Village* community will be decided at time of buildout by the builder with approval by the City of Moreno Valley.

3. Landscape Design

The conceptual landscape and planting design provides the identity to the *Ironwood Village* community that at time of buildout the builder shall comply with the ***City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code***. The plant palette for *Ironwood Village* will be appropriate to the project's climate. The landscaping shall be where appropriate drought tolerant/native vegetation and utilize water-conserving equipment including the installation of bubblers, drip systems, low volume sprays and/or smart irrigation controls when feasible.

Landscaping shall consist predominately of plant materials that include water efficient "drought tolerant", and/or native plants. The landscape areas shall be designed to promote water retention and allow runoff from impervious surfaces to permeable areas. Hardscape areas are recommended to be constructed with pervious surfaces where feasible to reduce run off and allow water percolation.

The landscape plan incorporates the water retention/detention/ water quality basins as well as the hillside areas that are to be conserved and the fuel modification areas as shown on TTM 37001. Project open space, fuel modification area, interior streets, interior trails and park will be maintained by the *Ironwood Village* Home Owners Association (HOA.) In addition, there are exterior multi-use trails along the roadways adjacent to the project, and a trail head (*located in the southeast corner of the project at Ironwood Avenue and*

Oliver Street) connecting to future City of Moreno Valley Proposed off-site trails; these will be maintained by the City of Moreno Valley. The drainages will be maintained by the City of Moreno Valley, however the water basins will be maintained by the *Ironwood Village* HOA (landscaping) . ***Please refer to Figure 4-1 Maintenance Responsibility***. The actual detailed landscape design and placement that will be used within the *Ironwood Village* community will be decided at time of buildout by the builder with approval by the City of Moreno Valley.

a. Community Landscape, Walls and Fencing

All of the *Ironwood Village's* community areas will be landscaped as appropriate per ***City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code***. The landscape will provide a cohesive appearance to the community and aid in the transition to and from adjacent areas. The visible *Ironwood Village* perimeter walls include a six feet (6') high block wall with pilasters and concrete block cap. Neighborhood walls will be six feet (6') high concrete masonry walls and vinyl privacy fencing in tan or white for residential privacy are to be a five feet six inches (5' 6") high, made with 6" vinyl tongue and groove with 7" top and bottom vinyl rails. Adjacent to the multi-use trails, a five feet (5') high, in tan or white three rail vinyl fence or a Three (3) Cable and Post fencing along the trails should be minimized, unless needed when out of "public view". Therefore, a trail may have no fence or a Three (3) cable and post fence, along the hilly trail sections if necessary the two trail fencing types are to be per City of Moreno Valley standards will define the trail areas. Top of slopes in the rear yards, a six feet (6') high view wall will be built; a low wall with tubular steel fencing on top will be provided. Tubular steel fencing will also be provided adjacent to water quality basins and the park per City of Moreno Valley standards. There will be an Entry monument located at the project entry into the project from Ironwood Avenue. In addition, there will be secondary entry monument at the Nason Street entry road and the Oliver Street entry road. ***Please refer to Figure 4- 2 Preliminary Wall/Fence Plan & Figure 4-4 Trails and Open Space Plan.***

The walls and fencing shall meet the following requirements as shown on ***Figure 4- 2 Preliminary Walls and Fence Plan.*** All of the public walls and fencing will be maintained by the *Ironwood Village* HOA. However, individual residential lot walls/ fences will be maintained by the homeowner. The Wall and Fence materials and colors will be decided at time of buildout by the builder with approval from the City of Moreno Valley.

Block Community Walls (*Perimeter Wall & Neighborhood Wall*)

- Block walls will be block or an approved alternative. This includes perimeter walls and private areas.
- Colored concrete caps at wall and pilaster tops shall match the color of the masonry.
- Perimeter wall pilasters will match the block material and color.
- Retaining walls will match the block wall conditions.
- Perimeter & neighborhood walls should have two feet (2′) wide square block pilasters which match the wall, with a two inch (2″) cap block.
- Perimeter walls should be four inches by six inches by sixteen inches (6″x 8″x 16″) stucco over regular CMU or split face CMU.
- Perimeter walls should have six inches by eight inches by sixteen inches (6″x 8″x 16″) split face CMU along the top edge of the wall.
- Perimeter walls should have fourteen inches (14″) Concrete Cap on top of the wall.
- Neighborhood walls should be four inches by eight inches by sixteen inches (4″x 8″x 16″) regular CMU.
- Entry Monuments with the Ironwood Village logo will be placed within the Ironwood Avenue, Nason Street and Oliver Street entrance road landscape setback areas. (*Exact design has not been determined at this time and will be determined at time of buildout by the builder and approved by the City of Moreno Valley*.)
- *Please refer to **Figure 4—3 Wall/Fence Details**.*

Rear Fencing on Slopes (*View Wall*)

- The "View Wall" low block wall twenty-four inches (24″) high lower wall will match the community block wall, with tubular steel fencing placed on top of the lower block wall.

- The view walls will be made with tubular steel fencing materials.
- View walls should have one and one-half inches (1 ½ ") square tubular steel tubing, top and bottom rails.
- View walls should have one inch (1") square steel tubing pickets set four and one-half inches (4 ½ ") on-center spacing.
- View walls should have two feet (2') wide square block pilasters which match the wall, with a two inch (2") cap block.
- View walls should be stucco over or split face CMU block six inches by eight inches by sixteen inches (6"x 8"x 16") regular CMU.
- View walls should have four inch (4") square tubular steel posts at property line corners, with a Newel Post Ball on top.
- View walls should be along the back of the lots, that back onto open space or other lots that back to open space areas but, not along trails.
- *Please refer to* ***Figure 4—3 Wall/Fence Details****.*

Interior Fencing (*Privacy Fence*)

- Interior privacy fencing will be tan or white vinyl for both interior property lines and fence return conditions.
- Interior fencing heights will vary but no lower than five feet six inches (5' 6") high.
- Privacy fencing should have five inches by five inches (5" x 5") Vinyl Post.
- Privacy fencing should have a domed cap on top of the post.
- Privacy fencing should have six inch (6") wide tongue and groove Vinyl or fencing that simulates tongue and groove.
- Privacy fencing should have two inches by seven inches (2" x 7") Top and Bottom vinyl rails.
- Vinyl privacy fencing will be tan or white.
- Gates will be constructed to match the tan or white interior vinyl privacy fence.
- *Please refer to* ***Figure 4—3 Wall/Fence Details****.*

Trail Fencing (*3 Rail Fence*)

- Trail fencing will be per City of Moreno Valley standards.
- Vinyl Ribbed Rails in tan or white.
- Five inches by five inches (5"x 5") Vinyl Posts in tan or white.

- Posts will be topped with post caps that match the vinyl posts in tan or white.
- Three rail fencing should have one and one-half inches by five and one-half inches (1 ½ x 5 ½ “) vinyl ribbed rails, spaced eleven inches to twelve and one-half inches (11” – 12 ½ “) apart.
- *Please refer to* ***Figure 4—3 Wall/Fence Details****.*

Trail Fencing (*3 Cable & Post Fence*)

- Trail fencing will be per City of Moreno Valley Standard MVGF-616-0.
- Galvanized Posts, Cable and Hardware.
- Posts 2” Standard Galvanized Post.
- Cable 1/4” Galvanized Cable.
- Posts will be topped with post caps that are driven fit.
- 5/16” Turnbuckle with 4 - ½ “ adjustment and 2 - ¼” Cable Clamps per end
- Three cable and post fencing should have cable spaced twelve inches (12”) apart.
- *Please refer to* ***Figure 4—3 Wall/Fence Details****.*

Basin / Open Space Fencing (*View Fence*)

- The view fencing will be made with tubular steel fencing materials.
- View Fencing should have one and one-half inches (1 ½ “) square tubular steel tubing, top and bottom rails.
- View fencing should have five-eight inches (5/8”) square steel tubing pickets set four and one-half inches (4 ½ “) on-center spacing.
- View fencing should have one and one-half inches (1 ½ “) square tubular steel posts set six feet (6’) on-center maximum spacing.
- View fencing should have four inch (4”) square tubular steel posts at property line corners, with a Newel Post Ball on top.
- View fencing should also be around the basins and other open space areas.
- *Please refer to* ***Figure 4—3 Wall/Fence Details****.*

b. Fuel Modification Requirements

On the north side of the *Ironwood Village* community are fuel modification zone areas. The removal and or preservation of plants/trees will be subject to review and approval by the City's fuel management officer. Maintenance of the fuel modification zone will be the responsibility of the *Ironwood Village* HOA. The twenty to twenty-four feet (20'– 24') wide fire access road and the multi-use trail that travels along the northern edge of the developed portion of the project, is built into the fuel modification zone for this project. All landscaping within *Ironwood Village* shall comply with the ***City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code***.

c. Trails

The multi-use trails interconnect the *Ironwood Villag*e project neighborhoods to the interior open spaces and park as well as to the future City of Moreno Valley's off-site trails system. A Trail Head will be located at the southeast corner of the Ironwood Village at Oliver Street and Ironwood Avenue. The Trail Head will connect to the exterior trail system along Ironwood Avenue and Oliver Street which connects to the interior trail system as well as to the off-site trails. There will be "nodes of interest" located along the central trail that leads from north to south to and from the neighborhood park. The "nodes of interest" may be but not limited to the following: scenic views, exercise equipment, benches, dog stations, drinking fountains, trash/recycling containers and/or other items along the project's trails. There are trail connections onto the central trail from trails leading off the adjacent cul-de-sacs. The central trail will have areas to rest and enjoy the outdoors within walking distance of home. In addition to the trails creating interconnectivity on site the project includes two (2) trail connections from Street "A" directly to Ironwood Avenue. These connections will provide view corridors from Ironwood Avenue into Ironwood Village as well as rest stops. The combination of trails and fire access located to the rear of the houses on the northern portion of the development are to be a minimum of twenty-four feet (20'– 24') wide per City of Moreno Valley standards. ***Please refer to Figure 4-4 Trails and Open Space Plan.***

Trails will provide connections through the central open space area and will branch off east and west along this north-south open space area, with additional trails connecting to neighborhood streets, and other trails. All the trails will loop throughout the *Ironwood Village* project and allows pedestrian connections to the park and the proposed City Trails north, east and west of the site. The trails will be built per City of Moreno Valley Standards. ***Please refer to Figure 4-4 Trails and Open Space Plan & Figure 4-5 Conceptual Trails Section.***

i. Trail Head

A Trail Head will be located within lot "M", adjacent to the corner of Oliver Street and Ironwood Avenue, parking will be on-street parking along Oliver Street. The Trail Head may include but is not limited to the following amenities: bench seating, covered picnic area, trash/recycling receptacles, dog station, water fountain, hitching post, horse watering station and/or exercise equipment. The actual Trail Head amenities will be decided at time of buildout by the builder with approval from the City of Moreno Valley. ***Please refer to Figure 4—8 Conceptual Trail Head.***

ii. Ironwood Avenue Trail Connections

There are two (2) Trail connections to Ironwood Avenue from Street "A" within the *Ironwood Village* project. The first trail connection is located between lots 13 & 14 and is a part of lot "K", this trail will cross the water basin with a bridge and a pedestrian walkway. The design and materials of the bridge will be determined at time of buildout by the builder with approval from City of Moreno Valley. The second trail connection is located between lots 5 & 6 and crosses between lot "K" and lot "M". The trail connections will be pedestrian walkways that will allow direct access from the project interior to the exterior trails along Ironwood Avenue. One of the trail connections bulbs/flares out on the Ironwood Avenue end of the connection, allowing room for enhanced landscaping and, seating areas and/or other amenities. Each of these trail connections may include but is not limited to the following amenities: bench seating, trash/recycling receptacles, dog station, shade structure and/or water fountain. The actual Trail Connection amenities will be decided at time of buildout by the builder with approval from the City of Moreno Valley. ***Please refer to Figure 4--9 Trails Connectivity and Figure 4-10 Ironwood Pedestrian Connections.***

All landscaping within *Ironwood Village* shall comply with the ***City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code***.

d. Hillside Nature Area

The hillside nature / open space areas are to be left undeveloped or minimally developed on the northwest and northeastern areas along the northern most project boundaries as shown on TTM 31007. ***Please refer to Figure 4-4 Trails and Open Space Plan .***These areas will be conserved as natural open space to help preserve the scenic views of the hillsides from the City of Moreno Valley. These areas will not be landscaped and/or watered the area will be maintained as is, unless otherwise required by the City of Moreno Valley. The hillside nature / open space areas creates a "natural" transition between the developed and undeveloped areas and, may include the fuel modification vegetation clearance zone and/or fire access/trail. The hillside areas will help to buffer and transition the project from the surrounding land uses to the proposed *Ironwood Village* community. Preserving the hillside areas for scenic and transitional reasons allows for some of the natural rock outcroppings as well as the existing off-site trails to remain intact.

e. Open Space

The *Ironwood Village* open space areas that are not to remain as natural vegetation will be planted as appropriate to the project's climate. The landscaping shall be where appropriate drought tolerant or native plants and utilize water-conserving equipment including the installation of bubblers, drip systems, low volume sprays and/or smart irrigation controls when feasible. No detailed plant palettes have been proposed within this document due to the currently evolving nature of the water conservation measures in the State of California. All landscaping within *Ironwood Village* shall comply with the ***City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code***.

Landscaping shall consist predominately of plant materials that include water efficient "drought tolerant" and native plants. Landscape areas shall be designed to promote water retention and allow runoff from impervious surfaces. Hardscape areas are recommended to be constructed with pervious surfaces where feasible to reduce run off and allow water percolation. ***Please refer to Figure 4-4 Trails and Open Space Plan.***

f. Park

The *Ironwood Village* park is located centrally within to the project, allowing residents to walk to the park safely using the project wide inter-looping trails system. The park may include but not limited to: bench seating, an open play area, Bocce ball courts, ½ court basketball, volleyball court, exercise equipment, picnic area and/or a tot lot "children's play equipment". The actual park amenities will be decided at time of buildout by the builder with approval from the City of Moreno Valley. ***Please refer to Figure 4--6 Conceptual Park Plan.***

The park areas will be planted as appropriate to the project's climate. The landscaping shall be where appropriate drought tolerant and utilize water-conserving equipment including the installation of bubblers, drip systems, low volume sprays and/or smart irrigation controls when feasible. No detailed plant palettes have been proposed within this document due to the currently evolving nature of the water conservation measures in the State of California. All landscaping within *Ironwood Village* shall comply with the ***City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code***.

Landscaping shall consist predominately of plant materials that include water efficient "drought tolerant" native plants. Landscape areas shall be designed to promote water retention and allow runoff from impervious surfaces. Hardscape areas are recommended to be constructed with pervious surfaces where feasible to reduce run off and allow water percolation.

g. Basins

The basins within *Ironwood Village* community are located along the southern edge of the project site. The basins will not only provide a necessary job for retaining water on-site to prevent run-off, they also provide a transition and visual buffer to the existing residences south of Ironwood Avenue. The basins make the transition softer and more visually appealing by having landscaping and open space, instead of walls and roof tops. The basins will be planted as appropriate to the project's climate. The landscaping shall be where appropriate drought tolerant and utilize water-conserving equipment including the installation of bubblers, drip systems, low volume sprays and/or smart irrigation controls when feasible. No detailed plant palettes have been proposed within this document due to the currently evolving nature of the water conservation measures in the State of California. All landscaping within *Ironwood Village* shall comply with the ***City of Moreno Valley's Landscape and Irrigation Standards Section 9.17.030 of the Municipal Code***.

Landscaping shall consist predominately of plant materials that include water efficient "drought tolerant" native plants. Landscape areas shall be designed to promote water retention and allow runoff from impervious surfaces. Hardscape areas are recommended to be constructed with pervious surfaces where feasible to reduce run off and allow water percolation. ***Please refer to Figure 4-- 7 Typical Basin Section.***

EXECUTIVE SUMMARY

Short-Term Construction

For regional emissions, the Project would not exceed the numerical thresholds of significance established by the South Coast Air Quality Management District (SCAQMD). Thus a less than significant impact will occur.

Additionally, emissions during construction activity will not exceed the SCAQMD's localized significance threshold. Therefore, a less than significant impact would occur.

Project construction-source emissions would not conflict with the applicable Air Quality Management Plan (AQMP).

Established requirements addressing construction equipment operations, and construction material use, storage, and disposal requirements act to minimize odor impacts that may result from construction activities. Moreover, construction-source odor emissions would be temporary, short-term, and intermittent in nature and would not result in persistent impacts that would affect substantial numbers of people. Potential construction-source odor impacts are therefore considered less-than-significant.

Long-Term Operational

For regional emissions, the Project would not exceed the numerical thresholds of significance established by the SCAQMD. Thus a less than significant impact would occur for Project-related operational-source emissions without the application of mitigation measures.

Project operational-source emissions would not result in or cause a significant localized air quality impact as discussed in the operational LSTs section of this report. The proposed Project would not result in a significant CO "hotspot" as a result of Project related traffic during ongoing operations, nor would the Project result in a significant adverse health impact as discussed in Section 3.8, thus a less than significant impact to sensitive receptors during operational activity is expected.

Project operational-source emissions would not conflict with the AQMP.

Substantial odor-generating sources include land uses such as agricultural activities, feedlots, wastewater treatment facilities, landfills or various heavy industrial uses. The Project does not propose any such uses or activities that would result in potentially significant operational-source odor impacts. Potential sources of operational odors generated by the Project would include disposal of miscellaneous residential refuse. Moreover, SCAQMD Rule 402 acts to prevent occurrences of odor nuisances (1) . Consistent with City requirements, all Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with solid waste regulations. Potential operational-source odor impacts are therefore considered less-than-significant.

1 INTRODUCTION

This report presents the results of the air quality impact analysis (AQIA) prepared by Urban Crossroads, Inc., for the Ironwood Residential Project (referred to as "Project"), which is located north of Ironwood Avenue, east of Nason Street, and west of Oliver Street in the City of Moreno Valley as shown on Exhibit 1-A.

The purpose of this AQIA is to evaluate the potential impacts to air quality associated with construction and operation of the proposed Project, and recommend measures to mitigate impacts considered potentially significant in comparison to established regulatory thresholds.

1.1 PROJECT OVERVIEW

The Project is proposed to consist of 181 single family, detached residential dwelling units as shown on Exhibit 1-B. For the purposes of this AQIA, it is assumed that the Project will be constructed and at full occupancy by 2020.

EXHIBIT 1-A: LOCATION MAP

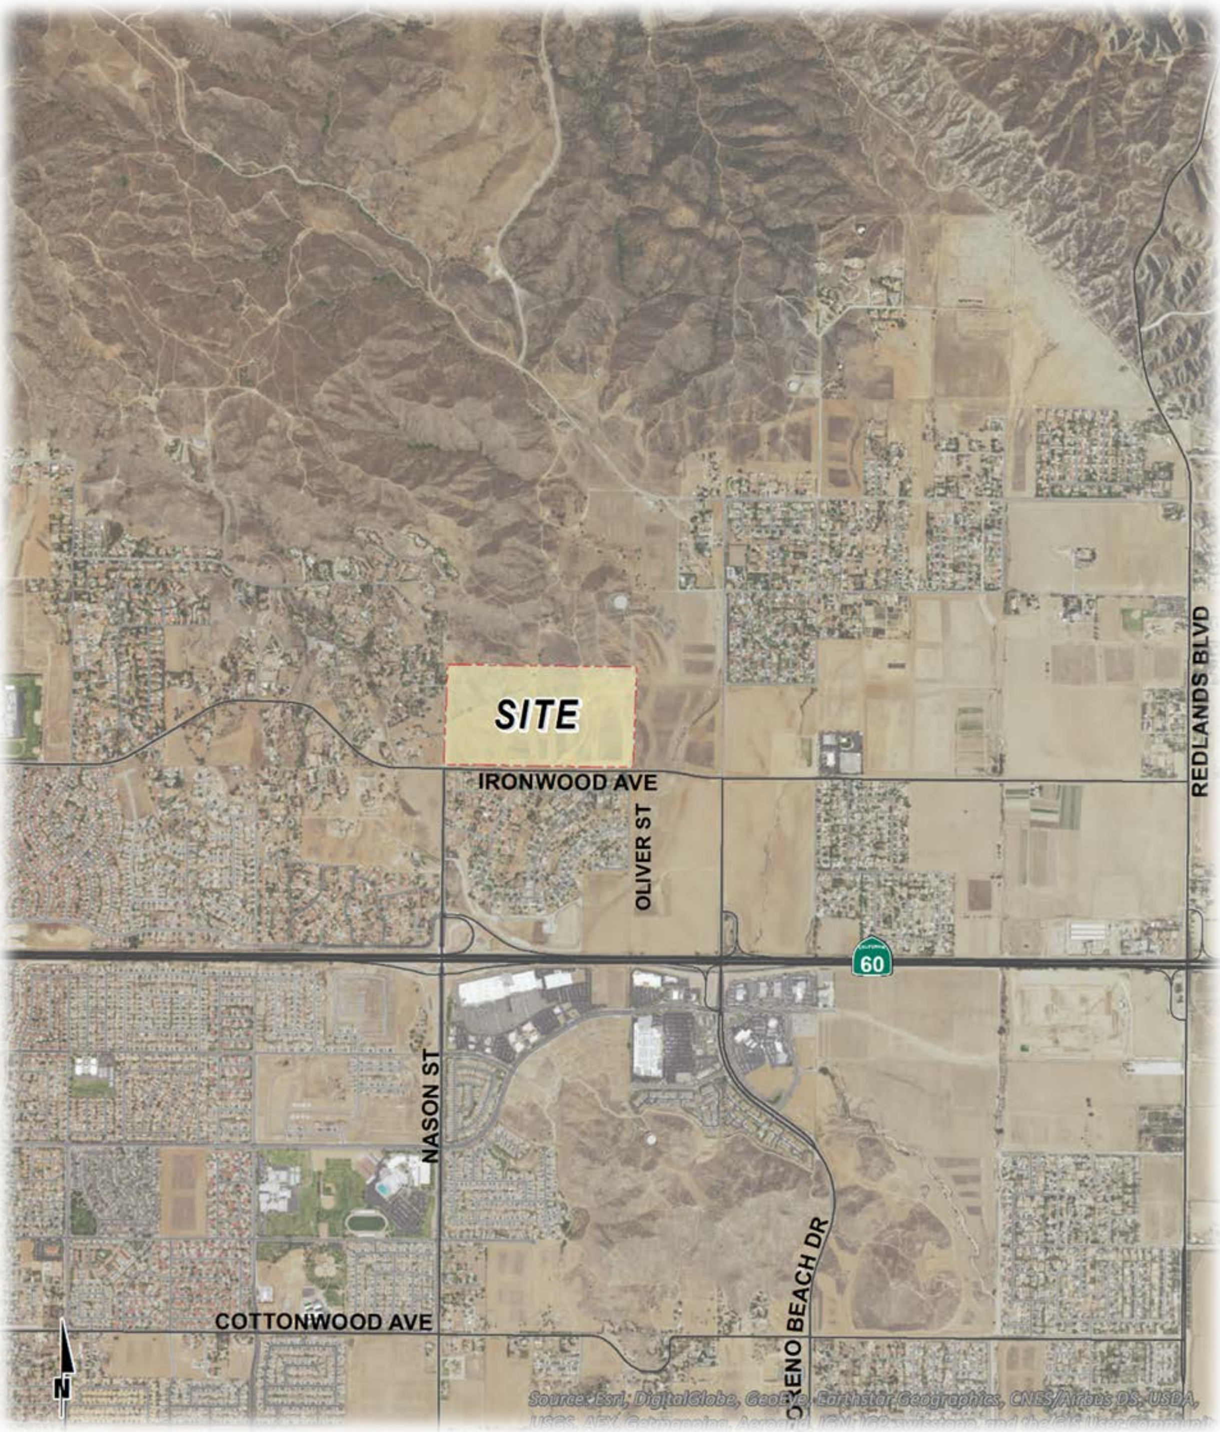

EXHIBIT 1-B: PRELIMINARY SITE PLAN

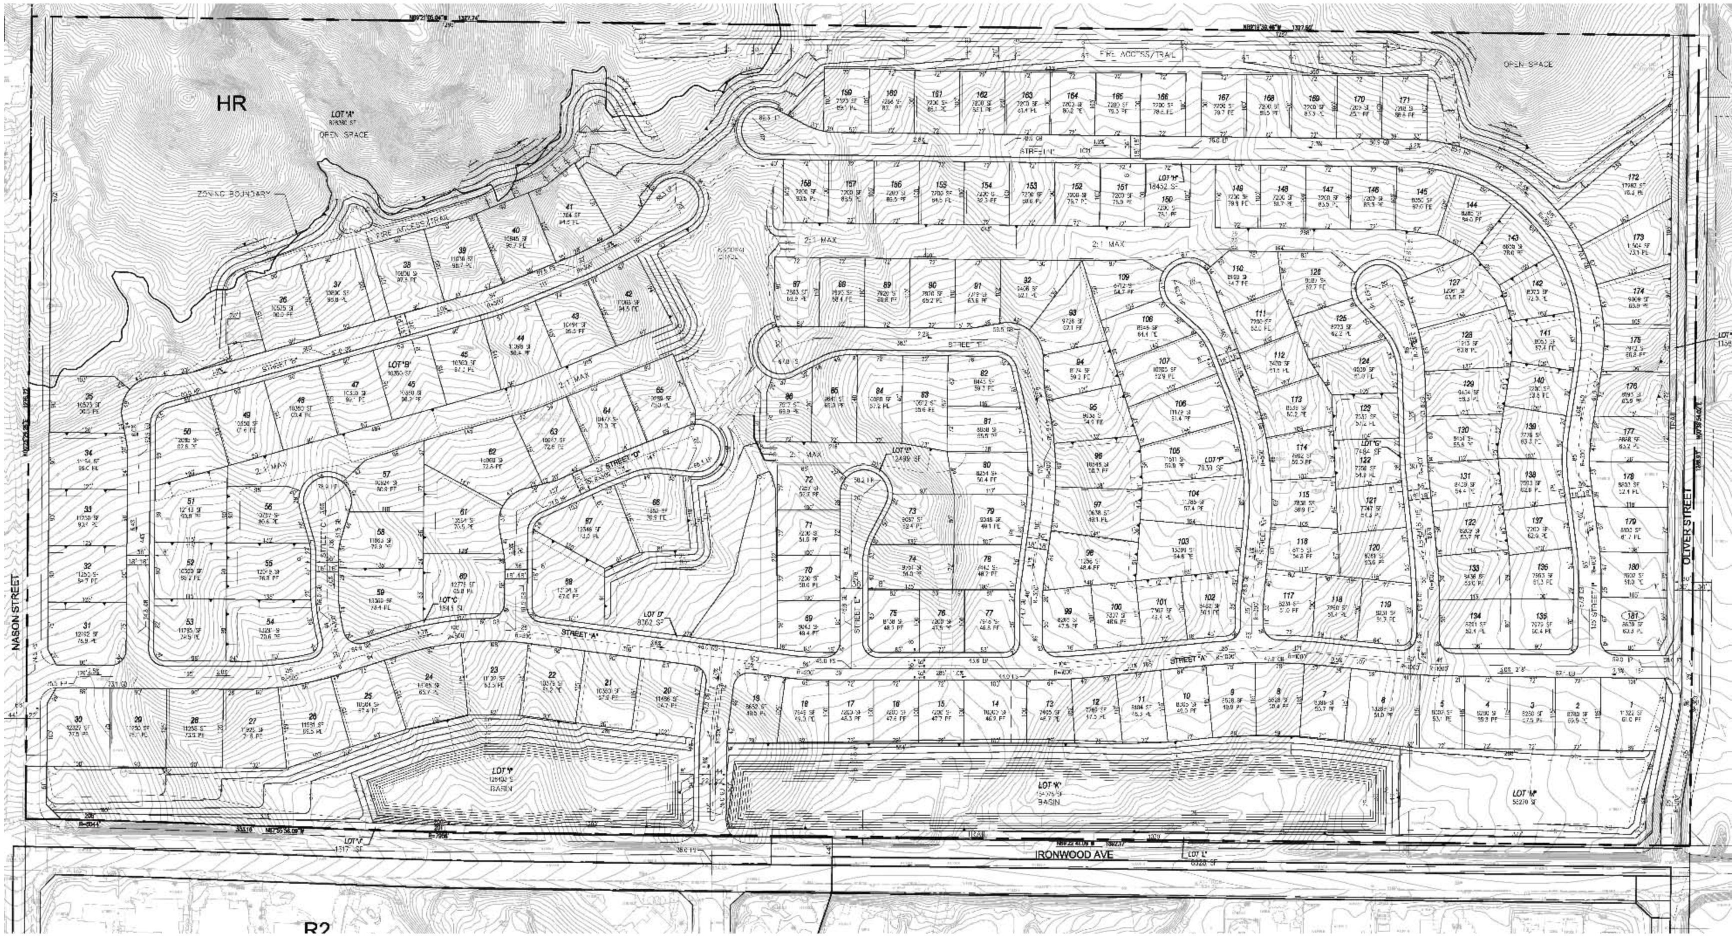

This page intentionally left blank

2 AIR QUALITY SETTING

This section provides an overview of the existing air quality conditions in the Project area and region.

2.1 SOUTH COAST AIR BASIN

The Project site is located in the South Coast Air Basin (SCAB) within the jurisdiction of SCAQMD (2). The SCAQMD was created by the 1977 Lewis-Presley Air Quality Management Act, which merged four county air pollution control bodies into one regional district. Under the Act, the SCAQMD is responsible for bringing air quality in areas under its jurisdiction into conformity with federal and state air quality standards. As discussed above, the Project site is located within the South Coast Air Basin, a 6,745-square mile subregion of the SCAQMD, which includes portions of Los Angeles, Riverside, and San Bernardino Counties, and all of Orange County. The larger South Coast district boundary includes 10,743 square miles.

The SCAB is bound by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The Los Angeles County portion of the Mojave Desert Air Basin is bound by the San Gabriel Mountains to the south and west, the Los Angeles / Kern County border to the north, and the Los Angeles / San Bernardino County border to the east. The Riverside County portion of the Salton Sea Air Basin is bound by the San Jacinto Mountains in the west and spans eastward up to the Palo Verde Valley.

2.2 REGIONAL CLIMATE

The regional climate has a substantial influence on air quality in the SCAB. In addition, the temperature, wind, humidity, precipitation, and amount of sunshine influence the air quality.

The annual average temperatures throughout the SCAB vary from the low to middle 60s (degrees Fahrenheit). Due to a decreased marine influence, the eastern portion of the SCAB shows greater variability in average annual minimum and maximum temperatures. January is the coldest month throughout the SCAB, with average minimum temperatures of 47°F in downtown Los Angeles and 36°F in San Bernardino. All portions of the SCAB have recorded maximum temperatures above 100°F.

Although the climate of the SCAB can be characterized as semi-arid, the air near the land surface is quite moist on most days because of the presence of a marine layer. This shallow layer of sea air is an important modifier of SCAB climate. Humidity restricts visibility in the SCAB, and the conversion of sulfur dioxide to sulfates is heightened in air with high relative humidity. The marine layer provides an environment for that conversion process, especially during the spring and summer months. The annual average relative humidity within the SCAB is

71 percent along the coast and 59 percent inland. Since the ocean effect is dominant, periods of heavy early morning fog are frequent and low stratus clouds are a characteristic feature. These effects decrease with distance from the coast.

More than 90 percent of the SCAB's rainfall occurs from November through April. The annual average rainfall varies from approximately nine inches in Riverside to fourteen inches in downtown Los Angeles. Monthly and yearly rainfall totals are extremely variable. Summer rainfall usually consists of widely scattered thunderstorms near the coast and slightly heavier shower activity in the eastern portion of the SCAB with frequency being higher near the coast.

Due to its generally clear weather, about three-quarters of available sunshine is received in the SCAB. The remaining one-quarter is absorbed by clouds. The ultraviolet portion of this abundant radiation is a key factor in photochemical reactions. On the shortest day of the year there are approximately 10 hours of possible sunshine, and on the longest day of the year there are approximately 14 1/2 hours of possible sunshine.

The importance of wind to air pollution is considerable. The direction and speed of the wind determines the horizontal dispersion and transport of the air pollutants. During the late autumn to early spring rainy season, the SCAB is subjected to wind flows associated with the traveling storms moving through the region from the northwest. This period also brings five to ten periods of strong, dry offshore winds, locally termed "Santa Anas" each year. During the dry season, which coincides with the months of maximum photochemical smog concentrations, the wind flow is bimodal, typified by a daytime onshore sea breeze and a nighttime offshore drainage wind. Summer wind flows are created by the pressure differences between the relatively cold ocean and the unevenly heated and cooled land surfaces that modify the general northwesterly wind circulation over southern California. Nighttime drainage begins with the radiational cooling of the mountain slopes. Heavy, cool air descends the slopes and flows through the mountain passes and canyons as it follows the lowering terrain toward the ocean. Another characteristic wind regime in the SCAB is the "Catalina Eddy," a low level cyclonic (counterclockwise) flow centered over Santa Catalina Island which results in an offshore flow to the southwest. On most spring and summer days, some indication of an eddy is apparent in coastal sections.

In the SCAB, there are two distinct temperature inversion structures that control vertical mixing of air pollution. During the summer, warm high-pressure descending (subsiding) air is undercut by a shallow layer of cool marine air. The boundary between these two layers of air is a persistent marine subsidence/inversion. This boundary prevents vertical mixing which effectively acts as an impervious lid to pollutants over the entire SCAB. The mixing height for the inversion structure is normally situated 1,000 to 1,500 feet above mean sea level.

A second inversion-type forms in conjunction with the drainage of cool air off the surrounding mountains at night followed by the seaward drift of this pool of cool air. The top of this layer forms a sharp boundary with the warmer air aloft and creates nocturnal radiation inversions. These inversions occur primarily in the winter, when nights are longer and onshore flow is weakest. They are typically only a few hundred feet above mean sea level. These inversions effectively trap pollutants, such as NOX and CO from vehicles, as the pool of cool air drifts seaward. Winter is therefore a period of high levels of primary pollutants along the coastline.

2.3 WIND PATTERNS AND PROJECT LOCATION

The distinctive climate of the Project area and the SCAB is determined by its terrain and geographical location. The Basin is located in a coastal plain with connecting broad valleys and low hills, bounded by the Pacific Ocean in the southwest quadrant with high mountains forming the remainder of the perimeter.

Wind patterns across the south coastal region are characterized by westerly and southwesterly on-shore winds during the day and easterly or northeasterly breezes at night. Winds are characteristically light although the speed is somewhat greater during the dry summer months than during the rainy winter season.

2.4 EXISTING AIR QUALITY

Existing air quality is measured at established SCAQMD air quality monitoring stations. Monitored air quality is evaluated and in the context of ambient air quality standards. These standards are the levels of air quality that are considered safe, with an adequate margin of safety, to protect the public health and welfare. National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) currently in effect, as well health effects of each pollutant regulated under these standards are shown in Table 2-1 (3).

The determination of whether a region's air quality is healthful or unhealthful is determined by comparing contaminant levels in ambient air samples to the state and federal standards presented in Table 2-1. The air quality in a region is considered to be in attainment by the state if the measured ambient air pollutant levels for O3, CO, SO2, NO2, PM10, and PM2.5 are not equaled or exceeded at any time in any consecutive three-year period; and the federal standards (other than O3, PM10, PM2.5, and those based on annual averages or arithmetic mean) are not exceeded more than once per year. The O3 standard is attained when the fourth highest eight-hour concentration in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24 hour standard is attained when 99 percent of the daily concentrations, averaged over three years, are equal to or less than the standard.

TABLE 2-1: AMBIENT AIR QUALITY STANDARDS

Pollutant	Averaging Time	California Standards [1]		National Standards [2]		
		Concentration [3]	Method [4]	Primary [3,5]	Secondary [3,6]	Method [7]
Ozone (O_3)	1 Hour	0.09 ppm (180 $\mu g/m^3$)	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8 Hour	0.070 ppm (137 $\mu g/m^3$)		0.075 ppm (147 $\mu g/m^3$)		
Respirable Particulate Matter (PM10)[8]	24 Hour	50 $\mu g/m^3$	Gravimetric or Beta Attenuation	150 $\mu g/m^3$	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 $\mu g/m^3$		—		
Fine Particulate Matter (PM2.5)[8]	24 Hour	—	—	35 $\mu g/m^3$	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 $\mu g/m^3$	Gravimetric or Beta Attenuation	12.0 $\mu g/m^3$	15 $\mu g/m^3$	
Carbon Monoxide (CO)	1 Hour	20 ppm (23 mg/m^3)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m^3)	—	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10 mg/m^3)		9 ppm (10 mg/m^3)	—	
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m^3)		—	—	
Nitrogen Dioxide (NO_2)[9]	1 Hour	0.18 ppm (339 $\mu g/m^3$)	Gas Phase Chemiluminescence	100 ppb (188 $\mu g/m^3$)	—	Gas Phase Chemiluminescence
	Annual Arithmetic Mean	0.030 ppm (57 $\mu g/m^3$)		0.053 ppm (100 $\mu g/m^3$)	Same as Primary Standard	
Sulfur Dioxide (SO_2)[10]	1 Hour	0.25 ppm (655 $\mu g/m^3$)	Ultraviolet Fluorescence	75 ppb (196 $\mu g/m^3$)	—	Ultraviolet Flourescence; Spectrophotometry (Pararosaniline Method)
	3 Hour	—		—	0.5 ppm (1300 $\mu g/m^3$)	
	24 Hour	0.04 ppm (105 $\mu g/m^3$)		0.14 ppm (for certain areas)[10]	—	
	Annual Arithmetic Mean	—		0.030 ppm (for certain areas)[10]	—	
Lead[11,12]	30 Day Average	1.5 $\mu g/m^3$	Atomic Absorption	—	—	High Volume Sampler and Atomic Absorption
	Calendar Quarter	—		1.5 $\mu g/m^3$ (for certain areas)[12]	Same as Primary Standard	
	Rolling 3-Month Average	—		0.15 $\mu g/m^3$		
Visibility Reducing Particles[13]	8 Hour	See footnote 13	Beta Attenuation and Transmittance through Filter Tape	No National Standards		
Sulfates	24 Hour	25 $\mu g/m^3$	Ion Chromatography			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 $\mu g/m^3$)	Ultraviolet Fluorescence			
Vinyl Chloride[11]	24 Hour	0.01 ppm (26 $\mu g/m^3$)	Gas Chromatography

California Air Resources Board (6/4/13)

Attachment: Air Quality Impact Analysis (2437 : Ironwood Village (PEN16-0077 through PEN16-0081))

2.5 REGIONAL AIR QUALITY

The SCAQMD monitors levels of various criteria pollutants at 30 monitoring stations throughout the air district. In 2013, the federal and state ambient air quality standards (NAAQS and CAAQS) were exceeded on one or more days for ozone, PM10, and PM2.5 at most monitoring locations (4). No areas of the SCAB exceeded federal or state standards for NO2, SO2, CO, sulfates or lead. See Table 2-2 for attainment designations for the SCAB (5). Appendix 3.2 provides geographic representation of the state and federal attainment status for applicable criteria pollutants within the SCAB.

2.6 LOCAL AIR QUALITY

Relative to the Project site, the nearest long-term air quality monitoring site for Ozone (O_3) and Particulate Matter ≤ 10 Microns (PM_{10}) is the South Coast Air Quality Management District Perris monitoring station (SRA 24), located approximately 11.25 miles south of the Project site (6). The nearest long-term air quality monitoring site in relation to the project for Carbon Monoxide (CO), Nitrogen Dioxide (NO_2), and Ultra-Fine Particulates ($PM_{2.5}$) is carried out by the Metropolitan Riverside County 2 monitoring station (SRA 23), located approximately 12 miles west of the project site. It should be noted that the Metropolitan Riverside County 2 monitoring stations were utilized in lieu of the Perris monitoring station only where data was not available from the nearest monitoring site.

The most recent three (3) years of data available is shown on Table 2-3 and identifies the number of days ambient air quality standards were exceeded for the study area, which is was considered to be representative of the local air quality at the Project site (7). Additionally, data for SO2 has been omitted as attainment is regularly met in the South Coast Air Basin and few monitoring stations measure SO2 concentrations.

Criteria pollutants are pollutants that are regulated through the development of human health based and/or environmentally based criteria for setting permissible levels. Criteria pollutants, their typical sources, and effects are identified below:

- Carbon Monoxide (CO): Is a colorless, odorless gas produced by the incomplete combustion of carbon-containing fuels, such as gasoline or wood. CO concentrations tend to be the highest during the winter morning, when little to no wind and surface-based inversions trap the pollutant at ground levels. Because CO is emitted directly from internal combustion engines, unlike ozone, motor vehicles operating at slow speeds are the primary source of CO in the Basin. The highest ambient CO concentrations are generally found near congested transportation corridors and intersections.
- Sulfur Dioxide (SO2): Is a colorless, extremely irritating gas or liquid. It enters the atmosphere as a pollutant mainly as a result of burning high sulfur-content fuel oils and coal and from chemical processes occurring at chemical plants and refineries. When SO2 oxidizes in the atmosphere, it forms sulfates (SO4). Collectively, these pollutants are referred to as sulfur oxides (SOX).

TABLE 2-2: ATTAINMENT STATUS OF CRITERIA POLLUTANTS IN THE SOUTH COAST AIR BASIN (SCAB)

Criteria Pollutant	State Designation	Federal Designation
Ozone - 1hour standard	Nonattainment	No Standard
Ozone - 8 hour standard	Nonattainment	Nonattainment
PM_{10}	Nonattainment	Attainment
$PM_{2.5}$	Nonattainment	Nonattainment
Carbon Monoxide	Attainment	Attainment
Nitrogen Dioxide	Attainment	Unclassified/Attainment
Sulfur Dioxide	Attainment	Attainment
Lead[1]	Attainment	Attainment

Source: State/Federal designations were taken from http://www.arb.ca.gov/desig/adm/adm.htm
Note: See Appendix 3.2 for a detailed map of State/National Area Designations within the South Coast Air Basin

[1] The Federal nonattainment designation for lead is only applicable towards the Los Angeles County portion of the SCAB.

TABLE 2-3: PROJECT AREA AIR QUALITY MONITORING SUMMARY 2011-2013

Pollutant	Standard	Year		
		2011	2012	2013
Ozone (O_3)				
Maximum 1-Hour Concentration (ppm)		0.125	0.111	0.108
Maximum 8-Hour Concentration (ppm)		0.112	0.093	0.090
Number of Days Exceeding State 1-Hour Standard	> 0.09 ppm	44	28	--
Number of Days Exceeding State 8-Hour Standard	> 0.07 ppm	77	64	--

Number of Samples Exceeding Federal 24-Hour Standard	> 35 μg/m^3	2	0	1

-- = data not available from SCAQMD

- Nitrogen Oxides (Oxides of Nitrogen, or NOx): Nitrogen oxides (NOx) consist of nitric oxide (NO), nitrogen dioxide (NO2) and nitrous oxide (N2O) and are formed when nitrogen (N2) combines with oxygen (O2). Their lifespan in the atmosphere ranges from one to seven days for nitric oxide and nitrogen dioxide, to 170 years for nitrous oxide. Nitrogen oxides are typically created during combustion processes, and are major contributors to smog formation and acid deposition. NO2 is a criteria air pollutant, and may result in numerous adverse health effects; it absorbs blue light, resulting in a brownish-red cast to the atmosphere and reduced visibility. Of the seven types of nitrogen oxide compounds, NO2 is the most abundant in the atmosphere. As ambient concentrations of NO2 are related to traffic density, commuters in heavy traffic may be exposed to higher concentrations of NO2 than those indicated by regional monitors.
- Ozone (O3): Is a highly reactive and unstable gas that is formed when volatile organic compounds (VOCs) and nitrogen oxides (NOX), both byproducts of internal combustion engine exhaust, undergo slow photochemical reactions in the presence of sunlight. Ozone concentrations are generally highest during the summer months when direct sunlight, light wind, and warm temperature conditions are favorable to the formation of this pollutant.
- PM10 (Particulate Matter less than 10 microns): A major air pollutant consisting of tiny solid or liquid particles of soot, dust, smoke, fumes, and aerosols. The size of the particles (10 microns or smaller, about 0.0004 inches or less) allows them to easily enter the lungs where they may be deposited, resulting in adverse health effects. PM10 also causes visibility reduction and is a criteria air pollutant.
- PM2.5 (Particulate Matter less than 2.5 microns): A similar air pollutant consisting of tiny solid or liquid particles which are 2.5 microns or smaller (which is often referred to as fine particles). These particles are formed in the atmosphere from primary gaseous emissions that include sulfates formed from SO2 release from power plants and industrial facilities and nitrates that are formed from NOX release from power plants, automobiles and other types of combustion sources. The chemical composition of fine particles highly depends on location, time of year, and weather conditions. PM2.5 is a criteria air pollutant.
- Volatile Organic Compounds (VOC): Volatile organic compounds are hydrocarbon compounds (any compound containing various combinations of hydrogen and carbon atoms) that exist in the ambient air. VOCs contribute to the formation of smog through atmospheric photochemical reactions and/or may be toxic. Compounds of carbon (also known as organic compounds) have different levels of reactivity; that is, they do not react at the same speed or do not form ozone to the same extent when exposed to photochemical processes. VOCs often have an odor, and some examples include gasoline, alcohol, and the solvents used in paints. Exceptions to the VOC designation include: carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate. VOCs are a criteria pollutant since they are a precursor to O3, which is a criteria pollutant. The SCAQMD uses the terms VOC and ROG (see below) interchangeably.
- Reactive Organic Gases (ROG): Similar to VOC, Reactive Organic Gases (ROG) are also precursors in forming ozone. Smog is formed when ROG and nitrogen oxides react in the presence of sunlight. ROGs are a criteria pollutant since they are a precursor to O3, which is a criteria pollutant. The SCAQMD uses the terms ROG and VOC (see previous) interchangeably.
- Lead (Pb): Lead is a heavy metal that is highly persistent in the environment. In the past, the primary source of lead in the air was emissions from vehicles burning leaded gasoline. As a result of the removal of lead from gasoline, there have been no violations at any of the SCAQMD's regular air monitoring stations since 1982. Currently, emissions of lead are largely

limited to stationary sources such as lead smelters. It should be noted that the Project is not anticipated to generate a quantifiable amount of lead emissions. Lead is a criteria air pollutant.

Health Effects of Air Pollutants

Ozone

Individuals exercising outdoors, children, and people with preexisting lung disease, such as asthma and chronic pulmonary lung disease, are considered to be the most susceptible sub-groups for ozone effects. Short-term exposure (lasting for a few hours) to ozone at levels typically observed in Southern California can result in breathing pattern changes, reduction of breathing capacity, increased susceptibility to infections, inflammation of the lung tissue, and some immunological changes. Elevated ozone levels are associated with increased school absences. In recent years, a correlation between elevated ambient ozone levels and increases in daily hospital admission rates, as well as mortality, has also been reported. An increased risk for asthma has been found in children who participate in multiple sports and live in communities with high ozone levels.

Ozone exposure under exercising conditions is known to increase the severity of the responses described above. Animal studies suggest that exposure to a combination of pollutants that includes ozone may be more toxic than exposure to ozone alone. Although lung volume and resistance changes observed after a single exposure diminish with repeated exposures, biochemical and cellular changes appear to persist, which can lead to subsequent lung structural changes.

Carbon Monoxide

Individuals with a deficient blood supply to the heart are the most susceptible to the adverse effects of CO exposure. The effects observed include earlier onset of chest pain with exercise, and electrocardiograph changes indicative of decreased oxygen supply to the heart. Inhaled CO has no direct toxic effect on the lungs, but exerts its effect on tissues by interfering with oxygen transport and competing with oxygen to combine with hemoglobin present in the blood to form carboxyhemoglobin (COHb). Hence, conditions with an increased demand for oxygen supply can be adversely affected by exposure to CO. Individuals most at risk include fetuses, patients with diseases involving heart and blood vessels, and patients with chronic hypoxemia (oxygen deficiency) as seen at high altitudes.

Reduction in birth weight and impaired neurobehavioral development have been observed in animals chronically exposed to CO, resulting in COHb levels similar to those observed in smokers. Recent studies have found increased risks for adverse birth outcomes with exposure to elevated CO levels; these include pre-term births and heart abnormalities.

Particulate Matter

A consistent correlation between elevated ambient fine particulate matter (PM10 and PM2.5) levels and an increase in mortality rates, respiratory infections, number and severity of asthma attacks and the number of hospital admissions has been observed in different parts of the United States and various areas around the world. In recent years, some studies have reported an association between long-term exposure to air pollution dominated by fine particles and increased mortality, reduction in life-span, and an increased mortality from lung cancer.

Daily fluctuations in PM2.5 concentration levels have also been related to hospital admissions for acute respiratory conditions in children, to school and kindergarten absences, to a decrease in respiratory lung volumes in normal children, and to increased medication use in children and adults with asthma. Recent studies show lung function growth in children is reduced with long-term exposure to particulate matter.

The elderly, people with pre-existing respiratory or cardiovascular disease, and children appear to be more susceptible to the effects of high levels of PM10 and PM2.5.

Nitrogen Dioxide

Population-based studies suggest that an increase in acute respiratory illness, including infections and respiratory symptoms in children (not infants), is associated with long-term exposure to NO2 at levels found in homes with gas stoves, which are higher than ambient levels found in Southern California. Increase in resistance to air flow and airway contraction is observed after short-term exposure to NO2 in healthy subjects. Larger decreases in lung functions are observed in individuals with asthma or chronic obstructive pulmonary disease (e.g., chronic bronchitis, emphysema) than in healthy individuals, indicating a greater susceptibility of these sub-groups.

In animals, exposure to levels of NO2 considerably higher than ambient concentrations results in increased susceptibility to infections, possibly due to the observed changes in cells involved in maintaining immune functions. The severity of lung tissue damage associated with high levels of ozone exposure increases when animals are exposed to a combination of ozone and NO2.

Sulfur Dioxide

A few minutes of exposure to low levels of SO2 can result in airway constriction in some asthmatics, all of whom are sensitive to its effects. In asthmatics, increase in resistance to air flow, as well as reduction in breathing capacity leading to severe breathing difficulties, are observed after acute exposure to SO2. In contrast, healthy individuals do not exhibit similar acute responses even after exposure to higher concentrations of SO2.

Animal studies suggest that despite SO2 being a respiratory irritant, it does not cause substantial lung injury at ambient concentrations. However, very high levels of exposure can cause lung edema (fluid accumulation), lung tissue damage, and sloughing off of cells lining the respiratory tract.

Some population-based studies indicate that the mortality and morbidity effects associated with fine particles show a similar association with ambient SO2 levels. In these studies, efforts to separate the effects of SO2 from those of fine particles have not been successful. It is not clear whether the two pollutants act synergistically or one pollutant alone is the predominant factor.

Lead

Fetuses, infants, and children are more sensitive than others to the adverse effects of Pb exposure. Exposure to low levels of Pb can adversely affect the development and function of the central nervous system, leading to learning disorders, distractibility, inability to follow simple commands, and lower intelligence quotient. In adults, increased Pb levels are associated with increased blood pressure.

Pb poisoning can cause anemia, lethargy, seizures, and death; although it appears that there are no direct effects of Pb on the respiratory system. Pb can be stored in the bone from early age environmental exposure, and elevated blood Pb levels can occur due to breakdown of bone tissue during pregnancy, hyperthyroidism (increased secretion of hormones from the thyroid gland) and osteoporosis (breakdown of bony tissue). Fetuses and breast-fed babies can be exposed to higher levels of Pb because of previous environmental Pb exposure of their mothers.

Odors

The science of odor as a health concern is still new. Merely identifying the hundreds of VOCs that cause odors poses a big challenge. Offensive odors can potentially affect human health in several ways. First, odorant compounds can irritate the eye, nose, and throat, which can reduce respiratory volume. Second, studies have shown that the VOCs that cause odors can stimulate sensory nerves to cause neurochemical changes that might influence health, for instance, by compromising the immune system. Finally, unpleasant odors can trigger memories or attitudes linked to unpleasant odors, causing cognitive and emotional effects such as stress.

2.7 REGULATORY BACKGROUND

2.7.1 FEDERAL REGULATIONS

The U.S. EPA is responsible for setting and enforcing the NAAQS for O3, CO, NOx, SO2, PM10, PM2.5, and lead (8). The U.S. EPA has jurisdiction over emissions sources that are under the authority of the federal government including aircraft, locomotives, and emissions sources outside state waters (Outer Continental Shelf). The U.S. EPA also establishes emission standards for vehicles sold in states other than California. Automobiles sold in California must meet the stricter emission requirements of the CARB.

The Federal Clean Air Act (CAA) was first enacted in 1955, and has been amended numerous times in subsequent years (1963, 1965, 1967, 1970, 1977, and 1990). The CAA establishes the federal air quality standards, the NAAQS, and specifies future dates for achieving compliance (9). The CAA also mandates that states submit and implement State Implementation Plans (SIPs) for local areas not meeting these standards. These plans must include pollution control measures that demonstrate how the standards will be met.

The 1990 amendments to the CAA that identify specific emission reduction goals for areas not meeting the NAAQS require a demonstration of reasonable further progress toward attainment and incorporate additional sanctions for failure to attain or to meet interim milestones. The sections of the CAA most directly applicable to the development of the Project site include Title I (Non-Attainment Provisions) and Title II (Mobile Source Provisions). Title I provisions were established with the goal of attaining the NAAQS for the following criteria pollutants O3, NO2, SO2, PM10, CO, PM2.5, and lead. The NAAQS were amended in July 1997 to include an additional standard for O3 and to adopt a NAAQS for PM2.5. Table 2-1 (previously presented) provides the NAAQS within the basin.

Mobile source emissions are regulated in accordance with Title II provisions. These provisions require the use of cleaner burning gasoline and other cleaner burning fuels such as methanol and natural gas. Automobile manufacturers are also required to reduce tailpipe emissions of hydrocarbons and nitrogen oxides (NOx). NOx is a collective term that includes all forms of nitrogen oxides (NO, NO2, NO3) which are emitted as byproducts of the combustion process.

2.7.2 CALIFORNIA REGULATIONS

The CARB, which became part of the California EPA in 1991, is responsible for ensuring implementation of the California Clean Air Act (AB 2595), responding to the federal CAA, and for regulating emissions from consumer products and motor vehicles. The California CAA mandates achievement of the maximum degree of emissions reductions possible from vehicular and other mobile sources in order to attain the state ambient air quality standards by the earliest practical date. The CARB established the CAAQS for all pollutants for which the federal government has NAAQS and, in addition, establishes standards for sulfates, visibility, hydrogen sulfide, and vinyl chloride. However at this time, hydrogen sulfide and vinyl chloride are not measured at any monitoring stations in the SCAB because they are not considered to be a regional air quality problem. Generally, the CAAQS are more stringent than the NAAQS (10) (3).

Local air quality management districts, such as the SCAQMD, regulate air emissions from commercial and light industrial facilities. All air pollution control districts have been formally designated as attainment or non-attainment for each CAAQS.

Serious non-attainment areas are required to prepare air quality management plans that include specified emission reduction strategies in an effort to meet clean air goals. These plans are required to include:

- Application of Best Available Retrofit Control Technology to existing sources;
- Developing control programs for area sources (e.g., architectural coatings and solvents) and indirect sources (e.g. motor vehicle use generated by residential and commercial development);
- A District permitting system designed to allow no net increase in emissions from any new or modified permitted sources of emissions;
- Implementing reasonably available transportation control measures and assuring a substantial reduction in growth rate of vehicle trips and miles traveled;
- Significant use of low emissions vehicles by fleet operators;
- Sufficient control strategies to achieve a five percent or more annual reduction in emissions or 15 percent or more in a period of three years for ROGs, NOx, CO and PM10. However, air basins

may use alternative emission reduction strategy that achieves a reduction of less than five percent per year under certain circumstances.

2.7.3 AIR QUALITY MANAGEMENT PLANNING

Currently, the NAAQS and CAAQS are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of Air Quality Management Plans (AQMPs) to meet the state and federal ambient air quality standards (11). AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy. A detailed discussion on the AQMP and Project consistency with the AQMP is provided in Section 3.9.

2.8 EXISTING PROJECT SITE AIR QUALITY CONDITIONS

Existing air quality conditions at the Project site would generally reflect ambient monitored conditions as presented previously at Table 2-3.

This page intentionally left blank

3 PROJECT AIR QUALITY IMPACT

3.1 INTRODUCTION

The Project has been evaluated to determine if it will violate an air quality standard or contribute to an existing or projected air quality violation. Additionally, the Project has been evaluated to determine if it will result in a cumulatively considerable net increase of a criteria pollutant for which the SCAB is non-attainment under an applicable federal or state ambient air quality standard. The significance of these potential impacts is described in the following section.

3.2 STANDARDS OF SIGNIFICANCE

The criteria used to determine the significance of potential Project-related air quality impacts are taken from the Initial Study Checklist in Appendix G of the State CEQA Guidelines (14 California Code of Regulations §§15000, et seq.). Based on these thresholds, a project would result in a significant impact related to air quality if it would (12):

- Conflict with or obstruct implementation of the applicable air quality plan.
- Violate any air quality standard or contribute to an existing or projected air quality violation.
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions, which exceed quantitative thresholds for ozone precursors).
- Expose sensitive receptors to substantial pollutant concentrations.
- Create objectionable odors affecting a substantial number of people.

The SCAQMD has also developed regional and localized significance thresholds for other regulated pollutants, as summarized at Table 3-1 (13). The SCAQMD's CEQA Air Quality Significance Thresholds (March 2011) indicate that any projects in the SCAB with daily emissions that exceed any of the indicated thresholds should be considered as having an individually and cumulatively significant air quality impact.

TABLE 3-1: MAXIMUM DAILY EMISSIONS THRESHOLDS

Pollutant	Construction	Operations
Regional Thresholds		
NOx	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM10	150 lbs/day	150 lbs/day
PM2.5	55 lbs/day	55 lbs/day
Sox	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day
Lead	3 lbs/day	3 lbs/day
Localized Thresholds		
NOx	236.67lbs/day	n/a
PM10	11.00 lbs/day	n/a
PM2.5	6.67 lbs/day	n/a
CO	1,345.67 lbs/day	n/a

3.3 PROJECT-RELATED SOURCES OF POTENTIAL IMPACT

Land uses such as the Project affect air quality through construction-source and operational-source emissions.

On October 2, 2013, the SCAQMD in conjunction with the California Air Pollution Control Officers Association (CAPCOA) released the latest version of the California Emissions Estimator Model™ (CalEEMod™) v2013.2.2. The purpose of this model is to calculate construction-source and operational-source criteria pollutant (NO_x, VOC, PM_{10}, $PM_{2.5}$, SO_x, and CO) and greenhouse gas (GHG) emissions from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from mitigation measures (17). Accordingly, the latest version of CalEEMod™ has been used for this Project to determine construction and operational air quality emissions. Output from the model runs for both construction and operational activity are provided in Appendix 3.1.

3.4 CONSTRUCTION EMISSIONS

Construction activities associated with the Project will result in emissions of CO, VOCs, NOx, SOx, PM10, and PM2.5. Construction related emissions are expected from the following construction activities:

- Grading
- Paving

- Building Construction
- Architectural Coatings (Painting)
- Construction Workers Commuting

Construction is expected to commence in March 2017 and will last through July 2020. Construction duration by phase is shown on Table 3-2. The construction schedule utilized in the analysis represents a "worst-case" analysis scenario should construction occur any time after the respective dates since emission factors for construction decrease as the analysis year increases. The duration of construction activity and associated equipment represents a reasonable approximation of the expected construction fleet as required per CEQA guidelines. Site specific construction fleet may vary due to specific project needs at the time of construction. The duration of construction activity and associated construction equipment was estimated based on consultation the applicant. Please refer to specific detailed modeling inputs/outputs contained in Appendix 3.1 of this analysis. A detailed summary of construction equipment assumptions by phase is provided at Table 3-3.

Dust is typically a major concern during rough grading activities. Because such emissions are not amenable to collection and discharge through a controlled source, they are called "fugitive emissions". Fugitive dust emissions rates vary as a function of many parameters (soil silt, soil moisture, wind speed, area disturbed, number of vehicles, depth of disturbance or excavation, etc.). The CalEEMod model was utilized to calculate fugitive dust emissions resulting from this phase of activity.

Construction emissions for construction worker vehicles traveling to and from the Project site, as well as vendor trips (construction materials delivered to the Project site) were estimated based on information CalEEMod model defaults.

TABLE 3-2: CONSTRUCTION DURATION

Phase	Start Date	End Date	Duration (working days)
Grading	3/1/2017	6/13/2017	75
Paving	6/14/2017	8/29/2017	55
Building Construction	8/30/2017	3/31/2020	675
Architectural Coatings	12/1/2017	7/2/2020	675

TABLE 3-3: CONSTRUCTION EQUIPMENT ASSUMPTIONS

Activity	Equipment	Number	Hours Per Day
Grading	Excavators	2	8
	Graders	1	8
	Water Trucks	1	8
	Rubber Tired Dozers	1	8
	Scrapers	2	8
	Tractors/Loaders/Backhoes	2	8

3.4.1 CONSTRUCTION EMISSIONS SUMMARY

The estimated maximum daily construction emissions are summarized on Table 3-4. Detailed construction model outputs are presented in Appendix 3.1. Under the assumed scenarios, emissions resulting from the Project construction will not exceed any criteria pollutant thresholds established by the SCAQMD. Therefore, a less than significant impact would occur and no mitigation is required.

TABLE 3-4: EMISSIONS SUMMARY OF OVERALL CONSTRUCTION

Year	Emissions (pounds per day)					
	VOC	NOx	CO	SOx	PM10	PM2.5
2017	6.87	76.97	50.90	0.07	7.27	4.81
2018	5.87	19.94	18.26	0.03	1.45	1.15
2019	5.64	17.48	18.00	0.03	1.30	1.00
2020	5.50	16.12	17.89	0.03	1.20	0.91
Maximum Daily Emissions	**6.87**	**76.97**	**50.9**	**0.07**	**7.27**	**4.81**

Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**	**NO**	**NO**

3.5 OPERATIONAL EMISSIONS

Operational activities associated with the proposed Project will result in emissions of ROG, NOX, CO, SOX, PM10, and PM2.5. Operational emissions would be expected from the following primary sources:

- Area Source Emissions
- Energy Source Emissions
- Mobile Source Emissions

3.5.1 AREA SOURCE EMISSIONS

Architectural Coatings

Over a period of time the buildings that are part of this Project will be subject to emissions resulting from the evaporation of solvents contained in paints, varnishes, primers, and other surface coatings as part of Project maintenance. The emissions associated with architectural coatings were calculated using the CalEEMod model.

Consumer Products

Consumer products include, but are not limited to detergents, cleaning compounds, polishes, personal care products, and lawn and garden products. Many of these products contain organic compounds which when released in the atmosphere can react to form ozone and other photochemically reactive pollutants. The emissions associated with use of consumer products were calculated based on defaults provided within the CalEEMod model.

Hearths/Fireplaces

The emissions associated with use of hearths/fireplaces were calculated based on assumptions provided in the CalEEMod model. The Project is required to comply with SCAQMD Rule 445, which prohibits the use of wood burning stoves and fireplaces in new development. In order to account for the requirements of this Rule, the unmitigated CalEEMod model estimates were adjusted to remove wood burning stoves and fireplaces. As the project is required to comply with SCAQMD Rule 445, the removal of wood burning stoves and fireplaces is not considered "mitigation" although it must be identified as such in CalEEMod in order to treat the case appropriately.

Landscape Maintenance Equipment

Landscape maintenance equipment would generate emissions from fuel combustion and evaporation of unburned fuel. Equipment in this category would include lawnmowers, shedders/grinders, blowers, trimmers, chain saws, and hedge trimmers used to maintain the landscaping of the Project. The emissions associated with landscape maintenance equipment were calculated based on assumptions provided in the CalEEMod model.

3.5.2 ENERGY SOURCE EMISSIONS

Combustion Emissions Associated with Natural Gas and Electricity

Electricity and natural gas are used by almost every project. Criteria pollutant emissions are emitted through the generation of electricity and consumption of natural gas. However, because electrical generating facilities for the Project area are located either outside the region (state) or offset through the use of pollution credits (RECLAIM) for generation within the SCAB, criteria pollutant emissions from offsite generation of electricity is generally excluded from the evaluation of significance and only natural gas use is considered. The emissions associated with natural gas use were calculated using the CalEEMod model.

3.5.3 MOBILE SOURCE EMISSIONS

Vehicles

Project operational (vehicular) impacts are dependent on both overall daily vehicle trip generation and the effect of the Project on peak hour traffic volumes and traffic operations in the vicinity of the Project. The Project related operational air quality impacts derive primarily from vehicle trips generated by the Project. Trip characteristics available from the report, Ironwood Residential Traffic Impact Analysis (Urban Crossroads 2015) were utilized in this analysis (14). A vehicle fleet mix consistent with the Caltrans ITS Transportation Project-Level Carbon Monoxide Protocol was used as shown in Table 3-5 (15). This fleet mix was utilized as it is more appropriate than the CalEEMod default fleet mix for residential land uses.

TABLE 3-5: PROJECT FLEET MIX

Vehicle Type	Fleet Mix %
Light Duty Autos	69 %
Light Duty Trucks	19.4 %
Medium Duty Trucks	6.4 %
Heavy Duty Trucks	4.7 %
Motorcycles	0.5 %

Fugitive Dust Related to Vehicular Travel

Vehicles traveling on paved roads would be a source of fugitive emissions due to the generation of road dust inclusive of tire wear particulates. The emissions estimates for travel on paved roads were calculated using the CalEEMod model.

3.5.4 OPERATIONAL EMISSIONS SUMMARY

Operational-source emissions are summarized on Table 3-6. Project operational-source emissions would not exceed applicable SCAQMD regional thresholds of significance. Therefore, a less than significant impact would occur and no mitigation is required.

TABLE 3-6: SUMMARY OF PEAK OPERATIONAL EMISSIONS

Operational Activities – Summer Scenario	Emissions (pounds per day)					
	VOC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$
Area Source	7.96	0.17	15.00	7.90E-04	0.33	0.33

3.6 LOCALIZED SIGNIFICANCE - CONSTRUCTION ACTIVITY

BACKGROUND ON LOCALIZED SIGNIFICANCE THRESHOLD (LST) DEVELOPMENT

The analysis makes use of methodology included in the SCAQMD *Final Localized Significance Threshold Methodology* (Methodology) (19). The SCAQMD has established that impacts to air quality are significant if there is a potential to contribute or cause localized exceedances of the federal and/or state ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs).

The significance of localized emissions impacts depends on whether ambient levels in the vicinity of any given project are above or below State standards. In the case of CO and NO2, if ambient levels are below the standards, a project is considered to have a significant impact if project emissions result in an exceedance of one or more of these standards. If ambient levels already exceed a state or federal standard, then project emissions are considered significant if they increase ambient concentrations by a measurable amount. This would apply to PM10 and PM2.5; both of which are non-attainment pollutants.

The SCAQMD established LSTs in response to the SCAQMD Governing Board's Environmental Justice Initiative I-4. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the nearest residence or sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses.

LSTs were developed in response to environmental justice and health concerns raised by the public regarding exposure of individuals to criteria pollutants in local communities. To address the issue of localized significance, the SCAQMD adopted LSTs that show whether a project would cause or contribute to localized air quality impacts and thereby cause or contribute to potential localized adverse health effects. The analysis makes use of methodology included in the SCAQMD *Final Localized Significance Threshold Methodology* (LST Methodology) (16).

APPLICABILITY OF LSTS FOR THE PROJECT

For this Project, the appropriate Source Receptor Area (SRA) for the LST is the Perris monitoring station (SRA 24). LSTs apply to carbon monoxide (CO), nitrogen dioxide (NO2), particulate matter ≤ 10 microns (PM10), and particulate matter ≤ 2.5 microns (PM2.5). The SCAQMD produced look-up tables for projects less than or equal to 5 acres in size.

In order to determine the appropriate methodology for determining localized impacts that could occur as a result of Project-related construction, the following process is undertaken:

- The CalEEMod model is utilized to determine the maximum daily on-site emissions that will occur during construction activity.
- The SCAQMD's Fact Sheet for Applying CalEEMod to Localized Significance Thresholds (21) is used to determine the maximum site acreage that is actively disturbed based on the construction equipment fleet and equipment hours as estimated in CalEEMod.
- If the total acreage disturbed is less than or equal to five acres per day, then the SCAQMD's screening look-up tables are utilized to determine if a Project has the potential to result in a significant impact (the SCAQMD recommends that Projects exceeding the screening look-up tables undergo dispersion modeling to determine actual impacts). The look-up tables establish a maximum daily emissions threshold in pounds per day that can be compared to CalEEMod outputs.
- If the total acreage disturbed is greater than five acres per day, then the SCAQMD recommends dispersion modeling to be conducted to determine the actual pollutant concentrations for applicable LSTs in the air. In other words, the maximum daily on-site emissions as calculated in CalEEMod are modeled via air dispersion modeling to calculate the actual concentration in the air (e.g., parts per million or micrograms per cubic meter) in order to determine if any applicable thresholds are exceeded.

EMISSIONS CONSIDERED

SCAQMD's Methodology clearly states that "off-site mobile emissions from the Project should NOT be included in the emissions compared to LSTs (17)." Therefore, for purposes of the construction LST analysis only emissions included in the CalEEMod "on-site" emissions outputs were considered.

MAXIMUM DAILY DISTURBED-ACREAGE

Table 3-6 is used to determine the maximum daily disturbed-acreage for use in determining the applicability of the SCAQMD's LST look-up tables. Based on Table 3-7, the proposed Project could actively disturb approximately 4.0 acres per day and thus would not exceed the 5 acre per day limit established by the SCAQMD's LST look-up tables. Site specific construction fleet may vary due to specific project needs at the time of construction. The SCAQMD produced look-up tables for projects less than or equal to 5 acres in size; since the Project does not exceed a disturbance area of 5 acres in size, SCAQMD LST look-up tables will be used to determine localized impacts consistent with SCAQMD protocol.

