PLANNING COMMISSION
Regular Meeting

Agenda

Thursday, January 26, 2017 at 7:00 PM
City Hall Council Chamber – 14177 Frederick Street

CALL TO ORDER

ROLL CALL

PLEDGE OF ALLEGIANCE

APPROVAL OF AGENDA

CONSENT CALENDAR

All matters listed under Consent Calendar are considered to be routine and all will be enacted by one roll call vote. There will be no discussion of these items unless Members of the Planning Commission request specific items be removed from the Consent Calendar for separate action.

APPROVAL OF MINUTES

Planning Commission - Special Meeting - Dec 15, 2016 7:00 PM

PUBLIC COMMENTS PROCEDURE

Any person wishing to address the Commission on any matter, either under the Public Comments section of the Agenda or scheduled items or public hearings, must fill out a "Request to Speak" form available at the door. The completed form must be submitted to the Secretary prior to the Agenda item being called by the Chairperson. In speaking to the Commission, member of the public may be limited to three minutes per person, except for the applicant for entitlement. The Commission may establish an overall time limit for comments on a particular Agenda item. Members of the public must direct their questions to the Chairperson of the Commission and not to other members of the Commission, the applicant, the Staff, or the audience.

Upon request, this agenda will be made available in appropriate alternative formats to persons with disabilities, in compliance with the Americans with Disabilities Act of 1990. Any person with a disability who requires a modification or accommodation in order to participate in a meeting should direct such request to Guy Pegan, ADA Coordinator, at 951.413.3120 at least 72 hours before the meeting. The 72-hour notification will enable the City to make reasonable arrangements to ensure accessibility to this meeting.

NON-PUBLIC HEARING ITEMS

General Plan Annual Report (Report of: Community Development)

Case: General Plan Annual Report

Applicant: City of Moreno Valley

Owner: N/A

Representative: N/A

Location: Citywide

Case Planner: Mark Gross

Council District: N/A

PUBLIC HEARING ITEMS

1. Case: PEN16-0103 (PA16-0013) Tentative Parcel Map

   Applicant: LGS Engineering, Inc.

   Owner: Catherine Kormos

   Representative: David Knell

   Location: Northeast corner of Jeranell Court and Alessandro Boulevard.

   Case Planner: Gabriel Diaz

   Council District: 3

   Proposal: PEN16-0103 (PA16-0013) Tentative Parcel Map 37104

STAFF RECOMMENDATION

Staff recommends that the Planning Commission **APPROVE** Resolution No. 2017-04, and thereby:

1. **CERTIFY** that PEN16-0103 (PA16-0013) Tentative Parcel Map 37104 qualifies as an exemption in accordance with the California Environmental Quality Act Guidelines, Section 15315 (Minor Land Divisions); and

2. **APPROVE** PEN16-0103 (PA16-0013) Tentative Parcel Map 37104 subject to the Conditions of Approval included as Exhibit A to Resolution No. 2017-04

2. Case: PEN16-0119 Plot Plan & PEN16-0120 Tentative Tract Map 35429

Applicant:	Creative Design Associates
Owner:	ENR Resources, LLC
Representative:	Creative Design Associates
Location:	Northwest corner of Alessandro Boulevard and Chara Street
Case Planner:	Gabriel Diaz
Council District:	3
Proposal:	PEN16-0119 Plot Plan & PEN16-0120 Tentative Tract Map 35429

STAFF RECOMMENDATION

Staff recommends that the Planning Commission **APPROVE** Resolution No. 2017-01 and Resolution No. 2017-02, and thereby:

1. **CERTIFY** that PEN16-0119 (PA13-0061) Plot Plan and PEN16-0120 (PA13-0162) Tentative Tract Map 35429 qualifies as an exemption in accordance with the California Environmental Quality Act Guidelines, Section 15332 (In-Fill Developments). The project is within the city limits, on a project site of no more than five acres substantially surrounded by urban uses, and consistent with all applicable general plan and zoning designations; and

2. **APPROVE** Resolution No. 2017-01 and thereby **APPROVE** Plot Plan PEN16-0119 (PA13-0061), subject to the attached conditions of approval included as Exhibit B; and

3. **APPROVE** Resolution No. 2017-02 and thereby **APPROVE** Tentative Tract Map PEN16-0020 (PA13-0062), subject to the attached conditions of approval included as Exhibit B.

3. Case: PEN16-0092 (PA16-0018) – General Plan Amendment
PEN16-0093 (PA16-0019) – Zone Change
PEN16-0094 (PA14-0052) – Conditional Use Permit
PEN16-0095 (PA14-0052) –Tentative Tract Map 36760

Applicant:	Mission Pacific Land Company
Owner:	MPLC Legacy 75 Associates, LP
Representative:	Rick Engineering Company
Location:	Southeast corner of Indian Street and Gentian Avenue
Case Planner:	Jeff Bradshaw
Council District:	4

Proposal: Legacy Park Project

STAFF RECOMMENDATION

Staff recommends that the Planning Commission:

1. **APPROVE** Resolution No. 2017-08 and thereby **RECOMMEND** that the City Council:

    - **ADOPT** a Mitigated Negative Declaration for General Plan Amendment application PEN16-0092, pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

    - **APPROVE** General Plan Amendment application PEN16-0092 based on the findings contained in this resolution, and as shown on the attachment included as Exhibit A.

2. **APPROVE** Resolution No. 2017-09 and thereby **RECOMMEND** that the City Council:

    - **ADOPT** a Mitigated Negative Declaration for Zone Change application PEN16-0093, pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

    - **APPROVE** Zone Change application PEN16-0093 based on the findings contained in this resolution, and as shown on the attachment included as Exhibit A.

3. **APPROVE** Resolution No. 2017-10 and thereby **RECOMMEND** that the City Council:

- **ADOPT** a Mitigated Negative Declaration for Conditional Use Permit application PEN16-0094, pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

- **APPROVE** the Mitigation Monitoring and Reporting Program prepared for Conditional Use Permit PEN16-0094 pursuant to the California Environmental Quality Act (CEQA) Guidelines, included as Exhibit A; and

- **APPROVE** Conditional Use Permit application PEN16-0094 based on the findings contained in this resolution, and subject to the attached conditions of approval included as Exhibit A.

4. **APPROVE** Resolution No. 2017-11 and thereby **RECOMMEND** that the City Council:

- **ADOPT** a Mitigated Negative Declaration for Tentative Tract Map 36760 (PEN16-0095), pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

- **APPROVE** the Mitigation Monitoring and Reporting Program prepared for Tentative Tract Map 36760 (PEN16-0095) pursuant to the California Environmental Quality Act (CEQA) Guidelines, included as Exhibit A; and

- **APPROVE** Tentative Tract Map 36760 (PEN16-0095) based on the findings contained in this resolution, and subject to the attached conditions of approval included as Exhibit A.

4. Case: Ironwood Village - General Plan Amendment, Change of Zone, Tentative Tract Map 37001, and Design Guidelines for a 181 Lot Single family Residential Development

Applicant: Global Investment & Development LLC

Owner: Ironwood 8 Properties LP

Representative: Anderson Consulting Engineers, Inc.

Location: Ironwood Avenue, east of Nason Street and west of Oliver Street (APN: 473-160-004)

Case Planner: Claudia Manrique

Council District: 2

Proposal: Ironwood Village - General Plan Amendment, Change of Zone, Tentative Tract Map 37001, and Design Guidelines for a 181 Lot Single family Residential Development

STAFF RECOMMENDATION

Staff recommends that the Planning Commission take the following action:

1. **APPROVE** Resolution No. 2017-05 and thereby **RECOMMEND** that the City Council:

   - **ADOPT** a Mitigated Negative Declaration, pursuant to the California Environmental Quality Act (CEQA) Guidelines for General Plan Amendment Application No. PEN16-0077 (PA15-0037); and

   - **ADOPT** the Mitigation Monitoring and Reporting Program prepared for General Plan Amendment Application No. PEN16-0077 (PA15-0037 pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

   - **APPROVE** General Plan Amendment Application No. PEN16-0077 (PA15-0037)

2. **APPROVE** Resolution No. 2017-06 and thereby **RECOMMEND** that the City Council:

   - **ADOPT** a Mitigated Negative Declaration, pursuant to the California Environmental Quality Act (CEQA) Guidelines for Change of Zone Application No. PEN16-0078 (PA15-0038); and

   - **ADOPT** the Mitigation Monitoring and Reporting Program prepared for Change of Zone Application No. PEN16-0078 (PA15-0038) pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

   - **APPROVE** Change of Zone Application No. PEN16-0078 (PA15-0038)

3. **APPROVE** Resolution No. 2017-07 and thereby **RECOMMEND** that the City Council:

   - **ADOPT** a Mitigated Negative Declaration, pursuant to the California Environmental Quality Act (CEQA) Guidelines for Tentative Tract Map 37001 Application No. PEN16-0079 (PA15-0039) and Plot Plan Application PEN16-0080 (PA15-0040); and

   - **ADOPT** the Mitigation Monitoring and Reporting Program prepared for Tentative Tract Map 37001 Application No. PEN16-0079 (PA15-0039) and Plot Plan

Application PEN16-0080 (PA15-0040) for the Ironwood Village Design Guidelines pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

- **APPROVE** Tentative Tract Map 37001 Application No. PEN16-0079 (PA15-0039)

- **APPROVE** Plot Plan Application PEN16-0080 (PA15-0040) for the Ironwood Village Design Guidelines

ADJOURNMENT

NEXT MEETING
Planning Commission Regular Meeting, February 23, 2017 at 7:00 P.M., City of Moreno Valley, City Hall Council Chamber, 14177 Frederick Street, Moreno Valley, CA 92553.

CITY OF MORENO VALLEY PLANNING COMMISSION
REGULAR MEETING
CITY HALL COUNCIL CHAMBER – 14177 FREDERICK STREET

Thursday, December 15, 2016 at 7:00 PM

CALL TO ORDER

CHAIR LOWELL – Good evening ladies and gentlemen. Welcome to the Special Planning Commission Meeting. Today is Thursday, December 15, 2016. The time is just after 7:00. It looks like it is 7:08 PM. I would like to call the meeting to order. Ms. Tadeo, could we have the roll call please?

ROLL CALL

Commissioners Present:
Commissioner Ramirez
Commissioner Baker
Commissioner Sims
Commissioner Gonzalez
Commissioner Nickel
Vice Chair Barnes
Chair Lowell
Commissioner Korzec - Excused Absent

Staff Present:
Rick Sandzimier, Planning Official
Paul Early, Assistant City Attorney
Erica Tadeo, Administrative Assistant
Jessica Descoteaux, Associate Planner
Adria Reinertson, Fire Marshal
Chris Ormsby, Senior Planner
Eric Lewis, City Traffic Engineer

Speakers:
Rafael Brugueras
Damon Allen

CHAIR LOWELL – Thank you very much. Vice Chair Barnes, could you lead us in the Pledge of Allegiance please?

PLEDGE OF ALLEGIANCE

CHAIR LOWELL – Thank you very much. Would anyone like to make a motion to approve tonight's Agenda?

APPROVAL OF THE AGENDA

COMMISSIONER BAKER – I will.

CHAIR LOWELL – Motioned by Commissioner Baker. Do we have a second?

COMMISSIONER GONZALEZ – I second.

CHAIR LOWELL – We have a second by Commissioner Gonzalez. All in favor, say aye.

CHAIR LOWELL – Aye.

VICE CHAIR BARNES – Aye.

COMMISSIONER RAMIREZ – Aye.

COMMISSIONER BAKER – Aye.

COMMISSIONER SIMS – Aye.

COMMISSIONER GONZALEZ – Aye.

COMMISSIONER NICKEL – Aye.

CHAIR LOWELL – All opposed say nay. No opposed. The motion passes 7-0. Tonight's Agenda is approved.

Opposed – 0

Motion carries 7 – 0

CHAIR LOWELL – That moves us onto our Consent Calendar.

CONSENT CALENDAR

All matters listed under Consent Calendar are considered to be routine and all will be enacted by one rollcall vote. There will be no discussion of these items unless Members of the Planning Commission request specific items be removed from the Consent Calendar for separate action.

APPROVAL OF MINUTES

Planning Commission - Regular Meeting - November 10, 2016 at 7:00 PM

Approve as submitted.

CHAIR LOWELL – Tonight we have one Consent Calendar item, which is approval of Minutes from the Regular Planning Commission Meeting from November 10, 2016. Unless we have any comments, I would like to make a motion to approve the Minutes. Do we have any comments or discussion?

COMMISSIONER NICKEL – I'll be abstaining since I wasn't seated.

VICE CHAIR BARNES – I'll second the motion.

CHAIR LOWELL – Then, all in favor, say aye.

CHAIR LOWELL – Aye.

VICE CHAIR BARNES – Aye.

COMMISSIONER RAMIREZ – Aye.

COMMISSIONER BAKER – Aye.

COMMISSIONER SIMS – Aye.

COMMISSIONER GONZALEZ – Aye.

CHAIR LOWELL – All opposed say nay. Abstaining we have Commissioner Nickel, so the motion passes 6-0 with one abstention. The Minutes are approved.

Opposed – 0

Motion carries 6 – 0 – 1 with one abstention

CHAIR LOWELL – That moves us onto Public Comments.

PUBLIC COMMENTS PROCEDURE

Any person wishing to address the Commission on any matter, either under Public Comments section of the Agenda or scheduled items or public hearings, must fill out a "Request to Speak" form available at the door. The completed form must be submitted to the Secretary prior to the Agenda item being called by the Chairperson. In speaking to the Commission, member of the public may be limited to three minutes per person, except for the applicant for entitlement. The Commission may establish an overall time limit for comments on a particular Agenda item. Members of the public must direct their questions to the Chairperson of the Commission and not to other members of the Commission, the applicant, the Staff, or the audience. Additionally, there is an ADA note. Upon request, this Agenda will be made available in appropriate alternative formats to persons with disabilities in compliance with the Americans with Disabilities Act of 1990. Any person with a disability who requires a modification or accommodation in order to participate in a meeting should direct their request to Guy Pagan, our ADA Coordinator, at (951) 413-3120 at least 48 hours prior to the meeting. The 48-hour notification will enable the City to make reasonable arrangements to ensure accessibility to this meeting.

NON-PUBLIC HEARING ITEMS

None

CHAIR LOWELL – Do we have any speakers waiting to talk on Non-Public Hearing Items?

ADMINISTRATIVE ASSISTANT ERICA TADEO – There is just one.

CHAIR LOWELL – Perfect, Mr. Brugueras.

SPEAKER RAFAEL BRUGUERAS – Good evening, Chair, Commissioners, Staff, Residents, and Guests. It is a great honor to be back here tonight with each one of you. It has been a little while. I've been busy meeting the residents of Moreno Valley. When I was campaigning for Mr. Brian Lowell and Dr. Gutierrez, I had a great honor, really. It is a beautiful city with a lot of different cultures. We have a wonderful city, and we made promises to them. We talked about public safety. We talked about jobs. We talked about development. We talked about having a peaceful place to live in, clean, and I made promises to them. And you're going to hear my promises tonight. You're going to see me a lot more than you ever did before because I promised them that I will fight for development and jobs to give people chances to go back to work. I always give them my story that my mother did for me, and I am going to share it with you and to those that are listening. When I was young and I was staying at my mother's, my mother always threw me out to go look for work, but she always gave me $2.00 so I can always have something to eat and take the train, have car fare. But there are two things I learned growing up, as of today, I don't steal and I don't beg because I have $2.00 in my pocket. Each one of you is in a position to help this city not to beg and steal. We can develop and bring jobs here. We have a great responsibility now more than ever since our country is now moving towards that purpose of bringing back jobs, and we have land in this city, and we have people that want to work in this city. Whether we start at $10.00, $15.00, or $20.00, we don't want to beg, and we don't want to steal. We just want to pay our bills and live a happy life. I am going to keep my promise to them. You'll see me a lot more, and thank you so much for coming back tonight.

CHAIR LOWELL – Thank you, Mr. Brugueras. Any other speakers?

ADMINISTRATIVE ASSISTANT ERICA TADEO – No.

CHAIR LOWELL – Last chance for Non-Public Hearing Items. Anybody want to speak? Okay, Non-Public Hearing Item portion is now closed. Moving onto the Public Hearing Items. The first Public Hearing Item tonight is PA16-0027, a Conditional Use Permit for a Banquet Facility. The Case Planner is Ms. Julia Descoteaux.

PUBLIC HEARING ITEMS

1. Case:	PEN16-0059 (PA16-0027) – Conditional Use Permit for a Banquet Facility (Existing Structure)
Applicant:	Huber Gutierrez
Owner:	Formosa Rentals, LLC

Representative:	Huber Gutierrez
Location:	24805 Alessandro Boulevard, Unit #9 at the southwest corner of Alessandro and Perris Boulevards (APN: 482-540-028)
Case Planner:	Julia Descoteaux
Council District:	3
Proposal:	PEN16-0059 (PA16-0027) – Conditional Use Permit for a Banquet Facility (Existing Structure)

STAFF RECOMMENDATION

Staff recommends that the Planning Commission **APPROVE** Resolution No. 2016-26, and thereby:

1. **CERTIFY** that this item is exempt from the provisions of the California Environmental Quality Act (CEQA), as a Class 1 Categorical Exemption, CEQA Guidelines, Section 15301 for Existing Facilities; and

2. **APPROVE** PEN16-0059 (PA16-0027) Conditional Use Permit (Existing Structure) subject to the attached Conditions of Approval included as Exhibit A.

ASSOCIATE PLANNER JULIA DESCOTEAUX – Good evening Planning Commissioner's. I am Julia Descoteaux, and I am the Associate Planner. I am the Planner for this project, which is a Conditional Use Permit for a Banquet Facility located in an existing structure at 24805 Alessandro Boulevard. The proposal is to establish a new 5000 square foot Banquet Facility, which will host social events such as weddings, wedding receptions, seminars, meetings, and operate on an as-needed basis generally Friday through Sunday. The Banquet Facility proposes to accommodate approximately 200 people at any given time, and the Applicant has indicated that there will be no alcohol sales and any food will be catered by outside licensed vendors. The Banquet Facility is located in the southwestern portion of the shopping center, and the space currently has single doors. The Applicant will be modifying that to add double doors in the front for better access to the facility. The existing shopping center has a variety of other commercial uses within the center including restaurants, a medical clinic, and retail offices and service-related businesses. It is in the Community Commercial Zone, which is intended to provide for general shopping needs of the area residents. Surrounding the shopping center includes commercial to the west and east and then residential uses are north of Alessandro Boulevard and the area behind, the south portion, is zoned for residential. Currently, there is a site behind this location that is vacant land and then, a little bit to the southwest, there are residential homes. The proposed facility in the shopping center, there will be no changes to the parking lot. The Parking Study was done, and there is adequate parking for this use and the other uses within the center. The proposal requires a Conditional Use Permit because it's within 300 feet of a Residential Zone, and the application was submitted on May 9, 2016. To date, all concerns or issues have been adequately addressed between City Staff and the Applicant. The proposal is in an existing center and, based on the use, size, and location, the project qualifies as a Class I Categorical Exemption under CEQA, Section 15301, for Existing Facilities. Notification was sent to all property owners within 300 feet and, to date, we have had no phone calls regarding the site. Staff recommends that the Planning Commission **APPROVE** Resolution 2016-26 certifying that the project is exempt from the provisions of the California Environmental Quality Act (CEQA) as a Class I Categorical Exemption and **APPROVE** PEN16-0059 Conditional Use Permit and the Existing Structure. The other Case number you'll note there is PA16-0027. That application came in prior to our conversion in ACP, so there are two numbers, but the new number is the PEN16-0059. This concludes my Staff Report, and myself and the Applicant are here to answer any questions for you. Thank you.

CHAIR LOWELL – What does the PEN stand for?

ASSOCIATE PLANNER JULIA DESCOTEAUX – Planning Entitlement.

CHAIR LOWELL – Awesome. Any questions for Staff before I move onto the Applicant? Commissioner Sims, go for it.

COMMISSIONER SIMS – It states that there is not going to be alcohol sales at the location. Is that the same….is that different than this is a wedding where they have receptions and so forth? Is it that the people that will be renting the hall can bring their own alcohol or set up their own bar, or how does that work?

ASSOCIATE PLANNER JULIA DESCOTEAUX – Currently, the application does not allow for alcohol at the site. If they intended to serve alcohol, they would have to come back and modify the Conditional Use Permit and also get a license from ABC.

COMMISSIONER SIMS – So I guess my question is…….

ASSOCIATE PLANNER JULIA DESCOTEAUX – No. They can't bring in alcohol.

CHAIR LOWELL – Consumption is different.

COMMISSIONER SIMS – Alright, thank you. Not that I am necessarily opposed to that, I just was wondering. It was just for my clarification, that's all. I wanted to know.

ASSOCIATE PLANNER JULIA DESCOTEAUX – Okay.

CHAIR LOWELL – Any other questions for Staff?

VICE CHAIR BARNES – Yes.

CHAIR LOWELL – Vice Chair Barnes.

VICE CHAIR BARNES – So ABC has a license for consumption only?

ASSOCIATE PLANNER JULIA DESCOTEAUX – Yes. They have to go through PD for that, the police department, as well.

VICE CHAIR BARNES – Okay. I had the same question. I also have a question on P3. It says 6:00 PM to 2:00 AM, so they couldn't have a Saturday afternoon function at 3:00?

ASSOCIATE PLANNER JULIA DESCOTEAUX – That's correct.

VICE CHAIR BARNES – Really? Their choice, or is that a City requirement?

ASSOCIATE PLANNER JULIA DESCOTEAUX – That is the way the application was submitted.

VICE CHAIR BARNES – Okay. P9 talks about site lighting. You know, it has to be maintained. Are they responsible for the maintenance?

ASSOCIATE PLANNER JULIA DESCOTEAUX – They and the landlord of the center. If there is something, they would have to contact their landlord and the landlord, so they would work together.

VICE CHAIR BARNES – Okay. My concern is that the landlord could impact their Conditional Use Permit because that same item applies in another condition where site maintenance is a condition. F2 talks about the fire alarm and an occupancy of 300 or more but the opening description talked about, I think, 200 max. So, does F2 not apply?

ASSOCIATE PLANNER JULIA DESCOTEAUX – That would not, based on the condition, would not apply. However, when they submit to Building and Safety and Fire, they'll look at the occupancy load and make a determination of the ultimate……

VICE CHAIR BARNES – It will be revisited.

ASSOCIATE PLANNER JULIA DESCOTEAUX – But, if the ultimate load does come out at the 300, then they would have to meet this condition.

VICE CHAIR BARNES – Okay, and I think that was it. Yeah, that was it. Thank you very much.

COMMISSIONER BAKER – Brian, I got one question.

CHAIR LOWELL – Commissioner Baker.

COMMISSIONER BAKER – A couple items here, and we may have them covered but I assume, I don't know what our rule is, I was always of the opinion, if you had 5000 square feet or more, you had to put a sprinkler system in. Is that correct? And I couldn't tell if they had sprinklers in there when I went there and looked at it. You know, automatic fire sprinkler.

ASSOCIATE PLANNER JULIA DESCOTEAUX – That would fall under the Building Code and Fire Code if it's required for their tenant improvement. However, it's an Existing Structure.

COMMISSIONER BAKER – It's what, Existing Structure?

ASSOCIATE PLANNER JULIA DESCOTEAUX – It's an Existing Structures, so…..

COMMISSIONER BAKER – It's a different issue then, right?

ASSOCIATE PLANNER JULIA DESCOTEAUX – And we can let fire address that.

FIRE MARSHAL ADRIA REINERTSON – Commissioner Baker, Adria Reinertson, Fire Marshal. The Existing Facility is fully sprinklered. Under our Municipal Code, we sprinkler new structures at 3600 square feet.

COMMISSIONER BAKER – 3600 okay.

FIRE MARSHAL ADRIA REINERTSON – Yes, and the assemblies, it just depends on what they are being used for and what their occupant load is.

COMMISSIONER BAKER – Very good.

FIRE MARSHAL ADRIA REINERTSON – So Code would be 300 occupants.

COMMISSIONER BAKER – Thank you so much. One other item I had. I know they are not going to prepare food there, but being from a food service background, what are they going to do for grease interceptor because, even if they are scraping plates off, you are going to have a waste issue there. I couldn't see any 3-VAT sinks on the plans. Is that something we need to deal with here, or is that Building and Safety or somebody else? I guess Health Department, right?

ASSOCIATE PLANNER JULIA DESCOTEAUX – That would fall under Building and Safety, and the Health Department, and probably EMWD too if it has to do with the drains.

COMMISSIONER BAKER – Okay, very good. Thank you.

CHAIR LOWELL – Commissioner Sims.

COMMISSIONER SIMS – Speaking of Eastern Municipal Water District, on this, I don't see there are any comment letters or any response. So the occupancy load potentially could be, with that kind of occupancy, could change like the sewer connection…..how does that work out? Is that done during building review or as circulated?

ASSOCIATE PLANNER JULIA DESCOTEAUX – Yes. That would be done during the building review and the Applicant has already been in contact with EMWD as well.

CHAIR LOWELL – Any other questions? Okay, I would like to invite the Applicant up please.

APPLICANT HUBER GUTIERREZ – Good evening.

CHAIR LOWELL – Good evening.

APPLICANT HUBER GUTIERREZ – My name is Huber Gutierrez, so we are the Applicant's and basically she already said it all. So it is going to be a Banquet Hall. Hopefully, you guys can approve it, and I don't know if you guys have any questions or any concerns or any other questions?

CHAIR LOWELL – Not right now. I don't think so. We were just inviting you up to have a chance to speak.

APPLICANT HUBER GUTIERREZ – Yeah, okay. Well basically what it is, it is just going to be a venue for social events. You know, we're not selling alcohol. However, I was a little confused when you guys mentioned something about that.

The guests, I guess they will be allowed to bring their own alcohol. We're not going to sell the alcohol, so I don't know how that is going to work.

CHAIR LOWELL – That was one of the concerns we had is if selling alcohol is the same as consuming alcohol and if there is a separate permit just for onsite consumption.

APPLICANT HUBER GUTIERREZ – I do not know. I have no….I don't have that information. I spoke to ABC over the phone, and they told me that there is no, we don't need a license for that because we're not selling alcohol there. We're not selling it. There might be alcoholic consumption, but we're not selling it so.

CHAIR LOWELL – We'll find out in a little bit. We will get down to that.

APPLICANT HUBER GUTIERREZ – Okay so, what else, I think basically I just wanted to point that out.

CHAIR LOWELL – Okay. If everything goes in favor, when do you guys plan on opening up?

APPLICANT HUBER GUTIERREZ – Within three to four months possibly, yeah.

CHAIR LOWELL – Perfect.

APPLICANT HUBER GUTIERREZ – Yeah.

CHAIR LOWELL – I appreciate it. Thank you.

APPLICANT HUBER GUTIERREZ – You're welcome.

CHAIR LOWELL – Do we have any Public Speakers? Any Comment Slips tonight?

ADMINISTRATIVE ASSISTANT ERICA TADEO – Just one, Rafael Brugueras.

CHAIR LOWELL – Mr. Rafael, you are up.

SPEAKER RAFAEL BRUGUERAS – Good evening once again, Chair, Commissioners, Staff, Guests, and Residents. I looked at this plan, and I went over to the site myself yesterday, and I read it. Planning Division General Conditions, Building and Safety, Fire Prevention Bureau, and Police Department, and I said to myself I need to come and meet the Applicant in person and ask him is he ready to do business in Moreno Valley because he needs to understand that he is going to meet the Commissioners and you kept me true to your questions of asking safety questions and concerns to other residents that are going to be walking or using that plaza for business. You know, and they may interact with their guests or somebody may go outside and maybe sip on his beer or a little drink. We don't know what people do, but we know that they are not going to sell alcohol. But we know that weddings, they have wine and alcohol at many weddings and I'm hoping that, if he is not responsible, the Applicant that is going to rent the facility may come to the City and get a permit to consume that alcohol there without making them responsible. I didn't hear that. I know that you're going to work it out. You mentioned that. So I'm happy for them because he said yes to your challenges, and he is willing to work with the Staff and the City to bring this business to Moreno Valley. This plaza needs a light on that side of the plaza because, the other side of the plaza, we have the 99 Cent Store and other facilities on that side. That side is well lit. Then, on the other side that we just mentioned, you have small businesses, the laundry mat and other little things. By having them on the weekend and at least fixing the lights and everything in the parking lot, that will help a lot with, once again, the residents that come to do business in that area next to them because I understand that he will be next to the restaurant that is there now. Anything that we can add to that side of the plaza is a plus for Moreno Valley. The good thing about it is we're going to allow 200 families to be together in a larger place because I thought about all the hotels that we have here that they only have small rooms like this. Sometimes families cannot find a larger place to enjoy, and there may be meetings and things like that. So we are going to bring a host of different people to our city that get a chance to see and hopefully, in time, we can start repairing Perris Boulevard to look a lot nicer and cleaner because it's an old city with its own history. And we would like to change it to a little modern look as time goes on with his help and others. Thank you for listening, and I hope you support him and approve his project. Thank you.

CHAIR LOWELL – Thank you very much, Mr. Brugueras. Would the Applicant like to respond to anything else you've heard tonight so far? Yes, no, maybe so? Okay, with that said, let's go into Commissioner Discussion. Anybody have any questions or concerns so far? We have Mr. Barnes ready to go.

VICE CHAIR BARNES – I guess I want to follow up on the alcohol issue. He has expressed a desire for the patrons to be able to consume if they are having a wedding reception or something so my only question is, should we approve this, does it make the addition of alcohol consumption more complicated for him? Or should that issue be resolved prior to this approval because I don't want to make it more complicated for him?

PLANNING OFFICIAL RICK SANDZIMIER – I think we're covered with the condition the way that it is written. The condition on page 45 is specifically written by our police department. It is Condition PD6 basically saying that ABC approvals will be required for alcohol license in this area. We can change that by adding a couple words. When applicable would be one way to do it because the ABC licensing is required if there is going to be any sale on the site. So, if they brought in somebody who was going to run a bar and they were going to sell it to the people that were coming to the event, that would be restricted. But, if they could qualify with the vendor…..

VICE CHAIR BARNES – But if it was provided by the host….

PLANNING OFFICIAL RICK SANDZIMIER – If the vendor was providing their own license, they may qualify. If the alcohol was free and was just provided as a host by the party, then we're covered here. There is an enforcement issue, but it basically relies on the person who is running the Banquet Facility to make sure that they are in compliance. Now, they are going to have to get a Business License from the City. If they want to indicate in there that they intend to have an ABC license provided by the person who provides the alcohol and it's not their responsibility, I can work with the Business License folks and see if there is a way to document that. But I think we're covered here.

VICE CHAIR BARNES – I just don't want to make it more complicated for him because if this were to be approved and then he is adding that after the fact, but if it could be addressed independently and not create any heartache then I'm good with it.

PLANNING OFFICIAL RICK SANDZIMIER – Our Municipal Code is more specific to convenient stores that are selling alcohol.

VICE CHAIR BARNES – Yeah.

PLANNING OFFICIAL RICK SANDZIMIER – And then the ABC License I think our attorney may want to answer here.

ASSISTANT CITY ATTORNEY PAUL EARLY – I don't know if I had anything to add other than to simplify. I think that the way it is written is as the Applicant has stated. There is no sales allowed but, if people bring in and serve alcohol (alcohol service), there is nothing restricting that at this point either under the Conditions or our Codes.

VICE CHAIR BARNES – Yeah, I think that's what Jeff and I were….

CHAIR LOWELL – Do you need a permit to consume alcohol onsite?

ASSISTANT CITY ATTORNEY PAUL EARLY – My five-minute research on ABC Licenses here on this because I sensed this coming up was that there is an exception under the ABC for what they deem to be private parties. That is a commercial establishment that's not open to the public. Obviously, it's going to be a case by case analysis. If they turned this into a facility where they were basically inviting the public in, they would be required to have a license and ABC would come down pretty hard on them if they were engaging in that type of activity. But, if they hold true to the a wedding where it's only the wedding guests who are present and they are not selling the alcohol, I don't believe an ABC License is going to be required.

CHAIR LOWELL – Okay so the nature of the proposal, with a private banquet facility where the patrons bring their own alcohol and disperse it freely to the guests at a private event, there is no conflict? There is no problem with ABC?

ASSISTANT CITY ATTORNEY PAUL EARLY – That would be allowed under our Code under these Conditions and, assuming they hold true to all of ABC's regulations, then yes, that would be true for them as well.

VICE CHAIR BARNES – It sounds like we're good then.

ASSISTANT CITY ATTORNEY PAUL EARLY – If your intention is to recognize that alcohol will be onsite, yes.

VICE CHAIR BARNES – Assuming, yeah, okay.

ASSISTANT CITY ATTORNEY PAUL EARLY – If your intention was not, then you wouldn't be good.

VICE CHAIR BARNES – I understand. Okay.

COMMISSIONER NICKEL – I have one question, Paul, excuse me. What would be the liabilities say they didn't follow through with getting okays for outside alcohol to come in and be consumed and one of their guests goes out and t-bones a family of four at Perris and Cactus. Who bears the liability for that? Because I mean bars and all have to know when to cut off.

ASSISTANT CITY ATTORNEY PAUL EARLY – Well the City wouldn't bear any liability. I can speak to that. The facts of your scenario, I can guarantee you a number of people would be included in that suit including the banquet facility, the hosts of the event, whoever served the alcohol or gave the alcohol to the person, whoever owned the vehicle that was involved in the collision whether or not they were the driver of the vehicle. All those people are likely to be brought into the suit. But, you know, that's the nature of our system.

COMMISSIONER NICKEL – Yeah.

CHAIR LOWELL – Yes, Commissioner Ramirez.

COMMISSIONER RAMIREZ – With regards to the facility being open until 2:00 AM, is this facility going to be required to have security or will they be using the onsite security at the shopping center?

ASSOCIATE PLANNER JULIA DESCOTEAUX – There is a Condition of Approval that states that, if there is concern, they would have to have……..If PD determines there is a concern later on, then they would have to provide security.

COMMISSIONER RAMIREZ – I have one question for the Applicant. What led you to open the business? Did you see a need for these types of facilities for families to gather? Can you come up to the microphone?

ASSISTANT CITY ATTORNEY PAUL EARLY – They just want to make sure it captures it all on the record. Thank you.

APPLICANT HUBER GUTIERREZ – I'm sorry. Yeah, definitely, we saw the need. There are just a few of them within the city. About a year ago, we had an event in the family, and it was kind of hard for us to find one available at the time that we needed it. So, you know, that kind of got knocking in our heads, and we own a business currently here within the City of Moreno Valley so I guess we have the entrepreneurial spirit so basically that is it.

COMMISSIONER RAMIREZ – Thank you.

APPLICANT HUBER GUTIERREZ – You're welcome.

CHAIR LOWELL – Commissioner Sims, you are on.

COMMISSIONER SIMS – Commissioner Ramirez asked my question. I looked at Condition P8, and it is pretty vague. But, if you have 200 people and there is alcohol and it is a wedding reception, it sounds like a good time. But I guess I just don't know how the……I guess is it just a matter of the activity that would be monitored by the PD that would then trigger some action? How would that go down as far as…..

COMMISSIONER NICKEL – After something happens?

COMMISSIONER SIMS – Yeah, something bad has to happen to trigger it and then we get a Condition or how does that work?

ASSOCIATE PLANNER JULIA DESCOTEAUX – That was a recommendation by the police department to have security there, but it is only a recommendation. They didn't want to place the condition out there. Normally, they give them the benefit of the doubt to begin with that everything is going to function properly and then, if it doesn't, then they come back and enforce the condition. Usually, it is up to the Applicant to make sure that they are providing a secure venue.

PLANNING OFFICIAL RICK SANDZIMIER – Mr. Chairman…..

COMMISSIONER SIMS – I just, I have been to a lot of weddings and the ones that I have seen that has been a hosted bar tend to be the consumption goes significantly more than the non-hosted bar so I think you're squaring up that you're going to need security potentially. I don't know what, are there other venues like this in the City and there is a requirement for security? I know that there is….

CHAIR LOWELL – There's one right here.

COMMISSIONER SIMS – Isn't there a venue over there by the…….

CHAIR LOWELL – Elsworth isn't it?

COMMISSIONER BAKER – Elsworth and…..

CHAIR LOWELL – The Jack in the Box parking lot.

COMMISSIONER SIMS – I was thinking of the one over there, it is the shopping center by the, it's where the dance studio is and the gymnastic place. There is kind of like a stand-alone little place right there. Is there a requirement for that one to have security?

SENIOR PLANNER CHRIS ORMSBY – I believe we looked at the Conditions for that. I believe they are similar to this project, and that project is actually relocating behind the Taco Bell, which is just a little bit east of there.

CHAIR LOWELL – Any other questions or comments?

PLANNING OFFICIAL RICK SANDZIMIER – Mr. Chairman, if I may.

CHAIR LOWELL – Mr. Sandzimier.

PLANNING OFFICIAL RICK SANDZIMIER – Just for clarification, on page 45, the condition I was referring to PD6, I would like to recommend that we add some additional language to that. The additional language I would like to add at the end would be to strike the period at the end of the sentence and add the words as required by California Department of Alcoholic Beverage Control Regulations. Then, with respect to, what enforcement opportunities or options would the City have? If they did not follow this requirement, say they did have an event and they were found to not be following ABC regulations, then we would have some grounds at least protected through this Conditional Use Permit approval. And, by our Municipal Code, it does allow the City to revoke a Conditional Use Permit if they are operating in violation. That isn't going to stop the event from happening, but it does maybe give us some protection if we ensure this here and the Applicant is fully aware that, if we do move forward and approve this this evening, that you're expecting them to be a responsible business and that they will follow these regulations. In terms of security, I apologize, I don't know what we we've put on the other banquet facilities we have in town. That was not something that…..

CHAIR LOWELL – I know that some of the bars that we've approved, they've required private security. Some Applicant's have required security, some haven't so I think it is a case by case basis.

PLANNING OFFICIAL RICK SANDZIMIER – Okay.

CHAIR LOWELL – One of the conditions in here, it says that there are supposed to be responsible for security should any measures arise, so it's kind of an as-needed condition so I'm comfortable with it. One of the other questions that I had that it doesn't appear to be an issue yet. Currently, to the south of the property, it is vacant. But, if something else comes in that's like a sensitive use that's like a residential site, I didn't see any noise regulations as a condition, so they are operating until 2:00 in the morning and it says generally Friday through Sunday but other days as needed so it could be possible that they are on a work day and they have a huge party until 2:00 AM. What's the noise regulation? Is it just the City's Standard Noise Regulation that they have to have quiet hours after what, 10:00?

PLANNING OFFICIAL RICK SANDZIMIER – That would be true, correct.

CHAIR LOWELL – There is no exception in this CUP?

PLANNING OFFICIAL RICK SANDZIMIER – No.

CHAIR LOWELL – I'm perfect with that. Any other questions or comments? Concerns?

COMMISSIONER BAKER – I had one other question. On the issue with the ADA, and I don't know if you require that, but the one thing that I did notice is there are no ramps or ADA spaces in front of this property. I mean it's null and void. It's about three doors I think. I would like to see that happen because you're going to have some older folk coming in that need, and I don't know if you can build that into the program or not.

PLANNING OFFICIAL RICK SANDZIMIER – We can.

COMMISSIONER BAKER – It does address the ADA issue. I just don't know if we went that deep with it or not for parking and the ramp?

PLANNING OFFICIAL RICK SANDZIMIER – So what you're asking for, we could draft a Condition that, prior to the issuance of a Building Permit, that the

Applicant demonstrate that the parking lot would be modified to include appropriate ADA parking spaces within the proximity to the new business.

COMMISSIONER BAKER – Yeah.

PLANNING OFFICIAL RICK SANDZIMIER – I would ask, before we put that condition in there….do we already have it in there?

ASSOCIATE PLANNER JULIA DESCOTEAUX – Yeah, B4.

COMMISSIONER BAKER – B4? Okay, good enough.

PLANNING OFFICIAL RICK SANDZIMIER – Okay. It sounds like we might already have that in there. The Condition is…..

ASSOCIATE PLANNER JULIA DESCOTEAUX – Before.

COMMISSIONER BAKER – Before? Okay good. Okeydoke, very good.

CHAIR LOWELL – Okay. I think all of our questions have been asked and answered. Would anybody like to make a motion?

COMMISSIONER NICKEL – I'd like to make one comment. I'm still not settled with the alcohol issue, and that's probably because I do have a bias as a critical care nurse for many, many years. I'm also concerned from the standpoint that we're hoping that everything is being done in good faith. And, when I went up and went around the rear of this site, there is a tire change store that is actually dumping tires. So, if the center can't follow those rules as simple as the trash dumpster, why am I to believe this is going to be safe for the public? That's just where I'm coming from.

CHAIR LOWELL – Well this permit is Applicant based. So, if the Applicant messes up, then they lose own permit. It's more of an enforcement issue than anything.

COMMISSIONER SIMS – I'd like to make a motion.

CHAIR LOWELL – Feel free to click the screen.

COMMISSIONER SIMS – What's that?

CHAIR LOWELL – Feel free to click the screen.

COMMISSIONER SIMS – Oh.

CHAIR LOWELL – Go ahead. Read your motion.

COMMISSIONER SIMS – I would like to recommend that the Planning Commission **APPROVE** Resolution No. 2016-26 and (1) **CERTIFY** that this Item is exempt from the provisions of California Environmental Quality Act as a Class I Categorical Exemption, CEQA Guidelines Section 15301, for Existing Facilities and (2) **APPROVE** PEN16-0059 (also referred to as PA16-0027) Conditional Use Permit for Existing Structures subject to the attached Conditions of Approval included as Exhibit A.

CHAIR LOWELL – The Conditions are as amended.

ASSISTANT CITY ATTORNEY PAUL EARLY – As proposed by the Planning Official?

CHAIR LOWELL – Yes.

ASSISTANT CITY ATTORNEY PAUL EARLY – With those amendments?

COMMISSIONER SIMS – Exactly.

CHAIR LOWELL – We have a motion by Commissioner Sims. We have a second by Vice Chair Barnes. All in favor, please cast your vote. I guess anybody cast your vote, not just in favor. All votes have been cast. Going once, going twice, the motion passes 6-0 with one abstention. The motion passes. Do we have a Staff wrap-up on this item?

Opposed – 0

Motion carries 6 – 0 – 1 with one abstention

PLANNING OFFICIAL RICK SANDZIMIER – Yes. This Item is an appealable action by the Planning Commission. If any interested party is inclined to want to appeal, they can file their appeal within 15 days of this action. They would direct that letter to the Community Development Director, and it would be going to the City Council within 30 days.

CHAIR LOWELL – Thank you very much. That moves us onto Item No. 2, which is Case PEN16-0020 formerly PA16-0002, a Plot Plan. The Applicant is SRG Acquisition, LLC, and the Case Planner is, once again, Ms. Julia Descoteaux.

2. Case: PEN16-0020 (PA16-0002) Plot Plan

Applicant: SRG Acquisition, LLC

Owner: Vogel Properties, LLC

Representative: Patrick Russell, SRG Acquisition, LLC

Location: SWC Indian Street & Grove View Road

Case Planner: Julia Descoteaux

Council District: 4

Proposal: PEN16-0020 (PA16-0002) – Plot Plan

STAFF RECOMMENDATION

Staff recommends that the Planning Commission **APPROVE** Resolution No. 2016-24 and 2016-25, and thereby:

1. **CERTIFY** that Final Environmental Impact Report (EIR, Attachment 2) PEN16-0019 (P16-003) for the Indian Street Commerce Center on file with the Community Development Department has been completed in compliance with the California Environmental Quality Act, the Planning Commission reviewed and considered the information contained in the Final EIR, and the Final EIR reflects the City's independent judgment and analysis as provided for in Planning Commission Resolution No. 2016-24; and

2. **ADOPT** the Findings and Statement of Overriding Considerations regarding the Final EIR for the Indian Street Commerce Center, attached hereto as Exhibit A to Resolution 2016-24; and

3. **APPROVE** the Mitigation Monitoring Program for the Final EIR for the proposed project, attached hereto as Exhibit B to Resolution 2016-24; and

4. **APPROVE** PEN16-0020 (PA16-0002) Plot Plan subject to the attached Conditions of Approval included as Exhibit A to Resolution 2016-25.

ASSOCIATE PLANNER JULIA DESCOTEAUX – Good evening again. The Item before you today is a Plot Plan for a 446,350 square foot warehouse building to be located on 19.64 acres in the Moreno Valley Industrial Area Specific Plan 208. The project provides for two alternatives, one for manufacturing and one for warehouse distribution, with differences being the number of parking required and the number of loading bay doors. The footprint of the building, the site access, landscaping, and water quality features will be the same for both alternatives. All the shipping and receiving areas will be located on the south side of the building with the opportunity for truck queueing along the north and west sides of the building. The proposed facility is a permitted use within the Industrial Area in the Zone in the Specific Plan. The plan is intended to provide locations for medium to heavy industrial and warehouse land uses. The proposed warehouse building is being built as a shell building for a single or multiple tenant occupancy with no tenant currently identified. The surrounding properties are also identified as industrial within the Specific Plan. Properties to the north include vehicle storage yards and operating warehouse distribution facilities. To the south, is an existing warehouse and, further south, is the City of Perris. There is a Waste Management Transfer Station to the northeast of the site and vacant land and existing facilities both to the east, north, and west. The project will take access from Indian Street at two locations with one driveway to the north being for auto vehicles, and parking is provided on the site per the City's Code Requirements with the parking areas designed with the required number of parking spaces and landscaping depending on the type of use being warehouse and manufacturing. The design of the building includes a concrete tilt-up building approximately 47 feet high with the use of color, reflective glazing, canopies, and mullions as decorative features. Landscaping and water quality areas will be designed and installed per the City's Municipal Code using water saving and drought tolerant design. The initial study was prepared for the project and determined that an Environmental Impact, EIR, was the appropriate environmental document for the project and it should focus on seven areas including air quality, biological resources, cultural resources, global climate change and greenhouse gas emissions, hazard and hazardous materials, hydrology and water, noise, transportation, and traffic. The EIR was prepared by Applied Planning with a Peer Consultation by First Carbon Solutions. The draft was circulated in August with the review period ending on October 10, 2016. Ten comment letters were received. All the comment letters were reviewed and responded to in the Final EIR, which was sent out on December 2, 2016 in advance of this meeting. The analysis presented in the EIR indicated that there are areas where the potential impact was significant and Mitigation Measures were implemented to reduce the impact to less than significant. Those that could not be reduced to a less than significant impact are listed in Section 4.0 of the Final EIR as significant and unavoidable and include air quality, greenhouse gas, and also traffic. The Planning Commission is asked to consider the Findings of Facts and Statement of Overriding Considerations for the project. CEQA requires that the decision-making agency balance the economic, legal, social, technological, and other benefits of a proposed project against its unavoidable environmental impacts. This would include project benefits such as the creation of jobs and other desired beneficial features versus the impacts of the project. Some benefits that were specifically identified included in your report are construction jobs, new jobs when the facility opens, the construction of the infrastructure around the facility. Mitigation Measures are also included, and they will be monitored under the reporting process. Public notice was sent to all property owners within 300 feet, posted on the site, and placed in the Press Enterprise. It was also sent to all the commenter's of the Draft EIR, and they were provided the Final EIR with that notification. To date, I have not received any phone calls or questions regarding the project. We have provided you a Revised Condition of Approval for a couple typographical errors. With respect to Condition of Approval P8, the square footage is 446,350, and the ALUC-10, the height is 48 feet. Staff recommends that the Planning Commission **APPROVE** Resolution No. 2016-24 and 2016-25 **CERTIFYING** the Environmental Impact Report, **ADOPTING** the Findings and Statement of Overriding Considerations, **APPROVING** the Mitigation Monitoring Program, and **APPROVING** the project with the attached Conditions of Approval. Staff is available for any questions. The Environmental consultant, Ross Geller from Applied Planning, is here to answer any questions related to the Environmental Impact Report. And, with him, is the Traffic Consultant, and also the Applicant from Sares-Regis is here as well. We also received one letter from, one of the comment letters from Johnson and Sedlack, stating that they were withdrawing their comments. This concludes Staff's presentation, and at this time we can answer questions for you. Thank you.

CHAIR LOWELL – Thank you very much. Any questions for Staff? I don't see any hands going up. Okay, I'd like to invite the Applicant up please.

APPLICANT PATRICK RUSSELL – Good evening. My name is Patrick Russell. I'm with Sares-Regis Group. I think Julia has done a good job of describing the project, and I just want to thank Staff, as well as the Commission for considering our project approval this evening. I am available to answer any questions that you would have. I would just like to add that the project is going to be a model for sustainability. It will be built to LEED Silver Certified Award levels. We're also including a solar ray for renewable energy at the building roof. There are many other features that have to do with water quality, water conservation, energy conservation, and green design that will be included in the project. So this should be a great project. It will meet the demands for the market, as well as be very environmentally conscious. So I'd be happy to answer any further questions that you would have.

CHAIR LOWELL – Do you have a perspective tenant in mind? I know we're talking some manufacturing, some distribution. That's what the summary said.

APPLICANT PATRICK RUSSELL – This is a spec project. We don't have a specific tenant in mind, but it's designed to accommodate a wide range of users that could be warehousing, corporate headquarters, manufacturing, or E-commerce. E-commerce has been growing at a rate of more than 15% annually, and we're seeing more and more of that business so that's a good possibility that we'd have that type of user.

CHAIR LOWELL – Is the building going to be built in hopes of a future tenant, or are you going to hold off construction until you have a tenant that is signed on the line to build for them?

APPLICANT PATRICK RUSSELL – Once we receive our approvals from this, the entitlement approvals, as well as the building department approvals, we will proceed with construction probably around the first of April.

CHAIR LOWELL – Awesome, and I'm excited. I like to see new businesses come to town, and I like to see new employment opportunities for our residents locally. It's a breath of fresh air to see people willing to invest in our City, so I appreciate it. Any other questions for the Applicant?

COMMISSIONER GONZALEZ – I do.

CHAIR LOWELL – Commissioner Gonzalez.

COMMISSIONER GONZALEZ – Regarding sustainability and your first comment, how would you say this building compares to say some of the older buildings that were built back in let's say the 2000s? You don't have to go into detail but just something, a general statement, what's the big difference, kind of the meat of what's changed, what's evolved from the standard warehouse building in, let's say 2005/2006 and, you know, 10 years now.

APPLICANT PATRICK RUSSELL – There are many different facets. We can talk about electrical energy consumption how now we've gone to low energy fixtures, LED lighting. The insulation requirements are much more rigid these days. The demands for energy are much lower because of the types of glass that we use, shading on the windows. It just goes on and on. Cool roofs in all the conditioned areas. Furthermore, rather than just consuming energy, we are also generating energy so we've come a long ways. It doesn't really stop at the building either. If we really look at the site and what's happening there is that, back in the early 2000s, the storm water would just ran straight into the storm drain. It could be carrying constituents or hazardous, those types of things. Now, we have the best management practices where we're filtering the water and we're also restoring our Aquifers through the percolation basins that we provide. It goes onto drought tolerant landscape and all the types of irrigation that have evolved over time to really reduce water consumption, so I look at it as really a wholistic approach to the project in the way that they are designed. It really started with the whole LEED movement. Now, we have Cal-Green, which is also modeling a lot of those same things so, much of what is required today, is not even voluntary. The LEED Certification still is voluntary. Things like the solar generation are voluntary, but there are many Tidal 24 and Cal-Green requirements that are very good for energy conservation and sustainability.

COMMISSIONER GONZALEZ – Thank you.

CHAIR LOWELL – Any other questions? I didn't see it in the report, but are you guys planning on utilizing electric forklifts and electric, what do you call them, pigs or whatever they use for shuttling containers to and from the loading docks?

APPLICANT PATRICK RUSSELL – Yard goats.

CHAIR LOWELL – Yard goats. There we go.

APPLICANT PATRICK RUSSELL – What we have agreed to is that we will have non-diesel equipment. We primarily see the electric forklifts in these types of facilities. Sometime they use propane and other clean fuels, but the diesel is being discouraged.

CHAIR LOWELL – We have a couple of warehouses in town that utilize electric equipment, and it's kind of refreshing when you walk through the warehouses and see these zero emission vehicles and they are being recharged through solar, which it's just nice. It takes a lot of the pollution concerns away from a lot of the residents. With the solar, are you planning on operating the facility on 100% solar or are you just putting X amount of solar panels on the roof to produce a certain amount and the rest is just going to be purchased?

APPLICANT PATRICK RUSSELL – Correct. The solar is primarily, the load that will be covered will primarily be the office portion of the site on the project, but any further needs within the warehouse would be through common means.

CHAIR LOWELL – Okay, Thank you very much

APPLICANT PATRICK RUSSELL – But still we're looking at using LED type of lighting and again low-energy consuming fixtures in the warehouse plus a lot of ambient natural light with the sky-lighting, so the energy demands have come a long ways in terms of tapering that off.

CHAIR LOWELL – I'm assuming this isn't your first commercial building?

APPLICANT PATRICK RUSSELL – No.

CHAIR LOWELL – Do you happen to have a list of a couple of key tenants that you have in some of your other facilities just so we can get an idea of who you're trying to attract?

APPLICANT PATRICK RUSSELL – Sure. Across the street from us, we built the Deckers Facility, and we have just recently finished the QVC facility in Ontario. There is Pier One in Ontario as well so these are very common large quality users that we've been able to attract to our buildings.

CHAIR LOWELL – Well, I appreciate it. I was just trying to get an idea of who you're tenants were so Thank you very much. Any other questions for the Applicant before I move on? I don't see any hands going up. Thank you very much. I appreciate it.

APPLICANT PATRICK RUSSELL – Thank you.

PLANNING OFFICIAL RICK SANDZIMIER – Mr. Chairman.

CHAIR LOWELL – Yes, Mr. Sandzimier.

PLANNING OFFICIAL RICK SANDZIMIER – May I provide a little bit of a Staff clarification. Mr. Russell was very clear that the solar installation is a voluntary installation. It is not a requirement of the project. The project did get reviewed by the Airport Land Use Commission, and the Airport Land Use Commission did have concerns about solar installation that if it could disrupt anything with the aircraft at the base. So it's not that it's not allowed, but we assured the Airport Land Use Commission that the City itself would not be requiring the Applicant to put the solar on the building, so we are not requiring them to put that on. It is voluntary, and when it comes in for building permits, it will most likely have to go through another Airport Land Use Commission Review. They may have to do a Glare Study, and they may have to take it back. They can do that as long as they satisfy the Airport Land Use Commission. There is actually a specific condition in your Conditions of Approval this evening. It's on page 253 of the packet. It lists all the various items that the Airport Land Use Commission.

CHAIR LOWELL – Do you happen to have the Condition Letter Number because I don't have page numbers on mine.

PLANNING OFFICIAL RICK SANDZIMIER – The Condition Number is Airport Land Use Commission Condition 2. It starts at the bottom of page 252 and then it goes on to page 253 or page 12 of the report. It says that, any use which could cause some light to be reflected towards an aircraft engaged is an issue, so basically we want to look at anything that has the potential of reflecting upwards so that can be done. But, like I said, it would require subsequent review by the Airport Land Use Commission, and we can take care of that during the Building Permit Issuance Review.

CHAIR LOWELL – Vice Chair Barnes.

VICE CHAIR BARNES – While we're on the subject of ALUC. ALUC Condition 4: The attached notice shall be given to all perspective purchasers of the property. What notice will that be? Did I miss something?

ASSOCIATE PLANNER JULIA DESCOTEAUX – I apologize. I thought we included that at the end of Conditions of Approval so I don't have that with me.

VICE CHAIR BARNES – What is it a notice of?

ASSOCIATE PLANNER JULIA DESCOTEAUX – Let me look through here just a moment, okay?

VICE CHAIR BARNES – Okay. We can move on. I was just curious what we were getting at.

PLANNING OFFICIAL RICK SANDZIMIER – What I can assure the Commission is, if you want to take a break, we can find that document. We should have it in our file but, in any event, we will attach that document to these Conditions of Approval since it is referenced.

VICE CHAIR BARNES – Okay.

PLANNING OFFICIAL RICK SANDZIMIER – So that would be…..

VICE CHAIR BARNES – The condition is correct. There is a notice that something.

ASSOCIATE PLANNER JULIA DESCOTEAUX – Yes there is.

VICE CHAIR BARNES – It's limited inadvertent.

ASSOCIATE PLANNER JULIA DESCOTEAUX – There is a notice.

VICE CHAIR BARNES – Thank you.

CHAIR LOWELL – You're good?

VICE CHAIR BARNES – Yeah, yeah. I was just curious about that.

CHAIR LOWELL – Any other questions before we move onto Public Comments?

COMMISSIONER BAKER – I've got one here on PE T8 and T9 on the, I guess it has to do with the transportation deal. What I'm wondering there is what our arrangement is with City of Perris where they come out with a $32,547 assessment. And, on Indian and Grove right there at the intersection, I know that's been improved. The City of Moreno Valley is only getting $4885. I know we have some kind of arrangement with the City of Perris down there even though that's in our City limits, right?

ASSOCIATE PLANNER JULIA DESCOTEAUX – Yes. I will refer to the Traffic Engineer for that.

COMMISSIONER BAKER – That's for Traffic Engineering, right?

CITY TRAFFIC ENGINEER ERIC LEWIS – Yes. So the payments shown are for Fair Share Contribution, their contribution to traffic at that intersection and to meet their Mitigation requirements.

COMMISSIONER BAKER – So does that happen on every warehouse that goes in in that area in the southern part of town? Perris gets some help? And I understand that because most of the traffic probably goes south toward their direction. Is that correct?

CITY TRAFFIC ENGINEER ERIC LEWIS – If the project will impact one of their intersections or multiple intersections, then we require the development to make a Fair Share Contribution to them.

COMMISSIONER BAKER – And how is that determined? On the square footage or the size of the intersection or?

CITY TRAFFIC ENGINEER ERIC LEWIS – Well it's based on the amount of new traffic that is introduced at the intersection so there's a formula.

COMMISSIONER BAKER – That's not on a traffic count then, right?

CITY TRAFFIC ENGINEER ERIC LEWIS – Correct.

COMMISSIONER BAKER – Okay, thank you so much.

CHAIR LOWELL – Any other questions? No?

ASSOCIATE PLANNER JULIA DESCOTEAUX – We have the notice. It is in….it talks about that the property is in the vicinity of an airport within what is known as an airport influence area. For that reason, the property may be subject to some of the annoyances and inconveniences associated with being near an airport. That's the notice.

VICE CHAIR BARNES – I do have a question, another question.

CHAIR LOWELL – Can we push that back until after Public Comments?

VICE CHAIR BARNES – I don't know. Do we ask the questions now?

CHAIR LOWELL – No. I think we should ask them after the Public Comments.

VICE CHAIR BARNES – Alright.

CHAIR LOWELL – Okay, I'd like to open up the Public Comments. We have two citizens waiting to speak. We have Mr. Damon Allen followed by Mr. Rafael Brugueras.

SPEAKER DAMON ALLEN – My name is Damon Allen. I am a 13 year resident of Moreno Valley. I have never spoken before the Planning Commission before, but I want to come up here again when you have Downtown Moreno Valley plans so we can get that on the road. I am with Southern California Environmental Justice Alliance. I would like to thank you for the opportunity to speak before you today. Since there is a time limit, I will not be able to get through the entirety of our comments, so I refer you to the comment letter to reflect the full scope of our comments.

CHAIR LOWELL – Could you pull the microphone a little closer.

SPEAKER DAMON ALLEN – Okay, how is that?

CHAIR LOWELL – Perfect.