TABLE 3-7 MAXIMUM DAILY DISTURBED-ACREAGE

Construction Phase	Equipment Type	Equipment Quantity	Acres grader per 8 hour day	Operating Hours per Day	Acres graded per day
Grading	Crawler Tractors	2	0.5	8	1
	Graders	1	0.5	8	0.5
	Rubber Tired Dozers	1	0.5	8	0.5
	Scrapers	2	1.0	8	2
Total acres graded per day					4.0
Applicable LST Mass Rate Look-up Table					4.0

Receptors

The nearest sensitive receptor land use is located immediately adjacent to the Project site to the west. Notwithstanding, the *Methodology* explicitly states that "*It is possible that a project may have receptors closer than 25 meters. Projects with boundaries located closer than 25 meters to the nearest receptor should use the LSTs for receptors located at 25 meters* (18)." Accordingly, LSTs for receptors at 25 meters are utilized in this analysis and provide for a conservative i.e. "health protective" standard of care.

Impacts

Emissions during construction activity will not exceed any of the SCAQMD's localized significance thresholds. Table 3-8 identifies the localized impacts at the nearest receptor location in the vicinity of the Project. A less than significant impact would occur and no mitigation is required.

TABLE 3-8: LOCALIZED SIGNIFICANCE SUMMARY CONSTRUCTION

On-Site Grading Emissions	Emissions (pounds per day)			
	NO_x	CO	PM_{10}	$PM_{2.5}$
Maximum Daily Emissions	**76.87**	**49.73**	**7.01**	**4.74**
SCAQMD Localized Threshold	236	1,345.67	11	6.67
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**

3.7 LOCALIZED SIGNIFICANCE – LONG-TERM OPERATIONAL ACTIVITY

The proposed project involves the construction and operation of 181 single family detached units. According to SCAQMD LST methodology, LSTs would apply to the operational phase of a proposed project, if the project includes stationary sources, or attracts mobile sources that may spend long periods queuing and idling at the site (e.g., warehouse or transfer facilities). The proposed project does not include such uses, and thus, due to the lack of stationary source emissions, no long-term localized significance threshold analysis is needed.

3.8 CO "HOT SPOT" ANALYSIS

As discussed below, the Project would not result in potentially adverse CO concentrations or "hot spots." Further, detailed modeling of Project-specific carbon monoxide (CO) "hot spots" is not needed to reach this conclusion.

It has long been recognized that adverse localized CO concentrations ("hot spots") are caused by vehicular emissions, primarily when idling at congested intersections. In response, vehicle emissions standards have become increasingly stringent in the last twenty years. Currently, the allowable CO emissions standard in California is a maximum of 3.4 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of increasingly sophisticated and efficient emissions control technologies, CO concentrations in the Project vicinity have steadily declined, as indicated by historical emissions data presented previously at Table 2-3.

A CO "hotspot" would occur if an exceedance of the state one-hour standard of 20 ppm or the eight-hour standard of 9 ppm were to occur. At the time of the 1993 Handbook, the SCAB was designated nonattainment under the California AAQS and National AAQS for CO (19). As identified within SCAQMD's 2003 AQMP and the 1992 Federal Attainment Plan for Carbon Monoxide (1992 CO Plan), peak carbon monoxide concentrations in the SCAB were a result of unusual meteorological and topographical conditions and not a result of congestion at a particular intersection (19). To establish a more accurate record of baseline CO concentrations affecting the SCAB, a CO "hot spot" analysis was conducted in 2003 for four busy intersections in Los Angeles at the peak morning and afternoon time periods. This hot spot analysis did not predict any violation of CO standards, as shown on Table 3-9. Traffic volumes generating the CO concentrations for the analysis are shown on Table 3-10. It can therefore be reasonably concluded that projects (such as the proposed Ironwood Residential (TTM No. 37001) development) that are not subject to the extremes in vehicle volumes and vehicle congestion that was evidenced in the 2003 Los Angeles hot spot analysis would similarly not create or result in CO hot spots. Similar considerations are also employed by other Air Districts when evaluating potential CO concentration impacts. More specifically, the Bay Area Air Quality Management District (BAAQMD) concludes that under existing and future vehicle emission rates, a given project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour—or 24,000 vehicles per hour where vertical and/or horizontal air does not mix—in order to generate a significant CO impact (20). The proposed Project considered herein would not produce the volume of traffic required to generate a CO hotspot either in the context of the 2003 Los Angeles hot spot study, or based on representative BAAQMD CO threshold considerations (see Table 3-11). Therefore, CO hotspots are not an environmental impact of concern for the proposed Project. Localized air quality impacts related to mobile-source emissions would therefore be less than significant.

TABLE 3-9: CO MODEL RESULTS

3.9 AIR QUALITY MANAGEMENT PLANNING

The Project site is located within the SCAB, which is characterized by relatively poor air quality. The SCAQMD has jurisdiction over an approximately 10,743 square-mile area consisting of the four-county Basin and the Los Angeles County and Riverside County portions of what use to be referred to as the Southeast Desert Air Basin. In these areas, the SCAQMD is principally responsible for air pollution control, and works directly with the Southern California Association of Governments (SCAG), county transportation commissions, local governments, as well as state and federal agencies to reduce emissions from stationary, mobile, and indirect sources to meet state and federal ambient air quality standards.

Currently, these state and federal air quality standards are exceeded in most parts of the Basin. In response, the SCAQMD has adopted a series of Air Quality Management Plans (AQMPs) to meet the state and federal ambient air quality standards. AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy.

The Final 2012 AQMP was adopted by the AQMD Governing Board on December 7, 2012 (21) (11). The 2012 AQMP incorporates the latest scientific and technological information and planning assumptions, including the 2012 Regional Transportation Plan/Sustainable Communities Strategy and updated emission inventory methodologies for various source categories.

Similar to the 2007 AQMP, the 2012 AQMP was based on assumptions provided by both CARB and SCAG in the latest available EMFAC model for the most recent motor vehicle and demographics information, respectively. The air quality levels projected in the 2012 AQMP are based on several assumptions. For example, the 2012 AQMP has assumed that development associated with general plans, specific plans, residential projects, and wastewater facilities will be constructed in accordance with population growth projections identified by SCAG in its 2012 RTP. The 2012 AQMP also has assumed that such development projects will implement strategies to reduce emissions generated during the construction and operational phases of development. The Project's consistency with the 2012 AQMP is discussed as follows:

Criteria for determining consistency with the AQMP are defined in Chapter 12, Section 12.2 and Section 12.3 of the SCAQMD's CEQA Air Quality Handbook (1993) (22). These indicators are discussed below:

- Consistency Criterion No. 1: The proposed Project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

<u>Construction Impacts</u>

Consistency Criterion No. 1 refers to violations of the CAAQS and NAAQS. CAAQS and NAAQS violations would occur LSTs were exceeded. As evaluated as part of the Project LST analysis (previously presented), the Project's localized construction-source emissions would not exceed applicable LSTs.

Operational Impacts

The Project regional analysis demonstrates that Project operational-source emissions would not exceed applicable thresholds, and would therefore not result in or cause violations of the CAAQS and NAAQS.

On the basis of the preceding discussion, the Project is determined to be consistent with the first criterion.

- Consistency Criterion No. 2: The Project will not exceed the assumptions in the AQMP based on the years of Project build-out phase.

Overview

The 2012 AQMP demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to the Southern California Association of Governments (SCAG), which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in City of Moreno Valley General Plan is considered to be consistent with the AQMP.

Construction Impacts

Peak day emissions generated by construction activities are largely independent of land use assignments, but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities.

Operational Impacts

The Project proposes a residential land use which is generally consistent current zoning and land use designations. Although the Project is proposing a zone change to allow for a more dense development, it should be noted that the proposed residential development would not exceed regional thresholds for operational emissions, and would therefore be considered to have a less than significant impact. As such, development proposed by the Project is generally consistent with the growth projections in the General Plan and is therefore considered to be consistent with the AQMP.

On the basis of the preceding discussion, the Project is determined to be consistent with the second criterion.

AQMP Consistency Conclusion

The Project would not result in or cause NAAQS or CAAQS violations. The Project's proposed land use designation for the subject site does not materially affect the uses allowed or increase the development intensities as reflected in the adopted General Plan. The Project is therefore considered to be consistent with the AQMP.

3.10 POTENTIAL IMPACTS TO SENSITIVE RECEPTORS

The potential impact of Project-generated air pollutant emissions at sensitive receptors has also been considered. Sensitive receptors can include uses such as long term health care facilities, rehabilitation centers, and retirement homes. Residences, schools, playgrounds, child care centers, and athletic facilities can also be considered as sensitive receptors.

Results of the LST analysis indicate that the Project will not exceed the SCAQMD localized significance thresholds during construction. Therefore sensitive receptors would not be subject to a significant air quality impact during Project construction.

Results of the LST analysis indicate that the Project will not exceed the SCAQMD localized significance thresholds during operational activity. The proposed Project would not result in a CO "hotspot" as a result of Project related traffic during ongoing operations, nor would the Project result in a significant adverse health impact as discussed in Section 3.8. Thus a less than significant impact to sensitive receptors during operational activity is expected.

3.11 ODORS

The potential for the Project to generate objectionable odors has also been considered. Land uses generally associated with odor complaints include:

- Agricultural uses (livestock and farming)
- Wastewater treatment plants
- Food processing plants
- Chemical plants
- Composting operations
- Refineries
- Landfills
- Dairies
- Fiberglass molding facilities

The Project does not contain land uses typically associated with emitting objectionable odors. Potential odor sources associated with the proposed Project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the proposed Project's (long-term operational) uses. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the City's solid waste regulations. The proposed Project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the proposed Project construction and operations would be less than significant and no mitigation is required.

3.12 Cumulative Impacts

The Project area is designated as an extreme non-attainment area for ozone and a non-attainment area for PM_{10} and $PM_{2.5}$.

Criterion 1; Regional Analysis

Construction Impacts

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that Project construction-source air pollutant emissions will not result in exceedances of regional thresholds. Therefore, project construction-source emission would be considered less than significant

Operational Impacts

Project operational-source emissions will not exceed applicable SCAQMD regional thresholds. Per SCAQMD significance guidance, these impacts at the Project level are also considered cumulatively less than significant impact persisting over the life of the Project.

Criterion 2; List Approach

A list approach is used, in accordance with Section 15130(b) of the CEQA Guidelines, which states the following:

> *The following elements are necessary to an adequate discussion of significant cumulative impacts: 1) Either: (A) A list of past, present, and probable future projects producing related or cumulative impacts, including, if necessary, those projects outside the control of the agency, or (B) A summary of projections contained in an adopted general plan or related planning document, or in a prior environmental document which has been adopted or certified, which described or evaluated regional or area wide conditions contributing to the cumulative impact.*

The SCAQMD has recognized that there is typically insufficient information to quantitatively evaluate the cumulative contributions of multiple projects because each project applicant has no control over nearby projects. Nevertheless, the potential cumulative impacts from the Project and other projects are discussed below. A cumulative project list was developed for this analysis and is shown in Table 3-12.

Related projects could contribute to an existing or projected air quality exceedance because the Basin is currently nonattainment for ozone, PM10, and PM2.5. With regard to determining the significance of the contribution from the Project, the SCAQMD recommends that any given project's potential contribution to cumulative impacts should be assessed using the same significance criteria as for project-specific impacts. Therefore, this analysis assumes that individual projects that do not generate operational or construction emissions that exceed the SCAQMD's recommended daily thresholds for project-specific impacts would also not cause a commutatively considerable increase in emissions for those pollutants for which the Basin is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact. Alternatively, individual project-related construction and operational emissions that exceed SCAQMD thresholds for project-specific impacts would be considered cumulatively considerable. As previously noted, the Project will not exceed the applicable SCAQMD regional threshold for construction and operational-source emissions. As such, the Project will not result in a cumulatively significant impact.

4 FINDINGS & CONCLUSIONS

4.1 CONSTRUCTION-SOURCE EMISSIONS

For regional emissions, the Project would not exceed the numerical thresholds of significance established by the South Coast Air Quality Management District (SCAQMD). Thus a less than significant impact will occur.

Additionally, emissions during construction activity will not exceed the SCAQMD's localized significance threshold. Therefore, a less than significant impact would occur.

Project construction-source emissions would not conflict with the applicable Air Quality Management Plan (AQMP).

Established requirements addressing construction equipment operations, and construction material use, storage, and disposal requirements act to minimize odor impacts that may result from construction activities. Moreover, construction-source odor emissions would be temporary, short-term, and intermittent in nature and would not result in persistent impacts that would affect substantial numbers of people. Potential construction-source odor impacts are therefore considered less-than-significant.

4.2 OPERATIONAL-SOURCE EMISSIONS

For regional emissions, the Project would not exceed the numerical thresholds of significance established by the SCAQMD. Thus a less than significant impact would occur for Project-related operational-source emissions without the application of mitigation measures.

Project operational-source emissions would not result in or cause a significant localized air quality impact as discussed in the operational LSTs section of this report. The proposed Project would not result in a significant CO "hotspot" as a result of Project related traffic during ongoing operations, nor would the Project result in a significant adverse health impact as discussed in Section 3.8, thus a less than significant impact to sensitive receptors during operational activity is expected.

Project operational-source emissions would not conflict with the AQMP.

Substantial odor-generating sources include land uses such as agricultural activities, feedlots, wastewater treatment facilities, landfills or various heavy industrial uses. The Project does not propose any such uses or activities that would result in potentially significant operational-source odor impacts. Potential sources of operational odors generated by the Project would include disposal of miscellaneous residential refuse. Moreover, SCAQMD Rule 402 acts to prevent occurrences of odor nuisances (1) . Consistent with City requirements, all Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with solid waste regulations. Potential operational-source odor impacts are therefore considered less-than-significant.

4.3 STANDARD REGULATORY REQUIREMENTS/BEST AVAILABLE CONTROL MEASURES (BACMS)

Measures listed below (or equivalent language) shall appear on all Project grading plans, construction specifications and bid documents, and the City shall ensure such language is incorporated prior to issuance of any development permits.

SCAQMD Rules that are currently applicable during construction activity for this Project include but are not limited to: Rule 1113 (Architectural Coatings) (23); Rule 431.2 (Low Sulfur Fuel) (24); Rule 403 (Fugitive Dust) (25); and Rule 1186 / 1186.1 (Street Sweepers) (26). It should be noted that BACMs are not mitigation as they are standard regulatory requirements.

BACM AQ-1

The following measures shall be incorporated into Project plans and specifications as implementation of Rule 403 (4):

- All clearing, grading, earth-moving, or excavation activities shall cease when winds exceed 25 mph per SCAQMD guidelines in order to limit fugitive dust emissions.
- The contractor shall ensure that all disturbed unpaved roads and disturbed areas within the Project are watered at least three (3) times daily during dry weather. Watering, with complete coverage of disturbed areas, shall occur at least three times a day, preferably in the mid-morning, afternoon, and after work is done for the day.
- The contractor shall ensure that traffic speeds on unpaved roads and Project site areas are reduced to 15 miles per hour or less

4.4 CONSTRUCTION AND OPERATIONAL-SOURCE AIR POLLUTANT EMISSIONS MITIGATION MEASURES

No significant impacts were identified and no mitigation measures are required.

6 CERTIFICATION

The contents of this air study report represent an accurate depiction of the environmental impacts associated with the proposed Ironwood Residential (TTM No. 37001) Project. The information contained in this air quality impact assessment report is based on the best available data at the time of preparation. If you have any questions, please contact me directly at (949) 660-1994 ext. 217.

EDUCATION

Master of Science in Environmental Studies
California State University, Fullerton • May, 2010

Bachelor of Arts in Environmental Analysis and Design
University of California, Irvine • June, 2006

PROFESSIONAL AFFILIATIONS

AEP – Association of Environmental Planners
AWMA – Air and Waste Management Association
ASTM – American Society for Testing and Materials

PROFESSIONAL CERTIFICATIONS

Planned Communities and Urban Infill – Urban Land Institute • June, 2011
Indoor Air Quality and Industrial Hygiene – EMSL Analytical • April, 2008
Principles of Ambient Air Monitoring – California Air Resources Board • August, 2007
AB2588 Regulatory Standards – Trinity Consultants • November, 2006
Air Dispersion Modeling – Lakes Environmental • June, 2006

CALEEMOD EMISSIONS MODEL OUTPUTS

This page intentionally left blank

Ironwood Residential- Construction

Riverside-South Coast County, Summer

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Single Family Housing	181.00	Dwelling Unit	58.77	325,800.00	518

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.4	**Precipitation Freq (Days)**	28
Climate Zone	10			**Operational Year**	2020
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	466.91	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - CPUC GHG Calculator version 3c, worksheet tab "CO2 Allocations," cells AH/AQ 35-44.

Land Use - Project unit count is based on information provided by the applicant

Construction Phase - Based on consultation with the applicant

Off-road Equipment - 8 hour work days

Off-road Equipment - 8 hour work days

Off-road Equipment - Water truck added

Off-road Equipment -

Grading -

Vehicle Trips - Construction run only

Woodstoves - Construction run only

Energy Use - Construction run only

Construction Off-road Equipment Mitigation -

7.0 Water Detail

7.1 Mitigation Measures Water

8.0 Waste Detail

8.1 Mitigation Measures Waste

9.0 Operational Offroad

Equipment Type	Number	Hours/Day	Days/Year	Horse Power	Load Factor	Fuel Type

10.0 Vegetation

Ironwood Residential- Operation

Riverside-South Coast County, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Single Family Housing	181.00	Dwelling Unit	58.77	325,800.00	518

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.4	**Precipitation Freq (Days)**	28
Climate Zone	10			**Operational Year**	2020
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	466.91	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - CPUC GHG Calculator version 3c, worksheet tab "CO2 Allocations," cells AH/AQ 35-44.

Land Use - Project unit count is based on information provided by the applicant

Construction Phase - Operation run only

Off-road Equipment - 8 hour work days

Off-road Equipment - Operation run only

Grading -

Vehicle Trips - Weekday TR based on the Ironwood Residential TIA. Weekend TR based on the ITE Trip Generation Manual (code 210)

Woodstoves - No wood stoves, all natural gas fireplaces

Energy Use - Title-24 Electricity Energy Intensity and Title-24 Natural Gas Energy Intensity were adjusted by 36.4% and 6.5% respectively, to reflect 2013 Title 24 requirements. Source: Impact Analysis California's 2013 Building Energy Efficiency Standards (CEC 2013)

Construction Off-road Equipment Mitigation -

Vechicle Emission Factors - Based on Caltrans ITS Transportation Project-Level Carbon Monoxide Protocol

Vechicle Emission Factors - Based on Caltrans ITS Transportation Project-Level Carbon Monoxide Protocol

Vechicle Emission Factors - Based on Caltrans ITS Transportation Project-Level Carbon Monoxide Protocol

Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	466.91	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - CPUC GHG Calculator version 3c, worksheet tab "CO2 Allocations," cells AH/AQ 35-44.

Land Use - Project unit count is based on information provided by the applicant

Construction Phase - Operation run only

Off-road Equipment - 8 hour work days

Off-road Equipment - Operation run only

Grading -

Vehicle Trips - Weekday TR based on the Ironwood Residential TIA. Weekend TR based on the ITE Trip Generation Manual (code 210)

Woodstoves - No wood stoves, all natural gas fireplaces

Energy Use - Title-24 Electricity Energy Intensity and Title-24 Natural Gas Energy Intensity were adjusted by 36.4% and 6.5% respectively, to reflect 2013 Title 24 requirements. Source: Impact Analysis California's 2013 Building Energy Efficiency Standards (CEC 2013)

Construction Off-road Equipment Mitigation -

Vechicle Emission Factors - Based on Caltrans ITS Transportation Project-Level Carbon Monoxide Protocol

Vechicle Emission Factors - Based on Caltrans ITS Transportation Project-Level Carbon Monoxide Protocol

1.0 INTRODUCTION

1.1 Background and Purpose

This report presents the findings of a Biological Resources Assessment & Western Riverside County Multiple Species Habitat Conservation Plan Consistency Analysis conducted by **ESA PCR** for the approximately 78.48-acre project site proposed for development of a single-family residential development associated with Assessor's Parcel Number (APN) 473-160-004 and approximately 10.57-acre off-site areas (collectively, the "study area"). The study area is located directly northeast of the intersection of Ironwood Avenue and Nason Street within the City of Moreno Valley, in Riverside County, California. The purpose of this study is to satisfy the requirements of the Western Riverside County Multiple Species Habitat Conservation (MSHCP), the California Environmental Quality Act (CEQA), and to supplement subsequent regulatory applications pursuant to Sections 404 and 401 of the Clean Water Act (CWA) and Section 1602 of the California Fish & Game Code (CF&G).

1.2 Sources

This Biological Resources Assessment & MSHCP Consistency Analysis (collectively, the "BRA") is based on information compiled through field reconnaissance and appropriate reference materials. A general biological survey, vegetation mapping, and investigation of jurisdictional waters and wetlands was conducted by ESA PCR. Focused surveys for special-status plant species and burrowing owl (*Athene cunicularia*) were also conducted. The information sources used in preparation of this BRA are provided in Section 9, *References*.

1.3 Study Area Location

The approximately 78.48-acre on-site study area and approximately10.57-acre off-site study areas are regionally situated north of State Route (SR) 60 and northeast of Interstate (I) 215 (**Figure 1**, *Regional Map*). Specifically, the study area is located northeast of the intersection of Ironwood Avenue and Nason Street in the City of Moreno Valley. The on-site and off-site project study areas are depicted on the U.S. Geological Survey (USGS) 7.5' Sunnymead topographic quadrangle (S34, T2S, R3W & S3, T3S, R3W) (USGS, 1967; Earth Survey, 2015), as shown in **Figure 2**, *Vicinity Map.* The specific location of each project study area is depicted on **Figure 3**, *Study Areas*. Off-site study areas associated with four types of proposed project improvements include manufactured slopes, road improvements, a sewer line extension, and water line extensions and described in detail below:

Manufactured Slopes (West & East) – There are two (2) off-site study area locations proposed to support manufactured slopes, including one area adjacent to Nason Street (West) and a second area adjacent to the eastern boundary of the project site (East).

Road Improvements – There is one (1) road improvement area proposed between the area located directly north of Ironwood Avenue and south of the project site boundary.

Sewer Line – The sewer line is proposed to connect at the southeast corner of the project site at the intersection of Ironwood Avenue and Oliver Street and extend south along Oliver Avenue, ultimately ending at the SR-60 freeway.

Water line (Proposed and Alternatives) – Although the exact location of the final water line extension is still unknown, one proposed alignment and two (2) alternative alignments were assessed as part of the off-site project study areas. The Proposed Water Line would commence at the intersection of Ironwood Avenue and Oliver Street and extend east along Ironwood Avenue, continuing north along Moreno Beach Drive, and terminating at the intersection of Moreno Beach Drive and Kalmia Avenue. Water Line Alternative 1 would connect the water line at the northeast corner of the project site and extend north to an existing off-site water tower. Water Line Alternative 2 would commence at the northeastern corner of the project site and extend east toward the intersection of Moreno Beach Drive and Juniper Avenue.

1.4 Scope of Study

The scope of this BRA encompasses descriptions of the project, methods of study, and existing site conditions including vegetation communities and the potential for special-status biological resources, followed by an evaluation of impacts to special-status biological resources pursuant to CEQA thresholds and compliance with the Western Riverside County MSHCP. Avoidance, minimization, and/or mitigation measures are proposed to reduce any potential adverse effects to biological resources to less than significant under CEQA where appropriate.

2.0 PROJECT DESCRIPTION

2.1 Project Description

The 78.48-acre project site is a proposed single-family residential development occupying approximately 38.5 acres, as shown in (**Figure 4**, *Site Plan*). The remaining acreage will be open space areas, which will consist of community open space areas that will be planted as appropriate to the project's climate and avoided areas in the northwestern and northeastern corner of the project site, which encompass native vegetation and rock outcroppings that will be preserved. Per Figure 3, there are four types of off-site areas associated with the project totaling 10.57 acres, including manufactured slope areas, road improvements, sewer line extension, and water line extensions (proposed and alternative). Sewer and water lines will be extended onto the site from existing utilities. Primary access to the development would occur from Ironwood Avenue between Nason Street and Oliver Street, immediately opposite from and north of Lantz Lane. Secondary access would be provided by driveways on both Nason Street and Oliver Street just north of Ironwood Avenue.

2.2 Project Avoidance

The project study areas consist primarily of non-native vegetation characterized by ruderal vegetation and disturbed areas that consist of little to no vegetation. There are some areas that support native plant communities, such as Riversidean sage scrub and brittlebush scrub, which predominantly reside in the northwestern corner of the on-site study area. The project proposes avoidance of the northwestern and northeastern corners of the on-site study area, which are located on hillsides that transition into the foothills of the Badlands mountain range located to the north of the project site. These avoided areas will be maintained as natural open space to preserve the scenic views of the hillsides from the City of Moreno Valley. The project on- and off-site study areas also support two drainage systems, which include Drainage A and Drainage Complex B, approximately 40% of which will be avoided.

3.0 METHODS OF STUDY

3.1 Approach

This BRA is based on information compiled through field reconnaissance and appropriate reference materials. Surveys included a general biological survey and vegetation mapping; an investigation of jurisdictional waters; focused plant surveys; and focused burrowing owl surveys.

3.2 Literature Review

Assessment of the study area began with a review of relevant literature on the biological resources of the study area and surrounding vicinity. The California Natural Diversity Database (CNDDB), a California Department of Fish and Wildlife (CDFW) species account database, was reviewed for all pertinent information regarding the localities of known observations of special-status species and habitats in the vicinity of the study area (CDFW, 2015). The vicinity of the study area included the following USGS topographic quadrangles: San Bernardino South, Redlands, Yucaipa, Riverside East, El Casco, Steele Peak, Perris, and Lakeview. Federal register listings, protocols, and species data provided by the United States Fish and Wildlife Service (USFWS) (USFWS, 2015a), CDFW and the California Native Plant Society (CNPS, 2015) were reviewed in conjunction with anticipated Federally and State listed species potentially occurring within the vicinity. Other data sources reviewed include USFWS critical habitat maps (USFWS, 2015b) and United States Department of Agriculture Natural Resources Conservation Service (NRCS) soils mapping (NRCS, 2015). In addition, numerous regional flora and fauna field guides were utilized to assist in the identification of species and suitable habitats, in addition to relevant local policies such as the *Western Riverside County Multiple Species Habitat Conservation Plan* (MSHCP) (Dudek & Associates, 2003). A list of all relevant references reviewed is included in Section 9.0, *References*.

3.3 Field Investigations

A general biological survey and vegetation mapping was conducted by ESA PCR Senior Biologist Ezekiel Cooley on September 19, 2014 and investigations of jurisdictional waters were conducted by Principal Regulatory Scientist Amir Morales on September 19 and December 10, 2014. The observed vegetation communities, jurisdictional features, and other biological features or species observations of interest were mapped on aerial photographs. Biological surveys were conducted over all on-site and off-site study areas, with special attention to sensitive habitats such as those suitable for the burrowing owl and those areas potentially supporting special-status flora. The only exception is an off-site study area located directly east of the project study area proposed to support manufactured slopes. The eastern manufactured slopes support suitable habitat for special-status plant species and a spring focused survey has not yet been conducted. As such, a mitigation measure addressing the potential for special-status plants to occur within this off-site area is included in Section 7.2.1 of this BRA. The following summarizes the extent of focused surveys conducted within the study areas identified on Figure 3.

Focused plant surveys were conducted within:

- the project site and off-site road improvement and sewer line areas on May 13, 2015 by ESA PCR Biologists Ezekiel Cooley, Amy Lee, and Lauren Singleton and on July 20, 2015 by Amy Lee;
- the off-site proposed and alternative water line areas on May 23 and July 5, 2016 by Amy Lee; and
- the off-site manufactured slope areas on July 5, 2016 by Amy Lee. However, a spring focused plant survey has not been conducted within the off-site manufactured slope area located directly east of the site.

Focused burrowing owl surveys were conducted within:

- the project site and off-site manufactured slopes, road improvement, proposed water line, and sewer line areas from May to July 2015 by ESA PCR Biologists Ezekiel Cooley, Amy Lee, and Lauren Singleton; and
- the alternative off-site water line areas from April to July 2016 by Amy Lee and Lauren Singleton.

During the course of all field visits, an inventory of plant and wildlife species observed was compiled. The methods for these field investigations are described in detail below.

3.3.1 Plant Community Mapping

Plant communities were mapped directly in the field utilizing a 125-scale (1”=125’) aerial photograph focusing on dominant plant species. Plant community names, codes, and descriptions follow *A Manual of California Vegetation, Second Edition* (Sawyer, Keeler-Wolf, and Evens, 2009) or Holland’s *Preliminary Descriptions of the Terrestrial Natural Communities of California* (1986). The California Natural Community Code (CaCodes) or Holland’s Element Code is in parentheses next to each community name, when applicable. After completing the fieldwork, the plant community polygons were digitized using Geographic Information System (GIS) technology to calculate acreages.

3.3.2 Sensitive Habitats

Sensitive habitats are listed by CDFW on their *List of Vegetation Alliances and Associations* (CDFW, 2010).[1] Communities on this list are given a Global (G) and State (S) rarity ranking on a scale of 1 to 5, where communities with a ranking of 5 are the most common and communities

[1] *Available online at: http://www.dfg.ca.gov/biogeodata/vegcamp/natural_comm_list.asp*

with a ranking of 1 are the rarest and of the highest priority to preserve. These high priority communities are denoted on the CDFW list with asterisks. For the purpose of this report, sensitive habitats are those communities that have a state ranking of S3 or rarer. Any sensitive habitats located on the study area were identified based on the mapped natural communities (see section 3.3.1, *Plant Community Mapping*).

3.3.3 General Plant Inventory

All plant species observed during the general and focused surveys were either identified in the field or collected and later identified using taxonomic keys. Plant taxonomy follows Baldwin (2012). Common plant names, when not available from Baldwin, were taken from Munz (1974) and/or Clarke (2007). Since common names vary significantly between references, scientific names are included upon initial mention of each species; common names consistent throughout the report are employed thereafter. All plant species observed were recorded in field notes. Special-status plant species are discussed below in section 3.3.4, *Special-status Plant Species*.

3.3.4 Special-status Plant Species

The potential for special-status plant species was assessed based upon the known occurrence of species in the area as identified from CDFW, USFWS and CNPS databases (see Section 3.2, *Literature Review*), and the presence or absence of suitable habitat within the study area based on plant community mapping (see section 3.3.1, *Plant Community Mapping*). Suitable habitat was defined as areas with appropriate vegetation communities, soils and/or topography (elevation at MSL) to support the species based on known occurrences in those habitats and/or CDFW and CNPS documented habitat descriptions for the species. The definitions of suitable habitat were then compared against the vegetation mapping conducted for the study area and local knowledge. A table of special-status plant species for which potentially suitable habitat occurs within the study area was prepared, and the potential for occurrence for each species was determined following completion of the vegetation mapping conducted during the field survey.

Due to the presence of potentially suitable habitat, focused plant surveys were conducted on the project site and off-site road improvement and sewer line areas by ESA PCR biologists Ezekiel Cooley, Amy Lee, and Lauren Singleton on May 13, 2015 and by Amy Lee on July 20, 2015. Focused plant surveys were also conducted on the off-site water line areas by Amy Lee on March 23, 2016 and July 5, 2016. Although a summer focused plant survey was conducted within the manufactured slope areas on July 5, 2016 by Amy Lee, a spring survey has not yet been performed in these areas. The manufactured slope area located west of the project boundary does not support suitable habitat for plants associated with the spring survey requirement. However, the manufactured slope area located east of the project boundary does require completion of a spring focused plant survey as summarized in Section 7.1.2 below. All focused plant surveys conducted to date were implemented in accordance with published agency guidelines (CDFW, 2009; CDFW, 2000a; and USFWS, 2000) and during the appropriate blooming periods of potential plant species to ensure detection of any special-status plants.

3.3.5 General Wildlife Inventory

All wildlife species observed within the study area, as well as any diagnostic sign (call, tracks, nests, scat, remains, or other sign), were recorded in field notes. Binoculars and regional field guides were utilized for the identification of wildlife, as necessary. Wildlife taxonomy follows Stebbins (2003) and California Herps (2015) for amphibians and reptiles, the American Ornithologists' Union (1998) for birds, and Jameson and Peeters (1988) for mammals. Since common names vary significantly between references, scientific names are included upon initial mention of each species; common names consistent throughout the report are employed thereafter. All wildlife species detected were recorded in field notes. Special-status wildlife species are discussed below in section 3.3.6, *Special-status Wildlife Species*.

3.3.6 Special-status Wildlife Species

The potential for special-status wildlife species was assessed based upon the known occurrence of species in the area as identified from CDFW and USFWS databases (see section 3.2, *Literature Review*), and the presence or absence of suitable habitat within the study area based on plant community mapping (see section 3.3.1, *Plant Community Mapping*). Suitable habitat was defined as areas with appropriate vegetation communities and/or topography (elevation at MSL) to support the species based on known occurrences in those habitats and/or CDFW and USFWS documented habitat descriptions for the species. The definitions of suitable habitat were then compared against the vegetation mapping conducted for the study area as well as local knowledge. A table of special-status wildlife species for which potentially suitable habitat occurs within the study area was prepared, and the potential for occurrence for each species was determined following completion of the vegetation mapping conducted during the field survey.

Due to the presence of potentially suitable habitat and MSHCP requirements, focused surveys were conducted for burrowing owl. A summary of the survey methodology is provided below; a separate survey report was also prepared following completion of the focused surveys. No other focused surveys were conducted for special-status wildlife species.

Burrowing Owl

The study area supports potentially suitable habitat for burrowing owl. As such, focused surveys for burrowing owl were conducted on the project site and off-site manufactured slopes, road improvement, proposed water line, and sewer line areas by ESA PCR biologists Ezekiel Cooley, Amy Lee, and Lauren Singleton on May 13; June 3; and July 2 and 27, 2015. Focused burrowing owl surveys were conducted within the off-site alternative water areas by Lauren Singleton on April 28, 2016 and by Amy Lee on May 23; June 9; and July 7, 2016. Step I and Step II surveys for burrowing owls were conducted on the project site and off-site areas in accordance with the County of Riverside's *Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area* (County of Riverside, 2006). Step I is a Habitat Assessment and Step II consists of Locating Burrows and Burrowing Owls.

Suitable habitat was identified during the Step I Habitat Assessment, which was conducted by Ezekiel Cooley on September 19, 2014 during the general biological survey, including disturbed, low-growing vegetation; bare ground; and a few small fossorial mammal burrows. Suitable habitat included disturbed, low-growing vegetation; bare ground; and a few small fossorial mammal burrows. Due to the presence of suitable habitat identified during the Step I survey, Step II surveys were conducted within the study area plus a 150-meter (approximately 500 feet) buffer zone around the perimeter of the study area (collectively, the “survey area”). Step II surveys focused on the detection of BUOW individuals, small fossorial mammal burrows potentially suitable for BUOW, and BUOW diagnostic sign (e.g., molted feathers, cast pellets, prey remains, eggshell fragments, or excrement at or near a burrow entrance). Transects were utilized, spaced no more than 100 feet apart, to allow 100 percent visual coverage of the ground surface. The four surveys were conducted during the burrowing owl breeding season (March 1 to August 31) on separate days between two hours before sunset to one hour after or one hour before sunrise to two hours after.[2]

3.3.7 Regional Connectivity/Wildlife Movement Corridor

An analysis of wildlife movement was conducted based on information compiled from the literature, analysis of aerial photographs and topographic maps, direct observations made in the field during survey work, and an analysis of existing wildlife movement functions. Relative to corridor issues, the focus of this assessment was to determine if the change of the existing land use within the study area would have significant impacts on the regional wildlife movement associated with the study area as well as the immediate vicinity.

The Western Riverside County MSHCP was reviewed to identify any linkage or Core Areas proposed for preservation on the study area (Dudek & Associates, 2003). Additionally, the South Coast Missing Linkages: A Wildland Network for the South Coast Ecoregion document was reviewed (South Coast Wildlands, 2008).

3.3.8 Investigation of Jurisdictional Waters

A jurisdictional determination of existing on-site drainage and wetland features was conducted by ESA PCR Principal Regulatory Scientist Amir Morales on September 19 and December 10, 2014. The purpose of the delineation was to assess the location, extent and acreage of “waters of the U.S.” and/or wetlands under the jurisdiction of the U.S. Army Corps of Engineers (USACE) and Regional Water Quality Control Board (RWQCB), and the limits of streambed and associated riparian habitat under the jurisdiction of CDFW. All areas were delineated using the protocol stipulated by CDFW under Section 1600-1607 of the California Fish and Wildlife Code, and by the USACE and RWQCB under Section 404 and Section 401 of the Clean Water Act (CWA), respectively. No potential for wetlands or other special aquatic sites were observed within project study areas. Therefore, a wetland delineation using the procedures stipulated in the USACE Wetland Delineation Manual (Environmental Laboratory, 1987) and Arid West Supplement (USACE, 2008a and USACE, 2008b) were not performed or warranted for this project.

2 For projects within the Western Riverside County MSHCP plan area, it has been PCR’s experience that the County of Riverside has preferred that Step II surveys be conducted at least one week apart.

The potential for USACE jurisdictional "waters of the U.S." was based primarily on the presence or absence of jurisdictional field indicators consistent with the USACE guidelines (USACE, 2008a) such as the presence of an OHWM and/or secondary indicators of hydrology, including evidence of the deposition of debris, scour, sediment sorting, and changes in vegetation. The extent of CDFW jurisdiction was assessed based on the limits of the defined bed and bank and includes riparian streambed associated vegetation, where applicable. If these criteria were met, data was collected to estimate the length and width of jurisdictional features potentially regulated by the resource agencies. Upon completion of the field work, documentation of all jurisdictional wetlands, waters, and streambed were completed. The documentation included a map illustrating the location, extent and acreage of all jurisdictional features. Downstream surface connections to known USACE jurisdictional waters were also evaluated in the field and by using satellite imagery and mapping, for the purpose of establishing a connection (i.e. federal nexus) to "waters of the U.S.," where applicable. The results of the ESA PCR jurisdictional assessment are subject to review and approval by the resource agencies as part of future regulatory permits for the project, if required.

4.0 EXISTING CONDITIONS

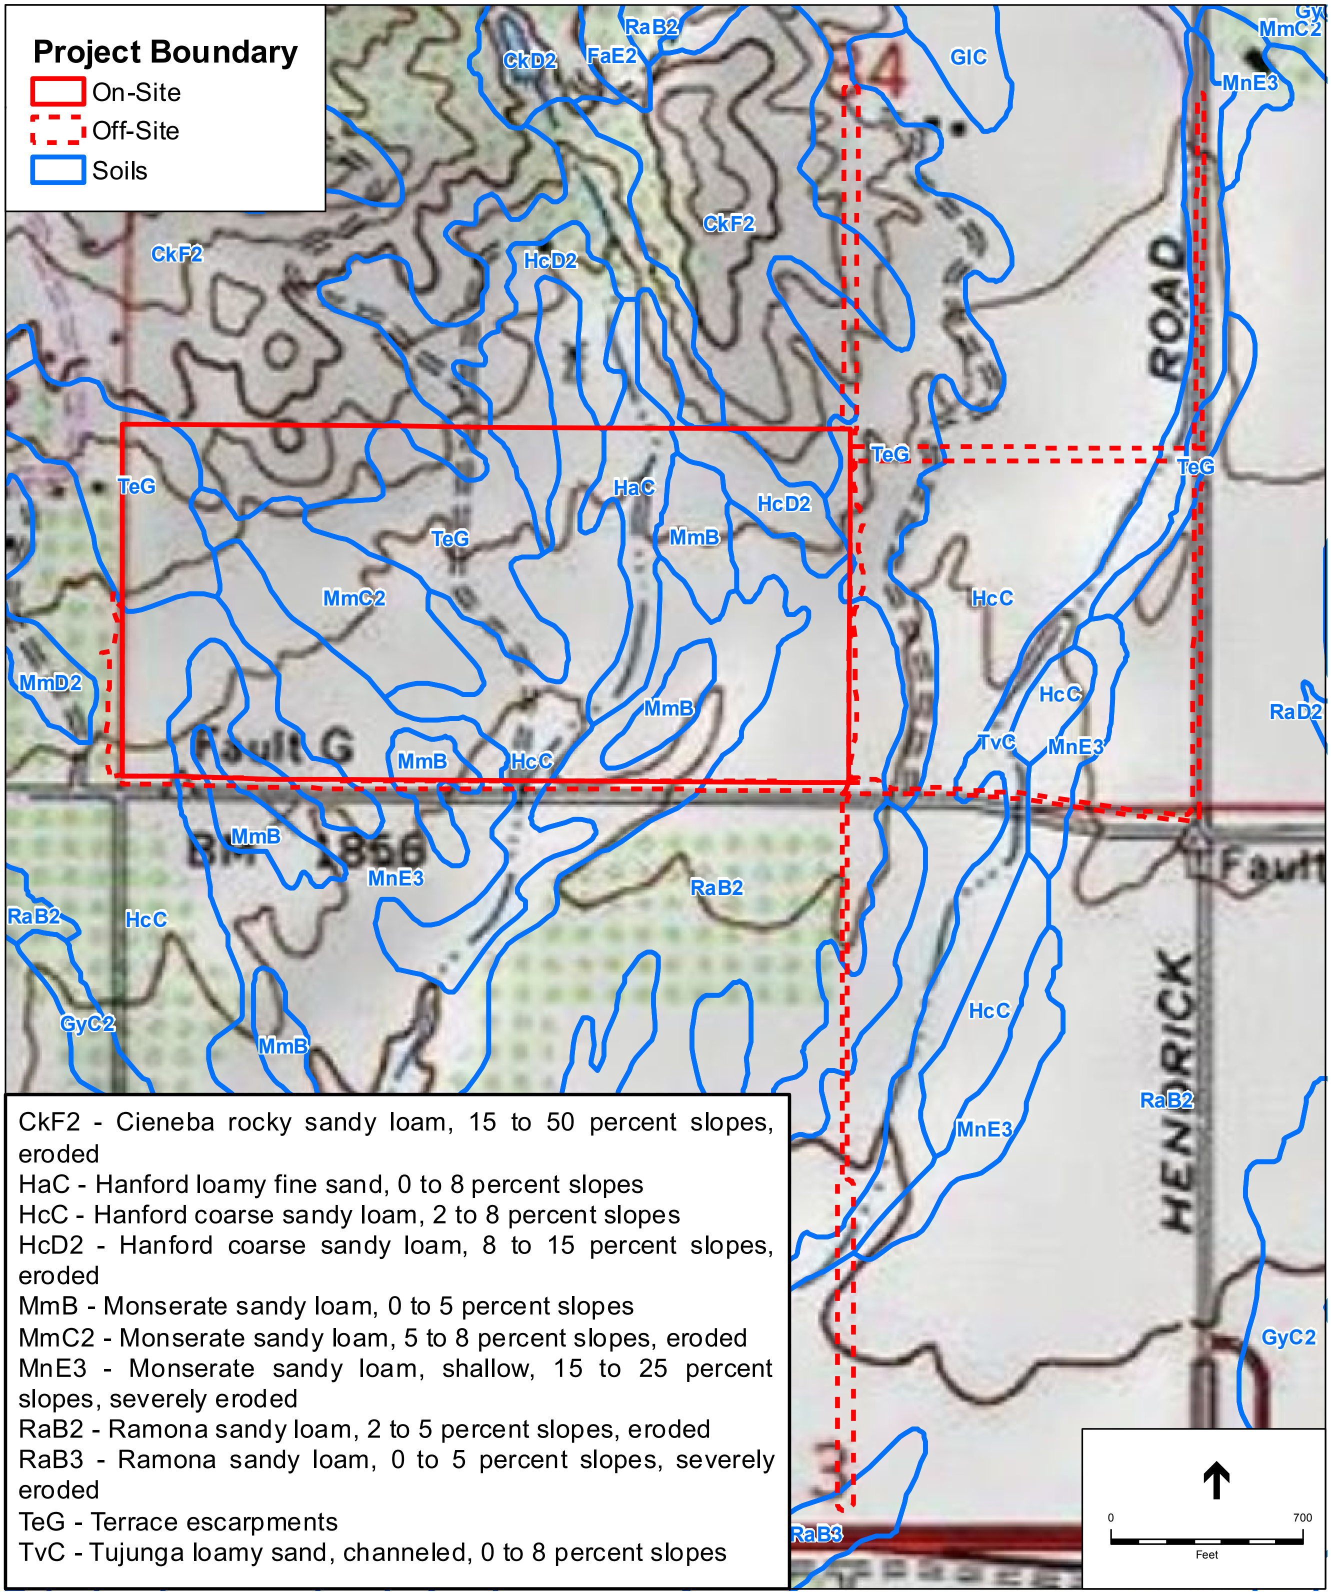
4.1 Characteristics of the Study Area and Surrounding Area

4.1.1 On-Site Characteristics

The approximately 79-acre project site and the 10.57-acre off-site areas are located in the City of Moreno Valley in Riverside County. The project site consists primarily of non-native vegetation characterized by ruderal vegetation and disturbed areas that consist of little to no vegetation. There are some areas that support native plant communities, such as Riversidean sage scrub and brittlebush scrub, which predominantly reside in the northwestern corner of the project site. The study area supports two drainage systems observed to support field indicators associated with USACE, RWQCB, and CDFW (collectively "the resource agencies") jurisdictional waters, referred to in this report as Drainage A and Drainage Complex B, although only Drainage A occurs on-site. The topography on-site is generally flat with gently rolling hills throughout the project site and steeper rock outcrops on the northwest corner. On-site elevations range from the lowest of approximately 1,830 feet above mean sea level (MSL) along the southern boundary of the project site to a high of approximately 1,975 feet above MSL along the northwest boundary of the site. On-site mapped soils in the project area include nine soil types as follows (NRCS, 2015), as shown in **Figure 5**, *Soils Map*:

- Cieneba rocky sandy loam, 15 to 50 percent slopes, eroded;
- Hanford loamy fine sand, 0 to 8 percent slopes;
- Hanford coarse sandy loam, 2 to 8 percent slopes;
- Hanford coarse sandy loam, 8 to 15 percent slopes, eroded;
- Monserate sandy loam, 0 to 5 percent slopes;
- Monserate sandy loam, 5 to 8 percent slopes, eroded ;
- Monserate sandy loam, shallow, 15 to 25 percent slopes, severely eroded;
- Ramona sandy loam, 2 to 5 percent slopes, eroded; and
- Terrace escarpments.

Immediate surrounding land uses include residential development to the south and west and vacant land to the north and east. The entire project site is within the Reche Canyon/Badlands Area Plan of the MSHCP (**Figure 6**, *Relationship to the MSHCP*).



CkF2 - Cieneba rocky sandy loam, 15 to 50 percent slopes, eroded
HaC - Hanford loamy fine sand, 0 to 8 percent slopes
HcC - Hanford coarse sandy loam, 2 to 8 percent slopes
HcD2 - Hanford coarse sandy loam, 8 to 15 percent slopes, eroded
MmB - Monserate sandy loam, 0 to 5 percent slopes
MmC2 - Monserate sandy loam, 5 to 8 percent slopes, eroded
MnE3 - Monserate sandy loam, shallow, 15 to 25 percent slopes, severely eroded
RaB2 - Ramona sandy loam, 2 to 5 percent slopes, eroded
RaB3 - Ramona sandy loam, 0 to 5 percent slopes, severely eroded
TeG - Terrace escarpments
TvC - Tujunga loamy sand, channeled, 0 to 8 percent slopes

4.1.2 Off-Site Characteristics

The 10.57-acre off-site areas include the proposed manufactured slopes, road improvements, sewer line, and water line areas. The off-site areas are dominated by ruderal vegetation and disturbed areas with only a small acreage of native brittlebush scrub and Riversidean sage scrub. The off-site areas also support some areas of sparsely vegetated river wash areas. A portion of Drainage A and the entirety of Drainage Complex B occurs within the off-site area. The topography of the off-site areas is generally flat with the exception of the proposed northern water line area near an existing water tank, which consists of a fairly steep east-facing slope supporting some native vegetation and rocky outcrops. Elevations within the off-site areas range from the lowest of approximately 1,793 feet above MSL at the southern end of the proposed sewer line to a high of approximately 1,948 feet above MSL at the steepest portion of the proposed water line area. Off-site mapped soils in the project area include seven soil types as follows (NRCS, 2015), as shown in Figure 5:

- Cieneba rocky sandy loam, 15 to 50 percent slopes, eroded;
- Hanford course sandy loam, 2 to 8 percent slopes;
- Monserate sandy loam, shallow, 15 to 25 percent slopes, severely eroded
- Ramona sandy loam, 0 to 5 percent slopes, severely eroded;
- Ramona sandy loam, 2 to 5 percent slopes, eroded;
- Terrace escarpments; and
- Tujunga loamy sand, channeled, 0 to 8 percent slopes.

Land uses immediately surrounding the off-site sewer line include a residential community to the west, SR-60 to the south, and vacant land to the north and east. Land uses immediately surrounding the potential water line areas include residential development to the north, east, and southwest and vacant land to the south and west. Since the proposed manufactured slope areas are directly adjacent to the project site, surrounding land uses are identical to those described in section 4.1.1 above.

4.2 Plant Communities

Descriptions of each of the plant communities found within the study area are provided below, with CDFW CaCodes or Holland Element Codes in parentheses next to each community name. The locations of each of the plant communities are shown in **Figure 7**, *Plant Communities*. **Table 1**, *Plant Communities*, lists each of the plant communities observed, as well as the acreage within the study area. Representative photographs of plant communities found within the study area are included in **Figures 8a** and **8b**, *Site Photographs*.

TABLE 1
PLANT COMMUNITIES

Plant Communities	On-site (acres)	Off-site (acres)
Brittlebush Scrub	2.34	0.27
Brittlebush Scrub/Ruderal	0.31	0.21
Buckwheat Scrub/Ruderal	0.09	0.04
Laurel Sumac Scrub/Ruderal	0.78	-
Riversidean Sage Scrub	3.10	0.12
Riversidean Sage Scrub/Ruderal	-	0.07
Rock Outcrop/Riversidean Sage Scrub	2.15	-
River Wash	-	0.05
Ruderal	38.04	2.50
Ruderal/Brittlebush Scrub	-	0.04
Ruderal/Riversidean Sage Scrub	2.29	0.43
Disturbed	28.68	4.18
Developed	0.70	2.66
Total	**78.48**	**10.57**

SOURCE: ESA PCR, 2016

4.2.1 Brittlebush Scrub (CaCode 33.030.00)

Brittlebush scrub is a drought tolerant subtype of Riversidean sage scrub dominated by an almost monotypic community of brittlebush (*Encelia farinosa*). Associated species observed within this community included sparsely growing California buckwheat (*Eriogonum fasciculatum*), California sagebrush (*Artemisia californica*), and chia (*Salvia columbariae*). Brittlebush scrub on-site occurs primarily in two patches on the northwestern corner of the project site and a smaller patch in the northeastern corner, comprising approximately 2.34 acres on-site. There is also a small patch of this community located within the off-site water line areas, occupying approximately 0.27 acre off-site.

4.2.2 Brittlebush Scrub/Ruderal (CaCode 33.030.00/Not Applicable)

Brittlebush scrub/ruderal is dominated by species found within the brittlebush scrub community (primarily brittlebush) with interspersed ruderal species. In addition to brittlebush, associated native species found in this community included native species such as blue elderberry (*Sambucus nigra ssp. caerulea*), common fiddleneck (*Amsinckia intermedia*), dove weed (*Croton setigerus*), mule fat (*Baccharis salicifolia*), pinebush (*Ericameria pinifolia*), and western ragweed (*Ambrosia psilostachya*). The ruderal community is described in further detail below (see section 4.2.9). Brittlebush scrub/ruderal occurs on-site in a small area along the eastern boundary in the northeastern portion of the project site and comprises approximately 0.31 acre. There is also a small patch of this community located within the eastern manufactured slope area, occupying approximately 0.21 acre off-site.

4.2.3 Buckwheat Scrub/Ruderal (CaCode 32.040.02/Not Applicable)

Buckwheat scrub/ruderal community is dominated by California buckwheat (*Eriogonum fasciculatum*) and other species commonly associated with the buckwheat scrub community, including pinebush and brittlebush. This community also supports interspersed areas of ruderal vegetation; the ruderal community is described in further detail below (see section 4.2.9). Buckwheat scrub/ruderal community occurs within one small patch on-site (0.09 acre) and within the off-site eastern manufactured slope area (0.04 acre).

4.2.4 Laurel Sumac Scrub/Ruderal (CaCode 45.455.00/Not Applicable)

Laurel sumac scrub/ruderal is primarily composed of those species found within the laurel sumac scrub community, which is dominated by laurel sumac (*Malosma laurina*) and often associated with other drought-tolerant shrubs, such as California buckwheat or black sage (*Salvia mellifera*). While this community largely consists of species found within the laurel sumac scrub community, ruderal species are interspersed throughout the community. The ruderal community is described in further detail below (see section 4.2.9). Laurel sumac scrub/ruderal community occurs in one area along the western boundary and comprises approximately 0.78 acre on-site only.

4.2.5 Riversidean Sage Scrub (Holland Element Code 32700)

Riversidean sage scrub is characterized by low growing shrubs adapted to semi-arid Mediterranean climate, and are most often found on steep or low gradient slopes that are rarely flooded. This community is fairly open and dominated by California sagebrush, California buckwheat, , and foxtail chess. Other associated species include pinebush, brittlebush, and caterpillar phacelia (*Phacelia cicutaria*). The Riversidean sage scrub community occurs in two patches on the northwestern corner of the project site and comprises approximately 3.10 acres on-site. There is also a small patch of this community located within the off-site water line areas, occupying approximately 0.12 acre off-site.

4.2.6 Riversidean Sage Scrub/Ruderal (Holland Element Code 32700/ Not Applicable)

Riversidean sage scrub/ruderal is primarily composed of those species found within the Riversidean sage scrub community, which is described in section 4.2.5 above. While this community largely consists of species found within the Riversidean sage scrub community, ruderal species are interspersed throughout the community. The ruderal community is described in further detail below (see section 4.2.9). Riversidean sage scrub/ruderal community occurs in one area along the western boundary and comprises approximately 0.07 acre off-site only.

4.2.7 Rock Outcrop/Riversidean Sage Scrub (Not Applicable/Element Code 32700)

Rock outcrop/Riversidean sage scrub includes rock outcrop areas, which consist of rocky, sparsely vegetated areas typically found along the hillsides on the northwest corner of the project site, and is interspersed with vegetation that is characteristic of the Riversidean sage scrub community described in section 4.2.5 above. Additional associated species observed in the rock outcrop/Riversidean sage scrub communities on-site included cane cholla (*Cylindropuntia californica* var. *parkeri*) and two-color rabbit tobacco (*Pseudognaphalium bicolor*). There are two patches of rock outcrop/Riversidean sage scrub on the northwestern corner of the project site, which occupies approximately 2.15 acres on-site only.

4.2.8 River Wash (Not Applicable)

River wash consists of prevailingly coarse-textured but variable material, ranging from sand to gravel. It usually is flood-swept, though it may lie slightly above present overflows. The sandy areas are loose with some silt and other fine materials. Sparse vegetation within the river wash areas include giant reed (*Arundo donax*), flatspine bur ragweed (*Ambrosia acanthicarpa*), pucturevine (*Tribulus terrestris*), and common sunflower (*Helianthus anuus*). River wash areas comprise approximately 0.05 acre off-site only associated with the mainstem Drainage B within the sewer line and water line areas.

4.2.9 Ruderal (Not Applicable)

Ruderal vegetation is found in areas heavily disturbed by human activities, such as roadsides, graded fields, and manufactured slopes. Within the study area, ruderal species observed include cheeseweed (*Malva parviflora*), cudweed aster (*Corethrogyne filaginifolia*), foxtail chess (*Bromus madritensis* ssp. *rubens*), gum tree (*Eucalyptus* sp.), London rocket (*Sisymbrium irio*), Mediterranean schismus (*Schismus barbatus*), Mexican palo verde (*Parkinsonia aculeata*), ripgut grass (*Bromus diandrus*), shortpod mustard (*Hirschfeldia incana*), tocalote (*Centaurea melitensis*), tree tobacco (*Nicotiana glauca*), wild oat (*Avena* sp.), and wild radish (*Raphanus raphanistrum*). Ruderal areas dominant the project site and comprised approximately 38.04 acres on-site. The ruderal community is also prominent throughout the off-site areas, totaling 2.50 acres.

4.2.10 Ruderal/Brittlebush Scrub (Not Applicable/ CaCode 33.030.00)

Ruderal/brittlebush scrub is dominated by ruderal, weedy species but exhibit sparse, remnant species associated with the brittlebush scrub community. The brittlebush scrub and ruderal communities are described above in sections 4.2.1 and 4.2.9, respectively. Only one small ruderal/brittlebush scrub patch was observed within the water line area, consisting of approximately 0.04 acre off-site only.

4.2.11 Ruderal/Riversidean Sage Scrub (Not Applicable/Holland Element Code 32700)

Ruderal/Riversidean sage scrub is dominated by ruderal, weedy species but exhibit sparse, remnant species associated with the Riversidean sage scrub community. The Riversidean sage scrub and ruderal communities are described above in sections 4.2.5 and 4.2.9, respectively. The ruderal/Riversidean sage scrub community occupies the northwestern corner and the center of the project site, consisting of approximately 2.29 acres on-site. This community also occurs within the eastern manufactured slope area, consisting of approximately 0.43 acre off-site.

4.2.12 Disturbed (Not Applicable)

Disturbed areas are heavily affected by human activities, including dirt roads, graded fields, and manufactured slopes; as a consequence, these areas support little to no vegetation. While ruderal areas comprise the majority of the project site, disturbed areas account for much of the remaining space occupying approximately 28.68 acres on-site. Disturbed areas dominate the off-site areas, consisting of 4.18 acres.

4.2.13 Developed (Not Applicable)

Developed areas are associated with an unpaved access road that occurs along the eastern boundary of the project site and off-site manufactured slope areas. Developed areas occupied approximately 0.70 acre on-site and 2.66 acres off-site.

4.3 General Plant Inventory

The plant communities discussed above are comprised of numerous plant species. Observations regarding the plant species present were made during the field visits to the study area, and a list of all plant species observed is provided in **Appendix A**, *Floral and Faunal Compendium*. Special-status plant species occurring or potentially occurring within the study area are discussed below in section 4.7.5, *Special-status Plant Species*.

4.4 General Wildlife Inventory

The plant communities discussed above provide habitat for common wildlife species. Observations regarding the wildlife species present were made during the field visits to the study area, and a list of all species observed is provided in **Appendix A**. Special-status wildlife species occurring or potentially occurring are discussed below in section 4.7.6, *Special-status Wildlife Species*.

4.5 Wildlife Movement

4.5.1 Overview

Wildlife corridors link together areas of suitable habitat that are otherwise separated by rugged terrain, changes in vegetation, or human disturbance. The fragmentation of open space areas by urbanization creates isolated "islands" of wildlife habitat. In the absence of habitat linkages that allow movement to adjoining open space areas, various studies have concluded that some wildlife species, especially the larger and more mobile mammals, will not likely persist over time in fragmented or isolated habitat areas because they prohibit the infusion of new individuals and genetic material (MacArthur and Wilson, 1967; Soulé, 1987; Harris and Gallagher, 1989; Bennett, 1990).

Corridors effectively act as links between different populations of a species. A group of smaller populations (termed "demes") linked together via a system of corridors is termed a "metapopulation." The long-term health of each deme within the metapopulation is dependent upon its size and the frequency of interchange of individuals (immigration vs. emigration). The smaller the deme, the more important immigration becomes, because prolonged inbreeding with the same individuals can reduce genetic variability. Immigrant individuals that move into the deme from adjoining demes mate with individuals and supply that deme with new genes and gene combinations that increases overall genetic diversity. An increase in a population's genetic variability is generally associated with an increase in a population's health and long-term viability.

Corridors mitigate the effects of habitat fragmentation by: (1) allowing animals to move between remaining habitats, which allows depleted populations to be replenished and promotes genetic diversity; (2) providing escape routes from fire, predators, and human disturbances, thus reducing the risk that catastrophic events (such as fires or disease) will result in population or local species extinction; and (3) serving as travel routes for individual animals as they move within their home ranges in search of food, water, mates, and other needs (Noss, 1983; Fahrig and Merriam, 1985; Simberloff and Cox, 1987; Harris and Gallagher, 1989).

Wildlife movement activities usually fall into one of three movement categories: (1) dispersal (e.g., juvenile animals from natal areas, individuals extending range distributions); (2) seasonal migration; and, (3) movements related to home range activities (foraging for food or water, defending territories, searching for mates, breeding areas, or cover). Although the nature of each of these types of movement is species specific, large open spaces will generally support a diverse wildlife community representing all types of movement. Each type of movement may also be represented at a variety of scales from non-migratory movement of amphibians, reptiles, and some birds on a "local" level to home ranges encompassing many square-miles for large mammals moving on a "regional" level. A number of terms have been used in various wildlife movement studies, such as "wildlife corridor," "travel route," and "wildlife crossing" to refer to areas in which wildlife move from one area to another. To clarify the meaning of these terms and facilitate the discussion on wildlife movement in this study, these terms are defined as follows:

<u>Travel Route</u>: A landscape feature (such as a ridgeline, drainage, canyon, or riparian strip) within a larger natural habitat area that is used frequently by animals to facilitate movement and provide access to necessary resources (e.g., water, food, cover, den areas). The travel route is generally preferred because it provides the least amount of topographic resistance in moving from one area to another; it contains adequate food, water, and/or cover while moving between habitat areas; and provides a relatively direct link between target habitat areas.

Wildlife Corridor: A piece of habitat, usually linear in nature, that connects two or more habitat patches that would otherwise be fragmented or isolated from one another. Wildlife corridors are usually bounded by urban land areas or other areas unsuitable for wildlife. The corridor generally contains suitable cover, food, and/or water to support species and facilitate movement while in the corridor. Larger, landscape-level corridors (often referred to as "habitat or landscape linkages") can provide both transitory and resident habitat for a variety of species.

Wildlife Crossing: A small, narrow area, relatively short in length and generally constricted in nature, that allows wildlife to pass under or through an obstacle or barrier that otherwise hinders or prevents movement. Crossings typically are manmade and include culverts, underpasses, drainage pipes, and tunnels to provide access across or under roads, highways, pipelines, or other physical obstacles. These are often "choke points" along a movement corridor.

4.5.2 Wildlife Movement Within the Study Area

As previously described, wildlife movement activities occur at a variety of scales from a "local" level to a "regional" level. Regional movement through the study area is restricted due to the urbanization of the region and the proximity to a major freeway (SR-60) (refer to **Figure 9**, *Regional Aerial Photograph*). The study area is immediately surrounded by residential development to the south and west. Although there is vacant land directly to the north and east of the study area, the land to the east is highly disturbed and mostly cleared of natural vegetation and there are a number of residential communities adjacent to the eastern boundary of the vacant land. Additionally, the study area is located about 0.5 mile to north of the SR-60. Although regional movement through this area is likely limited, there is some potential for local movement through the study area via the open area directly to the north which comprises the foothills of the Badlands. Although the study area connects to the open area to the north, the study area is dominated by ruderal and disturbed areas with limited native vegetation.

The project site only supports one ephemeral drainage that conveys minor road runoff from Ironwood Avenue with no associated vegetation (Drainage A), which is unlikely to facilitate wildlife movement. Additionally, Drainage A initiates on-site and meanders for approximately 396 linear feet before exiting the project site via a culvert beneath Ironwood Avenue. Drainage Complex B occurs within the off-site areas and comprises the mainstem Drainage B, which is a USGS mapped blueline stream, and five small tributaries (Drainages B1 through B5). The mainstem Drainage B does support some ruderal and non-native vegetation (e.g. giant reed). Drainage B appears to initiate in the foothills of the Badlands to the north of the off-site areas and becomes channelized just west of the off-site sewer line area.

SOURCE: Google Maps, 2015 (Aerial).

Ironwood Village Project
Figure 9
Regional Aerial Photograph

FSA PCR

Due to the limited vegetation within Drainage B and lack of connection to suitable habitat downstream due to development, Drainage B is not expected to function as a wildlife movement corridor. The smaller tributaries (Drainages B1 through B5) are also ephemeral drainages with limited upland vegetation, which initiate at the peak of a small ridge upstream from the off-site water line area and appear to support little to no surface connection to the mainstem Drainage B likely due to decades of disturbance from agriculture and/or weed abatement activities. Drainage B5 does not appear to support any natural watershed and appears to be relict in nature. Vegetation within the drainage appears to be supported by artificial discharges from the water tank blow-off pipe observed at the headwaters of Drainage B5. Due to the limited vegetation and watershed, as well as the disturbed nature of the downstream areas off-site, the tributaries do not facilitate wildlife movement through the study area.

The study area is not within any Core or Linkage areas as identified by the MSHCP (Dudek & Associates, 2003). There is one proposed linkage (Proposed Linkage 4) approximately 2.1 miles to the north of the study area and one existing core (Core H) roughly 4.0 miles to the south of the study area. Proposed Linkage 4 would include upland habitat within Reche Canyon and provide connection to Box Springs Reserve, the Badlands, and San Bernardino County. The open area directly to the north of the study area does directly connect to Proposed Linkage 4. Existing Core H includes Lake Perris State Recreation Area and San Jacinto Wildlife Area. There is no direct connection from the study area to Core H, which are separated by urban development. The study area is not within any linkages identified by the South Coast Missing Linkages report; the nearest linkage design identified is for the San Bernardino–San Jacinto Connection located approximately 3.5 miles to the east (South Coast Wildlands, 2008). Since the study area is not identified as a linkage by the MSHCP or South Coast Wildlands, and it does not support habitat that connects two or more habitat patches that would otherwise be fragmented or isolated from one another, the study area is not considered a wildlife corridor. The study area may provide limited opportunities for wildlife movement, more likely for local wildlife movement as described below.

Movement on a smaller or "local" scale could occur within the study area for species that are less restricted in movement pathway requirements or are adapted to urban areas (e.g., raccoon [*Procyon lotor*], stripped skunk [*Mephitis mephitis*], coyote [*Canis latrans*], and bird species in general). Habitat within the study area is dominated by ruderal and disturbed areas with some portions supporting native vegetation, including brittlebush scrub, buckwheat scrub, and Riversidean sage scrub. As such, it likely supports some wildlife movement within the study area and/or nearby areas for foraging and shelter. Data gathered from the biological survey indicates that the study area contains habitat that supports common species of invertebrates, reptiles, birds, and small mammals. The home range and average dispersal distance of many of these species may be entirely contained within the study area and immediate vicinity.

Populations of animals such as insects, reptiles, small mammals, and a few bird species may find all their resource requirements without moving far or outside of the study area at all. Occasionally, individuals expanding their home range or dispersing from their parental range could attempt to move outside of the study area, if feasible, based on the surrounding restrictions to movement from development (see above). Bird species may fly over the development and freeways to utilize the study area for foraging, although this is expected to be limited due to the high level of human activity in the region and higher quality foraging habitats in nearby open areas with less human disturbance, particularly the Badlands to the north.

In summary, the study area may support live-in and movement habitat for species on a local scale (i.e., some live-in and at least marginal movement habitat for invertebrates, reptiles, birds, and small mammal species). However, due to surrounding development, the proximity to the I-60 freeway, and the ephemeral nature and limited watershed of the drainages, the study area likely provides little to no function to facilitate movement for wildlife species on a regional scale and it is not identified as a regionally important dispersal or seasonal migration corridor by the MSHCP or by South Coast Wildlands.

4.6 Jurisdictional Waters

An investigation of on- and off-site jurisdictional waters was performed by Amir Morales, Principal Regulatory Scientist, on September 19, 2014. An additional site visit was conducted by Amir Morales on December 10, 2014 following a series of storm events that occurred on December 2, 3, and 4, 2014 totaling nearly two inches of rain in that period.[3] Based on the results of the investigation, Drainage A and Drainage Complex B (Drainages B & B1through B5) were determined to support a total of approximately 0.057 acre of USACE/RWQCB "waters of the U.S." and 0.165 acre of CDFW jurisdictional streambed (**Figure 10**, *Jurisdictional Features*). A summary of jurisdictional features assessed within the study area is provided in **Table 2**, *Jurisdictional Features*. Photographs of drainage features are provided as **Figures 11a** and **11b**, *Drainage Photographs*.

The study area is located within rolling valley topography located southeast of Reche Canyon and south/southwest of The Badlands mountain range. The study area is located within the San Jacinto Watershed and generally drains toward the south, eventually reaching the Perris Valley Storm Drain which ultimately reaches the San Jacinto River and then Canyon Lake. The USGS Sunnymead topographic Quadrangle depicts a blueline stream originating in the foothills to the north with headwaters located approximately 2,000 linear feet from the on-site study area. The mapped blueline drainage feature enters the project site near the center of the northern project boundary and bisects the property. The property has been subjected to seasonal dry-farming and/or weed abatement activities for several decades. Based on the jurisdictional assessments performed by ESA PCR, no discernible streambed or indicators of flow were observed within the area historically mapped as a blueline drainage feature during the September 19, 2014 jurisdictional delineation. In order to determine if jurisdictional field indicators reestablish following moderate rain events, Amir Morales returned to investigate the site following a series of early December 2014 storm events yielding nearly 2-inches of rain over three consecutive days. In our experience, this amount of rain would have reestablished some evidence of flow capable of eroding a streambed and/or supporting some jurisdictional field indicators based on the USACE's arid delineation guidelines.

[3] Based on WeatherCurrents.com precipitation data accessed at http://weathercurrents.com/morenovalley/ArchiveDec2014.do obtained on July 26, 2016.