SPEAKER DAMON ALLEN – Okay. We believe the EIR is flawed and should be redrafted and recirculated. Firstly, regarding Section 4272 of the EIR, the Air Quality Impact Statement. The EIR gives a sample construction schedule. The construction schedule presents the project in phases. However, phased construction is not required of the project. The EIR does not present any analysis of impact or particular Mitigation Measures for potential overlap of construction phases. There is no statement that the construction phases will not occur concurrently. Also, there is no requirement that the project be completed over a certain number of days given. Construction may occur faster as well, which results in a significantly greater daily impact. The EIR states, "Should construction occur any time after the dates presented here incremental in aggregate construction source emissions would likely decrease since emission factors for construction equipment would progressively decrease in the future." This statement is misleading as it assumes the best-case scenario. Contrary of CEQA's meaningful disclosure requirement, there is no indication of or requirement for the projects construction to (let me change pages here) utilize technology that may or may not exist to reduce emissions. The EIR continues to state "This is due to the natural turnover of the older fleet vehicles and replacement with more efficient equipment to enhance emission control and implementation of more stringent regulations, which act to reduce construction source emissions." Will the EIR be recirculated and analyzed if the project goes beyond construction dates given? Will it be analyzed against the more stringent regulations that do not currently exist? The statement is misleading and presents a scenario that is circumstantial and uncertain. Then, we have a comment also on the greenhouse gas emissions impact. The EIR states that the project emissions of GHG's are significant and unavoidable after mitigation. No Mitigation Measures are offered other than a reference to the projects design features and operational programs that would act to generally reduce the projects GHG emissions for area sources, energy sources, and other onsite emission sources, which combine and account for approximately 11% of the project's total GHG emissions. No further Mitigation Measures are offered. This is inadequate and the EIR must offer some Mitigation Measures beyond potential design features. Further, the EIR states that the project conflicts with the Scoping Plan, as well as Moreno Valley's Energy Efficient and Climate Action Strategy. There is no Mitigation Measure disclosed here either. The details of how the GHG emissions conflict with both documents is not discussed. This does not meet CEQA's meaningful disclosure requirements. Again, I thank you for your time.

CHAIR LOWELL – Thank you very much. Mr. Rafael Brugueras.

SPEAKER RAFAEL BRUGUERAS – Good evening again. I'm not sure if that should be answered first before I speak? I mean, I'm not saying that he's right or wrong, but I know when the Staff brings their Report to you they make sure what they are doing is correct. And that's been proven time after time so I learned something back there but, anyway, good evening once again Chair, Commissioners, Staff, Residents, and Guests. I'm glad to hear the Applicant speak first because he gave us all the positive notes of how to build a building energy efficient, water, landscaping. He gave it all to us. They are going to use their own energy and their own water without disturbing the City's, and that's a good thing and those are the projects that are coming to pass now. The old way is not going to happen anymore. We are now doing things differently, so I'm glad to hear that, but I just want to talk about the benefits of what can come to the City. It talks about it's going to cost 21 million dollars, and it's going to create 50 or 60 construction people for the next two years. And, after that, it's going to project 772 million dollars up to 3.7 billion dollars in new direct spending through construction and operations. This flood of funds has a positive economic and fiscal impact on the City of Moreno Valley in the form of fiscal revenue, job creation, household earnings, and economical output. Then, it talks about another $160,000 to $260,000 over 20 years. When you look at $160,000 or $260,000 over 20 years, when we add everything that we have done in the last several years, that helps our general fund. Okay, in then in here, it talks about billions of dollars or millions of dollars in revenue. See that's what happens when we have projects that come to our City and they produce in 20 years when they are built well as they are going to do for us. I'm just hoping that whatever this gentleman said can be corrected because that is important what he said. But I know that our Staff works very, very hard to make sure that these concerns are taken care of before they bring them to you and I guess we'll hear the explanation. But, anyway, I support what this project is going to do for Moreno Valley on that corner. Thank you.

CHAIR LOWELL – Thank you very much. Any other speakers wishing to speak before I close Public Comments? Going once, going twice. We have one hand up, the Applicant. I was just going to call you up to ask you if you wanted to respond. Let me close Public Comments. Any other Public Speakers wishing to speak? Anybody else wanting to speak? Going once, going twice. Public Comments are now closed. I was going to invite you back up to rebut anything you heard.

APPLICANT PATRICK RUSSELL – Okay, Thank you very much. I just wanted to respond to the comment that there really wasn't any mitigation proposed with respect to air quality and emissions control, and actually we spent a lot of time putting together a program where we have many mitigating factors, and I'd just like to name a few. First of all, for the construction, we will be using Tier 4 equipment, which is the heavy equipment, which is used for grading and so forth. Tier 4 equipment is State of the Art Emissions Control Equipment. They also have the best available control technology on that for monitoring and controlling emissions so that is very positive. Also, we have agreed that there will be no portable diesel generators used during the construction of the project. We also are providing limitations on idling for trucks and signage to three minutes or less. We are providing and encouraging the use of carpooling in van pools. We are providing special parking locations for those uses to encourage the ride sharing to get to work. We are also providing electrical vehicle charging stations to encourage the use of zero emissions automobiles. So we have one DC fast-charge unit, which again is the quick charge. It is a premium type of unit, as well as two level-two EVSE charging units for a total of three. We will also being putting conduits in and infrastructure to expand those electrical vehicle charging units over time as the tenants needs for those grow and to increase the number of zero emission vehicles. As I stated earlier, no diesel-powered forklifts are permitted onsite, and our landscape equipment will use only electric or equipment that is approved by the California Air Quality Board. So, in conclusion, I would just like to say that there are some significant and costly provisions that have been included into this plan that I think really will make a difference with the emissions, and I just wanted to make note of that. Thank you.

CHAIR LOWELL – For clarification, you said no diesel forklifts will be allowed onsite. Is that during operation or is that also during construction?

APPLICANT PATRICK RUSSELL – That would be at all times.

CHAIR LOWELL – So period. There will never be a diesel forklift on the site during construction or anytime?

APPLICANT PATRICK RUSSELL – Correct.

CHAIR LOWELL – Okay, thank you. Any questions or concerns before I move to discussion and deliberations? Nope, okay, I will open up the floor. Does anybody have any questions? Commissioner Sims.

COMMISSIONER SIMS – I don't have any questions, but I….looking over the paperwork on this, this project is located within Specific Plan 208, which is specifically for this type of use, so I can imagine that the conditions are all consistent with what was outlined in the Specific Plan for this type of development. And, of interest if you had a chance to look at the Fiscal Impact Report, you look at the numbers on that and, if you would indulge me a second, but the net annual revenue, that's net. That's after city expense for police and fire support and such is estimated to be $160,000 to $260,000 a year, so that's net new positive revenue to the City. The sustainable jobs are estimated between 500 and 400 between direct and indirect jobs that the project would influence and 50 to 60 jobs during the construction and that the net new household earnings, I did the math. Over the project, it would be around $40,000 per year on these jobs that will be influenced. Household earnings would be influenced positively by $40,000. I thought it was a pretty rigorous thing. They looked at six sources of revenue through the various taxes that the City would accumulate by this and it just, it's a warehouse in the right spot where warehouses are supposed to be. They got the Mitigation Measures that are consistent with the Specific Plan and the Conditions with the City, so I am very supportive of this project.

CHAIR LOWELL – Vice Chair Barnes.

VICE CHAIR BARNES – I want to second what Commissioner Sims said about the financial analysis. I really appreciated that being included in this Project Report because previously the Overriding Considerations were always somewhat vague. It's nice to see some real numbers that you can measure against the demands of the project, so I appreciate that addition very much. Also, observation on the conditions, which I always have, the conditions are dubitable that this thing gets built by yet the EDD conditions all say encouraged, may utilize, may work, encouraged, may. Why are they even in here if they are not requiring that they do anything? It's just an observation. And then, on a technical question, does the right-of-way for Grove exist west of Indian?

ASSOCIATE PLANNER JULIA DESCOTEAUX – No. I won't exist.

VICE CHAIR BARNES – It does not?

ASSOCIATE PLANNER JULIA DESCOTEAUX – It does not.

VICE CHAIR BARNES – It's not being vacated. It's already gone?

ASSOCIATE PLANNER JULIA DESCOTEAUX – If it's not already gone, it's in the process of being vacated.

VICE CHAIR BARNES – Okay.

ASSOCIATE PLANNER JULIA DESCOTEAUX – It's not intended for either this project or the project that's approved to the north of it.

VICE CHAIR BARNES – Okay. The reason I was asking is those driveways are very close together and was it considered to make Grove a four-way intersection with a shared driveway with the property to the north?

ASSOCIATE PLANNER JULIA DESCOTEAUX – That was discussed, but the property to the north has already been entitled.

VICE CHAIR BARNES – Oh, okay. Okay, and I think that concludes my questions. Thank you very much.

CHAIR LOWELL – Any other questions? Commissioner Gonzalez.

COMMISSIONER GONZALEZ – I just want to second the comments from my colleagues. This is a great project and a great place and that is what this Specific Plan was intended to do, and hopefully it is a very successful project.

CHAIR LOWELL – I have a question. On the Plot Plan, on the northwest corner of the site, the back corner doesn't look to be fire accessible. We show a fire access road that is 30 feet wide but that hard 90-degree turn doesn't look like it's going to accommodate a fire truck very well.

ASSOCIATE PLANNER JULIA DESCOTEAUX – I'll refer to Fire on that.

FIRE MARSHAL ADRIA REINERTSON – Adria Reinertson, Fire Marshal. Yes, it does appear that there is a 30-foot-wide lane all the way around, but certainly when we get to Building Permit Issuance and Plan Check, we would be setting down our turning radius templates to make sure that our engines and trucks can make that turn.

CHAIR LOWELL – It seems like that should be something that we address now to make sure that the building is in the right spot and the right square footage.

FIRE MARSHAL ADRIA REINERTSON – We generally don't, and we give them the parameters for the lane widths and then we issue conditions that all of those details will be handled during Plan Check.

CHAIR LOWELL – Okay, I guess that just kicks the can down the road for me. I don't have any other major concerns or questions. Anybody else?

PLANNING OFFICIAL RICK SANDZIMIER – I think you had one more Commissioner, but when you get done I do have some input.

COMMISSIONER NICKEL – Yes I did meet Mr. Russell quite a while ago when he was kind enough to have a public forum about this project. Sadly, there were not a lot of public there. I was there, a representative from Joint Powers was there, and a rep from the Sierra Club, but I know Mr. Russell takes a lot of pride in his buildings so I have good faith in this.

CHAIR LOWELL – Any other questions before I go to a motion? Well personally, I would like to say that the biggest problem I see facing our City is a major lack of employment opportunities. A lot of our youth stay at home. They work at minimum wage jobs, at Burger King, at Jack in the Box, or something that is not becoming up an upstanding citizen that needs a good well-paying long-term job. I welcome this project to the City. This is the right project in the right location. As Commissioner Sims said, it's where warehouses need to be. It's where they should be. We have two different warehouse communities, one on the east side of the town and one on the south side of town. This fits the right spot in the right place at the right time. We need the jobs in the City. We need the revenue, so I welcome you to town. With that, I would like to make a motion.

PLANNING OFFICIAL RICK SANDZIMIER – Mr. Chairman, may I, just for the record. I think this is important because some of the speakers did come up and question the quality of the Environmental Document so I just want, for the record because sometimes projects like this are challenged, I would like the record to reflect that we as your Staff have applied independent judgment, which is a requirement of CEQA. The consultant that was retained for the project was a professional consultant from Applied Planning. The City also secured the services with First Carbon to provide a Peer Review of the Environmental Document. The Environmental Document has been reviewed by both Professional Planners and your Professional Staff here. You already mentioned that the Statement of Overriding Considerations did have detail. We took extra caution to make sure that information was presented in the Staff Report so you did have that information available to you, and the public had that information available to you. We stand behind this project. We agree with what the Commission has found so far with the comments this evening that this is a good project in the right location in the City. I just want to make sure that the record reflects that. With regard to the Conditions of Approval from our Economic Development Department, we take great pride in this City to be business friendly. You've maybe heard the mantra that we operate at the speed of business, but we also have very detailed customer care standards. And the types of conditions that we've put in there with the EDD, the Economic Development Department, we're not going to dictate how a business is run, but we're giving them the opportunity to work with us with the resources that we have available to help the business be successful. So that's why those conditions are a little bit looser. We don't want to dictate exactly how they work, but those are there to make sure that the public and the businesses are aware that we do provide those services. And, with that, I'll conclude.

CHAIR LOWELL – Thank you very much. I do agree making the city business friendly is a good thing, and I applaud the Staff's actions and the research and homework you guys have done. With that, I personally would like to make the motion, so I'm going to jump on this one. I would like to recommend that the Planning Commission **APPROVE** Resolution No. 2016-24 and 2016-25 and thereby **CERTIFY** that the Final Environmental Impact Report (EIR, Attachment 2) PEN16-0019 (P16-03 is the other name for it) for the Indian Street Commerce Center on file with the Community Development Department has been completed in compliance with the California Environmental Quality Act. The Planning Commission viewed and considered the information contained in the Final EIR, and the Final EIR reflects the City's independent judgment and analysis as provided for in Planning Commission Resolution 2016-24, and **ADOPT** the Findings and Statements of Overriding Considerations regarding the Final EIR for the Indian Street Commerce Center attached hereto as Exhibit A to Resolution 2016-24, and **APPROVE** the Mitigation Monitoring Program for the Final EIR for the proposed project attached hereto as Exhibit B to Resolution 2016-24, and finally **APPROVE** PEN16-0020 (formerly PA16-0002) Plot Plan subject to the attached Condition of Approval included as Exhibit A to Resolution 2016-25.

PLANNING OFFICIAL RICK SANDZIMIER – As modified.

CHAIR LOWELL – As modified. So I have made the motion. We have a second by Commissioner Nickel. Please cast your votes. Going once, going twice. All votes have been cast. The motion passes 7-0. Do we have a Staff wrap-up on this Item?

Opposed – 0

Motion carries 7 – 0

PLANNING OFFICIAL RICK SANDZIMIER – Yes. This is a project that you are the final deciding body on. It is appealable to the City Council. If anybody is interested in appealing, they can file an appeal within 15 days. That appeal should be directed through the Director of Community Development. It will be forwarded to our City Clerk and agendized for a City Council Hearing within 30 days.

CHAIR LOWELL – Thank you very much. Moving onto Other Commissioner Business, which I don't think we have any.

OTHER COMMISSION BUSINESS

None

CHAIR LOWELL – Do we have any Staff Comments before we wrap up?

STAFF COMMENTS

PLANNING OFFICIAL RICK SANDZIMIER – I'd like to wish you all a very Merry Christmas and Happy New Year as we go into that.

CHAIR LOWELL – Thank you very much. Do we have any Planning Commissioner Comments?

PLANNING COMMISSIONER COMMENTS

VICE CHAIR BARNES – I second that.

COMMISSIONER RAMIREZ – I do. I just want to say thank you for this whole year. It has been great, a great learning experience with my fellow Commissioners. I have really enjoyed it. Thank you. And Staff as well. I have really enjoyed Staff input and…..

CHAIR LOWELL – As you can see the need for Alternate Planning Commissioners is very present today with both alternates being used. It has been very welcome. It has been a small learning curve throughout the year, but it has been a great addition to the Planning Commission. I welcome you guys, and thank you very much for your service and help.

ADJOURNMENT

CHAIR LOWELL – Again, I wish everybody happy holidays. Have a safe holiday season. Have a great New Year, and we will see you guys when we adjourn to the next Regular Planning Commission Meeting on January 26, 2017 right here at 7:00 PM. Thank you very much, and have a great night.

NEXT MEETING

Next Meeting: Planning Commission Regular Meeting, January 26, 2017 at 7:00 PM, City of Moreno Valley, City Hall Council Chamber, 14177 Frederick Street, Moreno Valley, CA 92553.

STAFF REPORT

Meeting Date: January 26, 2017

GENERAL PLAN ANNUAL REPORT

Case:	General Plan Annual Report
Applicant:	City of Moreno Valley
Owner:	N/A
Representative:	N/A
Location:	Citywide
Case Planner:	Mark Gross
Council District:	N/A

SUMMARY

The General Plan Annual Report includes information on the goals, objectives, policies and programs of the existing General Plan and provides major accomplishments and General Plan implementation projects to document compliance and consistency with the current Plan. The California Government Code Section 6400 requires that the legislative body of the City consider an annual progress report on the City's General Plan and to subsequently provide that annual progress report to the State Office of Planning and Research (OPR), and the Department of Housing and Community Development by April 1 of each year. The annual report is expected to cover the status of the General Plan and the progress in its implementation, including the progress in meeting the City's established share of regional housing needs. The Planning Commission, serving as the Advisory body to the City Council on planning matters, is requested to review and recommend to the City Council on the annual report prior to its submittal to OPR.

PROJECT DESCRIPTION

Background

California State Law requires each city to adopt a comprehensive, long-term general plan for its physical development and any land located outside its boundaries which bears a relationship to its planning activities. In essence, the City's general plan serves as the blueprint for future growth and development. As a blueprint for the future, the plan contains goals, objectives, policies and programs designed to provide decision makers with information and a basis for all land use related decisions.

The City of Moreno Valley incorporated on December 3, 1984. The City’s first General Plan was adopted by City Council Resolution on September 8, 1988. The last comprehensive update of the General Plan was completed and approved by the city Council on July 11, 2006. The last update of the Housing Element of the General Plan was approved by the City Council on February 11, 2014.

The existing General Plan incorporates all required elements as follows, with date of the last update noted:

- Circulation Element (2006)
- Community Development Element (2006)
- Conservation Element (2006)
- Housing Element (2014)
- Parks, Recreation and Open Space Element (2006)
- Safety/Noise Element (2006)

The Housing Element is the only mandatory Element of the General Plan that must be updated on a set schedule, which is presently based on an eight year cycle. The last update in February 2014 was performed in compliance with State Law. Following the adoption of that Housing Element, the State Department of Housing and Community Development (HCD) provided the City with certification of the document on May 19, 2014. With the certification the next required update of the Housing Element will be in year 2021. The other Elements of the General Plan should be updated from time to time to ensure that the policies and goals reflect the desired vision for the city, and does not become stale with respect to emerging industry trends and practices. When a General Plan has not been updated within a ten year period or longer, it is likely that the City will receive notification from the State. Given the last comprehensive update of the City General Plan was performed in 2006, consideration should be given to another update.

With regard to the required annual report, Section 65400 of the California Government Code requires the City to do the following:

A) A General Plan Annual Report shall be provided by April 1 of each year to the legislative body (i.e. City Council), the Office of Planning and Research (OPR) and the Department of Housing and Community Development (HCD); and

B) A status of the General Plan and progress in its implementation shall be provided in the form of a General Plan Annual Report; and

C) Progress in meeting its share of the regional housing needs pursuant to Section 65584 of the Government Code shall be provided in the General Plan Annual Report.

In addition to the State law, Objective 1.9 and supporting Initiatives 1.9.1 through 1.9.4 of the recent City Council adopted Momentum Moval strategic plan articulate a clear strategy for General Plan activity and planned next update. Initiative 1.9.1 specifically requires the preparation of an Annual Report by April 1, 2017 “that explains how current land use decisions relate to adopted goals, policies and other implementation measures, and as appropriate identify necessary course adjustments consistent with the Strategic Plan.” Initiative 1.9.2 calls for formation of a working group of key City staff to research and evaluate the current General Plan as a prerequisite to initiating the comprehensive update of the General Plan, which is expected to progress over the next three year period. These activities are underway.

Annual Report Contents

The 2015-2016 General Plan Annual Report, attached with this staff report, includes the following information:

- Acknowledgements
- Background, Analysis and Report Conclusions
- Major Accomplishments
- General Plan Implementation

The following two Appendices are key components of the General Plan Annual Report:

- Review of General Plan Goals, Objectives, Policies and Programs
- Housing Program Status Report

The General Plan Annual Report reports the major projects and General Plan Amendments approved by the Planning Commission and City Council during the reporting period. It includes a thorough assessment and report on actions and activities that the City is taking with regard to the specific articulated goals, objectives, policies and programs set forth in the City’s 2006 General Plan document. With the synopsis of status of each goal, objective, policy and program, information is provided to demonstrate how each are tied to corresponding Municipal Code regulations or program to foster implementation. Appendix A provides information on possible General Plan course adjustments that are under consideration with the scope of work preparation for the City’s next comprehensive General Plan update. These items are included in bold text within Appendix A to the General Plan Annual Report.

The Annual Report includes a Housing Program Status of the 2014 Housing Element. This information is provided as tables for the last three year time frame years 2014 - 2016. The information included also documents the housing types that have been constructed and occupied during this time period. From 2014 through 2016, the type of housing constructed and occupied in the City has been single-family homes. All 315 single-family homes constructed between 2014 through 2016 count towards the City's required Regional Housing Needs Assessment numbers for the category of Above Moderate Income Level Housing (1 through 5 units). Building and Safety staff verified the numbers by running reports on the building permits finalized in each of the noted years. Although the constructed and occupied housing numbers reflect only single-family dwellings for the three year reporting time period, other diverse housing types such as Planned Unit Developments and multiple-family residential apartment complexes have been entitled in 2015 and 2016.

The current Annual Report includes major projects, General Plan amendments, Municipal Code amendments and housing information not previously reported to OPR through December 2016.

As demonstrated in the attachments provided with this document, approved and completed projects and amendments to the General Plan are in conformance with the City's General Plan goals, objectives, policies and programs for each representative element. The City of Moreno Valley General Plan continues to serve as an effective guide for orderly growth and development, preservation and conservation of open space and natural resources. The City's Planning Commission and City Council have considered and followed the General Plan appropriately for long-range planning, capital improvement programs, community services, and associated fiscal and policy direction for Moreno Valley.

Conclusion

The General Plan Annual Progress Report is a State-mandated annual report on the implementation status of Moreno Valley's General Plan. The actions, plans, programs, and projects documented in the Annual Report represent the City's commitment to achieving the goals and objectives set forth in the seven (7) State mandated Elements.

The General Plan Annual Report is being provided to the Planning Commission for review and recommendation to the City Council. Subsequent to Planning Commission action on the Annual Report it shall be forwarded to the City Council for review and consideration as a consent calendar item. Following the City Council's action, the General Plan Annual Report will be forwarded to OPR and HCD by the April 1, 2017 due date.

ENVIRONMENTAL

The General Plan Annual Report is exempt from the California Environmental Quality Act (CEQA) pursuant to Section 15061 of the CEQA Guidelines as there is no possibility that the activity would create the potential for a significant impact upon the environment.

NOTIFICATION

Public noticing was not required to be provided for the General Plan Annual Progress

Report.

STAFF RECOMMENDATION

Staff recommends that the Planning Commission **APPROVE** Resolution No. 2017-03 and thereby:

1. **CERTIFY** that the proposed General Plan Annual Report qualifies as an exemption in accordance with Section 15061 of the California Environmental Quality Act (CEQA) Guidelines and

2. **RECOMMEND** to the City Council that the January 2015 to December 2016 General Plan Annual Report presented is consistent with the requirements of Government Code Section 64000 with regard to reporting on status of the City General Plan and progress in its implementation, and is ready for submittal to the Office of Planning and Research and to the Department of Housing and Community Development by April 1, 2017.

RESOLUTION NO. 2017-03

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY RECOMMENDING APPROVAL OF THE 2015 THROUGH 2016 GENERAL PLAN ANNUAL REPORT TO THE CITY COUNCIL

WHEREAS, the State of California requires non-charter cities and counties to adopted a General Plan to provide guidance and direction for development activities; and,

WHEREAS, the City of Moreno Valley's current General Plan was adopted on July 11, 2006; and,

WHEREAS, California Government Code section 65400 mandates that cities submit an Annual Progress Report on the status of the General Plan and its implementation to their legislative bodies, the State Office of Planning and Research (OPR) and the Department of Housing and Community Development (HCD); and,

WHEREAS, the Annual Progress Report is required to include: a) The state of the Plan and the progress of its implementation; b) the progress in meeting its share of regional housing needs; and, c) the degree to which the General Plan complies with the Guidelines established by OPR; and,

WHEREAS, the City has prepared its Annual Progress Report due April 1, 2017 to include major accomplishments, General Plan implementation, General Plan goals, objectives, policies and programs, and a regional housing report attached to the staff report, in accordance with the Guidelines adopted by OPR ;and

WHEREAS, the City's Strategic Plan (Momentum Moval), adopted on August 16, 2016, included Initiative 1.9.1 or the preparation of a General Plan Annual Report prior to April 1, 2017 to explain how current land use decisions relate to adopted goals, policies, objectives programs and other implementation measures and the review of necessary course adjustments consistent with the Strategic Plan; and,

WHEREAS,; the City's Strategic Plan (Momentum Moval) also provides Initiative 1.9.2 including the formation of a working group of key City staff to research and evaluate the current General Plan adopted in 2006 as a prerequisite to initiating a comprehensive update of the General Plan; and,

WHEREAS, the Housing Element is one of seven mandatory elements of a General Plan required by the State of California; and; and,

WHEREAS, the Housing Element must be updated every five to eight years and reviewed for consistency with the State Department of Housing and Community Development; and,

WHEREAS, the Annual Report includes vital General Plan and housing information from January 2015 through December 2016; and

WHEREAS, on January 26, 2017, the City Planning Commission reviewed the item as a report and provided a recommendation to City Council; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

NOW, THEREFORE, BE IT RESOLVED, it is hereby found, determined and resolved by the Planning Commission of the City of Moreno Valley as follows:

The City of Moreno Valley has completed the General Plan Annual Report as required by California Government Code section 65400 for the 2015- 2016 calendar years.

The Annual Report provided herein as an attachment to the staff report is found to be consistent with the suggested content in the State Guidelines and is hereby accepted.

BE IT FURTHER RESOLVED that the Planning Commission **HEREBY APPROVES** Resolution No. 2017-03 and hereby:

1. **CERTIFIES** that the General Plan Annual Report qualifies as an exception in accordance with Section 15061 of the California Environmental Quality Act (CEQA) Guidelines, and

2. **RECOMMENDS APPROVAL** of the General Plan Annual Report by the City Council.

ANNUAL REPORT SUMMARY

BACKGROUND

On December 3, 1984, the City of Moreno Valley was incorporated as a general law city led by a City Council-Manager form of government. Prior to incorporation, the City of Moreno Valley consisted of 42 square miles and a population of 49,702 people. As of December 2016, the City includes 51.56 square miles with a population of 207,675 people.

The City adopted its first General Plan in 1988. The General Plan was comprehensively amended and updated on July 11, 2006. The current General Plan recognizes the community's diverse population, distinct residential neighborhoods, neighborhood and regional commercial activities, industrial potential and recreational amenities.

This document constitutes an annual report to the Planning Commission and City Council, and subsequent submittal to the Office of Planning and Research and State Department of Housing and Community Development, as required by state law on the updates of programs and policies in the General Plan. The document includes major projects, General Plan amendments, a Housing Program Status Report and a thorough review of existing goals, policies, objectives and programs of the General Plan. As the City did not provide an Annual Report for 2015, this Annual Report includes projects and information from January 2015 through and up to December 2016.

The following is a summary of the current adoption status of the different required elements of the General Plan:

- Circulation Element (2006)
- Community Development Element (2006)
- Conservation Element (2006)
- Housing Element (2014)
- Parks, Recreation and Open Space Element (2006)
- Safety and Noise Element (2006)

ANALYSIS

Government Code Section 65400

California Governments Code Section 65400 requires that the annual report be made to the legislative body on the status of the General Plan and progress towards its implementation, including activity towards its share of regional housing needs. State law requires the following:

A) A General Plan Annual Report shall be provided by April of each year to the City Council, the Office of Planning and Research (OPR) and the Department of Housing and Community Development (HCD) ; and

B) A status of the General Plan and progress in its implementation shall be provided in the General Plan Annual Report; and

C) Progress in meeting its share of the regional housing needs pursuant to Section 65584 of the Government Code shall be provided in the General Plan Annual Report.

Annual Review and Housing Program Summary Report

Pursuant to State Law, the Annual Report and Review of the City of Moreno Valley General Plan reports the progress in implementing the General Plan to the City Council. The City of Moreno Valley's Annual Report includes the following items:

1. A list of Major Accomplishments from January 2015 to December 2016

2. A list of General Plan Amendments from January 2015 to December 2016

3. Appendix A – Moreno Valley General Plan Complete List of Goals and Policies, which provides a status report of the 2006 General Plan goals, policies, objectives and programs towards implementing the City's blueprint for land use development.

4. Housing Program Status Report includes the City's progress made in meeting its share of regional housing needs pursuant to State Government Code Section 65584.

Moreno Valley General Plan – Goals, Objectives, Policies and Programs

The current 2006 General Plan Appendix A describes goals and policies in a comprehensive document providing the goal/policy number, a description of each goal and policy, a discussion on implementation status and the party responsible for carrying out each item.

- A goal is defined as a broad vision of what the community wants to achieve or provide to residents, landowners and business owners. It is a statement of a desired condition based on community values. Goals are general in nature and usually timeless.

- A policy is a specific statement that guides decision-making. It indicates a commitment of the City to a particular course of action. A policy is based on and assists to implement the goal.

The General Plan Annual Report also includes objectives leading up to the goal/policy as well as an update on existing programs.

General Plan Update

The State Office of Planning and Research (OPR) recommends that cities update their General Plan every ten (10) years. The City or Moreno Valley last completed an update to its General Plan on July 11, 2006, and is preparing for a comprehensive General Plan update in the next two to three years. The General Plan update is an extensive process that would include various public meetings involving City staff, commissions and extensive community outreach. Any update would most probably be subject to several public hearings before the Planning Commission and City Council. The cost and work involved with the update would be extensive.

Momentum MoVal, the City of Moreno Valley's recently adopted strategic plan represents the results of active engagement by Moreno Valley residents and the City Council in charting the community's course into the future. Adopted on August 16, 2016, Momentum Moval, in part, provides a course of action for the City's next comprehensive General Plan update. This includes Objective 1.9 to "Ensure the City's General Plan articulates the vision of how Moreno Valley wants to evolve over time, and provides an orderly and predictable process through which this vision is developed and implemented, including new attention to economic development, sustainability, public health, and innovation".

Four (4) initiatives have been adopted with this effort to assist in preparing for and completing the comprehensive General Plan Update. This includes two (2) initiatives related to the completion of the General Plan Annual Report. Initiative 1.9.1 requires the preparation of a General Plan Annual Report to the City Council before April 1, 2017 that explains how current land use decisions relate to adopted goals, policies and other implementation measures, and as appropriate, identifies necessary course adjustments consistent with the Strategic Plan. Initiative 1.9.2 includes the formation of a working group of key City staff to research and evaluate the current General Plan adopted in 2006 as a prerequisite to initiating a comprehensive update of the General Plan. Both items are to be completed in a one year time frame. This effort is being led by Community Development Planning staff who have been fully engaged with members of various internal departments/divisions in providing General Plan feedback occurring over the past four months October 2016 through January 2017, which activity is planned to continue through completion of the desired update.

Additional initiatives included in the City's Strategic Plan articulate a plan of action to completion of the comprehensive General Plan update. This includes Initiative 1.9.3, which "includes consideration of incremental set aside of funding in the annual budget development in anticipation of future General Plan update and Initiative 1.9.4, which calls for "conducting the comprehensive update of the City's General Plan and supporting environmental document, including all mandatory elements (except the Housing Element, which was updated in 2014) an Economic Development Element, and other desired optional Elements as authorized by the City Council." An additional new Elements under consideration with the next comprehensive update is a Healthy Cities Element. Incorporation of environmental justice considerations and information, where warranted, per in new planning legislation will be a part of the effort.

CONCLUSION

The City of Moreno Valley General Plan continues to serve as an effective guide for orderly growth and development, preservation and conservation of open space and natural resources. The document also provides for the efficient expenditure of public funds.

As illustrated in the attachments provided with this document, completed public projects are in conformance with the City's General Plan goals, objectives, policies and programs for each representative element. The City of Moreno Valley's legislative bodies have used the 2006 General Plan as a primary source of long-range planning and policy direction. Future work activity that is consistent with these efforts will continue to guide future growth and preserve the quality of life within the community.

MAJOR ACCOMPLISHMENTS

The City of Moreno Valley is committed to implementing the adopted General Plan, Development Code and Design Guidelines. The Development Code and Design Guidelines, combined with the adopted Landscape Guidelines, are major tools to implement the General Plan.

The purpose of this Annual Report is to highlight significant accomplishments and summarize ongoing General Plan projects that the City of Moreno Valley has been working on since January of 2015. A major function of this report is to acknowledge and evaluate the ongoing implementation of the General Plan. Major accomplishments include key projects that demonstrate how the City of Moreno Valley is carrying out the policy and vision of the General Plan. This report is prepared in accordance with Section 65040.5 of the California Government Code. As the City did not submit a report in 2015, major accomplishments between January 2015 and December 2016 are provided.

Major Accomplishments in 2015 through 2016

Major development projects reviewed and approved in January 2015 through December 2016 are as follows:

2015

- PA14-0033 (Conditional Use Permit), PA14-0032 (Tentative Tract Map No. 34544): A Tentative Tract Map 34544 and a Conditional Use Permit for a Planned Unit Development for subdivision of 9.4 acres parcel to 72 single family detached unit condominium complex including common recreation areas. Located at the north side of Cottonwood Avenue and east of Perris Boulevard. This project was withdrawn prior to action by the Planning Commission.

- PA13-0063 (Plot Plan), P13-130 (Environmental Impact Report (EIR)): A Plot Plan for the construction of a 1,109,378 square foot warehouse building on 50.68 net acres with the demolition of an existing warehouse facility. The project site is in the Moreno Valley Industrial Area Specific Plan 208. Approval of this project required the review and certification of an EIR. Located at 17300 Perris Blvd, northeast corner of Perris Boulevard and Modular Way.

- PA15-0010 (Tentative Tract Map 36882): Tentative Tract Map 36882 subdivides 9.4 gross acres into 40 single-family residential lots. Located at the south side of Brodiaea Avenue approximately 600 feet west of Moreno Beach Drive.

- PA15-0002 (Plot Plan), P15-003 (Revised Tentative Tract Map 35414): Plot Plan with hearing for a 266 unit multiple-family apartment project with a revised Tentative Tract Map. Located at 21595 Box Springs Road.

- PA14-0038 (Municipal Code Amendment): This amendment included the Density Bonus Ordinance related to Energy Efficiency. The City of Moreno Valley amended Chapter 9.03 of the City's Municipal Code to establish a density bonus for multi-family residential projects that incorporate energy efficiency and other green building standards and exceed the California building standards code

2016

- P15-066 (Tentative Tract Map 36933), P15-067 (Amended Conditional Use Permit): A Tentative Tract Map and Conditional Use Permit was approved for a Residential Planned Unit Development consisting of 274 residential units with various common open space amenities such as pocket parks, walking trails and a recreation facility. Located at the southeast corner of Fir Avenue and Eucalyptus Avenue.

- PA14-0011: (Municipal Code Amendment) – The proposed amendment (PA14-0011) includes various clarifications and text clean-ups amending several zoning regulations contained in Title 9 of the City of Moreno Valley Municipal Code. The proposed amendments include technical corrections to further internal Municipal Code consistency, including additions of definitions, changes to the Permitted Uses Table, and changes to massage facilities to be in agreement with changes that have been made to Title 11 (Peace, Morals, and Safety) of the Municipal Code. Minor changes were also made to truck idling times in Title 12 (Vehicles and Traffic), and hours of operation for construction and grading in Title 8 (Building and Construction).

- PA15-0047 (Tentative Parcel Map 37058), PA15-0048 (Master Plot Plan), PA15-0049 (Conditional Use Permit), PA15-0050 (Plot Plan), PA15-0051 (Conditional Use Permit), PA16-0012 (Plot Plan): The Quarter Project included the subdivision of a 8.54 acres into six parcels for the development of two hotels, a service station with convenience store, a multiple tenant retail building and future development of a fast food restaurant with drive-through and retail building. 12490 Day Street.

- PA16-0025 (Smoke Shop Regulations): A Municipal Code Amendment in Title 9 and Title 11 pertaining to the regulation of Smoke Shop uses citywide.

- PA14-0027 (Plot Plan): A Plot Plan for a new 39 unit apartment complex on 2.6 acre site. The project includes seven two-story multi-unit buildings. The multi-unit buildings include one 3-unit, one 5-unit, two 6-unit, one 8-unit, one 10-unit, and a leasing office building with one manager-unit. The unit mix includes 18 two-bedroom apartments and 21 three-bedroom apartments. A total of 109 parking spaces are proposed including 31 surface parking spaces, 8 garage spaces, and 70 covered carports. The project is located at 23778 and 23798 Hemlock Avenue, east of Swages Lane.

- PA15-0046 (Plot Plan), P16-083 (Variance): Plot Plan for development of a 438 unit apartment project on approximately 18 acres of a 27.41 acre site. Project includes a mix of 1 bedroom, 2 bedroom and 3 bedroom units in fifteen 2-story buildings and two 4-story buildings. Located near the southeast corner of Alessandro Boulevard and Brodiaea Avenue.

- PA16-0039 (Plot Plan): This Plot Plan application approved 272 multi-family apartments (1 and 2 story buildings). There will be four building types with a range of one to three bedrooms, a community building, and detached garages and carports on 19.82 acres of land. Located southeasterly of Alessandro Boulevard and Perris Boulevard.

GENERAL PLAN IMPLEMENTATION

The General Plan and the Development Code gives the City of Moreno Valley the tools necessary to guide the development of the City into the next century. Implementation of the General Plan includes key projects that demonstrate how the City of Moreno Valley is carrying out the policy and vision of the Plan.

The Planning Commission held public hearings on amendments to the General Plan and the Development Code. The Planning Commission recommended approval of the amendments, and they were forwarded to the City Council for final approval. As the City did not provide an Annual Report in 2015, projects representing General Plan Implementation are provided from January 2015 to December 2016.

General Plan Implementation in 2015 through 2016

The following General Plan related projects reviewed and approved in January 2015 through December 2016 are as follows:

2015

- PA14-0042 (Plot Plan), PA14-0043 (General Plan Amendment), PA14-0044 (Zone Change): A General Plan Amendment from Commercial (C) to Residential 20 (R20) and Zone Change from Community Commercial (CC) to Residential 20 (R20) for development of a Plot Plan for a 112 unit apartment project on 6.63 acres. The project proposes 14 two-story buildings with a mix of 1 and 2 bedroom units to include vehicle parking within carports and garages.

- PA12-0010 (General Plan Amendment), PA12-0011 (Development Agreement), PA12-0012 (Change of Zone), PA12-0013 (Specific Plan), PA21-0014 (Annexation), PA12-0015 (Tentative Parcel Map No. 36457), P12-016 (Environmental Impact Report): The proposed World Logistics Center (WLC) project involves approximately 3,818 acres of property. The project includes a General Plan Amendment to change the land use for the project area to Business Park/Light Industrial (BP) and Open Space (OS), which includes associated modifications to the Community Development Element, Parks, Recreation and Open Space Element, Circulation Element, Safety Element, and Conservation Element. The project also includes a Specific Plan for 2,610 acres of the project area to establish vision and development regulations for up to 40.6 million square feet of logistic development, and light logistics land uses, predominantly in the form of large high-cube industrial warehouse and distribution centers, and approximately 20,000 square feet of logistics support (e.g. fueling, associated retail). The proposed Change of Zone resulted in changes to the zoning atlas to reflect the designated areas for Logistics Development (LD), Light Logistics (LL) and Open Space (OS) for the entire project area both within and outside the proposed Specific Plan boundary. Eighty-five (85) acres of land at the northwest corner of Alessandro Boulevard and Gilman Springs Road within the Specific Plan boundary would be pre-zoned for LD as intended for a subsequent Annexation to the City. The project also includes Tentative Parcel Map No. 36457, which divides property for finance and conveyance purposes only and a Development Agreement between the City and Highland Fairview for only real estate within the Specific Plan boundary in which Highland Fairview has a legal or equitable interest (approximately 2,263 acres). Approval of the project included the repeal of the current Moreno Highlands Specific Plan No. 212-1.

- PA14-0038 (General Plan Amendment): Energy Efficiency General Plan Amendment - The General Plan Amendment consists of an update to the Conservation Element of the City's General Plan to include a detailed discussion of energy efficiency. Section 7.6.3 "Energy Efficiency" has been developed within the existing framework of the City's General Plan. The General Plan Amendment text provides an overview of the larger context of energy efficiency policy, and the City's approved Energy Efficiency, Climate Action Strategy and Greenhouse Gas Analysis. The final General Plan Amendment provides useful information that furthers energy efficiency and the reduction of greenhouse gas, and can be integrated into the planning efforts for use by the general public, private developers, city staff or other governmental entities

2016

There were no General Plan Amendment approvals to report from January 2016 to December 2016.

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
The City Structure Land Use Element Goals and Policies			
9.2 Community Development Element Goals, Objectives, Policies and Programs			
9.2.1 Community Development Element Goals			
Goal 2.1	A pattern of land uses, which organizes future growth, minimizes conflicts between land uses, and which promotes the rational utilization of presently underdeveloped and undeveloped parcels.	Land use designations provided in the General Plan minimizes conflicts between land uses and allows for buffers between industrial, commercial and more sensitive residential land uses. In higher intensity Specific Plans such as the Industrial Area Plan (SP 208), buffers have been established between industrial land uses and existing more sensitive residential development. This is an ongoing goal of the City.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Goal 2.2	An organized, well-designed, high quality, and functional balance of urban and rural land uses that will meet the needs of a diverse population, and promote the optimum degree of health, safety, well-being, and beauty for all areas of the community, while maintaining a sound economic base.	The City of Moreno Valley strives to approve well-designed, high quality projects. There is a functional balance between urban and rural land uses that will meet the needs of the residents. For example, more rural land use designations are provided in the northern and eastern portions of the city, while urban land uses are provided in the western and southern portions. This practice allows for good sensible land use planning, while maintaining a sound economic base. This is an ongoing goal of the City.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Goal 2.3	Achieves an overall design statement that will establish a visually unique image throughout the City.	The City of Moreno Valley's General Plan provides for an overall design statement which establishes unique visual images throughout the City. The Municipal Code, which is consistent with the General Plan, establishes overall design guidelines and standards for residential, commercial and industrial development proposals, and reviews items such as, color, unity/diversity massing, and building proportion. This is an ongoing City goal.	Planning
Goal 2.4	A supply of housing in sufficient numbers suitable to meet the diverse needs of future residents and to support healthy economic development without creating an oversupply of any particular type of housing.	The downturn of the economy in 2007 limited new housing development in the City until recently. In the last year, new residential housing projects have been submitted and housing product has been very diverse. This includes such project types as smaller lot Planned Unit Developments for the senior or first time homeowner and multiple family housing such as apartments. This is an ongoing City goal.	Planning

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Goal 2.5	Maintenance of systems for water supply and distribution; wastewater collection, treatment, and disposal; solid waste collection and disposal; and energy distribution which are capable of meeting the present and future needs of all residential, commercial, and industrial customers within the City of Moreno Valley.	A specific goal for the City is to maintain water supply, wastewater collection/treatment/disposal and solid waste collection capable of meeting the present and future needs of City residents. MVU prepares an annual Distribution System Plan, which forecasts the future electrical needs of MVU's service area. Capital improvement projects are then developed and prioritized to ensure that the system will meet the present and future needs of MVU customers. This is an ongoing goal.	Water Purveyors/Waste Coordinator /MVU

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
9.2.2 Community Development Element Objectives and Policies			
Objective 2.1	Balance the provision of urban and rural lands within Moreno Valley by providing adequate land for present and future urban and economic development needs, while retaining the significant natural features and the rural character and lifestyle of the northeastern portion of the community.	The City of Moreno Valley continues to provide a balance of urban and rural land. The majority of the City is urbanized, with a continued emphasis of retaining natural features as well as the urban lifestyle with larger lots and larger animal keeping opportunities north of State Route 60 in the northeaster portion of the community. This is an ongoing City objective.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Objective 2.2	Provide a wide range of residential opportunities and dwelling types to meet the demands of present and future residents of all socioeconomic groups.	The City has a very diverse residential mix, including a wide range of residential opportunities to meet the demand of all socioeconomic groups. As included in Moreno Valley's approved 2014 Housing Element, the City strives for affordable housing opportunities. The City allows opportunities for Planned Unit Developments (PUD's) that provide smaller lot housing for the senior and first time home buyer. Although the market has been slow for condominium development, apartment projects have recently picked up momentum . There are also continued opportunities for market rate single family home development, from tract maps that have been carried over from before the economic downturn. This is an ongoing City objective.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Policies:			
2.2.1	In determining allowable density for residential parcels an "adjusted net acreage" shall be used. Adjusted net acres shall mean the land area that would remain after dedication of ultimate rights-of-ways for arterial streets, freeways and park dedications.	All allowable density of residential projects in the City are determined by calculating an adjusted net average of buildable area after infrastructure dedication for streets, utilities, parks etc. This is a continuing City policy.	Planning
2.2.2	The primary purpose of areas designated **Hillside Residential** is to balance the preservation of hillside areas with the development of view-oriented residential uses. a. Within the Hillside Residential category, appropriate	Section 9.03.040 B "Residential Site Development Standards" of the Municipal Code establishes standards for hillside residential development consistent with the goals, objectives and policies of the General Plan. Hillside residential development	Planning

	residential uses include large lot residential uses. Lots smaller than one acre may only be permitted as clustered units to minimize grading, and other impacts on the environment, inclusive of the Multi-Species Habitat Conservation Plan. b. The maximum residential density within Hillside Residential areas shall be determined by the steepness of slopes within the project. The maximum allowable density shall not exceed one dwelling unit per acre on sloping hillside property and shall decrease with increasing slope gradient. c. Future development within Hillside Residential areas shall occur in such a manner as to maximize preservation of natural hillside contours, vegetation and other characteristics. Hillside area developments should minimize grading by following the natural contours as much as possible. d. Development within Hillside Residential areas shall be evaluated to determine the precise boundaries of	includes large lot residential uses, with the maximum allowable density not to exceed one dwelling unit per acre on sloping hillside property, including a decreasing density with an increasing slope gradient. Allowable development would preserve the preservation of natural hillsides. A slope analysis is the likely vehicle for development in hillside residential areas to determine the percentage of slope. **Goals, objectives and policies of hillside residential development will be further evaluated with the next comprehensive General Plan update.**

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
	the area. If the Community Development Director determines that adequate slope information is not available, applicants requesting to develop within these areas shall complete a slope analysis for the proposed development site. Portions of the development that exceed an average slope of 10% shall adhere to the policies within the Hillside Residential category. Portions of the development where the slopes are less than 10% on average shall adhere		

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.2.3	The primary purpose of areas designated **Rural Residential** is to provide for and protect rural lifestyles, as well as to protect natural resources and hillsides in the rural portions of the City. a. The maximum residential density within Rural Residential and areas shall be determined by the steepness of slopes within the individual project area. The maximum allowable density shall be 0.4 dwelling units per acre (an average lot size of 2.5 acres) on flat terrain and shall decrease with increasing slope gradient. b. Within the Rural Residential category, appropriate residential uses include large lot residential uses. Lots smaller than 2.5 acres may only be permitted as clustered units to minimize grading and other impacts on the environment, inclusive of the Multi-Species Habitat Conservation Plan.	Section 9.03.040 A "Residential Site Development Standards" of the Municipal Code establishes standards for rural residential development consistent with the goals, objectives and policies of the General Plan. This includes large lot residential development allowing a maximum density of 0.4 dwelling units per acre on flat terrain, with a decrease in density as the slope gradient increases. This is an ongoing policy.	Planning
2.2.4	The primary purpose of areas designated **Residential 1** is to provide for and protect rural lifestyles. The maximum allowable density for projects within the Residential 1 areas shall be 1.0 dwelling unit per acre.	Section 9.03.040 "Residential Site Development Standards" of the Municipal Code establishes requirements for Residential 1 development consistent with the goals, objectives and policies of the General Plan. Development shall not exceed 1 dwelling unit per acre. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.2.5	The primary purpose of areas designated **Residential 2** is to provide for suburban lifestyles on residential lots larger than commonly available in suburban subdivisions and to provide a rural atmosphere. The maximum allowable density shall be 2.0 dwelling units per acre.	Section 9.03.040 "Residential Site Development Standards" of the Municipal Code establishes standards for Residential 2 development consistent with the goals, objectives and policies of the General Plan. Development shall not exceed 2 dwelling units per acre. This is an ongoing policy.	Planning
2.2.6	The primary purpose of areas designated **Residential 3** is to provide a transition between rural and urban density development areas, and to provide for a suburban lifestyle on residential lots larger than those commonly found in suburban subdivisions. The maximum allowable density shall be 3.0 dwelling units per acre.	Section 9.03.040 "Residential Site Development Standards" of the Municipal Code establishes standards for Residential 3 development consistent with the goals, objectives and policies of the General Plan. Development shall not exceed 3 dwelling units per acre. This is an ongoing policy.	Planning
2.2.7	The primary purpose of areas designated Residential 5 is to provide for single-family detached housing on standard sized suburban lots. The maximum allowable density shall be 5.0 dwelling units per acre.	Section 9.03.040 "Residential Site Development Standards" of the Municipal Code establishes standards for Residential 5 development consistent with the goals, objectives and policies of the General Plan. Development shall not exceed 5 dwelling unit per acre. This is an ongoing policy.	Planning

APPENDIX A

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.2.8	The primary purpose of areas designated **Residential 10** is to provide for a variety of residential products and to encourage innovation in housing types. Developments within Residential 10 areas are typically expected to provide amenities not generally found in suburban subdivisions, such as common open space and recreational areas. The maximum allowable density shall be 10.0 dwelling units per acre.	Section 9.03.040 "Residential Site Development Standards" of the Municipal Code establishes standards for Residential 10 development consistent with the goals, objectives and policies of the General Plan. Development shall not exceed 10 dwelling units per acre. This is an ongoing policy.	Planning
2.2.9	The primary purpose of areas designated **Residential 15** is to provide a range of multi-family housing types for those not desiring dwellings on individual lots that include amenities such as common open space and recreational facilities. The maximum allowable density shall be 15.0 dwelling units per acre.	Section 9.03.040 "Residential Site Development Standards" of the Municipal Code establishes standards for multiple-family Residential 15 development consistent with the goals, objectives and policies of the General Plan. Development shall not exceed 15 dwelling unit per acre. This is an ongoing policy.	Planning
2.2.10	The primary purpose of areas designated **Residential 2**0 is to provide a range of high density multi-family housing types. Developments within Residential 20 areas shall also provide amenities, such as common open spaces and recreational facilities. The maximum density shall be 20 dwelling units per acre.	Section 9.03.040 "Residential Site Development Standards" of the Municipal Code establishes standards for high density residential 20 development consistent with the goals, objectives and policies of the General Plan. Development shall not exceed 20 dwelling units per acre. This is an ongoing policy.	Planning

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.2.11	The primary purpose of areas designated **Residential 3**0 is to provide a range of high density multi-family housing types in an urban setting. Developments within Residential 30 areas shall also provide amenities, such as common open spaces and recreational facilities. The maximum density shall be 30 dwelling units per acre.	Section 9.03.040 "Residential Site Development Standards" of the Municipal Code establishes standards for high density Residential 30 development consistent with the goals, objectives and policies of the General Plan. Development shall not exceed 30 dwelling unit per acre. This is an ongoing policy.	Planning
2.2.12	Densities in excess of the maximum allowable density for residential projects may be permitted pursuant to California density bonus law.	The City encourages the use of density bonus for affordable housing and senior housing opportunities. Development Code Section 9.03.050 "Density Bonus Program for Affordable Housing" provides provisions for density bonus and greater on-site project densities. This is an ongoing policy.	Planning
2.2.13	Planned Unit Developments (PUD) shall be encouraged for residential construction in order to provide housing that is varied by type, design, form of ownership, and size. PUD's shall also provide opportunities to cluster units to protect significant environmental features and/or provide unique recreational facilities.	PUD's are encouraged to allow for more diverse designs, recreational opportunities and walkable residential communities. Section 9.03.060 "Planned Unit Developments of the Development Code provides for PUD's and clustering opportunities to avoid existing environmental constraints. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.2.14	Discourage costly "leap-frog" development patterns by encouraging in-fill development wherever feasible, thereby reducing overall housing costs. Development within an area designated as SP 212-1 (Moreno Highlands) is not considered to be leapfrog development.	Developing on infill properties is always encouraged by the City. This is an ongoing policy.	Planning
2.2.15	Encourage a diversity of housing types, including conventional, factory built, mobile home, and multiple family dwelling units.	The City encourages a diverse housing mix for all residentially zoned property. This is an ongoing policy.	Planning
2.2.16	Encourage the use of innovative and cost effective building materials, site design practices and energy and water conservation measures to conserve resources and reduce the cost of residential development.	The use of cost effective building materials, site design practices and energy/water conservation measures is encouraged through the Development and Building Codes. For example. The Landscape ordinance requires drought tolerant plant materials and waterwise irrigation practices . The Green Building Code requires conservations measures such as building material design and other energy requirements. This is an ongoing policy.	Planning
2.2.17	Affordable housing developments should be compatible in visual design with surrounding development.	All newly constructed affordable housing developments are compatible with both exterior design and surrounding development. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.2.18	Discourage nonresidential uses on local residential streets that generate traffic, noise or other characteristics that would adversely affect nearby residents.	Current zoning practices discourages and in many cases does not allow for impactful non-residential development to occur. The Municipal Code (Section 9.02.020 "Permitted Uses"), restricts non residential uses in residential zones that are contained to local residential streets. This is an ongoing policy.	Planning
Objective 2.3	Promote a sense of community and pride within residential areas through increased neighborhood interaction and enhanced project design.	A sense of community and pride is instilled in newly approved projects through good design and walkable communities. Increased neighborhood interaction is also encourage through such things as neighborhood watch and Pop teams established for multiple family residential development. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Policies:			
2.3.1	Within individual residential projects, a variety of floor plans and elevations should be offered.	Pursuant to Section 9.16.130 (Table 9.16.130B) of the Code, all residential projects shall provide a variety of floor plans and elevations. This is an ongoing policy.	Planning
2.3.2	Encourage building placement variations, roofline variations, architectural projections, and other embellishments to enhance the visual interest along residential streets.	Chapter 16 of the Municipal Code requires roofline variations, architectural projections and other embellishments such as four sided architecture. This is an ongoing policy.	Planning
2.3.3	Discourage the development of single-family residences with a bulk (building mass) that is out of scale with the size of the parcels on which they are located.	The City understands that building massing is a very important issue to consider in residential elevations and when developing single-family residential communities. The design guidelines contained in Section 9.16.010 of the Municipal Code discourages building massing that is out of context with the existing neighborhood. This is an ongoing policy.	Planning
2.3.4	Design large-scale small lot single family and multiple family residential projects to group dwellings around individual open space and/or recreational features.	Section 9.03.060 "Planned Unit Developments" of the Municipal Code encourages PUD's for greater innovation in housing development and conservation of natural resources and open space. Recreational facilities such as picnic areas, pocket parks, walking paths and gyms are commonplace among PUD developments. This is an ongoing policy.	Planning

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.3.5	Ensure that all multiple family housing is well-designed, attractive and livable by: a. Ensuring all structures are architecturally compatible and include decorative architectural features and articulation in walls and roofs; b. Providing adequate parking, walkways, lighting, landscaping, amenities and open space areas; c. Providing private open space areas such as patios and balconies.	Pursuant to Chapter 16, Section 9.16.130 "Design Guidelines" of the Municipal Code, multiple-family residential projects shall be architecturally compatible with the existing neighborhood, provide parking, walkways and common open space areas such as picnic areas, pools, tot lots etc. This is an ongoing policy.	Planning
Objective 2.4	Provide commercial areas within the City that are conveniently located, efficient, attractive, and have safe and easy pedestrian and vehicular circulation in order to serve the retail and service commercial needs of Moreno Valley residents and businesses.	The City strives for commercial areas that provide functional vehicular circulation and safe pedestrian areas that are walkable internally between uses and externally to surrounding neighborhoods. This is an ongoing objective.	Planning
Policies:			

APPENDIX A

Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.4.1	The primary purpose of areas designated **Commercial** is to provide property for business purposes, including, but not limited to, retail stores, restaurants, banks, hotels, professional offices, personal services and repair services. The zoning regulations shall identify the particular uses permitted on each parcel of land, which could include compatible noncommercial uses. Commercial development intensity should not exceed a Floor Area Ratio of 1.00 and the average floor area ratio should be significantly less.	Zoning regulations for commercial uses are consistent with established General Plan land use. For example, the City's zoning map establishes Commercial zoning designations and the Municipal Code Permitted Uses Table (Section 9.02.020-1) provides for permitted uses allowed for each commercial zoning category. This is an ongoing policy.	Planning
2.4.2	The commercial area located at the intersection of **Alessandro Boulevard and Redlands Boulevard** shall provide for commercial land uses that are compatible with the historical, small town nature of the original Moreno town site. The zoning regulations shall identify the particular uses permitted on each parcel of land, which could include compatible noncommercial uses.	The General Plan Land Use Map shows the site zoned as VC or Village Commercial, which is a unique zoning classification allowing for unique uses. Any development at this intersection has been and would need to be compatible with the historical, small town nature of the original site.	Planning

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.4.3	The commercial area located on the **north side of State Route 60 at the intersection of Moreno Beach Drive** shall provide for the establishment of commercial land uses that serve the daily needs of the surrounding residential neighborhood and the traveling public. It is not intended to serve the needs of the region for goods, services, entertainment or recreation. The zoning regulations shall identify the particular uses and type of development permitted on each parcel, which could include office uses and compatible noncommercial uses.	Properties located north of State Route 60 at the intersection of Moreno Beach Drive are zoned CC or Community Commercial. The zoning established in the City's Land Use Map and Municipal Code identifies permitted uses allows for commercial/retail uses that both serve the needs of the surrounding residential neighborhood and the traveling public. The preferred alternative in the Highway 60 Corridor study suggested a town center concept which includes potential entertainment retail uses such as hotels and sit down restaurant. **This item shall be reviewed further during the next General Plan update.**	Planning
2.4.4	An overlay district limiting land uses to those that are supportive and compatible with medical uses shall be established around the **Riverside County Regional Medical Center and the Moreno Valley Community Hospital.** The zoning regulations shall identify the particular uses and type of development permitted on each parcel.	Municipal Code standards under Section 9.07-040 "Medical Use Overlay District (MUO)", provides the foundation to create and maintain diverse and supportive medical uses in the vicinity of the Riverside County Regional Medical Center (Riverside University Health Systems) and the Moreno Valley Community Hospital. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.4.5	The primary purpose of locations designated **Mixed-Use** on the Moreno Valley General Plan Land Use map is to provide for the establishment of commercial and office uses and/or residential developments of up to 20 dwelling units per acre. The zoning regulations shall identify the particular uses and type of development permitted on each parcel. Overall development intensity should not exceed a floor area ratio of 1.00.	The Mixed Use land use zone established in the General Plan provides for both commercial/office and higher density residential development opportunities. The permitted uses table (Municipal Code(Section 9.02.020-1) identifies types of uses and Residential Site Development Standards (Municipal Code Section 9.03.040-6) establishes floor area ratios. **The revised Mixed Use Overlay has established standards for denser residential development and allows density to rise from a maximum of 20 dwelling units per acre to a maximum of 40 dwelling units per acre. This item shall be further reviewed and adjusted accordingly with the next General Plan update.**	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.4.6	The primary purpose of areas designated **Residential/Office** on the Moreno Valley General Plan Land Use map is to provide areas for the establishment of office-based working environments or residential developments of up to 15 dwelling units per acre. The zoning regulations shall identify the particular uses and type of residential development permitted on each parcel of land. Overall development intensity should not exceed a Floor Area Ratio of 1.00.	As established in Chapter 9,02, Section 9.02.020 of the Municipal Code, areas zoned Residential/Office provide office based working environments and allow for higher density multiple-family residential development. Zoning regulations identify particular uses, types of residential development and floor area ratio requirements. This is an ongoing policy.	Planning
2.4.7	The primary purpose of areas designated **Office** is to provide for office uses, including, administrative, professional, legal, medical and financial offices. The zoning regulations shall identify the particular uses permitted on each parcel of land, which could include limited non-office uses that support and are compatible with office uses. Development intensity should not exceed a Floor Area Ratio of 2.00 and the average intensity should be significantly less.	The Municipal Code (Sections 9.02.020 and 9.04.010) establishes permitted uses and defines areas designated for office type uses. Current zoning regulations identifies development intensity. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.4.8	Orient commercial development toward pedestrian use. Buildings should be designed and sited so as to present a human-scale environment, including convenient and comfortable pedestrian access, seating areas, courtyards, landscaping and convenient pedestrian access to the public sidewalk.	Section 9.04.010 encourages concentration of commercial use for the convenience of the public and to secure a mutually beneficial relationship between commercial uses and the and public. Section 9.16.150 "Commercial Design Guidelines requires pedestrian pathways in parking areas and further incorporates pedestrian ways and plazas to provide visual interest and functionality. This is an ongoing policy.	Planning
2.4.9	Require reciprocal parking and access agreements between individual parcels where practical.	Section 9.16.150 "Commercial Design Guidelines requires interspace access be provided between commercial centers reducing the number of drive approaches from the street and to encourage commercial/retail crossover. This is an ongoing policy.	Planning
2.4.10	Design internal roadways so that direct access is available to all structures visible from a particular parking area entrance in order to eliminate unnecessary vehicle travel, and to improve emergency response.	Internal roadways provide direct access to all structures visible from a parking area entrance. This would also be the norm for Specific Plans under Chapter 9.13. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.4.11	The commercial area located in the vicinity of the intersection of Gilman Springs Road and Jack Rabbit Trail shall provide those commercial support activities necessary and/or incidental to adjacent recreational uses and emphasize tourist-oriented activities and retail services. Recreation-oriented residential land use types may be appropriate to the extent that they are incidental to and complement the recreational character of the area. At such time as the area is annexed to the City, the zoning regulations shall identify the particular uses permitted on each parcel of land.	The General Plan Land Use Map provides a commercial land use designation for this area located in the City's Sphere of Influence. Based on the policy, land uses should be limited away from general commercial use, with an emphasis on more recreation or tourist oriented land uses. **This item shall be further reviewed and evaluated in the next comprehensive General Plan update.**	Planning
Objective 2.5	Promote a mix of industrial uses which provide a sound and diversified economic base and ample employment opportunities for the citizens of Moreno Valley with the establishment of industrial activities that have good access to the regional transportation system, accommodate the personal needs of workers and business visitors; and which meets the service needs of local businesses.	The Municipal Code provides for a mixture of industrial uses that provide a diverse economic base and opportunities for employment with access to regional transportation systems. For example, the recently approved World Logistics Center, situated in the southern and eastern portion of the City, takes advantage of easy access to the State Route 60 freeway.	Planning
Policies:			