TABLE 2
JURISDICTIONAL FEATURES

Drainage (Study Area)	Length (ft)	USACE/ RWQCB (acres)	CDFW (acres)	Flow Classification
A (On-Site)	285	0.023	0.046	Ephemeral
A (Off-Site)	111	0.007	0.013	Ephemeral
Drainage A Subtotal	***396***	***0.030***	***0.059***	
B (Off-Site)	306	0.026	0.069	Ephemeral
B1 (Off-Site)[b]	0[a]	N/A	0.001	Ephemeral
B2 (Off-Site)[b]	32	N/A	0.001	Ephemeral
B3 (Off-Site)[b]	25	N/A	0.001	Ephemeral
B4 (Off-Site)[b]	34	N/A	0.001	Ephemeral
B5 (Off-Site)	35	0.002	0.033	Ephemeral
Drainage Complex B Subtotal	***432***	***0.028***	***0.106***	
Total	**828**	**0.058**	**0.165**	

[a] Less than one linear foot of jurisdiction occurs within Drainage B1 as the majority of the drainage within the off-site study area is associated with an existing corrugated metal pipe that was not quantified.

[b] Drainage did not support jurisdictional field indicators associated with "waters of the U.S" regulated by the USACE and RWQCB pursuant to the Clean Water Act.

SOURCE: ESA PCR, 2014

However, no ordinary water mark, sediment deposition/sorting, debris wracks, bed/bank, streambed associated vegetation, or other jurisdictional field indicators were observed immediately following the consecutive rain events. As a result, it was determined that no jurisdiction occurs within the area mapped as a blueline drainage feature within the study area.

It was noted that the USGS Sunnymead Quadrangle depicts a small water feature at the off-site headwaters, located approximately 2,000 linear feet north of the site where the blueline feature initiates. As such, it is feasible that the mapped water feature is associated with a historic stock pond, which may have supported a small drainage that ultimately extended to the project study area when water was historically discharged from the feature and/or significant storm events caused it to overflow. However, based on review of current aerial imagery in Google Earth, no water feature appears to persist within the off-site headwaters in the current condition capable of supporting a discernible streambed. Consequently, the only jurisdictional feature identified within the on-site study area during the December 2014 site visit is a minor roadside ditch identified as Drainage A. Jurisdiction within the off-site study areas is limited to a mainstem drainage identified as Drainage B, and Drainage Complex B which is comprised of tributary Drainages B1through B5. No riparian and/or hydrophytic vegetation communities were observed on the study area that would warrant the need for a formal wetland analysis. Therefore, no jurisdictional wetlands or special aquatic sites were determined to occur within the project study areas. The following provides a summary of jurisdictional drainage features identified within the project study areas:

Ironwood Village Project

Figure 11b

Drainage Photographs

ESA PCR

4.6.1 Drainage A

Drainage A is an unvegetated roadside ditch that establishes only when rain events generate sufficient runoff from Ironwood Avenue to erode a small channel through sandy disturbed soils. The ephemeral ditch enters the Ironwood Avenue Right-of-Way within the off-site study area then enters the on-site study area along the southern project boundary, extending for approximately 285 linear feet. The ditch then enters a corrugated metal pipe (CMP) beneath Ironwood Avenue which is ultimately conveyed through the rural residential development to the south and into a water quality basin adjacent to SR-60. Drainage A ranged from 2 to 3 feet in jurisdictional channel width and contains sandy loam soils that are periodically disturbed by weed abatement activities. A photograph of Drainage A is provided in Figure 11a.

Drainage A within the on-and off-site study area supports a total of approximately 396 linear feet of ephemeral unvegetated roadside ditch, containing 0.023 acre of on-site and 0.007 acre of off-site non-wetland USACE "waters of the U.S" totaling 0.030 acre, as well as 0.46 acre of on-site and 0.013 acre of off-site CDFW jurisdictional streambed totaling 0.059 acre.

4.6.2 Drainage Complex B

4.6.2.1 Drainage B

Drainage B is an ephemeral sandy wash that originates off-site approximately 2 miles to the northwest along Reche Canyon Road. The drainage meanders along the road until it reaches the valley floor extending across Trust Way, crossing Kalmia Avenue, and then conveys runoff along the west side of Moreno Beach Drive for approximately a quarter-mile prior to crossing the off-site Water Line Alternative 1. The drainage feature then extends south/southwest for another quarter-mile before entering a culvert beneath Ironwood Avenue and meandering for another quarter-mile prior to entering the off-site sewer line study area. Drainage B then continues for approximately 700 linear feet toward the southwest ultimately entering a detention basin located directly northeast of the Nason Street exit of SR-60. Drainage B within the off-site study areas ranges from approximately 4-10 feet in USACE/CDFW channel width and is entirely unvegetated. Soils within the wash are comprised of loamy sands of the Tujunga series consistent with the mapping by NRCS. Photographs of Drainage B are provided in Figure 11a.

Drainage B within the off-site sewer line and Water Line Alternative 1 total approximately 306 linear feet of unvegetated ephemeral sandy wash totaling approximately 0.026 acre of non-wetland USACE/RWQCB "waters of the U.S." and 0.069 acre of CDFW jurisdictional streambed.

4.6.2.2 Drainages B1- B5

Drainages B1through B5 are minor ephemeral drainages that with the exception of Drainage B5 (which appears to accept flow from a water tank bypass pipe) function to drain a very limited watershed west of the existing water district road that runs parallel to the eastern boundary of the project site. Drainage B5 appears to support flows from two small slope v-ditches as well as a pipe at its headwaters that appears to drain the existing water tank directly to the west, and was likely formed by controlled releases from the water tank structure. Otherwise, no natural watershed capable eroding such an incised drainage feature occurs upstream. Drainages B1 through B3 have small CMP culverts that convey limited runoff west of the water district road and support very weak indicators of flow and/or bed and bank. Drainage B4 does not support a pipe culvert rather a small pipe that drains surface flow from a small v-ditch directly west of the road. No discernible indicators associated with "waters of the U.S." such as an ordinary high water mark, sediment deposition/sorting, debris wracks, streambed associated vegetation, or other USACE jurisdictional field indicators indicative of the arid southwest region were observed within Drainages B1-B4 immediately following the consecutive rain events of early December 2014. However, Drainages B1 through B4 do support topographic low points with banks typical of headwater swales. Drainage B5 was presumed to support USACE/RWQCB jurisdiction due to the presence of an ordinary high water mark, which ultimately became indiscernible after approximately 1,000 linear feet. Given the reasonable proximity to Drainage B5 observed in the field in light of periodic disturbance to the sandy soils from weed abatement activities, Drainage B5 was presumed to be regulated as "waters of the U.S." Drainages B1through B5 were all presumed to support CDFW jurisdictional streambed.

Drainages B1 through B4 exhibit sparse upland scrub vegetation and ruderal grasses and are otherwise unvegetated. Drainage B5 supports a small patch of mule fat along approximately 15 linear feet of the headwaters directly downstream of the water tank pipe and mostly upland scrub vegetation beyond. Drainages B1through B5 contain CDFW jurisdictional channel widths ranging from 0.5 to 3 feet, while Drainage B5 exhibits USACE jurisdiction averaging approximately 2 feet in channel width and a CDFW channel width approximately averaging 10 feet. Drainage Complex B drainage features all were observed to support sandy loam soils. Photographs of Drainage Complex B are provided in Figures 11a and 11b.

Drainage B5 within the Water Line Alternative 2 study area totals approximately 0.002 acre of non-wetland ephemeral "waters of the U.S." regulated by the USACE/RWQCB. Drainage Complex B (Drainages B1 through B5) total approximately 0.037 acre of CDFW jurisdictional streambed and associated vegetation.

4.7 Special-status Biological Resources

The following discussion describes the plant and wildlife species present, or potentially present, within the study area that have been afforded special recognition by Federal, State, or local resource conservation agencies and organizations. These species have declining or limited population sizes, usually resulting from habitat loss. Also discussed are habitats that are unique, of relatively limited distribution, or of particular value to wildlife. Protected special-status species are classified by either Federal or State resource management agencies, or both, as threatened or endangered, under provisions of the Federal and State Endangered Species Acts (FESA and CESA, respectively).

4.7.1 Federal Special-status Resource Protection and Classifications

4.7.1.1 FESA

The FESA of 1973 defines an endangered species as "any species which is in danger of extinction throughout all or a significant portion of its range." A threatened species is defined as "any species which is likely to become an Endangered species within the foreseeable future throughout all or a significant portion of its range." Under provisions of Section 9(a)(1)(B) of the FESA, unless properly permitted, it is unlawful to "take" any listed species. "Take" is defined in Section 3(18) of FESA: "...harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." Further, the USFWS, through regulation, has interpreted the terms "harm" and "harass" to include certain types of habitat modification as forms of "take." These interpretations, however, are generally considered and applied on a case-by-case basis and often vary from species to species. In a case where a property owner seeks permission from a federal agency for an action which could affect a federally listed plant or animal species, the property owner and agency are required to consult with USFWS pursuant to Section 7 of the ESA if there is a federal nexus, or pursuant to Section 10 of the ESA. Section 9(a)(2)(b) of the FESA addresses the protections afforded to listed plants.

All references to Federally-protected species in this BRA include the most current published status or candidate category to which each species has been assigned by USFWS. For purposes of this assessment the following acronyms are used for Federal status species, as applicable:

- FE Federally-listed as Endangered
- FT Federally-listed as Threatened
- FPE Federally proposed for listing as Endangered
- FPT Federally proposed for listing as Threatened
- FPD Federally proposed for delisting
- FC Federal candidate species (former C1 species)

Some of the USFWS offices maintain a database of listed species within their jurisdiction, for example the Sacramento[4] and Carlsbad[5] offices. The Carlsbad USFWS Office jurisdiction encompasses the counties of Los Angeles, Orange, Riverside, San Bernardino, Imperial, and San Diego.

4.7.1.2 Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) protects individuals as well as any part, nest, or eggs of any bird listed as migratory. In practice, Federal permits issued for activities that potentially

4 http://www.fws.gov/sacramento/ES_Species/Lists/es_species_lists-overview.htm
5 http://www.fws.gov/carlsbad/SpeciesStatusList/CFWO_Species_Status_List.htm

impact migratory birds typically have conditions that require pre-disturbance surveys for nesting birds. In the event nesting is observed, a buffer area with a specified radius must be established, within which no disturbance or intrusion is allowed until the young have fledged and left the nest, or it has been determined that the nest has failed. If not otherwise specified in the permit, the size of the buffer area varies with species and local circumstances (e.g., presence of busy roads, intervening topography, etc.), and is based on the professional judgment of a monitoring biologist. A list of migratory bird species protected under the MBTA is published by USFWS.

4.7.1.3 Federal Clean Water Act, Section 404

Section 404 of the Clean Water Act (CWA) regulates the discharge of dredged or fill material into waters of the U.S. and authorizes the Secretary of the Army, through the Chief of Engineers, to issue permits for such actions. Implementing regulations for the CWA define waters of the U.S. as "rivers, creeks, streams, and lakes extending to their headwaters and any associated wetlands." Wetlands are defined as "areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support a prevalence of vegetation typically adapted for life in saturated soil conditions." The permit review process entails an assessment of potentially adverse impacts to USACE jurisdictional waters of the U.S.

Over the years, the USACE has modified its regulations, typically due to evolving policy or judicial decisions, through the issuance of Regulatory Guidance Letters, memorandums, or more expansive instruction guidebooks. These guidance documents help to update and define how jurisdiction is claimed, and how these waters of the U.S. will be regulated. The most recent, significant modification occurred on June 5, 2007, subsequently updated in December 2008, when the USACE and the U.S. Environmental Protection Agency (USEPA) issued a series of guidance documents outlining the requirements and procedures, effective immediately, to establish jurisdiction under Section 404 of the CWA and the Section 10 of the Rivers and Harbors Act of 1899. These documents are intended to be used for all jurisdictional delineations and provide specific guidance for the jurisdictional determination of potentially jurisdictional features affected by the U.S. Supreme Court rulings in *Rapanos v. the United States* and *Carabell v. the United States* 547 U.S. 715 (2006) (jointly referred to as *Rapanos*).

The *Rapanos* case outlines the conditions and criteria used by the USACE to assess and claim jurisdiction over non-isolated, non-navigable, ephemeral tributaries. Under a plurality ruling, the Court noted that certain "not relatively permanent" (i.e., ephemeral), non-navigable tributaries must have a "significant nexus" to downstream traditional navigable waters to be jurisdictional. An ephemeral tributary has a significant nexus to downstream navigable "waters" when it has "more than a speculative or an insubstantial effect on the chemical, physical, and/or biological integrity of a Traditional Navigable Water (TNW)." A significant nexus is established through the consideration of a variety of hydrologic, geologic and ecological factors specific to the particular drainage feature in question. For drainage features that do not meet the significant nexus criteria, a significant nexus determination is provided by the USACE to the USEPA for the final determination of federal jurisdiction. Drainage features that do not meet the significant nexus criteria based on completion of an AJD, and/or are determined to be isolated pursuant to the SWANCC ruling (see below), may still be regulated by California Department of Fish and

Wildlife (CDFW) under Fish and Game Code Section 1600 or the Regional Water Quality Control Board (RWQCB) under the Porter-Cologne Water Quality Act.

On January 15, 2003, the USACE and USEPA issued a Joint Memorandum to provide clarifying guidance regarding the United States Supreme Court ruling in the *Solid Waste Agency of Northern Cook County v. United States Army Corps of Engineers*, No. 99-1178 (January 9, 2001) ("the SWANCC ruling"), (Federal Register: Vol. 68, No. 10.). This ruling held that the CWA does not give the federal government regulatory authority over non-navigable, isolated, intrastate waters. As a result of this decision, some previously regulated depressional areas such as mudflats, sandflats, wetlands, prairie potholes, wet meadows, playa lakes, natural ponds, and vernal pools, which are not hydrologically connected to other intra- or inter-state "waters of the U.S.," are no longer regulated by the USACE.

4.7.1.4 Federal Clean Water Act, Section 401

The mission of the RWQCB is to develop and enforce water quality objectives and implement plans that will best protect the beneficial uses of the state's waters, recognizing local differences in climate, topography, geology, and hydrology. The California RWQCB is responsible for implementing compliance not only with state codes such as the California Water Code, but also some federal acts such as Section 401 of the CWA. Section 401 of the CWA requires that any applicant for a federal permit for activities that involve a discharge to waters of the state shall provide the federal permitting agency with a certification from the state in which the discharge is proposed that states that the discharge will comply with the applicable provisions under the federal CWA.[6] As such, before the USACE will issue a CWA Section 404 permit, applicants must apply for and receive a Section 401 water quality certification (WQC) from the RWQCB. The RWQCB regulates "discharging waste, or proposing to discharge waste, within any region that could affect "waters of the state" (Water Code § 13260 (a)), pursuant to provisions of the Porter-Cologne Water Quality Control Act which defines RWQCB jurisdictional "waters of the state" as "any surface water or groundwater, including saline waters, within the boundaries of the state" (Water Code § 13050 (e)).

With the exception of isolated waters and wetlands, most discharges of fill to waters of the state are also subject to a CWA Section 404 permit. If a CWA Section 404 permit is not required for the project, the RWQCB may still require issuance of Waste Discharge Requirements (WDR) under the Porter-Cologne Water Quality Control Act. The RWQCB may regulate isolated waters that are not under jurisdiction of the USACE through issuance of WDR's. However, projects that obtain a Section 401 WQC are simultaneously enrolled in a statewide general WDR. Processing of Section 401 WQC's generally requires submittal of 1) a construction storm water pollution prevention plan (SWPPP), 2) a final water quality technical report that demonstrates that post-construction storm water Best Management Practices (BMPs) comply with the local design standards for municipal storm drain permits (MS4 permits) implemented by the State Water Resources Control Board effective January 1, 2011, and 3) a conceptual Habitat Mitigation and Monitoring Plan (HMMP) to compensate for permanent impacts to RWQCB waters, if any. In

6 33 USC 1341 *(a) (1)*.

addition to submittal of a draft CEQA document, a WQC application typically requires a discussion of avoidance and minimization of impacts to RWQCB jurisdictional resources, and efforts to protect beneficial uses as defined by the local RWQCB basin plan for the project. The RWQCB cannot issue a Section 401 WQC until the project CEQA document is certified by the lead agency.

4.7.2 State of California Special-status Resource Protection and Classifications

4.7.2.1 CESA

California's Endangered Species Act (CESA) defines an endangered species as:

> *…a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant which is in serious danger of becoming extinct throughout all, or a significant portion, of its range due to one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, or disease.*

The State defines a threatened species as:

> *…a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that, although not presently threatened with extinction, is likely to become an endangered species in the foreseeable future in the absence of the special protection and management efforts required by this chapter. Any animal determined by the commission as rare on or before January 1, 1985 is a threatened species.*

Candidate species are defined as:

> *…a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that the commission has formally noticed as being under review by the department for addition to either the list of endangered species or the list of threatened species, or a species for which the commission has published a notice of proposed regulation to add the species to either list.*

Candidate species may be afforded temporary protection as though they were already listed as threatened or endangered at the discretion of the Fish and Wildlife Commission. Unlike the FESA, CESA does not include listing provisions for invertebrate species.

Article 3, Sections 2080 through 2085, of the CESA addresses the taking of threatened or endangered species by stating:

> *…no person shall import into this State, export out of this State, or take, possess, purchase, or sell within this State, any species, or any part or product thereof, that the commission determines to be an endangered species or a threatened species, or attempt any of those acts, except as otherwise provided.*

Under the CESA, "take" is defined as, "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill."

Additionally, some special-status mammals and birds are protected by the State as Fully Protected Mammals or Fully Protected Birds, as described in the California Fish and Wildlife Code, Sections 4700 and 3511, respectively.

California Species of Special Concern are species designated as vulnerable to extinction due to declining population levels, limited ranges, and/or continuing threats. Informally listed species are not protected per se, but warrant consideration in the preparation of biological assessments. For some species, the CNDDB is only concerned with specific portions of the life history, such as roosts, rookeries, or nest areas.

For the purposes of this BRA, the following acronyms are used for State status species, as applicable:

- SE State-listed as Endangered
- ST State-listed as Threatened
- SR State-listed as Rare
- SCE State candidate for listing as Endangered
- SCT State candidate for listing as Threatened
- SFP State Fully Protected
- SSC California Species of Special Concern

Protection of Birds

Section 3503.5 of the California Fish and Game Code states that it is "unlawful to take, possess, or destroy any birds in the order Falconiformes or Strigiformes (birds of prey) or to take, possess, or destroy the nest or eggs of any such bird except as otherwise provided by this code or any regulation adopted pursuant thereto." Activities that result in the abandonment of an active bird of prey nest may also be considered in violation of this code. In addition, California Fish and Game Code, Section 3511 prohibits the taking of any bird listed as fully protected, and California Fish and Game Code, Section 3515 states that is it unlawful to take any non-game migratory bird protected under the MBTA.

4.7.2.2 State of California Fish and Game Code, Section 1602

Section 1602 of the California Fish and Game Code requires any entity (e.g., person, state or local government agency, or public utility) who proposes a project that will substantially divert or obstruct the natural flow of, or substantially change or use any material from the bed, channel, or bank of, any river, stream, or lake to notify the CDFW of the proposed project. In the course of this notification process, the CDFW will review the proposed project as it affects streambed habitats within the project area. The CDFW may then place conditions in the Section 1602 Streambed Alteration Agreement to avoid, minimize, and mitigate any potentially significant adverse impacts within CDFW jurisdictional limits.

4.7.2.3 California Native Plant Society

The CNPS is a private plant conservation organization dedicated to the monitoring and protection of special-status species in California. CNPS has compiled an inventory comprised of the information focusing on geographic distribution and qualitative characterization of Rare, Threatened, or Endangered vascular plant species of California (CNPS 2012). The list serves as the candidate list for listing as Threatened and Endangered by CDFW. CNPS has developed five categories of rarity, of which Ranks 1A, 1B, and 2 are particularly considered special-status:

- Rank 1A Presumed extinct in California.
- Rank 1B Plants Rare, Threatened, or Endangered in California and elsewhere.
- Rank 2 Plants Rare, Threatened, or Endangered in California, but more common elsewhere.
- Rank 3 Plants about which we need more information – a review list.
- Rank 4 Plants of limited distribution – a watch list.

The CNPS recently added “threat ranks” which parallel the ranks used by the CNDDB. These ranks are added as a decimal code after the CNPS List (e.g., Rank 1B.1). The threat codes are as follows:

- .1 – Seriously endangered in California (over 80% of occurrences threatened/high degree and immediacy of threat);
- .2 – Fairly endangered in California (20-80% occurrences threatened);
- .3 – Not very endangered in California (<20% of occurrences threatened or no current threats known).

Special-status species that occur or potentially could occur within the study area is based on one or more of the following: (1) the direct observation of the species within the study area during any field surveys; (2) a record reported in the CNDDB; and (3) the study area is within known distribution of a species and contains appropriate habitat.

4.7.2.4 Sensitive Plant Communities

Sensitive plant communities include those habitat types considered rare by resource agencies, namely the CDFW, due to their scarcity and/or their ability to support State and Federally-listed Endangered, Threatened, and Rare vascular plants, as well as several special-status bird and reptile species. CDFW maintains a natural plant community list, the *List of California Terrestrial Natural Communities*.[7] Special-status natural communities (also referred to by CDFW as ‘rare’ or ‘special concern’) are identified on the list by an asterisk and are considered high priority vegetation types (CDFW, 2010; CDFW, 2000a).

[7] Available online at: http://www.dfg.ca.gov/biogeodata/vegcamp/natural_comm_list.asp.

4.7.3 Local Special-status Resource Protection and Classifications

Western Riverside County MSHCP

The study area is within the Western Riverside County MSHCP which was adopted by the Riverside County Board of Supervisors (June 17, 2003). The MSHCP functions as an Habitat Conservation Plan (HCP) pursuant to Section 10(a)(1)(B) of the FESA and as a Natural Communities Conservation Plan (NCCP) under the NCCP Act of 2001. The USFWS and CDFW have authorized the take of a number special-status plant and wildlife species (Covered Species) within the MSHCP Plan Area in exchange for the assembly and management of a coordinated MSHCP Conservation Area.

Stephens' Kangaroo Rat Habitat Conservation Plan

The Stephens' kangaroo rat (SKR) HCP provides Take Authorization for SKR within its boundaries as implemented by legal agreements executed among the Riverside County Habitat Conservation Agency (RCHCA), its member agencies, USFWS, CDFW, BLM , U.S. Department of Interior, State of California Resources Agency, and other agencies as appropriate.[8] The MSHCP provides Take Authorization for SKR outside the boundaries of the SKR HCP, but within the MSHCP Plan Area boundaries. The seven core reserves established by the SKR HCP will be managed as part of the MSHCP Conservation Area consistent with the SKR HCP.

The study area is within the boundaries of the SKR HCP but is not within any of the core reserves. As such, the project would be required to pay a SKR mitigation fee for coverage under the SKR HCP.

4.7.4 Sensitive Plant Communities

The study area does not support any communities considered by CDFW as sensitive habitats.

4.7.5 Special-status Plant Species

Special-status plants include those listed, or candidates for listing, by the USFWS and CDFW; and species considered special-status by the CNPS (particularly Lists 1A, 1B, and 2). Several special-status plant species were reported in the vicinity based on CNDDB and CNPS, totaling 65 species within the 9-quadrangle search (as indicated in **Appendix B**, *Special-Status Plant Species*). A total of 12 species were identified as having a potential to occur within the study area based on the literature review and existing habitat on the study area, as listed in Appendix B. Focused plant surveys were conducted in 2015 on the project site and off-site road improvement and sewer line areas and in 2016 on the off-site water line areas; none of the species determined to have a potential to occur on the project site and off-site water and sewer line areas were observed. A summer focused survey was conducted within the off-site eastern manufactured slope area in 2016; however, a spring survey has not yet been conducted within this area. The western manufactured slope areas do not support suitable habitat for special-status plant species.

8 *http://www.skrplan.org/index.html*

4.7.6 Special-status Wildlife Species

Special-status wildlife include those species listed as Endangered or Threatened under the FESA or CESA, candidates for listing by the USFWS or CDFW, and species of special concern to the CDFW. Several special-status wildlife species were reported in the vicinity based on CNDDB, totaling 43 species within the 9-quadrangle search. A total of 19 species were identified as having a potential to occur within or use the study area based on the literature review and habitat present on the study area, as listed in **Appendix C**, *Special-status Wildlife Species*.

In addition, focused surveys were conducted for the burrowing owl in accordance with recommended protocols and the potential for foraging and nesting migratory bird and raptor species were also analyzed due to known presence within the study area or within the vicinity (see Appendix C). The species with a potential to occur on the study area are discussed below, including the results of the burrowing owl surveys and the migratory birds and raptors assessment.

Species With Potential to Occur On-site

Coast horned lizard (*Phrynosoma blainvillii*): This reptile species is a state species of special concern and is a Covered Species pursuant to the Western Riverside County MSHCP. This species prefers sandy riparian and sage scrub habitats, but also occurs in valley-foothill, hardwood, conifer, pine-cypress, juniper and annual grassland habitats below 6,000 feet. Habitats include open country, especially sandy areas, washes, flood plains, and windblown deposits.

Coast horned lizard was determined to have a moderate potential to occur within the study area based on the presence of some potentially suitable habitat on the northwestern corner of the on-site area, which includes Riversidean sage scrub and brittlebush scrub. Harvester ants, this species main food source, were also observed (although the food source was not seen in the area supporting suitable habitat). Although habitat and a food source potentially exist on the study area, the majority of the potentially suitable habitat is disturbed and higher quality habitat is present to the northwest (Olive Hill and Reche Canyon) and northeast (the Badlands mountain range) of the study area. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Orange-throated whiptail (*Aspidoscelis hyperythra*): This reptile species is a state species of special concern and a Covered Species pursuant to the Western Riverside County MSHCP. This species prefers chaparral, non-native grassland, Riversidean sage scrub, and juniper and oak woodlands. It is often associated with riparian areas and alluvial fan sage scrub habitats.

Orange-throated whiptail was determined to have a moderate potential to occur within the study area based on the presence of some potentially suitable habitat on the northwestern corner of the on-site area, which includes Riversidean sage scrub and brittlebush scrub. These areas support perennial plants that may host this species preferred food source (termites). Although habitat and a food source potentially exist on the study area, the majority of the potentially suitable habitat is disturbed and higher quality habitat is present to the northwest (Olive Hill and Reche Canyon) and northeast (the Badlands mountain range) of the study area. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Red Diamond Rattlesnake (*Crotalus ruber*): This reptile species is a state species of special concern and a Covered Species pursuant to the Western Riverside County MSHCP. This species prefers chaparral, woodland, and arid desert habitats in rocky areas with dense vegetation.

Red diamond rattlesnake was determined to have a moderate potential to occur within the study area based on the presence of some potentially suitable habitat on the northwestern corner of the on-site area, which includes Riversidean sage scrub and brittlebush scrub. Although these areas support some vegetation and crevices within the rock outcrops, the vegetation is not dense and rock crevices available for cover are limited. Higher quality habitat is present to the northwest (Olive Hill and Reche Canyon) and northeast (the Badlands mountain range) of the study area. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Golden Eagle (*Aquila chrysaetos*): This raptor is a state fully protected species and is protected by the Bald and Golden Eagle Protection Act; it is also a Covered Species pursuant to the Western Riverside County MSHCP. This species nests on cliff faces and tall trees. Foraging habitat includes open country, including grasslands and early successional stages of forest and shrub habitats.

Golden eagle was determined to have a potential to occur only to forage within the study area based on the presence of a few fossorial mammal burrows within the disturbed areas on-site, suggesting the presence of small mammals that could provide a possible food source. However, the potential for foraging was considered very low since the majority of the site is surrounded by development and is highly disturbed, making it a less optimal habitat. This species is not expected to nest due to lack of cliffs on the study area, which is their preferred nesting habitat. Additionally, there is only one CNDDB occurrence record within the vicinity. This record was a breeding pair observed in fall 1979, spring 1980, and fall 1980 in San Timoteo Canyon, approximately 6.0 miles to the northeast. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Swainson's hawk (*Buteo swainsoni*): This bird species is listed as threatened by the state and is a Covered Species pursuant to the Western Riverside County MSHCP. It prefers Great Basin grasslands, riparian forests, riparian woodlands, and valley and foothill grasslands.

Swainson's hawk was determined to have a potential for foraging only within the study area based on the presence of a few fossorial mammal burrows within the disturbed areas on-site, suggesting the presence of small mammals that could provide a possible food source. However, the potential for foraging was considered low since the majority of the site is surrounded by development and is highly disturbed, making it a less optimal habitat. This species is not expected to nest due to the limited number of trees on the study area and the proximity of the trees to roads and residential homes, which could create some noise disturbance. Additionally, there are only two CNDDB occurrence records of nesting individuals within the vicinity; both records are from over 100 years ago. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Burrowing owl: This bird species is a state species of special concern and a Covered Species pursuant to the Western Riverside County MSHCP. This species prefers coastal prairie, coastal scrub, Great Basin scrub, Mojavean desert scrub, Sonoran desert scrub, valley and foothill grassland and disturbed habitats. It is known to occur in the project vicinity based on CNDDB and the MSHCP, and the study area is within the MSHCP Burrowing Owl Survey Area, an overlay in the MSHCP that requires additional surveys.

Burrowing owl was determined to have potential to occur within the study area based on the presence of suitable habitat that was identified during the Step I survey, including disturbed, low-growing vegetation, bare ground, and a few small fossorial mammal burrows. Step II surveys were conducted from May to July 2015 within the project site and off-site manufactured slopes, road improvement, proposed water line, and sewer line areas. Step II surveys were conducted from April to July 2016 within the off-site alternative water line areas. The subsequent Step II surveys did not identify individual burrowing owls, active burrowing owl burrows, or signs of burrowing owls within the survey area. Therefore, the study area and adjacent buffer area do not currently support burrowing owls. The results are also outlined in a separate survey reports attached as **Appendix D**, 2015 *Burrowing Owl Focused Survey Report* and **Appendix E**, 2016 *Burrowing Owl Focused Survey Report*.

Loggerhead shrike (*Lanius ludovicianus*): This bird species is listed as a state species of special concern and a Covered Species pursuant to the Western Riverside County MSHCP. This species prefers broadleaved upland forest, desert wash, Joshua tree woodland, Mojavean desert scrub, pinyon and juniper woodlands, riparian woodland, and Sonoran desert scrub habitats.

Loggerhead shrike was observed foraging within the northwestern corner of study area during the third burrowing owl survey conducted on July 2, 2015. This area supports suitable foraging habitat for this species, which includes Riversidean sage scrub and brittlebush scrub. The potential for nesting for this species is considered moderate based on the presence of shrubs on the northwestern corner. Although this area supports shrubs that may be suitable for nesting, the northwestern corner is adjacent to developed, residential areas; higher quality habitat is present to the northwest (Olive Hill and Reche Canyon) and northeast (the Badlands mountain range) of the study area.

Coastal California gnatcatcher (*Polioptila californica californica*): This bird species is listed as Federally Threatened, state species of special concern, and a Covered Species pursuant to the Western Riverside County MSHCP. This species is an obligate inhabitant of coastal sage scrub habitat.

This species was observed on the study area during the focused burrowing owl survey conducted on May 13, 2015. Only one individual was heard during the survey.

Northwestern San Diego pocket mouse (*Chaetodipus fallax fallax*): This mammal species is listed as a state species of special concern and a Covered Species pursuant to the Western

Riverside County MSHCP. It prefers chaparral and coastal sage scrub habitats, in addition to grassland and Riversidean alluvial fan sage scrub habitats.

Northwestern San Diego pocket mouse was determined to have a moderate potential to occur within the study area based on the presence of suitable coastal scrub and chaparral habitat (e.g. brittle bush scrub, Riversidean sage scrub) in the northwestern portion and small fossorial mammal burrows. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Stephens' kangaroo rat (*Dipodomys stephensi*): This mammal species is listed as federally endangered and state threatened. Take Authorization for Stephens' kangaroo rat is provided by the SKR HCP within its plan boundaries, and by the Western Riverside County MSHCP for areas outside of the SKR HCP but within the MSHCP area plan boundaries (this species is a MSHCP Covered Species). This species prefers open grasslands or sparse shrub lands within sandy to sandy loam soils and low clay and gravel content.

Stephens' kangaroo rat was determined to have a moderate potential to occur within the study area based on the presence of suitable shrub habitat (e.g. brittle bush scrub, Riversidean sage scrub) in the northwestern portion and small fossorial mammal burrows. The study area is not within any core reserves identified by the SKR HCP. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Los Angeles pocket mouse (*Perognathus longimembris brevinasus*): This mammal species is listed as a state species of special concern and a conditionally Covered Species pursuant to the Western Riverside County MSHCP (surveys are required for areas within the survey overlay, with potential conservation). It prefers sparsely vegetated habitat areas within coastal sage scrub communities and in patches of fine sandy soils associated with washes.

Los Angeles pocket mouse was determined to have a moderate potential to occur within the study area based on the presence of suitable Riversidean sage scrub habitat in the northwestern portion. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

San Diego black-tailed jackrabbit (*Lepus californicus bennettii*): This mammal species is a California Species of Special Concern and a Covered Species pursuant to the Western Riverside County MSHCP. This species prefers open brushlands and scrub habitats.

San Diego black-tailed jackrabbit was determined to have a moderate potential to occur within the study area. The majority of the study area supports suitable habitat for this species, including the Riversidean sage scrub on the northwestern corner and the ruderal areas (which support some short grasses). However, this species is highly conspicuous and no incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

San Diego desert woodrat: This mammal species is a California Species of Special Concern and a Covered Species pursuant to the Western Riverside County MSHCP. This species prefers coastal scrub and chaparral habitats with areas containing rock outcrops and cliffs.

San Diego desert woodrat was determined to have a moderate potential to occur within the study area based on the presence of suitable habitat (e.g. Riversidean sage scrub, rock outcrop/Riversidean sage scrub) in the northwestern portion and small fossorial mammal burrows. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Southern Grasshopper Mouse (*Onychomys torridus ramona*): This mammal species is a state species of special concern. This species prefers grasslands, desert areas, and especially scrub with friable soils.

Southern grasshopper mouse was determined to have a potential to occur within the study area based on the presence of suitable shrub habitat (e.g. brittle bush scrub and Riversidean sage scrub) in the northwestern portion and small fossorial mammal burrows. However, the potential was considered low since this species has not been recorded on CNDDB within the vicinity of study area since 1938. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

American badger (*Taxidea taxus*): This mammal species is a state species of special concern. This species prefers grasslands, desert areas, and especially scrub with friable soils.

American badger was determined to have a potential to occur within the study area based on the presence of shrubs within the Riversidean sage scrub habitat on the northwestern corner of the study area. A few fossorial mammal burrows were observed, suggesting the presence of small mammals that could provide a possible food source. However, the potential was considered low since the majority of the site is surrounded by development and a large portion of suitable habitat is disturbed. Additionally, this species has not been recorded within the vicinity since 1908. No signs of this species were observed during any site surveys conducted in 2015.

Western Mastiff Bat (*Eumops perotis californicus*): This mammal species is a state species of special concern. This species prefers chaparral, cismontane woodlands, coastal scrub, and valley and foothill grassland habitats.

Western mastiff bat was determined to have a potential to occur for foraging only within the study area. However, the potential was considered low since although bats in this family are known to be strong fliers and can fly long distances to forage, habitat on the study area is disturbed and the majority of the study area is surrounded by development. This species preferred roosting habitat is not present on the study area and the nearest CNDDB occurrence record is from1990 approximately 3.0 miles to the southwest of the study area, in an area that is now a residential development. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Pocketed free-tailed bat (*Nyctinomops femorasaccus*): This bat species is a state species of special concern and occurs in more arid habitats, roosting in rock crevices, caverns, or buildings.

Pocketed free-tailed bat was determined to have a potential to occur for roosting only within the study area based on the presence of rock outcrops. However, this potential was considered very low since this species typically prefers steeper cliffs for roosting habitat. Although little is known regarding home range for this species, the potential for roosting is also unlikely since the study area does not support adjacent foraging habitat (CDFW, 2000b). There are only 2 CNDDB occurrence records in the vicinity. The nearest record is from 1985 approximately 6.5 miles to the southwest of the study area near March Air Force Base. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Lesser long-nosed bat (*Leptonycteris verbabuenae*): This bat species is a federally endangered species and occurs in more arid habitats, such as desert grasslands and shrublands.

Pocketed free-tailed bat was determined to have a potential to occur for roosting and foraging. Potential night roosts included a limited number of trees and rock crevices on the northwestern corner of the project and scattered cactus may provide feeding opportunities. Although day roosting habitat (caves or mines) are not present on the study area, this species can travel long distances between day roosting and foraging sites. However, the potential was considered very low for both roosting and foraging since this species not typically found in California and recorded sightings are typically vagrant migrants. There is only 1 CNDDB occurrence record within the vicinity from 1993, approximately 9.5 miles to the northeast in a residential neighborhood of Yucaipa. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Pallid bat (*Leptonycteris verbabuenae*): This bat species is a federally endangered species and occurs in more arid habitats, such as desert grasslands and shrublands.

Pocketed free-tailed bat was determined to have a potential to occur for roosting and foraging. Potential night roosts included a limited number of trees and rock crevices on the northwestern corner of the project and scattered cactus may provide feeding opportunities. Although day roosting habitat (caves or mines) is not present on the study area, this species can travel long distances between day roosting and foraging sites. However, the potential was considered very low for both roosting and foraging since this species not typically found in California and recorded sightings are typically vagrant migrants. There is only one CNDDB occurrence record within the vicinity from 1993, approximately 9.5 miles to the northeast in a residential neighborhood of Yucaipa. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Migratory Birds and Raptors

The study area supports some potential nesting and foraging habitat for nesting birds and raptors, primarily in the northwestern corner of the study area where there are shrubs and some trees. Several species of birds were observed on-site (see Appendix A) and were identified by CNDDB as potentially occurring within the 9-quadrangle search area (see Appendix C). Raptors observed on-site include Cooper's hawk (*Accipiter cooperii*), red-tailed hawk (*Buteo jamaicensis*), and American kestrel (*Falco sparverius*). There is also a foraging potential for listed raptors within the 9-quadrangle search area according to CNDDB, such as golden eagle (State Fully Protected) and Swainson's hawk (Federally Threatened), though the potential of foraging is considered low and neither are expected to nest on-site (see Appendix C).

4.7.7 Study Area's Relationship to the Western Riverside County MSHCP

This section provides a discussion of the study area's relationship to the MSHCP policies, including the location within the MSHCP Area Plan, Criteria Cells, and cores and linkages, and the presence of MSHCP protected biological resources.

4.7.7.1 Location of the Study Area within the MSHCP Area Plan and Criteria Cells

The entire study area is within the Reche Canyon/Badlands Area Plan (see Figure 6) of the MSHCP but is not within a Criteria Cell, a designated Cell Group, or a subunit within the Southwest Area Plan that requires conservation of land for inclusion in the MSHCP Conservation Area (Riverside County TLMA, 2015).

4.7.7.2 Location of the Study Area within MSHCP Cores and Linkages

As mentioned previously in section 4.5.2, *Wildlife Movement within the Study Area*, the study area is not within any cores or linkages (i.e., Special Linkage Areas) as identified in the Reche Canyon/Badlands Area Plan.

4.7.7.3 Riparian/Riverine Areas and Vernal Pools

Section 6.1.2, *Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools,* of the MSHCP provides for the protection of Riparian/Riverine Areas and Vernal Pools within the MSHCP Plan Area. Riparian/Riverine areas are defined in the MSHCP as "lands which contain habitat dominated by trees, shrubs, persistent emergents, or emergent mosses and lichens, which occur close to or which depend upon soil moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year." Vernal pools are defined in the MSHCP as "seasonal wetlands that occur in depression areas that have wetlands indicators of all three parameters (soils, vegetation, and hydrology) during the wetter portion of the growing season but normally lack wetlands indicators of hydrology and/or vegetation during the drier portion of the growing season."

As shown in **Figure 12**, *MSHCP Riverine Areas*, and summarized in **Table 3**, *MSHCP Riverine* Areas, The project study areas support a total 0.165 acre of MSHCP Riverine Areas including 0.059 acre in Drainage A (0.046 acre on-site and 0.013 acre off-site), 0.070 acre in Drainage B, 0.001 acre in Drainage B1, 0.001 acre in Drainage B2, 0.001 acre in Drainage B3, 0.002 acre in Drainage B4, and 0.033 acre in Drainage B5. All drainages are considered MSHCP Riverine Areas (rather than MSHCP Riparian Areas) since they are supported by ephemeral[9] flows and do not support riparian vegetation communities. No vernal pools occur within the on- and off-site study areas. Due to the presence of MSHCP Riverine features, the project will require a Determination of Biologically Equivalent or Superior Preservation (DBESP) analysis for any impacts proposed to these areas. The DBESP is required to provide details on any proposed impacts and compensatory mitigation for compliance with MSHCP requirements for submittal to the County of Riverside Environmental Programs Department (EPD), subject to approval by the

[9] Riparian drainages are streambeds that generally convey runoff during, and immediately after, a storm event.

County of Riverside Regional Conservation Authority (RCA) and the State and Federal Wildlife Agencies (CDFW and USFWS).

TABLE 3
MSHCP RIVERINE AREAS

Drainage (Study Area)	Length (ft)	Area (acres)	Riparian/Riverine Flow Classification
A (On-Site)	285	0.046	Riverine
A (Off-Site)	111	0.013	Riverine
B (Off-Site)	306	0.069	Riverine
B1 (Off-Site)	0*	0.001	Riverine
B2 (Off-Site)	32	0.001	Riverine
B3 (Off-Site)	25	0.001	Riverine
B4 (Off-Site)	34	0.001	Riverine
B5 (Off-Site)	35	0.033	Riverine
Total	**828**	**0.165**	

** Less than one linear foot of jurisdiction occurs within Drainage B1 as the majority of the drainage within the off-site study area is associated with an existing corrugated metal pipe that was not quantified.*

Source: ESA PCR, 2014

The biological function and value of the on- and off-site Riverine Areas within Drainage A and Drainage Complex B include the transport of water, which is limited based on the ephemeral flows of the drainage and limited watershed. The function and value of the drainages are also limited since they are primarily unvegetated and support only some small patches of upland and/or ruderal vegetation. Other types of aquatic features that could provide suitable habitat for Riparian/Riverine species, such as fairy shrimp, are not present within the study area (i.e. vernal pools, swales, vernal pool-like ephemeral ponds, seasonal ponds, stock ponds, or other human-modified depressions such as tire ruts, etc.).

Riparian/Riverine Plant Species

A habitat assessment was conducted for species listed in Section 6.1.2, *Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools*, of the MSHCP. The results are presented in **Table 4**, *MSHCP Riparian/Riverine Plant Species*. Only one Riparian/Riverine plant species was determined to have a potential to occur on the study area, namely smooth tarplant (*Centromadia pungens* ssp. *laevis*). This species was considered to have a potential to occur only within the riverine habitat associated with the on- and off-site drainages; however, smooth tarplant was not observed during any of the focused plant surveys and therefore was concluded to be absent from the project site. The remaining MSHCP Riparian/Riverine plant species are not expected to occur within the study area due to the lack of suitable habitat or the location of the study area.

TABLE 4
MSHCP RIPARIAN/RIVERINE PLANT SPECIES

Species	Potential to Occur within the Study Area
Brand's phacelia *Phacelia stellaris*	Not expected to occur. This species has not been recorded in the Moreno Valley area. There is only one occurrence record in CNDDB within Riverside County, which was observed in 2000 in the City of Riverside near the Santa Ana River.
California Orcutt grass *Orcuttia californica*	Not expected to occur due to the lack of vernal pools.
Coulter's matilija poppy *Romneya coulteri*	Not expected to occur. This perennial plant has conspicuous flowers that would have been detected during the focused plant surveys if present.
Engelmann oak *Quercus engelmannii*	Not expected to occur. This is a conspicuous tree species that would have been detected during the focused plant surveys if present.
Fish's milkwort *Polygala cornuta* var. *fishiae*	Not expected to occur. The majority of occurrence records of this species on CNDDB are confined to the Santa Ana Mountains.
graceful tarplant *Holocarpha virgata* ssp. *Elongate*	Not expected to occur due to disturbance on-site. The study area is outside of the species' range; there are no known records of this species within the flatter agricultural areas east of the Santa Ana Mountains.
lemon lily *Lilium parryi*	Not expected to occur due to the lack of suitable habitat. Also, the study area is outside the species' range; this species is restricted to the San Jacinto Mountains. The study area is outside of species' elevation range.
Mojave tarplant *Deinandra mohavensis*	Not expected to occur. The study area is outside the species range; this species is restricted to the San Jacinto Mountains. The study area is outside of species' elevation range.
mud nama *Nama stenocarpum*	Not expected to occur due to the lack of wetlands. None were incidentally observed during any surveys (this species can occasionally occur in non-wetlands).
ocellated Humboldt lily *Lilium humboldtii* ssp. *ocellatum*	Not expected to occur due to high disturbance within the drainages and lack of shade. This species is typically found at higher elevations.
Orcutt's brodiaea *Brodiaea orcuttii*	Not expected to occur due to the lack of vernal pools.
Parish's meadowfoam *Limnanthes alba* ssp. *parishii*	Not expected to occur due to the lack of suitable habitat. Also, the study area is outside the species' range; this species is restricted to the Santa Rosa Plateau within the MSHCP Plan Area. The study area is outside of this species' elevation range.

Species	Potential to Occur within the Study Area
prostrate navarretia *Navarretia prostrata*	Not expected to occur due to the lack of suitable habitat. Also, the study area is outside the species' range; this species is restricted to the Santa Rosa Plateau within the MSHCP Plan Area. The study area does not support suitable vernal pool habitat.
San Diego button-celery *Eryngium aristulatum* var. *parishii*	Not expected to occur. The study area is outside the species' range; this species is restricted to the Santa Rosa Plateau within the MSHCP Plan Area. The study area does not support suitable vernal pool habitat.
San Jacinto Valley crownscale *Atriplex coronata* var. *notatior*	Not expected to occur due to the lack of suitable alkaline habitat.
San Miguel savory *Satureja chandleri*	Not expected to occur due to the lack of suitable metavolcanic substrate habitat.
Santa Ana River woollystar *Eriastrum densifolium* ssp. *sanctorum*	Not expected to occur due to lack of suitable habitat. The study area is outside the species range; this species is restricted to the Santa Ana River and alluvial fan sage scrub habitat.
slender-horned spineflower *Dodecahema leptoceras*	Not expected to occur due to the lack of alluvial fan habitat.
smooth tarplant *Centromadia pungens* ssp. *laevis*	Potential, but not observed. This species was not observed during the focused plant surveys.
southern California black walnut *Juglans californica*	Not expected to occur. This is a conspicuous tree species that would have been detected if present.
spreading navarretia *Navarretia fossalis*	Not expected to occur due to the lack of vernal pools.
thread-leaved brodiaea *Brodiaea filifolia*	Not expected to occur due to the lack of vernal pools.
vernal barley *Hordeum intercedens*	Not expected to occur due to the lack of vernal pools.

SOURCE: ESA PCR, 2016

Riparian/Riverine Wildlife Species

Habitat assessments were conducted for wildlife species listed in Section 6.1.2, *Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools*, of the MSHCP. The results are presented in **Table 5**, *MSHCP Riparian/Riverine Wildlife Species*. No riparian/riverine wildlife species are expected to occur on the study area due to the lack of suitable habitat.

TABLE 5
MSHCP RIPARIAN/RIVERINE WILDLIFE SPECIES

Species	Potential to Occur within the Study Area
arroyo toad *Anaxyrus californicus*	Not expected to occur due to the lack of suitable habitat (perennial streams).
mountain yellow-legged frog *Rana muscosa*	Not expected to occur due to the lack of suitable habitat (perennial streams).
California red-legged frog *Rana aurora draytonii*	Not expected to occur due to the lack of suitable habitat (perennial streams).

Species	Potential to Occur within the Study Area
bald eagle *Haliaeetus leucocephalus*	Not expected to occur due to the lack of suitable habitat for foraging and nesting.
least Bell's vireo *Vireo bellii pusillus*	Not expected to occur due to the lack of suitable habitat for foraging and nesting.
American peregrine falcon *Falco peregrinus anatum*	Not expected to occur due to the lack of suitable habitat for foraging and nesting (cliffs overlooking open areas or large bodies of water).
southwestern willow flycatcher *Empidonax traillii extimus*	Not expected to occur due to the lack of suitable habitat for foraging and nesting.
western yellow-billed cuckoo *Coccyzus americanus occidentalis*	Not expected to occur due to the lack of suitable habitat for foraging and nesting; outside of the species range.
Santa Ana sucker *Catostomus santaanae*	Not expected to occur due to the lack of suitable habitat (perennial streams).
Riverside fairy shrimp *Streptocephalus woottoni*	Not expected to occur due to the lack of suitable habitat (vernal pools).
vernal pool fairy shrimp *Branchinecta lynchi*	Not expected to occur due to the lack of suitable habitat (vernal pools).
Santa Rosa Plateau fairy shrimp *Linderiella santarosae*	Not expected to occur due to the lack of suitable habitat (vernal pools).

4.7.7.4 Narrow Endemic Plant Species Survey Area

The study area is not within the Narrow Endemic Plant Species Survey Area; therefore, no surveys were required for Narrow Endemic plant species.

4.7.7.5 Additional Survey Needs and Procedures

Section 6.3.2, *Additional Survey Needs and Procedures*, of the MSHCP provides for additional survey needs for the burrowing owl, as well as a number of special-status plant, amphibian, and mammal species.

Burrowing Owl Survey Area

The study area is within the Burrowing Owl Survey Area; therefore, in compliance with the Western Riverside County MSHCP, surveys are required for this species. As discussed above in section 4.7.6 Special-status Wildlife Species, Step I and Step II surveys conducted for the project following Western Riverside County MSHCP protocol were negative. Although the site does not currently support burrowing owls, pre-construction surveys are required within 30 days of ground disturbance based on the presence of suitable habitat.

Criteria Area Species Survey Area

The study area is not within the Criteria Area Species Survey Area; therefore, no surveys were required for Criteria Area plant species.

Amphibian Species Survey Area

The study area is not within the Amphibian Species Survey Area; therefore, no surveys are required.

Mammal Species Survey Area

The study area is not within the Mammal Species Survey Area; therefore, no surveys are required.

4.7.7.6Urban/Wildlands Interface

Section 6.1.4, *Guidelines Pertaining to the Urban/Wildlands Interface*, of the MSHCP presents a number of guidelines that are intended to address indirect effects associated with locating developments in proximity to a Western Riverside County MSHCP Conservation Area. These guidelines address the quantity and quality of any runoff generated by the development (i.e., drainage and toxics), night lighting, noise, non-native invasive plant species, barriers to humans and animal predators, and grading/land development encroachment.

The study area is not within or in the vicinity of any Criteria Cells (see Figure 6) and, as such, development of the site is not expected to result in indirect effects to MSHCP Conservation Areas related to night lighting, noise, and grading/land development, and barriers would not be necessary. Drainage A and Drainage Complex B ultimately drain to the San Jacinto River, which is a Constrained Linkage (19) and where Criteria Cells are located. Runoff from the site therefore has the potential to affect the quantity and quality of water downstream, in addition to the transport of plant seeds. Since the project will be required to comply with flood and water quality standards[10], no indirect effects from the quantity and quality of run-off will occur to downstream areas. At minimum, no invasive, non-native plant species listed in Tables 6-2 of the MSHCP, *Plants That Should Be Avoided Adjacent To The MSHCP Conservation Area*, will be utilized in the landscape plans. This will avoid dispersal of invasive plant seeds in the watershed. Despite the study area not being within any Criteria Cells or adjacent to any MSHCP Conservation Areas, it does support one on-site drainage and one off-site drainage complex that are considered Riverine Areas. The above measures will avoid indirect impacts to these drainages from runoff and invasive species.

[10] The project will be required to prepare a Water Quality Management Plan and Storm Water Pollution Prevention Plan consistent with Regional Water Quality Control Board and County requirements that will outline measures such as Best Management Practices (BMPS) to address water quantity and quality, and to address any potential flooding.

5.0 THRESHOLDS OF SIGNIFICANCE

The environmental impacts relative to biological resources are assessed using impact significance threshold criteria which mirror the policy statement contained in the CEQA, Section 21001(c) of the California Public Resources Code. Accordingly, the State Legislature has established it to be the policy of the State to:

> *"Prevent the elimination of fish or wildlife species due to man's activities, ensure that fish and wildlife populations do not drop below self-perpetuating levels, and preserve for future generations representations of all plant and animal communities..."*

Determining whether or not a project may have a significant effect, or impact, plays a critical role in the CEQA process. According to CEQA, Section 15064.7, Thresholds of Significance, each public agency is encouraged to develop and adopt (by ordinance, resolution, rule, or regulation) thresholds of significance that the agency uses in the determination of the significance of environmental effects. A threshold of significance is an identifiable quantitative, qualitative or performance level of a particular environmental effect, non-compliance with which means the effect will normally be determined to be significant by the agency and compliance with which means the effect normally will be determined to be less than significant. In the development of thresholds of significance for impacts to biological resources CEQA provides guidance primarily in Section 15065, Mandatory Findings of Significance, and the State CEQA Guidelines, Appendix G, *Environmental Checklist Form*. Section 15065(a) states that a project may have a significant effect where:

> *"The project has the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or wildlife community, reduce the number or restrict the range of an endangered, rare, or threatened species..."*

Appendix G of the State CEQA Guidelines is more specific in addressing biological resources and encompasses a broader range of resources to be considered, including: candidate or other special-status species; riparian habitat or other special-status natural communities; Federally protected wetlands; fish and wildlife movement corridors; local policies or ordinances protecting biological resources; and, adopted HCPs. This is done in the form of a checklist of questions to be answered during the Initial Study leading to the preparation of the appropriate environmental documentation for a project [i.e., Negative Declaration, Mitigated Negative Declaration, or Environmental Impacts Report (EIR)]. Because these questions are derived from standards in other laws, regulations, and other commonly used thresholds, it is reasonable to use these standards as a basis for defining significance thresholds in an EIR. Therefore, for the purpose of this analysis, impacts to biological resources are considered potentially significant (before considering offsetting mitigation measures) if one or more of the following conditions would result from implementation of the proposed Project.

Threshold BIO-A Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Wildlife Service.

Note: Threshold BIO-A also encompasses the threshold on the Riverside County Environmental Assessment/Initial Study form as follows: "Have a substantial adverse effect, either directly or through habitat modifications, on any endangered, or threatened species, as listed in Title 14 of the California Code of Regulations (Sections 670.2 or 670.5) or in Title 50, Code of Federal Regulations (Sections 17.11 or 17.12)."

Threshold BIO-B Have a substantial adverse effect on any riparian habitat or other sensitive plant community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U. S. Fish and Wildlife Service.

Threshold BIO-C Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.

Threshold BIO-D Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery areas.

Threshold BIO-E Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

Threshold BIO-F Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

For the purposes of this impact analysis the following definitions apply:

- "Substantial adverse effect" means loss or harm of a magnitude which, based on current scientific data and knowledge would: (1) substantially reduce population numbers of a listed, candidate, sensitive, rare, or otherwise special status species; (2) substantially reduce the distribution of a sensitive plant community/habitat type; or (3) eliminate or substantially impair the functions and values of a biological resource (e.g., streams, wetlands, or woodlands) in a geographical area defined by interrelated biological components and systems. In the case of this analysis, the prescribed geographical area is considered to be the region that includes the USGS topographic quadrangle for the study area, namely Sunnymead. For some species, the geographic area may extend to the vicinity of the study area based on known distributions of the species. The vicinity of the study area is considered to comprise the following USGS topographic quadrangles: San Bernardino South, Redlands, Yucaipa, Riverside East, El Casco, Steele Peak, Perris, and Lakeview.

- "Conflict" means contradiction of a magnitude, which based on foreseeable circumstances, would preclude or prevent substantial compliance.

- "Rare" means: (1) that the species exists in such small numbers throughout all, or a significant portion of, its range that it may become endangered if its environment worsens; or (2) the species is likely to become endangered within the foreseeable future throughout all or a significant portion of its range and may be considered "threatened" as that term is used in the FESA.

This page intentionally blank.

6.0 PROJECT RELATED IMPACTS

6.1 Regulatory Setting

Special-status species are provided protection by either Federal or State resource management agencies, or both, under provisions of the FESA and CESA.

There are a number of performance criteria and standard conditions that must be met as part of any review and approval of the proposed project. These include compliance with all of the terms, provisions, and requirements with applicable laws that relate to Federal, State, and local regulating agencies related to potential impacts to special-status plant and wildlife species, wetlands, riparian habitats, and blue lined stream courses. The following summarizes federal and state regulations, and CNPS, as previously discussed in section 4.7, *Special-Status Biological Resources*.

6.1.1 Federal Regulations

As previously discussed in section 4.7.1, Federal Sensitive Resource Protection and Classifications of this BRA, under provisions of Section 9(a)(1)(B) of the FESA, unless properly permitted, it is unlawful to "take" any listed species. In a case where a property owner seeks permission from a Federal agency for an action which could affect a Federally-listed plant and animal species, the property owner and agency are required to consult with USFWS to obtain appropriate permits. Section 9(a)(2)(b) of the FESA addresses the protections afforded to listed plants. In addition to FESA, take of migratory birds, or bald or golden eagles, require permits pursuant to the MBTA and the Bald and Golden Eagle Protection Act, respectively. Furthermore, any impacts to USACE and RWQCB jurisdictional waters would require permitting pursuant to Sections 404 and 401 of the CWA, respectively.

6.1.2 State of California Regulations

As previously discussed in section 4.7.2, *State of California Sensitive Resource Protection and Classifications* of this BRA, Article 3, Sections 2080 through 2085, of the CESA addresses the taking of threatened or endangered species. Exceptions authorized by the State to allow "take" require permits or memoranda of understanding and can be authorized for "endangered species, threatened species, or candidate species for scientific, educational, or management purposes." Sections 1901 and 1913 of the California Fish and Wildlife Code provide that notification is required by an initiator prior to disturbance. State regulations also exist for protection of birds pursuant to the MBTA, and for acquiring permits for impacts to CDFW jurisdictional streambeds pursuant to Section 1602 of the Fish and Game Code.

6.1.3 California Native Plant Society

As previously discussed in section 4.7.2, *State of California Sensitive Resource Protection and Classifications* of this BRA, the CNPS has compiled an inventory comprised of the information focusing on geographic distribution and qualitative characterization of rare, threatened, or endangered vascular plant species of California which classifies plant species into categories of rarity. Informally ranked species are not protected per se, but warrant consideration in the preparation of biological assessments.

6.1.4 Local Regulations

The study area is within the adopted Western Riverside County MSHCP Plan area. The Western Riverside County MSHCP provides permits for the take of all species identified in the MSHCP as covered and conditionally covered, so long as the conditions imposed are satisfied (see also sections 4.7.3 and 4.7.7 above).

6.2 Project Related Impacts

The analysis in section *6.3 Impact Analysis* of this BRA examines the potential impacts to plant and wildlife resources that may occur as a result of implementation of the project. For the purpose of this assessment, project-related impacts take two forms, direct and indirect. Direct impacts are considered to be those that involve the loss, modification or disturbance of natural habitats (i.e., vegetation or plant communities), which in turn, directly affect plant and wildlife species dependent on that habitat. Direct impacts also include the destruction of individual plants or wildlife, which is typically the case in species of low mobility (i.e., plants, amphibians, reptiles, and small mammals). The collective loss of individuals in these manners may also directly affect regional population numbers of a species or result in the physical isolation of populations thereby reducing genetic diversity and, hence, population stability.

Indirect impacts are considered to be those that involve the effects of increases in ambient levels of sensory stimuli (e.g., noise, light), unnatural predators (e.g., domestic cats and other non-native animals), and competitors (e.g., exotic plants, non-native animals). Indirect impacts may be associated with the construction and/or eventual habitation/operation of a project; therefore, these impacts may be both short-term and long-term in their duration. These impacts are commonly referred to as “edge effects” and may result in changes in the behavioral patterns of wildlife and reduced wildlife diversity and abundance in habitats adjacent to study area.

The determination of impacts in this analysis is based on both the proposed project development plan and the biological values of the habitat and/or sensitivity of plant and wildlife species to be affected. Any recommended mitigation measures to address impacts are discussed in section 7.0 below, and compliance with existing regulations are also outlined in section 7.0 as Conditions of Approval.

The biological values of resources within, adjacent to, and outside the area to be affected by the proposed project were determined by consideration of several factors, as applicable. These included the overall size of habitats to be affected, the study area’s previous land uses and disturbance history, the study area's surrounding environment and regional context, the on-site biological diversity and abundance, the presence of special-status plant and wildlife species, the study area's importance to regional populations of these species, and the degree to which on-site habitats are limited or restricted in distribution on a regional basis and, therefore, are considered sensitive in themselves. Therefore, the focus of this impacts analysis is on sensitive plant communities/habitats, resources that play an important role in the regional biological systems, and special-status species.

Impacts to biological resources as a result of project development were analyzed in GIS using Computer-Aided Design (CAD) data of the project footprint and guidelines on temporary impact areas for the drainage crossings, both provided by the project engineer. Acreages of impacts were calculated by overlaying the CAD data and adding the fuel modification zones over GPS data of biological resources collected by ESA PCR during the surveys.

6.3 Impact Analysis

6.3.1 Impacts to Special-Status Species

Threshold BIO-A: Would the project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Wildlife Service?

Less than Significant with Mitigation Incorporated

6.3.1.1 Special-Status Plant Species

Development of the study area would result in the direct removal of numerous common plant species; a list of plant species observed within the study area is included in Appendix A. Common plant species present within the study area occur in large numbers throughout the region and their removal does not meet the significance thresholds defined in Section 5.0, *Thresholds of Significance* above. Therefore, impacts to common plant species would not be considered a significant impact and no mitigation measures are required.

A total of 53 special-status plant species of the 65 species identified as occurring in the project vicinity in available databases (see section 4.7.5 above) are not expected to occur within the study area due to the lack of suitable habitat or because the site is outside the known distribution or elevation range for the species. These species are listed in Appendix B. As discussed in section 4.7.5, above, the remaining 12 special-status plant species were determined to have a potential to occur on the study area; however, these 12 species are not expected to occur within the project site or off-site water and sewer line areas since focused surveys conducted within these areas were negative. As such, no impacts to special-status plant species would occur as a result development on the project site and within the proposed off-site water and sewer lines and no mitigation is required.

Although a summer focused survey was performed within the off-site manufactured slope area to the east of the project site, a spring focused survey has not been conducted within this off-site area. Of the 12 species with a potential to occur, seven (7) species are not expected to occur within the off-site manufactured slope area since these species were not detected during the summer focused survey or the area does not support suitable habitat, including California screw most (*Tortula californica*), smooth tarplant, San Bernardino aster (*Symphyotrichum defoliatum*), chaparral sand-verbena (*Abronia villosa* var. *aurita*), long-spined spineflower (*Chorizanthe polygonoides* var. *longispina*), salt spring checkerbloom (*Sidalcea neomexicana*), and mesa horkelia (*Horkelia cuneate* var. *puberula*). The blooming period of the remaining five (5) species with the potential to occur within the off-site manufactured slope area east of the project boundary fall outside of the summer survey window, which include Nevin's barberry (*Berberis nevinii*), Jaeger's bush milk-vetch (*Astragalus pachypus* var. *jaegeri*), round-leaved filaree (*California macrophylla*), Parry's spineflower (*Chorizanthe parryi* var. *parryi*), and white-bracted spineflower (*Chorizanthe xanti* var. *leucotheca*). Of these five species, Nevin's barberry, Jaeger's bush milk-vetch, and round-leaved filaree are covered by the MSHCP. Parry's spineflower and white-bracted spineflower are not currently covered by the MSHCP and impacts to these individuals, if present, would be significant. As such, a mitigation measure is prescribed as MM BIO-1 in section 7.2.1, which requires a spring focused plant survey to be conducted within the off-site manufactured slope area located directly east of the site prior to ground disturbance in the appropriate blooming period (between April and June) to determine the presence/absence of Parry's spineflower and white-bracted spineflower. If either or both of these species are found within the off-site eastern manufactured slope area, MM BIO-1 outlines the necessary actions that are required to reduce impacts to the special-status plant species to less than significant.

6.3.1.2 Special-status Wildlife Species

Development of the study area would result in the disruption and removal of habitat and the loss and displacement of common wildlife species. A list of wildlife species observed within the study area is included in Appendix A. Due to the limited amount of native habitat to be removed and the level of existing disturbance from human activity within the vicinity (e.g., nearby development), these impacts would not be expected to reduce the general wildlife populations below self-sustaining levels within the region and impacts to common wildlife species do not meet the significance thresholds defined in Section 5.0, *Thresholds of Significance* above. Therefore, impacts to common wildlife species would not be considered a significant impact and no mitigation measures are required.

A total of 25 special-status wildlife species of the 43 species identified as occurring in the project vicinity in available databases (see section 4.7.6 above) are not considered to have a potential to occur within the study area due to the lack of suitable habitat or because the site is outside the known distribution range for the species. These species are listed in Appendix C. Since these species are not expected to be present on the study area, no impacts would occur as a result of project development and no mitigation measures are required.

As discussed in section 4.7.6, above, the remaining 19 special-status wildlife species were determined to have a potential to occur on the study area. Of these species, focused surveys were conducted for burrowing owl, which is conditionally covered by the MSHCP with additional surveys and mitigation required as discussed in further detail below. Of the remaining 17 potential special-status wildlife species, 12 species are covered by the MSHCP with no survey or conservation requirements for the study area, including coast horned lizard, orange-throated whiptail, red diamondback rattlesnake, golden eagle, Swainson's hawk, loggerhead shrike, coastal California gnatcatcher, northwestern San Diego pocket mouse, Stephens' kangaroo rat (covered by the SKR HCP), Los Angeles pocket mouse, San Diego black-tailed jackrabbit, and San Diego desert woodrat. Therefore, assuming payment of the applicable fees (the MSHCP Local Development Mitigation Fee and the SKR HCP fee for the Stephens' kangaroo rat) and compliance with required guidelines in the MSHCP (see section 7.2.5 below), no additional mitigation is required for these species.

The remaining six (6) species, the southern grasshopper mouse, American badger, western mastiff bat, pocketed free-tailed bat, lesser long-nosed bat, and pallid bat are not covered by the MSHCP. These species are listed as species of special concern by the CDFW and do not carry a federal or state listing as threatened or endangered. These species are considered to have a low to very low potential to occur on the study area based on the limited habitat and/or quality of the habitat, and no significant impacts are anticipated to these species as described below. The study area also has the potential to support migratory birds and raptors that are discussed further in 6.2.4.2 of this report.

- No significant impact to southern grasshopper mouse since this species is only considered to have a low potential to occur as it has not been recorded on CNDDB within the vicinity of the study area since 1938.

- No significant impact to American badger since this species was considered to have low potential to occur. The majority of the site is surrounded by development and a large portion of suitable habitat is disturbed. Additionally, this species has not been recorded on CNDDB within the vicinity of the study area since 1908.

- No significant impact to western mastiff bat since this species was only considered to have a low potential to occur for foraging with no suitable roosting habitat on the study area. Although bats in this family are known to be strong fliers and can fly long distances to forage, there is only a low probability that these species will travel to the study area based on the disturbance present on the study area and presence of surrounding development. The nearest CNDDB occurrence record of this species was recorded in 1990 approximately 3.0 miles to the southwest of the study area.

- No significant impact to pocketed free-tailed bat since this species was only considered to have a very low potential to occur for roost with no suitable roosting habitat on the study area. The potential for roosting was considered very low since this species typically prefers steeper cliffs for roosting habitat. Although little is known regarding home range for this species, the potential for roosting is also unlikely since the study area does not support adjacent foraging habitat.[11] There are only two CNDDB occurrence records in the vicinity.

---

11 CDFW. 2000. California Wildlife Habitat Relationships System: Pocketed Free-tailed Bat. State of California, The Resources Agency. May 2000.

The nearest record is from 1985 approximately 6.5 miles to the southwest of the study area near March Air Force Base.

- No significant impact to lesser long-nosed bat since this species was only considered to have a very low potential to roost and forage on the study area. The potential was considered low since this species is not typically found in California. Records in California are typically vagrant migrants. This species has only been recorded once on CNDDB within the vicinity of the study area, which was in 1993 approximately 9.5 miles to the northeast in a residential neighborhood of Yucaipa.

- No significant impact to pallid bat since this species was only considered to have a very low potential to roost and forage on the study area. The potential was considered very low because of evidence of disturbance on the study area and the presence of surrounding development to the south, northeast, and west; this species is highly sensitive to disturbance. Additionally, this species has not been recorded on CNDDB within the vicinity since 1929.

The above six species were not considered for coverage under the MSHCP, indicating that regionally significant populations of these species do not exist within the MSHCP boundaries. Based on the above discussion, the study area is not capable of supporting large populations of these species and a loss of a few individuals, if present, would not expect to reduce regional population numbers. Therefore, any impacts to these species would be less than significant and no mitigation measures are considered required.

Burrowing Owl

The study area supports potentially suitable burrowing owl (Species of Special Concern) habitat, but no active burrowing owl burrows, signs, or individuals were found on-site during the Step I and Step II surveys.

Although the study area does not currently support burrowing owls, a pre-construction survey is required in compliance with the MSHCP. Specifically, in accordance with the County of Riverside's *Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area* (County of Riverside, 2006), a pre-construction survey for burrowing owl within the study area is required within 30 days prior to ground disturbance to avoid potential direct take of burrowing owls in the future. A Condition of Approval (COA BIO-1) requiring this survey is provided in section 7.2.2 below, in addition to a recommended mitigation measure (MM BIO-2) should burrowing owls be present in the future. Mitigation is proposed consistent with the burrowing owl mitigation guidelines published by CDFW (CDFW, 2012).