APPENDIX A

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.5.1	The primary purpose of areas designated **Business Park/Industrial** is to provide for manufacturing, research and development, warehousing and distribution, as well as office and support commercial activities. The zoning regulations shall identify the particular uses permitted on each parcel of land. Development intensity should not exceed a Floor Area Ratio of 1.00 and the average floor area ratio should be significantly less.	The Business park/Industrial land use category provides for a wide variety of industrial uses from warehousing, manufacturing and office/support uses. The Municipal Code Permitted Uses Table (Section 9.02.020-1) establishes permitted uses allowed for this land use category. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.5.2	Locate manufacturing and industrial uses to avoid adverse impacts on surrounding land uses.	Industrial design guidelines provided in the Municipal Code Chapter 9.16 requires truck traffic to be channeled directly to truck routes and prohibits access to neighborhood streets. Manufacturing/industrial uses shall be screened and buffered from surrounding land uses. This is an ongoing policy.	Planning
2.5.3	Screen manufacturing and industrial uses where necessary to reduce glare, noise, dust, vibrations and unsightly views.	Municipal Code Sections 9.16.160 "Business Park/industrial" and 9.05.050 'Good Neighbor Guidelines for Warehouse Distribution Facilities" require screening for manufacturing and industrial uses in view of rights of way. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.5.4	Design industrial developments to discourage access through residential areas.	Industrial development is designed to discourage access through residential zones. Industrial design guidelines provided in the Municipal Code Chapter 9.16 requires truck traffic to be channeled directly to truck routes and prohibits access to neighborhood streets. In addition, Section 9.05.050 "Good Neighbor Guidelines for Warehouse Distribution Facilities" eliminates diesel trucks from unnecessarily traversing through residential neighborhoods based on establish truck routes, parking restrictions and proper signage An example includes the World Logistics Center project, a 41 million square foot industrial logistics hub in the southeastern portion of the City which has prevented access to Redlands Boulevard and the adjacent residential neighborhoods to the west by redesigning streets and preventing through access. This is an ongoing policy.	Planning

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Objective 2.6	Maintain an adequate inventory of lands for the conduct of public, quasi-public, and institutional activities, including protection of areas needed for future public, quasi-public, and institutional facilities.	This is an on-going policy. Seniors and other users are encouraged to use para transit services provided by the Riverside Transit Agency. This is consistent with Chapter 9.11.080 of the Municipal Code.	Land Dev./Administrative Services/Police/Fire/Planning
Policies:			
2.6.1	The primary purpose of areas designated Public/Quasi-Public is to provide property for civic, cultural and public utility uses, including, but not limited to schools, libraries, fire stations, museums, and government offices. The zoning regulations shall identify the particular uses permitted on each parcel of land. Development intensity should not exceed a Floor Area Ratio of 1.00 and the average Floor Area Ratio should be significantly less.	The Municipal Code (Sections 9.02.020 and 9.04.010) establishes permitted uses and defines areas designated for "Public" uses. The description in this policy is consistent with zoning requirements in the above sections. This is an ongoing policy	Land Dev./Administrative Services/Police/Fire/Planning
Objective 2.7	Encourage open space preservation through appropriate land use policies that recognize the valuable natural resources and areas required for protection of public safety that exist in the City.	Municipal Code Chapter 9.06, Section 9.06.010 establishes standards for open space districts. The intent is to require specific regulations to preserve certain life styles, significant geological or other unique features, and protect the public health safety and welfare. Municipal Code Section 9.02.020 establishes permitted uses for properties located in the district. This is an ongoing objective.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Policies:			
2.7.1	The primary purpose of areas designated **Open Space**, is to provide areas that are substantially unimproved, including, but not limited to areas for outdoor recreation, the preservation of natural resources, the grazing of livestock and the production of crops. Development intensity should not exceed a Floor Area Ratio of 0.10 and the average Floor Area Ratio should be significantly less.	The purpose of Open Space Districts is to provide primarily unimproved areas, while preserving natural and environmentally sensitive areas. Municipal Code Chapter 9.06, Section 9.06.010 establishes standards for open space districts. Municipal Code Section 9.02.020 establishes permitted uses for properties located in the district. This is an ongoing policy.	Planning
2.7.2	The primary purpose of areas designated **Floodplain** is to designate floodplain areas where permanent structures for human occupancy are prohibited to protect of the public health and safety. Development intensity should not exceed a Floor Area Ratio of 0.05.	Accomplished through site design consistent with Municipal Code Chapter 8.12.	Land Development/Planning
Objective 2.8	The major purpose of specific plans is to encourage and promote the development of larger-scaled mixed-use developments for the purpose of providing adequate flexibility and innovation in residential building types, land use mixes, site design, and development concepts.	Some of the objectives of a specific plan are s to encourage and promote the development of larger scaled mixed use developments for purposes of providing flexibility and innovation in residential building types, land use mixes, site design and development concepts for areas at or exceeding 15 acres. Municipal Code Chapter 9.13, Sections 9.13.010 through 9.13.050 provide purpose and intent, applicability and specific plan requirements. This is an ongoing objective.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Policies:			
2.8.1	In order to provide superior design solutions, reduce adverse environmental impacts, preserve scenic values, and enhance the provision of open space and other amenities, transfers of residential densities permitted under the General Plan may be accomplished in accordance with the following: a. The transfer of residential densities may be accomplished only pursuant to approval of a planned unit development or hillside development. b. Up to one hundred percent (100%) of the density indicated on the General Plan Land Use map may be transferred within a single hillside development or planned unit development project. Densities may not be transferred from one project to another. c. The proposed transfer of densities shall be accomplished such that the project results in a superior use of land, increased sensitivity to the environment, and/or enhanced project amenities without an increased burden on public facilities and services.	Municipal Code chapter 9.03, Section 9.03.050 provides standards for density bonus and affordable housing opportunities. In addition, Chapter 9.03.060 "Planned Unit Developments", provide transfer of densities to preserve scenic areas, rock outcroppings and conservation of cultural or biological resources. Project amenities are enhanced by providing walkable communities that provide ample open space areas such as trails and parks. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.8.2	To the extent that development policies, land use standards, design guidelines, and other provisions of the adopted specific plans are, by their content, intended to address issues contained in the objectives, policies, and implementation programs of the Moreno Valley General Plan, and are inconsistent with the provisions of the General Plan, then the provisions of those specific plans shall be controlling; otherwise, all other provisions of the Moreno Valley General Plan shall remain in effect.	Specific Plans have been developed to be consistent with and to address issues contained in the Moreno Valley General Plan. All items not addressed in specific plans are directed to provisions in the Municipal Code (which is consistent with General Plan provisions). This is an ongoing policy.	Planning
Objective 2.9	Maintain City boundaries that are logical in terms of City service capabilities, economic development needs, social and economic interdependencies, citizen desires, and City costs and revenues.	Logical City boundaries have been maintained throughout the years with areas designated as spheres of influence for future expansion opportunities of the City. This is an ongoing objective.	Planning
Policies:			

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.9.1	Support and encourage the annexation of unincorporated areas within the General Plan study area for which: a. Long-term benefits will be derived by the City; b. Adequate infrastructure and services have been or can be economically provided in accordance with current City standards; c. The proposed annexation will generate sufficient revenues to adequately pay for the provision of City services within a reasonable period of time.	Logical City areas of future annexation of unincorporated areas (northern and eastern portions) have been encouraged to produce long term benefits only if the necessary infrastructure is in place or is attainable, and if the annexation can generate sufficient revenues to pay for City services. These areas have been designated as spheres of influence. This is an ongoing policy.	Planning
Objective 2.10	Ensure that all development within the City of Moreno Valley is of high quality, yields a pleasant living and working environment for existing and future residents, and attracts business as the result of consistent exemplary design.	It is an objective of the City of Moreno Valley to make sure that development is of the highest quality, provides a pleasant living and working environment for residents and from an economic development standpoint, attracts business based on high quality design. This is an ongoing objective.	Planning
Policies:			

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.10.1	Encourage a design theme for each new development that is compatible with surrounding existing and planned developments.	Chapter 16, Section 9.16.130 "Design Guidelines" of the Municipal Code establishes design for different types of development. Consistent with this Chapter, design themes are encouraged for new development. The theme shall be compatible with surrounding development. This is an ongoing policy.	Planning
2.10.2	Screen trash storage and loading areas, ground and roof mounted mechanical equipment and outdoor storage areas from public view as appropriate.	Chapter 16, Section 9.16.130 "Design Guidelines" of the Municipal Code establishes design for screening of trash/ storage areas, loading areas, roof mounted mechanical equipment and outdoor storage areas from public view. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.10.3	Require exterior elevations of buildings to have architectural treatments that enhance their appearance. a. A design theme, with compatible materials and styles should be evident within a development project; b. Secondary accent materials, colors and lighting should be used to highlight building features; c. Variations in roofline and setbacks (projections and recesses) should be used to break up the building mass. d. Industrial buildings shall include architectural treatments on visible facades that are aesthetically pleasing.	Chapter 16, Section 9.16.130 "Design Guidelines" of the Municipal Code establishes design for exterior building facades and architectural treatments for all development types to include such items as overall design materials, accent materials, rooflines and architectural treatments for industrial buildings. This is an ongoing policy.	Planning
2.10.4	Landscaping and open spaces should be provided as an integral part of project design to enhance building design, public views, and interior spaces; provide buffers and transitions as needed; and facilitate energy and resource conservation.	Chapter 16, Section 9.16.130 "Design Guidelines" of the Municipal Code requires landscape buffers and open spaces to enhance public design, public views and interior spaces. Landscape in buffers and opens space also facilitates energy conservation. This is an ongoing policy.	Planning
2.10.5	Development projects adjacent to freeways shall provide landscaped buffer strips along the ultimate freeway right-of-way.	Chapter 16, Section 9.16.130 "Design Guidelines" of the Municipal Code requires freeway adjacent developments to provide landscape buffers along freeway rights of ways. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.10.6	Buildings should be designed with a plan for adequate signage. Signs should be highly compatible with the building and site design relative to size, color, material, and placement.	Chapter 9.12"Sign Regulations" of the Municipal Code establishes requirements for sign placement and design. For visibility and economic viability of the business, adequate signage is required for building and site design. This is an ongoing policy.	Planning
2.10.7	On-site lighting should not cause nuisance levels of light or glare on adjacent properties.	Chapter 9.08 "General Development Standards" Section 9.08.100 "Lighting" of the Municipal Code provides standards for lighting and limitations for light and glare. Recent modifications to the Code have provided for dark sky provisions with further limitations of light spillage onto adjacent properties. This is an ongoing policy.	Planning
2.10.8	Lighting should improve the visual identification of structures. Within commercial areas, lighting should also help create a festive atmosphere by outlining buildings and encouraging nighttime use of areas by pedestrians.	Chapter 9.08, Section 9.08.100 "Lighting" of the Municipal Code provides lighting standards for visual identification. Lighting accents to the building through up lighting opportunities outline buildings and encourage use by pedestrians at night. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.10.9	Fences and walls should incorporate landscape elements and changes in materials or texture to deter graffiti and add visual interest.	Both Chapters 9.08 Section 9.08.070 "Fences and Walls" and Chapter 9.16 "Design Guidelines" both require landscape elements, material changes and texture to deter graffiti to fences and walls This is an ongoing policy.	Planning
2.10.10	Minimize the use and visibility of reverse frontage walls along streets and freeways by such treatments as landscaping, berming, and "side-on" cul-de-sacs.	Due to the cost of establishing "Special Districts" to maintain reverse frontage landscape and irrigation, reverse frontage development has been discouraged. Therefore, the use of reverse frontage walls is minimal. Any necessary reverse frontage wall shall be decorative in nature and would include landscape and possible berming to break up the elevations. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.10.11	Screen and buffer nonresidential projects from adjacent residential property and other sensitive land uses when necessary to mitigate noise, glare and other adverse effects on adjacent uses.	Chapter 9.16 "Design Guidelines", Sections 9.16.150 and 9.16.160 and Chapter 9.08, Section 9.08.150 of the Municipal Code provides general screening and buffer requirements for non-residential properties to other sensitive properties. This would include such items as trash areas, loading areas, ground-mounted equipment, roof mounted equipment etc. This is an ongoing policy.	Planning
2.10.12	Screen parking areas from streets to the extent consistent with surveillance needs (e.g. mounding, landscaping, low profile walls, and/or grade separations).	Both Landscape Guidelines (Parking Lots) approved by resolution in 2009 and Chapter 9.16 "Design Guidelines" for residential, commercial, industrial and office land uses include guidelines for screening of materials and equipment from streetscapes. This is an ongoing policy.	Planning
2.10.13	Provide landscaping in automobile parking areas to reduce solar heat and glare.	Landscape Guidelines (Parking Lots) approved by resolution in 2009 specifically requires landscaping in automobile parking areas. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.10.14	Preserve or relocate existing mature trees and vegetation where practical. Mature trees shall be replaced when they cannot be preserved or relocated.	Landscape Guidelines approved by resolution in 2009 specifically requires preservation of landscape and specifically trees. Mature trees not able to be preserved shall be replaced at a 3 to 1 ratio. This is an ongoing policy.	Planning
2.10.15	Emphasize the "gateway status" of lands in the vicinity of the intersection of I-215 and State Route 60, at the intersection of Alessandro Boulevard and I-215, at the intersection of Perris Boulevard and State Route 60, and at State Route 60 and Gilman Springs Road. In the vicinity of those areas designated as having "gateway status", the City shall encourage community identification signing.	Although gateway status has been emphasized with a recent upgrade of community identification status, the City has not designated any specific areas along the I-215 or State Route 60 gateway status **As there are no specific policies or Code requirements on this subject, it is recommended that the item be further reviewed during the comprehensive update of the General Plan.**	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Objective 2.11	Maintain a water system that is capable of meeting the daily and peak demands of Moreno Valley residents and businesses, including the provision of adequate fire flows.	This item is accomplished through will serve letters, environmental documentation, and fire flow letters.	Land Development/Planning/Fire
Policies:			
2.11.1	Permit new development only where and when adequate water services can be provided.	This item is accomplished through will serve letters and environmental documentation.	Land Development/Planning
Objective 2.12	Maintain a wastewater collection, treatment, and disposal system that is capable of meeting the daily and peak demands of Moreno Valley residents and businesses.	Wastewater collection and treatment is provided by Eastern Municipal Water District (EMWD) Western Municipal Water District (WMWD), and Edgemont Community Services District (ECSD)	Land Development
Policies:			
2.12.1	Prior to the approval of any new development application ensure that adequate septic or sewer service capacity exists or will be available in a timely manner.	Requirement for sewer unless septic allowed by Riverside County Department of Environmental Health. This is consistent with Municipal Code Chapter 9.14.	Land Development
Objective 2.13	Coordinate development activity with the provision of public infrastructure and services to eliminate possible gaps in service provision.	Accomplished through design/construction consistent with Municipal Code Chapter 9.14.	Land Development
Policies:			
2.13.1	Limit the amount of development to that which can be adequately served by public services and facilities, based upon current information concerning the capability of public services and facilities.	Adequate public services are reviewed for each development proposal through California Environmental Quality Act guidelines.	Land Development/ Planning
2.13.2	Unless otherwise approved by the City, public water, sewer, drainage and other backbone facilities needed for a project phase shall be constructed prior to or concurrent with initial development within that phase.	Accomplished through design/construction consistent with Municipal Code Chapter 9.14.	Land Development

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.13.3	It shall be the ultimate responsibility of the sponsor of a development project to assure that all necessary infrastructure improvements (including system wide improvements) needed to support project development are available at the time that they are needed.	Accomplished through design/construction consistent with Municipal Code Chapters 9.8 and 9.14.	Land Development
2.13.4	Encourage installation of advanced technology infrastructure, including, but not limited to, infrastructure for high speed internet access and solar energy.	Land Development is not providing guidance on high speed internet access or involved with solar energy. Any involvement would be through the plan check process completed for utilities.	Land Development
Objective 2.14	Establish and implement comprehensive solutions to the financing of public facilities that adequately distribute costs based on the level of benefit received and the timing of development.	This item is accomplished through implementation of DIF and TUMF programs consistent with Municipal Code Title 3.	Finance / Facilities / Land Development/SD/Capital Projects

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Policies:			
2.14.1	Conduct periodic review of public facilities impact mitigation fees in accordance with state statutes to ensure that the charges are consistent with the costs of improvements. Utilize the service and mitigation standards contained in the Moreno Valley General Plan as the basis for determining improvement costs.	DIF program is periodically updated and the program is implemented consistent with Municipal Code Title 3.	Finance / Facilities / Land Development/Capital Projects
2.14.2	Promote the establishment of benefit assessment districts, Mello-Roos Community Facilities Districts, tax increment financing, and other financing mechanisms in combination with programmed capital improvements to eliminate existing public service and facility gaps, and to provide necessary facilities in advance of the impacts created by development.	CFD No. 2014-01 (Maintenance Services) was established on March 25, 2014. The District was formed to provide an alternative financing tool for the development community. It provides a mechanism to fund the operation and maintenance of street lighting services and maintenance of public landscaping. With next comprehensive General Plan update, it is recommend to change, "Promote the establishment of benefit assessment district, Mello-Roos Community Facilities Districts, tax increment financing, and other financing mechanisms in combination. . ." with "Promote the establishment of various special financing districts based on qualifications of project in combination. . ."	Special Districts

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.14.3	Review development projects for their impacts on public services and facilities including, but not necessarily limited to, roadways, water, sewer, fire, police, parks, and libraries and require public services or facilities to be provided at the standards outlined in the Moreno Valley General Plan and the standards of applicable service agencies.	Water and sewer impacts/service is determined during entitlement and will serve letters from purveyor.	Public Works / Public Safety/Facilities/Parks
Objective 2.15	Ensure that all Moreno Valley residents have access to high-quality educational facilities, regardless of their socioeconomic status or location within the City.	This objective is being met with continual cooperation and dialog with the Moreno Valley Unified School District and the Van Verde Unified School District.	Administrative Services/Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Policies:			
2.15.1	Encourage an ongoing open liaison with all school districts regarding proposed school design and siting to maximize access and minimize impacts to adjacent uses.	This will ensure that City Standards are conveyed, joint-use facilities are considered, safe routes to school are established, opportunity for parks are incorporated on adjacent property, and amenities are designed to minimize impacts to adjacent uses.	Parks/Planning
Objective 2.16	Maintain local library facilities and reserves in accordance with the following minimum standards: 0.5 square feet of library space and 1.2 volumes per capita.	Libraries fall under Admin Services. While the space and volume goals are well within national standards (and even below) they are well beyond what we can hope to achieve with the funds that we have to dedicate to library services. the .5 sq. ft. standard would required over 100,000 sq. ft. of space for library services. We are currently at 14,000 sq. ft. of space, .06 sq. ft. of space per resident, and even with adding a satellite of 4,000 sq. ft. we would be at 18.000 sq. ft. total or .08 sq. ft. per resident. Additionally, our current collections is just over 82,000 volumes, the 1.2 standard would require 246,000 volumes.	Administrative Services/Parks
Policies:			

APPENDIX A

Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.16.1	Encourage inter-library loan agreements with the County library system and those of surrounding cities to provide the widest possible variety of materials to library patrons.	Inter-library loan agreements are encouraged with the County library system to provide the widest range and variety of materials possible to residents.	Administrative Services/Parks
2.16.2	Provide for the expansion of library facilities as needed to keep pace with the growing population of Moreno Valley.	Due to budgetary issues, the expansion of library facilities has not kept up with the pace of the growing population of Moreno Valley. **This item can be revisited with the comprehensive update of the General Plan.**	Administrative Service/Parks

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Objective 2.17	Provide cultural facilities, including history (natural, cultural and children's) and art museums and performing arts facilities.	The City collaborates with a number of cultural facilities including the Vanguard Galley (Moreno Valley Cultural Arts Foundation) to provide residents with art expos; clothing, toy, and food drives; charity art auctions; poetry readings; live music and theater events. The Conference & Recreation Center is home to the Moreno Valley Master Chorale and the Moreno Valley Community Band. Both offer performances quarterly at no cost to the community. The March Field Park Community Center is home to day camp and pre-school programs year round and is soon to be re-painted. The City's Arts commission is planning a Community Mural that will utilize volunteers to design and paint a mural on the exterior of the building depicting youth and recreation activities. On-going	Parks/Administrative Services
Policies:			
2.17.1	Promote the development and construction of a civic/cultural center and museums.	Moreno Valley has constructed the Conference and Recreation Center, Cottonwood Banquet Room, and Towngate Community Center for use as civic/cultural centers. A museum is planned at March Field Park in the future. Events at these facilities are ongoing.	Parks / Administrative Services

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2.18.2	Encourage day care through zoning regulations by permitting such facilities in all compatible zoning classifications.	The City's Parks and Community Services Department locates their facilities within it's own facilities, which are properly zoned for such use.	Parks/Administrative Services / Community Development
2.18.3	Work closely with local schools, private companies, churches, non-profit agencies, government social service agencies, and community groups to facilitate the provision of community services.	The City works with various groups to jointly provide a multitude of services to the community. Examples of these groups include: Moreno Valley and Val Verde Unified School Districts, Salvation Army, Family Services Association, Master Chorale, Cultural Arts Foundation, Riverside University Health Systems, UC Riverside, Cal Baptist College, Friends of the Senior Center. Ongoing	Parks/Administrative Services
2.18.4	Encourage the development of senior citizens independent living and congregate care facilities in locations with convenient access to social, commercial, and medical services.	Development of senior citizen independent living and congregate care facilities are encouraged in locations convenient to social, commercial and medical services.	Administrative Services / *Community Development*
2.18.5	Promote volunteer involvement in all public programs and within the community as a whole.	The City promotes volunteer involvement through several departments and programs within the City.	Parks/Administrative Services

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
9.2 Community Development Element Goals, Objectives Policies and Programs			
9.2.3 Community Development Element Programs			
2-1	Develop a community signing scheme for street corridors, public buildings and selected entrances to the community and its sub-communities.	This is completed in concert with the bi-annual City Capital Improvement Plan effort. It is implemented in conformance with existing policies and procedures for signing throughout the City, and when needed, new policies may be developed. Wayfinding signs have been installed at selected locations. Future Wayfinding signs will be installed as need arises. "Welcome to Moreno Valley" signs have been installed at selected entrance points to the City, with remaining signs to be installed as priorities and funds allow.	Planning/Public Works/Capital Projects
2-2	Review and revise the Municipal Code to implement the goals, objectives and policies stated in the General Plan.	Periodically, the Municipal Code is revised and updated to reflect General Plan goals, objectives and policies. A General Plan annual report to review current General Plan standards is also completed and submitted to the Office of Planning and Research (OPR) each year. This is a policy that is reviewed annually with periodic updates throughout the year. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
2-3	Conduct a detailed capital improvement program using the revised population projections and proposed land use characteristics of the General Plan.	A detailed capital improvement program is conducted annually by the Capital Projects Division of Public Works. This is an ongoing policy.	Public Works/Planning/Capital Projects
2-4	Periodically study the feasibility of extending the sphere of influence north of the city limits and annexing unincorporated areas along the city boundary.	Designated spheres of influence have been established east and north of the city limits. The City periodically studies the extension of the existing spheres of influence to the north, with the latest attempt at expansion studied with the City Council in 2016. This is an ongoing policy.	Planning
2-5	Disseminate local childcare resource information and provide referral service to residents and businesses.	Childcare resource information is provided to residents and businesses in the City. Ongoing	Planning/Administrative Services
2-6	Encourage demand-response public transportation facilities, such as the mini-bus or dial-a-ride systems in order facilitate the transportation needs of the elderly and the disabled.	This is an on-going policy. Seniors and other users are encouraged to use para transit services provided by the Riverside Transit Agency. This is consistent with Chapter 9.11.080 of the Municipal Code.	Transportation/Planning
2-7	Provide City information identifying available social services and facilities in a broad range of formats.	**Housing:** Following the dissolution of RDA, there are no currently active programs due to limited or no funding available. Any projects funded with HOME or Housing Authority funding is provided on the City's website.	Housing/Administrative Services/Planning

APPENDIX A

9.4.1 Parks, Recreation and Open Space Element Goals			

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Goal 4.1	To enhance Moreno Valley as a desirable place in which to live, work, shop, and do business.	The City provides numerous amenities for residents including parks, sports facilities, cultural/community centers, restaurants, stores, entertainment, and medical facilities, to promote the desirability of the City. Ongoing.	Parks / Community Services / *Economic Development*
Goal 4.2	To retain an open space system that will conserve natural resources, preserve scenic beauty, promote a healthful atmosphere, provide space for outdoor recreation, and protect the public safety.	The City promotes the preservation of it's natural resources and scenic beauty of open space, creating a healthy atmosphere for outdoor recreation and public safety, per MVMC Title 7. On-going.	Parks / Community Services / *Planning*
9.4.2 Parks, Recreation and Open Space Element Objectives and Policies			
Objective 4.1	Retain agricultural open space as long as agricultural activities can be economically conducted, and are desired by agricultural interests, and provide for an orderly transition of agricultural lands to other urban and rural uses.	The City encourages agricultural open space land as long as the activities can be economically conducted and it is an objective to provide for orderly transition of agricultural uses to other urban/rural lands. Permitted uses Table 9.02.020 in the Municipal Code allows for agricultural and crop production in all land use zones Ongoing.	Planning
Policies:			
4.1.1	Encourage grazing and crop production as a compatible part of a rural residential atmosphere.	Permitted uses Table 9.02.020 allows for agricultural and crop production in all land use zones. Ongoing.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Objective 4.2	Provide safe, affordable and accessible recreation facilities and programs to meet the current and future needs of Moreno Valley's various age and interest groups and promote the provision of private recreational facilities.	The City provides numerous safe, affordable, and accessible recreation facilities to meet the various needs or multiple age and interest groups. There are currently 4 community centers and 28 public parks that have recreation amenities. Ongoing.	Parks / Community Services
Policies:			
4.2.1	Neighborhood parks shall serve as the day-to-day recreational areas of the City, Neighborhood parks should be within a reasonable walking distance of the population served. Community parks may also serve day-to-day recreation needs. That portion of the community and/or regional facilities that provide similar amenities to those found in neighborhood parks shall also be considered as meeting this objective.	Neighborhood parks are designed and constructed to be located within a reasonable distance of the population they are intended to serve. Community parks are designed and constructed to include similar amenities as neighborhood parks to meet the objective of a neighborhood park. On-going.	Parks / Community Services
4.2.2	Community parks shall provide opportunities for participation in sports and related athletic activities, water-oriented recreation and other special interest activities (e.g. golf, tennis, equestrian, etc.).	Community parks provide opportunities for a variety of athletic activities. Examples of these include: Cottonwood Golf Center, Moreno Valley Equestrian Center, March Field Skate Park, tennis courts at three sites, basketball courts at several sites, and splash pads in two parks. Ongoing.	Parks / Community Services

APPENDIX A

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
4.2.3	Employ a multifaceted approach in the financing and acquisition, development and maintenance of parkland, including the financing of parklands through development fees, state and federal grant-in-aid programs, gifts and donations, and other sources.	Moreno Valley utilizes development impact fees, Quimby in lieu fees, Community Facilities and Services Districts, and various grants, to finance acquisition, development, and maintenance of parks and parkland. "Zone A was formed at City incorporation to provide a funding mechanism for parks and community services. Every parcel in the City contributes to Zone A. CFD No. 1 (Park Maintenance) was established on July 8, 2003. The District was formed to provide financing tool for the residential development community. It provides a mechanism to fund the operation and maintenance of parks constructed after district formation. All new residential development is conditioned to contribute to the District. Willdan Financial has been engaged to evaluate possible amendment to CFD No. 1 or creation of a new CFD to provide for a tax rate layer for non-residential development "	Parks / Community Services

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
4.2.4	Encourage special events (tournaments, festivals, celebrations) that reflect the uniqueness of Moreno Valley and contribute to community identity, cohesiveness and stability.	Moreno Valley encourages and hosts several special events. Some are unique to the City, in order to bring together it's residents. Examples are: 4th of July Independence Parade and Family Fun Fest, Youth Fest, Springtastic Festival and Egg Hunt, Recreation Expo, Concerts/Movies in the Parks, Snow Day and Holiday Tree Lighting. Ongoing	Parks / Community Services
4.2.5	Work in conjunction with private and public school districts and other public agencies to facilitate the public use of school grounds and facilities for recreational activities. The City shall also encourage the development of park sites adjacent to school facilities to maximize recreational opportunities in Moreno Valley.	The City has joint-use agreements with the school districts for use of recreation facilities. The City encourages new developments to construct parks next to schools to maximize recreational opportunities in the City. Ongoing.	Parks / Community Services
4.2.6	The City shall use cost effectiveness, demand and need for service and potential return on investment as criteria for the development and operation of future recreational facilities and programs.	The City Council sets activities/program fees. Typically, senior programs are no-cost and youth and adult fees are cost recovery. Sponsorships are utilized to off-set costs. Ongoing.	Parks / Community Services

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
4.2.7	The City level of service standard is 3 acres of developed parkland for every 1,000 new residents. Exceptions from this ratio may be made in exchange for extraordinary amenities of comparable economic value. Land not suitable for active recreation purposes may not be counted toward fulfilling parkland dedication requirements.	The City's standard for developed parkland is 3 acres per 1,000 new residents. In some areas, this ratio has been reduced due to the City receiving added amenities that are equal to or exceed the value of property. The City does not take on new property not suitable for active recreation purposes as fulfillment for parkland dedication requirements. MVMC Chapter 3.4. (Ongoing).	Parks / Community Services
4.2.8	Encourage the development of recreational facilities within private developments, with appropriate mechanisms to ensure that such facilities are properly maintained and that they remain available to residents in perpetuity.	The Planning Division encourages development of recreational facilities within private developments, with facility maintenance provided through required Covenants, Conditions and Restrictions (CC&R's) and through a Homeowners Association.	Planning
4.2.9	In conjunction with the school districts, civic organizations, and other private, civic-minded entities, encourage and participate in the provision of organized recreational activities for Moreno Valley residents of all ages.	The City has many programs that incorporate organized recreation activities for schools, civic organizations, and private civic-minded entities. These are designed to encourage participation in organized recreational activities for resident of all ages.	Parks / Community Services

APPENDIX A

Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
4.2.10	Involve individuals and citizen groups reflecting a cross section of Moreno Valley citizens (including youth and adults) in the planning, design and maintenance of parks, recreation facilities and recreation programs.	The City has established a Park and Trail adoption system for individuals and groups to assist with the maintenance of parks and trails. City has several boards and commissions that assist with the planning and design of recreation facilities, parks, and trails. Ongoing	Parks / Community Services
4.2.11	Emphasize joint planning and cooperation with all public agencies as the preferred approach to meeting the parks and program needs of Moreno Valley citizens.	Moreno Valley jointly plans and cooperates with the local fire department, police department, and water district, in its approach to meet the needs of citizens. On-going	Parks / Community Services
4.2.12	Include multi-functional spaces and facilities in parks to facilitate cultural events.	Moreno Valley utilizes parks and the Conference and Recreation Center to facilitate cultural events such as: movies and concerts in the park; Artoberfest (art displays and performances); and various heritage related events.	Parks / Community Services
4.2.13	Provide recreation programs and access to facilities at reasonable costs.	The City provides many recreation programs and access to facility access at a reasonable cost. A few examples are: the Cottonwood Golf Center, Conference and Recreation Center gym, and Tee-ball. Ongoing	Parks / Community Services

APPENDIX A

Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
4.2.14	Establish linear parks in agreement with public and private utilities, including the State of California along the California Aqueduct, for the use and maintenance of utility corridors and rights-of-way for recreational purposes.	The City currently has agreements with the State Department of Water Resources for use of land over the California Aqueduct pipeline and Edison for the Sunnymead Ranch Linear Park. Ongoing	Parks / Community Services
4.2.15	Work closely with Riverside County Parks Department in its open space program to ensure that trail systems within Moreno Valley effectively link open space components.	The City requires developers that are located on Riverside County boundaries to coordinate their trail plans with the County Parks. (On-going) "Zone A was formed at City incorporation to provide a funding mechanism for parks and community services. Every parcel in the City contributes to Zone A. CFD No. 1 (Park Maintenance) was established on July 8, 2003. The District was formed to provide financing tool for the residential development community. It provides a mechanism to fund the operation and maintenance of parks constructed after district formation. All new residential development is conditioned to contribute to the District.	Parks / Community Services

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
4.2.16	Acquire land jointly with the local school districts for future school/park sites.	The City makes every effort to coordinate placing parks next to schools. An example of an undeveloped park next to a school is adjacent to March Middle School. Through a joint-use agreement the City had two lighted ball fields constructed on the school and will have a developer dedicated and construct a park adjacent to the school. On-going	Parks / Community Services
4.2.17	Require new development to contribute to the park needs of the City.	New development is required to provide fully functioning parks or a in-lieu fee for future construction of parks.	Parks / Community Services
4.2.18	Provide lighted sports fields to increase availability and utilization of courts and playing field facilities.	Where funding allows, the City has added or revamped lighting of sport facilities. Added/revamped facilities include Lassalle Sports Park and Morrison Park. Ongoing	Parks / Community Services
Objective 4.3	Develop a hierarchical system of trails which contribute to environmental quality and energy conservation by providing alternatives to motorized vehicular travel and opportunities for recreational equestrian riding, bicycle riding, and hiking, and that connects with major regional trail systems.	The City has a master plan of multi-use trails and non-motorized bike trails throughout the City. They are designed to connect to trails and adjacent agencies. The trail plan is reviewed with each development annexing the City, each development building in the City, and on a yearly basis. Ongoing	Parks / Community Services

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Policies:			
4.3.1	The City's network of multiuse trails, including regional trails, community trails, and local feeder trails, shall (1) be integrated with recreational, residential and commercial areas, schools and equestrian centers; (2) provide access to community resources and facilities, and (3) connect urban populations with passage to hillsides, ridgelines, and other scenic areas.	Per the Master Plan of Trails and the General Plan, trails are incorporated into parks, residential, commercial, and industrial developments. In many instances, trails provide access to facilities and other community resources. Trails are designed to connect to scenic areas. Ongoing	Parks / Community Services
4.3.2	The City shall establish an agreement with public and private utilities for the use and maintenance of utility corridors and rights-of-way for trail purposes.	The City has several agreements with both public and private utilities for the design, construction, and maintenance of trails. Examples of these include the California Department of Water Resources, The Gas Company, and Southern California Edison. Ongoing	Parks / Community Services
4.3.3	All new development approvals shall be contingent on trail right-of-way dedication and improvement in accordance with the Master Plan of Trails (Figure 4-5).	In adherence to the Master Plan of Trails, the City may require fee or easement dedication for trails. New developments that annex to the City may be required to provide similar amenities. On-going	Parks / Community Services
4.3.4	In conjunction with all development review, the City shall consider multiuse trail access and traditional travel routes through the property.	Per the Master Plan of Trails and the General Plan, trails are incorporated into many developments adjacent to traditional travel routes (streets and sidewalks). On-going	Parks / Community Services

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
4.3.5	In conjunction with the review and approval of nonresidential developments, the City should consider the use of multiuse trail amenities such as hitching posts, benches, rest areas, and drinking facilities.	In adherence to the Master Plan of Trails, the City may require trails and related amenities within nonresidential development.	Parks / Community Services
4.3.6	Wherever possible, development of residential areas conditioned for animal keeping on lots of ½ acre or larger, shall include a decomposed granite trail on one side of the street and traditional concrete sidewalk on the other.	Where applicable, feeder trails are conditioned for residential developments that allow animal keeping. The standard is to have a trail on one side of the street and a traditional sidewalk on the other. On-going	Parks / Community Services
4.3.7	Trail design and construction should take into consideration the safety and convenience of all trail users as the primary concern.	User safety and convenience are the upmost concern in the planning and construction of multi-use trails. On-going	Parks / Community Services
4.3.8	The City should facilitate the development of a multiuse regional trail system.	The City has been working with the County of Riverside and Lake Perris State Park to coordinate trail systems. On-going	Parks / Community Services
4.3.9	Unless otherwise specified due to fire department requirements, access or as established by a specific plan, city trails along roadways shall be ten (10) feet wide and shall be constructed with decomposed granite or equal material and shall provide appropriate fencing or other devices where needed to delineate trails from vehicular rights-of-way.	Multi-use trails where located adjacent or near roadways are designed to have a minimum flat surface of ten (10) foot in width, with a 2% cross-slope. Trails are delineated from vehicular traffic by means of fencing and or shrubbery. Trail surfaces are stabilized granite with a minimum thickness of four (4) inches.	Parks / Community Services

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
4.3.10	Where firefighting access is required, trails shall be 20' wide to meet the needs of the Fire Department and its equipment. Fire Department requirements shall be met in all conditions where access is required.	Where fire access and a trail is required, the minimum width of the trail shall be 20', to accommodate fire equipment and staging. On-going	Parks / Community Services
4.3.11	In unusual situations where legal or topographical barriers exist (e.g., excessive slope, the configuration of right-of-way, existing vegetation, etc.), the City shall have the discretion to amend the trail requirement as needed to accomplish the goals of this General Plan.	The City makes amendments to specific trail locations, based on various topographical barriers. This is done to create a trail system that can be utilized by the majority of citizens, without inconvenience to residents. On-going	Parks / Community Services
4.3.12	Local feeder trails shall connect residential lots in property zoned for horse keeping to the community trail system.	Where appropriate zoning exists, the City requires developers to install Feeder Trails that connect residential lots to the City's Trail System. On-going	Parks / Community Services
4.3.13	The City will encourage volunteer programs for the improvement of existing trails for the purpose of providing an integrated trail network that is safe, functional and readily accessible.	The City encourages volunteers for it's Adopt a Trail Program, to maintain safe, functional, and accessible trails. To date, individuals to civic organizations have become volunteers. This is an on-going program.	Parks / Community Services
4.3.14	Where feasible, use drainage courses, utility rights-of-way and other such opportunities to incorporate trail and open space elements in the design of major development projects.	The City evaluates developer projects to maximize the undeveloped space for use with trails, passive parks, and open space. Ongoing	Parks / Community Services

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
4.3.15	Utilize the Citizen's Advisory Board on Recreational Trails in making recommendations to City Council for the distribution of funds for the construction of new trails.	When funds are available, the Recreation Trails Board would be recommending body to City Council for distribution of funds to construct new trails. Ongoing	Parks / Community Services
9.4.3 Parks, Recreation and Open Space Element Programs			
Programs:			
4-1	Develop a parks and recreation facilities master plan to implement the Parks and Recreation Element.	In 2012 the City developed a Parks Master Plan, to outline the current recreational facilities, as well to identify the deficiencies. The master plan is a living document, to be updated periodically.	Parks / Community Services
4-2	Develop policies and criteria for the establishment of trails and rest/picnic areas in natural open space areas.	The City has developed policies and criteria for the establishment of trails and rest stops in open space areas. Ongoing	Parks / Community Services
4-3	Set policies and criteria for the establishment of greenbelt standards and design guidelines to allow flexibility in design of greenbelt/parks/open spaces areas within new development as long as non-auto circulation corridors (for equestrians, bicycles, pedestrians, etc.) are provided and the overall dedication requirement for greenbelt and park facilities is met.	The City has set policies and criteria for the design and construction of greenbelts, parks, and open space. Several provide for the use of equestrians, bicycles, and pedestrians. These uses have become dedication requirements. Reviews of standards and design are under review every one to two years.	Parks / Community Services

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
4-4	Explore the feasibility of requiring new development to provide a percentage of the development in greenbelt area.	New developments are examined for possible greenbelts. Many of these developments are required to construct these greenbelts for the resident's use.	Parks / Community Services
4-5	Provide on-going opportunities for public involvement and input into the park planning process.	The public is involved in assessing the current and future needs of park amenities. Some of this is done through committees/boards/commissions and some it through community meetings. On-going	Parks / Community Services
4-6	Maintain advisory committees, such as the Parks and Recreation Advisory Committee, created by City Council in 1988, to serve in an advisory capacity on parks and recreation issues.	The City Parks and Community Services Departments maintains commissions/boards such as the Parks and Recreation Commission, Senior Advisory Board, Recreational Trails Board, various sports groups, and the Arts Commission.	Parks / Community Services
4-7	Work with coalitions of sports organizations to define mutually compatible facility needs and mechanisms for the development, construction, operation and maintenance of these facilities.	The City consistently meets with various sports groups to discuss facilities and their needs. The City utilizes this information to design and construct new facilities as well as modify existing facilities. Ongoing.	Parks / Community Services

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
4-8	Investigate the feasibility of establishing a non-profit foundation to seek and receive donations from private sources for the support of Parks and Recreation programs and facilities.	The City's Library currently has a foundation for capital improvements. This foundation can be expanded upon to include various parks commissions/boards for specific programs. However, this must be approved by the IRS, so it does not jeopardize the City's tax exempt status. This program needs more investigation for additional uses. Ongoing.	Parks / Community Services
4-9	Acquire land and develop neighborhood and community parks in the "Recommended Future Parkland Acquisition Areas" shown in Figure 4-4.	**Figure 4-4 was not provided in the 2006 General Plan. This item will need to be removed or updated with the next comprehensive General Plan update.**	Parks / Community Services
4-10	Prepare a comprehensive plan of trails that clearly defines the routing of city trails and is part of the General Plan.	During the last General Plan update a comprehensive master plan of trails was adopted, which defines locations for city trails.	Parks / Community Services
4-11	Develop policies and criteria for the establishment of multiuse trails and rest/picnic areas in natural open space areas.	The City has developed policies and criteria for the establishment of trails and rest stops in open space areas. On-going. **This is a duplicate of Policy 4.2, and shall be removed during the next comprehensive General Plan Update.**	Parks / Community Services
4-12	Periodically review the Master Plan of Trails to show existing and planned trails.	The Master Plan of Trails is periodically reviewed, adding newly constructed trails to the plan. Ongoing with yearly reviews.	Parks / Community Services

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
4-13	Enact ordinances requiring developers to incorporate trail corridors into their development plans in accordance with the Master Plan of Trails.	Ordinance 359 (1992) provides for recreational facilities for trails per the Master Plan of Trails.	Parks / Community Services
4-14	Develop standards for residential feeder trails to guide developers in locating and constructing trails and for the arrangement of on-going maintenance requirements of the trails.	The City has developed construction standards for residential feeder trails to guide developers in locating feeder trails, as well as requirement for the development to establish a funding mechanism to maintain these trails. On-going program	Parks / Community Services

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
4-15	Establish a fee system for the equitable distribution of the cost of developing and maintaining trails citywide.	The City has established a Community Facilities District to pay for the cost of developing and maintaining trails. (On-going program.) Zone A was formed at City incorporation to provide a funding mechanism for parks and community services. Every parcel in the City contributes to Zone A. CFD No. 1 (Park Maintenance) was established on July 8, 2003. The District was formed to provide financing tool for the residential development community. It provides a mechanism to fund the operation and maintenance of parks constructed after district formation. All new residential development is conditioned to contribute to the District. Willdan Financial has been engaged to evaluate possible amendment to CFD No. 1 or creation of a new CFD to provide for a tax rate layer for non-residential development	Parks / Community Services
4-16	Investigate the feasibility of creating a special district(s) for the purpose of acquiring and managing open space and trails.	Currently, the City has a special district to manage trails. However, it has been the responsibility of developer associations to acquire and maintain open space.	Parks / Community Services

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
4-17	Seek out and apply for grants sponsored by state and federal agencies, such as the Recreational Trails Program administered by the Federal Highways Administration and the State Department of Parks and Recreation.	The City applies for several grants for trails, if the qualifications are met. On-going program	Parks / Community Services
The City Structure Circulation Element Goals, Objectives, Policies, and Programs			
9.5 Circulation Element Goals, Objectives, Policies, and Programs			
9.5.1 Circulation Element Goals			
Goal 5.1	Develop a safe, efficient, environmentally and financially sound, integrated vehicular circulation system consistent with the City General Plan Circulation Element Map, Figure 9-1, which provides access to development and supports mobility requirements of the system's users.	This is an on-going goal. It is accomplished through provisions of Titles 9 and 12 of the Municipal Code.	Transportation
Goal 5.2	Maintain safe and adequate pedestrian, bicycle, and public transportation systems to provide alternatives to single occupant vehicular travel and to support planned land uses.	This is an on-going goal. It is accomplished through provisions of Titles 9 and 12 of the Municipal Code.	Transportation
9.5.2 Circulation Element Objectives and Goals			
Objective 5.1	Create a safe, efficient and neighborhood- friendly street system.	This is an on-going objective. It is accomplished in accordance with Titles 9 and 12 of the Municipal Code.	Transportation
Policies:			
5.1.1	Plan access and circulation of each development project to accommodate vehicles (including emergency vehicles and trash trucks), pedestrians, and bicycles.	This is an on-going policy. It is implemented in accordance with Title 9 of the Municipal Code.	Transportation
5.1.2	Plan the circulation system to reduce conflicts between vehicular, pedestrian and bicycle traffic.	This is an on-going policy. It is implemented in accordance with Titles 9 and 12 of the Municipal Code.	Transportation

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5.1.3	Require adequate off-street parking for all developments.	This is an on-going policy. It is implemented in accordance with Chapter 9.11 of the Municipal Code.	Transportation
5.1.4	Driveway placement shall be designed for safety and to enhance circulation wherever possible.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5.1.5	Incorporate American Disability Act (ADA) and Title 24 requirements in roadway improvements as appropriate.	This is an on-going policy. It is implemented in accordance with Chapter 9 of the Municipal Code.	Transportation
5.1.6	Design new developments to provide opportunity for access and circulation to future adjacent developments.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
Objective 5.2	Implement access management policies.	This is an on-going objective. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
Policies:			
5.2.1	Locate residential units with access from local streets. Minimize direct residential access from collectors. Prohibit direct single-family driveway access on arterials and higher classification roadways.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5.2.2	Feed short local streets into collectors.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5.2.3	Encourage the incorporation of traffic calming design into local and collector streets to promote safe vehicle speeds.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 and Title 12 of the Municipal Code.	Transportation

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5.2.4	Design new subdivisions to minimize the disruptive impact of motor vehicles on local streets. Long, broad and linear streets should be avoided. Residential streets should be no wider than 40 feet, and should have an uninterrupted length of less than one half mile. Curvilinear streets and cul-de-sacs are preferred. Streets within the subdivision should be designed to facilitate access to residences and to discourage through traffic.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
Objective 5.3	Maintain Level of Service (LOS) "C" on roadway links, wherever possible, and LOS "D" in the vicinity of SR 60 and high employment centers. Figure 9-2 depicts the LOS standards that are applicable to all segments of the General Plan Circulation Element Map.	This is an on-going objective. It is implemented in accordance with Title 9 of the Municipal Code. **A complete review of the Circulation Element will be accomplished with the next General Plan update.**	Transportation
Policies:			
5.3.1	Obtain right-of-way and construct roadways in accordance with the designations shown on the General Plan Circulation Element Map and the City street improvement standards.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5.3.2	Wherever feasible, promote the development of roadways in accordance with the City standard roadway cross-sections, as shown in Figure 9-3. Cross-sections range from two-lane undivided roadways to 8-lane divided facilities.	This is an on-going policy. It is implemented in accordance with Chapters 9.14.100 of the Municipal Code.	Transportation

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5.3.3	Create new roadway classifications to accommodate future traffic demand, including; Divided Major Arterial - Reduced Cross-Section, and Divided Arterial - 6-lane. These cross-sections are shown on Figure 9-3.	This is an on-going policy. It is implemented in accordance with Chapter 9.14.100 of the Municipal Code.	Transportation
5.3.4	For planning purposes, utilize LOS standards shown on Table 5 -1 to determine recommended roadway widths.	This is an on-going policy. It is implemented in accordance with Title 9 of the Municipal Code. **A complete review of the Circulation Element will be accomplished with the next General Plan update.**	Transportation
5.3.5	Ensure that new development pays a fair share of costs to provide local and regional transportation improvements and to mitigate cumulative traffic impacts. For this purpose, require new developments to participate in Transportation Uniform Mitigation Fee Program (TUMF), the Development Impact Fee Program (DIF) and any other applicable transportation fee programs and benefit assessment districts.	This is an on-going policy. It is implemented in accordance with Title 3 of the Municipal Code.	Transportation
5.3.6	Where new developments would increase traffic flows beyond the LOS C (or LOS D, where applicable), require appropriate and feasible mitigation measures as a condition of approval. Such measures may include extra right-of-way and improvements to accommodate left-turn and right-turn lanes at intersections, or other improvements.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5.3.7	Provide consideration to projects that have overriding regional or local benefits that would be desirable even though the LOS standards cannot be met. These projects would be required to analyze traffic impacts and mitigate such impacts to the extent that it is deemed feasible.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5.3.8	Pursue arterial improvements that link and/or cross the State route 60 (SR-60) Freeway, including an additional over-crossing at Graham Street.	This is an on-going policy. An additional over-crossing at Graham Street is shown as Initiative 4.6.4 of the City's Strategic Plan.	Transportation
5.3.9	Address additional widenings at arterials providing access to SR-60 at Day Street, Frederick Street/Pigeon Pass road and Perris Boulevard.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code. **A complete review of the Circulation Element will be accomplished with the next General Plan update.**	Transportation
Objective 5.4	Maximize efficiency of the regional circulation system through close coordination with state and regional agencies and implementation of regional transportation policies.	This is an on-going objective. The City works closely with all state and regional agencies to enhance the efficiency of the regional circulation system.	Transportation

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Policies:			
5.4.1	Coordinate with Caltrans and the Riverside County Transportation Commission (RCTC) to identify and protect ultimate rights-of-way, including those for freeways, regional arterial projects, transit, bikeways and interchange expansion.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code. **A complete review of the Circulation Element will be accomplished with the next General Plan update.**	Transportation
5.4.2	Coordinate with Caltrans and RCTC regarding the integration of Intelligent Transportation Systems (ITS) consistent with the principles and recommendations of the Inland Empire Regional ITS Architecture Project.	This is an on-going policy. It is implemented in accordance with the City's ITS Master Plan.	Transportation
5.4.3	Work with property owners, in cooperation with RCTC, to reserve rights-of-way for potential Community and Environmental Transportation Acceptability Process (CETAP) corridors through site design, dedication, and land acquisition, as appropriate.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code. **A complete review of the Circulation Element will be accomplished with the next General Plan update.**	Transportation
5.4.4	The City Council will commit to establishing ongoing relationships with all agencies that play a role in the development of the City's transportation system. Council members who are appointed to these agencies as City representatives shall seek out leadership roles to maximize their effectiveness on behalf of the City. Council will strive to maintain continuity in their appointments of representatives to promote effective representation.	This is an on-going policy. The Administrative Codes for various regional agencies define the requirements for elected officials to be represented on their Executive Boards.	Transportation

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5.4.5	Work with RCTC, WRCOG, and the TUMF Central Zone Committee to facilitate the expeditious construction of TUMF Network projects, especially projects that directly benefit Moreno Valley.	This is an on-going policy. The City has designated certain Public Works staff to represent Moreno Valley interests at various Technical Advisory meetings.	Transportation
5.4.6	Cooperatively participate with SCAG, RCTC, and WRCOG in the planning for a transportation system that anticipates regional needs for the safe and efficient movement of goods and people.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code. A complete review of the Circulation Element will be accomplished with the next General Plan update.	Transportation
5.4.7	Utilizing a combination of regional, state and federal funds, development impact fees, and other locally generated funds, provide needed improvements along SR 60 and the associated interchanges, including interchange and grade separation improvements.	This is an on-going policy. It is implemented in accordance with Chapters 3.44 and 9.11.080 of the Municipal Code.	Transportation
5.4.8	Reserve rights-of-way to accomplish future improvements as specified in the Caltrans District 8 Route Concept Fact Sheet for SR-60. Specifically, SR-60 shall be built to six general purpose lanes and two High Occupancy Vehicle (HOV) lanes through Moreno Valley. Additional auxiliary lanes may be required between interchanges. The need for auxiliary lanes will be determined from future studies.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code. **A complete review of the Circulation Element will be accomplished with the next General Plan update.**	Transportation
5.4.9	Lobby the State Legislature to keep triple trailer trucks off highways in developed areas of California.	This policy is out of date. Staff does not actively lobby against triple trailer trucks off highways.	Transportation

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Objective 5.5	Maximize efficiency of the local circulation system by using appropriate policies and standards to design, locate and size roadways.	This is an on-going objective primarily accomplished through provisions in Chapter 9.11.080 of the Municipal Code.	Transportation
Policies:			
5.5.1	Space Collectors between higher classification roadways within development areas at appropriate one-quarter mile intervals.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5.5.2	Provide dedicated left-turn lanes at all major intersections on minor arterials and higher classification roadways.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5.5.3	Prohibit points of access from conflicting with other existing or planned access points. Require points of access to roadways to be separated sufficiently to maintain capacity, efficiency, and safety of the traffic flow.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5.5.4	Wherever possible, minimize the frequency of access points along streets by the consolidation of access points between adjacent properties on all circulation element streets, excluding collectors.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5.5.5	Design streets and intersections in accordance with the Moreno Valley Municipal Code.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5.5.6	Consider the overall safety, efficiency and capacity of street designs as more important than the location of on-street parking.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation

Attachment: Appendix A to Annual Report - GP Goals and Policies (2426 : General Plan Annual Report)

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5.5.7	For developments fronting both sides of a street, require that streets be constructed to full width. Where new developments front only one side of a street, require that streets be constructed to half width plus an additional 12-foot lane for opposing traffic, whenever possible. Additional width may be needed for medians or left and/or right turn lanes.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5.5.8	Whenever possible, require private and public land developments to provide on-site and off-site improvements necessary to mitigate any development-generated circulation impacts. A review of each proposed land development project shall be undertaken to identify project impacts to the circulation system. The City may require developers to provide traffic impact studies prepared by qualified professionals to identify the impacts of a development.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5.5.9	Design curves and grades to permit safe movement of vehicular traffic per applicable Caltrans and Moreno Valley standards.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5.5.10	Provide adequate sight distances for safe vehicular movement at all intersections and driveways.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5.5.11	Implement National Pollutant Discharge Elimination System Best Management Practices relating to construction of roadways to control runoff contamination from affecting water resources.	The National Pollutant Discharge Elimination System Best Management Practices are required for projects relating to the construction of roadways, to control runoff contamination from impacting water resources (ongoing).	Transportation
Objective 5.6	Support development of a ground access system to March Inland Port in accordance with its development plan as a major cargo airport.	This is an on-going objective. The City works closely with the March Joint Powers Authority in implementing strategies / development in support of a major cargo airport.	Transportation
Policies:			
5.6.1	Ensure that City arterials that provide access to and from March Inland Port are properly designed to accommodate projected traffic volumes, including truck traffic.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5.6.2	Ensure that traffic routes to March Inland Port are planned to minimize impacts to City residential communities.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
Objective 5.7	Design roads to meet the needs of the residents of the community without detracting from the "rural" atmosphere in designated portions of Moreno Valley. (Designated "rural" areas include those encompassed by the Residential Agriculture 2, Residential 1, Rural Residential and Hillside Residential zoning districts. "Urban" areas encompass all other zoning districts.)	This is an on-going objective. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
Policies:			

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5.7.1	Pursue development of modified sidewalk standards for local and collector roads within low density areas to reflect the rural character of those areas.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5.7.2	Provide sidewalks on arterials in designated low density areas that provide access to schools and bus stops.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
Objective 5.8	Encourage development of an efficient public transportation system for the entire community.	This is an on-going objective. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
Policies:			
5.8.1	Support the development of high-speed transit linkages, or express routes, that would benefit the citizens and employers of Moreno Valley.	This is an on-going policy. The City works closely with Riverside Transit Agency (RTA) in the implementation of Bus Rapid Transit routes as developed in the RTA Comprehensive Operational Analysis (COA).	Transportation
5.8.2	Support the efforts of the March Joint Powers Authority in its pursuit of a Transit Center.	This is an on-going policy. The City works closely with Riverside Transit Agency (RTA) in the implementation of recommended improvements developed in the RTA Comprehensive Operational Analysis (COA).	Transportation
5.8.3	Encourage public transportation opportunities that address the particular needs of transit dependent individuals in the City such as senior citizens, the disabled and low -income residents.	This is an on-going policy. The City works closely with Riverside Transit Agency (RTA) in the implementation of recommended improvements developed in the RTA Comprehensive Operational Analysis (COA).	Transportation

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5.8.4	Ensure that all new developments make adequate provision for bus stops and turnout areas for both public transit and school bus service.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5.8.5	Continue on-going coordination with transit authorities toward the expansion of transit facilities into newly developed areas.	This is an on-going policy. The City works closely with Riverside Transit Agency (RTA) in the implementation of recommended improvements developed in the RTA Comprehensive Operational Analysis (COA).	Transportation
Objective 5.9	Support and encourage development of safe, efficient and aesthetic pedestrian facilities.	This is an on-going objective. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
Policies:			
5.9.1	Encourage walking as an alternative to single occupancy vehicle travel, and help ensure the safety of the pedestrian as follows: (a) All new developments shall provide sidewalks in conformance with the City's streets cross-section standards, and applicable policies for designated urban and rural areas. (b) The City shall actively pursue funding for the infill of sidewalks in developed areas. The highest priority shall be to provide sidewalks on designated school routes.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.100 of the Municipal Code.	Transportation
5.9.2	Walkways shall be designed to minimize conflicts between vehicles and pedestrians.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.100 of the Municipal Code.	Transportation

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5.9.3	Where appropriate, provide amenities such as, but not limited to, enhanced paving, seating, and landscaping to enhance the pedestrian experience.	This is an on-going policy. New development is reviewed and conditioned to provide pedestrian friendly infrastructure in accordance with 9.11.100 of the Municipal Code.	Transportation
5.9.4	Require the provision of convenient and safe pedestrian access to buildings from the public sidewalk.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.100 of the Municipal Code.	Transportation
Objective 5.10	Encourage bicycling as an alternative to single occupant vehicle travel for the purpose of reducing fuel consumption, traffic congestion, and air pollution. The Moreno Bikeway Plan is shown in Figure 9-4.	This is an on-going objective. Bicycle Infrastructure is developed in accordance with the adopted Bicycle Master Plan.	Transportation
Policies:			
5.10.1	Bikeways shall link residential neighborhood areas with parks, employment centers, civic and commercial areas, and schools.	This is an on-going policy. Bicycle Infrastructure is developed in accordance with the adopted Bicycle Master Plan.	Transportation
5.10.2	Integrate bikeways, consistent with the Bikeway Plan, with the circulation system and maintain Class II and III bikeways as part of the City's street system.	This is an on-going policy. Bicycle Infrastructure is developed in accordance with the adopted Bicycle Master Plan.	Transportation
5.10.3	Support bicycle safety programs, and active enforcement of laws relating to the safe operation of bicycles on City streets.	This is an on-going policy. Bicycle Infrastructure is developed in accordance with the adopted Bicycle Master Plan.	Transportation