6.3.2 Impacts to Sensitive Plant Communities

Threshold BIO-B: Would the project have a substantial adverse effect on any riparian habitat or other sensitive plant community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Wildlife or U. S. Fish and Wildlife Service?

No Impacts (Sensitive Plant Communities)

Less than Significant with Regulatory Compliance (CDFW Jurisdiction)

6.3.2.1 Sensitive Plant Communities

Sensitive plant communities were not observed within the study area; therefore, no impacts would occur. There are seven native communities on the study area that total 9.48 acres, including brittlebush scrub, brittlebush scrub/ruderal, buckwheat scrub/ruderal, laurel sumac scrub/ruderal, Riversidean sage scrub, Riversidean sage scrub/ruderal, and rock outcrop/Riversidean sage scrub. Permanent impacts to native communities on the study area are proposed to 2.91 acres, which is only 3.8 percent of the total proposed permanent impacts (75.81 acres) to plant communities. The majority of permanent impacts are proposed to ruderal (37.66 acres) and disturbed (30.54 acres) areas, which are dominated by non-native species. Impacts to these areas comprise 90.0 percent of the total impacts to plant communities on the study area. In addition to permanent impacts, 0.83 acres of fuel modification and 1.25 acres of temporary impacts are proposed to native communities on the study area. Impacts to plant communities are shown in **Figure 13**, *Impacts to Plant Communities* and **Table 6**, *Existing and Proposed Impacts to Plant Communities*.

TABLE 6
EXISTING AND PROPOSED IMPACTS TO PLANT COMMUNITIES

Plant Communities	Existing (acres)	Permanent Impacts (acres)	Fuel Modification Impacts (acres)	Temporary Impacts (acres)
Brittlebush Scrub	2.61	0.92	0.32	0.69
Brittlebush Scrub/Ruderal	0.52	0.51	0.00	0.01

6.3.2.2 CDFW Jurisdiction

The project study areas support drainages that are considered CDFW jurisdictional streambeds pursuant to Section 1602 of the California Fish and Game Code and are proposed for impacts. Drainage A and Drainage Complex B are all jurisdictional, of which permanent impacts are proposed to Drainages A, B, B2, B3, B4, and B5 totaling 0.077 acre of permanent impacts (including 0.046 acre on-site and 0.031 acre off-site), as shown on **Figure 14**, *Impacts to Jurisdictional Features and MSHCP Riverine Areas*. Existing and impact acreages are summarized in **Table 7**, *Permanent Impacts to CDFW Jurisdictional Features and MSHCP Riverine Areas*. The permanent impacts total approximately 47 percent of the total 0.165 acre of CDFW jurisdiction identified within the on-site and off-site study areas. It should be noted that this report presumes combined impacts associated with the proposed water line alignment and two alternative alignments will occur. However, only one water line alignment will ultimately by implemented. Therefore, permanent and temporary impacts to CDFW jurisdictional waters will be slightly reduced once the final water line alignment is determined. Compensatory mitigation for permanent impacts to CDFW jurisdictional waters will be required for the project based only on impacts associated with the final water line alignment as part of subsequent CDFW Section 1602 permitting requirements. Temporarily impacted CDFW jurisdictional areas will be restored to pre-project conditions following completion of construction.

TABLE 7
IMPACTS TO CDFW JURISDICTIONAL FEATURES AND MSHCP RIVERINE AREAS[a]

Drainage (Study Area)	Existing (acres)	Permanent Impacts (acres)	Temporary Impacts (acres)
Drainage A (On-Site)	0.046	0.046	-
Drainage A (Off-Site)	0.013	0.013	-
Drainage B (Off-Site)	0.069	0.011	0.058
Drainage B1 (Off-Site)	0.001	0.000	0.001
Drainage B2 (Off-Site)	0.001	0.000[b]	0.001
Drainage B3 (Off-Site)	0.001	0.000[c]	0.001
Drainage B4 (Off-Site)	0.001	0.000[d]	0.001
Drainage B5 (Off-Site)	0.033	0.007	0.026
Total	**0.165**	**0.077**	**0.088**

NOTES:
[a] MSHCP Riverine Areas are presumed equivalent to CDFW jurisdiction.
[b] Impacts are considered negligible; actual acreage of impacts to four decimal places is 0.0003 acre.
[c] Impacts are considered negligible; actual acreage of impacts to four decimal places is 0.0001 acre.
[d] Impacts are considered negligible; actual acreage of impacts to four decimal places is 0.0004 acre.

Ironwood Village Project
Figure 14
Impacts to Jurisdictional Features and MSHCP Riverine Areas

ESA PCR

Impacts to CDFW jurisdictional features would be required to comply with Section 1602 of the California Fish and Game Code, including applying for a permit and providing compensatory streambed mitigation as stated above. A Condition of Approval (COA BIO-2) is proposed in section *7.2.3 Measures to Mitigate Potentially Significant Impacts to Jurisdictional Features* of this BRA to comply with the compensatory mitigation requirement of this regulation, subject to approval by CDFW. Compliance with Section 1602 of the California Fish and Game Code would reduce impacts to a less than significant level.

6.3.3 Impacts to Wetlands

Threshold BIO-C: Would the project have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Less than Significant with Regulatory Compliance

The project study areas do not support wetlands as defined by Section 404 of the Clean Water Act. However, the project study areas do support USACE/RWQCB ephemeral non-wetland jurisdictional streambeds regulated under Sections 404/401 of the Clean Water Act (CWA) that are proposed for impacts. Drainage A and Drainage B5 are considered jurisdictional "waters of the U.S.", of which permanent impacts are proposed totaling 0.034 acre(0.023 acre on-site and 0.011 acre off-site), as shown on Figure 14. Existing and permanent impact acreages are summarized in **Table 8**, *Permanent Impacts to USACE/RWQCB Jurisdictional Features*. The permanent impacts total less than 60 percent of the total 0.058 acre of USACE/RWQCB jurisdiction on-site and off-site. Temporarily impacted areas will be restored to pre-project conditions.

TABLE 8
IMPACTS TO USACE/RWQCB JURISDICTIONAL FEATURES

Drainage	Existing (acres)		Permanent Impacts (acres)		Temporary Impacts (acres)	
	Length (ft)	Area (acres)	Length (ft)	Area (acres)	Length (ft)	Area (acres)
Drainage A	285	0.023	285	0.023	0	0.000
Drainage A (off-site)	111	0.007	111	0.007	0	0.000
Drainage B (off-site)	306	0.026	40	0.004	266	0.022
Drainage B5 (off-site)	35	0.002	10	0.001	25	0.001
Total	**737**	**0.058**	**436**	**0.034**	**366**	**0.023**

SOURCE: ESA PCR, 2016

Impacts to USACE and RWQCB jurisdictional "waters of the U.S." would be required to comply with Sections 404 and 401 of the CWA, respectively, including applying for a permit and mitigation subject to approval by USACE and/or RWQCB. A Condition of Approval (COA

BIO-2) is proposed in section *7.2.3 Measures to Mitigate Potentially Significant Impacts to Jurisdictional Features* of this BRA to comply with the compensatory mitigation requirement of these regulations, subject to approval by USACE and RWQCB. Compliance with Sections 404 and 401 of the CWA is intended to reduce impacts to a less than significant level.

6.3.4 Impacts to Wildlife Movement and Migratory Species

Threshold BIO-D: Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery areas?

Less Than Significant (Wildlife Movement)

Less than Significant with Mitigation Incorporated (Migratory Species)

6.3.4.1 Wildlife Movement

As described in section 4.5.2 above, the study area supports potential live-in and movement habitat for species on a local scale (i.e., some limited live-in and at least marginal movement habitat for reptile, bird, and mammal species), but it likely provides little to no function to facilitate wildlife movement for wildlife species on a regional scale, and is not identified as a regionally important dispersal or seasonal migration corridor. Movement on a local scale likely occurs with species adapted to urban environments due to the development and disturbances in the vicinity of the study area. Although implementation of the project would result in disturbances to local wildlife movement within the study area, those species adapted to urban areas would be expected to persist on-site following construction, particularly within the open space areas. As such, impacts would be less than significant and no mitigation measures would be required. Since the study area does not function as a regional wildlife corridor and are not known to support wildlife nursery area(s), no impacts would occur and no mitigation measures would be required.

6.3.4.2 Migratory Species

Migratory Birds and Raptors

As previously discussed in section 4.7.6, *Special-status Wildlife Species*, the site supports potential nesting and foraging habitat for migratory birds, in addition to potential foraging habitat for raptors. Based on the disturbed nature of the site from agriculture and ongoing maintenance activities, the quality of foraging habitat is considered to be low. Higher quality foraging habitat is considered to occur in less developed areas with larger expanses of open space. The loss of a relatively small acreage of low quality foraging habitat as a result of the project would not be expected to impact the foraging of these species. Therefore, impacts to foraging habitat would be considered less than significant and no mitigation measures are considered required.

The study area has the potential to support songbird and raptor nests due to the presence of shrubs, ground cover, and limited trees on-site. Nesting activity typically occurs from February 15 to August 31. Disturbing or destroying active nests is a violation of the MBTA (16 U.S.C.

703 et seq.). In addition, nests and eggs are protected under Fish and Wildlife Code Section 3503. As such direct impacts to breeding birds (e.g. through nest removal) or indirect impacts (e.g. by noise causing abandonment of the nest) is considered a potentially significant impact as defined by the thresholds of significance (Threshold BIO-D) in Section 6.0 above. Compliance with the MBTA would reduce impacts to a less than significant level, as detailed in MM BIO-3 (see section 7.2.4).

6.2.5 Consistency with Local Policies and Ordinances

Threshold BIO-E: Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

No Impacts

The project does not conflict with any local policies or ordinances protecting biological resources, such as tree preservations or ordinances.

6.2.6 Consistency with Adopted Natural Community Conservation Plan

Threshold BIO-F: Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Less than Significant with Mitigation Incorporated

The study area is within the Western Riverside County MSHCP and requires payment of the Local Development Mitigation Fee, compliance with requirements of the MSHCP including the Burrowing Owl Survey Area guidelines (Section 6.3.2 of the MSHCP), and the Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools (Section 6.1.2 of the MSHCP). The study area is not within a cell, a designated cell group, or a subunit within the Reche Canyon/Badlands Area Plan; therefore, conservation of land on the study area is not required pursuant to the MSHCP. The study area is also not within the survey overlays for Criteria Area Species, Narrow Endemic Plant Species, Amphibian Species, or Mammal Species (Section 6.3.2 of the MSHCP). Since the study area is not within or in the vicinity of any Criteria Cells, the project will not result in edge effects that will adversely and directly affect biological resources within the MSHCP Conservation Area. As such, the project will not be subject to certain requirements outlined in the Guidelines Pertaining to the Urban/Wildlands Interface (Section 6.1.3 of the MSHCP) including those for the treatment and management of edge factors including night lighting, noise, barriers for public access and predators, and grading/land development limits. However, runoff from the site has the potential to indirectly affect MSHCP Conservation Areas downstream through the quantity and quality of water discharged from the site, in addition to the transport of plant seeds. Therefore compliance with the drainage, toxics, and invasive requirements outlined in Section 6.1.3 of the MSHCP would be required. A Condition of Approval (COA BIO-3) is proposed in section *7.2.5 Measures to Mitigate Potentially Significant Impacts to the MSHCP* of this BRA, which requires the project to comply with all provisions of the MSHCP prior to issuance of a grading permit. Compliance with COA BIO-3 would reduce impacts to a less than significant level.

Project compliance with the MSHCP pertaining to Burrowing Owl, Riparian/Riverine, and Urban/Wildlands Interface requirements for drainage, toxics and invasives are summarized below:

- The study area is within the Burrowing Owl Survey Area of the MSHCP. Focused burrowing owl surveys were conducted within all portions of the study area that support potentially suitable habitat for this species. No burrowing owls were observed on the study area. However, due to the presence of potentially suitable habitat, a 30-day pre-construction survey for burrowing owl is required pursuant to the MSHCP. If burrowing owls are found within the study area during the 30-day pre-construction survey, impacts to this species would be potentially significant. The Condition of Approval (COA BIO-1) and mitigation measure (MM BIO-2) prescribed in section 7.2.1 below would reduce this impact to a less than significant level and ensure consistency with the MSHCP.

- Drainage A and Drainage Complex B on the study area meet the definition of Riverine Areas pursuant to the MSHCP. The project will result in permanent impacts to 0.078 acre of Riverine Areas, including 0.046 acre within the on-site portion of Drainage A, 0.013 acre in the off-site portion of Drainage A, and 0.018 acre within Drainage Complex B. The permanent impacts are equivalent to approximately 47 percent of the total 0.165 acre of Riverine Areas within the project study areas. The proposed Riverine Areas impacts are summarized in Table 7.

- The biological function and value of the on- and off-site Riverine Areas within Drainage A and Drainage Complex B include the transport of water, which is restricted based on the ephemeral flows of the drainage and limited watershed. The function and value of the drainages are also limited since they support only small patches of upland and/or ruderal vegetation and are primarily unvegetated. Other types of aquatic features that could provide suitable habitat for Riparian/Riverine species, such as fairy shrimp, are not present within the study area (i.e. vernal pools, swales, vernal pool-like ephemeral ponds, seasonal ponds, stock ponds, or other human-modified depressions such as tire ruts, etc.).

- Impacts to Riverine Areas would be potentially significant based on requirements of the MSHCP. According to section 6.1.2 of the MSHCP, if an avoidance alternative is not feasible a Determination of Biologically Equivalent or Superior Preservation (DBESP) shall be made by the Project applicant to ensure the replacement of any lost functions and values of habitat as it relates to MSHCP Covered Species. The condition of approval prescribed in section 7.2.3 below pertaining to jurisdictional drainages ensures consistency with the MSHCP. The DBESP would be submitted to the City and reviewed and approved by the City and the Wildlife Agencies.

- The project has the potential to affect the quantity and quality of water in downstream MSHCP Conservation Areas or Riverine areas via Drainage A and Drainage Complex B through runoff generated by the development and transport of invasive, non-native plants species from project landscaping. Since the project will be required to comply with flood and water quality standards,[12] no indirect effects from the quantity and quality of run-off will occur to downstream areas. In addition, no invasive, non-native plant species listed in Tables 6-2 of the MSHCP, *Plants That Should Be Avoided Adjacent To The MSHCP Conservation Area*, will be utilized in the landscape plans. These measures will avoid impacts to water quality and the dispersal of invasive plant seeds in the watershed and are outlined in the Condition of Approval recommended in section 7.2.5 below.

12 The project will be required to prepare a Water Quality Management Plan and Storm Water Pollution Prevention Plan consistent with Regional Water Quality Control Board and County requirements that will outline measures such as Best Management Practices (BMPS) to address water quantity and quality, and to address any potential flooding.

This page intentionally blank.

7.0 MITIGATION MEASURES AND CONDITIONS OF APPROVAL

7.1 Approach

Mitigation measures are recommended for those impacts determined to be significant to special-status biological resources (identified in italics in section 7.2 below). Mitigation measures for impacts considered to be "significant" were developed in an effort to reduce such impacts to a level of "insignificance," while at the same time allowing an opportunity to realize development goals under the proposed project. As stated in CEQA Guidelines Section 15370 mitigation includes:

1. Avoiding the impact altogether by not taking a certain action or parts of an action.
2. Minimizing impacts by limiting the degree or magnitude of the action and its implementation.
3. Rectifying the impact by repairing, rehabilitating, or restoring the impacted environment.
4. Reducing or eliminating the impact over time by preservation and maintenance operations during the life of the action.
5. Compensating for the impact by replacing or providing substitute resources or environments.

Where compliance with existing regulations and the issuance of permits by regulatory agencies would reduce impacts to a less than significant level, those measures are proposed as conditions of approval (identified in non-italics in section 7.2 below).

7.2 Mitigation Measures and Conditions of Approval for Significant Impacts

The following recommended mitigation measures (MM) and conditions of approval (COA) are intended to address potentially significant impacts from the proposed development Project.

7.2.1 Measures to Mitigate Potentially Significant Impacts to Special-Status Plant Species

MM BIO-1 Due to the presence of suitable habitat within the proposed off-site manufactured slope area located directly east of the project boundary, a spring focused plant survey to determine the presence/absence of Parry's spineflower and white-bracted spineflower is required to be conducted during the appropriate blooming periods of the two species (between April and June) prior to ground disturbance. If individuals are found, significant impacts would occur as a result of implementation of the project unless mitigation is implemented to reduce impacts to less than significant. Mitigation includes seed collection of individuals that would be significantly impacted by the project at the end of the growing season and prior to ground disturbance. Collected seeds will be planted within an appropriate on-site or off-site mitigation area, which will be conserved as open space in perpetuity. Mitigation for significant impacts to Parry's spineflower and white-bracted spineflower will be implemented in consultation with the City of Moreno Valley and CDFW.

7.2.2 Measures to Mitigate Potentially Significant Impacts to Special-Status Wildlife Species

COA BIO-1 Due to the presence of suitable habitat and in compliance with the MSHCP, a pre-construction survey for burrowing owl is required within 30 days prior to ground disturbance to determine the presence of burrowing owls and avoid potential direct take of burrowing owls if present.

MM BIO-2 If burrowing owls are determined present during the 30-day pre-construction survey, occupied burrows shall be avoided to the greatest extent feasible, following the guidelines in the Staff Report on Burrowing Owl Mitigation published by Department of Fish and Wildlife (CDFW, 2012) including, but not limited to, conducting pre-construction surveys, avoiding occupied burrows during the nesting and non-breeding seasons, implementing a worker awareness program, biological monitoring, establishing avoidance buffers, and flagging burrows for avoidance with visible markers. If occupied burrows cannot be avoided, acceptable methods may be used to exclude burrowing owl either temporarily or permanently, pursuant to a Burrowing Owl Exclusion Plan that shall be prepared and approved by the County of Riverside Environmental Programs Department (EPD), in coordination with the CDFW. The Burrowing Owl Exclusion Plan shall be prepared in accordance with the guidelines in the Staff Report on Burrowing Owl Mitigation and the MSHCP.

In accordance with the MSHCP, take of active nests will be avoided. Passive relocation (i.e., the scoping of the burrows by a burrowing owl biologist and collapsing burrows free of young) will occur when owls are present outside the nesting season. The EPD may require translocation sites for the burrowing owl to be created in the MSHCP reserve for the establishment of new colonies pursuant to MSHCP objectives for the species. Translocation sites, if required, will be identified in consultation with EPD and/or CDFW taking into consideration unoccupied habitat areas, presence of burrowing mammals, existing colonies, and effects to other MSHCP Covered Species.

7.2.3 Measures to Mitigate Potentially Significant Impacts to Jurisdictional Features

COA BIO-2 Prior to the issuance of any grading permit for permanent impacts in the areas designated as jurisdictional features, the project applicant shall obtain regulatory permits from the USACE, RWQCB, and CDFW. The following shall be incorporated into the permitting, subject to approval by the regulatory agencies:

1. On-site or off-site creation, restoration and/or enhancement of USACE/RWQCB jurisdictional "waters of the U.S." within the San Jacinto watershed at a ratio no less

than 1:1 or within an adjacent watershed at a ratio no less than 2:1 for permanent impacts, and for any temporary impacts to restore the impact area to pre-project conditions (i.e. pre-project contours). Off-site mitigation may occur on land acquired for the purpose of in-perpetuity preservation as approved by the resource agencies, or through the purchase of mitigation credits at a resource agency-approved off-site mitigation bank or in-lieu fee program.

2. On-site or off-site creation, restoration, and/or enhancement of CDFW jurisdictional streambed within the San Jacinto watershed at a ratio no less than 1:1 or within an adjacent watershed at a ratio no less than 2:1 for permanent impacts, and for any temporary impacts to restore the impact area to pre-project conditions (i.e. pre-project contours). Off-site mitigation may occur on land acquired for the purpose of in-perpetuity preservation as approved by the resource agencies, or through the purchase of mitigation credits at a resource agency-approved off-site mitigation bank or in-lieu fee program.

Purchase of any mitigation credits through an agency-approved mitigation bank or in-lieu fee program should occur prior to any impacts to jurisdictional drainages. Any mitigation proposed on land acquired for the purpose of in-perpetuity mitigation that is not part of an agency-approved mitigation bank or in-lieu fee program shall include the creation, restoration, and/or enhancement of similar streambed habitat pursuant to a resource agency-approved Habitat Mitigation and Monitoring Plan (HMMP). The HMMP shall be prepared prior to any impacts to jurisdictional features, and shall provide details as to the implementation of the mitigation, maintenance, and future monitoring of mitigation areas. The goal of the mitigation shall be to create, restore, and/or enhance similar habitat with equal or greater function and value than the impacted habitat.

7.2.4 Measures to Mitigate Potentially Significant Impacts to Migratory or Nesting Birds

MM BIO-3 Prior to the issuance of any grading permit that would remove potentially suitable nesting habitat for raptors or songbirds, the project applicant shall demonstrate to the satisfaction of the City of Moreno Valley that either of the following have been or will be accomplished:

1. Vegetation removal activities shall be scheduled outside the nesting season (September 1 to February 14 for songbirds; September 1 to January 14 for raptors) to avoid potential impacts to nesting birds.

2. Any construction activities that occur during the nesting season (February 15 to August 31 for songbirds; January 15 to August 31 for raptors) will require that all suitable habitat be thoroughly surveyed for the presence of nesting birds by a qualified biologist before commencement of clearing. If any active nests are detected a buffer of 300 feet (500 feet for raptors) around the nest adjacent to construction will be delineated, flagged, and avoided until the nesting cycle is complete. The buffer may be modified and/or other recommendations proposed as determined appropriate by the biological monitor to minimize impacts.

7.2.5 Measures to Mitigate Potentially Significant Impacts to the MSHCP

COA BIO-3 Prior to the issuance of any grading permit the project applicant shall comply with all of the provisions of the MSHCP, including payment of the MSHCP Local Development Mitigation Fee, compliance with Section 6.1.2 of the MSHCP pertaining to Riparian/Riverine Areas, implementation of drainage, toxics and non-native species guidelines pertaining to the Urban/Wildlands Interface in Section 6.1.4 of the MSHCP, and compliance with Section 6.3.2 of the MSHCP pertaining to Burrowing Owl Survey Area requirements. Compliance with Section 6.1.2 of the MSHCP will require preparation of a Determination of Biologically Equivalent or Superior Preservation (DBESP) analysis outlining the impacts and proposed compensatory mitigation for impacts to the Riparian/Riverine Areas for submittal and approval by the City of Moreno Valley and the wildlife agencies (CDFW and USFWS).

8.0 IMPACTS AFTER MITIGATION

8.1 Level of Significance after Mitigation

The proposed project, inclusive of mitigation measures and conditions of approval, would have less than significant impacts to special-status species, jurisdictional features, and migratory and/or nesting birds, in addition to providing MSHCP consistency.

8.2 Cumulative Impacts

Cumulative impacts are defined as the direct and indirect effects of a proposed project which, when considered alone, would not be deemed a substantial impact, but when considered in addition to the impacts of related projects in the area, would be considered significant. "Related projects" refers to past, present, and reasonably foreseeable probable future projects, which would have similar impacts to the proposed Project. CEQA deems a cumulative impact analysis to be adequate if a list of "related projects" is included in the EIR or the proposed project is consistent with an adopted general, specific, master, or comparable programmatic plan [Section 15130(b)(1)(B)]. CEQA also states that no further cumulative impact analysis is necessary for impacts of a proposed project consistent with an adopted general, specific, master, or comparable programmatic plan [Section 15130(d)].

The MSHCP identifies areas for long-term conservation and management. As such, cumulative impacts of proposed projects within authorized take lands are minimized through the conservation of land. Cumulative impacts to the biological resources listed below for the study area are considered to be less than significant based on compliance with the Western Riverside County MSHCP, and regulations for jurisdictional waters. This includes implementation of the mitigation measures and conditions of approval outlined above in section 6.*0*, *Project Related Impacts* and *7.0, Mitigation Measures and Conditions of Approval*. Since the study area was determined not to function as a regional wildlife movement corridor, this biological resource is not included below.

- Special-status plant species (Parry's spineflower and white-bracted spineflower);
- Burrowing owl;
- Migratory and/or nesting birds; and
- Drainage features (including USACE, RWQCB and CDFW jurisdictional features and MSHCP Riparian/Riverine areas).

The proposed mitigation would result in a minimum no-net-loss of the biological function and value of these resources, and the conditions of approval would ensure compliance with existing regulations (such as the Western Riverside County MSHCP) and regulations for jurisdictional drainages. Therefore, with the proposed mitigation and conditions of approval, impacts would not be considered cumulatively significant. A summary is provided below.

<u>Special-Status Plant Species:</u> Mitigation is proposed and includes a spring focused survey prior to ground disturbance to determine the presence/absence of Parry's spineflower and white-bracted spineflower within the off-site eastern manufactured slope area. If either or both of these species are observed, collection of seed and planting within an on-site or off-site mitigation site is required. The mitigation site is required to be preserved as open space in perpetuity. With this mitigation measure, any impacts to Parry's spineflower and white-bracted spineflower would not be considered cumulatively significant.

<u>Special-Status Wildlife Species:</u> Mitigation is proposed if burrowing owls are observed on the study area in the future, which would avoid direct impacts in compliance with the Western Riverside County MSHCP. Mitigation is also proposed to avoid direct impacts to raptors and migratory bird species through compliance with the MBTA. With these mitigation measures, any impacts would not be considered cumulatively significant.

<u>Jurisdictional Drainages:</u> Impacts to jurisdictional features would be subject to permitting with the regulatory agencies, including USACE, RWQCB and/or CDFW, including compensatory mitigation. With the proposed compliance of existing regulations through the permitting process, impacts would not be considered cumulatively significant.

<u>Riparian/Riverine Areas:</u> Impacts to MSHCP Riparian/Riverine areas would be subject to approval of a DBESP by the City of Moreno Valley and Wildlife Agencies, as required in Section 6.1.2 of the Western Riverside County MSHCP. With the approval and implementation of the DBESP impacts would not be considered cumulatively significant. Mitigation is proposed as compensation for impacts to jurisdictional drainages through the regulatory process as described above.

APPENDIX A - FLORAL AND FAUNAL COMPENDIUM

ANGIOSPERMS (DICOTYLEDONS)

SCIENTIFIC NAME	COMMON NAME
Adoxaceae	**Muskroot Family**
Sambucus nigra ssp. *caerulea*	blue elderberry
Anacardiaceae	**Sumac or Cashew Family**
Rhus ovata	sugar sumac
Asteraceae	**Sunflower Family**
Ambrosia acanthicarpa	flatspine bur ragweed
Artemisia californica	California sagebrush
Artemisia douglasiana	mugwort
Baccharis salicifolia	mule fat
Brickellia desertorum	desert brickellbush
* *Centaurea melitensis*	tocalote
Corethrogyne filaginifolia	common sandaster
Deinandra fasciculata	fascicled tarplant
Encelia farinosa	brittlebush
Ericameria pinifolia	pinebush
Erigeron canadensis	horseweed
* *Helianthus annuus*	common sunflower
Heterotheca grandiflora	telegraphweed
* *Lactuca serriola*	prickly lettuce
* *Oncosiphon piluliferum*	stinknet
Pseudognaphalium bicolor	bicolored cudweed
* *Salsola tragus*	prickly Russian thistle
Stephanomeria virgata	rod wirelettuce
Boraginaceae	**Borage Family**
Amsinckia intermedia	common fiddleneck
Phacelia cicutaria	caterpillar phacelia
Brassicaceae	**Mustard Family**
* *Hirschfeldia incana*	short pod mustard
* *Raphanus raphanistrum*	wild radish
* *Sisymbrium irio*	London rocket
Sisymbrium sp.	mustard

* *non-native*

ANGIOSPERMS (DICOTYLEDONS)

SCIENTIFIC NAME	COMMON NAME
Cactaceae	**Cactus Family**
Cylindropuntia californica var. *parkeri*	cane cholla
Opuntia littoralis	coast prickly pear
Chenopodiaceae	**Goosefoot Family**
* *Chenopodium murale*	nettle-leaved goosefoot
Convolvulaceae	**Morning-Glory Family**
* *Convolvulus arvensis*	field bindweed
Cucurbitaceae	**Gourd Family**
Cucurbita palmata	coyote gourd
Marah macrocarpa	wild cucumber
Cuscutaceae	**Dodder Family**
Cuscuta sp.	dodder
Euphorbiaceae	**Spurge Family**
Croton setigerus	dove weed
Euphorbia albomarginata	rattlesnake weed
Fabaceae	**Legume Family**
Acmispon americanus	Spanish lotus
Acmispon glaber var. *glaber*	deerweed
Geraniaceae	**Geranium Family**
* *Erodium botrys*	longbeak stork's bill
* *Erodium cicutarium*	red-stemmed filaree
Lamiaceae	**Mint Family**
* *Marrubium vulgare*	horehound
Salvia apiana	white sage
Salvia columbariae	chia
Salvia mellifera	black sage
Trichostema lanceolatum	vinegarweed
Malvaceae	**Mallow Family**
* *Malva parviflora*	cheeseweed
Myrtaceae	**Myrtle Family**
* *Eucalyptus camaldulensis*	red gum
* *Eucalyptus citriodora*	lemon scented gum
Nyctaginaceae	**Four O'Clock Family**
Mirabilis laevis	wishbone bush

Attachment: Biological Resources Assessment (2437 : Ironwood Village (PEN16-0077 through PEN16-0081))

* *non-native*

ANGIOSPERMS (DICOTYLEDONS)

SCIENTIFIC NAME	COMMON NAME
Polygonaceae	**Buckwheat Family**
Eriogonum fasciculatum	California buckwheat
Salix gooddingii	black willow
Scrophulariaceae	**Figwort Family**
Antirrhinum nuttallianum	Nuttall's snapdragon
Scrophularia californica	California figwort
Solanaceae	**Nightshade Family**
Datura wrightii	jimsonweed
* *Nicotiana glauca*	tree tobacco
Solanum douglasii	Douglas' nightshade
Solanum xanti	purple nightshade
Zygophyllaceae	**Caltrop Family**
* *Tribulus terrestris*	puncturevine

ANGIOSPERMS (MONOCOTYLEDONS)

SCIENTIFIC NAME	COMMON NAME
Arecaceae	**Palm Family**
* *Washingtonia robusta*	Mexican fan palm
Liliaceae	**Lily Family**
Chlorogalum pomeridianum	soap plant
Poaceae	**Grass Family**
* *Arundo donax*	giant reed
* *Avena fatua*	wild oat
* *Bromus diandrus*	ripgut grass
* *Bromus madritensis* ssp. *rubens*	foxtail chess
* *Festuca perennis*	Italian ryegrass
* *Hordeum vulgare*	barley
* *Lamarckia aurea*	goldentop
* *Polypogon monspeliensis*	annual beard grass
* *Schismus barbatus*	Mediterranean schismus

* *non-native*

REPTILES

SCIENTIFIC NAME	COMMON NAME
Colubridae	**Colubrid Snakes**
Coluber flagellum	coachwhip
Phrynosomatidae	**Zebratail, Earless, Horned, Spiny, Fringe-Toed Lizards**
Sceloporus occidentalis	western fence lizard

BIRDS

SCIENTIFIC NAME		COMMON NAME
Cathartidae		**New World Vultures**
	Cathartes aura	*turkey vulture*
Accipitridae		**Hawks**
	Accipiter cooperii	*Cooper's hawk*
	Buteo jamaicensis	*red-tailed hawk*
Falconidae		**Falcons**
	Falco sparverius	*American kestrel*
Charadriidae		**Plovers**
	Charadrius vociferus	*killdeer*
Columbidae		**Pigeons and Doves**
*	*Columba livia*	*rock pigeon*
	Zenaida macroura	*mourning dove*
Apodidae		**Swifts**
	Aeronautes saxatalis	*white-throated swift*
Trochilidae		**Hummingbirds**
	Archilochus alexandri	*black-chinned hummingbird*
	Calypte anna	*Anna's hummingbird*
Picidae		**Woodpeckers**
	Picoides nuttallii	*Nuttall's woodpecker*
Tyrannidae		**Tyrant Flycatchers**
	Sayornis nigricans	*black phoebe*
	Sayornis saya	*Say's phoebe*
	Tyrannus verticalis	*western kingbird*
	Tyrannus vociferans	*Cassin's kingbird*
Laniidae		**Shrikes**
	Lanius ludovicianus	*loggerhead shrike*

** non-native*

BIRDS

SCIENTIFIC NAME		COMMON NAME
Corvidae		**Jays and Crows**
	Corvus brachyrhynchos	*American crow*
Alaudidae		**Larks**
	Eremophila alpestris	*horned lark*
Hirundinidae		**Swallows**
	Petrochelidon pyrrhonota	*cliff swallow*
	Hirundo rustica	*barn swallow*
	Stelgidopteryx serripennis	*northern rough-winged swallow*
Aegithalidae		**Bushtits**
	Psaltriparus minimus	*bushtit*
Polioptilidae		**Gnatcatchers**
	Polioptila californica californica	*coastal California gnatcatcher*
Sturnidae		**Starlings**
*	*Sturnus vulgaris*	*European starling*
Emberizidae		**Emberizine Sparrows and Allies**
	Melozone crissalis	*California towhee*
Icteridae		**Blackbirds**
	Agelaius phoeniceus	*red-winged blackbird*
Fringillidae		**Finches**
	Haemorhous mexicanus	*house finch*
	Spinus psaltria	*lesser goldfinch*
	Spinus tristis	*American goldfinch*
Passeridae		**Old World Sparrows**
*	*Passer domesticus*	*house sparrow*

MAMMALS

SCIENTIFIC NAME	COMMON NAME
Sylvilagus audubonii sanctidiegi	Audubon's cottontail

* *non-native*

APPENDIX B: SPECIAL-STATUS PLANT SPECIES

Scientific Name	Common Name	Flowering Period	Federal	State	CNPS	MSHCP	Preferred Habitat	Potential For Occurrence
BRYOPHYTES								
Bryaceae	**Moss Family**							
Tortula californica	California screw moss	N/A	NONE	NONE	1B.2	NONE	Sandy soil. Chenopod scrub, Valley and foothill grassland. 10-1460 meters.	**ABSENT**
ANGIOSPERMS (DICOTS)								
Asteraceae	**Sunflower Family**							
Ambrosia pumila	San Diego ambrosia	Apr.-Oct.	FE	NONE	1B.1	MSHCP(b)	Chaparral, coastal scrub, valley and foothill grassland, vernal pools; often in disturbed areas; sometimes alkaline sandy loam or clay soils. 20-415 meters.	**NONE**
Artemisia palmeri	San Diego sagewort	May-Sep.	NONE	NONE	4.2	MSHCP	Coastal scrub, chaparral, riparian forest, riparian woodland, riparian scrub; found in sandy soils within drainages and riparian areas. 15-915 meters.	**NONE**
Centromadia pungens ssp. *laevis*	smooth tarplant	Apr.-Sep.	NONE	NONE	1B.1	MSHCP(d)	Chenopod scrub, meadows and seeps, playas, riparian woodland, valley and foothill grassland; alkaline. 0-640 meters.	**ABSENT**
Deinandra paniculata	paniculate tarplant	Apr.-Nov.	NONE	NONE	4.2	NONE	Generally vernally mesic; coastal scrub; valley and foothill grassland; vernal pools 25-940 meters.	**NONE**
Helianthus nuttallii ssp. *parishii*	Los Angeles sunflower	Aug.-Oct.	NONE	NONE	1A	NONE	Freshwater marsh, salt marsh. 10-1675 meters.	**NONE**
Lasthenia glabrata ssp. *coulteri*	Coulter's goldfields	Feb.-Jun.	NONE	NONE	1B.1	MSHCP(d)	Marshes and swamps (coastal salt), playas, vernal pools. 1-1220 meters.	**NONE**

NONE = species not expected to occur on the study area due to the lack of suitable habitat, or the site's location outside of the species' range; **ABSENT** = preferred habitat was considered present based on the literature review and observed habitat on the study area, however no individuals were observed during the focused sensitive plant survey.

Scientific Name	Common Name	Flowering Period	Federal	State	CNPS	MSHCP	Preferred Habitat	Potential For Occurrence
Senecio astephanus	San Gabriel ragwort	May-Jul.	NONE	NONE	4.3	NONE	Chaparral, coastal bluff scrub; rocky slopes. 400-1500 meters.	**NONE**
Symphyotrichum defoliatum	San Bernardino aster	Jul.-Nov.	NONE	NONE	1B.2	NONE	Cismontane woodland; coastal scrub; lower montane coniferous forest; meadows and seeps; marshes and swamps; valley and foothill grassland (vernally mesic); near ditches, streams and springs. 2-2040 meters.	**ABSENT**
Trichocoronis wrightii var. *wrightii*	Wright's trichocoronis	May-Sep.	NONE	NONE	2B.1	MSHCP(b)	Meadows and seeps, marshes and swamps, riparian scrub, vernal. 5-435 meters.	**NONE**
Aspleniaceae	**Spleenwort Family**							
Asplenium vespertinum	western spleenwort	Mar.-Jun.	NONE	NONE	4.2	NONE	Sandy soils in low-gradient washes, alluvial terraces, and canyon bottoms, along gravelly wash margins, or on coarse soils on steep, generally north-facing slopes in alluvial scrub, cismontane (e.g., chamise) chaparral, coastal sage scrub, oak woodland, and/or riparian scrub or woodland. 274 - 825 meters.	**NONE**
Berberidaeeae	**Barberry Family**							
Berberis nevinii	Nevin's barberry	Mar.-Jun.	FE	SE	1B.1	MSHCP(d)	Sandy soils in low-gradient washes, alluvial terraces, and canyon bottoms, along gravelly wash margins, or on coarse soils on steep, generally north-facing slopes in alluvial scrub, cismontane (e.g., chamise) chaparral, coastal sage scrub, oak woodland, and/or riparian	**ABSENT**

NONE = species not expected to occur on the study area due to the lack of suitable habitat, or the site's location outside of the species' range; **ABSENT** = preferred habitat was considered present based on the literature review and observed habitat on the study area, however no individuals were observed during the focused sensitive plant survey.

Scientific Name	Common Name	Flowering Period	Federal	State	CNPS	MSHCP	Preferred Habitat	Potential For Occurrence
							scrub or woodland. 274 - 825 meters.	
Nasturtium gambelii	Gambel's water cress	Apr.-Oct.	FE	ST	1B.1	NONE	Marshes or swamps. 5-330 meters.	**NONE**
Boraginaceae	**Borage Family**							
Harpagonella palmeri	Palmer's grapplinghook	Mar.-May	NONE	NONE	4.2	MSHCP	Chaparral, coastal scrub, valley and foothill grassland; open grassy areas within shrubland; clay soils. 20-955 meters.	**NONE**
Brassicaceae	**Mustard Family**							
Caulanthus simulans	Payson's jewel-flower	Feb.-Jun.	NONE	NONE	4.2	MSHCP	Chaparral, coastal scrub; sandy, granitic soils. 90-2200 meters.	
Lepidium virginicum var. robinsonii	Robinson's pepper-grass	Jan.-Jul.	NONE	NONE	4.3	NONE	Chaparral, coastal scrub; shrubland; dry soils. 1-885 meters.	**NONE**
Cactaceae	**Cactus Family**							
Opuntia basilaris var. brachyclada	short-joint beavertail	Apr.-Jun.	NONE	NONE	1B.2	NONE	Chaparral, Joshua tree woodland, Mojavean desert scrub, pinyon-juniper woodland, riparian woodland; sandy or granitic soils. 425-1800 meters.	**NONE**
Caryophyllaceae	**Pink Family**							
Arenaria paludicola	marsh sandwort	May-Aug.	FE	SE	1B.1	NONE	Marshes and swamps (freshwater); grows through dense areas of *Typha*, *Juncus*, and *Scirpus*; found in sandy soils. 3-170 meters.	**NONE**
Chenopodiaceae	**Saltbush Family**							
Atriplex coronata var. *notatior*	San Jacinto Valley crownscale	Apr.-Aug.	FE	NONE	1B.1	MSHCP(d)	Alkaline flats, playas, valley and foothill grassland, vernal pools. 139-500 meters.	**NONE**
Atriplex pacifica	South Coast saltscale	Mar.-Oct.	NONE	NONE	1B.2	NONE	Coastal bluff scrub, Coastal dunes, Coastal scrub, Playas. 0-140 meters.	**NONE**

NONE = species not expected to occur on the study area due to the lack of suitable habitat, or the site's location outside of the species' range; **ABSENT** = preferred habitat was considered present based on the literature review and observed habitat on the study area, however no individuals were observed during the focused sensitive plant survey.

Scientific Name	Common Name	Flowering Period	Federal	State	CNPS	MSHCP	Preferred Habitat	Potential For Occurrence
Atriplex parishii	Parish's brittlescale	Jun.-Oct.	NONE	NONE	1B.1	MSHCP(d)	Shadscale scrub, alkali sinks, freshwater wetlands, wetland-riparian; playas, vernal pools. 25-1900 meters.	**NONE**
Atriplex serenana var. *davidsonii*	Davidson's saltscale	Apr.-Oct.	NONE	NONE	1B.2	MSHCP(d)	Coastal sage scrub, wetland-riparian; coastal. 10-200 meters	**NONE**
Convolvulaceae	**Morning-glory Family**							
Convolvulus simulans	small-flowered morning-glory	Mar.-Jul.	NONE	NONE	4.2	MSHCP(e)	Clay soils, serpentinite seeps; openings in chaparral; coastal sage scrub; valley and foothill grassland. 30-700 meters.	**NONE**
Cuscuta obtusiflora var. *glandulosa*	Peruvian dodder	Jul.-Oct.	NONE	NONE	2B.2	NONE	Marshes and swamps (freshwater). 15-280 meters.	**NONE**
Fabaceae	**Pea Family**							
Astragalus hornii var. hornii	Horn's milk-vetch	May-Oct.	NONE	NONE	1B.1	MSHCP	Meadows and seeps, playas, lake margins; alkali soils. 60-850 meters.	**NONE**
Astragalus pachypus var. jaegeri	Jaeger's bush milk-vetch	Dec.-Jun.	NONE	NONE	1B.1	MSHCP	Coastal scrub, chaparral, valley and foothill grassland, cismontane woodland; dry habitats, such as ridges, valleys, and sandy slopes, typically within grasslands and oak chaparral. 365-915 meters.	**ABSENT**
Rupertia rigida	Parish's rupertia	Jun.-Aug.	NONE	NONE	4.3	NONE	Chaparral, lower montane coniferous forest, cismontane woodland, meadows and seeps, pebble plain, valley and foothill grassland. 700-2500 meters	**NONE**

NONE = species not expected to occur on the study area due to the lack of suitable habitat, or the site's location outside of the species' range; **ABSENT** = preferred habitat was considered present based on the literature review and observed habitat on the study area, however no individuals were observed during the focused sensitive plant survey.

Scientific Name	Common Name	Flowering Period	Federal	State	CNPS	MSHCP	Preferred Habitat	Potential For Occurrence
Geraniaceae	**Geranium Family**							
California macrophylla	round-leaved filaree	Mar.-May	NONE	NONE	1B.1	MSHCP(d)	Cismontane woodland, valley and foothill grassland; clay. 15-1200 meters.	**ABSENT**
Grossulariaceae	**Gooseberry Family**							
Ribes divaricatum var. parishii	Parish's gooseberry	Feb.-Apr.	NONE	NONE	1A	NONE	Riparian woodland. 65-300 meters.	**NONE**
Hydrophyllaceae	**Waterleaf Family**							
Nama stenocarpa	mud nama	Jan.-Jul.	NONE	NONE	2.B2	MSHCP(d)	Marches and swamps (lake margins, riverbanks). 5-500 meters.	**NONE**
Juglandaceae	**Walnut Family**							
Juglans californica	California black walnut	Mar.-Jun.	NONE	NONE	4.2	MSHCP	Chaparral, coastal scrub, cismontane woodland, slopes, canyons, alluvial habitats. 50-900 meters.	**NONE**
Juglandaceae	**Walnut Family**							
Lepechinia cardiophylla	heart-leaved pitcher sage	Apr.-Jul.	NONE	NONE	1B.2	MSHCP(d)	Closed-cone coniferous forest, chaparral, cismontane woodland. 520-1370 meters.	**NONE**
Monardella macrantha ssp. *hallii*	Hall's monardella	Jun.-Oct.	NONE	NONE	1B.3	MSHCP	Broadleafed upland forest, chaparral, cismontane woodland, lower montane coniferous forest, valley and foothill grassland. 730-2195 meters.	**NONE**
Monardella pringlei	Pringle's monardella	May-Jun.	NONE	NONE	1A	NONE	Coastal scrub; sandy soils. 300-400 meters.	**NONE**
Juncaceae	**Rush Family**							
Juncus duranii	Duran's rush	Jul.-Aug.	NONE	NONE	4.3	NONE	Meadows, lower and upper montane coniferous forest; wet areas. 1770-2805 meters.	**NONE**

NONE = species not expected to occur on the study area due to the lack of suitable habitat, or the site's location outside of the species' range; **ABSENT** = preferred habitat was considered present based on the literature review and observed habitat on the study area, however no individuals were observed during the focused sensitive plant survey.

Scientific Name	Common Name	Flowering Period	Federal	State	CNPS	MSHCP	Preferred Habitat	Potential For Occurrence
Malvaceae	**Stick-leaf Family**							
Malacothamnus parishii	Parish's bush-mallow	Jun.-Jul.	NONE	NONE	1A	NONE	Chaparral, coastal sage scrub; in washes. 305-455 meters.	**NONE**
Sidalcea hickmanii ssp. parishii	Parish's checkerbloom	Jun.-Aug.	NONE	SR	1B.2	NONE	Chaparral, cismontane woodland, lower montane coniferous forest; typically found in burned or cleared areas on dry, rocky hillsides and along edges of fire roads. 1000-2500 meters.	**NONE**
Sidalcea neomexicana	salt spring checkerbloom	Mar.-Jun.	NONE	NONE	2B.2	NONE	Chaparral, coastal scrub, lower montane coniferous forest, Mojavean desert scrub, playas/alkaline, mesic. 15-1530 meters.	**ABSENT**
Nyctaginaceae	**Four O'Clock Family**							
Abronia villosa var. *aurita*	chaparral sand-verbena	Jan.-Sep.	NONE	NONE	1B.1	NONE	Chaparral, coastal scrub, desert dunes; sandy. 75-1600 meters.	**ABSENT**
Orobanchaceae	**Broom-rape Family**							
Chloropyron maritimum ssp. maritimum	salt marsh bird's-beak	May-Oct.	FE	SE	1B.2	NONE	Coastal salt marsh, coastal dunes; limited to the higher zones of the salt marsh habitat 0-30 meters.	**NONE**
Papaveraceae	**Poppy Family**							
Romneya coulteri	Coulter's matilija poppy	Mar.-Jul.	NONE	NONE	4.2	MSHCP(e)	Dry washes and canyons in sage scrub and chaparral. 20-1200 meters.	**NONE**
Polemoniaceae	**Phlox Family**							
Eriastrum densifolium ssp. sanctorum	Santa Ana River woollystar	Apr.-Sep.	FE	SE	1B.1	MSHCP	Chaparral, coastal scrub (alluvial fan); sandy or gravelly soils. 91-610 meters.	**NONE**

NONE = species not expected to occur on the study area due to the lack of suitable habitat, or the site's location outside of the species' range; **ABSENT** = preferred habitat was considered present based on the literature review and observed habitat on the study area, however no individuals were observed during the focused sensitive plant survey.

Scientific Name	Common Name	Flowering Period	Federal	State	CNPS	MSHCP	Preferred Habitat	Potential For Occurrence
Navarretia fossalis	spreading navarretia	Apr.-Jun.	FT	NONE	1B.1	MSHCP(b)	Coastal sage scrub, wetland-riparian; occurs almost always under natural conditions in wetlands. 30-655 meters.	**NONE**
Polygonaceae	**Buckwheat Family**							
Chorizanthe leptotheca	Peninsular spineflower	May-Aug.	NONE	NONE	4.2	MSHCP(e)	Chaparral, coastal scrub, lower montane coniferous forest; granitic soils and alluvial fans. 300-1900 meters.	**NONE**
Chorizanthe parryi var. *parryi*	Parry's spineflower	Apr.-Jun.	NONE	NONE	1B.1	MSHCP(e)	Chaparral, cismontane woodland, coastal scrub, valley and foothill grassland; sandy or rocky, openings. 275-1220 meters.	**ABSENT** However, there is a potential for this species to occur within the off-site manufactured slope area east of the project boundary.
Chorizanthe polygonoides var. *longispina*	long-spined spineflower	Apr.-Jul.	NONE	NONE	1B.2	MSHCP	Chaparral, coastal scrub, meadow and seep, valley and foothill grassland, vernal pools; ultramafic, often clay. 30-1530 meters.	**ABSENT**
Chorizanthe xanti var. leucotheca	white-bracted spineflower	Apr.-June	NONE	NONE	1B.2	NONE	Coastal scrub(alluvial fans), Mojavean desert scrub, pinyon and juniper woodland; sandy or gravelly soils. 300-1200 meters.	**ABSENT** However, there is a potential for this species to occur within the off-site manufactured slope area east of the project boundary.
Dodecahema leptoceras	slender-horned spineflower	Apr.-Jun.	FE	SE	1B.1	MSHCP(b)	Chaparral, cismontane woodland, coastal scrub (alluvial fan); sandy. 200-760 meters.	**NONE**
Ranunculaceae	**Buttercup Family**							
Myosurus minimus ssp. *apus*	little mousetail	Mar.-Jun.	NONE	NONE	3.1	MSHCP(d)	Associated with vernal pools and inundated grassland habitats.	**NONE**

NONE = species not expected to occur on the study area due to the lack of suitable habitat, or the site's location outside of the species' range; **ABSENT** = preferred habitat was considered present based on the literature review and observed habitat on the study area, however no individuals were observed during the focused sensitive plant survey.

Scientific Name	Common Name	Flowering Period	Federal	State	CNPS	MSHCP	Preferred Habitat	Potential For Occurrence
Rosaceae	**Rose Family**							
Horkelia cuneata var. *puberula*	mesa horkelia	Feb.-Sep.	NONE	NONE	1B.1	NONE	Chaparral (maritime), cismontane woodland, coastal scrub; sandy or gravelly soils. 70-810 meters.	**ABSENT**
Rubiaceae	**Coffee Family**							
Galium californicum ssp. *primum*	Alvin Meadow bedstraw	May-Jul.	NONE	NONE	1B.2	MSHCP(f)	Chaparral, Lower montane coniferous forest/granitic, sandy 1350-1700 meters.	**NONE**
Solanaceae	**Nightshade Family**							
Lycium parishii	Parish's desert-thorn	Mar.-Apr.	NONE	NONE	2B.3	NONE	Coastal scrub, Sonoran desert scrub. 135-1000 meters.	**NONE**
Themidaceae	**Butcher's-Broom Family**							
Brodiaea filifolia	thread-leaved brodiaea	Mar.-Jun.	FT	SE	1B.1	MSHCP(d)	Clay soils in coastal scrub, valley and foothill grassland, cismontane woodland, and vernal pools. 25-1120 meters.	**NONE**
Muilla coronate	crowned muilla	Mar.-Apr.	NONE	NONE	4.2	NONE	Joshua tree woodland, pinyon-juniper woodland, Mojavean desert scrub, chenopod scrub; found in sandy, granitic soils on barren flats and ridges. 670-1960 meters.	**NONE**
ANGIOSPERMS (MONOCOTS)								
Cyperaceae	**Sedge Family**							
Carex comosa	bristly sedge	May-Sep.	NONE	NONE	2B.1	NONE	Coastal prairie, Marshes and swamps (lake margins), Valley and foothill grassland. 0-625 meters.	**NONE**

NONE = species not expected to occur on the study area due to the lack of suitable habitat, or the site's location outside of the species' range; **ABSENT** = preferred habitat was considered present based on the literature review and observed habitat on the study area, however no individuals were observed during the focused sensitive plant survey.

Scientific Name	Common Name	Flowering Period	Federal	State	CNPS	MSHCP	Preferred Habitat	Potential For Occurrence
Orchidaceae	**Orchid Family**							
Piperia leptopetala	narrow-petaled rein orchid	Mar.-Jul.	NONE	NONE	4.3	NONE	Cismontane woodland, lower and upper montane coniferous forest. 380-2225 meters.	**NONE**
Liliaceae	**Lily Family**							
Allium munzii	Munz's onion	Mar.-May	FE	ST	1B.1	MSHCP(b)	Prefers chaparral, cismontane woodland, coastal scrub, pinyon and juniper woodland, valley and foothill grassland; mesic, clay. 297-1070 meters.	**NONE**
Calochortus plummerae	Plummer's mariposa lily	May-Jul.	NONE	NONE	4.2	MSHCP(e)	Coastal scrub, chaparral, valley and foothill grassland, cismontane woodland, lower montane coniferous forest; rocky and sandy areas, typically of granitic or alluvial material; typically common after fire. 100-1700 meters.	**NONE**
Lilium humboldtii ssp. ocellatum	ocellated Humboldt lily	Mar.-Jul.	NONE	NONE	4.2	MSHCP(e)	Chaparral, cismontane woodland, coastal scrub, lower montane coniferous forest, riparian woodland, openings. 30-1800 meters.	**NONE**
Poaceae	**Grass Family**							
Hordeum intercedens	vernal barley	Mar.-Jun.	NONE	NONE	3.2	MSHCP	Valley and foothill grassland, vernal pools, coastal dunes, coastal scrub, dry saline streambeds, alkaline flats. 5-1000 meters.	**NONE**
Imperata brevifolia	California satintail	Sep.-May	NONE	NONE	2.1	NONE	Chaparral, coastal sage scrub, Mojavean desert scrub, meadows and seeps (often alkali), riparian scrub/mesic. 0-1215 meters.	**NONE**
Sphenopholis obtusata	prairie wedge grass	Apr.-Jul.	NONE	NONE	2B.2	NONE	Cismontane woodland, meadows and seeps; mesic sites. 300-2000 meters.	**NONE**

NONE = species not expected to occur on the study area due to the lack of suitable habitat, or the site's location outside of the species' range; **ABSENT** = preferred habitat was considered present based on the literature review and observed habitat on the study area, however no individuals were observed during the focused sensitive plant survey.

Scientific Name	Common Name	Flowering Period	Federal	State	CNPS	MSHCP	Preferred Habitat	Potential For Occurrence
FUNGI (ASCOMYCOTA)								
Caliciaceae	**Lichen-forming Fungi**							
Texosporium sancti-jacobi	woven-spored lichen	N/A	NONE	NONE	3	NONE	Chaparral; found in open areas with chamise, buckwheat, club moss, and sometimes on small mammal droppings. 290-660 meters.	**NONE**

NONE = species not expected to occur on the study area due to the lack of suitable habitat, or the site's location outside of the species' range; **ABSENT** = preferred habitat was considered present based on the literature review and observed habitat on the study area, however no individuals were observed during the focused sensitive plant survey.

Appendix C: Special-Status Wildlife Species

Scientific Name	Common Name	Federal	State	MSHCP	Preferred Habitat	Potential For Occurrence
INVERTEBRATES						
ANOSTRACA	**Fairy Shrimp**					
Streptocephalus woottoni	Riverside fairy shrimp	FE	NONE	MSHCP(a)	Endemic to western Riverside, Orange and San Diego Counties In areas of tectonic swales and slump basins in grassland and coastal scrub. Inhabit seasonal pools filled by winter/spring rains. Hatch in warm water later in the season.	**NONE** No suitable habitat.
Diptera	**Flies**					
Rhaphiomidas terminatus abdominalis	Delhi Sands flower-loving fly	FE	NONE	MSHCP	Found in areas of the Delhi Sands formation in southwestern San Bernardino and northwestern Riverside Counties. Requires fine, sandy soils, often with wholly or partly consolidated dunes and sparse vegetation.	**NONE** No suitable habitat. Although the study area is in the species range, Delhi Sands soils were not mapped by NRCS. Additionally, the majority of the site is highly disturbed.
Lepidoptera	**Butterflies and Moths**					
Euphydryas editha quino	quino checkerspot butterfly	FE	NONE	MSHCP	Chaparral and coastal scrub with sunny clearings. Require high densities of host plants, cuhs as *Plantago erecta*, *P. insularis*, and *Orthocarpus purpurescens*.	**NONE** No host species.
FISHES						
Catostomidae	**Suckers**					
Catostomus santaanae	Santa Ana sucker	FT	NONE	MSHCP	Habitat generalists, but prefer sand-rubble-boulder bottoms,	**NONE**

NONE = Species not expected to occur due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (N) = Species not expected to nest or roost due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (F) = Species not expected to forage due to lack of food sources, or the site's location is outside of the species' range.

NOT EXPECTED = Preferred habitat was considered potentially present based on the literature review and anticipated habitat in the study area, however no individuals were observed and/or suitable habitat was absent based on the general field survey or focused surveys.

POTENTIAL = Preferred habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (N) = Preferred nesting or roosting habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (F) = Preferred foraging habitat was considered potentially present based on the literature review and observed habitat in the study area.

OBSERVED = Species was observed during surveys conducted on the site.

Scientific Name	Common Name	Federal	State	MSHCP	Preferred Habitat	Potential For Occurrence
					cool, clear water, & algae.	No suitable habitat.
Cyprinidae	**Carps and Minnows**					
Gila orcutti	arroyo chub	NONE	SSC	MSHCP	Aquatic and south coast flowing waters; slow water stream sections with mud or sand bottoms; feeds heavily on aquatic vegetation and associated invertebrates.	**NONE** No suitable habitat.
Rhinichthys osculus ssp. *3*	Santa Ana speckled dace	NONE	SSC	NONE	Aquatic and south coast flowing waters. Prefer stony habitat where there are hiding spaces between stones, washed by moderate current.	**NONE** No suitable habitat.
AMPHIBIANS						
Ranidae	**True Frogs**					
Rana muscosa	southern mountain yellow-legged frog	FE, FSS	SSC	MSHCP(d)	Prefers rocky stream courses in the mountains of southern California. Inhabits mid- to upper-elevation, perennial streams, often in locations with bedrock pools. Always encountered within a few feet of water.	**NONE** No suitable habitat.
Scaphiopodidae	**North American Spadefoots**					
Spea hammondii	western spadefoot	NONE	SSC	MSHCP	Prefers burrow sites within relatively open areas in lowland grasslands, chaparral, and pine-oak woodlands, areas of sandy or gravelly soil in alluvial fans, washes, and floodplains.	**NONE** No suitable habitat.

NONE = Species not expected to occur due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (N) = Species not expected to nest or roost due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (F) = Species not expected to forage due to lack of food sources, or the site's location is outside of the species' range.

NOT EXPECTED = Preferred habitat was considered potentially present based on the literature review and anticipated habitat in the study area, however no individuals were observed and/or suitable habitat was absent based on the general field survey or focused surveys.

POTENTIAL = Preferred habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (N) = Preferred nesting or roosting habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (F) = Preferred foraging habitat was considered potentially present based on the literature review and observed habitat in the study area.

OBSERVED = Species was observed during surveys conducted on the site.

Scientific Name	Common Name	Federal	State	MSHCP	Preferred Habitat	Potential For Occurrence
					Requires temporary pools for reproduction.	
REPTILES						
Anniellidae	**Legless Lizards**					
Anniella pulchra pulchra	silvery legless lizard	NONE	SSC	NONE	Sparse vegetation in beach, chaparral, and pine-oak woodland habitats as well as sycamores, cottonwoods, and oaks growing adjacent to streams. Needs loose soil for burrowing, moisture, warmth, and plant cover. Requires moisture.	**NONE** No suitable habitat.
Colubridae	**Colubrid Snakes**					
Lampropeltis zonata parvirubra	California mountain kingsnake (San Bernardino population)	NONE	SSC	MSHCP(f)	Well-lit canyons with rocky outcrops or rocky talus.	**NONE** No suitable habitat. Although the study area supports two small areas with rock outcrops, the outcrops are interspersed with vegetation and surrounded by unsuitable habitat. The study area also lacks rocky talus and is not within a canyon, which are both habitat features preferred by this species. The only CNDDB occurrence record in the vicinity is from 1997 on near Mill Creek off of SR-38, approximately 14.25 miles to the northeast of the study area.
Thamnophis hammondii	two-striped garter snake	NONE	SSC	NONE	Riparian and freshwater marshes with perennial water.	**NONE** No suitable habitat.

NONE = Species not expected to occur due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (N) = Species not expected to nest or roost due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (F) = Species not expected to forage due to lack of food sources, or the site's location is outside of the species' range.

NOT EXPECTED = Preferred habitat was considered potentially present based on the literature review and anticipated habitat in the study area, however no individuals were observed and/or suitable habitat was absent based on the general field survey or focused surveys.

POTENTIAL = Preferred habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (N) = Preferred nesting or roosting habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (F) = Preferred foraging habitat was considered potentially present based on the literature review and observed habitat in the study area.

OBSERVED = Species was observed during surveys conducted on the site.

Scientific Name	Common Name	Federal	State	MSHCP	Preferred Habitat	Potential For Occurrence
Emydidae	**Box and Water Turtles**					
Emys marmorata	western pond turtle	None	SSC	MSHCP	Aquatic environments; artificial flowing waters; marsh and swamp; south coast flowing and standing waters; wetlands. Requires upland habitat up to 0.5 km from water for egg laying and sandy banks or open fields for basking.	**None** No suitable habitat.
Phrynosomatidae	**Zebratail, Earless, Horned, Spiny, Fringe-Toed Lizards**					
Phrynosoma blainvillii	coast horned lizard	None	SSC	MSHCP	Chaparral; cismontane woodland; coastal bluff scrub; coastal scrub; desert wash; pinyon and juniper woodlands; riparian scrub; riparian woodland; valley and foothill grassland. Requires opens areas for basking, bushes for cover, loose soil for burrowing, and insects for food.	**Potential [Moderate]** The majority of potentially suitable habitat resides on the northwestern corner of study area where Riversidean sage scrub and brittlebush scrub occurs. Harvester ants, this species main food source, were also observed (although the food source was not observed in the area supporting suitable habitat). Although suitable habitat and a possible food source exists on the study area, the majority is disturbed and higher quality habitat is present to the northwest (Olive Hill and Reche Canyon) and northeast (the Badlands mountain range) of the study area. There are numerous CNDDB occurrence records for this species within the vicinity of the study area.

NONE = Species not expected to occur due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (N) = Species not expected to nest or roost due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (F) = Species not expected to forage due to lack of food sources, or the site's location is outside of the species' range.

NOT EXPECTED = Preferred habitat was considered potentially present based on the literature review and anticipated habitat in the study area, however no individuals were observed and/or suitable habitat was absent based on the general field survey or focused surveys.

POTENTIAL = Preferred habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (N) = Preferred nesting or roosting habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (F) = Preferred foraging habitat was considered potentially present based on the literature review and observed habitat in the study area.

OBSERVED = Species was observed during surveys conducted on the site.

Scientific Name	Common Name	Federal	State	MSHCP	Preferred Habitat	Potential For Occurrence
Teiidae	**Whiptail Lizards**					
Aspidoscelis hyperythra	orange-throated whiptail	None	SSC	MSHCP	Chaparral; cismontane woodland; coastal scrub. Typically found along washes and other sandy sites. Requires perennial plants that host termites.	**Potential [Moderate]** The majority of potentially suitable habitat resides on the northwestern corner of the study area where Riversidean sage scrub and brittlebush scrub occurs. These areas support perennial plants that may host this species preferred food source (termites). Although suitable habitat and a possible food source exists on the study area, the majority is disturbed and higher quality habitat is present to the northwest (Olive Hill and Reche Canyon) and northeast (the Badlands mountain range) of the study area. There are numerous CNDDB occurrence records for this species within the vicinity of the study area.
Viperidae	**Vipers**					
Crotalus ruber	red diamond rattlesnake	None	SSC	MSHCP	Chaparral, woodland, and arid desert habitats in rocky areas with dense vegetation.	**Potential [Moderate]** The majority of potentially suitable habitat resides on the northwestern corner of study area where Riversidean sage scrub and brittlebush scrub occurs. However, these areas support limited vegetation and crevices for cover required by this species and higher quality habitat is present to the northwest (Olive Hill and Reche Canyon) and northeast (the Badlands mountain range) of the

NONE = Species not expected to occur due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (N) = Species not expected to nest or roost due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (F) = Species not expected to forage due to lack of food sources, or the site's location is outside of the species' range.

NOT EXPECTED = Preferred habitat was considered potentially present based on the literature review and anticipated habitat in the study area, however no individuals were observed and/or suitable habitat was absent based on the general field survey or focused surveys.

POTENTIAL = Preferred habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (N) = Preferred nesting or roosting habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (F) = Preferred foraging habitat was considered potentially present based on the literature review and observed habitat in the study area.

OBSERVED = Species was observed during surveys conducted on the site.

Scientific Name	Common Name	Federal	State	MSHCP	Preferred Habitat	Potential For Occurrence
						study area. There are numerous CNDDB occurrence records for this species within the vicinity of the study area.
BIRDS						
Accipitridae	**Hawks**					
Aquila chrysaetos	golden eagle	NONE	SFP	MSHCP	Mountains, deserts, and open country; prefer to forage over grasslands, deserts, savannahs and early successional stages of forest and shrub habitats.	**NONE (N); POTENTIAL(F, LOW)** There are few trees are present on the site, primarily near the western boundary in the laurel sumac scrub/ ruderal community. However, this species typically prefers to nest on cliffs, which are not present. This species is not expected to nest on the study area since it is highly disturbed, preferred nesting habitat is not present, and no records of nesting occur. There were some small mammal burrows observed in the disturbed areas of the study area, which could potentially provide a food source. However, there is only 1 CNDDB occurrence record within the vicinity. This record was a breeding pair observed in fall 1979, spring 1980, and fall 1980 in San Timoteo Canyon, approximately 6.0 miles to the northeast.
Buteo swainsoni	Swainson's hawk	NONE	ST	MSHCP	Breeds in grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, and agricultural or ranch lands	**NONE (N); POTENTIAL (F, LOW)** There are a few trees present on the study area, primarily near the

NONE = Species not expected to occur due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (N) = Species not expected to nest or roost due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (F) = Species not expected to forage due to lack of food sources, or the site's location is outside of the species' range.

NOT EXPECTED = Preferred habitat was considered potentially present based on the literature review and anticipated habitat in the study area, however no individuals were observed and/or suitable habitat was absent based on the general field survey or focused surveys.

POTENTIAL = Preferred habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (N) = Preferred nesting or roosting habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (F) = Preferred foraging habitat was considered potentially present based on the literature review and observed habitat in the study area.

OBSERVED = Species was observed during surveys conducted on the site.

Scientific Name	Common Name	Federal	State	MSHCP	Preferred Habitat	Potential For Occurrence
					with groves or lines of trees. Requires suitable foraging areas adjacent to breading areas such as grasslands that support rodent populations. This species will also hunt for reptiles and occasionally insects.	western boundary in the laurel sumac scrub/ ruderal community. However, these trees are limited and directly adjacent to roads and residential homes, which could create some noise disturbance. Disturbed areas supply open space with some potentially suitable habitat for burrowing animals and insects, and therefore may provide a food source for this species. There are only 2 CNDDB occurrence records of nesting individuals within the vicinity, both from over 100 years ago.
Elanus leucurus	white-tailed kite	None	SFP	MSHCP	Cismontane woodland; marsh and swamp; riparian woodland; valley and foothill grassland; wetland. Requires open grasslands, meadows, or marshes for foraging near isolated full-canopied trees for nesting.	**None (N); None (F)** No suitable habitat.
Haliaeetus leucocephalus	bald eagle	None	SE	MSHCP	Lower montane coniferous forest; old growth.	**None (N); None (F)** No suitable habitat.
Cuculidae	**Cuckoos, Roadrunners, and Anis**					
Coccyzus americanus occidentalis	western yellow-billed cuckoo	FC	SE	MSHCP(a)	Riparian thickets and forests dominated by willows abutting slow-moving watercourses, backwaters, or seeps.	**None (N); None (F)** No suitable habitat.

NONE = Species not expected to occur due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (N) = Species not expected to nest or roost due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (F) = Species not expected to forage due to lack of food sources, or the site's location is outside of the species' range.

NOT EXPECTED = Preferred habitat was considered potentially present based on the literature review and anticipated habitat in the study area, however no individuals were observed and/or suitable habitat was absent based on the general field survey or focused surveys.

POTENTIAL = Preferred habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (N) = Preferred nesting or roosting habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (F) = Preferred foraging habitat was considered potentially present based on the literature review and observed habitat in the study area.

OBSERVED = Species was observed during surveys conducted on the site.

Scientific Name	Common Name	Federal	State	MSHCP	Preferred Habitat	Potential For Occurrence
Strigidae	**True Owls**					
Athene cunicularia	burrowing owl	NONE	SSC	MSHCP(c)	Disturbed; low-growing vegetation within coastal prairie, coastal scrub, Great Basin scrub, Mojavean desert scrub, Sonoran desert scrub, valley and foothill grassland; bare ground, disturbed.	**NOT EXPECTED** Potentially suitable habitat present. Presence/absence surveys conducted with no BUOW observed.
Asio otus	long-eared owl	NONE	SSC	NONE	Riparian bottomlands with tall willows & cottonwoods; also found in live oak patches along streams. Require adjacent open land with mice and old nests of crows, hawks, or magpies for breeding.	**NONE (N); NONE (F)** No suitable habitat.
Tyrannidae	**Tyrant Flycatchers**					
Empidonax traillii extimus	southwestern willow flycatcher	FE	SE	MSHCP(a)	Wet meadows, riparian woodlands that contain water and low growing willow thickets.	**NONE (N); NONE (F)** No suitable habitat.
LANIIDAE	**Shrikes**					
Lanius ludovicianus	loggerhead shrike	NONE	SSC	MSHCP	Broken woodlands, savannah, pinyon-juniper, Joshua tree, & riparian woodlands, desert oases, scrub & washes; open country with perches for hunting and relatively dense shrubs for nesting.	**POTENTIAL (N, MODERATE); OBSERVED (F)** This species was observed during the third BUOW survey (7/2/2015).
Vireonidae	**Vireos**					
Vireo bellii pusillus	least Bell's vireo	FE	SE	MSHCP(a)	Riparian forest; riparian scrub; riparian woodland.	**NONE (N); NONE (F)** No suitable habitat.