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5.10.4	Link local bikeways with existing and planned regional bikeways.	This is an on-going policy. Bicycle Infrastructure is developed in accordance with the adopted Bicycle Master Plan.	Transportation
Objective 5.11	Eliminate obstructions that impede safe movement of vehicles, bicyclists, and pedestrians.	This is an on-going objective. Bicycle Infrastructure is developed in accordance with the adopted Bicycle Master Plan.	Transportation

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Policies:			
5.11.1	Landscaping adjacent to City streets, sidewalks and bikeways shall be designed, installed and maintained so as not to physically or visually impede public use of these facilities. (a) The removal or relocation of mature trees, street trees and landscaping may be necessary to construct safe pedestrian, bicycle and street facilities. (b) New landscaping, especially street trees shall be planted in such a manner to avoid overhang into streets, obstruction of traffic control devices or sight distances, or creation of other safety hazards.	This is an on-going program. Transportation Engineering works closely with Special Districts to ensure existing and proposed landscaping does not interfere with traffic control devices or pose any problems for pedestrians and cyclists.	Transportation
5.11.2	Driveways shall be designed to avoid conflicts with pedestrian and bicycle travel.	This is an on-going policy. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
Objective 5.12	Promote efficient circulation planning for all school sites that will maximize pedestrian safety, and minimize traffic congestion and neighborhood impacts.	This is an on-going objective. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
Policies:			

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5.12.1	Coordinate with school districts to identify suggested pedestrian routes within existing and new subdivisions for school children to walk to and from schools and/or bus stops.	This is an on-going policy. The city has a robust Safe Routes to School Program which provides for designated walking routes, and school age pedestrian education / encouragement outreach efforts.	Transportation
9.5.3 Circulation Element Programs			
Programs:			Transportation
5-1	Periodically review current traffic volumes, traffic collision data, and the pattern of urban development to coordinate, program, and as necessary revise the planning and prioritization of road improvements.	This is an on-going program. It is implemented in accordance with Title 12 of the Municipal Code.	Transportation
5-2	Periodically, reassess the goals, objectives and policies statements of the Circulation Element and propose amendments, as necessary.	This is an on-going program. **A comprehensive review of the Circulation Element will be performed with the next update of the General Plan.**	Transportation
5-3	Develop a comprehensive strategy to ensure full funding of the circulation system. The strategy will include the DIF, TUMF, and other funding sources that may be available to the City. In addition, the creation of benefit assessment districts, and road and bridge fee districts may be considered where appropriate.	This is an on-going policy. It is implemented in accordance with Title 3 of the Municipal Code.	Transportation

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5-4	Develop a multi-year transportation infrastructure improvement program that, to the extent feasible, phases the construction of new projects in advance of new development.	This is a bi-annual City Capital Improvement Plan effort. It is implemented in accordance with the City's bi-annual budget process.	Transportation
5-5	The above referenced program will prioritize circulation improvement projects to be funded from DIF, TUMF and other sources. Prioritization to consider the following factors: (a) Traffic safety; (b) Congestion relief; (c) Access to new development; (d) Equitable benefit.	This is a bi-annual City Capital Improvement Plan effort. It is implemented in accordance with the City's bi-annual budget process.	Transportation

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5-6	Conduct studies of specified arterial segments to determine if any additional improvements will be needed to maintain an acceptable LOS at General Plan build-out. Generally, these segments will be studied as new developments are proposed in their vicinity. Measures will be identified that are consistent with the Circulation Element designation of these roadway segments, such as additional turn lanes at intersections, signal optimization by coordination and enhanced phasing, and travel demand management measures. The study of specified arterial segments will be required to identify measures to maintain an acceptable LOS at General Plan build-out for at least one of the reasons discussed below: (a) Segments will need improvement, but their ultimate volumes slightly exceed design capabilities. (b) Segments will need improvements but require inter-jurisdictional coordination. (c) Segments would require significant encroachment on existing adjacent development if built-out to their Circulation Element designations.	This is an on-going program. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code. The Circulation Element will undergo an extensive analysis with the next update of the General Plan.	Transportation

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5-7	Establish traffic study guidelines to deal with development projects in a consistent manner. The traffic study guidelines shall include criteria for projects that propose changes it the approved General Plan land uses.	This is an on-going program. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code. T**raffic study guidelines will be modified with the next update of the General Plan to ensure compliance with SB 743.**	Transportation
5-8	Develop access guidelines for arterials with commercial frontage to facilitate access to development and preservation of safe flow of traffic. A component of guidelines shall address shared access.	This is an on-going program. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5-9	Collaborate with all adjacent jurisdictions to implement and integrate right-of-way requirements and improvement standards for General Plan roads that cross-jurisdictional boundary.	This is an on-going program. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5-10	Support regional projects that improve access to Moreno Valley. Examples of specific ongoing projects that should be supported include: (a) CETAP Cajalco alignment and extension to State Route 241 in Orange County; (b) CETAP Moreno Valley to San Bernardino alternative alignments including Reche Canyon Road / Reche Vista Road alignment and the Pigeon Pass Road to Pepper Avenue alignment; (c) TUMF Backbone Network projects to widen Alessandro Boulevard and Van Buren Boulevard; (d) Measure A projects to widen SR-60 through the Badlands, widen Interstate 215 (I-215) from Riverside interchange to Interstate 10, and extension of San Jacinto commuter rail line; (e) Construction of commuter rail stations in Highgrove, and at the intersection of Alessandro at I-215; (f) Construction of HOV ramp connector from westbound SR-60 to south bound I-215; (g) Widen SR-60/I-215 from Moreno Valley interchange to Riverside interchange.	This is an on-going program. The City has designated certain Public Works staff to represent Moreno Valley interests at various Technical Advisory meetings.	Transportation
5-11	Work with RCTC, Caltrans, County of Riverside, adjacent jurisdictions and other affected agencies to plan and develop a multi-modal transportation system.	This is an on-going program. The City works closely with regional partners in the development of a circulation system that supports all modes of transportation.	Transportation

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5-12	Coordinate with Caltrans to redesign and reconstruct the SR-60 interchanges with Day Street, Perris Boulevard, Nason Street, Moreno Beach Drive, Redlands Boulevard, Theodore Street and Gilman Springs Road.	This is completed in concert with the bi-annual City Capital Improvement Plan effort. It is implemented in accordance with the City's bi-annual budget process and Riverside County's bi-annual Federal Transportation Improvement Plan (FTIP) process. Nason Street interchange is complete	Transportation
5-13	Implement Transportation demand management (TDM) strategies that reduce congestion in the peak travel hours. Examples include carpooling, telecommuting, and flexible work hours.	This is an on-going program. It is implemented in accordance with Chapter 9.11.080 of the Municipal Code.	Transportation
5-14	Implement programs in support of the efforts of Riverside Transit Agency toward the expansion of the existing bus system within the City and the provision of future public transportation consistent with the Riverside County Transit Plan.	This is an on-going program. The City works closely with Riverside Transit Agency (RTA) in the implementation of recommended improvements developed in the RTA Comprehensive Operational Analysis (COA).	Transportation
5-15	Work with Riverside County Transportation Commission and Riverside Transit Agency to implement the Transit Oasis system.	This program is out of date. The City worked with RTA when they developed their Comprehensive Operational Analysis which is their long range planning document.	Transportation
5-16	Implement programs that mitigate on-street hazards for bicyclists.	This is an on-going program. Bicycle Infrastructure is developed in accordance with the adopted Bicycle Master Plan.	Transportation

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5-17	Pursue regional, state and federal grant opportunities to fund design and construction of the City bikeway system.	This is an on-going program. Bicycle Infrastructure funding opportunities are identified in the adopted Bicycle Master Plan.	Transportation
5-18	Pursue grant funding that supports traffic safety at and in the vicinity of school facilities.	This is an on-going program. The City aggressively pursues all traffic safety related grant funding.	Transportation

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
5-19	Work with school districts and private schools to identify school site locations and designs that will minimize traffic impacts and promote traffic safety.	This is an on-going program. The city has a robust Safe Routes to School Program which provides for designated walking routes, and school age pedestrian education / encouragement outreach efforts.	Transportation
5-20	Work with school districts and private schools to identify suggested school routes and drop-off/pick-up plans for cars and buses.	This is an on-going program. The city has a robust Safe Routes to School Program which provides for designated walking routes, and school age pedestrian education / encouragement outreach efforts.	Transportation
5-21	Work with school districts and private schools to develop and promote traffic safety education programs.	This is an on-going program. The city has a robust Safe Routes to School Program which provides for designated walking routes, and school age pedestrian education / encouragement outreach efforts.	Transportation
The City Structure Safety Element Goals, Objectives, Policies, and Programs			
9.6 Safety Element Goals, Objectives, Policies, and Programs			
9.6.1 Safety Element Goals			

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Goal 6.1	To achieve acceptable levels of protection from natural and man-made hazards to life, health, and property	1. The City of Moreno Valley has a robust, pro-active emergency management program that incorporates all elements of NIMS. 2. The City contracts with Cal-Fire for fire protection and emergency services. 3. the City's fire prevention and building safety divisions adopt and enforce the latest codes pertaining to structural, building construction and fire safety in the built environment.	Fire / Police / Building / Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Goal 6.2	To have emergency services which are adequate to meet minor emergency and major catastrophic situations.	1.The City contracts with Cal-Fire for fire protection and emergency services. The city has seven fire stations and access to a full complement of emergency services to respond to fires, medical emergencies, extrications, urban search and rescue, wild land fires, and swift water rescues. 2.Building and Safety Inspectors are trained through Cal OES and certified for the State of California in the Safety Assessment Program, for emergency assessment of all buildings and properties. 3. PD: The police department is almost fully staffed, and fully prepared to provide adequate services to meet emergency and catastrophic incident needs.	Fire / Police / Building
9.6.2 Safety Element Objectives and Goals			
Objective 6.1			
	Minimize the potential for loss of life and protect residents, workers, and visitors to the City from physical injury and property damage due to seismic ground shaking and secondary effects.	All residential and commercial buildings and structures are built to the current 2016 California Building Codes part 1 &2, volume 1&2 for all seismic events.	Fire / Police / Building / Planning
Policies:			

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
6.1.1	Reduce fault rupture and liquefaction hazards through the identification and recognition of potentially hazardous conditions and areas as they relate to the San Jacinto fault zone and the high and very high liquefaction hazard zones. During the review of future development projects, the City shall require geologic studies and mitigation for fault rupture hazards in accordance with the Alquist-Priolo Special Study Zones Act. Additionally, future geotechnical studies shall contain calculations for seismic settlement on all alluvial sites identified as having high or very high liquefaction potential. Should the calculations show a potential for liquefaction, appropriate mitigation shall be identified and implemented.	1. All residential and commercial buildings and structures are built to the current 2016 California Building Codes part 1 &2, volume 1&2 for all seismic events . **Fire:** This is really a Building and Land Development thing. Fire should be removed.	Fire / Police / Building / Planning
6.1.2	Require all new developments, existing critical and essential facilities and structures to comply with the most recent Uniform Building Code seismic design standards.	All residential and commercial buildings and structures are built to the current 2016 California Building Codes part 1 &2, volume 1&2 for all seismic events . **Fire:** The City's building safety division adopts and enforces the latest California Building Code pertaining to structural and seismic safety in the built environment. This is an ongoing goal. See MVMC 8.20.	Fire / Police / Building

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Objective 6.2	Minimize the potential for loss of life and protect residents, workers, and visitors to the City from physical injury and property damage, and to minimize nuisances due to flooding.	Currently being done consistent with Municipal Code capture 8.12 as well as Federal Emergency Management Agency (FEMA) requirements.	Land Development

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Policies:			
6.2.1	Permit only that development in 100-year floodplain that represents an acceptable use of the land in relation to the hazards involved and the costs of providing flood control facilities. Locate critical facilities, such as hospitals, fire stations, police stations, public administration buildings, and schools outside of flood hazard areas.	This item is currently applied consistently with Municipal Code Chapter 8.12 as well as Federal Emergency Management Agency (FEMA) requirements.	Land Development
6.2.2	Storm drains and catch basins owned and operated by the City shall be inspected, cleaned and maintained pursuant to an approved clean out schedule.	M&O maintains storm drains compliant with NPDES requirements consistent with Muni Code Chapter 8.10.	Land Development/M&O
6.2.3	Maximize pervious areas in order to reduce increases in downstream runoff resulting from new development.	This is accomplished through the review/implementation of WQMPs and site design features consistent with Municipal Code Chapters 9.16, 9.17, et al.	Land Development /Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
6.2.4	Design, construct and maintain street and storm drain flood control systems to accommodate 10 year and 100 year storm flows respectively.	Design of Street and storm drain flood control systems are accomplished through design review of improvement plans and studies consistent with Municipal Code Section 9.14.110. **Capital Projects:** This is completed in conjunction with Riverside County Flood Control and Water Conservation District's (RCFC&WCD) cooperation and funding. It is implemented in accordance with RCFC&WCD's annual Zone budget effort.	Land Development/M&O, Capital Projects
6.2.5	The storm drain system shall conform to Riverside County Flood Control and Water Conservation District master drainage plans and the requirements of the Federal Emergency Management Agency.	This item is accomplished through design review of improvement plans and studies consistent with Muni Code Chapter 8.12. **Capital Projects:** This is completed in conjunction with Riverside County Flood Control and Water Conservation District's (RCFC&WCD) cooperation and funding. It is implemented in accordance with RCFC&WCD's annual Zone budget effort.	Land Development/Capital Projects

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Objective 6.3	Provide noise compatible land use relationships by establishing noise standards utilized for design and siting purposes.	Chapter 9.10, Section 9.10.140 "Noise and Sound" of the Municipal Code provides standards for commercial and industrial uses. Additionally, Title 11, Chapter 11.80 "Noise Regulation" provides requirements for construction noise and times construction and grading can occur. This is an ongoing objective for all development.	Planning
Policies:			

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
6.3.1	The following uses shall require mitigation to reduce noise exposure where current or future exterior noise levels exceed 20 CNEL above the desired interior noise level: a. Single and multiple family residential buildings shall achieve an interior noise level of 45 CNEL or less. Such buildings shall include sound-insulating windows, walls, roofs and ventilation systems. Sound barriers shall also be installed (e.g. masonry walls or walls with berms) between single-family residences and major roadways. b. New libraries, hospitals and extended medical care facilities, places of worship and office uses shall be insulated to achieve interior noise levels of 50 CNEL or less. c. New schools shall be insulated to achieve interior noise levels of 45 CNEL or less.	Chapter 9.10, Section 9.10.140 "Noise and Sound" of the Municipal Code provides standards for commercial and industrial uses. Additionally, Title 11, Chapter 11.80 "Noise Regulation" provides regulations for construction noise and times construction and grading can occur. If CNEL levels are not met with the uses listed in this policy, mitigation measures for items such as installation shall be provided through the Noise Study and/or environmental document. This is an ongoing	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
6.3.2	Discourage residential uses where current or projected exterior noise due to aircraft over flights will exceed 65 CNEL.	Title 11, Chapter 11.80 "Noise Regulation" provides requirements for residential uses noise and Section 9.07.060 of the Municipal Code provides standards consistent with the Air Installation Compatibility Zone (ACUZ) Use Overlay District. Land use and building restrictions are provided when exceeding noise levels or if development/use is not in compliance with ACUZ standards. This is an ongoing policy.	Planning
6.3.3	Where the future noise environment is likely to exceed 70 CNEL due to overflights from the joint-use airport at March, new buildings containing uses that are not addressed under Policy 6.3.1 shall require insulation to achieve interior noise levels recommended in the March Air Reserve Base Air Installation Compatible Use Zone Report.	Section 9.07.060, referring to the Air Installation Compatibility Zone (ACUZ) Use Overlay District, provides land use and building restrictions when exceeding noise levels or not in compliance with ACUZ standards. This is an ongoing policy.	Planning
6.3.4	Encourage residential development heavily impacted by aircraft over flight noise, to transition to uses that are more noise compatible.	Section 9.07.060 as well as ACUZ and/or standards required by the Airport Land Use Commission encourage non-compatible land uses to transition to more compatible uses.	Planning
6.3.5	Enforce the California Administrative Code, Title 24 noise insulation standards for new multi-family housing developments, motels and hotels.	Title 24 noise insulation standards for both new multi-family housing developments and hotels/motels are continually enforced through the California Administrative Code. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
6.3.6	Building shall be limited in areas of sensitive receptors.	Section 9.07.060 as well as ACUZ and/or Airport Land Use Commission regulations restricts or limits building within areas of sensitive receptors.	Planning
Objective 6.4	Review noise issues during the planning process and require noise attenuation measures to minimize acoustic impacts to existing and future surrounding land uses.	Potential Noise issues to surrounding land uses are reviewed through the project design review stage at the Project Review Staff Committee and through the California Environmental Quality Act (CEQA) standards. Mitigation measures for noise shall be provided in environmental documents to limit noise impacts. This is an ongoing City objective.	Planning
Policies:			
6.4.1	Site, landscape and architectural design features shall be encouraged to mitigate noise impacts for new developments, with a preference for noise barriers that avoid freeway sound barrier walls.	Specific design features are incorporated into projects during design review to minimize noise impacts. This could include site design features such as the placement of loading areas away from residential sensitive receptors, dense landscape and decorative walls. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Objective 6.5	Minimize noise impacts from significant noise generators such as, but not limited to, motor vehicles, trains, aircraft, commercial, industrial, construction, and other activities.	Chapter 9.10, Section 9.10.120 "Performance Standards" of the Municipal Code requires all mechanical and electrical equipment associated with such items as vehicles, land use or construction etc. to screen and minimize potential noise in a manner that it does not disturb adjacent uses and activities. (Ongoing)	Planning
Policies:			
6.5.1	New commercial and industrial activities (including the placement of mechanical equipment) shall be evaluated and designed to mitigate noise impacts on adjacent uses	Chapter 9.16 "Design Guidelines", Sections 9.16.150 and 9.16.160 and Chapter 9.08, Section 9.08.150 of the Municipal Code provides general screening and buffer requirements for non-residential properties to other sensitive properties. This would include such items as trash areas, loading areas, ground-mounted equipment, roof mounted equipment etc. Chapter 9.10, Section 9.10.120 "performance Standards" of the Municipal Code requires all mechanical and electrical equipment associated with such items as vehicles, land use or construction etc. to screen and minimize potential noise in a manner that it does not disturb adjacent uses and activities. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
6.5.2	Construction activities shall be operated in a manner that limits noise impacts on surrounding uses.	Chapter 9.10, Section 9.10.140 "Noise and Sound" of the Municipal Code provides standards for commercial and industrial uses. Additionally, Title 11, Chapter 11.80 "Noise Regulation" provides regulations for construction noise and times construction and grading can occur. This is an ongoing policy.	Planning
Objective 6.6	Promote land use patterns that reduce daily automotive trips and reduce trip distance for work, shopping, school, and recreation.	The General Plan Land Use Map and the City's zoning map have provided land uses and patterns that reduce vehicle trips and distances for essential services. The City's Climate Action Plan also has provided strategies to reduce vehicle miles traveled. This is an ongoing objective.	Planning
Policies:			
6.6.1	Provide sites for new neighborhood commercial facilities within close proximity to the residential areas they serve.	The General Plan Land Use Map and the City's zoning map have provided land use designations and patterns that provide opportunities for residential areas to easily access neighborhood commercial areas (Ongoing)	Planning

APPENDIX A

Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
6.6.2	Provide multi-family residential development sites in close proximity to neighborhood commercial centers in order to encourage pedestrian instead of vehicular travel.	Zoning Maps provided in the Municipal Code are consistent with the General Plan land use maps and have provided multiple-family zoning near or adjacent to where neighborhood commercial zoned property is located. This is an ongoing policy.	Planning
6.6.3	Locate neighborhood parks in close proximity to the appropriate concentration of residents in order to encourage pedestrian and bicycle travel to local recreation areas.	Moreno Valley strives to locate neighborhood parks in close proximity to the development the park will serve. Examples of these are: Victoriano Park/School, El Potrero Park/School, Morrison Park, Westbluff Park, and Ridgecrest Park. Pedestrian and bicycle travel to the parks are encourage, as well as shopping areas around parks. On-going	Parks
Objective 6.7	Reduce mobile and stationary source air pollutant emissions.	Mobile and stationary source air pollution emissions are reviewed for most projects. For larger industrial projects, it is a primary objective to reduce air pollution sources. Air Quality is reviewed through the California Environmental Quality Act Guidelines and mitigation measures to reduce source are pollution emissions are a frequent occurrence. This is an ongoing City objective	Planning
Policies:			

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
6.7.1	Cooperate with regional efforts to establish and implement regional air quality strategies and tactics.	The City complies with standards within the California Air Resources Board (CARB) South Coast Air Quality Management District SCAQMD) requirements and rules (i.e. Rule 403) regarding emissions and air quality strategies. Checks and balances are reviewed thoroughly in the appropriate project environmental document. This is an ongoing policy.	Planning
6.7.2	Encourage the financing and construction of park-and-ride facilities.	This is an on-going policy. The City works closely with Caltrans and RCTC in the development of Park and Ride Facilities.	Transportation
6.7.3	Encourage express transit service from Moreno Valley to the greater metropolitan areas of Riverside, San Bernardino, Orange and Los Angeles Counties.	This is an on-going policy. The City works closely with Riverside Transit Agency (RTA) in the implementation of recommended improvements developed in the RTA Comprehensive Operational Analysis (COA).	Transportation
6.7.4	Locate heavy industrial and extraction facilities away from residential areas and sensitive receptors.	Chapter 9.05 provides Good Neighbor standards for the location of heavy industrial uses away from residential uses. Examples of established buffer areas in large industrial projects are within the World Logistics Specific Plan and the Industrial Area Plan (SP 208), each separating industrial uses from residential uses.	Planning

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
6.7.5	Require grading activities to comply with South Coast Air Quality Management District's Rule 403 regarding the control of fugitive dust.	All grading activities comply with the South Coast Air Quality Management Districts Rule 403. Conditions of approval on projects confirm control of fugitive dust by such measures as continual watering of the site and restriction of grading during higher wind events. This is an ongoing policy.	Planning
6.7.6	Require building construction to comply with the energy conservation requirements of Title 24 of the California Administrative Code.	All residential and commercial buildings and structures are built to the current 2016 California Energy and Green Codes for all new and remodeled and tenant improvement project.	Building
Objective 6.8	As feasible given budget constraints, strive to maintain a police force with a ratio of one sworn officer for each 1,000 residents.	Fire should be removed from this item PD: The county continues to fill open positions and the new contract allows for two additional sworn officers.	Police / Fire
Policies:			
6.8.1	Explore the most effective and economical means of providing responsive and adequate law enforcement protection in the future.	Fire should be removed from this item PD: Senior leadership continues to work toward improving community policing programs, reducing crime, improving service and reducing costs.	Police / Fire

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Objective 6.9	Reduce the risk and fear of crime through physical planning strategies that maximize surveillance opportunities and minimize opportunities for crime found in the present and future built environment, and by creating and maintaining a high level of community awareness and support of crime prevention.	Fire should be removed from this item PD: Senior leadership continues to work toward improving community policing programs, reducing crime, improving service delivery, and improving the perception of safety in the city. New patrol tactics, team deployments, social media platforms, and crime analysis strategies are being used to maximize our efforts.	Police / Fire
Policies:			
6.9.1	Promote the establishment of neighborhood and business watch programs to encourage community participation in the patrol of neighborhood areas, and increased awareness of any suspicious activity.	Fire should be removed from this item PD: Our Community Services Unit and Problem Oriented Policing Teams continues to work with neighborhood watch programs, businesses, and apartment managers to encourage community participation in the patrol of neighborhood areas, and increased awareness of any suspicious activity. A social media component is in the works to assist with these programs as well.	Police / Fire

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
6.9.2	Require well-lighted entrances, walkways and parking lots, street lighting in all commercial, industrial areas and multiple-family residential areas to facilitate nighttime surveillance and discourage crime.	Fire should be removed from this item PD: Crime Prevention through Environmental Design (CPTED) Concepts are provided to businesses and homeowners via an inspection process handled by the Department's Community Services Unit.	Police / Fire
6.9.3	Incorporate "defensible space" concepts into the design of dwellings and nonresidential structures, including, but not limited to configuration of lots, buildings, fences, walls and other features that facilitate surveillance and reinforce a sense of territorial control.	Fire should be removed from this item PD: Crime Prevention through Environmental Design (CPTED) Concepts are provided to businesses and homeowners via an inspection process handled by the Department's Community Services Unit.	Police / Fire /Planning
Objective 6.10	Protect life and property from the potential short-term and long-term deleterious effects of the necessary transportation, use, storage treatment and disposal and hazardous materials and waste within the City of Moreno Valley.	The Fire Prevention Division strives to inspect business occupancies who store, handle, use hazardous materials on an annual basis. The latest California Fire Code regulations pertaining to hazardous materials processes are enforced.	Fire
Policies:			
6.10.1	Require all land use applications and approvals to be consistent with the siting criteria and other applicable provisions of the adopted Hazardous Waste Management Plan, which is also incorporated into and as part of the General Plan.	The Hazardous Waste Management Plan.	Waste Coordinator

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
6.10.2	Manage the generation, collection, storage, processing, treatment, transport and disposal of hazardous waste in accordance with provisions of the City of Moreno Valley's adopted Hazardous Waste Management Plan, which is also incorporated into and as part of the General Plan.	The Hazardous Waste Management Plan. Host hazardous waste collection events; educate residents how to properly handle and dispose of hazardous waste; support Riverside County's efforts to provide residents and businesses with opportunities to dispose of hazardous waste properly. Work with Federal, State and County agencies to identify and regulate the use and disposal of toxic waste.	Waste Coordinator
Objective 6.11	Maintain an integrated emergency management program that is properly staffed, trained, and equipped for receiving emergency calls, providing initial response, providing for key support to major incidents.	1. The City of Moreno Valley has a robust, pro-active emergency management program that incorporates all elements of NIMS. 2. The City contracts with Cal-Fire for fire protection and emergency services.	Fire
Policies:			
6.11.1	Respond to any disaster situation in the City to provide necessary initial response and providing for key support to major incidents.	1. The City of Moreno Valley has a robust, pro-active emergency management program that incorporates all elements of NIMS. 2. The City contracts with Cal-Fire for fire protection and emergency services.	Emergency Operations / Fire

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
6.11.2	Provide emergency first aid treatment when necessary.	1. The City of Moreno Valley has a robust, pro-active emergency management program that incorporates all elements of NIMS. 2. The City contracts with Cal-Fire for fire protection and emergency services.	Emergency Operations / Fire
6.11.3	Support the maintenance of a trauma center within the City.	The City contracts with Cal-Fire for fire protection and emergency services.	Emergency Operations / Fire
6.11.4	Aggressively attack uncontrolled fires and hold losses to a minimum.	The City contracts with Cal-Fire for fire protection and emergency services.	Fire
6.11.5	Minimize uncontrolled fires through support of weed abatement programs.	The Fire Prevention Division has a pro-active hazard abatement program in which all vacant parcels are inspected on an annual basis to ensure proper maintenance is being conducted by property owners.	Fire
Objective 6.12			
	Coordinate with Federal, State and County agencies and neighboring communities in developing a regional system to respond to emergencies and major catastrophes.	1. The City of Moreno Valley has a robust, pro-active emergency management program that incorporates all elements of NIMS. 2. The City contracts with Cal-Fire for fire protection and emergency services.	Emergency Operations / Fire
Policies:			

APPENDIX A

Moreno Valley General Plan

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
6.12.1	Support mutual aid agreements and communication links with the County of Riverside and other local participating jurisdictions.	1. The City of Moreno Valley has a robust, pro-active emergency management program that incorporates all elements of NIMS. 2. The City contracts with Cal-Fire for fire protection and emergency services.	Emergency Operations / Fire
Objective 6.13	Maintain fire prevention, fire-related law enforcement, and public education and information programs to prevent fires.	The Fire Prevention division conducts inspections on multi-family dwellings, schools, hospitals, and business occupancies and provides education to residents and business owners regarding fire code violations and other potential safety problems.	Emergency Operations / Fire
Policies:			
6.13.1	Provide fire safety education to residents of appropriate age.	The Fire Prevention division conducts inspections on multi-family dwellings, schools, hospitals, and business occupancies and provides education to residents and business owners regarding fire code violations and other potential safety problems. The fire department participates in a number of public events throughout the year providing public education to our residents.	Fire

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Objective 6.14	Maintain the capacity to respond rapidly to emergency situations.	1. The City of Moreno Valley has a robust, pro-active emergency management program that incorporates all elements of NIMS. 2. The City contracts with Cal-Fire for fire protection and emergency services.	Fire
Policies:			
6.14.1	Locate fire stations in accordance with the Fire Station Master Plan as shown in Figure 6-1. The exact location of each fire station may be modified based on availability of land and other factors.	Since the general plan was written, Station 58 was added off Moreno Beach and Auto Mall Dr. and Station 99 was added at Morrison and Cottonwood.	Fire
6.14.2	Relate the timing of fire station construction to the rise of service demand in surrounding areas.	1. Demand for service is continually monitored by Cal-Fire and recommendations are brought to the city.	Fire

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Objective 6.15	Ensure that property in or adjacent to wildland areas is reasonably protected from wildland fire hazard, consistent with the maintenance of a viable natural ecology.	1. The Fire Prevention Division has a pro-active hazard abatement program in which all vacant parcels are inspected on an annual basis to ensure proper maintenance is being conducted by property owners. 2. During development, the Fire Prevention division ensures that all Wildland Urban Interface developments meet the construction requirements of the California Fire and Building Codes.	Fire
Policies:			
6.15.1	Encourage programs to minimize the fire hazard, including but not limited to the prevention of fuel build-up where wildland areas are adjacent to urban development.	1. The Fire Prevention Division has a pro-active hazard abatement program in which all vacant parcels are inspected on an annual basis to ensure proper maintenance is being conducted by property owners. 2. During development, the Fire Prevention division ensures that all Wildland Urban Interface developments meet the construction requirements of the California Fire and Building Codes.	Fire