NONE = Species not expected to occur due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (N) = Species not expected to nest or roost due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (F) = Species not expected to forage due to lack of food sources, or the site's location is outside of the species' range.

NOT EXPECTED = Preferred habitat was considered potentially present based on the literature review and anticipated habitat in the study area, however no individuals were observed and/or suitable habitat was absent based on the general field survey or focused surveys.

POTENTIAL = Preferred habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (N) = Preferred nesting or roosting habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (F) = Preferred foraging habitat was considered potentially present based on the literature review and observed habitat in the study area.

OBSERVED = Species was observed during surveys conducted on the site.

Scientific Name	Common Name	Federal	State	MSHCP	Preferred Habitat	Potential For Occurrence
Troglodytidae	**Wrens**					
Campylorhynchus brunneicapillus sandiegensis	coastal cactus wren	NONE	SSC	MSHCP	Coastal scrub. Requires tall, mature *Opuntia* or cholla cactus for nesting.	**NONE (N); NONE (F)** No suitable habitat. The cactus observed on-site (*Opuntia littoralis* and *Cylindropuntia californica* var. *parkeri*) are sparsely growing, immature individuals and are not suitable for nesting.
Parulidae	**Wood Warblers**					
Icteria virens	yellow-breasted chat	NONE	SSC	MSHCP	Nests in low, dense riparian willow thickets & other brushy tangles (e.g. blackberry, wild grape) near water. Forages and nests within 10 feet of ground.	**NONE (N); NONE (F)** No suitable habitat.
Setophaga petechia	yellow warbler	NONE	SSC	MSHCP	Riparian woodlands, montane chaparral, open ponderosa pine and mixed coniferous habitat with significant brush.	**NONE (N); NONE (F)** No suitable habitat.
Polioptilidae	**Gnatcatchers**					
Polioptila californica californica	coastal California gnatcatcher	FT	SSC	MSHCP	Coastal bluff scrub; coastal scrub.	**POTENTIAL (LOW, N); OBSERVED (F)** This species was observed on the study area after completing the burrowing owl survey conducted on 5/13/2015. There is potential for this species to nest on the study area based on the presence of suitable RSS habitat; however, the potential is low since the habitat is fragmented and interspersed with unsuitable habitat.

NONE = Species not expected to occur due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (N) = Species not expected to nest or roost due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (F) = Species not expected to forage due to lack of food sources, or the site's location is outside of the species' range.

NOT EXPECTED = Preferred habitat was considered potentially present based on the literature review and anticipated habitat in the study area, however no individuals were observed and/or suitable habitat was absent based on the general field survey or focused surveys.

POTENTIAL = Preferred habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (N) = Preferred nesting or roosting habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (F) = Preferred foraging habitat was considered potentially present based on the literature review and observed habitat in the study area.

OBSERVED = Species was observed during surveys conducted on the site.

Scientific Name	Common Name	Federal	State	MSHCP	Preferred Habitat	Potential For Occurrence
Icteridae	**Blackbirds**					
Agelaius tricolor	tricolored blackbird	None	SSC	MSHCP	Highly colonial species. Requires open water, protected nesting substrate, and foraging area with insect prey within a few kilometers of the colony.	**None (N); None (F)** No suitable habitat.
Mammals						
Heteromyidae	**Pocket Mice and Kangaroo Rats**					
Chaetodipus fallax fallax	northwestern San Diego pocket mouse	None	SSC	MSHCP	Coastal scrub, chaparral, grasslands, sagebrush; sandy, herbaceous areas, usually in association with rocks or coarse gravel.	**Potential [Moderate]** The study area supports suitable coastal scrub and chaparral habitat within the northwestern portion (e.g. brittle bush scrub, Riversidean sage scrub). Additionally, a number of small fossorial mammal burrows were observed on the study area.
Dipodomys merriami parvus	San Bernardino kangaroo rat	FE	None	MSHCP	Alluvial scrub vegetation on sandy loam substrates characteristic of alluvial fans and flood plains.	**None** The study area does not support suitable alluvial scrub vegetation.
Dipodomys stephensi	Stephens' kangaroo rat	FE	ST	MSHCP/SKR HCP	Open grasslands or sparse shrub lands. Sandy to sandy loam soils with low clay to gravel content.	**Potential [Moderate]** The study area supports potentially suitable shrub habitat within the northwestern portion (e.g. brittle bush scrub and Riversidean sage scrub communities). Additionally, a number of small fossorial

NONE = Species not expected to occur due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (N) = Species not expected to nest or roost due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (F) = Species not expected to forage due to lack of food sources, or the site's location is outside of the species' range.

NOT EXPECTED = Preferred habitat was considered potentially present based on the literature review and anticipated habitat in the study area, however no individuals were observed and/or suitable habitat was absent based on the general field survey or focused surveys.

POTENTIAL = Preferred habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (N) = Preferred nesting or roosting habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (F) = Preferred foraging habitat was considered potentially present based on the literature review and observed habitat in the study area.

OBSERVED = Species was observed during surveys conducted on the site.

Scientific Name	Common Name	Federal	State	MSHCP	Preferred Habitat	Potential For Occurrence
						mammal burrows were observed on the study area.
Perognathus longimembris brevinasus	Los Angeles pocket mouse	NONE	SSC	MSHCP(c)	Lower elevation grasslands and coastal sage communities. Sparsely vegetated habitat areas in patches of fine sandy soils associated with washes. May not dig burrows, rather using weeds and dead leaves.	**POTENTIAL [MODERATE]** The study area supports potentially suitable habitat within the Riversidean sage scrub in the northwestern corner.
Leporidae	**Hares and Rabbits**					
Lepus californicus bennettii	San Diego black-tailed jackrabbit	NONE	SSC	MSHCP	Arid regions with short grasses; coastal scrub.	**POTENTIAL [MODERATE]** The majority of the study area supports suitable habitat for this species, including the Riversidean sage scrub on the northwestern corner and the ruderal areas (which support some short grasses)
Muridae	**Mice, Rats, and Voles**					
Neotoma lepida intermedia	San Diego desert woodrat	NONE	SSC	MSHCP	Coastal scrub and chaparral. Prefer areas with moderate to dense canopy cover. Frequently found in areas with rock outcrops and cliffs.	**POTENTIAL [MODERATE]** The study area supports potentially suitable habitat within northwestern corner (e.g. Riversidean sage scrub, rock outcrop/Riversidean sage scrub).

NONE = Species not expected to occur due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (N) = Species not expected to nest or roost due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (F) = Species not expected to forage due to lack of food sources, or the site's location is outside of the species' range.

NOT EXPECTED = Preferred habitat was considered potentially present based on the literature review and anticipated habitat in the study area, however no individuals were observed and/or suitable habitat was absent based on the general field survey or focused surveys.

POTENTIAL = Preferred habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (N) = Preferred nesting or roosting habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (F) = Preferred foraging habitat was considered potentially present based on the literature review and observed habitat in the study area.

OBSERVED = Species was observed during surveys conducted on the site.

Scientific Name	Common Name	Federal	State	MSHCP	Preferred Habitat	Potential For Occurrence
Onychomys torridus ramona	southern grasshopper mouse	NONE	SSC	NONE	Low, open, and semi-open coastal sage scrub, mixed chaparral, low sagebrush, riparian scrub, chenopod scrub, and annual grasslands with scattered shrubs; food source is arthropods, especially scorpions and grasshoppers.	**POTENTIAL [LOW]** The study area supports potentially suitable shrub habitat within the northwestern portion (e.g. brittle bush scrub and Riversidean sage scrub). Additionally, a number of small fossorial mammal burrows were observed on the study area. The nearest CNDDB occurrence record of this species was recorded in 1938 approximately 4.3 miles to the southeast of the study area within the Badlands.
Mustelidae	**Weasels, Badgers, and Otters**					
Taxidea taxus	American badger	NONE	SSC	NONE	Open shrub, forest, and herbaceous habitats, with friable soils to dig burrows. Requires rodent populations for food source.	**POTENTIAL [LOW]** Shrub habitat is present on the study area within the Riversidean sage scrub community on the northwestern corner of the study area. A few mammal burrows were observed, suggesting the presence of small fossorial mammals that could provide a possible food source. However, the majority of the site is surrounded by development and a large portion of suitable habitat is disturbed. Nearest CNDDB occurrence record is from 1908 roughly 6.5 miles to the northwest of the study area.
Molossidae	**Free-Tailed Bats**					
Eumops perotis californicus	western mastiff bat	NONE	SSC	NONE	Chaparral; cismontane woodland; coastal scrub; valley	**NONE [N]; POTENTIAL [F, LOW]**

NONE = Species not expected to occur due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (N) = Species not expected to nest or roost due to the lack of suitable habitat, or the site's location is outside of the species' range.

NONE (F) = Species not expected to forage due to lack of food sources, or the site's location is outside of the species' range.

NOT EXPECTED = Preferred habitat was considered potentially present based on the literature review and anticipated habitat in the study area, however no individuals were observed and/or suitable habitat was absent based on the general field survey or focused surveys.

POTENTIAL = Preferred habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (N) = Preferred nesting or roosting habitat was considered potentially present based on the literature review and observed habitat in the study area.

POTENTIAL (F) = Preferred foraging habitat was considered potentially present based on the literature review and observed habitat in the study area.

OBSERVED = Species was observed during surveys conducted on the site.

Scientific Name	Common Name	Federal	State	MSHCP	Preferred Habitat	Potential For Occurrence
					and foothill grassland. Roosts in crevices in cliff faces, high buildings, trees, and tunnels. Feed on insects.	No suitable roosting habitat exists on the study area. Bats in this family are known to be strong fliers and can fly long distances to forage. There is a probability that individuals may travel from roosts to forage on insects on the study area, but this is considered low based on the disturbance present on the study area and presence of surrounding development. The nearest CNDDB occurrence record is from1990 approximately 3.0 miles to the southwest of the study area.
Nyctinomops femorosaccus	pocketed free-tailed bat	NONE	SSC	NONE	Joshua tree woodland; pinyon and juniper woodland; desert scrub, palm oasis, desert wash, and desert riparian; Sonoran desert scrub. Typically roost in caves and rocky outcrops; prefers cliffs in order to obtain flight speed. Feeds on insects flying, over bodies of water or arid desert habitats to capture prey.	**POTENTIAL [N, VERY LOW]; NONE [F]** Rock outcrops are present on the study area, which may provide some potentially suitable habitat for roosting. However, this potential was considered very low since this species typically prefers steeper cliffs for roosting habitat. Although little is known regarding home range for this species, the potential for roosting is also unlikely since the study area does not support adjacent foraging habitat.[1] There are only 2 CNDDB occurrence records in the vicinity. The nearest record is from 1985 approximately 6.5 miles to the

2015 Burrowing Owl Focused Survey Report

PCR

August 3, 2015

Mr. Joseph Rivani
GLOBAL INVESTMENT & DEVELOPMENT
3470 Wilshire Boulevard, Suite 1020
Los Angeles, CA 90010

Re: RESULTS OF FOCUSED BURROWING OWL SURVEYS FOR THE IRONWOOD PROJECT, CITY OF MORENO VALLEY, RIVERSIDE COUNTY, CALIFORNIA

Dear Mr. Rivani:

This report summarizes the methodology and findings of focused burrowing owl (*Athene cunicularia*) (BUOW) surveys conducted by **PCR Services Corporation (PCR)** for the approximately 83-acre property located directly northeast of Ironwood Avenue and Nason Street (APN 473-160-004) ("project site") located in the City of Moreno Valley, Riverside County, California. The surveys encompassed the project site and a 500-foot survey buffer surrounding the perimeter of the project site where suitable habitat was present. The surveys were conducted in accordance with the County of Riverside's 2006 *Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area*.[1]

PROJECT SITE DESCRIPTION

The approximately 83-acre project site is generally situated east of Interstate 10 (I-10) and north of State Route 60 (SR 60), as shown in **Figure 1**, *Regional Map*. Specifically, the project site is located northwest of the intersection of Ironwood Avenue and Nason Street. The project site is depicted on the U.S. Geological Survey (USGS) 7.5' Sunnymead topographic quadrangle map, Section 34, T. 2 S., R. 3 W., as shown in **Figure 2**, *Vicinity Map*. The topography of the project site is generally flat with gently rolling hills throughout and steep rocky hillsides along the northwestern portion of the project site. Elevations on the project site range from approximately 1,975 feet above mean sea level (MSL) along the northwestern boundary of the project site, to approximately 1,830 feet above MSL along the southern boundary of the project site. Surrounding land uses include residential development to the south, northeast, and west and undeveloped land to the north and southeast.

[1] *County of Riverside. 2006. Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area.*

PLANT COMMUNITIES

The project site consists primarily of large ruderal areas. Plant communities found on the project site include brittlebush scrub, Riversidean sage scrub, rock outcrop/Riversidean sage scrub, brittlebush scrub/ruderal, laurel sumac scrub/ruderal, ruderal/Riversidean sage scrub, river wash, ruderal, disturbed, and developed. A brief summary of each plant community within the project site in which surveys were conducted is discussed below.

Brittlebush Scrub/Ruderal

Brittlebush scrub is a drought tolerant subtype of Riversidean Sage Scrub in which the dominate plant is brittlebush (*Encelia farinosa*). Additional native species within the brittlebush scrub community include California buckwheat (*Eriogonum fasciculatum*), California sagebrush (*Artemisia californica*), and chia (*Salvia columbariae*). Ruderal vegetation is also found within this community. Brittlebush scrub/ruderal areas occupy 0.29 acre throughout the project site.

River Wash

River wash consists of prevailingly course-textured but variable material, ranging from sand to gravel. Sparse vegetation within the river wash includes giant reed (*Arundo donax*), telegraph weed (*Heterotheca grandiflora*), doveweed, and Russian thistle (*Salsola tragus*). River wash occupies 0.03 acre throughout the project site.

Ruderal/Riversidean Sage Scrub

Ruderal/Riversidean sage scrub within the project site is heavily disturbed and is dominated by ruderal vegetation. Non-native species observed within this community include shortpod mustard (*Hirschfeldia incana*), foxtail chess (*Bromus madritensis*), and red-stemmed filaree (*Erodium cicutarium*). Native species found within this community include brittlebush (*Encelia farinosa*), California buckwheat, California sagebrush, common sunflower (*Helianthus annuus*), deerweed (*Acmispon glaber*), and pinebush (*Ericameria pinifolia*). Ruderal/Riversidean sage scrub occupies 1.31 acres throughout the project site.

Ruderal

Ruderal vegetation is found in areas heavily disturbed by human activities, such as roadsides, graded fields, and manufactured slopes. Within the project site, non-native species observed within this community include shortpod mustard, foxtail chess, red-stemmed filaree, ripgut brome (*Bromus diandrus*), and native species such as doveweed (*Croton setigerus*), common fiddleneck (*Amsinckia* *intermedia*), and cudweed aster (*Corethrogyne filaginifolia*). Ruderal areas occupy 39.08 acres throughout the project site.

Disturbed

Disturbed areas consist of areas heavily disturbed by human activities, including dirt roads with little to no vegetation. Disturbed areas occupy 31.23 acres throughout the project site.

Developed

Developed areas consist of man-made structures such as homes and buildings, and these areas comprise 1.64 acres throughout the project site.

METHODOLOGY

Step I - Habitat Assessment

The surveys were conducted in accordance with the County of Riverside's 2006 *Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area*.[2] During the Step I Habitat Assessment, suitable habitat was identified on-site during the field survey, including disturbed, low-growing vegetation; bare ground; and small fossorial mammal burrows.

Step II – Locating Burrows and Burrowing Owls

Step II surveys were conducted within the project site plus an approximately 500-foot survey buffer around the project site perimeter. Surveys focused on the detection of small fossorial mammal burrows potentially suitable for BUOW, BUOW burrows, individual BUOW, and any diagnostic sign of their occurrence (e.g., molted feathers, cast pellets, prey remains, eggshell fragments, or excrement at or near a burrow entrance). Off-site areas within the 500-foot survey buffer were surveyed by foot where accessible, or with the use of binoculars in areas which were inaccessible.

Surveys were conducted on May 13, June 3, July 2, and July 27, 2015 by PCR biologists Ezekiel Cooley, Amy Lee, and Lauren Singleton. Surveys consisted of four site visits, on four separate days, and were conducted between one hour prior to and two hours after sunrise during suitable weather conditions. Transects were utilized in all accessible areas, spaced no more than 100

---

[2] *County of Riverside. 2006. Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area.*

feet apart, to allow for 100 percent visibility (**Figure 3**, *Transect Map*, attached). In addition, observations were made with the use of binoculars. Weather conditions consisted of hazy to cloudy skies with winds between 0 and 5 miles per house (mph) and air temperatures ranging from 52° to 76° Fahrenheit. Survey data is presented in **Table 1**, *Survey Data*, below.

Table 1

Survey Data

Date	Time	Wind (mph) (start/end)	Temperature (F) (start-end)	Weather (start-end)	Results	Surveyor
05/13/15	0615 – 0820	1-2/2-5	52° – 61°	70% Cloud Cover – 60% Cloud Cover	No BUOW or BUOW sign	Cooley, Lee, Singleton
06/03/15	0600 – 0800	1-3/0-1	55° – 57°	100% Cloud Cover – 100% Cloud Cover	No BUOW or BUOW sign	Cooley, Lee, Singleton
07/02/15	0545 – 0730	0-1/0-1	72° – 76°	60% Cloud Cover – 80% Cloud Cover	No BUOW or BUOW sign	Cooley, Lee, Singleton
07/27/15	0600 – 0730	0-1/0-1	62°– 66°	100% Cloud Cover – 100% Cloud Cover	No BUOW or BUOW sign	Cooley, Lee, Singleton

Source: PCR Services Corporation, 2015.

RESULTS

The project site is within the Burrowing Owl Survey Area for the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP). The following results present the findings of the Step I Habitat Assessment and Step II Locating Burrows and Burrowing Owls.

Step I - Habitat Assessment

Results of the Step I, Habitat Assessment concluded that the project site and 500-foot survey buffer exhibited suitable BUOW habitat consisting of disturbed, low-growing vegetation; bare ground; and fossorial mammal burrows.

PCR

Step II – Locating Burrows and Burrowing Owls

The Step II surveys did not identify BUOW burrows, BUOW sign or BUOW within the project site or within the 500-foot survey buffer. A complete list of all avian species observed within the project site is included in **Appendix A**, *Avian Compendium*, attached.

RECOMMENDATIONS

As required by the MSHCP, a pre-construction survey must be conducted 30 days prior to ground disturbance for project sites whether or not BUOW are found during the focused surveys to avoid the direct take of BUOW.

Should you have any questions concerning the methodology or findings in this report, please contact Ezekiel Cooley (E.Cooley@pcrnet.com) at (949) 753-7001.

Sincerely,
PCR SERVICES CORPORATION

Subject: Results of Focused Burrowing Owl Surveys for the Alternative Off-site Waterline Area for the Ironwood Village Project, City of Moreno Valley, Riverside County, California

Dear Mr. Rivani:

This report summarizes the methodology and findings of focused burrowing owl (*Athene cunicularia*) (BUOW) surveys conducted by **ESA PCR** for the two proposed alternative off-site waterline areas associated with the approximately 78.48-acre Ironwood Village Project (APN 473-160-004) located directly northeast of Ironwood Avenue and Nason Street, City of Moreno Valley, Riverside County, California.[1] The surveys encompassed the two alternative off-site waterline areas (survey area) and a 500-foot survey buffer surrounding the survey area (survey buffer). The surveys were conducted in accordance with the County of Riverside's 2006 *Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area*.[2]

Survey Area Description

The survey area is generally situated south of Interstate 10 (I-10) and north of State Route 60 (SR 60), as shown in **Figure 1**, *Regional Map*. Specifically, the survey area includes a waterline alignment that runs north-south, immediately north of the intersection of Ironwood Avenue and Oliver Street along the Eastern Municipal Water District access road, and another which runs east-west, west of the intersection of Moreno Beach Drive and Juniper Avenue. The survey area and survey buffer are depicted on the U.S. Geological Survey (USGS) 7.5' Sunnymead topographic quadrangle map, Section 34, T. 2 S., R. 3 W., as shown in **Figure 2**, *Vicinity Map*. The topography of the survey area and survey buffer is generally flat with the expectation of fairly steep east-facing slope on the western portion. Elevations in the survey area are approximately 1,858 feet above mean sea level (MSL) along the midpoint of the east-west waterline, to approximately 1,945 feet above MSL at the northern terminus of north-south waterline. Surrounding land uses include residential development to the northeast and east, and undeveloped land to the northwest, west, and south.

Plant Communities

The survey area and survey buffer consists primarily of ruderal and disturbed habitat. Ruderal habitat is dominated by non-native species including mediterranean grass (*Schismus barbatus*), Russian thistle (*Salsola tragus*), and ripgut brome (*Bromus diandrus*). Disturbed areas consist of areas heavily disturbed by human activities, including dirt roads with little to no vegetation.

ESA PCR

Methodology

Step I - Habitat Assessment

The surveys were conducted in accordance with the County of Riverside's 2006 *Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area*.[2] During the Step I Habitat Assessment, suitable habitat was identified on-site during the field survey, including disturbed, low-growing vegetation; bare ground; and small fossorial mammal burrows.

Step II – Locating Burrows and Burrowing Owls

Step II surveys were conducted within the survey area plus an approximately 500-foot survey buffer. Surveys focused on the detection of small fossorial mammal burrows potentially suitable for BUOW, BUOW burrows, individual BUOW, and any diagnostic sign of their occurrence (e.g., molted feathers, cast pellets, prey remains, eggshell fragments, or excrement at or near a burrow entrance). Off-site areas within the 500-foot survey buffer were surveyed by foot where accessible, or with the use of binoculars in areas which were inaccessible.

Surveys were conducted on April 28, May 23, June 9, and July 5, 2016 by ESA PCR biologists Amy Lee and Lauren Singleton. Surveys consisted of four site visits, on four separate days, and were conducted between one hour prior to and two hours after sunrise during suitable weather conditions. Transects were utilized in all accessible areas, spaced no more than 100 feet apart, to allow for 100 percent visibility (**Figure 3**, *Survey Area*, attached). In addition, observations were made with the use of binoculars. Weather conditions consisted of 45 to 100 percent cloud cover with winds between 0 and 4 miles per hour (mph) and air temperatures ranging from 48° to 68° Fahrenheit. Survey data is presented in **Table 1**, *Survey Data*, below.

TABLE 1
SURVEY DATA

Date	Time	Wind (mph) (start/end)	Temperature (F) (start-end)	Weather (start-end)	Results	Surveyor

ESA PCR

Results

The survey area is within the Burrowing Owl Survey Area for the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP). The following results present the findings of the Step I Habitat Assessment and Step II Locating Burrows and Burrowing Owls.

Step I - Habitat Assessment

Results of the Step I, Habitat Assessment concluded that the survey area and 500-foot survey buffer exhibited suitable BUOW habitat consisting of disturbed, low-growing vegetation; bare ground; and fossorial mammal burrows.

Step II – Locating Burrows and Burrowing Owls

The Step II surveys did not identify BUOW burrows, BUOW sign or BUOW within the survey area or within the 500-foot survey buffer. A complete list of all avian species observed within the survey area and survey buffer is included in **Appendix A**, *Avian Compendium*, attached.

Recommendations

As required by the MSHCP, a pre-construction survey must be conducted 30 days prior to ground disturbance for project sites whether or not BUOW are found during the focused surveys to avoid the direct take of BUOW.

Should you have any questions concerning the methodology or findings in this report, please contact Amy Lee (A.Lee@pcrnet.com) at (949) 753-7001.

EXECUTIVE SUMMARY

Global Investment & Development, LLC. (the "Applicant") is proposing to develop the Ironwood Residential Project on an approximately 79-acre parcel in the City of Moreno, California. The proposed project would include the construction of single-family residences, streets, other infrastructure, underground utilities, parks, open spaces, and off-site water and sewer lines (the "proposed project"). For purpose of this report, all project components will collectively be referred to as the "Study Area", unless otherwise noted. The proposed project would include excavations across the majority of the Study Area.

ESA PCR conducted a phase I cultural resources assessment of the Study Area to determine the potential impacts to cultural resources (including archaeological, historical, and paleontological resources) for the purpose of complying with the California Environmental Quality Act (CEQA) and the local cultural resource regulations. The scope of work for this assessment included a cultural resources records search through the California Historical Resources Information System-Eastern Information Center (CHRIS-EIC), a Sacred Lands File (SLF) search through the California Native American Heritage Commission (NAHC) and follow-up Native American consultation, land use history research, a paleontological resources records search through the San Bernardino County Museum (SBCM), a pedestrian survey, eligibility evaluations for resources identified within the Study Area, impact analyses, and the recommendation of additional work and mitigation measures.

ARCHAEOLOGICAL RESOURCES

The results of ESA PCR's assessment revealed that two prehistoric cultural resources (P-33-024882/CA-RIV-12,333 and P-33-024883) are located within the Study Area. Resource 33-024882/CA-RIV-12333 is a prehistoric archaeological resource that was previously recorded in the northwestern portion of the Study Area and was revisited by ESA PCR during the pedestrian survey. It consists of one boulder with one milling slick and one boulder with three milling slicks and measures 25 meters (north/south) x 6 meters (east-west). The Applicant has designed the project to avoid this resource and it is located in an area that is planned for open space; therefore no additional work or mitigation would be warranted. Resource P-33-024883, an isolated quartzite hammerstone, is not eligible for the California Register of Historical Resources therefore impacts to it from the proposed project are not considered a significant impact on the environment. Therefore, no further work or mitigation is warranted at this resource as well.

It is possible to encounter buried archaeological resources given the proven prehistoric occupation of the region, the identification of multiple surface archaeological resources within the vicinity of the Study Area (including two archaeological resources within the Study Area and numerous resources recorded in the Reche Hills Complex – see Section 4.1.5 of this report), and the favorable natural conditions (e.g., ephemeral drainages, natural spring, and vegetation communities) that would have attracted prehistoric inhabitants to the area. Therefore, despite the heavy disturbances of the Study Area that may have displaced archaeological resources on the surface, it is possible that intact archaeological resources exist at depth. As a result, recommended mitigation measures are provided in Chapter 9 to reduce potentially significant impacts to previously undiscovered archaeological resources that may be accidentally encountered during project implementation to a less than significant level.

BUILT ENVIRONMENT RESOURCES

The cultural resources records search results from the CHRIS-EIC indicated that there were no built environment resources located within the Study Area and none were identified during the pedestrian survey. Therefore, the proposed project would result in no substantial adverse change in the significance of a historical resource as defined in §15064.5.

PALEONTOLOGICAL RESOURCES

Results of the paleontological resources records search through SBCM indicate that no vertebrate fossil localities from the SBCM records have been previously recorded within the Study Area or within a one-mile radius. Moreover, no paleontological resources were identified by ESA PCR during the pedestrian survey. These findings; however, do not preclude the existence of undiscovered paleontological resources located below the ground surface and lacking surface manifestation, which may be encountered during construction excavations associated with the proposed project. The Study Area has been previously mapped geologically as containing surface exposures of early Pleistocene-aged (i.e., 1.9 million to 12,000 years ago) fan deposits, overlain across much of the Study Area by a thin sedimentary veneer of recent Holocene-aged (i.e., 12,000 years ago to present day) alluvium. The northwestern portion of the Study Area is mapped as Cretaceous-aged (i.e., 145 million to 65 million years ago) tonalite. The tonalite and the surficial Holocene-aged alluvium have very limited to no potential to be conducive to retaining paleontological resources; however, the Pleistocene-aged fan (or alluvial) deposits may have high a paleontological sensitivity, depending upon their lithology, as these sediments have yielded significant fossils of extinct animals from the Ice Age throughout the Inland Empire (Scott 2014). As a result, recommended mitigation measures are provided in Chapter 9 to reduce potentially significant impacts to previously undiscovered paleontological resources and/or unique geological features that may be accidentally encountered during project implementation to a less than significant level

1.0 INTRODUCTION

1.1 PROPOSED PROJECT AND LOCATION

Global Investment & Development, LLC. (the "Applicant") is proposing to develop the Ironwood Residential Project on an approximately 79-acre parcel in the City of Moreno, California. The proposed project would include the construction of single-family residences, streets, other infrastructure, underground utilities, parks, open spaces, and off-site water and sewer lines (the "proposed project"). For purpose of this report, all project components will collectively be referred to as the "Study Area", unless otherwise noted. The proposed project would include excavations across the majority of the Study Area.

The Study Area is located in a semi-rural area of the City of Moreno Valley, in western Riverside County, California (**Figure 1**, *Regional Map)*. It is located approximately one-half mile north of State Route 60 (SR-60). The Study Area is depicted in Section 33 of Township 2 South, Range 3 West of the Sunnymead CA United States Geological Survey (USGS) 7.5' topographic quadrangle map (**Figure 2**, *Vicinity Map*). It is surrounded by open space to the north, Ironwood Avenue on the south, Oliver Street on the east, Nason Street on the west, and semi-rural development (**Figure 3**, *Aerial Photograph*).

1.2 SCOPE OF STUDY AND PERSONNEL

ESA PCR conducted a phase I cultural resources assessment of the Study Area from November 2014 through January 2015 (with an update in June 2016) to identify potential impacts to cultural resources (including archaeological, historical, and paleontological resources) and to develop mitigation measures to avoid, reduce, or mitigate potential impacts to resources for the purpose of complying with CEQA and local cultural resource guidelines. The scope of work for this assessment included a cultural resources records search through the CHRIS-EIC, a SLF search through the NAHC and follow-up Native American consultation, land use history research, a paleontological resources records search through the SBCM, a pedestrian survey, eligibility evaluations for the resources identified within the Study Area, impact analyses, and the recommendation of additional work and mitigation measures. In June 2016, ESA PCR conducted an additional pedestrian survey of proposed water pipeline alignment that was not previously included in the original assessment.

The assessment was co-managed and this report compiled by Mr. Kyle Garcia and Mr. Chris Purtell, M.A., RPA. The pedestrian field survey was performed by Mr. Purtell, Mr. Garcia, and Ms. Lauren Willey. The record searches were conducted by Mr. Purtell. The June 2016 pedestrian survey was conducted by Mrs. Fatima Clark. Qualifications of key personnel are provided in Appendix A.

2.0 REGULATORY SETTING

Numerous laws and regulations require federal, state, and local agencies to consider the effects of a proposed project on cultural resources. These laws and regulations establish a process for compliance, define the responsibilities of the various agencies proposing the action, and prescribe the relationship among other involved agencies (e.g., State Historic Preservation Office and the Advisory Council on Historic Preservation). The National Historic Preservation Act (NHPA) of 1966, as amended, CEQA, and Public Resources Code (PRC) 5024, are the primary federal and state laws governing and affecting preservation of cultural resources of national, state, regional, and local significance. Other relevant regulations and guidelines at the local level include the City's General Plan and Municipal Code. A description of the applicable laws, regulations, and guidelines are provided in the following paragraphs.

2.1 STATE LEVEL

2.1.1 California Register of Historical Resources

The California Office of Historic Preservation (OHP), as an office of the California Department of Parks and Recreation, implements the policies of the NHPA on a statewide level. The OHP also maintains the California Historic Resources Inventory. The SHPO is an appointed official who implements historic preservation programs within the State's jurisdictions.

Created by Assembly Bill 2881, which was signed into law on September 27, 1992, the California Register is "an authoritative listing and guide to be used by state and local agencies, private groups, and citizens in identifying the existing historical resources of the state and to indicate which resources deserve to be protected, to the extent prudent and feasible, from substantial adverse change."[1] The criteria for eligibility for the California Register are based upon National Register criteria.[2] Certain resources are determined by the statute to be automatically included in the California Register, including California properties formally determined eligible for, or listed in, the National Register of Historic Places.[3]

To be eligible for the California Register, a prehistoric or historic property must be significant at the local, state, and/or federal level under one or more of the following criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. Is associated with the lives of persons important in our past;
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. Has yielded, or may be likely to yield, information important in prehistory or history.

---

1 *California Public Resources Code § 5024.1(a).*

2 *California Public Resources Code § 5024.1(b).*

3 *California Public Resources Code § 5024.1(d).*

A resource eligible for the California Register must meet one of the criteria of significance described above and retain enough of its historic character or appearance (integrity) to be recognizable as a historical resource and to convey the reason for its significance. It is possible that a historic resource may not retain sufficient integrity to meet the criteria for listing in the National Register, but it may still be eligible for listing in the California Register.

Integrity is evaluated with regard to the retention of location, design, setting, materials, workmanship, feeling, and association. The resource must also be judged with reference to the particular criteria under which it is proposed for eligibility.[4]

Additionally, the California Register consists of resources that are listed automatically and those that must be nominated through an application and public hearing process. The California Register automatically includes the following:

- California properties listed on the National Register and those formally Determined Eligible for the National Register.
- California Registered Historical Landmarks from No. 770 onward.
- Those California Points of Historical Interest that have been evaluated by the OHP and have been recommended to the State Historical Commission for inclusion on the California Register.

Other resources that may be nominated to the California Register include:

- Historical resources with a significance rating of Category 3 through 5.[5]
- Individual historical resources.
- Historical resources contributing to historic districts.
- Historical resources designated or listed as local landmarks, or designated under any local ordinance, such as an historic preservation overlay zone.

2.1.2 California Environmental Quality Act

CEQA is the principal statute governing environmental review of projects occurring in the State. CEQA requires lead agencies to determine if a proposed project would have a significant effect on archaeological resources (PRC Sections 21000 *et seq.*). As defined in Section 21083.2 of the PRC, a "unique" archaeological resource is an archaeological artifact, object, or site, about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and there is a demonstrable public interest in that information.

---

[4] *Ibid.*

[5] *Those properties identified as eligible for listing in the National Register, the California Register, and/or a local jurisdiction register.*

- Has a special and particular quality such as being the oldest of its type or the best available example of its type.
- Is directly associated with a scientifically recognized important prehistoric or historic event or person.

In addition, CEQA Guidelines Section 15064.5 broadens the approach to CEQA by using the term "historical resource" instead of "unique archaeological resource." The CEQA Guidelines recognize that certain historical resources may also have significance. The CEQA Guidelines recognize that a historical resource includes: (1) a resource in the California Register of Historical Resources; (2) a resource included in a local register of historical resources, as defined in PRC section 5020.1 (k) or identified as significant in a historical resource survey meeting the requirements of PRC section 5024.1 (g); and (3) any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California by the lead agency, provided the lead agency's determination is supported by substantial evidence in light of the whole record.

If a lead agency determines that an archaeological site is a historical resource, the provisions of section 21084.1 of the PRC and section 15064.5 of the CEQA Guidelines apply. If an archaeological site does not meet the criteria for a historical resource contained in the CEQA Guidelines, but does meet the definition of a unique archaeological resource in Section 20183.2 of the PRC, then the site is to be treated in accordance with the provisions of PRC section 21083. The CEQA Guidelines note that if an archaeological resource is neither a unique archaeological nor a historical resource, the effects of the project on those resources shall not be considered a significant effect on the environment. (CEQA Guidelines §15064.5(c)(4)).

2.2 LOCAL LEVEL

2.2.1 City of Moreno Valley General Plan

The City of Moreno Valley has put forth numerous policies within the Goals and Objectives section of the General Plan. These policies were created to identify and preserve Moreno Valley's unique historical and archaeological resources for future generations (City of Moreno Valley 2006). These policies are listed below:

- **Policy 7.6.1:** Historical, cultural and archaeological resources shall be located and preserved, or mitigated consistent with their intrinsic value.
- **Policy 7.6.2:** Implement appropriate mitigation measures to conserve cultural resources that are uncovered during excavation and construction activities
- **Policy 7.6.3:** Minimize damage to the integrity of historic structures when they are altered.
- **Policy 7.6.4:** Encourage restoration and adaptive reuse of historical buildings worthy of preservation.
- **Policy 7.6.5:** Encourage documentation of historic buildings when such buildings must be demolished (City of Moreno Valley 2006).

2.2.2 City of Moreno Valley Landmark Criteria

The City of Moreno Valley's Municipal Code Title Chapter 7: Cultural Preservation, Subsection 7.05 Landmarks and Structures of Merit. Subchapter 7.05.010 states: a Landmark is any site, including significant trees or other significant permanent landscaping located thereof, place, building, structure, street, improvement, natural feature or other object having a special historical, archaeological, paleontological, cultural, architectural or community value in the city and which has been designated a landmark pursuant to this title. (Ord. 126 § 1, 1987). The City has established 11 Subsection Chapters in determining landmark eligibility and procedural processes.

The Subsection Chapters are as follows:

7.05.020 Initiation. The designation, repeal or modification of a landmark may be initiated by the city council, the environmental and historical preservation board, the planning commission or the record property owner. Application for such designation, repeal or modification shall be made to the community development director upon such forms and accompanied by such data and information as may be required for that purpose by the environmental and historical preservation board so as to assure the fullest practical presentation of the facts for proper consideration of the request. (Ord. 723 §2.3, 2006: Ord. 126 § 1, 1987)

7.05.030 Hearing date. Upon the acceptance by the director of developmental services of an application, the matter shall be set for public hearing thereon before the committee. The date of such hearing shall be not more than fifty (50) days from the date of acceptance of the application. (Ord. 126 § 1, 1987)

7.05.040 Hearing notice. Notice of the date, time, place and purpose of the hearing before the committee shall be given by at least one publication of a notice, in a newspaper having general circulation in the city, not less than ten days prior to the date of such hearing and by depositing in the United States mail, postage prepaid, at least ten days prior to the date of the hearing, a notice addressed to the owner of the property being considered. When the property being considered is not real property, notice shall be given to both the owner and the person in possession of the real property where the object is situated. The last known name and address of each owner as shown on the records of the county assessor may be used for this notice. Failure to send any notice by mail to any property owner where the address of such owner is not a matter of public record or the failure to receive any mailed notice shall not invalidate any proceedings in connection with the proposed designation. (Ord. 126 § 1, 1987)

7.05.050 Hearing. At the time and place so fixed and noticed, a public hearing shall be conducted before the committee. The committee may continue such hearing to a time and place certain when such action is deemed necessary or desirable. The committee may establish rules for the conducting of such public hearings. (Ord. 126 § 1, 1987)

7.05.060 Investigation. The director of developmental services shall cause to be made such investigation of facts bearing upon the application set for hearing as in the opinion of the director will provide sufficient information to permit the committee to take action consistent with the intent and purpose of this title. (Ord. 126 § 1, 1987)

7.05.070 Designation. The committee may designate a landmark in whole or in part if from the facts presented in the application, at the public hearing or by investigation, the committee finds that the site, landscaping, place, buildings, structure, street, improvement, natural feature or other object has special historical, archaeological, paleontological, cultural, architectural or community value in the city and that purposes of this title are furthered by such designation. (Ord. 126 § 1, 1987)

7.05.080 Resolution. A landmark shall be designated by resolution of the committee. Rescission or modification of such designation shall be accomplished in the same manner. (Ord. 126 § 1, 1987)

7.05.090 Notice of designation. Promptly after the adoption thereof, notice of the designation, rescission or modification of landmark status shall be transmitted by the planning director to the city clerk, the city manager, the community redevelopment agency of the city, the assessor and the recorder of Riverside County, and to any other interested departments and governmental and civic agencies. Upon receipt of such notice, the city clerk shall place it upon the agenda of the first regular meeting of the city council occurring at least five days after receipt of the notice. Each city department and division shall incorporate the notice of designation, rescission or modification into its records, so that future decisions or permissions regarding or affecting any landmark made by the city will have been made with the knowledge thereof, and in accordance with the procedures set forth in this title. Whenever any project to be carried out on behalf of the city may have an impact on a designated landmark, written notice shall be given to the committee and to the city council prior to taking any irreversible action to carry out such project. (Ord. 260 § 1.2, 1990: Ord. 126 § 1, 1987)

7.05.100 Appeal and city council review. Any person aggrieved or affected by a decision of the committee in designating, repealing or modifying landmark status may appeal to the city council from such decision at any time within ten days after the date upon which the committee announced its decision. An appeal to the city council shall be taken by filing a letter of appeal, in duplicate, with the city clerk. Such letter of appeal shall set forth the grounds upon which the appeal is based. Within five days after the letter of appeal has been filed, the city clerk shall notify the committee and the planning director of such filing. Within five working days after such notice is given, the planning director shall lodge with the city clerk copies of the application and all other papers constituting the record upon which the action of the committee was taken. The city clerk shall give notice of hearing upon the appeal in the same manner and for the same time as is required by Section 7.05.040 for hearing in connection with an application before the committee. The date of such hearing upon the appeal shall be not more than thirty (30) days from the date of filing of the appeal. Upon the hearing of such appeal, the city council may by resolution affirm, reverse or modify the determination of the committee. Except for provisions which properly can relate only to appeals, review of committee decisions by the city council without any appeal having been filed, shall follow the procedures set forth above for appeals. (Ord. 260 1.3, 1990: Ord. 126 § 1, 1987)

7.05.120 Duty to maintain. Every owner of a landmark and any appurtenant premises shall maintain and keep in good repair the exterior of such landmark and premises. "Good repair" is defined as that level of maintenance and repair which clearly insures the continued availability of such structure and premises for lawful reasonable uses and prevents deterioration, dilapidation and decay of such structures and premises. (Ord. 126 § 1, 1987)

7.05.130 Structures of merit. The committee may encourage the protection, enhancement, appreciation and use of structures of historical, archaeological, paleontological, cultural, architectural, community or aesthetic value which have not been designated as landmarks but are deserving of recognition, by designating them as structures of merit so as to emphasize their importance in the past, present and future of the city (Ord. 126 § 1, 1987).

3.0 ENVIRONMENTAL SETTING

The Study Area is located in western Riverside County, California within the City of Moreno Valley in a semi-rural area that is situated between open spaces on the north and east and adjacent to residential housing on the west and south. The elevation within the Study Area ranges from approximately 1,858 feet above mean sea level (MSL) in the south to 2,000 feet above MSL in the north. The Study Area is characterized as undeveloped; however, evidence of past disking/plowing activities is depicted in historic aerial photographs. The Study Area may have been used for cultivation in the past although it is currently fallow. The topography of a majority of the Study Area is relatively flat, except in the northern area which exhibits an elevated topography and numerous granitic bedrock outcroppings. Review of aerial photographs indicates that the Study Area has been highly disturbed by dirt access roads and regular disking/plowing for fire breaks.

Two ephemeral steams are located within and adjacent to the Study Area. The first stream was formerly located in the central portion of the Study Area and ran in a northwest-southeast direction as shown USGS maps (see **Figure 2**). This stream has since been diverted and filled in and is no longer visible within the Study Area. The second ephemeral stream is located approximately 600-feet east of the Study Area's eastern boundary and runs in a north-south direction and shows minimal change or modification over time based on historic topographic map review. Vegetation within the Study Area can be characterized as sparse plant communities consisting of coyote bush, white bur sage, native and non-native wild grasses.

Geologically, the Study Area is located in the northwestern portion of the Peninsular Ranges geomorphic province. The Peninsular Ranges province is distinguished by northwest trending mountain ranges and valleys following faults branching from the San Andreas Fault. The Peninsular Ranges are bound to the east by the Colorado Desert and extend north to the San Bernardino – Riverside county line (Norris and Webb 1976), west into the submarine continental shelf, and south to the California state line.

Previous mapping of the Study Area (Rogers 1965) suggests that the majority of the area is situated upon surface exposures of early Pleistocene fan deposits (Qvofa), overlain by a thin sedimentary veneer of recent alluvium (Qyaa). The northwestern portion of the Study Area is mapped as Cretaceous-aged tonalite (Kt) (Scott 2014).

4.0 CULTURAL SETTING

4.1 PREHISTORIC CONTEXT

Prehistory is most easily discussed chronologically, in terms of environmental change and recognized cultural developments. Several chronologies have been proposed for inland Southern California, the most widely accepted of which is Wallace's four-part Horizon format (1955), which was later updated and revised by Claude Warren (1968). The advantages and weaknesses of Southern California chronological sequences are reviewed by Warren (in Moratto 1984), Chartkoff and Chartkoff (1984), and Heizer (1978). The following discussion is based on Warren's (1968) sequence, but the time frames have been adjusted to reflect more recent archaeological findings, interpretations, and advances in radiocarbon dating.

4.1.1 Paleo-Indian Period (ca. 13,000-11,000 years before present [YBP])

Little is known of Paleo-Indian peoples in inland southern California, and the cultural history of this period follows that of North America in general. Recent discoveries in the Americas have challenged the theory that the first Americans migrated from Siberia, following a route from the Bering Strait into Canada and the Northwest Coast sometime after the Wisconsin Ice Sheet receded (ca. 14,000 YBP), and before the Bering Land Bridge was submerged (ca. 12,000 YBP). Based on new research from the Pacific Rim, it has been proposed that modern humans settled islands of the eastern Pacific between 40,000 and 15,000 years ago. Evidence of coastal migration has also come from sites on islands off Alta and Baja California. As a result, these sites are contemporary with Clovis and Folsom points found in North America's interior regions. All of these new findings have made the coastal migration theory gain credibility in recent times (Erlandson et al. 2007).

The timing, manner, and location of the Bering Strait crossing are a matter of debate among archaeologists, but the initial migration probably occurred as the Laurentide Ice Sheet melted along the Alaskan Coast and interior Yukon. The earliest radiocarbon dates from the Paleo-Indian Period in North America come from the Arlington Springs Woman site on Santa Rosa Island located approximately 150 miles west-northwest of the Study Area. These human remains date to approximately 13,000 YBP (Johnson, et al. 2002). Other early Paleo-Indian sites include the Monte Verde Creek site in Chile (Meltzer, et al. 1997) and the controversial Meadowcroft Rockshelter in Pennsylvania. Both sites have early levels dated roughly at 12,000 YBP. Lifeways during the Paleo-Indian Period were characterized by highly mobile hunting and gathering. Prey included megafauna such as mammoth and technology included a distinctive flaked stone toolkit that has been identified across much of North America and into Central America. They likely used some plant foods, but the Paleo-Indian toolkit recovered archaeologically does not include many tools that can be identified as designed specifically for plant processing.

The megafauna that appear to have been the focus of Paleo-Indian life went extinct during a warming trend that began approximately 10,000 years ago, and both the extinction and climatic change (which included warmer temperatures in desert valleys and reduced precipitation in mountain areas) were factors in widespread cultural change. Subsistence and social practices continued to be organized around hunting and gathering, but the resource base was expanded to include a wider range of plant and game resources. Technological traditions also became more localized and included tools specifically for the processing of plants and other materials. This constellation of characteristics has been given the name "Archaic" and it was the most enduring of cultural adaptations to the North American environment.

4.1.2 Archaic Period (ca. 11,000-3,500 YBP)

The earliest Archaic Period life in inland southern California has been given the name San Dieguito tradition, after the San Diego area where it was first identified and studied (Warren 1968). Characteristic artifacts include stemmed projectile points, crescents and leaf-shaped knives, which suggest a continued subsistence, focus on large game, although not megafauna of the earlier Paleo-Indian period. Milling equipment appears in the archaeological record at approximately 7,500 years ago (Moratto 1984:158). Artifact assemblages with this equipment include basin milling stones and unshaped manos, projectile points, flexed burials under cairns, and cogged stones, and have been given the name La Jolla Complex (7,500–3,000 YBP). The transition from San Dieguito life to La Jolla life appears to have been an adaptation to drying of the climate after 8,000 YBP, which may have stimulated movements of desert peoples to the coastal regions, bringing milling stone technology with them. Groups in the coastal regions focused on mollusks, while inland groups relied on wild-seed gathering and acorn collecting.

4.1.3 Late Prehistoric Period (ca. 3,500 YBP-A.D. 1769)

Cultural responses to environmental changes around 4,000–3,000 YBP included a shift to more land-based gathering practices. This period was characterized by the increasing importance of acorn processing, which supplemented the resources from hunting and gathering. Meighan (1954) identified the period after A.D. 1400 as the San Luis Rey complex. San Luis Rey I (A.D. 1400–1750) is associated with bedrock mortars and milling stones, cremations, small triangular projectile points with concave bases and Olivella beads. The San Luis Rey II (A.D. 1750–1850) period is marked by the addition of pottery, red and black pictographs, cremation urns, steatite arrow straighteners and non-aboriginal materials (Meighan 1954:223, Keller and McCarthy 1989:6). Work at Cole Canyon and other sites in southern California suggests that this complex, and the ethnographically described life of the native people of the region, were well established by at least 1,000 YBP (Keller and McCarthy 1989:80).

4.1.4 Ethnographic Context

Information presented in the California volume of the Handbook of North American Indians (Heizer 1978:575) shows the Study Area is located near the traditional territory of the Luiseño and Cahuilla. Both of these ethnographic groups are described below.

Luiseño

The Luiseño are a Takic speaking people that are usually associated with coastal and inland areas of present-day Orange and southern Riverside counties, with cultural and social behavioral characteristics similar to those of the Cahuilla, a tribal group generally linked with areas northeast of the San Jacinto Mountains. In fact, exchanges between the Luiseno and Cahuilla have been well documented. In context, the Study Area is considered a Luiseño area, though evidence of a Cahuilla presence may be identified (Robinson and Risher 1996:102-103).

The term Luiseño derives from the mission named San Luis Rey and has been used in the region to refer to those Takic-speaking people associated with Mission San Luis Rey (Bean and Shipek 1978:550). The Luiseño shared boundaries with the Cahuilla, Cupeño, Gabrielino, and Kummeyaay groups on the east, north, and south, respectively. These different bands shared cultural and language traditions with the Luiseño. The Luiseño territory comprised from the coast to Agua Hedionda Creek on the south to near Aliso Creek on the northwest. The boundary extended inland to Santiago Peak, then across to the eastern side of Elsinore Fault Valley, then southward to the east of Palomar Mountain, then around the southern slope above the valley of San Jose (*ibid.*:550). Their habitat covered every ecological zone from the ocean, sandy beaches, shallow inlets, coastal chaparral, grassy valleys oak groves, among various other niches. The primary food source consisted of game animals such as deer, rabbit, jackrabbit, woodrat, mice, ground squirrels, antelope, and various species of birds. Next to game animals, acorns were the most single important staple, and six different species were utilized (*ibid.*:552). The Luiseño social structure is unclear; however, each village was a clan-triblet-a group of people patrilineally related who owned an area in common and who were politically and economically autonomous from neighboring groups. The Luiseño were not organized into exogamous moieties such as were their neighbors, Cahuilla, Cupeño, and Serrano (Strong 1929:291). The hereditary village chief held an administrative position that combined and controlled religious, economic, and warfare powers (Boscana 1933:43). Marriage was arranged by the parents of children and important lineages were allied through marriage. Reciprocally useful alliances were arranged between groups in different ecological niches, and became springboards of territorial expansion, especially following warfare and truces (White 1963:130).

The Luiseño material culture included an array of tools that were made from stone, wood, bone, and shell, and which served to procure and process the region's resources. Needs for shelter and clothing were minimal in the region's forgiving climate, but considerable attention was devoted to personal decoration in ornaments, painting, and tattooing. The local pottery was well made, although it was not elaborately decorated (Laylander and Pham 2012).

Cahuilla

The Cahuilla occupied a large area in the geographic center of southern California that was bisected by the Cocopa-Maricopa Trail in addition to Santa Fe and Yuman Trails. They occupied an area from the summit of the San Bernardino Mountains in the north to Borrego Springs and the Chocolate Mountains in the south, portions of the Colorado Desert west of Orocopia Mountain to the east, and the San Jacinto Plain near Riverside and the eastern slopes of Palomar Mountain to the west (Bean 1978). The Cahuilla hunted with throwing sticks, clubs, nets, traps, dead falls with seed triggers, spring-poled snares, arrows (often poison-tipped) and self-backed and sinew-backed bows. They sometimes fired bush clumps to drive game out in the open, and flares to attract birds at night. Baskets of various kinds were used for winnowing, leaching, grinding, transporting, parching, storing, and cooking. Pottery vessels were used for carrying water, for storage, cooking, serving food and drink. Cahuilla tools included mortars and pestles, manos and metates, fire drills, awls, arrow-straighteners, flint knives, wood, horn, and bone spoons and stirrers, scrapers, and hammerstones. Woven rabbitskin blankets served to keep people warm in cold weather. Feathered costumes were worn for ceremonial events, and at these events the Cahuilla made music using rattles derived from insect cocoon, turtle and tortoise shell, and deer-hoofs, along with wood rasps, bone whistles, bull-roarers, and flutes, to make music. They wove bags, storage pouches, cords, and nets from the fibers of yucca, agave, and other plants (Bean and Vane 2002).

4.1.5 Reche Hills Complex

The Study Area is located within an area that has been designated as the Reche Hills Complex (City of Moreno Valley 2006). The Reche Hills Complex is comprised of a series of hills that stretch south into Moreno Valley from the mountains on the west side of Reche Canyon. Their appears to be two major habitation areas within the complex and include an area at the mouth of Reche Canyon (approximately one-half mile northwest of the Study Area) and another area to the southeast of the canyon. These areas are characterized as prehistoric habitation areas that consist of more than 23 bedrock millings stations, cupule rocks, petroglyphs, and pictographs (*Ibid.*). The identification of this complex, whose boundaries encompass the Study Area, confirms the prehistoric occupation of the Study Area and surrounding vicinity.

4.1.6 European Contact

European contact with the Native American groups that likely inhabited the Study Area and surrounding region began in 1542 when Spanish explorer, Juan Rodriguez Cabrillo, arrived by sea during his navigation of the California coast. Sebastian Vizcaino arrived in 1602 during his expedition to explore and map the western coast that Cabrillo visited 60 years earlier. In 1769, another Spanish explorer, Gaspar de Portola, passed through Luiseño/Kumeyaay territory and interacted with the local indigenous groups. In 1798, Mission San Luis Rey was established by the Spanish and it likely integrated the Native Americans from the surrounding region. Multiple epidemics took a great toll on Native American populations between approximately 1800 and the early 1860s (Porretta 1983), along with the cultural and political upheavals that came with European, Mexican, and American settlement (Goldberg 2001:50-52). In the beginning of the nineteenth century, some Spaniards who had worked at the missions began to set up what would later be known as the "Ranchos." The Rancho era in California history was a period when the entire state was divided into large parcels of land equaling thousands of acres apiece. These large estates were ruled over in a semi-feudal manner by men who had been deeded the land by first the Spanish crown, and later the Mexican government. In 1821 Mexico won independence from Spain and began to dismantle the mission system in California. As the missions began to secularize, they were transformed into small towns and most Native Americans would later be marginalized into reservations or into American society. It was during this time that "Americans" began to enter California. Many of the American Californians married into the Rancho families, a development that would transform land ownership in Mexican California. By the time the United States annexed California after the Mexican-American War in 1850, much of the Rancho lands were already in the hands of Americans.

4.2 HISTORIC CONTEXT

4.2.1 City of Moreno Valley

By the mid-19th century, the area that comprises present-day Moreno Valley remained essentially uninhabited, despite its location on a grassy upland surrounded by several large Mexican Ranchos. When the U.S. government initiated its first official land survey in southern California in 1853-1855, the only man-made features in the Moreno Valley were a few roads including a wagon road from San Bernardino to Temecula, a second one leading to San Jacinto, and several unidentified roads and/or trails.

The area surrounding Moreno Valley remained unclaimed public land until 1870, when a large tract of 13,471 acres were purchased from the U.S. Government and with the expansion of the railroad in 1880's a land boom soon brought settlers into the area, only to see the boom turn to bust for lack of a reliable water supply. In 1891, private developers brought water into new Haven, which was subsequently changed to Moreno and Midland also, known as Armada from the newly constructed Bear Valley reservoir, which got the economy moving again until a drought the following year stopped the water flow from the Bear Valley reservoir. As a result, the town of Moreno died again and many of its budding were either abandoned or were sold and moved to Riverside (Gunther 1984).

Moreno Valley's economic fortunes were severely hampered by the lack of water. Finally, in 1973, after the completion of the California Aqueduct and the construction of Lake Perris, Moreno Valley's economic fortunes began to change. A reliable water supply, coupled with the Interstate Freeway System and the construction of affordable housing brought an influx of commuters to the Moreno Valley area, setting off a period of rapid expansion and urbanization. By 1984, when residents in the communities of Moreno, Sunnymead, and Edgemont voted to incorporate as the City of Moreno Valley, the new city had already become the second most populous in Riverside County (*Ibid.*).

5.0 METHODS

5.1 CULTURAL RESOURCES RECORDS SEARCH

On November 17, 2014, Mr. Purtell conducted a records search of the Study Area at the CHRIS-EIC. The records searches included a review of all recorded archaeological and historical resources within a one half-mile radius of the Study Area and within a one-mile radius of the Off-Site Areas as well as a review of cultural resource reports and historic topographic maps on file. In addition, ESA PCR reviewed the California Points of Historical Interest (CPHI), the California Historical Landmarks (CHL), the California Register, the National Register, and the California State Historic Resources Inventory (HRI) listings. The purpose of the record search is to determine whether or not there are previously recorded archaeological or historical resources within the Study Area that require evaluation and treatment. The results also provide a basis for assessing the sensitivity of the Study Area for additional and buried cultural resources.

5.2 SACRED LANDS FILE SEARCH AND NATIVE AMERICAN CONSULTATION

On November 12, 2014, Mr. Purtell commissioned a SLF records search of the Study Area through the NAHC and conducted follow-up consultation with the ten (10) Native American groups and/or individuals (inclusive of Luiseño and Cahuilla groups) identified by the NAHC as having affiliation with the Study Area vicinity. Each Native American group and/or individual listed was sent a project notification letter and map and was asked to convey any knowledge regarding prehistoric or Native American resources (archaeological sites, sacred lands, or artifacts) located within the Study Area or surrounding vicinity. The letter included information such as Study Area location and a brief description of the proposed project. Results of the search and follow-up consultation provided information as to the nature and location of additional prehistoric or Native American resources to be incorporated in the assessment whose records may not be available at the CHRIS-EIC.

5.3 PALEONTOLOGICAL RESOURCES RECORDS SEARCH

On November 12, 2014, Mr. Purtell commissioned a paleontological resources records search through the Division of Geological Sciences at the SBCM in Redlands, California. This institution maintains files of regional paleontological site records as well as supporting maps and documents. This record search entailed an examination of current geologic maps and known fossil localities inside and within the general vicinity of the Study Area. The objective of the record search was to determine the geological formations underlying the Study Area, whether any paleontological localities have previously been identified within the Study Area or in the same or similar formations near the Study Area, and the potential for excavations associated with the Study Area to encounter paleontological resources. The results also provide a basis for assessing the sensitivity of the Study Area for additional and buried paleontological resources.

5.4 PEDESTRIAN SURVEY

On December 23, 2014, ESA PCR (Mr. Garcia, Mr. Purtell, and Ms. Willey) conducted a pedestrian survey of the Study Area to identify the presence of archaeological, historical, or paleontological resources. The field crew surveyed the Study Area using parallel pedestrian transects spaced not more than 10 to 15 meters (m) between each surveyor. A Trimble® GeoXT™ sub-meter Global Positioning System (GPS) unit was used for navigation and documenting distribution of Study Area conditions. ESA PCR surveyed 100% of the Study Area. Detailed notes and digital photographs were also taken of the Study Area and surrounding vicinity.

Resources were documented on State of California Department of Parks and Recreation (DPR) 523 series Site Forms with preliminary sketch maps and photographs providing supplemental documentation.

On June 14, 2016, Mrs. Clark conducted an additional pedestrian survey of a proposed water pipeline alignment west of the intersection of Moreno Beach Drive and Juniper Avenue which was not previously included as part of the original 2014 ESA PCR assessment. Mrs. Clark surveyed the additional pipeline alignment using parallel transects spaced at no more than five meters apart.

6.0 RESULTS

6.1 CULTURAL RESOURCES RECORDS SEARCH

Results of the records research conducted at the CHRIS-EIC revealed that there have been two cultural resource studies conducted within the Study Area (RI-08242 and RI-08368). These studies are described in detail, below. Twelve cultural resource studies have been conducted within a one-half mile radius and 17 studies have been conducted within a one-mile radius of the Study Area. All of these studies were conducted from 1978 to 2012 and encompass approximately 75 percent of the record search area.

Report RI-08242 is described as phase I assessment of the current Study Area (not inclusive of the off-site areas) for a proposed high school that was conducted in 2008. Results of this assessment identified one prehistoric cultural resource within the Study Area (P-33-001064/CA-RIV-1064). This resource is described as one bedrock milling slick on a granitic boulder in the northwestern portion of the Study Area with no associated surface artifacts.

Report RI-8368 is described as a phase I assessment (in 2009) of the two alternative sewer pipelines that appear to overlap in certain area of the current Study Area. No cultural resources were identified as part of this assessment.

As discussed above, the records search also revealed that one prehistoric archaeological resource, CA-RIV-1064 (P-33-001064) was recorded within the Study Area. This resource is described in more detail in Section 6.4 of this report. Seven prehistoric archaeological sites and one prehistoric isolate have been recorded within a one-eighth mile of the Study Area. These resources are summarized in **Table 1,** *Previously Recorded Cultural Resources Within a One-eighth Mile of the Study Area.* Twenty-four prehistoric archaeological sites and one historical archaeological site have been recorded within one-half mile of the Study Area. The majority of the prehistoric archaeological resources recorded in the vicinity of the Study Area include bedrock milling stations.

Table 1

Previously Recorded Cultural Resources Within a One-Eighth Mile Radius of the Study Area

Resource Designation	Description	Status Code
CA-RIV-2277	Six milling slicks on two boulders, chert flake, metavolcanic scraper	7
CA-RIV-2587	Three milling slicks on one granite boulder	7
CA-RIV-3305	One milling slick on one granite boulder	7
CA-RIV-3306	10 cupules on a granite boulder	7
CA-RIV-1604	Rockshelter with more than 100 cupules and several pit-and-groove petroglyphs	7
CA-RIV-4924	One milling slick on one granite boulder	7
CA-RIV-4925	One milling slick on one granite boulder	7
P-33-017851	Isolated granite mano	7

6.2 SACRED LANDS FILE SEARCH AND NATIVE AMERICAN CONSULTATION

The NAHC SLF records search results (received November 24, 2014) revealed that there are no known "Native American cultural resources" in the SLF database within the Study Area. As per NAHC suggested procedure, follow-up letters were sent via certified mail on December 15, 2014 to the ten (10) Native American individuals and organizations identified by the NAHC as being affiliated with the vicinity of the Study Area to request any additional information they may have about Native American cultural resources that may be affected by the proposed project.

As of June 23, 2016, ESA PCR has received one response from the Morongo Band of Mission Indians (Morongo) who requested the following: 1) If human remains are discovered, that they be treated in accordance with State Health and Safety Code Section 7050.5, 2) If significant prehistoric Native American resources are discovered, that a qualified archaeologist be consulted to assess the find, 3) If a treatment plan is prepared for the resource that the Morongo be contacted, and 4) If requested by the Morongo, the Applicant shall consult with the Morongo "on the discovery and its disposition (e.g., avoidance, preservation, return of artifacts, etc.)." ESA PCR has received no other responses from the Native American community concerning the proposed project. ESA PCR will keep the Applicant apprised with the progress of this on-going Native American consultation. The NAHC SLF records search results, the Native American contact list, request letters, and response letters are provided in Appendix B of this report.

6.3 PALEONTOLOGICAL RESOURCES RECORDS SEARCH

Results of the paleontological resources records search through the SBCM indicate that no known vertebrate fossil localities from the SBCM database have been previously identified within the Study Area or within a one-mile radius. The Study Area has been previously mapped geologically and is situated upon surface exposures of early Pleistocene-aged fan deposits (Qvofa), overlain across much of the property by a thin sedimentary veneer of recent Holocene-aged alluvium (Qyaa). Similar older Pleistocene-aged alluvial sediments throughout the Inland Empire have yielded extinct taxa including mammoths, mastodons, ground sloths, dire wolves, sabre-toothed cats, large and small horses, large and small camels, and bison, as well as plant macro- and microfossils. The northwestern portion of the Study Area is mapped as Cretaceous-aged tonalite (Kt) (Scott 2014).

The paleontological resources records search results letter from the SBCM is provided in Appendix C of this report.

6.4 PEDESTRIAN SURVEY

ESA PCR identified two prehistoric archaeological resources (P-33-024882/CA-RIV-12,333 and P-33-024883) within the Study Area during the pedestrian survey. Moreover, one previously recorded archaeological resource (P-33-017851) that was recorded immediately outside of the off-site sewer area was revisited by ESA PCR. These resources are described in more detail below. No built environment or paleontological resources were identified during the pedestrian survey.

6.4.1 33-024882/CA-RIV-12333

This resource consists of a previously recorded bedrock milling station that was recorded in 2008 by McKenna in the northwestern portion of Study Area (**Figure D1**, *Resources Map*, in Appendix D of this report). It is described by McKenna as one milling slick on a single granite boulder and given its proximity to other nearby prehistoric resources, McKenna designated it as a component of the previously recorded resource CA-RIV-1604 (McKenna 2008a, 2008b). CA-RIV-1604 is located approximately 300 m to the west of 33-024882 and was originally recorded in 1976 as a rockshelter with more than 100 cupules and several pit-and-groove petroglyphs (Parr and Arkush 1987). Although ESA PCR agrees with McKenna in that 33-024882 is likely associated with CA-RIV-1064, ESA PCR has decided to give the resource a separate designation since other nearby bedrock milling stations were also designated separately and since this resource will be evaluated separately from CA-RIV-1064.

ESA PCR identified P-33-024882 in the exact location within the Study Area that McKenna did in 2008; however, ESA PCR identified three milling slicks on the boulder as opposed to a single milling slick. Furthermore, ESA PCR identified an additional milling slick on another low-lying granite boulder approximately 17 m to the north. As a result, P-33-024882 consists of one boulder with one milling slick and one boulder with three milling slicks and measures 25 m (north/south) x 6 m (east-west) (see **Figure D1**). No surface artifacts were identified by ESA PCR (or McKenna in 2008) near the boulders. The area within and around P-33-024882 has been disturbed by recent and recurring disking/plowing activities and many nearby boulders appear to have been displaced from their former location as result of the construction of the adjacent road (Nason St.).

6.4.2 P-33-024883

This resource consists of a newly identified isolated artifact-a quartzite hammerstone-that is polished on one end and therefore appears to have been utilized as a ground stone as well. The resource was found within the southwestern portion of the Study Area in a disturbed context (recently disked field) and has likely been displaced from its original location (see **Figure D1**).

6.4.3 P-33-017851

This resource was originally recorded in 2009 as an isolated granite mano artifact (Ballester 2009). ESA PCR revisited the resource during the pedestrian survey and confirmed its location outside the Study Area. Specifically it is located 20 m west of the edge of the pavement of a road (Oliver St.) where an off-site sewer line is proposed.

The new and/or updated DPR Site Forms form the aforementioned resources are provided in Appendix D of this report.

No other resources were identified within the Study Area during the pedestrian survey. This may have been a direct results of heavy ground-surface disturbances from recent and recurring disking/plowing and numerous off-road vehicle tracks and walking trails, which may have displaced (e.g., buried) resources from their original location.

6.4.4 Other Study Area Conditions

Ground surface visibility was relatively consistent throughout the Study Area and ranged from 75 to 100 percent within in the 79-acre on-site parcel and zero percent in the off-site areas due to existing pavement (roadways) that obstructed the natural ground surface (**Figure 4** through **Figure 6**, *Study Area Photographs)*. Limitations to ground visibility including low-lying vegetation (primarily California buckwheat, salt-brush, white sage, and wild grasses) that occurred throughout the Study Area except in northern portion where large granite boulders, spares trees, and tall brush partially obstructed ground visibility.

6.4.5 June 2016 Pedestrian Survey

The pedestrian survey revealed that this portion of the Study Area (located immediately west of the intersection of Juniper Avenue and Moreno Beach Drive) is covered with dense vegetation. In particular, the ground surface visibility in this area is approximately 25 to 50 percent. A drainage was identified in the eastern portion of the alignment near Moreno Beach Drive. No archaeological, built environment, or paleontological resources were encountered during the June 2016 pedestrian survey.

7.0 EVALUATION

Evaluation of cultural resources is determined by conducting an "evaluation" of a resource's eligibility for listing in the California Register; determining whether it qualifies as a "unique archaeological resource"; and determining whether the resource retains integrity. This is achieved by applying the California Register criteria (including criteria for a "unique archaeological resource") as defined in Chapter 2 of this report. If a resource is determined eligible for listing in the California Register or qualifies as a "unique archaeological resource" and retains integrity, then the resource is considered an archaeological resource and/or a historical resource pursuant to CEQA §15064.5 and any substantial adverse change to the resource is considered a significant impact on the environment. The CEQA guidelines do not provide criteria to evaluate paleontological resources.

7.1 ARCHAEOLOGICAL RESOURCES

7.1.1 P-33-024882/CA-RIV-12,333

Resource P-33-024882/CA-RIV-12,333 is a prehistoric archaeological resource that was previously recorded in the northwestern portion of the Study Area and was revisited by ESA PCR during the pedestrian survey. It consists of one boulder with one milling slick and one boulder with three milling slicks and measures 25 meters (north/south) x 6 meters (east-west). The Applicant has designed the project to avoid this resource and it is located in an area that is planned for open space; therefore no additional work or mitigation would be warranted. Since the resource would be avoided by the proposed project, no formal evaluation of the resource was performed by ESA PCR.

7.1.2 P-33-024883

Resource P-33-024883 was identified in a disturbed and isolated context and therefore the potential for intact subsurface archaeological deposits in the area where it was recorded by ESA PCR is low. As a result of these factors, P-33-024883 does not yield, or have the potential to yield information important to prehistory (Criterion 4 of the California Register) and therefore recommend as not eligible for listing in the California Register and does not qualify as a unique archaeological resource pursuant to CEQA. No additional work is necessary at this resource and impacts to it from the proposed project are not considered a significant impact on the environment.

7.2 BUILT ENVIRONMENT RESOURCES

As discussed in the previous chapter, no known built environment resources from the EIC records were recorded within the Study Area and no resources were identified during the pedestrian survey; therefore, no evaluation of built environment resources is necessary.

7.3 PALEONTOLOGICAL RESOURCES

As discussed in the previous chapter, no known paleontological resources from the SBCM records were recorded within the Study Area and no resources were identified during the pedestrian survey; therefore, no evaluation of paleontological resources is necessary.

8.0 IMPACTS/EFFECTS ANALYSIS

The purpose of this chapter is to discuss the potential impacts to archaeological, historical (built environment), and paleontological resources, and human remains associated with implementing the proposed project.

8.1 CEQA SIGNIFICANCE THRESHOLDS

8.1.1 Archaeological Resources

The current CEQA Guidelines state that a project will have a significant impact on the environment if it ***will cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5.***

According to the CEQA Guidelines, an archaeological resource is further defined as a resource that qualifies as a "historical resource"[6] pursuant to CEQA Guidelines Section 15064.5 or a "unique archaeological resource" pursuant to Section 21083.2 of the Public Resources Code. These terms are defined earlier in this report. Therefore, a project will have a significant impact on the environment if it will cause a "substantial adverse change" in the significance of a historical resource or "damage" to a unique archaeological resource.

A "substantial adverse change" (as defined in the CEQA Guidelines) is caused when one or more of the following occurs:

- Substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired.

- The significance of a historical resource is materially impaired when a project:

a. Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register of Historical Resources; or

b. Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to Section 5020.1(k) of the Public Resources Code or its identification in a historical resources survey meeting the requirements of Section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

c. Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for

6 *A historical resource can be an archaeological object, site or district that is listed in or determined eligible for the CRHR.*

inclusion in the California Register of Historical Resources as determined by a lead agency for purposes of CEQA.

The CEQA Guidelines do not define "damage" when it comes to unique archaeological resources, but it can be reasonably interpreted as having a meaning similar to that of "substantial adverse change" (as defined above).

8.1.2 Historical Resources

The current CEQA Guidelines state that a project will have a significant impact on the environment if it ***will cause a substantial adverse change in the significance of a historical resource as defined in §15064.5.***

According to the CEQA Guidelines, a historical resource is further defined as a resource that qualifies for listing in the California Register or another federal or local register. The criteria for listing are defined earlier in this report. Therefore, a project will have a significant impact on the environment if it will cause a "substantial adverse change" in the significance of a historical resource. The definition of "substantial adverse change" is provided in the previous section, 8.1.1.

The *Secretary of the Interior's Standards for Rehabilitation* (Standards) are codified at 36 Code of Federal Regulations (CFR) Section 67.7. In most circumstances, the Standards are relevant in assessing whether there is a substantial adverse change under CEQA. Section 15064.5b(3) of the CEQA Guidelines states in part that ". . . a project that follows the *Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings* or the *Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings* (1995), Weeks and Grimmer, shall be considered as mitigated to a level of less than a significant impact on the historic resource," and therefore may be considered categorically exempt.

8.1.3 Paleontological Resources

The current CEQA Guidelines state that a project will have a significant impact on the environment if it ***will directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.***

The CEQA Guidelines do not define "directly or indirectly destroy," but it can be reasonably interpreted as the physical damage, alteration, disturbance, or destruction of a paleontological resource.

8.1.4 Human Remains

The current CEQA Guidelines state that a project will have a significant impact on the environment if it ***will disturb any human remains, including those interred outside of formal cemeteries.***

The CEQA Guidelines do not define "disturb" but it can be reasonably interpreted as the physical damage, alteration, disturbance, or destruction of any human remains.

8.2 POTENTIAL IMPACTS

8.2.1 Project Description

As discussed earlier, the proposed project would include the construction of single-family residences, streets, infrastructure, unities, parks, open spaces, and off-site water and sewer lines. Excavations associated with implementation of the proposed project would occur across the majority of the Study Area.

8.2.2 Archaeological Resources

P-33-024882/CA-RIV-12,333 was identified in the northwestern portion of the Study Area. As discussed earlier, the Applicant has designed the project to avoid this resource and it is located in an area that is planned for open space; therefore no impacts to the resource from the proposed project would occur.

These findings, however, do not preclude the existence of undiscovered archaeological resources located below the ground surface and lacking surface manifestation, which may be encountered during construction excavations associated with the proposed project. It is possible to encounter buried archaeological resources given the proven prehistoric occupation of the region, the identification of multiple surface archaeological resources within the vicinity of the Study Area (including two archaeological resources within the Study Area and numerous resources recorded in the Reche Hills Complex – see Section 4.1.5 of this report), and the favorable natural conditions (e.g., ephemeral drainages, natural spring, and vegetation communities) that would have attracted prehistoric inhabitants to the area. Therefore, despite the heavy disturbances of the Study Area that may have displaced archaeological resources on the surface, it is possible that intact archaeological resources exist at depth. As a result, recommended mitigation measures are provided in the following chapter to reduce potentially significant impacts to previously undiscovered archaeological resources that may be accidentally encountered during project implementation to a less than significant level.

8.2.3 Historical Resources (Built Environment Resources)

Results from the CHRIS-EIC indicated that there were no previously recorded historical (or built environment) resources within the Study Area and no historical resources were identified during the pedestrian survey; therefore, no impact analysis of historical resources is necessary.

8.2.4 Paleontological Resources

Results of the paleontological resources records search through SBCM indicate that no vertebrate fossil localities from the SBCM records have been previously recorded within the Study Area or within a one-mile radius. Moreover, no paleontological resources were identified by ESA PCR during the pedestrian survey. These findings; however, do not preclude the existence of undiscovered paleontological resources located below the ground surface and lacking surface manifestation, which may be encountered during construction excavations associated with the proposed project. The Study Area has been previously mapped geologically as containing surface exposures of early Pleistocene-aged fan deposits, overlain across much of the Study Area by a thin sedimentary veneer of recent Holocene-aged alluvium. The northwestern portion of the Study Area is mapped as Cretaceous-aged tonalite. The tonalite and the surficial Holocene-aged alluvium have very limited to no potential to be conducive to retaining paleontological resources; however, the Pleistocene-aged fan deposits may have high a paleontological sensitivity, depending upon their lithology, as these sediments have yielded significant fossils of extinct animals from the Ice Age throughout the Inland Empire (Scott 2014). As a result, recommended mitigation measures are provided in the following chapter to reduce potentially significant impacts to previously undiscovered paleontological resources and/or unique geological features that may be accidentally encountered during project implementation to a less than significant level.

8.2.5 Human Remains

No known human remains have been identified from the CHRIS-EIC database within a half-mile radius of the Study Area. No human remains were identified during the pedestrian survey of the Study Area. However, these findings do not preclude the existence of previously unknown human remains located below the ground surface, which may be encountered during construction excavations associated with the proposed project. Similar to the discussion regarding archaeological resources above, it is also possible to encounter buried human remains during construction given the proven prehistoric occupation of the region, the identification of multiple surface archaeological resources within a half-mile of the Study Area, and the favorable natural conditions that would have attracted prehistoric inhabitants to the area. As a result, recommended mitigation measures are provided in the following chapter that would reduce potentially significant impacts to previously unknown human remains that may be unexpectedly discovered during project implementation to a less than significant level.

9.0 RECOMMENDED MITIGATION MEASURES

9.1 ARCHAEOLOGICAL RESOURCES

The following mitigation measures have been recommended to reduce potentially significant impacts to archaeological resources that are accidentally discovered during implementation of the proposed project to a less than significant level:

Mitigation Measure CULT-1: **Conduct Archaeological Sensitivity Training for Construction Personnel.** The Applicant shall retain a qualified professional archaeologist who shall conduct an Archaeological Sensitivity Training for construction personnel prior to commencement of excavation activities. The training session, shall be carried out by a cultural resources professional with expertise in archaeology, will focus on how to identify archaeological resources that may be encountered during earthmoving activities, and the procedures to be followed in such an event. The training session will include a Power Point presentation and/or handouts for all attendees. The basic topics to be addressed in the session include: a brief cultural and archaeological history of the area and the Applicant's and City's cultural resource compliance obligations; training in potential resources that may be encountered through the use of photographs or other illustrations; the duties of archaeological monitors; notification and other procedures to follow upon discovery of resources; and, the general steps that would be followed to conduct a salvage investigation if one is necessary. A sign-in sheet shall be compiled to track attendance and shall be submitted to the City with the Archaeological Monitoring Report.

Mitigation Measure CULT-2: **Monitor Construction Excavations for Archeological Resources in Younger Alluvial Sediments.** The Applicant shall retain a qualified archaeological monitor, who will work under the direction and guidance of a qualified professional archaeologist. The archaeological monitor shall be present during all construction excavations (e.g., grading, trenching, or clearing/grubbing) into non-fill younger Pleistocene alluvial sediments. Multiple earth-moving construction activities may require multiple archaeological monitors. The frequency of monitoring shall be based on the rate of excavation and grading activities, proximity to known archaeological resources, the materials being excavated (native versus artificial fill soils), and the depth of excavation, and if found, the abundance and type of archaeological resources encountered. Full-time monitoring can be reduced to part-time inspections if determined adequate by the project archaeologist.

Mitigation Measure CULT-3: **Cease Ground-Disturbing Activities and Implement Treatment Plan if Archaeological Resources Are Encountered.** In the event that archaeological resources are unearthed during ground-disturbing activities, ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. A buffer area shall be established around the find where construction activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area. All archaeological resources unearthed by project construction activities shall be evaluated by a qualified professional archaeologist. The Applicant and City shall coordinate with the archaeologist to develop an appropriate treatment plan for the resources. Treatment may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis or preservation in place. The landowner, in consultation with the archaeologist, shall designate repositories in the event that archaeological material is recovered.

Mitigation Measure CULT-4: Prepare Report Upon Completion of Monitoring Services. The archaeological monitor under the direction of a qualified professional archaeologist shall prepare a final report at the conclusion of archaeological monitoring. The report shall be submitted to the Applicant and the Eastern Information Center, and representatives of other appropriate or concerned agencies to signify the satisfactory completion of the project and required mitigation measures. The report shall include a description of resources unearthed, if any, evaluation of the resources with respect to the California Register and CEQA, and treatment of the resources.

9.2 HISTORICAL RESOURCES (BUILT ENVIRONMENT RESOURCES)

The proposed project would not impact historical resources therefore no mitigation measures are recommended.

9.3 PALEONTOLOGICAL RESOURCES

The following mitigation measures have been recommended to reduce potentially significant impacts to paleontological resources that are accidentally discovered during implementation of the proposed project to a less than significant level:

Mitigation Measure CULT-5: Conduct Paleontological Sensitivity Training for Construction Personnel. The Applicant shall retain a qualified paleontologist who shall conduct a Paleontological Sensitivity Training for construction personnel prior to commencement of excavation activities. The training session, shall be carried out by a cultural resources professional with expertise in paleontology, will focus on how to identify paleontological resources that may be encountered during earthmoving activities, and the procedures to be followed in such an event. The training session will include a Power Point presentation and/or handouts for all attendees. The basic topics to be addressed in the session include: a brief cultural and geologic history of the area and the City cultural resource compliance obligations; training in potential resources that may be encountered through the use of photographs or other illustrations; the duties of paleontological monitors; notification and other procedures to follow upon discovery of resources; and, the general steps that would be followed to conduct a salvage investigation if one is necessary.

Mitigation Measure CULT-6: Monitor Construction Excavations for Paleontological Resources in Older Pleistocene Alluvial Deposits. The Applicant shall retain a qualified paleontological monitor, who will work under the guidance and direction of a qualified professional paleontologist. The paleontological monitor shall be present during all construction excavations (e.g., grading, trenching, or clearing/grubbing) into non-fill older Pleistocene alluvial deposits. Multiple earth-moving construction activities may require multiple paleontological monitors. The frequency of monitoring shall be based on the rate of excavation and grading activities, proximity to known paleontological resources and/or unique geological features, the materials being excavated (native versus artificial fill soils), and the depth of excavation, and if found, the abundance and type of paleontological resources and/or unique geological features encountered. Full-time monitoring can be reduced to part-time inspections if determined adequate by the qualified professional paleontologist.

Mitigation Measure CULT-7: Cease Ground-Disturbing Activities and Implement Treatment Plan if Paleontological Resources Are Encountered. In the event that paleontological resources and or unique geological features are unearthed during ground-disturbing activities, ground-disturbing activities shall be halted or diverted away from the vicinity of the find so that the find can be evaluated. A buffer area of at least 25 feet shall be established around the find where construction activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area. The Applicant and City shall coordinate with a qualified professional paleontologist to develop an appropriate treatment plan for the resources. Treatment may include implementation of paleontological salvage excavations to remove the resource along with subsequent laboratory processing and analysis or preservation in place. At the paleontologist's discretion and to reduce any construction delay, the grading and excavation contractor shall assist in removing rock samples for initial processing. Any fossils encountered and recovered shall be prepared to the point of taxonomic identification and catalogued and curated to a suitable museum or other repository with a research interest in the materials, such as the San Bernardino County Museum or Western Science Center. If no institution accepts the fossil collection, they shall be donated to a local school in the area for educational purposes. Accompanying notes, maps, and photographs shall also be filed at the repository and/or school.

Mitigation Measure CULT-8: Prepare Report Upon Completion of Monitoring Services. Upon completion of the above activities, the paleontologist shall prepare a report summarizing the results of the monitoring and salvaging efforts, the methodology used in these efforts, as well as a description of the fossils collected and their significance. The report shall be submitted to the Applicant, City, the San Bernardino County Natural History Museum, and representatives of other appropriate or concerned agencies to signify the satisfactory completion of the project and required mitigation measures.

9.4 HUMAN REMAINS

Components of the proposed project that require excavation activities, the following mitigation measure is recommended to reduce potentially significant impacts to previously unknown human remains that are unexpectedly discovered during excavations to a less than significant level:

Mitigation Measure CULT-9: Cease Ground-Disturbing Activities and Notify County Coroner If Human Remains Are Encountered. If human remains are unearthed during implementation of the Proposed Project, the City shall comply with State Health and Safety Code Section 7050.5. The City shall immediately notify the County Coroner and no further disturbance shall occur until the County Coroner has made the necessary findings as to origin and disposition pursuant to PRC Section 5097.98. If the remains are determined to be of Native American descent, the coroner has 24 hours to notify the Native American Heritage Commission (NAHC). The NAHC shall then identify the person(s) thought to be the Most Likely Descendent (MLD). The MLD may, with the permission of the landowner, inspect the site of the discovery of the Native American remains and may recommend to the landowner means for treating or disposing, with appropriate dignity, the human remains and any associated funerary objects. The MLD shall complete their inspection and make their recommendation within 48 hours of being granted access by the landowner to inspect the discovery. The recommendation may include the scientific removal and nondestructive analysis of human remains and cultural items associated with Native American burials. Upon the discovery of the Native American remains, the landowner shall ensure that the immediate vicinity, according to generally accepted cultural or archaeological standards or practices, where the Native American human remains are located, is not damaged or disturbed by further development activity until the landowner has discussed and conferred, as prescribed in this mitigation measure, with the MLD regarding their recommendations, if applicable, taking into account the possibility of multiple human remains. The landowner shall discuss and confer with the descendants all reasonable options regarding the descendants' preferences for treatment. MLDs in the region typically recommend reburial of the remains as close to the original burial location as feasible accompanied by a ceremony. The MLD shall file a record of the reburial with the NAHC and the project archaeologist shall file a record of the reburial with the CHRIS-EIC.

If the NAHC is unable to identify a MLD, or the MLD identified fails to make a recommendation, or the landowner rejects the recommendation of the MLD and the mediation provided for in Subdivision (k) of Section 5097.94, if invoked, fails to provide measures acceptable to the landowner, the landowner or his or her authorized representative shall inter the human remains and items associated with Native American human remains with appropriate dignity on the facility property in a location not subject to further and future subsurface disturbance. A record of the reburial shall be filed with the NAHC and the CHRIS-EIC.

Riverside County Registered Archaeologist #202

40-Hour HAZWOPER Training – Update, 2013

PROFESSIONAL AFFILIATIONS

Society for American Archaeology

Society for California Archaeology

Pacific Coast Archaeological Society

Kyle Garcia has 13 years of experience in the archaeology and prehistory of California with a specialization in faunal analysis. He is well-versed in the archaeological resources of California's coastal, interior, and island settings. He is skilled in evaluation historic and prehistoric archaeological resources; agency and Native American consultation; pedestrian surveys, testing and evaluation excavations, and construction monitoring; application of the California Quality Act (CEQA), the National Environmental Policy Act (NEPA), Section 106 of the Natural Historic Preservation Act (NHPA), and local regulations; and laboratory processing. During his tenure he has authored or contributed to more than 350 technical reports and sections to support all levels of CEQA and NEPA documents. In addition to his archaeological work, Kyle has been cross-trained in paleontological mitigation monitoring.

Relevant Experience

Kyle's portfolio of projects includes energy, water and transportation infrastructure; residential, commercial, mixed-use, institutional, and urban redevelopment serving public and private sector clients. He has conducted archaeological work throughout California.

Large-Scale Development Projects. Kyle directed the 1,400-acre field survey and the successful site recordation of over 150 prehistoric and historic archaeological resources per the Section 106 Process for a confidential project in Riverside County; served as the Deputy Project Manager for the 240-acre Archaeological Treatment & Restoration Plan for The Cove project that was subject to Section 106, responsible for the field survey, Native American consultation, final report, and supervised the thorough recordation and documentation of over 350 significant artifacts. In Arizona, he led crews on a pedestrian survey and site recordation of more than 200 historic and prehistoric archaeological resources during a Class III Inventory on an 11,000-acre portion of the La Osa Ranch Project site in Pinal County.

Water Infrastructure. Kyle has performed the archaeological and paleontological resources surveys and assessments for a number of regional water infrastructure projects including the Reservoir No. 1 Reconstruction Project MND for Burbank; the Pasadena Groundwater Storage Program; and recycled water facilities projects for San Clemente, the Town of Rosamond, and Palmdale.

Transportation Peer Reviews. Kyle is often sought after to conduct Peer Review services of controversial projects across southern California including the Needles Highway Safety Realignment Project for the County of San Bernardino, various infrastructure projects for Caltrans/San Bernardino Associated Governments, and the I-710 Corridor Project EIS/EIR for the City of Commerce.

Energy Projects. Kyle served as the Project Director for over 100 SCE projects, managing purchase orders totaling more than $1.5M during PCR's on-call cultural resources management contract to Southern California Edison (SCE).

Fatima Clark

Archeologist

EDUCATION

B.A., Anthropology, California State University, Fullerton, 2005

9 YEARS EXPERIENCE

Workshop: The Art and Science of Flintknapping, California Desert Studies Center, 2013

Successful CEQA, Compliance-Southern California Edison, Environmental Training, 2011

Cultural Resources Protection under CEQA and Other Legislative Mandates, UCLA Extension, 2010

PROFESSIONAL AFFILIATIONS

Society for California Archaeology

Fatima Clark has eight years of hands-on archaeological experience and is a practiced in project management and client and agency coordination. Her field experience is complimented by the course study and participation in numerous archaeological excavations in California, Arizona and Peru. In addition to her archaeology background, she has been cross trained in conducting paleontological surveys and monitoring and co-authored and managed associated reports.

Experience

Fatima has written CEQA-level technical reports, EIR sections, Initial Study sections, archaeological peer reviews, archaeological monitoring reports, and reports pursuant to Caltrans requirements. She is also experienced in performing archaeological testing, site recordation, pedestrian surveys, records searches through several California Historical Resources Information Systems-Information Centers, and monitoring for a wide variety of projects including mixed-use, residential, and energy, water, and road infrastructure projects.

Real Estate Development. Fatima has provided a full range of archaeological services to numerous projects throughout Southern California. Recent project experience includes the Uptown Newport Village Project in Newport Beach, the Shriners Hospital for Children in Pasadena, the San Juan Medical Office Building in San Juan Capistrano, and the Aidlin Property Residential Project in the Stevenson Ranch community of unincorporated Los Angeles County.

Infrastructure. Fatima has served a number of clients and lead agencies in the provision of a variety of archaeological services including municipalities, water agencies, Caltrans, large engineering firms, and energy providers. She also served as an in-house consultant to Southern California Edison for nearly six years during which time she worked on a wide variety of Environmental Compliance projects including the Deteriorated Pole and General Order 131D Programs and the Valley South Subtransmission (VSSP) Project. Fatima also performed the records search, Phase I pedestrian survey, Phase II testing, and monitoring for the SunEdison Cascade Solar Energy Project in the Sunfair Community of unincorporated San Bernardino County.

Her road and water infrastructure projects include serving as Project Manager for the I-10 Freeway/Pepper Avenue Interchange Project in Colton which in addition to the technical analysis involved coordination with the Prime Consultant, San Bernardino Associated Governments, and Caltrans' Environmental Unit. She is currently the Project Manager for the La Costa Chevron Drainage Improvements Project in Encinitas regarding the proposed repairs of an eroded gully into a Caltrans right-of-way requiring a Caltrans Extended Phase I excavation (XPHI). Other projects include the Badlands Landfill stockpile project for Riverside County, the Palos Verdes pipeline project and Crenshaw Reservoir project for the California Water Service Company, and the San Clemente Recycled Water project.

Summary

Christopher Purtell is an archaeologist with nine years of professional experience in environmental compliance, archaeological surveys, excavations, monitoring, data recovery, laboratory analysis, and in the development of mitigation and treatment plans. An experienced project manager, Mr. Purtell has more than six years of experience in a decision-making capacity on cultural resources projects in California.

As an RPA his training and background meet the U.S. Secretary of the Interior's Professional Qualifications Standards as a Principal Investigator and Field Director for prehistoric and historic archaeology (36 CFR 61).

Experience

Mr. Purtell has undertaken and contributed to work efforts for prehistoric and historic archaeology throughout California pursuant to the California Environmental Quality Act (CEQA), and the National Environmental Policy Act (NEPA), and Sections 106 and 110 of the National Historic Preservation Act (NHPA). He has authored and co-authored Cultural Resources Management Plans, Worker Environmental Awareness Programs (WEAP), cultural analyses for Fatal Flaw studies; environmental compliance documents, such as Initial Studies, Environmental Impact Reports, and Cultural Resources Technical Reports; and, has compiled California Department of Parks and Recreation (DPR) site records. As a field director, he has managed field crews in intensive pedestrian surveys, surface collections, shovel test pits, excavations, and the curation of artifacts.

He has successfully coordinated cultural resource mitigation recommendations with a variety of lead and regulatory agencies, including Los Angeles County, Kern County, Inyo County, and he has obtained Cultural Use Permits and Field Authorizations with the Bureau of Land Management (BLM), among others.

High-Profile Monitoring Projects: Mr. Purtell implemented and managed the Cultural Treatment Plan for the Vasquez Rocks Natural Area Park and Interpretive Center for the County of Los Angeles Department of Public Works. He led contractor coordination, Native American consultation, and the Phase II and Phase III investigations which led to the recovery and curation of over 150 artifacts during pre-construction, and the recovery and curation of 73 artifacts during construction monitoring. Working with the Los Angeles County Chief Executive Office, Mr. Purtell served as the project manager for the LA Plaza de Cultura y Artes, a part of the El Pueblo de Los Angeles Historic District, responsible for the cultural mitigation and construction monitoring activities and report preparation.

Energy Projects: Mr. Purtell has worked on and managed large-scale renewable energy projects in Central and Northern California including a full suite of cultural resources services. As the cultural resources manager for the 7,300-acre Catalina Renewable Energy Project in Kern County he managed the record search, Native American consultation, led the pedestrian survey, coordinated technicians and staffing, prepared the cultural resources technical report and assisted with Phase II excavations to mitigate project impacts. He served a similar role on the 8,300-acre Avalon Wind Energy Project in Kern, which also included acquisition of a BLM Field Authorization Permit. Additional projects include the Jawbone Wind Energy Project, the Timber Hills Wind Energy Project, the Pacific Wind Energy Project, and the Hoffman Summit Wind Project, all in Kern County. In addition to renewable projects, Mr. Purtell has also served as an archaeological monitor and contractor trainer to ensure recognition and protection of cultural resources discovered during Southern California Edison earth-moving activities associated with the installation of grounding rods and laterals at the San Fernando Substation.

Transportation Infrastructure Projects: Working for clients like the Metro and Los Angeles World Airports, Mr. Purtell has participated in numerous transportation infrastructure projects. He performed a Phase I archaeological and paleontological investigation, Native American consultation, and the cultural resources technical section for the 2014 Doran Street Grade Separation Project. Working with a prime consultant, he served as the cultural resources manager for the Runway 6L-24R Safety Area Improvement Project. He worked with the lead agency, project archaeologists, biologists, and scientists to perform various technical assessments. Beyond the coordination effort, Mr. Purtell led the CEQA/NEPA compliance documentation including Section 106 of the National Historic Preservation Act, archaeological and paleontological investigations /surveys, Native American consultation and cultural resources technical sections for the runway improvement.

Irvine, CA 92606

RE: 79 Acre Residential Development Site (APN 473-160-004) in the city of Moreno Valley, Riverside County. FAX (949) 753-7002

Dear Mr. Purtell,

A record search of the sacred land file has failed to indicate the presence of Native American cultural resources in the immediate project area. The absence of specific site information in the sacred lands file does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Enclosed is a list of Native Americans individuals/organizations who may have knowledge of cultural resources in the project area. The Commission makes no recommendation or preference of a single individual, or group over another. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated, if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe or group. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from any of these individuals or groups, please notify me. With your assistance we are able to assure that our lists contain current information. If you have any questions or need additional information, please contact me at (916) 373-3712.

Sincerely,

Katy Sanchez

Re: PROPOSED 79-ACRE RESIDENTIAL DEVELOPMENT SITE (APN 473-160-004) IN THE CITY OF MORENO VALLEY, RIVERSIDE COUNTY, CALIFORNIA.

Dear Mr. Hamilton:

PCR Services Corporation (PCR) is preparing environmental documentation in compliance with the California Environmental Quality act for the proposed residential development (project) on an approximately 79-acre site (APN 473-160-004) located directly northwest of Ironwood Avenue and Nason Street in the City of Moreno Valley, Riverside County, California. The proposed project would include the construction of single-family residential houses, streets, infrastructure, unities, parks, and open spaces. The project site is currently undeveloped. The proposed project would include excavations across the project site to currently unknown depths.

On November 11, 2014, the Native American Heritage Commission (NAHC) was contacted. On December 4, 2014, the NAHC indicated that there have been no Native American cultural resources identified within their Sacred Lands File for the project location. The NAHC recommended that you be contacted. As part of this effort, and in compliance with federal, state, and local environmental regulations, we are initiating correspondence and consultation efforts regarding the identification of cultural resources and sacred lands within this project site and vicinity

In order to ensure that any areas containing cultural resources or sacred lands are considered, PCR requests any information you are willing to share regarding Native American or prehistoric resources (including properties, places, or archaeological sites) in the vicinity of the project site that may be affected by the proposed project. The project site is depicted on the Sunnymead, California United States Geologic Society 7.5' topographic quadrangle map in Section 34 of Township 2 South, Range 3 West, as shown in Figure 1, Records Search Map, attached.

Thank you for your assistance with our efforts to address possible Native American concerns that may be affected by the proposed project. If you have any questions or need additional information, please contact me at (949) 753-7001 or via email at c.purtell@pcrnet.com.

Sincerely,

Ms. Rosemary Morillo, Chairperson
Soboba Band of Mission Indians
P.O. Box 487
San Jacinto, CA 92581

Re: PROPOSED 79-ACRE RESIDENTIAL DEVELOPMENT SITE (APN 473-160-004) IN THE CITY OF MORENO VALLEY, RIVERSIDE COUNTY, CALIFORNIA.

Dear Ms. Morillo:

PCR Services Corporation (PCR) is preparing environmental documentation in compliance with the California Environmental Quality act for the proposed residential development (project) on an approximately 79-acre site (APN 473-160-004) located directly northwest of Ironwood Avenue and Nason Street in the City of Moreno Valley, Riverside County, California. The proposed project would include the construction of single-family residential houses, streets, infrastructure, unities, parks, and open spaces. The project site is currently undeveloped. The proposed project would include excavations across the project site to currently unknown depths.

On November 11, 2014, the Native American Heritage Commission (NAHC) was contacted. On December 4, 2014, the NAHC indicated that there have been no Native American cultural resources identified within their Sacred Lands File for the project location. The NAHC recommended that you be contacted. As part of this effort, and in compliance with federal, state, and local environmental regulations, we are initiating correspondence and consultation efforts regarding the identification of cultural resources and sacred lands within this project site and vicinity

In order to ensure that any areas containing cultural resources or sacred lands are considered, PCR requests any information you are willing to share regarding Native American or prehistoric resources (including properties, places, or archaeological sites) in the vicinity of the project site that may be affected by the proposed project. The project site is depicted on the Sunnymead, California United States Geologic Society 7.5' topographic quadrangle map in Section 34 of Township 2 South, Range 3 West, as shown in Figure 1, Records Search Map, attached.

Thank you for your assistance with our efforts to address possible Native American concerns that may be affected by the proposed project. If you have any questions or need additional information, please contact me at (949) 753-7001 or via email at c.purtell@pcrnet.com.

Sincerely,
PCR SERVICES CORPORATION

SUBJECT:
Proposed 79-Acre Residential Development Site (APN 473-160-004) In the city of Morneno Valley, Riverside County, California.

Dear
Christopher W. Purtell, RPA
Senior Archaeologist I

Thank you for contacting the Morongo Band of Mission Indians regarding the above referenced project. The Tribe greatly appreciates the opportunity to review the project and, respectfully, offer the following comments.

The project is outside of the Tribe's current reservation boundaries but within an area that may be considered a traditional use area or one in which the Tribe has cultural ties (e.g. Cahuilla/Serrano territory). However, the Morongo Band of Mission Indians asks that you impose specific conditions regarding cultural and/or archaeological resources and buried cultural materials on any development plans or entitlement applications as follows:

- If human remains are encountered during grading and other construction excavation, work in the immediate vicinity shall cease and the County Coroner shall be contacted pursuant to State Health and Safety Code §7050.5.

- In the event that Native American cultural resources are discovered during project development/construction, all work in the immediate vicinity of the find shall cease and a qualified archaeologist meeting Secretary of Interior standards shall be hired to assess the find. Work on the overall project may continue during this assessment period.

If significant Native American cultural resources are discovered, for which a Treatment Plan must be prepared, the developer or his archaeologist shall contact the Morongo Band of Mission Indians

("Tribe")[1]. If requested by the Tribe, the developer or the project archaeologist shall, in good faith, consult on the discovery and its disposition (e.g. avoidance, preservation, return of artifacts to tribe, etc.).

If I may be of further assistance with regard to this matter, please do not hesitate to contact me at your convenience.

Very truly yours,

MORONGO BAND OF MISSION INDIANS

---

[1] The Morongo Band of Mission Indians realizes that there may be additional tribes claiming cultural affiliation to the area; however, Morongo can only speak for itself. The Tribe has no objection if the archaeologist wishes to consult with other tribes and if the city wishes to revise the condition to recognize other tribes.

re: **PALEONTOLOGY LITERATURE AND RECORDS REVIEW, PROPOSED RESIDENTIAL DEVELOPMENT, CITY OF MORENO VALLEY, RIVERSIDE COUNTY, CALIFORNIA**

Dear Mr. Purtell,

The Division of Geological Sciences of the San Bernardino County Museum (SBCM) has completed a literature review and records search for the above-named development in the City of Moreno Valley, Riverside County, California. Specifically, the proposed project property is located in the southwestern quadrant of section 34, Township 2 South, Range 3 West, San Bernardino Base and Meridian, as seen on the Sunnymead, California 7.5' United States Geological Survey topographic quadrangle map (1967 edition, photorevised 1980).

Previous mapping of the proposed property (Rogers, 1965; Morton and Matti, 2001) indicates that the majority of the proposed study area is situated upon surface exposures of early Pleistocene fan deposits (= unit **Qvof$_a$**), overlain across much of the property by a thin sedimentary veneer of recent alluvium (= **Qya$_a$**). The recent alluvial sediments have low paleontologic sensitivity. In contrast, the Pleistocene fan deposits may have high paleontologic sensitivity, depending upon their lithology. Pleistocene alluvium elsewhere throughout Riverside County and the Inland Empire has been reported to yield significant fossils of extinct animals from the Ice Age (Jefferson, 1991; Reynolds and Reynolds, 1991; Scott and Cox, 2008; Springer and others, 2009, 2010; Scott, 2010). Fossils recovered from these Pleistocene sediments represent extinct taxa including mammoths, mastodons, ground sloths, dire wolves, sabre-toothed cats, large and small horses, large and small camels, and bison, as well as plant macro- and microfossils (Jefferson, 1991; Reynolds and Reynolds, 1991; Anderson and others, 2002; Scott and Cox, 2008; Springer and others, 2009, 2010; Scott, 2010). If not previously disturbed by development, and depending upon the lithology exhibited, these sediments have high potential to contain significant nonrenewable paleontologic resources.

The northwestern portion of the study area is mapped (Morton and Matti, 2001) as Cretaceous tonalite (= unit **Kt**). These granitic rocks have no potential to contain fossil resources, and so are assigned low paleontologic sensitivity.

For this review, I conducted a search of the Regional Paleontologic Locality Inventory (RPLI) at the SBCM. The results of this search indicate that no previously-recorded fossil resource localities from Pleistocene older alluvium are present within the boundaries of the proposed development property, nor from at least within one mile in any direction.

Recommendations

The results of the literature review and the search of the RPLI at the SBCM demonstrate that the proposed development property is situated for the most part upon Pleistocene older alluvial deposits that, if not previously disturbed by development and depending upon their lithology, have high potential to contain paleontologic resources. A qualified vertebrate paleontologist must develop a program to mitigate impacts to nonrenewable paleontologic resources. This mitigation program must be consistent with the provisions of the California Environmental Quality Act (Scott and Springer, 2003), as well as with regulations currently implemented by the County of Riverside. This program should include, but not be limited to:

1. Monitoring of excavation in areas identified as likely to contain paleontologic resources by a qualified paleontologic monitor. Areas requiring monitoring include all previously-undisturbed Pleistocene older alluvial sediments present, at the surface or at depth, within the boundaries of the property. Paleontologic monitors should be equipped to salvage fossils as they are unearthed, to avoid construction delays, and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. Monitors must be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Monitoring may be reduced or eliminated if the potentially-fossiliferous units described herein are determined upon exposure and examination by qualified paleontologic personnel to have low potential to contain fossil resources.

2. Preparation of recovered specimens to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates. Preparation and stabilization of all recovered fossils are essential in order to fully mitigate adverse impacts to the resources (Scott and others, 2004).

3. Identification and curation of specimens into an established, accredited museum repository with permanent retrievable paleontologic storage. These procedures are also essential steps in effective paleontologic mitigation (Scott and others, 2004) and CEQA compliance (Scott and Springer, 2003). The paleontologist must have a written repository agreement in hand prior to the initiation of mitigation activities. Mitigation of adverse impacts to significant paleontologic resources is not complete until such curation into an established, accredited museum repository has been fully completed and documented.

4. Preparation of a report of findings with an appended itemized inventory of specimens. The report and inventory, when submitted to the appropriate Lead Agency along with confirmation of the curation of recovered specimens into an established, accredited museum repository, would signify completion of the program to mitigate impacts to paleontologic resources.

1.0 Introduction

1.1 Background and Purpose

This document presents the results of a Determination of Biologically Equivalent or Superior Preservation (DBESP) conducted by ESA PCR for the approximately 89.05-acre (78.48 acres on-site and 10.57-acre off-site) (collectively, the "study area") proposed single-family residential development associated with Assessor's Parcel Number (APN) 473-160-004 located in the City of Moreno Valley, Riverside County, California, as required under Section 6.1.2, Riparian/Riverine and Vernal Pools policy of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) (Riverside County Integrated Project/RCIP, 2003; Dudek & Associates, 2003). No MSHCP Riparian Areas or vernal pools occur within the study area. However, the study area does support MSHCP Riverine Areas and as such requires a DBESP analysis for any impacts proposed to these areas. This DBESP provides details on the MSHCP Riverine Areas located within the project study area in addition to proposed impacts and compensatory mitigation for compliance with Section 6.1.2 of the MSHCP.

1.2 Definition of the Study Area

The approximately 89.05-acre study area is regionally situated north of State Route (SR) 60 and northeast of Interstate (I) 215 (**Figure 1**, *Regional Map*). Specifically, the study area is located northeast of the intersection of Ironwood Avenue and Nason Street in the City of Moreno Valley. The study area is depicted on the U.S. Geological Survey (USGS) 7.5' Sunnymead topographic quadrangle (S34, T2S, R3W & S3, T3S, R3W) (USGS, 1967; Earth Survey, 2015), as shown in **Figure 2**, *Vicinity Map.* The specific locations and extend of the on-site and off-site study areas are depicted on **Figure 3**, *Study Areas*. The six (6) off-site study areas are associated with four types of proposed project activities including manufactured slopes, road improvements, a sewer line extension, and water line extensions (1 proposed and 2 alternatives) as described below:

Manufactured Slopes (West & East) – There are two (2) off-site study area locations proposed to support manufactured slopes, including one area adjacent to Nason Street (West) and a second area adjacent to the eastern boundary of the on-site study area (East).

Road Improvements – There is one (1) road improvement area proposed between the area located directly north of Ironwood Avenue and south of the on-site study area boundary.

Sewer Line – There is one (1) sewer line area which is proposed to connect at the southeast corner of the on-site study area at the intersection of Ironwood Avenue and Oliver Street and extend south along Oliver Avenue, ultimately ending at the SR-60 freeway.

Study Areas

ESA PCR

Water line (Proposed and Alternatives) – Although the exact location of the final water line extension is still unknown, one proposed alignment and two (2) alternative alignments were assessed as part of the off-site project study areas. The Proposed Water Line would commence at the intersection of Ironwood Avenue and Oliver Street and extend east along Ironwood Avenue, continuing north along Moreno Beach Drive, and terminating at the intersection of Moreno Beach Drive and Kalmia Avenue. Water Line Alternative 1 would connect the water line at the northeast corner of the on-site study area and extend north terminating near an existing off-site water tower. Water Line Alternative 2 would commence at the northeastern corner of the on-site study area and extend east toward the intersection of Moreno Beach Drive and Juniper Avenue.

It should be noted that only one of the water line alignments will ultimately be implemented by the project. However, given the relatively small amount of impacts to Riverine Areas proposed by the water alignments, this DBESP analyzes the cumulative impacts to MSHCP Riverine resources as if all water line alignments were to be implemented in order to provide a conservative analysis. Ultimately, impacts to MSHCP Riverine resources will be slightly reduced once the final water line alignment is chosen.

The topography on-site is generally flat with gently rolling hills throughout the study area and steeper rock outcrops on the northwest corner. On-site elevations range from the lowest of approximately 1,830 feet above mean sea level (MSL) along the southern boundary of the study area to a high of approximately 1,975 feet above MSL along the northwest boundary of the study area. The topography of the off-site study areas are generally flat with the exception of the proposed water line area that extends north from the northeastern corner of the study area, which consists of a fairly steep east-facing slope supporting some native vegetation and rocky outcrops. Elevations within the off-site areas range from the lowest of approximately 1,793 feet above MSL at the southern end of the proposed sewer line to a high of approximately 1,948 feet above MSL at the steepest portion of the proposed water line area. Representative photographs of the study area are included in **Figures 4a** and **4b**, *Site Photographs*.

1.3 Relationship to the MSHCP

The study area is located within the Reche Canyon/Badlands Plan of the MSHCP. The MSHCP is a multi-jurisdictional Habitat Conservation Plan to maintain biological and ecological diversity within a rapidly urbanizing region. Under the MSHCP, participating jurisdictions (in this case, the City of Moreno Valley) are authorized to allow "take" of specified plant and wildlife species within the MSHCP Plan Area. In addition, the wildlife agencies, namely CDFW and USFWS, allow take of habitat or individual species outside of the MSHCP Conservation Area in exchange for the assembly and management of a coordinated MSHCP Conservation Area. The study area is not within or adjacent to a criteria cell, as shown in **Figure 5**, *Relationship to the MSHCP*. A criteria cell is defined as a "unit within the Criteria Area" for which descriptions are provided "to guide assembly of the Additional Reserve Lands". Since the study area is not within a criteria cell, the project is not subject to the Habitat Acquisition and Negotiation Strategy (HANS) process. The HANS process applies to properties within a MSHCP criteria cell which may be needed for inclusion in the MSHCP Conservation Area.

Figure 5

Relationship to the MSHCP

ESA PCR

Although the study area is not within a criteria cell, it is still subject to other plan wide requirements of the MSHCP. The Applicant is required to pay the Local Development Mitigation Fee established in the MSHCP Implementation Agreement (Section 8.5.1 of the MSHCP), comply with the Riparian/Riverine policy (Section 6.1.2 of the MSHCP), and conduct burrowing owl surveys since the study area is within the Burrowing Owl Survey Area (Section 6.3.2 of the MSHCP). The study are is not within the MSHCP's Narrow Endemic Plant Species Survey Area (Section 6.1.3 of the MSHCP), Criteria Area Species Survey Area, Amphibian Species Survey Area, or Mammal Species Survey Area (Section 6.3.2 of the MSHCP). However, the study area is within the Stephens' kangaroo rat (SKR) habitat conservation plan (HCP) boundaries and will be required to pay the SKR mitigation fee for coverage under the HCP.[1]

The study area is not within any Core or Linkage areas as identified by the MSHCP (Dudek & Associates, 2003). There is one proposed linkage (Proposed Linkage 4) approximately 2.1 miles to the north of the study area and one existing core (Core H) roughly 4.0 miles to the south of the study area. Proposed Linkage 4 would include upland habitat within Reche Canyon, which would provide connection to Box Springs Reserve, the Badlands, and San Bernardino County. The open area directly to the north of the study area does directly connect to Proposed Linkage 4. Existing Core H includes Lake Perris State Recreation Area and San Jacinto Wildlife Area. There is no direct connection from the study area to Core H, which are separated by urban development.

1 *http://www.skrplan.org/index.html; SKR is an Adequately Conserved species under the MSHCP. However, coverage is only provided under the MSHCP in areas within the MSHCP boundaries that are outside the boundaries of the SKR HCP.*

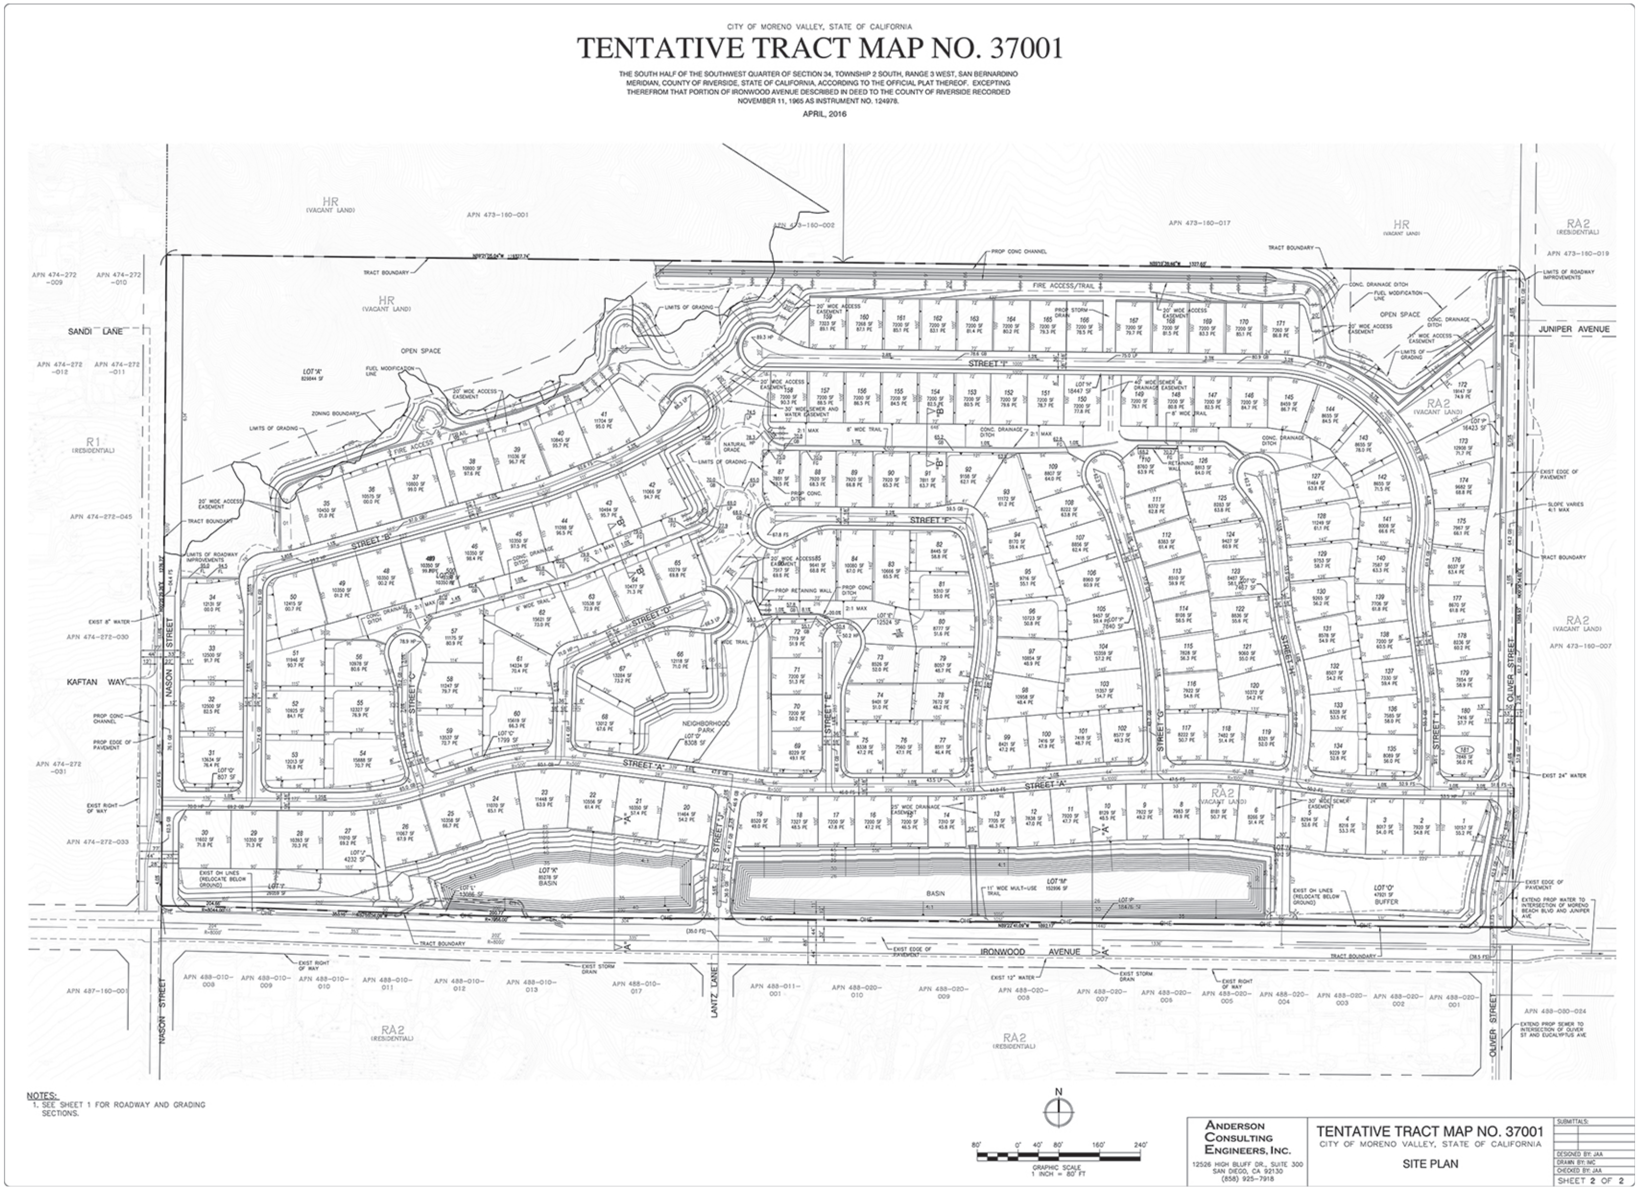
2.0 Project Description

2.1 Proposed Project

The 89.05 acre study area is a proposed single-family residential development that will occupy approximately 38.5 acres, as shown in (**Figure 6**, *Site Plan*).[2] The remaining on-site acreage (39.98 acres) will be open space areas, which will consist of community open space areas that will be planted as appropriate to the project's climate, the proposed on-site mitigation area and avoided areas in the northwestern and northeastern corner of the study area, which encompass native vegetation and rock outcroppings that will be preserved. Per Figure 3, there are four types of off-site improvement areas associated with the project totaling 10.57 acres, including manufactured slope areas, road improvements, a sewer line extension, and water line extensions comprised of one (1) proposed alignment & two (2) alternative alignments. Sewer and water lines will be extended onto the study area from existing utilities. Primary access to the development would occur from Ironwood Avenue between Nason Street and Oliver Street, immediately opposite from and north of Lantz Lane. Secondary access would be provided by driveways on both Nason Street and Oliver Street just north of Ironwood Avenue.

The study area supports two drainage systems identified as Drainage A and Drainage Complex B. The drainages support field indicators associated with USACE, RWQCB, and CDFW (collectively "the resource agencies") jurisdictional waters. The limits of CDFW jurisdictional streambed resources were found to be consistent with the definition of Riverine Areas as defined by Section 6.1.2 of the MSHCP. Drainage A is an unvegetated roadside ditch that enters the Ironwood Avenue Right-of-Way and flows on-site adjacent to the southern boundary. Drainage A exits the study area via a corrugated metal pipe (CMP) that runs under Ironwood Avenue. Drainage Complex B occurs within the off-site areas and comprises the mainstem Drainage B feature and five smaller tributaries (Drainages B1 through B5). The mainstem feature identified as Drainage B is an ephemeral sandy wash that originates off-site to the northwest of the study area along Reche Canyon Road. Drainage B meanders south/southwest and crosses the off-site Water Line Alternative 1 and sewer line area, ultimately entering a detention basin located directly northeast of the Nason Street exit of the SR-60.

2 The project site plan does not depict the conceptual on-site mitigation area presented as Figure 10 in Section 7.3 below. However, the feasibility of providing the necessary on-site mitigation area into the site design has been evaluated by the project engineer, and the mitigation area will be integrated into the final project design should the resource agencies prefer on-site mitigation as part of subsequent regulatory permitting.



SOURCE: Anderson Consulting Engineers, Inc., 2016

Ironwood Village Project

Figure 6

Site Plan

ESA PCR

Drainages B1 through B5 are minor ephemeral drainages that drain very small and localized watersheds located directly west of the existing water district road which runs parallel to the eastern boundary of the study area. Drainage B5 supports marginal, yet more substantial flows than Drainages B1 through B4, and was likely formed by controlled release from the water tank structure directly to the west which outlets directly into the drainage via a large corrugated metal pipe structure. Drainage A and Drainage Complex B are further described in Section 4.4, *Riverine Areas Setting* and Section 5.1, *Assessment of Riparian/Riverine and Vernal Pool Resources*, below.

2.2 Project Alternatives

The sensitive biological resources on the study area are limited to Drainage A and Drainage Complex B that support ephemeral habitats and are considered jurisdictional features and MSHCP Riverine Areas. The study area does not support any habitats that qualify as MSHCP Riparian Areas. Avoidance of sensitive biological resources on the study area is not feasible as impacts are necessary to provide slope stabilization to support the proposed residential development and infrastructure improvements, including road improvements along Ironwood Avenue and extension of water and sewer lines to the proposed development from existing off-site utilities. Permanent impacts proposed to MSHCP Riverine Areas total 0.077 acre and include: Drainage A (0.059 acre), Drainage B (0.011 acre), Drainage B2 (<0.001), Drainage B3 (<0.001), Drainage B4 (<0.001) and Drainage B5 (0.007 acre). The remaining impacts to MSHCP Riverine Areas (totaling 0.088 acre) are temporary impacts associated with the extension of the off-site sewer and water lines to the study area. All though the drainages will either be permanently or temporarily impacted, the drainages are ephemeral systems with limited watersheds and support little to no native vegetation. Impacts to vegetation within the drainages will be limited to small patches of upland vegetation, including brittlebush scrub, buckwheat scrub, and Riversidean sage scrub.

Impacts to MSHCP Riverine Areas addressed in this report are based on a worst-case scenario in regards to impacts to MSHCP Riverine Areas, which assesses impacts associated with all Alternative Water Lines. However, it should be noted that once the Alternative Water Line route is chosen, actual impacts to MSHCP Riverine Areas will be slightly less. Therefore, when addressing mitigation, the acreage of presumed mitigation will be based on a 2:1 ratio of TOTAL riverine impacts with the caveat that once the alternative is chosen, impacts and mitigation may be slightly reduced.

2.3 100 Percent Avoidance Analysis

In accordance with the MSHCP, a 100 percent avoidance alternative was considered to determine if a project could be developed on the property that avoided 100 percent of the MSHCP Riverine Areas present. The study area supports two drainage systems (Drainage A and Drainage Complex B), which are briefly described above and in further detail in section 4.4, *Riverine Features*, of this report. Drainage A, which occurs on-site and off-site, and Drainage Complex B (i.e. mainstem Drainage B and its tributaries), which occurs within the off-site areas, were determined to meet the definition of MSHCP Riverine Areas.

In order to avoid all impacts to Riverine Areas, the project could not provide infrastructure improvements, including road improvements and water and sewer line extensions and support the developable acreage necessary to make the project economically feasible. Furthermore, since the proposed project is not within a MSHCP criteria cell, removing any possible development would place additional development pressure on areas within MSHCP criteria cells.

In summary, the 100 percent avoidance alternative was determined to be infeasible because it would not allow the Applicant to provide the required infrastructure improvements while realizing project objectives, and it would increase development pressure within MSHCP criteria cells. Additionally, the project has minimized permanent impacts to a maximum[3] of just 0.077 acre of low function and value habitat (based on the limited watershed and presence of minimal upland vegetation) within the drainages. Therefore, no further analysis was considered by the project proponent with regard to 100 percent avoidance or any part thereof.

2.4 Other Alternatives Considered

No other alternatives beyond those discussed in sections 2.1 and 2.2, above, were considered for the development based on the economical infeasibility and low function and value of the biological resources identified.

[3] Actual impacts will be reduced further upon determination of the final water line alignment.

3.0 Methodology

The biological resources of the study area are documented in the Biological Resources Assessment (BRA) (ESA PCR, 2016) (refer to attached **Appendix A**, *Biological Resources Assessment*). An overview of the methods is provided below.

3.1 Literature Review

Assessment of the study area began with a review of relevant maps and literature on the biological resources of the study area and surrounding vicinity. The California Natural Diversity Database (CNDDB), a CDFW species account database; the MSHCP; and the California Native Plant Society (CNPS) Online Inventory of Rare and Endangered Plans were reviewed for all pertinent information regarding the localities of known observations of sensitive species and habitats in the vicinity of the study area. Federal register listings, protocols, and species data provided by the USFWS and CDFW were reviewed in conjunction with anticipated Federally and State listed species potentially occurring within the vicinity as necessary. In addition, numerous regional flora and fauna field guides were utilized to assist in the identification of species and suitable habitats.

3.2 Field Investigations

The following field investigations were conducted by ESA PCR on the study area. The detailed methodology for each type of survey can be found in section 3.0 of the BRA Report, which is attached as Appendix A.

- A general biological survey and vegetation mapping were conducted by ESA PCR Senior Biologist Ezekiel Cooley on September 19, 2014.
- A Riparian/Riverine Areas assessment was conducted by ESA PCR Principal Regulatory Scientist Amir Morales on September 19 and December 10, 2014.
- Focused plant surveys were conducted within:
  - the study area and off-site sewer line area on May 13, 2015 by ESA PCR Biologists Ezekiel Cooley, Amy Lee, and Lauren Singleton and on July 20, 2015 by Amy Lee;
  - the off-site proposed and alternative water line areas on May 23 and July 5, 2016 by Amy Lee; and

- the off-site eastern manufactured slope area on July 5, 2016 by Amy Lee; however, a spring focused plant survey has not yet been conducted in this area.4

- Focused burrowing owl surveys were conducted within:

  - the study area and off-site manufactured slopes, road improvement, and sewer line areas from May to July 2015 by ESA PCR Biologists Ezekiel Cooley, Amy Lee, and Lauren Singleton; and

  - the proposed and alternative off-site water line areas from April to July 2016 by Amy Lee and Lauren Singleton.

[4] *The western manufactured slope area was not surveyed since it does not support suitable habitat for special-status plant species.*

4.0
Description of Available Biological Information

This section summarizes the biological resources of the study area and proposed impacts as documented in the BRA, attached as Appendix A. Observed species lists are included as Appendix A to the BRA.

4.1 Plant Communities

The on-site study area totals 78.48 acres, including 69.01 acres of non-native dominated plant communities, 6.62 acres of native plant communities, 2.15 acres of sparsely vegetated rock outcrop/Riversidean sage scrub, and 0.70 acre of developed areas. Non-native plant communities include 38.04 acres of ruderal areas, 2.29 acres of ruderal/Riversidean sage scrub, 28.68 acres of disturbed areas. Native plant communities include 2.34 acres of brittlebush scrub, 0.31 acre of brittlebush scrub/ruderal, 0.09 acre of buckwheat scrub/ruderal, 0.78 acre of laurel sumac scrub/ruderal, and 3.10 acres of Riversidean sage scrub.

The off-site study areas totals 10.57 acres, including 7.15 acres of non-native dominated plant communities, 0.64 acre of native plant communities, 0.05 acre of sparsely vegetated river wash area, and 2.66 acres of developed areas. Non-native communities consist of 2.50 acres of ruderal areas, 0.04 acre of ruderal/brittlebush scrub, 0.43 acre of ruderal/Riversidean sage scrub, and 4.18 acres of disturbed areas. Native plant communities include 0.27 acre of brittlebush scrub, 0.21 acre of brittlebush scrub/ruderal, 0.04 acre of buckwheat scrub/ruderal, and 0.12 acre of Riversidean sage scrub, and 0.07 acre of Riversidean sage scrub/ruderal.

Descriptions and a map of the plant communities are provided in Section 4.2 and Figure 7, respectively, of the BRA prepared by ESA PCR included as Appendix A of this DBESP (2016) (Appendix A). On and off-site permanent impacts are proposed by the project to 69.96 acres of non-native plant communities, 2.91 acres of native plant communities, 0.01 acre of sparsely vegetated river wash, and 2.93 acres of developed areas. An additional 1.50 acres of impacts will occur as a result of on-site fuel modification activities as well as 5.22 acres of temporary on and off-site impacts. The total acreages of each plant community mapped within the study area, the proposed impacts to those communities, and proposed avoidance acreages are summarized in **Table 1**, *Existing and Impacted Acres of Plant Communities*.

TABLE 1
EXISTING AND IMPACTED ACRES OF PLANT COMMUNITIES

Plant Communities	Existing (acres)			Permanent Impacts (acres)			On-site Fuel Modification Impacts (acres)	Temporary Impacts (acres)		
	On-site	Off-site	Total	On-site	Off-site	Total		On-site	Off-site	Total

SOURCE: ESA PCR, 2014 & 2016

4.2 Special-status Plant Species

Special-status plants include those listed, or candidates for listing, by the USFWS and CDFW; and species considered special-status by the CNPS (Lists 1A, 1B, and 2). Several special-status and CNPS-listed species were reported in the vicinity based on CNDDB and CNPS, totaling 65 species within the 9-quadrangle search. Of the 65 species reported in the vicinity of the study area, 12 species were identified as having a potential to occur within the study area based on the literature review and existing habitat, as listed in Appendix B to the BRA. The remaining 53 species were not considered to have a potential to occur based on the literature review and habitat present on the study area. Focused plant surveys were conducted in 2015 and off-site road improvement and sewer line areas and in 2016 on the off-site water line areas; none of the species determined to have a potential to occur on the study area and off-site water and sewer line study areas were observed. A summer focused survey was conducted within the off-site eastern manufactured slope area in 2016; however, a spring survey has not yet been conducted within this area. The off-site western manufactured slope area does not support suitable habitat for special-status plant species.

4.3 Special-status Wildlife Species

Sensitive wildlife species include those species listed as Endangered or Threatened under the Federal Endangered Species Act (FESA) or the California Endangered Species Act (CESA), candidates for listing by the USFWS or CDFW, and Species of Special Concern to the CDFW. Several sensitive wildlife species were reported in the vicinity based on CNDDB, totaling 43 species within the 9-quadrangle search. A total of 19 species were identified as having a potential to occur based on the literature review and habitat present on the study area. Of the species with the potential to occur, focused surveys were conducted for the burrowing owl in accordance with recommended protocols due to the presence of potentially suitable habitat on the study area. The remaining 24 species were not considered to have a potential to occur within the study area due to lack of suitable habitat or the location of these areas were outside of the species' range. A summary table of these species is provided in Appendix C to the BRA. The remaining 19 species with potential to occur are discussed further below in section 4.3.1, *Species with Potential to Occur*.

4.3.1 Species with Potential to Occur

The following 19 species were determined to have a potential to occur on the study area:

Coast horned lizard (*Phrynosoma blainvillii*): This reptile species is a state species of special concern and is a Covered Species pursuant to the Western Riverside County MSHCP. This species prefers sandy riparian and sage scrub habitats, but also occurs in valley-foothill, hardwood, conifer, pine-cypress, juniper and annual grassland habitats below 6,000 feet. Habitats include open country, especially sandy areas, washes, flood plains, and windblown deposits.

Coast horned lizard was determined to have a moderate potential to occur within the study area based on the presence of some potentially suitable habitat on the northwestern corner of the on-site area, which includes Riversidean sage scrub and brittlebush scrub. Harvester ants, this species main food source, were also observed (although the food source was not seen in the area supporting suitable habitat). Although habitat and a food source potentially exist on the study area, the majority of the potentially suitable habitat is disturbed and higher quality habitat is present to the northwest (Olive Hill and Reche Canyon) and northeast (the Badlands mountain range) of the study area. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Orange-throated whiptail (*Aspidoscelis hyperythra*): This reptile species is a state species of special concern and a Covered Species pursuant to the Western Riverside County MSHCP. This species prefers chaparral, non-native grassland, Riversidean sage scrub, and juniper and oak woodlands. It is often associated with riparian areas and alluvial fan sage scrub habitats.

Orange-throated whiptail was determined to have a moderate potential to occur within the study area based on the presence of some potentially suitable habitat on the northwestern corner of the on-site area, which includes Riversidean sage scrub and brittlebush scrub. These areas support perennial plants that may host this species preferred food source (termites).

Although habitat and a food source potentially exist on the study area, the majority of the suitable habitat is disturbed and higher quality habitat is present to the northwest (Olive Hill and Reche Canyon) and northeast (the Badlands mountain range) of the study area. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Red Diamond Rattlesnake (*Crotalus ruber*): This reptile species is a state species of special concern and a Covered Species pursuant to the Western Riverside County MSHCP. This species prefers chaparral, woodland, and arid desert habitats in rocky areas with dense vegetation.

Red diamond rattlesnake was determined to have a moderate potential to occur within the study area based on the presence of some potentially suitable habitat on the northwestern corner of the on-site area, which includes Riversidean sage scrub and brittlebush scrub. Although these areas support some vegetation and crevices within the rock outcrops, the vegetation is not dense and rock crevices available for cover are limited. Higher quality habitat is present to the northwest (Olive Hill and Reche Canyon) and northeast (the Badlands mountain range) of the study area. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Golden Eagle (*Aquila chrysaetos*): This raptor is a state fully protected species and is protected by the Bald and Golden Eagle Protection Act; it is also a Covered Species pursuant to the Western Riverside County MSHCP. This species nests on cliff faces and tall trees. Foraging habitat includes open country, including grasslands and early successional stages of forest and shrub habitats.

Golden eagle was determined to have a potential to occur only to forage within the study area based on the presence of a few fossorial mammal burrows within the disturbed areas on-site, suggesting the presence of small mammals that could provide a possible food source. However, the potential for foraging was considered very low since the majority of the site is surrounded by development and is highly disturbed, making it a less optimal habitat. This species is not expected to nest due to lack of cliffs on the study area, which is their preferred nesting habitat. Additionally, there is only one CNDDB occurrence record within the vicinity. This record was a breeding pair observed in fall 1979, spring 1980, and fall 1980 in San Timoteo Canyon, approximately 6.0 miles to the northeast. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Swainson's hawk (*Buteo swainsoni*): This bird species is listed as threatened by the state and is a Covered Species pursuant to the Western Riverside County MSHCP. It prefers Great Basin grasslands, riparian forests, riparian woodlands, and valley and foothill grasslands.

Swainson's hawk was determined to have a potential for foraging only within the study area based on the presence of a few fossorial mammal burrows within the disturbed areas on-site, suggesting the presence of small mammals that could provide a possible food source. However, the potential for foraging was considered low since the majority of the site is surrounded by development and is highly disturbed, making it a less optimal habitat. This species is not expected to nest due to the limited number of trees on the study area and the proximity of the trees to roads and residential homes, which could create some noise disturbance.

Additionally, there are only two CNDDB occurrence records of nesting individuals within the vicinity; both records are from over 100 years ago. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Burrowing owl (*Athene cunicularia*): This bird species is a state species of special concern and a Covered Species pursuant to the Western Riverside County MSHCP. This species prefers coastal prairie, coastal scrub, Great Basin scrub, Mojavean desert scrub, Sonoran desert scrub, valley and foothill grassland and disturbed habitats. It is known to occur in the study area vicinity based on CNDDB and the MSHCP, and the study area is within the MSHCP Burrowing Owl Survey Area, an overlay in the MSHCP that requires additional surveys.

Burrowing owl was determined to have potential to occur within the study area based on the presence of suitable habitat that was identified during the Step I survey, including disturbed, low-growing vegetation, bare ground, and a few small fossorial mammal burrows. Step II surveys were conducted from May to July 2015 within the study area and off-site sewer line area and slope stabilization areas. Step II surveys were conducted from April to July 2016 within the off-site water line areas. The subsequent Step II surveys did not identify individual burrowing owls, active burrowing owl burrows, or signs of burrowing owls within the survey area. Therefore, the study area and adjacent buffer area do not currently support burrowing owls. The results are also outlined in a separate survey reports included in the attached BRA as Appendices D and E.

Loggerhead shrike (*Lanius ludovicianus*): This bird species is listed as a state species of special concern and a Covered Species pursuant to the Western Riverside County MSHCP. This species prefers broadleaved upland forest, desert wash, Joshua tree woodland, Mojavean desert scrub, pinyon and juniper woodlands, riparian woodland, and Sonoran desert scrub habitats.

Loggerhead shrike was observed foraging within the northwestern corner of study area during the third burrowing owl survey conducted on July 2, 2015. This area supports suitable foraging habitat for this species, which includes Riversidean sage scrub and brittlebush scrub. The potential for nesting for this species is considered moderate based on the presence of shrubs on the northwestern corner. Although this area supports shrubs that may be suitable for nesting, the northwestern corner is adjacent to developed, residential areas; higher quality habitat is present to the northwest (Olive Hill and Reche Canyon) and northeast (the Badlands mountain range) of the study area.

Coastal California gnatcatcher (*Polioptila californica californica*): This bird species is listed as Federally Threatened, state species of special concern, and a Covered Species pursuant to the Western Riverside County MSHCP. This species is an obligate inhabitant of coastal sage scrub habitat.

This species was observed on the study area during the focused burrowing owl survey conducted on May 13, 2015. Only one individual was heard during the survey.

Northwestern San Diego pocket mouse (*Chaetodipus fallax fallax*): This mammal species is listed as a state species of special concern and a Covered Species pursuant to the Western Riverside County MSHCP. It prefers chaparral and coastal sage scrub habitats, in addition to grassland and Riversidean alluvial fan sage scrub habitats.

Northwestern San Diego pocket mouse was determined to have a moderate potential to occur within the study area based on the presence of suitable coastal scrub and chaparral habitat (e.g. brittle bush scrub, Riversidean sage scrub) in the northwestern portion and small fossorial mammal burrows. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Stephens' kangaroo rat (*Dipodomys stephensi*): This mammal species is listed as federally endangered and state threatened. Take Authorization for Stephens' kangaroo rat is provided by the SKR HCP within its plan boundaries, and by the Western Riverside County MSHCP for areas outside of the SKR HCP but within the MSHCP area plan boundaries (this species is a MSHCP Covered Species). This species prefers open grasslands or sparse shrub lands within sandy to sandy loam soils and low clay and gravel content.

Stephens' kangaroo rat was determined to have a moderate potential to occur within the study area based on the presence of suitable shrub habitat (e.g. brittle bush scrub, Riversidean sage scrub) in the northwestern portion and small fossorial mammal burrows. The study area is not within any core reserves identified by the SKR HCP. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Los Angeles pocket mouse (*Perognathus longimembris brevinasus*): This mammal species is listed as a state species of special concern and a conditionally Covered Species pursuant to the Western Riverside County MSHCP (surveys are required for areas within the survey overlay, with potential conservation). It prefers sparsely vegetated habitat areas within coastal sage scrub communities and in patches of fine sandy soils associated with washes.

Los Angeles pocket mouse was determined to have a moderate potential to occur within the study area based on the presence of suitable Riversidean sage scrub habitat in the northwestern portion. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

San Diego black-tailed jackrabbit (*Lepus californicus bennettii*): This mammal species is a California Species of Special Concern and a Covered Species pursuant to the Western Riverside County MSHCP. This species prefers open brushlands and scrub habitats.

San Diego black-tailed jackrabbit was determined to have a moderate potential to occur within the study area. The majority of the study area supports suitable habitat for this species, including the Riversidean sage scrub on the northwestern corner and the ruderal areas (which support some short grasses). However, this species is highly conspicuous and no incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

San Diego desert woodrat: This mammal species is a California Species of Special Concern and a Covered Species pursuant to the Western Riverside County MSHCP. This species prefers coastal scrub and chaparral habitats with areas containing rock outcrops and cliffs.

San Diego desert woodrat was determined to have a moderate potential to occur within the study area based on the presence of suitable habitat (e.g. Riversidean sage scrub, rock outcrop/Riversidean sage scrub) in the northwestern portion and small fossorial mammal burrows. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Southern Grasshopper Mouse (*Onychomys torridus ramona*): This mammal species is a state species of special concern. This species prefers grasslands, desert areas, and especially scrub with friable soils.

Southern grasshopper mouse was determined to have a potential to occur within the study area based on the presence of suitable shrub habitat (e.g. brittle bush scrub and Riversidean sage scrub) in the northwestern portion and small fossorial mammal burrows. However, the potential was considered low since this species has not been recorded on CNDDB within the vicinity of study area since 1938. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

American badger (*Taxidea taxus*): This mammal species is a state species of special concern. This species prefers grasslands, desert areas, and especially scrub with friable soils.

American badger was determined to have a potential to occur within the study area based on the presence of shrubs within the Riversidean sage scrub habitat on the northwestern corner of the study area. A few fossorial mammal burrows were observed, suggesting the presence of small mammals that could provide a possible food source. However, the potential was considered low since the majority of the site is surrounded by development and a large portion of suitable habitat is disturbed. Additionally, this species has not been recorded within the vicinity since 1908. No signs of this species were observed during any site surveys conducted in 2015.

Western Mastiff Bat (*Eumops perotis californicus*): This mammal species is a state species of special concern. This species prefers chaparral, cismontane woodlands, coastal scrub, and valley and foothill grassland habitats.

Western mastiff bat was determined to have a potential to occur for foraging only within the study area. However, the potential was considered low since although bats in this family are known to be strong fliers and can fly long distances to forage, habitat on the study area is disturbed and the majority is surrounded by development. This species preferred roosting habitat is not present on the study area and the nearest CNDDB occurrence record is from1990 approximately 3.0 miles to the southwest of the study area, in an area that is now a residential development. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Pocketed free-tailed bat (*Nyctinomops femorasaccus*): This bat species is a state species of special concern and occurs in more arid habitats, roosting in rock crevices, caverns, or buildings.

Pocketed free-tailed bat was determined to have a potential to occur for roosting only within the study area based on the presence of rock outcrops. However, this potential was considered very low since this species typically prefers steeper cliffs for roosting habitat. Although little is known regarding home range for this species, the potential for roosting is also unlikely since the study area does not support adjacent foraging habitat (CDFW, 2000). There are only 2 CNDDB occurrence records in the vicinity. The nearest record is from 1985 approximately 6.5 miles to the southwest of the study area near March Air Force Base. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Lesser long-nosed bat (*Leptonycteris verbabuenae*): This bat species is a federally endangered species and occurs in more arid habitats, such as desert grasslands and shrublands.

Pocketed free-tailed bat was determined to have a potential to occur for roosting and foraging. Potential night roosts included a limited number of trees and rock crevices on the northwestern corner of the project and scattered cactus may provide feeding opportunities. Although day roosting habitat (caves or mines) are not present on the study area, this species can travel long distances between day roosting and foraging sites. However, the potential was considered very low for both roosting and foraging since this species not typically found in California and recorded sightings are typically vagrant migrants. There is only 1 CNDDB occurrence record within the vicinity from 1993, approximately 9.5 miles to the northeast in a residential neighborhood of Yucaipa. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

Pallid bat (*Leptonycteris verbabuenae*): This bat species is a federally endangered species and occurs in more arid habitats, such as desert grasslands and shrublands.

Pocketed free-tailed bat was determined to have a potential to occur for roosting and foraging. Potential night roosts included a limited number of trees and rock crevices on the northwestern corner of the project and scattered cactus may provide feeding opportunities. only within the study area based on the presence of rock outcrops. Although day roosting habitat (caves or mines) is not present on the study area, this species can travel long distances between day roosting and foraging sites. However, the potential was considered very low for both roosting and foraging since this species not typically found in California and recorded sightings are typically vagrant migrants. There is only 1 CNDDB occurrence record within the vicinity from 1993, approximately 9.5 miles to the northeast in a residential neighborhood of Yucaipa. No incidental sightings of this species occurred during any site surveys conducted in 2015 and 2016.

4.3.2 Migratory Birds and Raptors

The study area supports some potential nesting and foraging habitat for nesting birds and raptors, primarily in the northwestern corner of the study area where there are shrubs and some trees. Several species of birds were observed on-site and were identified by CNDDB as potentially occurring within the 9-quadrangle search area.

Raptors observed on-site include Cooper's hawk (*Accipiter cooperii*), red-tailed hawk (*Buteo jamaicensis*), and American kestrel (*Falco sparverius*). There is also a foraging potential for listed raptors within the 9-quadrangle search area according to CNDDB, such as golden eagle (State Fully Protected) and Swainson's hawk (Federally Threatened), though the potential of foraging is considered low and neither are expected to nest on-site. These special-status bird species are listed in Appendix C to the attached BRA.

4.4 Riverine Areas Setting

The study area is located within rolling valley topography located southeast of Reche Canyon and south/southwest of The Badlands mountain range. The study area is located within the Santa Ana Watershed and generally drains toward the south, eventually reaching the Perris Valley Storm Drain, which ultimately reaches the San Jacinto River and then Canyon Lake. The USGS Sunnymead topographic Quadrangle depicts a blueline stream originating in the foothills to the north with headwaters located approximately 2,000 linear feet from the on-site study area. The mapped blueline drainage feature enters the study area near the center of the northern project boundary and bisects the property. The property has been subjected to seasonal dry-farming and/or weed abatement activities for decades. Based on the jurisdictional assessments performed by ESA PCR, no discernible streambed or indicators of flow were observed within the area historically mapped as a blueline drainage feature during the September 19, 2014 assessment of Riparian/Riverine Areas. In order to determine if indicators of flow reestablish following moderate rain events, Amir Morales returned to investigate the study area following a series of early December 2014 storm events yielding a total of nearly 2-inches of rain over three consecutive days. In our experience, this amount of rain would have reestablished some evidence of flow capable of eroding a streambed. However, no ordinary water mark, sediment deposition/sorting, debris wracks, bed/bank, streambed associated vegetation, or other flow indicators were observed immediately following the consecutive rain events, and no vegetation was observed as establishing in those areas based on review of recent and historical imagery of the site. As a result, it was determined that no MSHCP Riparian/Riverine Areas occur within the area depicted as a USGS blueline drainage feature mapped within the study area.

It was noted that the USGS Sunnymead Quadrangle depicts a small water feature at the off-site headwaters of the blueline drainage feature, approximately 2,000 linear feet north of the study area where the feature originates. As such, it is feasible that the mapped water feature was formed in association with a historic stock pond, which may have supported a small drainage that ultimately extended to the study area when water was historically discharged from the pond feature and/or significant storm events caused it to overflow. However, based on review of current aerial imagery in Google Earth, no water feature appears to persist within the off-site headwaters in the current condition capable of supporting a discernible streambed. Consequently, the only Riverine Area identified within the on-site study area during the December 2014 site visit is a minor roadside ditch identified as Drainage A, which extends into the off-site Ironwood Avenue right-of-way. Riverine indicators within the off-site study areas are therefore limited to Drainage Complex B, comprised of a mainstem drainage identified as Drainage B, and its tributaries identified as Drainages B1 through B5.

No riparian and/or hydrophytic vegetation communities were observed on the study area that would warrant the need for a formal wetland analysis, and no depressional features were observed. Therefore, no wetland or vernal pool resources were determined to occur within the project study area.

Drainage A and Drainage Complex B are considered to meet the MSHCP definition of Riverine Areas (rather than MSHCP Riparian Areas) since they are supported by ephemeral[5] flows and do not support riparian vegetation communities. The extent of Riverine Areas associated with Drainage A and Drainage Complex B are considered to be equivalent to the extent of CDFW jurisdiction. Riverine Areas associated with the two drainage systems are discussed in further detail in Section 5.1, *Assessment of Riparian/Riverine and Vernal Pool Resources*, below.

5 *Ephemeral drainages are streambeds that generally convey runoff during, and immediately after, a storm event.*

5.0
Assessment of Riparian/Riverine and Vernal Pool Resources

5.1 Assessment of Riparian/Riverine and Vernal Pool Features

Section 6.1.2, *Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools*, of the MSHCP provides for the protection of Riparian/Riverine Areas and Vernal Pools within the MSHCP Plan Area. Riparian/Riverine areas are defined in the MSHCP as "lands which contain habitat dominated by trees, shrubs, persistent emergents, or emergent mosses and lichens, which occur close to or which depend upon soil moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year." Vernal pools are defined in the MSHCP as "seasonal wetlands that occur in depression areas that have wetlands indicators of all three parameters (soils, vegetation, and hydrology) during the wetter portion of the growing season but normally lack wetlands indicators of hydrology and/or vegetation during the drier portion of the growing season."

As shown in **Figure 7**, *MSHCP Riverine Areas*, the study area supports 0.165 acre of Riverine Areas, including 0.59 acre in Drainage A (0.046 acre on-site and 0.013 acre off-site), 0.069 acre in off-site Drainage B, 0.001 acre in off-site Drainages B1, 0.001 acre in off-site Drainage B2, 0.001 acre in off-site Drainage B3, 0.001 acre in off-site Drainage B4, and 0.033 acre in off-site Drainage B5. This acreage is equivalent to the CDFW jurisdiction for these drainages. All drainages meet the definition of Riverine Areas since they are supported by ephemeral flows and do not support any vegetation that is dependent on hydrology from the drainages. The acreages of MSHCP Riverine Areas in Drainage A and Drainage Complex B are summarized in **Table 2**, *MSHCP Riverine Areas*. Other types of aquatic features that could provide suitable habitat for MSHCP vernal pool species, such as fairy shrimp, are not present within the study area (i.e. vernal pools, swales, vernal pool-like ephemeral ponds, seasonal ponds, stock ponds, or other human-modified depressions such as tire ruts, etc.). Photographs of the drainages are provided in **Figures 8a** and **8b,** *Drainage Photographs*. Detailed descriptions of Drainage A and Drainage Complex B are provided in sections 5.1.1 and 5.1.2 below.

TABLE 2
MSHCP RIVERINE AREAS[A]

Drainage (Study Area)	Length (ft)	Area (acres)	Riparian/Riverine Classification
A (On-Site)	285	0.046	Riverine
A (Off-Site)	111	0.013	Riverine
B (Off-Site)	306	0.069	Riverine
B1 (Off-Site)	0*	0.001	Riverine
B2 (Off-Site)	32	0.001	Riverine
B3 (Off-Site)	25	0.001	Riverine
B4 (Off-Site)	34	0.001	Riverine
B5 (Off-Site)	35	0.033	Riverine
Total	**828**	**0.165**	

NOTES:

** Less than one linear foot of jurisdiction occurs within Drainage B1 as the majority of the drainage within the off-site study area is associated with an existing corrugated metal pipe that was not quantified.*

Source: ESA PCR, 2014

5.1.1 Drainage A (MSHCP Riverine Area)

Drainage A is an unvegetated roadside ditch that establishes only when rain events generate sufficient runoff from Ironwood Avenue to erode a small channel through sandy disturbed soils. The ephemeral ditch enters the Ironwood Avenue Right-of-Way within the off-site study area then enters the on-site study area along the southern project boundary, extending for approximately 285 linear feet. The ditch then enters a corrugated metal pipe (CMP) beneath Ironwood Avenue, which is ultimately conveyed through the rural residential development to the south and into a water quality basin adjacent to SR-60. Drainage A measures approximately 3 feet in channel width and contains sandy loam soils that are periodically disturbed by weed abatement activities. A photograph of Drainage A is provided in Figure 8a.

Drainage A within the on and off-site study area supports a total of approximately 396 linear feet of ephemeral unvegetated roadside ditch, containing 0.46 acre of on-site and 0.013 acre of off-site CDFW jurisdictional streambed/MSHCP Riverine Areas totaling 0.059 acre.

5.1.2 Drainage Complex B (MSHCP Riverine Area)

Drainage B

Drainage B is an ephemeral sandy wash that originates off-site approximately 2 miles to the northwest along Reche Canyon Road. The drainage meanders along the road until it reaches the valley floor extending across Trust Way, crossing Kalmia Avenue, and then conveys runoff along the west side of Moreno Beach Drive for approximately a quarter-mile prior to crossing the off-site Water Line Alternative 1.

The drainage feature then extends south/southwest for another quarter-mile before entering a culvert beneath Ironwood Avenue and meandering for another quarter-mile prior to entering the off-site sewer line study area. Drainage B then continues for approximately 700 linear feet toward the southwest ultimately entering a detention basin located directly northeast of the Nason Street exit of SR-60. Drainage B within the off-site study areas ranges from approximately 4-10 feet in channel width and is entirely unvegetated. Soils within the wash are comprised of loamy sands of the Tujunga series consistent with the mapping by NRCS. Photographs of Drainage B are provided in Figure 8b.

Drainage B within the off-site sewer line and Water Line Alternative 1 total approximately 306 linear feet of unvegetated ephemeral sandy wash totaling approximately 0.069 acre of CDFW jurisdictional streambed/MSHCP Riverine Areas.

Drainages B1- B5

Drainages B1 through B5 are minor ephemeral drainages that with the exception of Drainage B5 (which appears to accept flow from a water tank bypass pipe) function to drain a very limited watershed west of the existing water district road that runs parallel to the eastern boundary of the study area. Drainage B5 appears to support flows from two small slope v-ditches as well as a pipe at its headwaters that appears to drain the existing water tank directly to the west, and was likely formed by controlled releases from the water tank structure. Otherwise, no natural watershed capable eroding such an incised drainage feature occurs upstream. Drainages B1 through B3 have small CMP culverts that convey limited runoff west of the water district road and support very weak indicators of flow and/or bed and bank. Drainage B4 does not support a pipe culvert rather a small pipe that drains surface flow from a small v-ditch directly west of the road. No discernible indicators associated with a streambed such as an ordinary high water mark, sediment deposition/sorting, debris wracks, or streambed associated vegetation were observed within Drainages B1-B4 immediately following the consecutive rain events of early December 2014. However, Drainages B1 through B4 do support topographic low points with banks typical of headwater swales. Drainage B5 was presumed to support Riverine Areas due to the presence of an ordinary high water mark, which ultimately became indiscernible after approximately 1,000 linear feet. Drainages B1 through B5 were all presumed to support CDFW jurisdictional streambed/MSHCP Riverine Areas.

Drainages B1 through B4 exhibit sparse upland scrub vegetation and ruderal grasses and are otherwise unvegetated. Drainage B5 supports a small patch of mule fat along approximately 15 linear feet of the headwaters directly downstream of the water tank pipe and mostly upland scrub vegetation beyond. Drainages B1 through B5 contain CDFW jurisdictional channel widths ranging from 0.5 to 3 feet, while Drainage B5 exhibits USACE jurisdiction averaging approximately 2 feet in channel width and a CDFW channel width approximately averaging 10 feet. Drainage Complex B drainage features all were observed to support sandy loam soils. Photographs of Drainage Complex B are provided in Figures 8a and 8b.

Drainage Complex B (Drainages B1 through B5) total approximately 0.037 acre of CDFW jurisdictional streambed/MSHCP Riverine Areas.

5.2 Assessment of Riparian/Riverine and Vernal Pool Plant and Wildlife Species

5.2.1 Riparian/Riverine Plant Species

A habitat assessment was conducted for species listed in Section 6.1.2, *Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools*, of the MSHCP. The results are presented in **Table 3**, *MSHCP Riparian/Riverine Plant Species*. Only one Riparian/Riverine plant species was determined to have a potential to occur on the study area, namely smooth tarplant (*Centromadia pungens* ssp. *laevis*). This species was considered to have a potential to occur only within the riverine habitat associated with the on- and off-site drainages; however, smooth tarplant was not observed during any of the focused plant surveys and therefore was concluded to be absent from the study area. The remaining MSHCP Riparian/Riverine plant species are not expected to occur within the study area due to the lack of suitable habitat or the location of the study area.

TABLE 3
MSHCP RIPARIAN/RIVERINE PLANT SPECIES

Species	Potential to Occur within the Study Area
Brand's phacelia *Phacelia stellaris*	Not expected to occur. This species has not been recorded in the Moreno Valley area. There is only one occurrence record in CNDDB within Riverside County, which was observed in 2000 in the City of Riverside near the Santa Ana River.
California Orcutt grass *Orcuttia californica*	Not expected to occur due to the lack of vernal pools.
Coulter's matilija poppy *Romneya coulteri*	Not expected to occur. This perennial plant has conspicuous flowers that would have been detected during the focused plant surveys if present.
Engelmann oak *Quercus engelmannii*	Not expected to occur. This is a conspicuous tree species that would have been detected during the focused plant surveys if present.
Fish's milkwort *Polygala cornuta* var. *fishiae*	Not expected to occur. The majority of occurrence records of this species on CNDDB are confined to the Santa Ana Mountains.
graceful tarplant *Holocarpha virgata* ssp. *Elongate*	Not expected to occur due to disturbance on-site. The study area is outside of the species' range; there are no known records of this species within the flatter agricultural areas east of the Santa Ana Mountains.
lemon lily *Lilium parryi*	Not expected to occur due to the lack of suitable habitat. Also, the study area is outside the species' range; this species is restricted to the San Jacinto Mountains. The study area is outside of species' elevation range.
Mojave tarplant *Deinandra mohavensis*	Not expected to occur. The study area is outside the species range; this species is restricted to the San Jacinto Mountains. The study area is outside of species' elevation range.
mud nama *Nama stenocarpum*	Not expected to occur due to the lack of wetlands. None were incidentally observed during any surveys (this species can occasionally occur in non-wetlands).
ocellated Humboldt lily *Lilium humboldtii* ssp. *Ocellatum*	Not expected to occur due to high disturbance within the drainages and lack of shade. This species is typically found at higher elevations.
Orcutt's brodiaea *Brodiaea orcuttii*	Not expected to occur due to the lack of vernal pools.

Species	Potential to Occur within the Study Area
Parish's meadowfoam *Limnanthes alba* ssp. *Parishii*	Not expected to occur due to the lack of suitable habitat. Also, the study area is outside the species' range; this species is restricted to the Santa Rosa Plateau within the MSHCP Plan Area. The study area is outside of this species' elevation range.
prostrate navarretia *Navarretia prostrata*	Not expected to occur due to the lack of suitable habitat. Also, the study area is outside the species' range; this species is restricted to the Santa Rosa Plateau within the MSHCP Plan Area. The study area does not support suitable vernal pool habitat.
San Diego button-celery *Eryngium aristulatum* var. *parishii*	Not expected to occur. The study area is outside the species' range; this species is restricted to the Santa Rosa Plateau within the MSHCP Plan Area. The study area does not support suitable vernal pool habitat.
San Jacinto Valley crownscale *Atriplex coronata* var. *notatior*	Not expected to occur due to the lack of suitable alkaline habitat.
San Miguel savory *Satureja chandleri*	Not expected to occur due to the lack of suitable metavolcanic substrate habitat.
Santa Ana River woollystar *Eriastrum densifolium* ssp. *sanctorum*	Not expected to occur due to lack of suitable habitat. The study area is outside the species range; this species is restricted to the Santa Ana River and alluvial fan sage scrub habitat.
slender-horned spineflower *Dodecahema leptoceras*	Not expected to occur due to the lack of alluvial fan habitat.
smooth tarplant *Centromadia pungens* ssp. *Laevis*	Potential, but not observed. This species was not observed during the focused plant surveys.
southern California black walnut *Juglans californica*	Not expected to occur. This is a conspicuous tree species that would have been detected if present.
spreading navarretia *Navarretia fossalis*	Not expected to occur due to the lack of vernal pools.
thread-leaved brodiaea *Brodiaea filifolia*	Not expected to occur due to the lack of vernal pools.
vernal barley *Hordeum intercedens*	Not expected to occur due to the lack of vernal pools.

Source: ESA PCR, 2016

5.2.2 Riparian/Riverine Wildlife Species

Habitat assessments were conducted for wildlife species listed in Section 6.1.2, *Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools*, of the MSHCP. The results are presented in **Table 4**, *MSHCP Riparian/Riverine Wildlife Species*. No riparian/riverine wildlife species are expected to occur on the study area due to the lack of suitable habitat.

TABLE 4
MSHCP RIPARIAN/RIVERINE WILDLIFE SPECIES

Species	Potential to Occur within the Study Area
arroyo toad *Anaxyrus californicus*	Not expected to occur due to the lack of suitable habitat (perennial streams).
mountain yellow-legged frog *Rana muscosa*	Not expected to occur due to the lack of suitable habitat (perennial streams).
California red-legged frog *Rana aurora draytonii*	Not expected to occur due to the lack of suitable habitat (perennial streams).
bald eagle *Haliaeetus leucocephalus*	Not expected to occur due to the lack of suitable habitat for foraging and nesting.
least Bell's vireo *Vireo bellii pusillus*	Not expected to occur due to the lack of suitable habitat for foraging and nesting.
American peregrine falcon *Falco peregrinus anatum*	Not expected to occur due to the lack of suitable habitat for foraging and nesting (cliffs overlooking open areas or large bodies of water).
southwestern willow flycatcher *Empidonax traillii extimus*	Not expected to occur due to the lack of suitable habitat for foraging and nesting.
western yellow-billed cuckoo *Coccyzus americanus occidentalis*	Not expected to occur due to the lack of suitable habitat for foraging and nesting; outside of the species range.
Santa Ana sucker *Catostomus santaanae*	Not expected to occur due to the lack of suitable habitat (perennial streams).
Riverside fairy shrimp *Streptocephalus woottoni*	Not expected to occur due to the lack of suitable habitat (vernal pools).
vernal pool fairy shrimp *Branchinecta lynchi*	Not expected to occur due to the lack of suitable habitat (vernal pools).
Santa Rosa Plateau fairy shrimp *Linderiella santarosae*	Not expected to occur due to the lack of suitable habitat (vernal pools).

Source: ESA PCR, 2016

5.3 Assessment of Riverine Ecological Processes

The MSHCP Riverine Areas located on the study area support 0.059 acre in Drainage A (0.046 acre on-site and 0.013 acre off-site), 0.069 acre in off-site Drainage B, 0.001 acre in off-site Drainages B1, 0.001 acre in off-site Drainage B2, 0.001 acre in off-site Drainage B3, 0.001 acre in off-site Drainage B4, and 0.033 acre in off-site Drainage B5. Based on the limited watersheds and ephemeral nature of these features, the drainages have a reduced capacity to provide functions, including flood storage, groundwater recharge, flood flow attenuation, velocity dissipation, nutrient and sediment transport and trapping, carbon transport, and toxicant trapping from the stormwater and nuisance urban runoff entering these features. The ephemeral water sources most likely do not provide a large contribution to the hydrology of the downstream watershed and associated habitats for Conserved Species, such as the San Jacinto River where the flows ultimately drain. Furthermore, Drainage A and Drainage Complex B provide limited to no habitat for wildlife species. Drainage A is within a disturbed area that supports little to no associated vegetation and is unlikely to facilitate wildlife movement. Drainage B is a USGS mapped blueline stream and supports some ruderal and non-native vegetation (e.g. giant reed

[*Arundo donax*]) with small patches of sparsely vegetated riverwash areas outside of the project study areas. The smaller tributaries (Drainages B1 through B5) are also ephemeral drainages with limited upland vegetation, which initiate at the peak of a nearby but small ridge. Due to the limited vegetation and watershed, the tributaries do not facilitate wildlife movement through the study area. Based on this assessment, the biological and hydrological functions and values of the MSHCP Riverine Area associated with Drainage A (on-site and off-site portions) and the off-site Drainage Complex B are low.

6.0
Unavoidable Impacts to Riparian/Riverine and Vernal Pool Areas

6.1 Direct Impacts

Direct impacts are considered to be those that involve the loss, modification or disturbance of natural habitats (i.e., vegetation or plant communities), which in turn, directly affect plant and wildlife species dependent on that habitat. Direct impacts also include the destruction of individual plants or wildlife, which is typically the case in species of low mobility (i.e., plants, amphibians, reptiles, and small mammals). The collective loss of individuals in these manners may also directly affect regional population numbers of a species or result in the physical isolation of populations thereby reducing genetic diversity and, hence, population stability.

As noted above, impacts (permanent and temporary) will be slightly reduced once the water line alternative is chosen. If the Alternative 1 Water Line is chosen, permanent and temporary direct impacts to Drainages B1 through B5 will be avoided. If Alternative 2 Water Line is chosen, permanent direct impacts to 0.007 acre and temporary direct impacts to 0.03 acre of Drainage B will be avoided.

6.1.1 Permanent Direct Impacts

As shown in **Figure 9**, *Impacts to Jurisdictional Features and MSHCP Riverine Areas*, and **Table 5**, *Existing and Proposed Impacts to MSHCP Riverine Areas*, the proposed project would result in permanent direct impacts to 0.059 acre of MSHCP Riverine Areas in Drainage A, including 0.046 acre of on-site MSHCP Riverine Areas and 0.013 acre of off-site MSHCP Riverine Areas. On and off-site impacts to the MSHCP Riverine Areas within Drainage A would occur to weedy species dominated by non-native species typical of ruderal areas. Drainage A does not support any MSHCP Riparian Areas. In addition, Drainage A does not support or have the potential to support any protected plant or wildlife species. The on-site impacts to Drainage A will occur as a result of grading activities and development of the site. The off-site impacts to Drainage A will occur as a result of road improvements proposed for Ironwood Avenue.

The proposed project would result in permanent direct impacts to 0.018 acre of MSHCP Riverine Areas off-site in the Drainage Complex B, including 0.011 acre permanent off-site impacts in Drainage B, <0.001 acre of permanent off-site impacts in Drainage B2, <0.001 acre of permanent off-site impacts in Drainage B3, <0.001 acre of permanent off-site impacts in Drainage B4 and 0.007 acre of permanent off-site impacts in Drainage B5.

TABLE 5
EXISTING AND PROPOSED IMPACTS TO MSHCP RIVERINE AREAS

Drainage	Existing (acres)	Permanent Impacts (acres)	Temporary Impacts (acres)
Drainage A (On-Site)	0.046	0.046	-
Drainage A (Off-Site)	0.013	0.013	-
Drainage B (Off-Site)	0.069	0.011	0.058
Drainage B1 (Off-Site)	0.001	0.000	0.001
Drainage B2 (Off-Site)	0.001	<0.001[b]	0.001
Drainage B3 (Off-Site)	0.001	<0.001[c]	0.001
Drainage B4 (Off-Site)	0.001	<0.001[d]	0.001
Drainage B5 (Off-Site)	0.033	0.007	0.026
Total	**0.165**	**0.077**	**0.088**

NOTES:
[a] MSHCP Riverine Areas are presumed equivalent to CDFW jurisdiction.
[b] Impacts are considered negligible; actual acreage of impacts to four decimal places is 0.0003 acre.
[c] Impacts are considered negligible; actual acreage of impacts to four decimal places is 0.0001 acre.
[d] Impacts are considered negligible; actual acreage of impacts to four decimal places is 0.0004 acre.

Source: ESA PCR, 2016.

No permanent or direct impacts are proposed on-site within the Drainage Complex B. Impacts to the MSHCP Riverine Areas within Drainage B would be limited to areas of low biological function and value as this drainage was found to be sparsely vegetated with non-native invasive vegetation comprised of patches of arundo within the study area. Impacts to MSHCP Riverine Areas within Drainage B1 through B4 would occur to mostly unvegetated areas with only sparse patches of upland vegetation and ruderal grasses. Impacts to MSHCP Riverine Areas within Drainage B5 would be limited to a small patch of approximately 15 linear foot strip of mule fat. None of the plant communities found within the Drainage Complex B are considered high quality habitats. Further, the mule fat within Drainage B5 is of low quality, lacks composition and structure and is non-contiguous with larger riparian systems off-site. In addition, Drainage Complex B does not support or have the potential to support any protected plant or animal species. The off-site impacts to Drainage Complex B will occur as a result of the proposed sewer line along Oliver Street and the proposed Alternatives 1 and 2 Water Lines to the north and east of the property. In summary, permanent direct impacts to MSHCP Riverine Areas (on-site and off-site) within Drainages A and B total 46.7 percent of the total 0.165 acre of MSHCP Riverine Areas on the study area.

This page intentionally blank.

6.1.2 Temporary Direct Impacts

As shown in Figure 9 and Table 5, temporary direct impacts are proposed to 0.088 acre of Riverine Areas off-site within the Drainage Complex B, including 0.058 acre of temporary direct off-site impacts in Drainage B, 0.001 acre of temporary direct off-site impacts in Drainage B1, 0.001 acre of temporary direct off-site impacts in Drainage B2, 0.001 acre of temporary direct off-site impacts in Drainage B3, 0.001 acre of temporary direct off-site impacts in Drainage B4 and 0.026 acre of temporary direct off-site impacts in Drainage B5. No temporary direct on-site impacts are proposed in Drainage Complex B. Further, no temporary direct on-site or off-site impacts are proposed in Drainage A. Temporary direct impacts to drainages within the study area are equivalent to the extent of impacts to CDFW streambed and total 53.3 percent of the total 0.165 acre of MSHCP RiverineAreas.

Similar to the proposed permanent direct off-site impacts to Drainage Complex B, the 0.088-acre of proposed temporary direct off-site impacts to the Drainage Complex B are associated with two types of impacts, including impacts associated with the proposed sewer line along Oliver Street and the proposed alternative water lines to the north and east of the property. Temporary direct impacts to vegetation within Drainage Complex B will be limited to sparse patches of upland vegetation and ruderal grasses as well as a small, low quality patch of mule fat within Drainage B5. Temporary impacts to the drainages will be returned to pre-project contours, which is described further in section 7.4, below.

6.2 Indirect Impacts

Indirect impacts are considered to be those that involve the effects of increases in ambient levels of sensory stimuli (e.g., noise, light), unnatural predators (e.g., domestic cats and other non-native animals), competitors (e.g., exotic plants, non-native animals), public use, and hydrology (hydrologic regime, flood storage, flood flow modification, nutrient retention and transformation, sediment trapping and transport, toxic trapping). Indirect impacts may be associated with the construction and/or eventual habitation/operation of a project; therefore, these impacts may be both short-term and long-term in their duration. These impacts are commonly referred to as “edge effects” and may result in changes in the behavioral patterns of wildlife and reduced wildlife diversity and abundance in habitats adjacent to study area. Measures to address potential indirect impacts are provided in section 7.2 of this report.

6.2.1 Permanent Indirect Impacts

Permanent indirect impacts include the effects of increases in ambient levels of sensory stimuli (e.g. noise, light), unnatural predators (e.g. domestic cats and other non-native animals), competitors (e.g. exotic plants, non-native animals), and trampling and unauthorized recreational use due to the increase in human population. Other permanent indirect effects may occur that are related to water quality and storm water management, including trash/debris, toxic materials, and dust. Permanent indirect impacts may be associated with the eventual habitation/operation of a project.

The potential for permanent indirect impacts from water quality and storm water management from the proposed development will be addressed through the project's design features, as outlined in sections 7.2 and 7.5 of this report.

6.2.2 Temporary Indirect Impacts

Temporary indirect impacts may be associated with the construction and eventual habitation/operation of a project; therefore, these impacts may be both short-term and long-term in their duration. Temporary indirect impacts may include increases in ambient levels of sensory stimuli (e.g. noise, light), dust, and trampling due to construction within the study area.

The potential for temporary indirect impacts from water quality and storm water management during construction of the development will be addressed through the project's design features, as outlined in sections 7.2 and 7.5 of this report.

7.0
Project Avoidance, Design Features, and Mitigation Measures

Impacts to MSHCP Riverine Areas were limited to the greatest extent feasible, as discussed in section 2.2 above and section 7.1 below. The design features and mitigation measures to compensate for unavoidable direct permanent impacts to these areas and indirect edge effects are discussed in this section under 7.2 and 7.3. The on-site mitigation approach discussed in this document is conceptual as the final design of the project is still in review for entitlement and any compensatory mitigation will ultimately be reviewed and approved as part of regulatory permits pursuant to Sections 404 and 401 of the Clean Water Act and Section 1602 of the California Fish & Game Code that will occur concurrently subsequent to the CEQA entitlement process. However, the mitigation ratios and mitigation types described in this section would not change and would be subject to a detailed Habitat Mitigation & Monitoring Plan (HMMP) in the event that the conceptual on-site mitigation described below is accepted by the resource agencies as part of future regulatory permitting and/or conditions of those permits. Therefore, the mitigation measures proposed in the project BRA and in this DBESP are written to allow for compensatory mitigation to be satisfied either on-site or off-site, in the event that more appropriate off-site mitigation is available and preferred by the resource agencies as part of subsequent DBESP approval and/or regulatory permitting by the resource agencies. This flexibility in the compensatory streambed mitigation approach has been developed for the project in light of the fact that some agencies such as the USACE have a preference for off-site mitigation credits over on-site mitigation, when available. Temporary impacts to the drainages will be returned to pre-project contours, which is also described in this section in 7.4 below.

7.1 Avoidance

Complete on-site and off-site avoidance 0.059 acre of the severely degraded roadside ditch associated with Drainage A is not feasible due to project-related water quality management requirements and the City required road improvements to Ironwood Avenue. However, on-site and off-site impacts to MSHCP Riverine Areas within Drainage A will only occur to a minimal area that was artificially created by the prior construction of Ironwood Avenue, totaling 0.046 acre on-site and 0.013 acre off-site permanent impacts. Flows within Drainage A establish only when rain events generate sufficient runoff from Ironwood Avenue to erode a small channel through sandy disturbed soils that are seasonally weed abated. Drainage A only exists because Ironwood Avenue does not contain curb-and-gutter facilities that would generally contain sheetflow from the road prior to discharge into off-site areas. Drainage A therefore collects this sheetflow for a short period of time after rain events and does not support vegetation which could potentially support sensitive wildlife species. As such, the functions and values of Drainage A are considered very low and have not historically existed. The project proposes to construct a water quality basin, where Drainage A occurs on-site, which would serve to treat project-related flows, providing a greater benefit to groundwater recharge and dissipation of flows prior to entering off-site streambed areas. Off-site, 0.013 acre of Drainage A located within the Ironwood Avenue would be impacted as a result of improvements to Ironwood Avenue within the road right-of-way. As a result, Drainage A will be rerouted from the location it enters the off-site areas underground and into a stormdrain that will continue to carry flows through the rural residential development to the south and into the water quality basin adjacent to SR-60. In summary, the Riverine functions and values of this drainage will not be lost as a result of the proposed project. This drainage will continue to function in its currently capacity by carrying flows downstream.

A majority of the impacts (0.088 acre) within Drainage Complex B will be temporary in nature and will be recontoured to pre-project conditions following construction. This will allow re-establishment of the channel and vegetation, which therefore provides long-term avoidance. This is equivalent to 53.3 percent of the total 0.165 acre of Riverine Areas on and off-site. Permanent direct off-site impacts to 0.018 acre of MSHCP Riverine Areas within Drainage Complex B have been limited to areas subject to City required infrastructure necessary for development of the study area (i.e., sewer line and Alternatives 1 and 2 Water Lines). Impacts associated with the Alternative 2 Water Line may not occur if it is determined that the Alternative 1 Water Line route is more feasible. Should this be the case, than the project will avoid an additional 0.007 acres of permanent impacts and 0.03 acre of temporary impacts associated with Drainages B1 through B5. As such, long-term avoidance of MSHCP Riverine Areas on and off-site would then be equivalent to 77.6 percent of the total 0.165 acre of Riverine Areas on and off-site.

7.2 Design Features

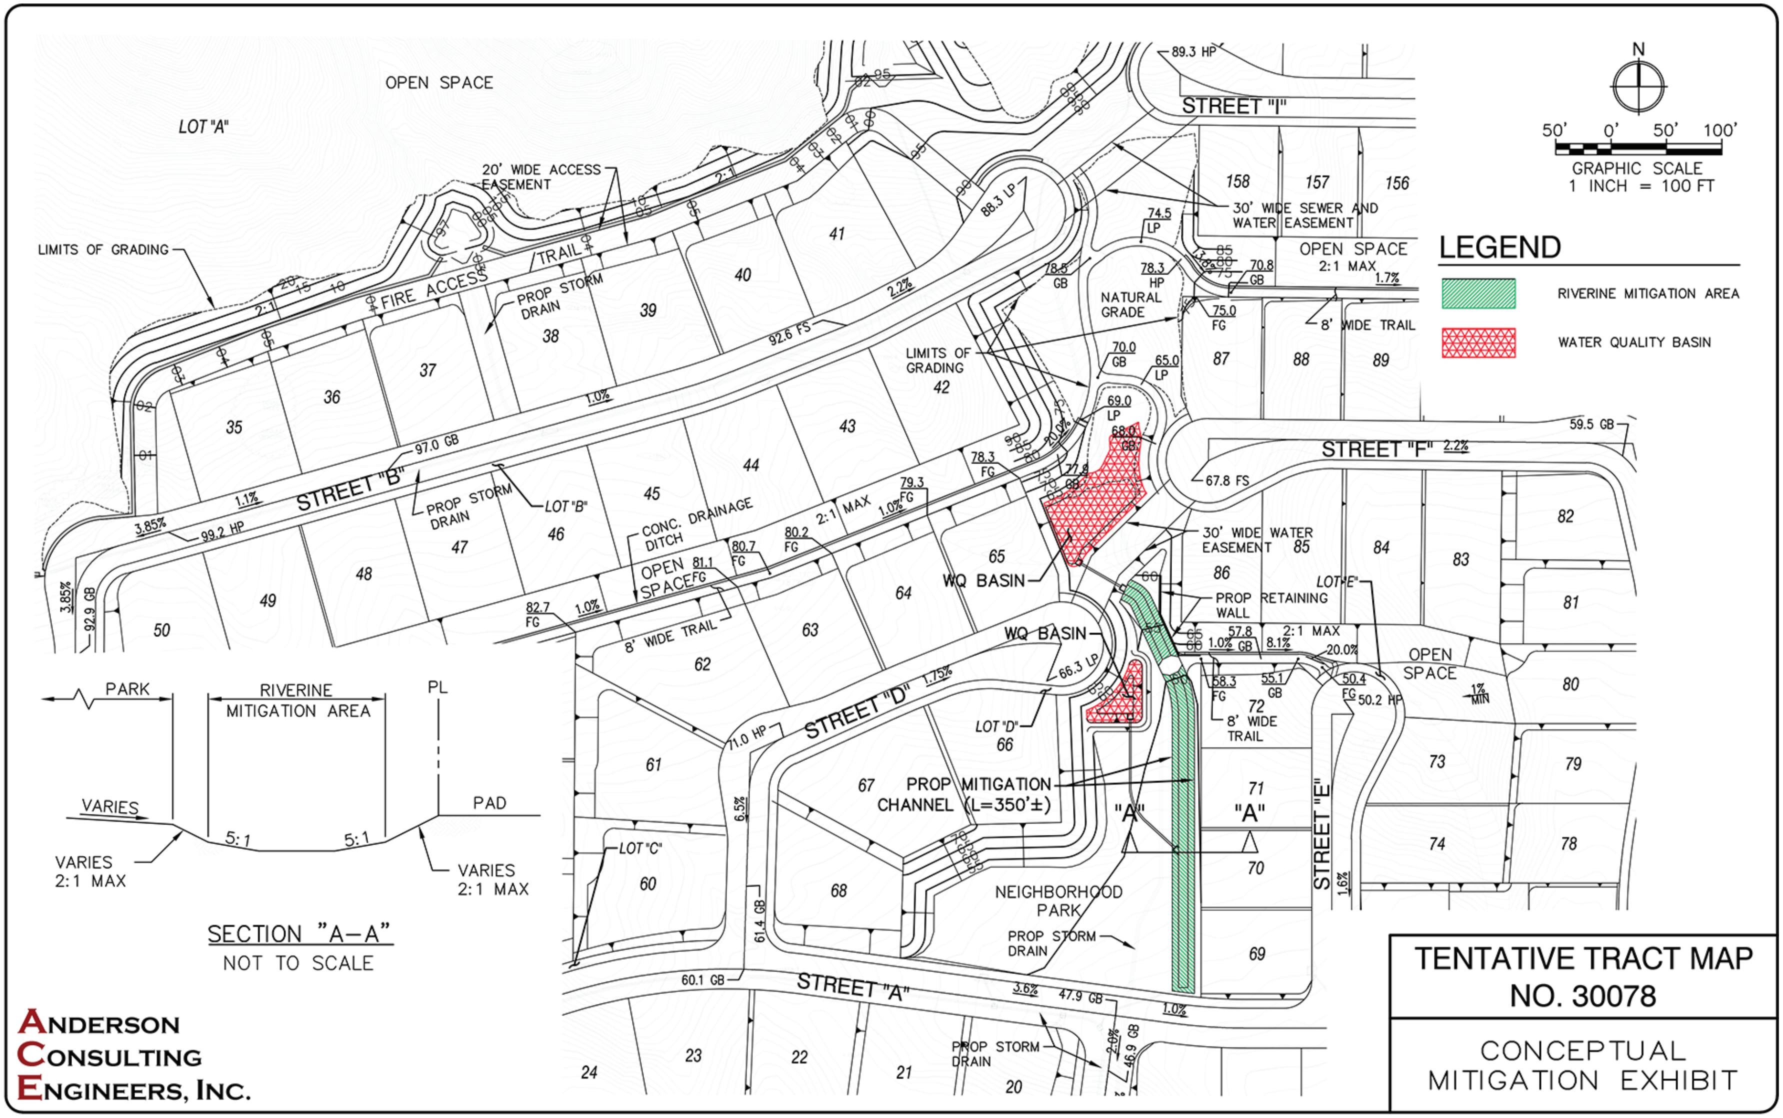
The project will be required to prepare a Water Quality Management Plan (WQMP) and Storm Water Pollution Prevention Plan (SWPPP) consistent with RWQCB, City of Moreno Valley, and County of Riverside requirements. These documents will outline measures and Best Management Practices (BMPs) to address water quality issues both during construction and post-construction, and to mitigate post-project flow rates to less than or equal to pre-project levels. Examples of measures and BMPs include minimizing urban runoff, minimizing the impervious footprint, constructing basins and swales, providing educational materials to residents, activity restrictions such as prohibiting dumping of oils, paint or masonry waste into streets and storm drains, requiring covered trash receptacles, and street sweeping. The Home Owner's Association (HOA) will be responsible for operations and maintenance of the post-construction BMPs. Detailed designs of the measures and BMPs, and operations and maintenance requirements including specific activities and checklists, will be provided during the final engineering.

7.3 Mitigation for Direct Impacts to MSHCP Riverine Areas

This DBESP proposes two (2) options for mitigation that will be determined as part of DBESP approvals and regulatory permitting, the processing of which is anticipated to occur somewhat concurrently to ensure only one mitigation option is ultimately required. Therefore, both on-site mitigation and off-site mitigation options are proposed in this DBESP in order to compensate for permanent impacts to MSHCP Riverine Areas (equivalent to CDFW jurisdictional areas) required to construct the project, in order to ensure that either on-site or off-site mitigation opportunities evaluated in this report are capable of providing biologically equivalent or superior preservation pursuant to requirements of the MSHCP. As such, compensatory mitigation for permanent impacts to Riverine Areas within the project study area is proposed at a minimum 2:1 ratio of mitigation-to-impacts. Maximum impacts to Riverine Areas may be as much as 0.07 acre, for a total of 0.14 acre of mitigation required depending on the which alternative water line is chosen. In addition, temporary impacts to as much as 0.088 acre of MSHCP Riverine Areas would be returned to pre-project conditions and revegetated with native species consistent with pre-project conditions, if any. The mitigation will be designed to provide habitat that is of higher quality than those Riverine areas impacted by the project. The proposed mitigation plan is shown on **Figure 10**, *Conceptual On-Site Mitigation*. The mitigation plan discussed in this document and shown on Figure 10 is conceptual as the final design of the project is still in review for entitlement. As such the mitigation plan could change slightly, if necessary, during final plan approval, including the mitigation configuration. However, the other components of the plan such as the goals, mitigation ratio and expected functional gains and success criteria described in this section would not change. The final configuration and specific details such as plant palettes and monitoring and management methods for the mitigation will be outlined in a Habitat Mitigation and Monitoring Plan (HMMP) that will be approved by the regulatory agencies during the processing of regulatory permits following adoption of the project Mitigated Negative Declaration.

7.3.1 Conceptual Mitigation Plan (On-Site Option vs. Off-Site Option)

Due to the uncertainty in the forthcoming regulatory permit application process, this DBESP is proposing both on-site and off-site mitigation options for impacts to MSHCP Riverine Areas (equivalent to CDFW jurisdictional areas) on the study area to demonstrate how either option will provide biologically equivalent or superior preservation pursuant to requirements of the MSHCP. The DBESP will also serve to support the Project's determination under the California Environmental Quality Act (CEQA), that impacts to jurisdictional areas are considered less than significant through the implementation of either mitigation option. The on-site mitigation option will include the creation or restoration of Riparian/Riverine habitat with upland transitional plant species. Currently, there are no agency approved mitigation banks or in-lieu fee programs available in the watershed to provide off-site compensatory mitigation.



SOURCE: Anderson Consulting Engineers, Inc., 2016

Ironwood Village Project

Figure 10
Conceptual On-Site Mitigation

ESA PCR

However, off-site mitigation opportunities do occur in adjacent watersheds subject to agency approval and may require higher mitigation ratios. Additional opportunities may arise in the future for off-site mitigation during forthcoming regulatory permit processing subject to agency approval. For example, potential opportunities could occur on lands owned by a local resource conservation district, the County of Riverside Regional Conservation Authority (RCA) or on alternate off-site lands as part of a collaborative group of developers. If approved by the regulatory agencies, off-site mitigation would provide more wide-reaching watershed benefits than on-site mitigation if part of a larger effort and/or within an area with greater habitat diversity, and would be preserved in perpetuity and managed by a pre-identified entity or entities. As such, on-site mitigation within a small ephemeral system provided by the permittee would be replaced by off-site mitigation within a larger drainage system in the watershed and pre-secured for in-perpetuity preservation and management by an agency-approved entity. Off-site mitigation is preferred by the USACE as it has been demonstrated to have a higher rate of success than on-site mitigation in general. Based on these reasons, off-site mitigation, if available in the future, may be preferred over the on-site option. On-site mitigation may also be deemed inadequate if the agencies require an increased mitigation ratio as part of the regulatory permitting process and are incapable meeting that ratio on-site, the agencies revise the regulatory requirements associated with on-site mitigation, or if USACE determine the mitigation is not consistent with their guidelines (known as the “Mitigation Rule”). The on-site mitigation would be proposed at a minimum 2:1 ratio for total impacts to acreage. If mitigated off-site, and within the Santa Ana Watershed mitigation is also proposed at a minimum 2:1 ratio. If mitigation cannot be established within the Santa Ana watershed, mitigation will be met at a 3:1 ratio.

Both the on-site and off-site mitigation opportunities would require regulatory agency approval during the permitting process discussed in the preceding paragraph. The intent is to provide the same mitigation to satisfy the requirements of the regulatory agencies and RCA, thus avoiding double-mitigating for impacts to the same streambed resources. The on-site and off-site mitigation would provide compensation for the loss of primarily unvegetated ephemeral habitat by enhancing habitat with riparian and/or riparian transition vegetation and removing non-native weeds. Details of the on-site mitigation (if implemented), including plant palette, monitoring term, and success criteria, will be included in a five-year HMMP prepared for the proposed Project during the permitting process with the USACE and RWQCB to obtain a Section 404 Nationwide Permit and a Section 401 Water Quality Certification under the Clean Water Act (CWA), respectively, and the CDFW to obtain a Streambed Alteration Agreement (SAA) under Section 1602 of the California Fish and Game Code. The off-site mitigation option would be part of a larger mitigation effort that would be implemented, monitored and maintained pursuant to an existing document prepared for the entire program. The expected functional gains and success of both the on-site and off-site mitigation options are discussed in section 7.3.2 below[6].

[6] Due to the uncertainty in the forthcoming regulatory permit application process, this DBESP is proposing both an on-site and off-site mitigation for impacts to MSHCP Riverine Areas (equivalent to CDFW jurisdictional areas) on the study area to demonstrate how either option will provide biologically equivalent or superior preservation pursuant to requirements of the MSHCP. The DBESP will also serve to support the Project’s determination under CEQA that impacts to jurisdictional areas are considered less than significant through the implementation of either mitigation option.

On-Site Mitigation Option

If the on-site mitigation is implemented, potential opportunities would include mitigating total permanent direct impacts to as much as 0.077 acre at a 2:1 ratio through the creation of habitat on-site (establishment). The mitigation area will be located within the northwestern section of the development area in the vicinity of two water quality basins and a neighborhood park as depicted on Figure 10. Establishment would occur by planting riparian/riverine habitat and transitional upland habitat within an open space area that will be constructed downstream from a water quality basin. The specific goals of the mitigation are as follows:

1. Restore the hydrological function of the study area as a result of permanent impacts to Drainages by creating a riparian/riverine and upland transitional habitat that functions to transport and filter water. The mitigation area will be supported by the increased flows as a result of treated run-off from the proposed development flows that will be discharged from a water quality basin north and west of the mitigation area.

2. Create riparian/riverine and upland transitional habitat with a diversity of native species appropriate for Riverine Areas in proximity to the site, in order to provide potential habitat for wildlife species, which is currently lacking on the study area. Native streambed vegetation proposed for planting would include species appropriate for the local area and the hydrology of the channel. Planting of additional species would increase the diversity of vegetation and provide higher quality habitat for wildlife species. In addition, the plant palette would include a range of herbaceous and shrub species planted as seed, cuttings, and/or container stock to provide vegetation structure that would further increase the wildlife value of the habitat.

3. Develop and monitor the mitigation area in accordance with a resource agency approved HMMP that will include qualitative and quantitative monitoring measures and specific success criteria goals.

4. Preserve the mitigation area in perpetuity through an appropriate legal preservation mechanism that will be approved by the regulatory agencies during the permitting process.

Off-Site Mitigation Option

The off-site mitigation would include establishment, restoration and/or enhancement[7] of habitat associated with existing drainages within the Santa Ana watershed or possibly within an adjacent watershed. Feasible off-site mitigation opportunities as close to the study area as possible would be selected and it should be noted that off-site mitigation outside of the Santa Ana watershed, if approved by the resource agencies, will require a higher mitigation ratio to adequately offset project impacts. It is expected that habitat enhancement would include removal of non-native weed species and planting with native riparian habitat, as appropriate. If off-site mitigation is proposed on land purchased for mitigation by the project, a HMMP will be prepared and provided to the regulatory agencies for review and approval. As mentioned above, proof of off-site

[7] Proposed off-site establishment, restoration, and/or enhancement follow the definitions provided by the Santa Ana RWQCB, which are also consistent with USACE definitions. Establishment creates an aquatic resource at a site where that resource was not historically present. Restoration is divided into two categories: re-establishment and rehabilitation. Re-establishment returns natural/historic functions to a site while rehabilitation improves multiple functions of a degraded site. Enhancement improves one or two functions of an existing aquatic resource.

mitigation purchase would be provided to the regulatory agencies for participation in an approved mitigation bank, in-lieu fee program, private bank, or off-site permittee responsible mitigation opportunities.

7.3.2 Summary of Mitigation Compensation

The proposed mitigation provides a 2:1 ratio of compensation to as much as 0.077 acre of permanent impacts to MSHCP Riverine Areas, for a total of 0.154 acre of riparian/riverine and upland transitional habitat creation. The final acreage of mitigation will be based on the total final impacts, which could be slightly less than 0.077 acre based on which Alternative Water Line is chosen. The drainages are considered of low function and value and are primarily unvegetated with the exception of a few patches of native and non-native invasive vegetation. The mitigation would provide compensation for impacts to limited function and values of the existing drainages at a net gain by improving the channel morphology through creation of a system with a more defined bed and bank, providing additional hydrology, eliminating the current disturbance that the drainages are subjected to, and creating habitat where none currently exists.

7.3.3 Expected Functional Gains of the Mitigation On-Site Mitigation

On-Site Mitigation

The on-site mitigation set forth in section 7.3.1 above will compensate for the loss of on and off-site MSHCP Riverine Areas on the study area. The on-site mitigation would result in higher function and value drainages than currently exist. The drainages proposed for impacts are considered low function and value in their current state due to the structure of the drainages, the limited hydrologic regime, and the lack of vegetation. Based on these factors, the drainages do not currently support any potential habitat for MSHCP Riparian/Riverine species. An increase in function and value as a result of the mitigation would be achieved through the creation of a streambed channel, creation of riparian habitat, and improving the hydrologic regime. Any planting would be designed to provide species diversity by planting additional species not currently known to occur on-site but that are known to occur in similar habitats in the vicinity; provide vegetation structure by planting herbaceous, shrub and tree species; and provide native cover, all of which do not currently exist in the drainages. Considering these factors, the following functional gains would be expected as a result of the mitigation:

1. Compensation for impacts to low quality disturbed drainages that are primarily unvegetated by replacing with riparian/riverine and transitional upland habitat that will provide biogeochemical and water quality functions.

The mitigation would include planting with appropriate native species for the area that are consistent with the expected hydrology for the drainages. The existing drainages proposed for impacts are highly disturbed and primarily unvegetated with only sparse patches of a few native and non-native species. The planting would be designed to provide native species diversity, vegetation structure, and native cover within the habitat utilizing the limited native species observed on-site and other similar habitats in the area. As such, the proposed replacement of disturbed drainages with riparian/riverine and transitional upland habitat would improve water quality and provide biogeochemical functions within the watershed. Specifically, the vegetation will result in increased trapping of sediment, and the microbial action in the root zone of plants removes toxins, nitrogen, and other nutrients from the runoff, thereby improving water quality and helping to reduce the impacts of non-point source pollution (Schaefer and Brown, 1992) through natural filtering of pollutants (bio-filtration effects). Heterotrophic microorganisms, which thrive in riparian areas, are also responsible for converting detritus from leaf litter and other dead organic matter into consumable organic matter. This organic material forms the base for the riparian food chain and, within the drainages, can be released downstream as dissolved organic matter (Gregory, et al., 1991; Schaefer and Brown, 1992). Knight and Bottorff (1984) reported that up to 1000g/m2/yr of detritus are processed by aquatic macrophytes in riparian zones and this provides a food chain base for these ecosystems, promoting their biodiversity. Improvement of water quality and biogeochemical functions will take place as these nutrients pass through the drainages and are transformed or sequestered into the plant tissue. In addition, the deposition of fine and coarse woody debris will provide important habitat for amphibians, reptiles, and other wildlife.

2. Compensation for impacts to low quality disturbed drainages that are primarily unvegetated by replacing with native riparian/riverine and transitional upland habitat that will provide hydrologic functions.

The disturbed drainage channels will be replaced with a defined drainage channel that is vegetated with native species. This will provide improved energy dissipation and storage during storm events. In addition, the drainage will be supported by existing hydrology and flows from the development post-construction, resulting in an increase in hydrologic input to support the vegetation. Increasing plant cover also stabilizes soil to deter channel and habitat degradation by storm flows. Interception and retention of storm flows by vegetation regulates sharp run-off peaks and slows discharges over a longer time period to avoid erosional issues and may also contribute to groundwater recharge.

3. Compensation for impacts to low quality disturbed drainages that are primarily unvegetated by replacing with defined drainage channels vegetated with native riparian habitat that will provide biological functions.

The planting of native vegetation will provide potential habitat for wildlife that utilize drainage areas, which does not occur under current conditions. The planting will provide a diversity of plant species with structural and spatial diversity to encourage wildlife species to utilize the habitat for foraging, cover and/or breeding.

Off-Site Mitigation

The off-site mitigation set forth in section 7.3.1 above will compensate for the loss of primarily ruderal and ephemeral habitat within the study area. Although a site-specific analysis of off-site mitigation cannot be completed at present since the resource agencies have yet to determine what they will accept as compensatory mitigation for the project, the mitigation would be expected to include the creation, restoration, and/or enhancement of a drainage with native species, likely within a larger drainage system than supported on the study area. The off-site mitigation would result in a higher function and value than the primarily ruderal and ephemeral habitat currently on the study area, which is consistent with the proposed on-site mitigation option. However, the off-site mitigation also has a potential to provide higher function and value than the on-site mitigation from a regional benefit perspective. For example if new drainage habitat was created, the mitigation was part of a larger drainage system, and/or the mitigation was part of a wider-reaching mitigation effort. Considering these factors, the following functional gains would be expected:

1. Compensation for impacts to the primarily ruderal and ephemeral habitat with native vegetated habitat will provide biogeochemical and water quality functions.

The off-site mitigation would be expected to include removal of non-native species and planting with natives, as appropriate. The impacted drainages on the study area currently support vegetation that is primarily non-native. As such, the proposed native vegetation would provide water quality and biogeochemical functions consistent with the on-site mitigation option described above. In addition, improving these functions within a larger drainage system and/or as part of a wider-reaching mitigation effort would have the potential to provide a more regional collective benefit to the watershed.

2. Compensation for impacts to the primarily ruderal and ephemeral habitat with native vegetated habitat will provide hydrologic functions.

Native vegetation will provide energy dissipation and storage during storm events that is currently not provided on the study area. Increasing plant cover also stabilizes soil to deter channel and habitat degradation by storm flows. The improvement of these functions is consistent with the on-site mitigation option described above. In addition, improving these functions within a larger drainage system and/or as part of a wider-reaching mitigation effort would have the potential to provide a more collective benefit to the watershed.

3. Compensation for impacts to the primarily ruderal and ephemeral habitat with native vegetated habitat will provide biological functions.

Native vegetation will increase potential wildlife habitat by providing more diversity of plant species, forage and cover for wildlife, consistent with the on-site mitigation option described above. In addition, improving these functions within a larger drainage system and/or as part of a wider-reaching mitigation effort would have the potential to provide a more collective benefit to the watershed.

7.3.4 Success Criteria for the Mitigation

In addition to compensating for streambed loss, the mitigation will provide native plant cover for wildlife habitat and to stabilize the drainage system. The success criteria below will be incorporated into a final HMMP for the on-site mitigation following approval by the regulatory agencies.

1. The habitat mitigation will contribute to regional biodiversity in perpetuity.

The proposed mitigation will include the goal of creating a drainage channel with improved morphology, a native species plant cover, and hydrology provided by existing flows and treated flows from the development. This will create habitat for wildlife populations within the mitigation and general area to ensure a more diverse habitat structure and stable watershed, and also improve the hydrologic conditions both on-site and downstream of the study area. The on-site mitigation is proposed for conservation in perpetuity pursuant to a conservation easement, deed restriction, restrictive covenant, or other appropriate legal mechanism as approved by the regulatory agencies.

2. The habitat mitigation will be self-sustaining and will not require supplemental watering or outside input for recruitment and propagation of plant species.

A HMMP will be prepared for the on-site mitigation and will include a number of specific interim and ultimate success criteria over a five-year program that would require the site to then be self-sustaining. Typically mitigation sites are required to demonstrate survival without irrigation for a minimum of two years before the regulatory agencies will deem the mitigation complete.

3. The entire range of biological components, processes, and interactions will be present in each community.

As discussed above, success criteria will be developed as part of the HMMP that will include criteria related to habitat structural diversity, habitat coverage and spatial diversity, percent of non-native vegetation, and hydrologic regime, and will allow for monitoring of the expected range of biological components, processes and interactions within the mitigation area.

4. Natural processes of ecological succession will be allowed to occur.

The success criteria and/or goals in the HMMP will ensure the long-term survivability of the habitats created, including self-sustaining habitat that will follow natural ecological succession including processes such as nutrient cycling.

Off-Site Mitigation

In addition to compensating for streambed loss, the off-site mitigation will provide increased native plant cover for wildlife habitat and to stabilize the drainage system, consistent with the on-site mitigation option described above. For banks or in-lieu fee programs it is expected that the success criteria below are already incorporated into a restoration plan prepared for the entire effort. However, if lands are secured for off-site mitigation, these success criteria will be incorporated into a final HMMP to ensure long-term success of the mitigation.

1. The mitigation will contribute to regional biodiversity in perpetuity.

The proposed mitigation will include the goal of increasing native plant cover and removing non-native weeds. This will create habitat for wildlife populations within the mitigation site and general area to ensure a more diverse habitat structure and stable watershed. Off-site mitigation within an approved mitigation bank, private bank, or in-lieu free program will be part of a larger mitigation effort benefitting the regional watershed that is preserved in perpetuity typically through an existing preservation mechanism. For off-site land purchased for preservation, a preservation mechanism will be established to ensure in-perpetuity conservation of the mitigation.

2. The habitat mitigation will be self-sustaining and will not require supplemental watering or outside input for recruitment and propagation of plant species.

For off-site mitigation on acquired lands, a HMMP will be prepared and will include a number of specific interim and ultimate success criteria over a five-year program that would require the site to be self-sustaining, consistent with the on-site mitigation option described above. It is expected that agency approved mitigation banks, in-lieu fee programs, and private banks would have existing success criteria outlined in a plan prepared as part of the larger mitigation effort. The plan is expected to include criteria for demonstrating the mitigation is self-sustaining, which is typical for mitigation plans.

3. The entire range of biological components, processes, and interactions will be present in each community.

As discussed above, success criteria will be developed as part of the HMMP or are anticipated to be part of existing plans for approved mitigation banks, in-lieu fee programs, and private banks. These will, or are expected to, include criteria related to habitat structural diversity, habitat coverage and spatial diversity, percent of non-native vegetation, and hydrologic regime, and will allow for monitoring of the expected range of biological components, processes and interactions within the mitigation site.

4. Natural processes of ecological succession will be allowed to occur.

The success criteria and/or goals in the HMMP or existing plans will ensure the long-term survivability of the habitats created, including self-sustaining habitat that will follow natural ecological succession including processes such as nutrient cycling.

7.4 Returning Temporary Impact Areas to Pre-project Contours

A total of 0.088 acre of Drainage Complex B is proposed for temporary impacts to allow for construction of the sewer and water line. Consistent with the definition of "temporary impacts" recognized by the resource agencies, temporarily impacted drainages will be returned to pre-project contours and revegetated where appropriate.

7.5 Project Design Features and Mitigation Measures to Address Edge Effects

Section 6.1.4, *Guidelines Pertaining to the Urban/Wildlands Interface*, of the MSHCP presents a number of guidelines that are intended to address indirect effects associated with locating developments in proximity to a MSHCP Conservation Area. These guidelines address the quantity and quality of any runoff generated by the development, night lighting, noise, and domestic predators. The study area is not within or adjacent to any Criteria Cells and, as such, development of these areas is not expected to result in indirect effects to MSHCP Conservation Areas related to night lighting, noise, and grading/land development. However, runoff from the study area has the potential to affect the quantity and quality of water downstream to MSHCP Conservation Areas within the watershed, in addition to transporting non-native plant seeds. Furthermore, the study area supports MSHCP Riverine Areas up and down stream of Drainage Complex B. Although mitigation is proposed for temporary impacts to recontour the areas back to pre-project conditions, allowing for re-establishment of the channel and vegetation, the project has a potential to indirectly effect up and downstream areas during and following construction. Project design features are proposed that will address indirect impacts of the proposed project and to minimize edge effects beyond the limits of grading at the urban/wildlands interface, consistent with Section 6.1.4 of the MSHCP.

Drainage (Urban and Storm Water Runoff): The project will be required to comply with flood and water quality standards, including preparation of a WQMP and SWPPP as outlined in section 7.2 above. As such, no indirect effects from the quantity and quality of run-off will occur to the avoided MSHCP Riverine Areas or mitigation area, or to any downstream MSHCP Conservation Areas. The project will be required to maintain flows, treat the water, maintain water quality, and address flood control/erosion pursuant to RWQCB and County of Riverside standards. Examples of measures and BMPs that may be required include the construction of water quality basins, the implementation of street sweeping and waste management, dust-control measures during construction, and providing education materials to inform the residents on water quality issues. Thus all water leaving the development will be treated and will be discharged at rates that will prevent downstream erosion, and the frequency of storm events discharging to the drainages will not be affected. This is expected to allow the continued survival of the habitat. These measures will avoid any indirect effects from the development drainage in MSHCP Riverine Areas on and off-site (including the mitigation area) and in downstream MSHCP Conservation Areas as a result of the proposed project.

Toxic Material: Construction of the proposed project will incorporate erosion control measures (e.g., sand bags and/or straw wattles as appropriate) around the perimeter of the work area to ensure all water leaving the site is filtered and an increase in siltation does not occur. In addition, for the long-term operation of the Project, the measures and BMPs outlined in the WQMP and SWPPP will treat project-generated flows and remove pollutants (see above and also section 7.2 of this report). These measures will avoid any indirect effects from toxic materials to avoided MSHCP Riverine Areas on-site (including the mitigation area) and to downstream MSHCP Conservation Areas as a result of the proposed project.

Trash/Debris: The project will be required to minimize and address the amount of trash/debris created by the development, and avoid trash/debris from entering downstream areas. These may include activity restrictions placed on the occupants, the distribution of educational materials, street sweeping and waste management, and will be outlined in the project's WQMP and SWPPP. These measures will avoid any indirect effects from trash/debris to nearby MSHCP Riverine Areas located off-site and/or to downstream MSHCP Conservation Areas as a result of the proposed project.

Lighting: The project has been designed to minimize night lighting while remaining compliant with City ordinances related to street lighting. All lighting will be directed away from off-site MSHCP Riverine Areas and/or mitigation areas both during construction and post-construction. As such, no effects from lighting are anticipated to these areas.

Noise: The proposed use of the site for residential development is not anticipated to result in noise-generating activities apart from increased traffic noise. The project will comply with all City requirements pertaining to noise and traffic standards.

Invasives: No invasive, non-native plant species listed in Table 6-2 of the MSHCP, Plants That Should Be Avoided Adjacent To The MSHCP Conservation Area, will be utilized in the landscape plans. This will avoid dispersal of invasive plant seeds in the watershed.

Barriers: The MSHCP requires the incorporation of barriers, such as native landscaping, rocks/boulders, fencing, walls, and/or signage, for proposed land uses adjacent to preservation areas to minimize unauthorized public access, trampling, introduction of urban wildlife, and/or illegal dumping within the preservation areas. The proposed project is not located adjacent to any preservation areas, but is located adjacent to MSHCP Riverine Areas and associated mitigation. The project will include fences and/or walls around the entire development, including adjacent to the MSHCP Riverine Areas.

Grading/Land Development and/or Fuel Modification Activities: Manufactured slopes are contained within the study area identified and do not extend beyond the limits analyzed in this report or into any proposed avoidance and mitigation areas. Brush management, as well as all ground disturbing activities associated with construction and operation of the project development, will also be contained within the project's impact footprint and shall not encroach into the avoided areas in accordance with Section 6.4 of the MSHCP. Off-site impacts are limited to manufactured slope areas, road improvements, sewer line extension, and water line extensions and will be mitigated as described in this document.

The Fuels Management guidelines presented in Section 6.4 of the MSHCP are intended to address brush management activities around new development within or adjacent to the MSHCP Conservation Area. Fuel modification has been incorporated into the project design and does not extend into off-site or into the proposed mitigation area.

7.6 Measures to Address MSHCP Riparian/Riverine Species

The project proposes the following mitigation measure (MM) to ensure compliance with the Migratory Bird Treaty Act. Conditions of Approval (COAs) recommended to the City of Moreno Valley as part of the project CEQA document are also proposed to address compliance with regulatory permitting of impacts to jurisdictional areas (all of which are also considered MSHCP Riverine Areas) and compliance with the MSHCP. The MM and COAs are provided in the BRA (section 7.2 in Appendix A) and are also included verbatim below. The on-site and off-site mitigation proposed in this DBESP would be considered to provide compensation for impacts to jurisdictional drainages pursuant to COA BIO-2, in addition to MSHCP Riverine Areas pursuant to COA BIO-3.

MM BIO-3 Prior to the issuance of any grading permit that would remove potentially suitable nesting habitat for raptors or songbirds, the project applicant shall demonstrate to the satisfaction of the City that either of the following have been or will be accomplished:

1. Vegetation removal activities shall be scheduled outside the nesting season (September 1 to February 14 for songbirds; September 1 to January 14 for raptors) to avoid potential impacts to nesting birds.

2. Any construction activities that occur during the nesting season (February 15 to August 31 for songbirds; January 15 to August 31 for raptors) will require that all suitable habitat be thoroughly surveyed for the presence of nesting birds by a qualified biologist before commencement of clearing. If any active nests are detected a buffer of 300 feet (500 feet for raptors) around the nest adjacent to construction will be delineated, flagged, and avoided until the nesting cycle is complete. The buffer may be modified and/or other recommendations proposed as determined appropriate by the biological monitor to minimize impacts.

COA BIO-2 Prior to the issuance of any grading permit for permanent impacts in the areas designated as jurisdictional features, the project applicant shall obtain regulatory permits from the USACE, RWQCB, and CDFW. The following shall be incorporated into the permitting, subject to approval by the regulatory agencies:

1. On-site or off-site creation, restoration and/or enhancement of USACE/RWQCB jurisdictional "waters of the U.S." within the Santa Ana watershed at a ratio no less than 2:1 or within an adjacent watershed at a ratio no less than 3:1 for permanent impacts, and for any temporary impacts to restore the impact area to pre-project conditions (i.e. pre-project contours). Off-site mitigation may occur on land acquired for the purpose of in-perpetuity preservation as approved by the resource agencies, or through the purchase of mitigation credits at a resource agency-approved off-site mitigation bank or in-lieu fee program.

2. On-site or off-site creation, restoration, and/or enhancement of CDFW jurisdictional streambed within the Santa Ana watershed at a ratio no less than 2:1 or within an adjacent watershed at a ratio no less than 3:1 for permanent impacts, and for any temporary impacts to restore the impact area to pre-project conditions (i.e. pre-project contours). Off-site mitigation may occur on land acquired for the purpose of in-perpetuity preservation as approved by the resource agencies, or through the purchase of mitigation credits at a resource agency-approved off-site mitigation bank or in-lieu fee program.

Purchase of any mitigation credits through an agency-approved mitigation bank or in-lieu fee program should occur prior to any impacts to jurisdictional drainages. Any mitigation proposed on land acquired for the purpose of in-perpetuity mitigation that is not part of an agency-approved mitigation bank or in-lieu fee program shall include the creation, restoration, and/or enhancement of similar streambed habitat pursuant to a resource agency-approved HMMP. The HMMP shall be prepared prior to any impacts to jurisdictional features, and shall provide details as to the implementation of the mitigation, maintenance, and future monitoring of mitigation areas. The goal of the mitigation shall be to create, restore, and/or enhance similar habitat with equal or greater function and value than the impacted habitat.

COA BIO-3 Prior to the issuance of any grading permit the project applicant shall comply with all of the provisions of the MSHCP, including payment of the MSHCP Local Development Mitigation Fee, compliance with Section 6.1.2 of the MSHCP pertaining to Riparian/Riverine Areas, implementation of drainage, toxics and non-native species guidelines pertaining to the Urban/Wildlands Interface in Section 6.1.4 of the MSHCP, and compliance with Section 6.3.2 of the MSHCP pertaining to Burrowing Owl Survey Area requirements.

8.0

Determination of Biologically Equivalent or Superior Preservation

Section 6.1.2 of the MSHCP, Volume I, Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools, is intended to ensure protection of Riparian/Riverine Areas within the entire MSHCP Plan Area such that habitat values are preserved for those species within the MSHCP Conservation Area. The project site and off-site areas support disturbed Riverine areas that do not support any sensitive species listed in Section 6.1.2 of the MSHCP.

The proposed project, inclusive of all project design features and mitigation measures, is biologically superior to an avoidance alternative by replacing low function and value disturbed MSHCP Riverine Areas with a higher function and value riparian habitat typical of similar drainage systems in the local area, and by avoiding any potential impacts to downstream areas through implementation of measures to address water quality and dispersal of non-native seeds downstream. A summary of this statement is provided below based on the analysis in this report, and further assessed in Sections 8.1 through 8.3.

- The proposed permanent impacts are limited to a maximum of 0.077 acre of the total 0.165 acre of MSHCP Riverine Areas both on-site and off-site. The majority of these impacts are due to City required infrastructure and road improvements, with a small acreage of impacts required for a water quality basin associated with Drainage A. The MSHCP Riverine Areas proposed for impacts have a low function and value due to ongoing disturbance and the absence of vegetation and/or signs of hydrology for most of the year.

- The remaining 0.088-acre of the total 0.165 acre of MSHCP Riverine Areas will be temporarily impacted to allow construction of City required infrastructure and road improvements off-site.

- The proposed mitigation for impacts is at a 2:1 ratio for total permanent impacts which could be as high as 0.154 acre. This will include riparian/riverine and transitional upland habitat creation that will provide higher function and value habitat than the existing condition by creating habitat with native species coverage that also provides consistent hydrology through existing flows and treated discharge from the development. As a result, the impacts to low function and value drainages will be compensated by providing a net gain in acreage and functions and values, including habitat that currently does not exist. The net increase in native habitat acreage would provide improved functions such as water quality, water storage and wildlife habitat. Temporary impacts will be returned to pre-project contours consistent with the resource agencies definition of temporary impacts.

- If on-site mitigation occurs, it will be conserved in perpetuity through a conservation easement, deed restriction, restrictive covenant, or other appropriate legal mechanism as approved by the regulatory agencies. Preservation will ensure protection of MSHCP Riverine

Areas as intended pursuant to Volume I, Section 6.1.2 of the MSHCP, *Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools*. The preserved mitigation area is proposed to occur within dedicated open space. Currently the on-site drainages are unprotected and are largely non-existent due to disturbance.

- The success of the mitigation would be ensured through an approved project-specific HMMP that will be prepared and submitted to the USACE, RWQCB, and CDFW for review and/or approval as part of the regulatory permitting process. The mitigation would be monitored regularly pursuant to a five-year program, and analyzed against a number of interim and target success criteria. The success criteria will ensure that the mitigation efforts are successful.

- The project is not located within or adjacent to any MSHCP Conservation Areas but will avoid indirect impacts to the on-site mitigation area and any protected areas downstream through measures that will be proposed in the WQMP and SWPPP to manage daily nuisance flows and initial first flush storm flows generated by the development. As such, the water discharged downstream will be treated for both sediment and pollutants. Also, current flow rates to downstream areas will be maintained to prevent erosion, but the overall volume of water discharged downstream will increase providing at minimum sufficient hydrology to maintain and even increase downstream habitats. The native plant species coverage in the mitigation area is also expected to provide biofiltration and water quality benefits for the watershed system.

- A number of additional project design features have been incorporated to address edge effects (i.e., indirect impacts) such as noise, lighting, and non-native invasive species.

8.1 Effects on Riparian/Riverine Planning Species

- The study area is within the Burrowing Owl Survey Area and Riverine resources were found on-site. As such, focused surveys for burrowing owl were conducted due to the presence of potentially suitable habitat for this species within the study area. Habitat assessments were also conducted for the Riparian/Riverine planning species listed under Section 6.1.2 of the MSHCP. The results of the burrowing owl focused surveys were negative, and pre-construction surveys will be conducted to confirm continued absence. For the Riparian/Riverine species, suitable habitat was determined present on the study area for one Riparian/Riverine planning species, smooth tarplant. However, smooth tarplant was not observed during any of the focused plant surveys and therefore was concluded to be absent from the study area. As such, no significant effects on Riparian/Riverine planning species (or burrowing owl) are expected to occur as a result of the Project.

- The proposed mitigation (on-site and off-site) will include riparian/riverine and transitional upland habitat creation and planting with native riparian/riparian-transition habitat, as appropriate, at a minimum 2:1 ratio to total impacts. This will increase the acreage of native habitat and replace non-native habitats with riparian/riparian-transition habitat that has increased spatial, structural and species diversity to encourage wildlife use. The mitigation will also improve water quality and hydrology functions. As such, the proposed mitigation will improve the quality of the habitat for wildlife species and provide potential habitat for Riparian/Riverine planning species.

- The improved quality of water and expected increase in volume of water due to impervious surfaces and additional input (e.g., from irrigation; the flow rate will not increase), would be beneficial to the on-site mitigation and areas downstream of the project for supporting any existing wildlife habitat and potentially allowing additional habitat to establish.

8.2 Effects on Conserved Habitats

- The proposed project impacts low function and value MSHCP Riverine areas that are subject to on-going disturbance. The mitigation would improve the function and value of the hydrology in the area by creating structure, hydrology, and vegetation in the created riparian channel. As such, the project impacts would be compensated by a net gain of streambed acreage and of biogeochemical, hydrologic and habitat functions to benefit MSHCP conserved habitats. The on-site mitigation area will be within dedicated open space lots. In addition, the mitigation area would be protected in perpetuity through a conservation easement, deed restriction, restrictive covenant, or other appropriate legal mechanism as approved by the regulatory agencies. The mitigation would therefore contribute to the acreage of conserved habitats within the MSHCP.

- The proposed project would contribute higher function and value habitat to be conserved within the MSHCP. The MSHCP Riverine Areas proposed for impacts are primarily unvegetated due to ongoing disturbance, and therefore lacks native species cover to provide appropriate habitat features for the Riparian/Riverine wildlife species listed under Section 6.1.2 of the MSHCP. The main function of the drainages in their current condition is conveyance of flows during large storm events, with limited ecological functions (i.e., limited sediment transport, transport of nutrients and aquatic chemicals to downstream waters, seasonal flood storage, flood flow attenuation, toxicant trapping, and velocity dissipation). The proposed mitigation would provide these ecological functions through the creation of a riparian channel, hydrology from existing and treated development flows, and planting of native species that would occur pursuant to an agency approved HMMP. The mitigation would be designed to provide wildlife habitat that could potentially support species listed in Section 6.1.2 of the MSHCP. Furthermore, the mitigation would allow for greater nutrient and toxicant trapping, which would be beneficial to downstream water quality. The on-site mitigation is within a dedicated open space area, and the mitigation area itself will be protected in perpetuity through an appropriate and approved legal mechanism, as described in the preceding bullet.

8.3 Effects on Linkages and Functions of the MSHCP Conservation Area

- The project site and off-site areas are not located within or adjacent to any MSHCP Cores, Linkages or Conservation Areas, and measures have been incorporated into the project design to avoid potential indirect edge effects to such areas through drainage, including maintaining the flows and improving water quality to downstream areas. As such, the project would not impact the functions of any MSHCP Cores, Linkages or Conservation Areas.

- The proposed project impacts low function and value Riverine Areas subject to ongoing disturbance that would be replaced with a net gain of higher function and value riparian habitat by the proposed mitigation that will be preserved in perpetuity.

- The project's WQMP and SWPPP will ensure that water quality standards are met. The flow rate will be similar to existing conditions; however the volume of water will increase which will be beneficial to the on-site mitigation and downstream areas by providing increased hydrology to support wildlife habitat functions. In addition, measures proposed in these documents will protect against flooding, prevent downstream erosion, and improve water quality by filtering pollutants from previously untreated flows. Thus, all water leaving the study area will be of a higher quality compared to existing site conditions. The mitigation is also expected to provide additional biofiltration functions through the planting of native vegetation. As such, both the project development and mitigation would improve the overall water quality of flows downstream and within MSHCP Conservation Areas, and potentially provide habitat for MSHCP planning species, making this a superior alternative to the existing disturbed conditions.

1.0 INTRODUCTION

1.1 Background and Purpose

This report presents the findings of a Biological Resources Assessment & Western Riverside County Multiple Species Habitat Conservation Plan Consistency Analysis conducted by **ESA PCR** for the approximately 78.48-acre project site proposed for development of a single-family residential development associated with Assessor's Parcel Number (APN) 473-160-004 and approximately 10.57-acre off-site areas (collectively, the "study area"). The study area is located directly northeast of the intersection of Ironwood Avenue and Nason Street within the City of Moreno Valley, in Riverside County, California. The purpose of this study is to satisfy the requirements of the Western Riverside County Multiple Species Habitat Conservation (MSHCP), the California Environmental Quality Act (CEQA), and to supplement subsequent regulatory applications pursuant to Sections 404 and 401 of the Clean Water Act (CWA) and Section 1602 of the California Fish & Game Code (CF&G).

1.2 Sources

This Biological Resources Assessment & MSHCP Consistency Analysis (collectively, the "BRA") is based on information compiled through field reconnaissance and appropriate reference materials. A general biological survey, vegetation mapping, and investigation of jurisdictional waters and wetlands was conducted by ESA PCR. Focused surveys for special-status plant species and burrowing owl (*Athene cunicularia*) were also conducted. The information sources used in preparation of this BRA are provided in Section 9, *References*.

1.3 Study Area Location

The approximately 78.48-acre on-site study area and approximately10.57-acre off-site study areas are regionally situated north of State Route (SR) 60 and northeast of Interstate (I) 215 (**Figure 1**, *Regional Map*). Specifically, the study area is located northeast of the intersection of Ironwood Avenue and Nason Street in the City of Moreno Valley. The on-site and off-site project study areas are depicted on the U.S. Geological Survey (USGS) 7.5' Sunnymead topographic quadrangle (S34, T2S, R3W & S3, T3S, R3W) (USGS, 1967; Earth Survey, 2015), as shown in **Figure 2**, *Vicinity Map.* The specific location of each project study area is depicted on **Figure 3**, *Study Areas*. Off-site study areas associated with four types of proposed project improvements include manufactured slopes, road improvements, a sewer line extension, and water line extensions and described in detail below:

Manufactured Slopes (West & East) – There are two (2) off-site study area locations proposed to support manufactured slopes, including one area adjacent to Nason Street (West) and a second area adjacent to the eastern boundary of the project site (East).

Road Improvements – There is one (1) road improvement area proposed between the area located directly north of Ironwood Avenue and south of the project site boundary.

Sewer Line – The sewer line is proposed to connect at the southeast corner of the project site at the intersection of Ironwood Avenue and Oliver Street and extend south along Oliver Avenue, ultimately ending at the SR-60 freeway.

Water line (Proposed and Alternatives) – Although the exact location of the final water line extension is still unknown, one proposed alignment and two (2) alternative alignments were assessed as part of the off-site project study areas. The Proposed Water Line would commence at the intersection of Ironwood Avenue and Oliver Street and extend east along Ironwood Avenue, continuing north along Moreno Beach Drive, and terminating at the intersection of Moreno Beach Drive and Kalmia Avenue. Water Line Alternative 1 would connect the water line at the northeast corner of the project site and extend north to an existing off-site water tower. Water Line Alternative 2 would commence at the northeastern corner of the project site and extend east toward the intersection of Moreno Beach Drive and Juniper Avenue.

1.4 Scope of Study

The scope of this BRA encompasses descriptions of the project, methods of study, and existing site conditions including vegetation communities and the potential for special-status biological resources, followed by an evaluation of impacts to special-status biological resources pursuant to CEQA thresholds and compliance with the Western Riverside County MSHCP. Avoidance, minimization, and/or mitigation measures are proposed to reduce any potential adverse effects to biological resources to less than significant under CEQA where appropriate.

2.0 PROJECT DESCRIPTION

2.1 Project Description

The 78.48-acre project site is a proposed single-family residential development occupying approximately 38.5 acres, as shown in (**Figure 4**, *Site Plan*). The remaining acreage will be open space areas, which will consist of community open space areas that will be planted as appropriate to the project's climate and avoided areas in the northwestern and northeastern corner of the project site, which encompass native vegetation and rock outcroppings that will be preserved. Per Figure 3, there are four types of off-site areas associated with the project totaling 10.57 acres, including manufactured slope areas, road improvements, sewer line extension, and water line extensions (proposed and alternative). Sewer and water lines will be extended onto the site from existing utilities. Primary access to the development would occur from Ironwood Avenue between Nason Street and Oliver Street, immediately opposite from and north of Lantz Lane. Secondary access would be provided by driveways on both Nason Street and Oliver Street just north of Ironwood Avenue.

2.2 Project Avoidance

The project study areas consist primarily of non-native vegetation characterized by ruderal vegetation and disturbed areas that consist of little to no vegetation. There are some areas that support native plant communities, such as Riversidean sage scrub and brittlebush scrub, which predominantly reside in the northwestern corner of the on-site study area. The project proposes avoidance of the northwestern and northeastern corners of the on-site study area, which are located on hillsides that transition into the foothills of the Badlands mountain range located to the north of the project site. These avoided areas will be maintained as natural open space to preserve the scenic views of the hillsides from the City of Moreno Valley. The project on- and off-site study areas also support two drainage systems, which include Drainage A and Drainage Complex B, approximately 40% of which will be avoided.

3.0 METHODS OF STUDY

3.1 Approach

This BRA is based on information compiled through field reconnaissance and appropriate reference materials. Surveys included a general biological survey and vegetation mapping; an investigation of jurisdictional waters; focused plant surveys; and focused burrowing owl surveys.

3.2 Literature Review

Assessment of the study area began with a review of relevant literature on the biological resources of the study area and surrounding vicinity. The California Natural Diversity Database (CNDDB), a California Department of Fish and Wildlife (CDFW) species account database, was reviewed for all pertinent information regarding the localities of known observations of special-status species and habitats in the vicinity of the study area (CDFW, 2015). The vicinity of the study area included the following USGS topographic quadrangles: San Bernardino South, Redlands, Yucaipa, Riverside East, El Casco, Steele Peak, Perris, and Lakeview. Federal register listings, protocols, and species data provided by the United States Fish and Wildlife Service (USFWS) (USFWS, 2015a), CDFW and the California Native Plant Society (CNPS, 2015) were reviewed in conjunction with anticipated Federally and State listed species potentially occurring within the vicinity. Other data sources reviewed include USFWS critical habitat maps (USFWS, 2015b) and United States Department of Agriculture Natural Resources Conservation Service (NRCS) soils mapping (NRCS, 2015). In addition, numerous regional flora and fauna field guides were utilized to assist in the identification of species and suitable habitats, in addition to relevant local policies such as the *Western Riverside County Multiple Species Habitat Conservation Plan* (MSHCP) (Dudek & Associates, 2003). A list of all relevant references reviewed is included in Section 9.0, *References*.

3.3 Field Investigations

A general biological survey and vegetation mapping was conducted by ESA PCR Senior Biologist Ezekiel Cooley on September 19, 2014 and investigations of jurisdictional waters were conducted by Principal Regulatory Scientist Amir Morales on September 19 and December 10, 2014. The observed vegetation communities, jurisdictional features, and other biological features or species observations of interest were mapped on aerial photographs. Biological surveys were conducted over all on-site and off-site study areas, with special attention to sensitive habitats such as those suitable for the burrowing owl and those areas potentially supporting special-status flora. The only exception is an off-site study area located directly east of the project study area proposed to support manufactured slopes. The eastern manufactured slopes support suitable habitat for special-status plant species and a spring focused survey has not yet been conducted. As such, a mitigation measure addressing the potential for special-status plants to occur within this off-site area is included in Section 7.2.1 of this BRA. The following summarizes the extent of focused surveys conducted within the study areas identified on Figure 3.

Focused plant surveys were conducted within:

- the project site and off-site road improvement and sewer line areas on May 13, 2015 by ESA PCR Biologists Ezekiel Cooley, Amy Lee, and Lauren Singleton and on July 20, 2015 by Amy Lee;
- the off-site proposed and alternative water line areas on May 23 and July 5, 2016 by Amy Lee; and
- the off-site manufactured slope areas on July 5, 2016 by Amy Lee. However, a spring focused plant survey has not been conducted within the off-site manufactured slope area located directly east of the site.

Focused burrowing owl surveys were conducted within:

- the project site and off-site manufactured slopes, road improvement, proposed water line, and sewer line areas from May to July 2015 by ESA PCR Biologists Ezekiel Cooley, Amy Lee, and Lauren Singleton; and
- the alternative off-site water line areas from April to July 2016 by Amy Lee and Lauren Singleton.

During the course of all field visits, an inventory of plant and wildlife species observed was compiled. The methods for these field investigations are described in detail below.

3.3.1 Plant Community Mapping

Plant communities were mapped directly in the field utilizing a 125-scale (1”=125’) aerial photograph focusing on dominant plant species. Plant community names, codes, and descriptions follow *A Manual of California Vegetation, Second Edition* (Sawyer, Keeler-Wolf, and Evens, 2009) or Holland’s *Preliminary Descriptions of the Terrestrial Natural Communities of California* (1986). The California Natural Community Code (CaCodes) or Holland’s Element Code is in parentheses next to each community name, when applicable. After completing the fieldwork, the plant community polygons were digitized using Geographic Information System (GIS) technology to calculate acreages.

3.3.2 Sensitive Habitats

Sensitive habitats are listed by CDFW on their *List of Vegetation Alliances and Associations* (CDFW, 2010).[1] Communities on this list are given a Global (G) and State (S) rarity ranking on a scale of 1 to 5, where communities with a ranking of 5 are the most common and communities

1 *Available online at: http://www.dfg.ca.gov/biogeodata/vegcamp/natural_comm_list.asp*

with a ranking of 1 are the rarest and of the highest priority to preserve. These high priority communities are denoted on the CDFW list with asterisks. For the purpose of this report, sensitive habitats are those communities that have a state ranking of S3 or rarer. Any sensitive habitats located on the study area were identified based on the mapped natural communities (see section 3.3.1, *Plant Community Mapping*).

3.3.3 General Plant Inventory

All plant species observed during the general and focused surveys were either identified in the field or collected and later identified using taxonomic keys. Plant taxonomy follows Baldwin (2012). Common plant names, when not available from Baldwin, were taken from Munz (1974) and/or Clarke (2007). Since common names vary significantly between references, scientific names are included upon initial mention of each species; common names consistent throughout the report are employed thereafter. All plant species observed were recorded in field notes. Special-status plant species are discussed below in section 3.3.4, *Special-status Plant Species*.

3.3.4 Special-status Plant Species

The potential for special-status plant species was assessed based upon the known occurrence of species in the area as identified from CDFW, USFWS and CNPS databases (see Section 3.2, *Literature Review*), and the presence or absence of suitable habitat within the study area based on plant community mapping (see section 3.3.1, *Plant Community Mapping*). Suitable habitat was defined as areas with appropriate vegetation communities, soils and/or topography (elevation at MSL) to support the species based on known occurrences in those habitats and/or CDFW and CNPS documented habitat descriptions for the species. The definitions of suitable habitat were then compared against the vegetation mapping conducted for the study area and local knowledge. A table of special-status plant species for which potentially suitable habitat occurs within the study area was prepared, and the potential for occurrence for each species was determined following completion of the vegetation mapping conducted during the field survey.

Due to the presence of potentially suitable habitat, focused plant surveys were conducted on the project site and off-site road improvement and sewer line areas by ESA PCR biologists Ezekiel Cooley, Amy Lee, and Lauren Singleton on May 13, 2015 and by Amy Lee on July 20, 2015. Focused plant surveys were also conducted on the off-site water line areas by Amy Lee on March 23, 2016 and July 5, 2016. Although a summer focused plant survey was conducted within the manufactured slope areas on July 5, 2016 by Amy Lee, a spring survey has not yet been performed in these areas. The manufactured slope area located west of the project boundary does not support suitable habitat for plants associated with the spring survey requirement. However, the manufactured slope area located east of the project boundary does require completion of a spring focused plant survey as summarized in Section 7.1.2 below. All focused plant surveys conducted to date were implemented in accordance with published agency guidelines (CDFW, 2009; CDFW, 2000a; and USFWS, 2000) and during the appropriate blooming periods of potential plant species to ensure detection of any special-status plants.

3.3.5 General Wildlife Inventory

All wildlife species observed within the study area, as well as any diagnostic sign (call, tracks, nests, scat, remains, or other sign), were recorded in field notes. Binoculars and regional field guides were utilized for the identification of wildlife, as necessary. Wildlife taxonomy follows Stebbins (2003) and California Herps (2015) for amphibians and reptiles, the American Ornithologists' Union (1998) for birds, and Jameson and Peeters (1988) for mammals. Since common names vary significantly between references, scientific names are included upon initial mention of each species; common names consistent throughout the report are employed thereafter. All wildlife species detected were recorded in field notes. Special-status wildlife species are discussed below in section 3.3.6, *Special-status Wildlife Species*.

3.3.6 Special-status Wildlife Species

The potential for special-status wildlife species was assessed based upon the known occurrence of species in the area as identified from CDFW and USFWS databases (see section 3.2, *Literature Review*), and the presence or absence of suitable habitat within the study area based on plant community mapping (see section 3.3.1, *Plant Community Mapping*). Suitable habitat was defined as areas with appropriate vegetation communities and/or topography (elevation at MSL) to support the species based on known occurrences in those habitats and/or CDFW and USFWS documented habitat descriptions for the species. The definitions of suitable habitat were then compared against the vegetation mapping conducted for the study area as well as local knowledge. A table of special-status wildlife species for which potentially suitable habitat occurs within the study area was prepared, and the potential for occurrence for each species was determined following completion of the vegetation mapping conducted during the field survey.

Due to the presence of potentially suitable habitat and MSHCP requirements, focused surveys were conducted for burrowing owl. A summary of the survey methodology is provided below; a separate survey report was also prepared following completion of the focused surveys. No other focused surveys were conducted for special-status wildlife species.

Burrowing Owl

The study area supports potentially suitable habitat for burrowing owl. As such, focused surveys for burrowing owl were conducted on the project site and off-site manufactured slopes, road improvement, proposed water line, and sewer line areas by ESA PCR biologists Ezekiel Cooley, Amy Lee, and Lauren Singleton on May 13; June 3; and July 2 and 27, 2015. Focused burrowing owl surveys were conducted within the off-site alternative water areas by Lauren Singleton on April 28, 2016 and by Amy Lee on May 23; June 9; and July 7, 2016. Step I and Step II surveys for burrowing owls were conducted on the project site and off-site areas in accordance with the County of Riverside's *Burrowing Owl Survey Instructions for the Western Riverside Multiple Species Habitat Conservation Plan Area* (County of Riverside, 2006). Step I is a Habitat Assessment and Step II consists of Locating Burrows and Burrowing Owls.

Suitable habitat was identified during the Step I Habitat Assessment, which was conducted by Ezekiel Cooley on September 19, 2014 during the general biological survey, including disturbed, low-growing vegetation; bare ground; and a few small fossorial mammal burrows. Suitable habitat included disturbed, low-growing vegetation; bare ground; and a few small fossorial mammal burrows. Due to the presence of suitable habitat identified during the Step I survey, Step II surveys were conducted within the study area plus a 150-meter (approximately 500 feet) buffer zone around the perimeter of the study area (collectively, the “survey area”). Step II surveys focused on the detection of BUOW individuals, small fossorial mammal burrows potentially suitable for BUOW, and BUOW diagnostic sign (e.g., molted feathers, cast pellets, prey remains, eggshell fragments, or excrement at or near a burrow entrance). Transects were utilized, spaced no more than 100 feet apart, to allow 100 percent visual coverage of the ground surface. The four surveys were conducted during the burrowing owl breeding season (March 1 to August 31) on separate days between two hours before sunset to one hour after or one hour before sunrise to two hours after.[2]

3.3.7 Regional Connectivity/Wildlife Movement Corridor

An analysis of wildlife movement was conducted based on information compiled from the literature, analysis of aerial photographs and topographic maps, direct observations made in the field during survey work, and an analysis of existing wildlife movement functions. Relative to corridor issues, the focus of this assessment was to determine if the change of the existing land use within the study area would have significant impacts on the regional wildlife movement associated with the study area as well as the immediate vicinity.

The Western Riverside County MSHCP was reviewed to identify any linkage or Core Areas proposed for preservation on the study area (Dudek & Associates, 2003). Additionally, the South Coast Missing Linkages: A Wildland Network for the South Coast Ecoregion document was reviewed (South Coast Wildlands, 2008).

3.3.8 Investigation of Jurisdictional Waters

A jurisdictional determination of existing on-site drainage and wetland features was conducted by ESA PCR Principal Regulatory Scientist Amir Morales on September 19 and December 10, 2014. The purpose of the delineation was to assess the location, extent and acreage of “waters of the U.S.” and/or wetlands under the jurisdiction of the U.S. Army Corps of Engineers (USACE) and Regional Water Quality Control Board (RWQCB), and the limits of streambed and associated riparian habitat under the jurisdiction of CDFW. All areas were delineated using the protocol stipulated by CDFW under Section 1600-1607 of the California Fish and Wildlife Code, and by the USACE and RWQCB under Section 404 and Section 401 of the Clean Water Act (CWA), respectively. No potential for wetlands or other special aquatic sites were observed within project study areas. Therefore, a wetland delineation using the procedures stipulated in the USACE Wetland Delineation Manual (Environmental Laboratory, 1987) and Arid West Supplement (USACE, 2008a and USACE, 2008b) were not performed or warranted for this project.

---

2 For projects within the Western Riverside County MSHCP plan area, it has been PCR’s experience that the County of Riverside has preferred that Step II surveys be conducted at least one week apart.

The potential for USACE jurisdictional “waters of the U.S.” was based primarily on the presence or absence of jurisdictional field indicators consistent with the USACE guidelines (USACE, 2008a) such as the presence of an OHWM and/or secondary indicators of hydrology, including evidence of the deposition of debris, scour, sediment sorting, and changes in vegetation. The extent of CDFW jurisdiction was assessed based on the limits of the defined bed and bank and includes riparian streambed associated vegetation, where applicable. If these criteria were met, data was collected to estimate the length and width of jurisdictional features potentially regulated by the resource agencies. Upon completion of the field work, documentation of all jurisdictional wetlands, waters, and streambed were completed. The documentation included a map illustrating the location, extent and acreage of all jurisdictional features. Downstream surface connections to known USACE jurisdictional waters were also evaluated in the field and by using satellite imagery and mapping, for the purpose of establishing a connection (i.e. federal nexus) to “waters of the U.S.,” where applicable. The results of the ESA PCR jurisdictional assessment are subject to review and approval by the resource agencies as part of future regulatory permits for the project, if required.

4.0 EXISTING CONDITIONS

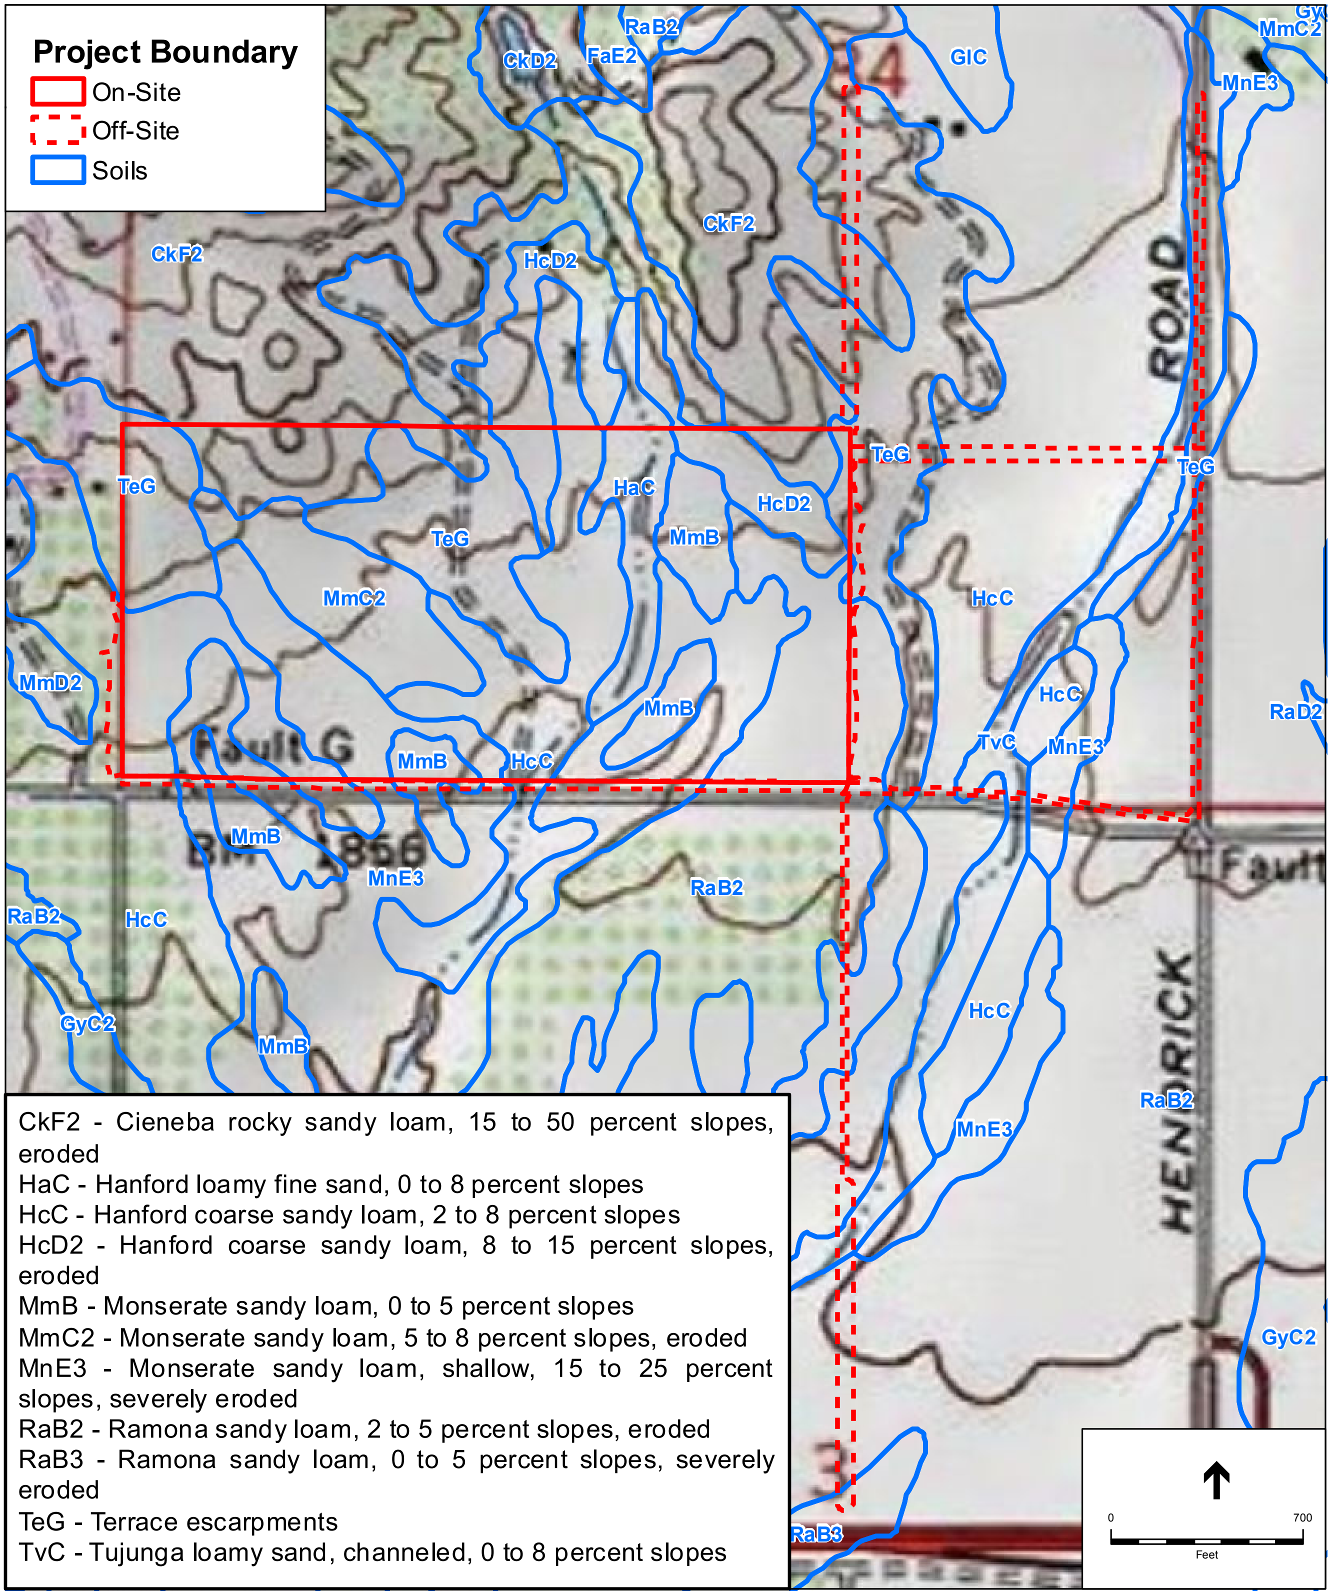
4.1 Characteristics of the Study Area and Surrounding Area

4.1.1 On-Site Characteristics

The approximately 79-acre project site and the 10.57-acre off-site areas are located in the City of Moreno Valley in Riverside County. The project site consists primarily of non-native vegetation characterized by ruderal vegetation and disturbed areas that consist of little to no vegetation. There are some areas that support native plant communities, such as Riversidean sage scrub and brittlebush scrub, which predominantly reside in the northwestern corner of the project site. The study area supports two drainage systems observed to support field indicators associated with USACE, RWQCB, and CDFW (collectively "the resource agencies") jurisdictional waters, referred to in this report as Drainage A and Drainage Complex B, although only Drainage A occurs on-site. The topography on-site is generally flat with gently rolling hills throughout the project site and steeper rock outcrops on the northwest corner. On-site elevations range from the lowest of approximately 1,830 feet above mean sea level (MSL) along the southern boundary of the project site to a high of approximately 1,975 feet above MSL along the northwest boundary of the site. On-site mapped soils in the project area include nine soil types as follows (NRCS, 2015), as shown in **Figure 5**, *Soils Map*:

- Cieneba rocky sandy loam, 15 to 50 percent slopes, eroded;
- Hanford loamy fine sand, 0 to 8 percent slopes;
- Hanford coarse sandy loam, 2 to 8 percent slopes;
- Hanford coarse sandy loam, 8 to 15 percent slopes, eroded;
- Monserate sandy loam, 0 to 5 percent slopes;
- Monserate sandy loam, 5 to 8 percent slopes, eroded ;
- Monserate sandy loam, shallow, 15 to 25 percent slopes, severely eroded;
- Ramona sandy loam, 2 to 5 percent slopes, eroded; and
- Terrace escarpments.

Immediate surrounding land uses include residential development to the south and west and vacant land to the north and east. The entire project site is within the Reche Canyon/Badlands Area Plan of the MSHCP (**Figure 6**, *Relationship to the MSHCP*).



CkF2 - Cieneba rocky sandy loam, 15 to 50 percent slopes, eroded
HaC - Hanford loamy fine sand, 0 to 8 percent slopes
HcC - Hanford coarse sandy loam, 2 to 8 percent slopes
HcD2 - Hanford coarse sandy loam, 8 to 15 percent slopes, eroded
MmB - Monserate sandy loam, 0 to 5 percent slopes
MmC2 - Monserate sandy loam, 5 to 8 percent slopes, eroded
MnE3 - Monserate sandy loam, shallow, 15 to 25 percent slopes, severely eroded
RaB2 - Ramona sandy loam, 2 to 5 percent slopes, eroded
RaB3 - Ramona sandy loam, 0 to 5 percent slopes, severely eroded
TeG - Terrace escarpments
TvC - Tujunga loamy sand, channeled, 0 to 8 percent slopes

4.1.2 Off-Site Characteristics

The 10.57-acre off-site areas include the proposed manufactured slopes, road improvements, sewer line, and water line areas. The off-site areas are dominated by ruderal vegetation and disturbed areas with only a small acreage of native brittlebush scrub and Riversidean sage scrub. The off-site areas also support some areas of sparsely vegetated river wash areas. A portion of Drainage A and the entirety of Drainage Complex B occurs within the off-site area. The topography of the off-site areas is generally flat with the exception of the proposed northern water line area near an existing water tank, which consists of a fairly steep east-facing slope supporting some native vegetation and rocky outcrops. Elevations within the off-site areas range from the lowest of approximately 1,793 feet above MSL at the southern end of the proposed sewer line to a high of approximately 1,948 feet above MSL at the steepest portion of the proposed water line area. Off-site mapped soils in the project area include seven soil types as follows (NRCS, 2015), as shown in Figure 5:

- Cieneba rocky sandy loam, 15 to 50 percent slopes, eroded;
- Hanford course sandy loam, 2 to 8 percent slopes;
- Monserate sandy loam, shallow, 15 to 25 percent slopes, severely eroded
- Ramona sandy loam, 0 to 5 percent slopes, severely eroded;
- Ramona sandy loam, 2 to 5 percent slopes, eroded;
- Terrace escarpments; and
- Tujunga loamy sand, channeled, 0 to 8 percent slopes.

Land uses immediately surrounding the off-site sewer line include a residential community to the west, SR-60 to the south, and vacant land to the north and east. Land uses immediately surrounding the potential water line areas include residential development to the north, east, and southwest and vacant land to the south and west. Since the proposed manufactured slope areas are directly adjacent to the project site, surrounding land uses are identical to those described in section 4.1.1 above.

4.2 Plant Communities

Descriptions of each of the plant communities found within the study area are provided below, with CDFW CaCodes or Holland Element Codes in parentheses next to each community name. The locations of each of the plant communities are shown in **Figure 7**, *Plant Communities*. **Table 1**, *Plant Communities*, lists each of the plant communities observed, as well as the acreage within the study area. Representative photographs of plant communities found within the study area are included in **Figures 8a** and **8b**, *Site Photographs*.

TABLE 1
PLANT COMMUNITIES

Plant Communities	On-site (acres)	Off-site (acres)
Brittlebush Scrub	2.34	0.27
Brittlebush Scrub/Ruderal	0.31	0.21
Buckwheat Scrub/Ruderal	0.09	0.04
Laurel Sumac Scrub/Ruderal	0.78	-
Riversidean Sage Scrub	3.10	0.12
Riversidean Sage Scrub/Ruderal	-	0.07
Rock Outcrop/Riversidean Sage Scrub	2.15	-
River Wash	-	0.05
Ruderal	38.04	2.50
Ruderal/Brittlebush Scrub	-	0.04
Ruderal/Riversidean Sage Scrub	2.29	0.43
Disturbed	28.68	4.18
Developed	0.70	2.66
Total	**78.48**	**10.57**

SOURCE: ESA PCR, 2016

4.2.1 Brittlebush Scrub (CaCode 33.030.00)

Brittlebush scrub is a drought tolerant subtype of Riversidean sage scrub dominated by an almost monotypic community of brittlebush (*Encelia farinosa*). Associated species observed within this community included sparsely growing California buckwheat (*Eriogonum fasciculatum*), California sagebrush (*Artemisia californica*), and chia (*Salvia columbariae*). Brittlebush scrub on-site occurs primarily in two patches on the northwestern corner of the project site and a smaller patch in the northeastern corner, comprising approximately 2.34 acres on-site. There is also a small patch of this community located within the off-site water line areas, occupying approximately 0.27 acre off-site.

4.2.2 Brittlebush Scrub/Ruderal (CaCode 33.030.00/Not Applicable)

Brittlebush scrub/ruderal is dominated by species found within the brittlebush scrub community (primarily brittlebush) with interspersed ruderal species. In addition to brittlebush, associated native species found in this community included native species such as blue elderberry (*Sambucus nigra ssp. caerulea*), common fiddleneck (*Amsinckia intermedia*), dove weed (*Croton setigerus*), mule fat (*Baccharis salicifolia*), pinebush (*Ericameria pinifolia*), and western ragweed (*Ambrosia psilostachya*). The ruderal community is described in further detail below (see section 4.2.9). Brittlebush scrub/ruderal occurs on-site in a small area along the eastern boundary in the northeastern portion of the project site and comprises approximately 0.31 acre. There is also a small patch of this community located within the eastern manufactured slope area, occupying approximately 0.21 acre off-site.

4.2.3 Buckwheat Scrub/Ruderal (CaCode 32.040.02/Not Applicable)

Buckwheat scrub/ruderal community is dominated by California buckwheat (*Eriogonum fasciculatum*) and other species commonly associated with the buckwheat scrub community, including pinebush and brittlebush. This community also supports interspersed areas of ruderal vegetation; the ruderal community is described in further detail below (see section 4.2.9). Buckwheat scrub/ruderal community occurs within one small patch on-site (0.09 acre) and within the off-site eastern manufactured slope area (0.04 acre).

4.2.4 Laurel Sumac Scrub/Ruderal (CaCode 45.455.00/Not Applicable)

Laurel sumac scrub/ruderal is primarily composed of those species found within the laurel sumac scrub community, which is dominated by laurel sumac (*Malosma laurina*) and often associated with other drought-tolerant shrubs, such as California buckwheat or black sage (*Salvia mellifera*). While this community largely consists of species found within the laurel sumac scrub community, ruderal species are interspersed throughout the community. The ruderal community is described in further detail below (see section 4.2.9). Laurel sumac scrub/ruderal community occurs in one area along the western boundary and comprises approximately 0.78 acre on-site only.

4.2.5 Riversidean Sage Scrub (Holland Element Code 32700)

Riversidean sage scrub is characterized by low growing shrubs adapted to semi-arid Mediterranean climate, and are most often found on steep or low gradient slopes that are rarely flooded. This community is fairly open and dominated by California sagebrush, California buckwheat, , and foxtail chess. Other associated species include pinebush, brittlebush, and caterpillar phacelia (*Phacelia cicutaria*). The Riversidean sage scrub community occurs in two patches on the northwestern corner of the project site and comprises approximately 3.10 acres on-site. There is also a small patch of this community located within the off-site water line areas, occupying approximately 0.12 acre off-site.

4.2.6 Riversidean Sage Scrub/Ruderal (Holland Element Code 32700/ Not Applicable)

Riversidean sage scrub/ruderal is primarily composed of those species found within the Riversidean sage scrub community, which is described in section 4.2.5 above. While this community largely consists of species found within the Riversidean sage scrub community, ruderal species are interspersed throughout the community. The ruderal community is described in further detail below (see section 4.2.9). Riversidean sage scrub/ruderal community occurs in one area along the western boundary and comprises approximately 0.07 acre off-site only.

4.2.7 Rock Outcrop/Riversidean Sage Scrub (Not Applicable/Element Code 32700)

Rock outcrop/Riversidean sage scrub includes rock outcrop areas, which consist of rocky, sparsely vegetated areas typically found along the hillsides on the northwest corner of the project site, and is interspersed with vegetation that is characteristic of the Riversidean sage scrub community described in section 4.2.5 above. Additional associated species observed in the rock outcrop/Riversidean sage scrub communities on-site included cane cholla (*Cylindropuntia californica* var. *parkeri*) and two-color rabbit tobacco (*Pseudognaphalium bicolor*). There are two patches of rock outcrop/Riversidean sage scrub on the northwestern corner of the project site, which occupies approximately 2.15 acres on-site only.

4.2.8 River Wash (Not Applicable)

River wash consists of prevailingly coarse-textured but variable material, ranging from sand to gravel. It usually is flood-swept, though it may lie slightly above present overflows. The sandy areas are loose with some silt and other fine materials. Sparse vegetation within the river wash areas include giant reed (*Arundo donax*), flatspine bur ragweed (*Ambrosia acanthicarpa*), pucturevine (*Tribulus terrestris*), and common sunflower (*Helianthus anuus*). River wash areas comprise approximately 0.05 acre off-site only associated with the mainstem Drainage B within the sewer line and water line areas.

4.2.9 Ruderal (Not Applicable)

Ruderal vegetation is found in areas heavily disturbed by human activities, such as roadsides, graded fields, and manufactured slopes. Within the study area, ruderal species observed include cheeseweed (*Malva parviflora*), cudweed aster (*Corethrogyne filaginifolia*), foxtail chess (*Bromus madritensis* ssp. *rubens*), gum tree (*Eucalyptus* sp.), London rocket (*Sisymbrium irio*), Mediterranean schismus (*Schismus barbatus*), Mexican palo verde (*Parkinsonia aculeata*), ripgut grass (*Bromus diandrus*), shortpod mustard (*Hirschfeldia incana*), tocalote (*Centaurea melitensis*), tree tobacco (*Nicotiana glauca*), wild oat (*Avena* sp.), and wild radish (*Raphanus raphanistrum*). Ruderal areas dominant the project site and comprised approximately 38.04 acres on-site. The ruderal community is also prominent throughout the off-site areas, totaling 2.50 acres.

4.2.10 Ruderal/Brittlebush Scrub (Not Applicable/ CaCode 33.030.00)

Ruderal/brittlebush scrub is dominated by ruderal, weedy species but exhibit sparse, remnant species associated with the brittlebush scrub community. The brittlebush scrub and ruderal communities are described above in sections 4.2.1 and 4.2.9, respectively. Only one small ruderal/brittlebush scrub patch was observed within the water line area, consisting of approximately 0.04 acre off-site only.

4.2.11 Ruderal/Riversidean Sage Scrub (Not Applicable/Holland Element Code 32700)

Ruderal/Riversidean sage scrub is dominated by ruderal, weedy species but exhibit sparse, remnant species associated with the Riversidean sage scrub community. The Riversidean sage scrub and ruderal communities are described above in sections 4.2.5 and 4.2.9, respectively. The ruderal/Riversidean sage scrub community occupies the northwestern corner and the center of the project site, consisting of approximately 2.29 acres on-site. This community also occurs within the eastern manufactured slope area, consisting of approximately 0.43 acre off-site.

4.2.12 Disturbed (Not Applicable)

Disturbed areas are heavily affected by human activities, including dirt roads, graded fields, and manufactured slopes; as a consequence, these areas support little to no vegetation. While ruderal areas comprise the majority of the project site, disturbed areas account for much of the remaining space occupying approximately 28.68 acres on-site. Disturbed areas dominate the off-site areas, consisting of 4.18 acres.

4.2.13 Developed (Not Applicable)

Developed areas are associated with an unpaved access road that occurs along the eastern boundary of the project site and off-site manufactured slope areas. Developed areas occupied approximately 0.70 acre on-site and 2.66 acres off-site.

4.3 General Plant Inventory

The plant communities discussed above are comprised of numerous plant species. Observations regarding the plant species present were made during the field visits to the study area, and a list of all plant species observed is provided in **Appendix A**, *Floral and Faunal Compendium*. Special-status plant species occurring or potentially occurring within the study area are discussed below in section 4.7.5, *Special-status Plant Species*.

4.4 General Wildlife Inventory

The plant communities discussed above provide habitat for common wildlife species. Observations regarding the wildlife species present were made during the field visits to the study area, and a list of all species observed is provided in **Appendix A**. Special-status wildlife species occurring or potentially occurring are discussed below in section 4.7.6, *Special-status Wildlife Species*.

4.5 Wildlife Movement

4.5.1 Overview

Wildlife corridors link together areas of suitable habitat that are otherwise separated by rugged terrain, changes in vegetation, or human disturbance. The fragmentation of open space areas by urbanization creates isolated "islands" of wildlife habitat. In the absence of habitat linkages that allow movement to adjoining open space areas, various studies have concluded that some wildlife species, especially the larger and more mobile mammals, will not likely persist over time in fragmented or isolated habitat areas because they prohibit the infusion of new individuals and genetic material (MacArthur and Wilson, 1967; Soulé, 1987; Harris and Gallagher, 1989; Bennett, 1990).

Corridors effectively act as links between different populations of a species. A group of smaller populations (termed "demes") linked together via a system of corridors is termed a "metapopulation." The long-term health of each deme within the metapopulation is dependent upon its size and the frequency of interchange of individuals (immigration vs. emigration). The smaller the deme, the more important immigration becomes, because prolonged inbreeding with the same individuals can reduce genetic variability. Immigrant individuals that move into the deme from adjoining demes mate with individuals and supply that deme with new genes and gene combinations that increases overall genetic diversity. An increase in a population's genetic variability is generally associated with an increase in a population's health and long-term viability.

Corridors mitigate the effects of habitat fragmentation by: (1) allowing animals to move between remaining habitats, which allows depleted populations to be replenished and promotes genetic diversity; (2) providing escape routes from fire, predators, and human disturbances, thus reducing the risk that catastrophic events (such as fires or disease) will result in population or local species extinction; and (3) serving as travel routes for individual animals as they move within their home ranges in search of food, water, mates, and other needs (Noss, 1983; Fahrig and Merriam, 1985; Simberloff and Cox, 1987; Harris and Gallagher, 1989).

Wildlife movement activities usually fall into one of three movement categories: (1) dispersal (e.g., juvenile animals from natal areas, individuals extending range distributions); (2) seasonal migration; and, (3) movements related to home range activities (foraging for food or water, defending territories, searching for mates, breeding areas, or cover). Although the nature of each of these types of movement is species specific, large open spaces will generally support a diverse wildlife community representing all types of movement. Each type of movement may also be represented at a variety of scales from non-migratory movement of amphibians, reptiles, and some birds on a "local" level to home ranges encompassing many square-miles for large mammals moving on a "regional" level. A number of terms have been used in various wildlife movement studies, such as "wildlife corridor," "travel route," and "wildlife crossing" to refer to areas in which wildlife move from one area to another. To clarify the meaning of these terms and facilitate the discussion on wildlife movement in this study, these terms are defined as follows:

<u>Travel Route</u>: A landscape feature (such as a ridgeline, drainage, canyon, or riparian strip) within a larger natural habitat area that is used frequently by animals to facilitate movement and provide access to necessary resources (e.g., water, food, cover, den areas). The travel route is generally preferred because it provides the least amount of topographic resistance in moving from one area to another; it contains adequate food, water, and/or cover while moving between habitat areas; and provides a relatively direct link between target habitat areas.

Wildlife Corridor: A piece of habitat, usually linear in nature, that connects two or more habitat patches that would otherwise be fragmented or isolated from one another. Wildlife corridors are usually bounded by urban land areas or other areas unsuitable for wildlife. The corridor generally contains suitable cover, food, and/or water to support species and facilitate movement while in the corridor. Larger, landscape-level corridors (often referred to as “habitat or landscape linkages”) can provide both transitory and resident habitat for a variety of species.

Wildlife Crossing: A small, narrow area, relatively short in length and generally constricted in nature, that allows wildlife to pass under or through an obstacle or barrier that otherwise hinders or prevents movement. Crossings typically are manmade and include culverts, underpasses, drainage pipes, and tunnels to provide access across or under roads, highways, pipelines, or other physical obstacles. These are often “choke points” along a movement corridor.

4.5.2 Wildlife Movement Within the Study Area

As previously described, wildlife movement activities occur at a variety of scales from a “local” level to a “regional” level. Regional movement through the study area is restricted due to the urbanization of the region and the proximity to a major freeway (SR-60) (refer to **Figure 9**, *Regional Aerial Photograph*). The study area is immediately surrounded by residential development to the south and west. Although there is vacant land directly to the north and east of the study area, the land to the east is highly disturbed and mostly cleared of natural vegetation and there are a number of residential communities adjacent to the eastern boundary of the vacant land. Additionally, the study area is located about 0.5 mile to north of the SR-60. Although regional movement through this area is likely limited, there is some potential for local movement through the study area via the open area directly to the north which comprises the foothills of the Badlands. Although the study area connects to the open area to the north, the study area is dominated by ruderal and disturbed areas with limited native vegetation.

The project site only supports one ephemeral drainage that conveys minor road runoff from Ironwood Avenue with no associated vegetation (Drainage A), which is unlikely to facilitate wildlife movement. Additionally, Drainage A initiates on-site and meanders for approximately 396 linear feet before exiting the project site via a culvert beneath Ironwood Avenue. Drainage Complex B occurs within the off-site areas and comprises the mainstem Drainage B, which is a USGS mapped blueline stream, and five small tributaries (Drainages B1 through B5). The mainstem Drainage B does support some ruderal and non-native vegetation (e.g. giant reed). Drainage B appears to initiate in the foothills of the Badlands to the north of the off-site areas and becomes channelized just west of the off-site sewer line area.

SOURCE: Google Maps, 2015 (Aerial).

Ironwood Village Project

Figure 9

Regional Aerial Photograph

ESA PCR

Due to the limited vegetation within Drainage B and lack of connection to suitable habitat downstream due to development, Drainage B is not expected to function as a wildlife movement corridor. The smaller tributaries (Drainages B1 through B5) are also ephemeral drainages with limited upland vegetation, which initiate at the peak of a small ridge upstream from the off-site water line area and appear to support little to no surface connection to the mainstem Drainage B likely due to decades of disturbance from agriculture and/or weed abatement activities. Drainage B5 does not appear to support any natural watershed and appears to be relict in nature. Vegetation within the drainage appears to be supported by artificial discharges from the water tank blow-off pipe observed at the headwaters of Drainage B5. Due to the limited vegetation and watershed, as well as the disturbed nature of the downstream areas off-site, the tributaries do not facilitate wildlife movement through the study area.

The study area is not within any Core or Linkage areas as identified by the MSHCP (Dudek & Associates, 2003). There is one proposed linkage (Proposed Linkage 4) approximately 2.1 miles to the north of the study area and one existing core (Core H) roughly 4.0 miles to the south of the study area. Proposed Linkage 4 would include upland habitat within Reche Canyon and provide connection to Box Springs Reserve, the Badlands, and San Bernardino County. The open area directly to the north of the study area does directly connect to Proposed Linkage 4. Existing Core H includes Lake Perris State Recreation Area and San Jacinto Wildlife Area. There is no direct connection from the study area to Core H, which are separated by urban development. The study area is not within any linkages identified by the South Coast Missing Linkages report; the nearest linkage design identified is for the San Bernardino–San Jacinto Connection located approximately 3.5 miles to the east (South Coast Wildlands, 2008). Since the study area is not identified as a linkage by the MSHCP or South Coast Wildlands, and it does not support habitat that connects two or more habitat patches that would otherwise be fragmented or isolated from one another, the study area is not considered a wildlife corridor. The study area may provide limited opportunities for wildlife movement, more likely for local wildlife movement as described below.

Movement on a smaller or "local" scale could occur within the study area for species that are less restricted in movement pathway requirements or are adapted to urban areas (e.g., raccoon [*Procyon lotor*], stripped skunk [*Mephitis mephitis*], coyote [*Canis latrans*], and bird species in general). Habitat within the study area is dominated by ruderal and disturbed areas with some portions supporting native vegetation, including brittlebush scrub, buckwheat scrub, and Riversidean sage scrub. As such, it likely supports some wildlife movement within the study area and/or nearby areas for foraging and shelter. Data gathered from the biological survey indicates that the study area contains habitat that supports common species of invertebrates, reptiles, birds, and small mammals. The home range and average dispersal distance of many of these species may be entirely contained within the study area and immediate vicinity.

Populations of animals such as insects, reptiles, small mammals, and a few bird species may find all their resource requirements without moving far or outside of the study area at all. Occasionally, individuals expanding their home range or dispersing from their parental range could attempt to move outside of the study area, if feasible, based on the surrounding restrictions to movement from development (see above). Bird species may fly over the development and freeways to utilize the study area for foraging, although this is expected to be limited due to the high level of human activity in the region and higher quality foraging habitats in nearby open areas with less human disturbance, particularly the Badlands to the north.

In summary, the study area may support live-in and movement habitat for species on a local scale (i.e., some live-in and at least marginal movement habitat for invertebrates, reptiles, birds, and small mammal species). However, due to surrounding development, the proximity to the I-60 freeway, and the ephemeral nature and limited watershed of the drainages, the study area likely provides little to no function to facilitate movement for wildlife species on a regional scale and it is not identified as a regionally important dispersal or seasonal migration corridor by the MSHCP or by South Coast Wildlands.

4.6 Jurisdictional Waters

An investigation of on- and off-site jurisdictional waters was performed by Amir Morales, Principal Regulatory Scientist, on September 19, 2014. An additional site visit was conducted by Amir Morales on December 10, 2014 following a series of storm events that occurred on December 2, 3, and 4, 2014 totaling nearly two inches of rain in that period.[3] Based on the results of the investigation, Drainage A and Drainage Complex B (Drainages B & B1through B5) were determined to support a total of approximately 0.057 acre of USACE/RWQCB "waters of the U.S." and 0.165 acre of CDFW jurisdictional streambed (**Figure 10**, *Jurisdictional Features*). A summary of jurisdictional features assessed within the study area is provided in **Table 2**, *Jurisdictional Features*. Photographs of drainage features are provided as **Figures 11a** and **11b**, *Drainage Photographs*.

The study area is located within rolling valley topography located southeast of Reche Canyon and south/southwest of The Badlands mountain range. The study area is located within the San Jacinto Watershed and generally drains toward the south, eventually reaching the Perris Valley Storm Drain which ultimately reaches the San Jacinto River and then Canyon Lake. The USGS Sunnymead topographic Quadrangle depicts a blueline stream originating in the foothills to the north with headwaters located approximately 2,000 linear feet from the on-site study area. The mapped blueline drainage feature enters the project site near the center of the northern project boundary and bisects the property. The property has been subjected to seasonal dry-farming and/or weed abatement activities for several decades. Based on the jurisdictional assessments performed by ESA PCR, no discernible streambed or indicators of flow were observed within the area historically mapped as a blueline drainage feature during the September 19, 2014 jurisdictional delineation. In order to determine if jurisdictional field indicators reestablish following moderate rain events, Amir Morales returned to investigate the site following a series of early December 2014 storm events yielding nearly 2-inches of rain over three consecutive days. In our experience, this amount of rain would have reestablished some evidence of flow capable of eroding a streambed and/or supporting some jurisdictional field indicators based on the USACE's arid delineation guidelines.

3 Based on WeatherCurrents.com precipitation data accessed at http://weathercurrents.com/morenovalley/ArchiveDec2014.do obtained on July 26, 2016.

TABLE 2
JURISDICTIONAL FEATURES

Drainage (Study Area)	Length (ft)	USACE/ RWQCB (acres)	CDFW (acres)	Flow Classification
A (On-Site)	285	0.023	0.046	Ephemeral
A (Off-Site)	111	0.007	0.013	Ephemeral
Drainage A Subtotal	***396***	***0.030***	***0.059***	
B (Off-Site)	306	0.026	0.069	Ephemeral
B1 (Off-Site)[b]	0[a]	N/A	0.001	Ephemeral
B2 (Off-Site) [b]	32	N/A	0.001	Ephemeral
B3 (Off-Site) [b]	25	N/A	0.001	Ephemeral
B4 (Off-Site) [b]	34	N/A	0.001	Ephemeral
B5 (Off-Site)	35	0.002	0.033	Ephemeral
Drainage Complex B Subtotal	***432***	***0.028***	***0.106***	
Total	**828**	**0.058**	**0.165**	

[a] Less than one linear foot of jurisdiction occurs within Drainage B1 as the majority of the drainage within the off-site study area is associated with an existing corrugated metal pipe that was not quantified.

[b] Drainage did not support jurisdictional field indicators associated with “waters of the U.S” regulated by the USACE and RWQCB pursuant to the Clean Water Act.

SOURCE: ESA PCR, 2014

However, no ordinary water mark, sediment deposition/sorting, debris wracks, bed/bank, streambed associated vegetation, or other jurisdictional field indicators were observed immediately following the consecutive rain events. As a result, it was determined that no jurisdiction occurs within the area mapped as a blueline drainage feature within the study area.

It was noted that the USGS Sunnymead Quadrangle depicts a small water feature at the off-site headwaters, located approximately 2,000 linear feet north of the site where the blueline feature initiates. As such, it is feasible that the mapped water feature is associated with a historic stock pond, which may have supported a small drainage that ultimately extended to the project study area when water was historically discharged from the feature and/or significant storm events caused it to overflow. However, based on review of current aerial imagery in Google Earth, no water feature appears to persist within the off-site headwaters in the current condition capable of supporting a discernible streambed. Consequently, the only jurisdictional feature identified within the on-site study area during the December 2014 site visit is a minor roadside ditch identified as Drainage A. Jurisdiction within the off-site study areas is limited to a mainstem drainage identified as Drainage B, and Drainage Complex B which is comprised of tributary Drainages B1through B5. No riparian and/or hydrophytic vegetation communities were observed on the study area that would warrant the need for a formal wetland analysis. Therefore, no jurisdictional wetlands or special aquatic sites were determined to occur within the project study areas. The following provides a summary of jurisdictional drainage features identified within the project study areas:

Drainage Photographs

ESA PCR

4.6.1 Drainage A

Drainage A is an unvegetated roadside ditch that establishes only when rain events generate sufficient runoff from Ironwood Avenue to erode a small channel through sandy disturbed soils. The ephemeral ditch enters the Ironwood Avenue Right-of-Way within the off-site study area then enters the on-site study area along the southern project boundary, extending for approximately 285 linear feet. The ditch then enters a corrugated metal pipe (CMP) beneath Ironwood Avenue which is ultimately conveyed through the rural residential development to the south and into a water quality basin adjacent to SR-60. Drainage A ranged from 2 to 3 feet in jurisdictional channel width and contains sandy loam soils that are periodically disturbed by weed abatement activities. A photograph of Drainage A is provided in Figure 11a.

Drainage A within the on-and off-site study area supports a total of approximately 396 linear feet of ephemeral unvegetated roadside ditch, containing 0.023 acre of on-site and 0.007 acre of off-site non-wetland USACE "waters of the U.S" totaling 0.030 acre, as well as 0.46 acre of on-site and 0.013 acre of off-site CDFW jurisdictional streambed totaling 0.059 acre.

4.6.2 Drainage Complex B

4.6.2.1 Drainage B

Drainage B is an ephemeral sandy wash that originates off-site approximately 2 miles to the northwest along Reche Canyon Road. The drainage meanders along the road until it reaches the valley floor extending across Trust Way, crossing Kalmia Avenue, and then conveys runoff along the west side of Moreno Beach Drive for approximately a quarter-mile prior to crossing the off-site Water Line Alternative 1. The drainage feature then extends south/southwest for another quarter-mile before entering a culvert beneath Ironwood Avenue and meandering for another quarter-mile prior to entering the off-site sewer line study area. Drainage B then continues for approximately 700 linear feet toward the southwest ultimately entering a detention basin located directly northeast of the Nason Street exit of SR-60. Drainage B within the off-site study areas ranges from approximately 4-10 feet in USACE/CDFW channel width and is entirely unvegetated. Soils within the wash are comprised of loamy sands of the Tujunga series consistent with the mapping by NRCS. Photographs of Drainage B are provided in Figure 11a.

Drainage B within the off-site sewer line and Water Line Alternative 1 total approximately 306 linear feet of unvegetated ephemeral sandy wash totaling approximately 0.026 acre of non-wetland USACE/RWQCB "waters of the U.S." and 0.069 acre of CDFW jurisdictional streambed.

4.6.2.2 Drainages B1- B5

Drainages B1through B5 are minor ephemeral drainages that with the exception of Drainage B5 (which appears to accept flow from a water tank bypass pipe) function to drain a very limited watershed west of the existing water district road that runs parallel to the eastern boundary of the project site. Drainage B5 appears to support flows from two small slope v-ditches as well as a pipe at its headwaters that appears to drain the existing water tank directly to the west, and was likely formed by controlled releases from the water tank structure. Otherwise, no natural watershed capable eroding such an incised drainage feature occurs upstream. Drainages B1 through B3 have small CMP culverts that convey limited runoff west of the water district road and support very weak indicators of flow and/or bed and bank. Drainage B4 does not support a pipe culvert rather a small pipe that drains surface flow from a small v-ditch directly west of the road. No discernible indicators associated with "waters of the U.S." such as an ordinary high water mark, sediment deposition/sorting, debris wracks, streambed associated vegetation, or other USACE jurisdictional field indicators indicative of the arid southwest region were observed within Drainages B1-B4 immediately following the consecutive rain events of early December 2014. However, Drainages B1 through B4 do support topographic low points with banks typical of headwater swales. Drainage B5 was presumed to support USACE/RWQCB jurisdiction due to the presence of an ordinary high water mark, which ultimately became indiscernible after approximately 1,000 linear feet. Given the reasonable proximity to Drainage B5 observed in the field in light of periodic disturbance to the sandy soils from weed abatement activities, Drainage B5 was presumed to be regulated as "waters of the U.S." Drainages B1through B5 were all presumed to support CDFW jurisdictional streambed.

Drainages B1 through B4 exhibit sparse upland scrub vegetation and ruderal grasses and are otherwise unvegetated. Drainage B5 supports a small patch of mule fat along approximately 15 linear feet of the headwaters directly downstream of the water tank pipe and mostly upland scrub vegetation beyond. Drainages B1through B5 contain CDFW jurisdictional channel widths ranging from 0.5 to 3 feet, while Drainage B5 exhibits USACE jurisdiction averaging approximately 2 feet in channel width and a CDFW channel width approximately averaging 10 feet. Drainage Complex B drainage features all were observed to support sandy loam soils. Photographs of Drainage Complex B are provided in Figures 11a and 11b.

Drainage B5 within the Water Line Alternative 2 study area totals approximately 0.002 acre of non-wetland ephemeral "waters of the U.S." regulated by the USACE/RWQCB. Drainage Complex B (Drainages B1 through B5) total approximately 0.037 acre of CDFW jurisdictional streambed and associated vegetation.

4.7 Special-status Biological Resources

The following discussion describes the plant and wildlife species present, or potentially present, within the study area that have been afforded special recognition by Federal, State, or local resource conservation agencies and organizations. These species have declining or limited population sizes, usually resulting from habitat loss. Also discussed are habitats that are unique, of relatively limited distribution, or of particular value to wildlife. Protected special-status species are classified by either Federal or State resource management agencies, or both, as threatened or endangered, under provisions of the Federal and State Endangered Species Acts (FESA and CESA, respectively).

4.7.1 Federal Special-status Resource Protection and Classifications

4.7.1.1 FESA

The FESA of 1973 defines an endangered species as “any species which is in danger of extinction throughout all or a significant portion of its range.” A threatened species is defined as “any species which is likely to become an Endangered species within the foreseeable future throughout all or a significant portion of its range.” Under provisions of Section 9(a)(1)(B) of the FESA, unless properly permitted, it is unlawful to “take” any listed species. “Take” is defined in Section 3(18) of FESA: “...harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct.” Further, the USFWS, through regulation, has interpreted the terms “harm” and “harass” to include certain types of habitat modification as forms of “take.” These interpretations, however, are generally considered and applied on a case-by-case basis and often vary from species to species. In a case where a property owner seeks permission from a federal agency for an action which could affect a federally listed plant or animal species, the property owner and agency are required to consult with USFWS pursuant to Section 7 of the ESA if there is a federal nexus, or pursuant to Section 10 of the ESA. Section 9(a)(2)(b) of the FESA addresses the protections afforded to listed plants.

All references to Federally-protected species in this BRA include the most current published status or candidate category to which each species has been assigned by USFWS. For purposes of this assessment the following acronyms are used for Federal status species, as applicable:

- FE Federally-listed as Endangered
- FT Federally-listed as Threatened
- FPE Federally proposed for listing as Endangered
- FPT Federally proposed for listing as Threatened
- FPD Federally proposed for delisting
- FC Federal candidate species (former C1 species)