APPENDIX A

Moreno Valley General Plan

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
6.15.2	Tailor fire prevention measures implemented in wildland areas to both the aesthetic and functional needs of the natural environment.	1. The Fire Prevention Division has a pro-active hazard abatement program in which all vacant parcels are inspected on an annual basis to ensure proper maintenance is being conducted by property owners. 2. During development, the Fire Prevention division ensures that all Wildland Urban Interface developments meet the construction requirements of the California Fire and Building Codes.	Fire
Objective 6.16	Ensure that uses within urbanized areas are planned and designed consistent with accepted safety.	1. The Fire Prevention Division has a pro-active hazard abatement program in which all vacant parcels are inspected on an annual basis to ensure proper maintenance is being conducted by property owners. 2. During development, the Fire Prevention division ensures that all Wildland Urban Interface developments meet the construction requirements of the California Fire and Building Codes.	Fire
Policies:			

APPENDIX A

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
6.16.1	Ensure that ordinances, resolutions and policies relating to urban development are consistent with the requirements of acceptable fire safety, including requirements for smoke detectors, emergency water supply and automatic fire sprinkler systems.	1. The Fire Prevention division enforces the latest state adopted California Fire Code to ensure appropriate fire protection systems are installed. 2. Annual inspections are conducted as resources permit to ensure fire protection systems are properly maintained.	Fire
6.16.2	Encourage the systematic mitigation of existing fire hazards related to land urban development or patterns of urban development as they are identified and as resources permit.	The Fire Prevention division conducts annual inspections as resources permit to ensure fire protection systems are properly maintained, egress and ingress are provided for, and that other hazards are mitigated as required.	Fire
6.16.3	Ensure that adequate emergency ingress and egress is provided for each development.	1. The Fire Prevention division reviews all new developments for sufficient ingress, egress, and water supply. 2. The Fire Prevention division conducts annual inspections as resources permit to ensure fire protection systems are properly maintained, egress and ingress are provided for, and that other hazards are mitigated as required.	Fire

APPENDIX A
Moreno Valley General Plan

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
6.16.4	Within the safety zones (e.g. Air Crash Hazard Zones and Clear Zones) shown in Figure 6-5, residential uses shall not be permitted, and business uses shall be restricted to low intensity uses as defined in the March Air Reserve Base Air Installation Compatible Use Zone Report, as amended from time to time.	Residential uses are generally not permitted and businesses shall be restricted to low intensity uses within air crash hazard and clear zones. This use is monitored and regulated by March Air Reserve Base Air Installation Compatible Use Zones and the Airport Land Use Commission (ALUC), This is an ongoing policy.	Planning
Objective 6.17	Provide non-emergency public services provided that such demands do not interfere with fire protection and other emergency services.	1. The City of Moreno Valley has a robust, pro-active emergency management program that incorporates all elements of NIMS.	Fire
9.6.3 Safety Element Programs			
Programs:			
6-1	Request that public utility companies inspect their facilities and distribution networks to determine the potential impact of earthquake damage.	**MVU** routinely inspects all facilities and performs any necessary repairs. Fire: 1. The City of Moreno Valley has a robust, pro-active emergency management program that works closely with local hospitals, utilities and other critical infrastructure.	Fire/MVU
6-2	Evaluate historic buildings relative to the need for mitigation of geologic hazards, while weighing their historical value against the potential hazard of their collapse.	All residential and commercial buildings and structures are built to the current 2016 California Building Codes for all renovations to historic buildings	Building

APPENDIX A

Moreno Valley General Plan

6-3	Reevaluate designated truck routes in terms of noise impact on existing land uses to determine if those established routes and the hours of their use should be adjusted to minimize exposure to truck noise.	This is an on-going program. It is accomplished through provisions of Title 12 of the Municipal Code. A comprehensive review of the designated truck routes will be performed with the General Plan update.	Transportation
6-4	Review existing ordinances to ensure that building and site design standards specifically address crime prevention utilizing defensible space criteria. Incorporate security standards into the Municipal Code.	No action has been taken in this area; however, the Department's Community Services Unit can begin working on this immediately.	Police/Planning
6-5	Seek state and federal grants to offset any required additions in law enforcement staffing and/or equipment.	Senior police leadership is constantly on the lookout out for grant opportunities. Similarly, the Riverside County Sheriff's Department assists in this effort by applying for grants on the police department's behalf. All grant awards are sent to the city for approval before acceptance. The police department is currently utilizing serval grants to fund equipment purchases and staff positions.	Police

6-9	Establish criteria for weed abatement programs.	1. The Fire Prevention Division has a pro-active hazard abatement program in which all vacant parcels are inspected on an annual basis to ensure proper maintenance is being conducted by property owners. 2. During development, the Fire Prevention division ensures that all Wildland Urban Interface developments meet the construction requirements of the California Fire and Building Codes.	Fire
The City Structure Conservation Element Goals, Objectives, Policies, and Programs			
9.7 Conservation Element Goals, Objectives, Policies, and Programs			
9.7.1 Conservation Element Goals			
Goal 7.1	To achieve the wise use of natural resources within the City of Moreno Valley, its sphere of influence and planning area.	The City continues to adhere to Goal 7.1, which includes conservation of natural resources within the city limits and is sphere of influence.	Planning
9.7.2 Conservation Element Objectives and Goals			
Objective 7.1	Minimize erosion problems resulting from development activities.	Accomplished through grading and erosion control plans consistent with Municipal Code Chapter 8.21.	Land Development
Policies:			
7.1.1	Require that grading plans include appropriate and feasible measures to minimize erosion, sedimentation, wind erosion and fugitive dust.	Grading plans are reviewed for these aspects consistent with Municipal Code Chapter 8.21.	Land Development

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
7.1.2	Circulation patterns within newly developing portions of Moreno Valley, particularly in hillside areas, should follow natural contours to minimize grading.	Circulation patterns are accomplished through review of site plans and tract maps consistent with Municipal Code Chapters 8.21 and 9.16	Land Development
Objective 7.2	Maintain surface water quality and the supply and quality of groundwater.	Surface water quality is achieved through the review and implementation of WQMPs consistent with Municipal Code Chapter 8.10.	Land Development
Policies:			
7.2.1	New development may use individual wells only where an adequate supply of good quality groundwater is available.	Well installation is governed by Riverside County Department of Environmental Health.	Land Development
7.2.2	The City shall comply with the provisions of its permit(s) issued by the Regional Water Quality Control Board for the protection of water quality pursuant to the National Pollutant Discharge Elimination System.	This is an on-going policy, consistent with Municipal Code Chapter 8.10.	Land Development
7.2.3	In concert with the water purveyor identify aquifer recharge areas and establish regulations to protect recharge areas and regulate new individual wells.	To date, this item is not required. Wells governed by Riverside County Department of Environmental Health. **This policy may need to be reviewed further with the next comprehensive General Plan update.**	Land Development

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Objective 7.3	Minimize the consumption of water through a combination of water conservation and reuse.	To date, this item is not required. Wells are governed by Riverside County Department of Environmental Health. **This policy may need to be reviewed further with the next comprehensive General Plan update.**	Land Development/Planning/Special Districts
Policies:			
7.3.1	Require water conserving landscape and irrigation systems through development review. Minimize the use of lawn within private developments, and within parkway areas. The use of mulch and native and drought tolerant landscaping shall be encouraged.	The City's Water Conservation Landscape Ordinance as approved in 2009 requires water conservation landscape and irrigation systems in all development review. City uses Public Works Department Landscape Design Guidelines, Planning Division Landscape Standards and Municipal Code Chapter 17, Title 9 when reviewing and approving landscape plans for public landscape. In 2016, non-functional turf (irrigated with potable water) was removed in all publically maintained medians and parkway and replaced with drought tolerant landscaping and water efficient irrigation. This is an ongoing policy.	Planning
7.3.2	Encourage the use of reclaimed wastewater, stored rainwater, or other legally acceptable non-potable water supply for irrigation.	Land Development contributes to reuse through review/implementation of WQMPs consistent with Municipal Code Chapter 8.10.	Land Development/Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Objective 7.4	Maintain, protect, and preserve biologically significant habitats where practical, including the San Jacinto Wildlife Area, riparian areas, habitats of rare and endangered species, and other areas of natural significance.	The Planning Division, through the provisions of the Western Riverside County Multi-species Habitat Conservation Plan. assures that biologically significant habitats are protected and preserved during site design review at the Project Review Staff Committee. This is an ongoing objective.	Planning
Policies:			
7.4.1	Require all development, including roads, proposed adjacent to riparian and other biologically sensitive habitats to provide adequate buffers to mitigate impacts to such areas.	Development or public rights of way proposed adjacent to significant habitats are protected and preserved during site design review and review at the Project Review Staff Committee. This is an ongoing policy.	Planning
7.4.2	Limit the removal of natural vegetation in hillside areas when retaining natural habitat does not pose threats to public safety.	1. The Fire Prevention Division has a pro-active hazard abatement program in which all vacant parcels are inspected on an annual basis to ensure proper maintenance is being conducted by property owners.	Fire
7.4.3	Preserve natural drainage courses in their natural state and the natural hydrology, unless the protection of life and property necessitate improvement as concrete channels.	Accomplished through site design consistent with Municipal Code Chapters 8.12, 8.21, and 9.16.	Planning / Land Development

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
7.4.4	Incorporate significant rock formations into the design of hillside developments.	Natural rock formations are incorporated into design of hillside residential developments through Municipal Code standards included in Section 9.03.040 "Residential Site Development Standards" and Section 9.16.190 "Natural Open Space Standards". Section 9.03.060 "Planned Unit Developments" also incorporates the conservation of Cultural and Natural Resources. This is an ongoing policy.	Planning
7.4.5	The City shall fulfill its obligations set forth within any agreement(s) and permit(s) that the City may enter into for the purpose of implementing the Western Riverside County Multi-species Habitat Conservation Plan.	This goal is satisfied through the Western Riverside County Multi-Species Habitat Conservation Plan (MSHCP) approved on June 17, 2003, The MSHCP Plan was incorporated by the City of Moreno Valley and the City fulfills its obligations for implementing the Plan regarding agreements, permits, review of cell groups etc. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Objective 7.5	Encourage efficient use of energy resources.	The City's adopted Climate Action Strategy provides strategies for efficient use of energy resources citywide. MVU regularly forecasts demand for energy and procures enough energy to meet demand. A portion of the energy is from renewable resources, such as wind and solar. This is an ongoing objective.	Planning/MVU

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Policies:			
7.5.1	Encourage building, site design, and landscaping techniques that provide passive heating and cooling to reduce energy demand.	Building, site design and landscaping techniques that provide passive heating and cooling as well as energy reduction are achieved by following the current 2016 California Energy and Green Code for reference. MVU has established Energy Efficiency Programs for residential and commercial customers that provide rebates and incentives for the installation of energy saving projects, including window film and cool roof applications.	Building/Planning /MVU

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
7.5.2	Encourage energy efficient modes of transportation and fixed facilities, including transit, bicycle, equestrian, and pedestrian transportation. Emphasize fuel efficiency in the acquisition and use of City-owned vehicles.	**MVU:** In March 2016, MVU completed the installation of electric vehicle charging stations that are available to the public. Installation of additional electric vehicle charging stations at City Hall will begin in February 2017. **Transportation:** This is an on-going policy. It is accomplished through implementation of the Bicycle Master Plan, continued development of the Safe Routes to School program, and support of the recommendations within RTA's Comprehensive Operational Analysis. Also Public Works uses fuel efficiency as a major factor in the acquisition of City vehicles.	Transportation/MVU
7.5.3	Locate areas planned for commercial, industrial and multiple family density residential development within areas of high transit potential and access.	The General Plan Land Use Map and the City's zoning map have provided land use designations and patterns that provide opportunities for commercial, industrial and multiple-family residential development to locate within areas of high transit potential and access. New plans such as the Nason Corridor and Alessandro Corridor have provided additional opportunities for development near transit corridors. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
7.5.4	Encourage efficient energy usage in all city public buildings.	Efficient energy usage in all city public buildings is achieved by following the current 2016 California Energy and Green Code for reference. MVU works with Facilities to implement energy efficient measures in MVU-served city facilities. Examples include lighting retrofits at the Conference and Rec Center and the Animal Shelter. This is an ongoing policy.	Building/MVU
7.5.5	Encourage the use of solar power and other renewable energy systems.	The use of solar power and other renewable energy systems is achieved by following the current 2016 California Energy and Green Code and by goals included in the City's Climate Action Plan. MVU has a solar program for residential and commercial customers. To date, MVU customers have installed over 6 MW of solar.	Planning / Building
Objective 7.6	Identify and preserve Moreno Valley's unique historical and archaeological resources for future generations.	The City has identified historical and archeological resources for preservation purposes. This includes review of historic resources through project review under the California Environmental Quality Act (CEQA) and archeological resources through Native American Tribal entity review and general Archeological Studies through CEQA review. This is an ongoing objective of the City.	Planning / Building
Policies:			

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
7.6.1	Historical, cultural and archaeological resources shall be located and preserved, or mitigated consistent with their intrinsic value.	Through environmental review and required technical studies, project conditions of approval and coordination with Native American Tribes,, mitigation measures are provided to conserve cultural resources that are uncovered during excavation and construction act ivies This is an ongoing policy.	Planning
7.6.2	Implement appropriate mitigation measures to conserve cultural resources that are uncovered during excavation and construction activities.	Through environmental review and required technical studies, project conditions of approval and coordination with Native American Tribes, mitigation measures are provided to conserve cultural resources that are uncovered during excavation and construction activities This is an ongoing policy.	Planning
7.6.3	Minimize damage to the integrity of historic structures when they are altered.	Altered structures are reviewed internally with Building and Planning staff and on an individual basis with the Environmental and Historical Preservation Board. This is an ongoing policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
7.6.4	Encourage restoration and adaptive reuse of historical buildings worthy of preservation.	Restoration and adaptive reuse to preserve historical buildings are reviewed internally with Building and Planning staff and on an individual basis with the Environmental and Historical Preservation Board. This is an ongoing policy.	Planning
7.6.5	Encourage documentation of historic buildings when such buildings must be demolished.	When historic buildings must be demolished, they are first reviewed by the Environmental and Historical Preservation Board. Any documentation would occur through the Building and Safety Division.	Planning
Objective 7.7	Where practical, preserve significant visual features significant views and vistas.	Review of development projects through Project Staff Review strive to preserve visual features, significant views and vistas. The item is further reviewed through Appendix G, "Aesthetics" and "Cultural Resources" of the California Environmental Quality Act (CEQA Guidelines. This is an ongoing objective.	Planning
Policies:			

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
7.7.1	Discourage development directly upon a prominent ridgeline.	Section 9.03.040 B "Residential Site Development Standards" of the Municipal Code establishes standards for hillside residential development consistent with the goals, objectives and policies of the General Plan. Allowable development would preserve natural hillsides and ridgelines. **Goals, objectives and policies of hillside residential development will be further evaluated with the next comprehensive General Plan update**.	Planning
7.7.2	Require new electrical and communication lines to be placed underground.	This item is accomplished through site design consistent with Municipal Code Section 9.14.130.	Land Development
7.7.3	Implement reasonable controls on the size, number and design of signs to minimize degradation of visual quality.	Sign regulations included in Chapter 9.12 "Sign Regulations" provides controls on size, number and design of signs. Sign programs for larger commercial and industrial sites also provide regulations that are consistent with the Municipal Code and General Plan policy.	Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
7.7.4	Gilman Springs Road, Moreno Beach Drive, and State Route 60 shall be designated as local scenic roads.	Caltrans manages the Scenic Highway Program in accordance with State Scenic Highway Guidelines and Sections 260 through 263 of the Streets and Highways Code. A county highway component was added to the Program in Section 154 of the Streets and Highways Code. Key criteria include memorable landscape, minimal intrusions, local support, and length not less than 1 mile.	Transportation/Planning
7.7.5	Require development along scenic roadways to be visually attractive and to allow for scenic views of the surrounding mountains and Mystic Lake.	Development along scenic roadways and the allowance for scenic views of the surrounding mountains are achieved through environmental review and Appendix N "Aesthetics" of the California Environmental Quality Act Guidelines.	Building/Planning
7.7.6	Minimize the visibility of wireless communication facilities by the public. Encourage "stealth" designs and encourage new antennas to be located on existing poles, buildings and other structures.	Chapter 9.09, Section 9.09.040 "Communication facilities, antennas and satellite dishes includes standards to minimize the visibility of wireless communications and encourages stealth designs. Co-location of facilities are encouraged. This is an ongoing policy.	Planning

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Policies:			
7.8.1	Encourage recycling projects by individuals, non-profit organizations, or corporations and local businesses, as well as programs sponsored through government agencies.	Encourage recycling projects by individuals, non-profit organizations, or corporations and local businesses, as well as programs sponsored through government agencies. The City of Moreno Valley actively encourages recycling projects and promotes participation in Keep Moreno Valley Clean and Beautiful (KMVCB); and educates groups regarding recyclable materials guidelines and goals. The City is involved in extensive outreach and education activities with respect to the three R's: reduce, reuse, recycle.	Waste Coordinator
9.7.3 Conservation Element Programs			
Programs:			

APPENDIX A

Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
7-1	Support regional solid waste disposal efforts by the County of Riverside.	**Capital Projects:** The City offers a number of waste reduction, recycling and community clean-up programs. There is a franchise agreement in place with a major solid waste/recycling (AB 939) hauler, for residential (curbside) and commercial (AB 341) materials, that has resulted in the attainment of significant diversion. The City in partnership with Riverside County hosts biannual hazardous and electronic waste collections and community outreach events. The City is implementing AB 1826, requiring businesses to recycle their organic waste. The City has implemented a used motor oil and filters recycling public education program, and promotes Riverside County's free Backyard Composting Workshops, where residents can learn to properly compost green waste.	Waste Coordinator/M&O/Capital Projects
7-2	Advocate for natural drainage channels to the Riverside County Flood Control District, in order to assure the maximum recovery of local water, and to protect riparian habitats and wildlife.	This item is accomplished through site design and coordination with Flood Control consistent with Municipal Code Chapter 8.12.	Land Development /Capital Projects

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
7-3	Maintain a close working relationship with EMWD to ensure that EMWD plans for and is aware of opportunities to use reclaimed water in the City.	A close working relationship is maintained with EMWD on all projects to review reclaimed water opportunities in the City	Land Development/Special Districts
7-4	Provide guidelines for preferred planting schemes and specific species to encourage aesthetically pleasing landscape statements that minimize water use.	Current Landscape Development Guidelines and Specifications in the Municipal Code provide preferred planting schemes and aesthetically pleasing landscape statements that minimize water use and require drought tolerant species. This is an ongoing policy.	Planning
7-5	Develop incentives where appropriate, for the maintenance and sensitive rehabilitation of historic structures and properties.	Although historic structures and properties are reviewed and conserved, specific incentives have not been developed for maintenance and sensitive rehabilitation of historic structures. **This item shall be further reviewed and evaluated in the next comprehensive General Plan update.**	Planning

Objective 8.8	Assist households with down payment and closing costs.	From the 2014-2021 Housing Element Update - Policy/Program # 8.10 - Program description - Provide funds for Homebuyer Assistance Program (HAP) silent seconds. Work with approved lenders. **Housing: Following the dissolution of RDA, there are no currently active programs due to limited or no funding available.**	Housing/Planning
Policies:			
8.8.1	Provide assistance to facilitate homeownership for very low to moderate-income households.	From the 2014-2021 Housing Element Update - Policy/Program # 8.10 - Program will continue (need update from Housing) Housing: Following the dissolution of RDA, there are no currently active programs due to limited or no funding available.	Housing/Planning
Objective 8.9	Create a minimum of 126 affordable rental units, citywide.	**Following the dissolution of RDA, there are no currently active programs due to limited or no funding available.** The Housing Authority will continue to address new units as funding is available.	Housing/Planning

APPENDIX A

Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
Policies:			
8.9.1	Facilitate the creation of affordable rental units.	From the 2014-2021 Housing Element Update - Policy/Program # 8.13 - Program 8.13 was deleted after dissolution of the state's redevelopment agencies. The City will continue to look for new funding source and other programs to promote the development of affordable units for larger families. Housing: Following the dissolution of RDA, there are no currently active programs due to limited or no funding available.	Housing/Planning
Objective 8.10	Create a minimum of seventy senior units.	Following the dissolution of RDA, there are no currently active programs due to limited or no funding available. The Housing Authority will continue to address new units as funding is available.	Housing/Planning
Policies:			
8.10.1	Create decent and affordable housing opportunities for low and very-low income seniors.	Following the dissolution of RDA, there are no currently active programs due to limited or no funding available. The Housing Authority will continue to address new units as funding is available.	Housing/Planning
9.8.3 Housing Element Programs			
Programs:			

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
8-1	Utilize the Home Improvement Loan Program (HILP) that provides a 3% loan for up to $15,000 deferred for 20 years. Available citywide for very low to lower income homeowners.	**The program has met its goal and is currently no longer active due to funding.**	Housing/Planning
8-2	Utilize the Homeowner Assistance for Minor Rehabilitation (HAMR) loan program that provides a 3% to 5% loan for up to $7,500 amortized over a 10-year term.	**The program has met its goal and is currently no longer active due to funding.**	Housing/Planning
8-3	Utilize the Mobile Home Grant Program that provides grants up to $10,000 for owner-occupants of mobile homes.	CDBG Funding is still being used for this purpose.	Housing/Planning
8-4	Provide enhanced code compliance services and referrals to City housing rehabilitation programs.	When Redevelopment was dissolved several years ago any referrals ceased at that point due to lack of funding availability	Housing/Planning
8-5	Utilize the City Neighborhood Clean-up Program to provide volunteers and equipment to neighborhoods for clean-up activities.	This program was administered by the Sustainability & intergovernmental Program Manager. The city has created an Annual Day of Volunteerism (5.1.2) that may replace this program.	Housing/Planning
8-6	Contract with a fair housing agency to mediate between landlords and tenants and educate them on their rights and responsibilities.	Fair housing receives CDBG funding for these activities on an annual basis.	Housing/Planning
8-7	Update the City's Analysis of Impediments to Fair Housing.	This item is no longer active due to funding loss. Funding sources are being looked at.	Housing/Planning
8-8	Provide rehabilitation loans through the City's Rental Rehabilitation Program that offers 5% loans with the first year deferred and amortized over a 19-year period.	The program has met its goal and is currently no longer active due to funding.	Housing/Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
8-9	Through the Homebuyer Assistance Program, provide 30-year deferred silent second loans, with no interest, up to 20% or $200,000 of the purchase price of resale homes.	The program has met its goal and is currently no longer active due to funding.	Housing/Planning
8-10	Work with local CHDO to construct and/or rehabilitate houses for very low-income households.	The City receives an allocation of HOME funds for CHDOs. This funding may only be used for this purpose.	Housing/Planning
8-11	Purchase HUD homes for resale to first time homebuyers.	**Following the dissolution of RDA, there are no currently active programs due to limited or no funding available.** The Housing Authority will continue to address new units as funding is available.	Housing/Planning
8-12	Administer new construction home ownership program and youth job training.	**Following the dissolution of RDA, there are no currently active programs due to limited or no funding available.** The Housing Authority will continue to address new units as funding is available.	Housing/Planning
8-13	Work with housing developers by providing Agency assistance to write-down the costs of units via loans.	**Following the dissolution of RDA, there are no currently active programs due to limited or no funding available.** The Housing Authority will continue to address new units as funding is available.	Housing/Planning

APPENDIX A
Moreno Valley General Plan
Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
8-14	Provide financial assistance for the development of affordable rental units for larger families.	**Following the dissolution of RDA, there are no currently active programs due to limited or no funding available.** The Housing Authority will continue to address new units as funding is available.	Housing/Planning
8-15	Revise General Plan.	The General Plan will need to be revised to add the R30 land use. This will be provided with the next comprehensive General Plan update.	Housing/Planning
8-16	Continue to implement permit streamlining.	Permit streamlining is ongoing in support of affordable housing projects within the Housing Element.	Housing/Planning
8-17	Develop standards for mobile home parks and mobile home subdivisions.	If not governed or following under state regulations, Mobile home parks and subdivisions are addressed in the Municipal Code regarding use (Section 9.02.020-1 - Conditional Use Permit in residential zones) and standards (Section 9.08.110 "Manufactured Home Requirements").	Housing/Planning
8-18	Review parking standards for multi-family 3 and 4 bedroom units, including covered parking requirements to determine if reductions are appropriate.	The Municipal Code addresses density bonus, affordable housing and senior housing projects through reductions/modifications to standards.	Housing/Planning
8-19	Review second unit regulations to determine if expansion is merited to additional districts.	This item is ongoing to meet new state regulations and will remain in compliance with State law requirements.	Housing/Planning

APPENDIX A

Moreno Valley General Plan

Complete list of Goals and Policies

Goal/Policy	Description	Discussion on Implementation Status	Responsible Party
8-20	Continue to pay the development fees for projects, on a case-by-case basis, that have received State or Federal funds, such as Section 202 and Tax Credits.	All uses, including Section 202 projects , continue to pay development impact fees on a case by case basis (ongoing).	Housing/Planning
8-21	Utilize Redevelopment Agency funds, where appropriate and necessary, to facilitate infrastructure for affordable projects.	**Following the dissolution of RDA, there are no currently active programs due to limited or no funding available.**	Housing/Planning
8-22	Propose general plan changes for rezoning areas in the city to housing uses or mixed uses that include housing.	The Municipal Code was updated in 2014 to include provisions for mixed use projects	Housing/Planning
8-23	Facilitate the construction of a sixty-nine unit multi-family senior complex.	We are currently pursuing a senior development opportunity on Housing Authority property.	Housing/Planning

PLANNING COMMISSION

STAFF REPORT

Meeting Date: January 26, 2017

PEN16-0103 (PA16-0013) TENTATIVE PARCEL MAP 37104

Case:	PEN16-0103 (PA16-0013) Tentative Parcel Map
Applicant:	LGS Engineering, Inc.
Owner:	Catherine Kormos
Representative:	David Knell
Location:	Northeast corner of Jeranell Court and Alessandro Boulevard.
Case Planner:	Gabriel Diaz
Council District:	3

SUMMARY

The proposed project is a tentative parcel map to subdivide 1.1 gross acres of land at the northeast corner of Jeranella Court and Alessandro Boulevard from one legal parcel into two parcels. No new land development is proposed at this time with this subdivision. The property is presently developed with four existing single family homes. The project site is located within a Residential 3 (R3) zoning district.

The Tentative Parcel Map was previously reviewed by the Planning Commission at a Public Hearing on August 25, 2015. At that meeting the parcel map was continued to address additional information requested by the Planning Commission. The requested information regarded the septic systems, and compliance with the septic system requirements of the County of Riverside Department of Environmental Health. While it has more time than anticipated at the prior Planning Commission time of consideration, the applicant has now provided locations of onsite septic systems on the map, and has provided a preliminary clearance letter from the County of Riverside Department of Environmental Health each of which were necessary to address the interests of the

Planning Commission expressed at the August 25, 2016 Public Hearing meeting. There are no outstanding concerns and the project is now ready for Planning Commission consideration and action.

PROJECT DESCRIPTION

Project

LGS Engineering, Inc. is proposing Tentative Parcel Map 37104 to subdivide one legal parcel into two parcels on 1.1 gross acres of land. The project site is located at the northeast corner of Jeranella Court and Alessandro Boulevard. The Assessor Parcel Numbers are 478-040-007 and 478-040-008.

The Tentative Parcel Map has been submitted to subdivide the existing property consistent with pre-existing deeds to facilitate the sale of the property. The property, which has two separate Assessor Parcel Numbers (APN), had been sold combined by deed prior to 1972. The proposed map is intended to formalize the subdivision back to two parcels consistent with the APNs. There are no physical improvements on or off-site associated or authorized with this subdivision. The project site has been improved, and includes four existing older single family homes. The current assessor's parcel map identifies two assessor parcels for the one existing legal parcel. The proposed parcel map will be consistent with the assessor parcel numbers as shown in aerial photograph (Attachment 5). The project site is located in a Residential 3 (R3) zoning district.

Tentative Parcel Map 37104 will create two legal parcels (Parcel 1 and 2). The existing placement of the four homes on the existing single parcel does not conform to the underlying R3 standards based on the number of residential units on the property and due to the existing setback between the existing single family house and the north property line. The creation of Parcel 1 of the proposed map will not increase the nonconformity of the existing homes to the City's required development standards. As proposed, Parcel 2 will meet all development standards, including the R3 zoning setback requirements. The setbacks of the existing residential homes on both Parcel 1 and 2 with respect to the newly created parcel line will be consistent with the R3 zoning setback requirements.

Parcel 1 will have lot dimensions of approximately 108 feet in width by 212 feet in length, and have a lot size of 22,108 square feet. Parcel 2 will have lot dimensions of approximately 108 feet in width by 212 feet in length, and have a lot size of 21,783 square feet. Both parcels will be consistent with Municipal Code Section 9.03.040 for lot size, lot depth, and lot width in the R3 zone. The tentative parcel map has been revised since the August 25, 2016 Planning Commission Public Hearing meeting. Additional information has been added to the map as per the request of the Planning Commission. The existing homes are on septic systems and the septic system locations have been identified on the tentative parcel map. In addition, the lot line that divides Parcel 1 and Parcel 2 has been relocated and skewed to satisfy the requirements of the County of Riverside Department of Environmental Health requirements of one-half acre (21,780 sq. ft.) minimum lot sizes for parcels with septic systems, and to meet the minimum setback of five feet from the interior lot line to the existing building on Parcel 1 (Building B).

Site/Surrounding Area

The project site is located at the northeast corner of Jeranella Court and Alessandro Boulevard. The site is relatively flat and currently developed with four older single family homes on 1.1 gross acres. Jeranella Court is an unimproved road and Alessandro Boulevard is a paved street.

The project site is within a Residential 3 (R3) zoning district (Attachment 4). The areas surrounding the project site to the north, east, south and west are zoned as single family Residential 3 (R3). There are existing single family homes to the west and east, and empty lots to the north and south.

Access/Parking

There are two main access points proposed with Tentative Parcel Map 37104, one from Alessandro Boulevard and one from Jeranella Court. Parcel 1 has three existing single family homes on site, two of the homes have access from Jeranella Ct. and the other home has access from Alessandro Boulevard. Parcel 2 has one single family home with access from Alessandro Boulevard. All four of the existing single family homes have existing onsite parking. No new development is proposed as part of the parcel map application.

Design/Landscaping

The design of the Parcel Map will create two legal parcels from one parcel. Parcel 1 will have lot dimensions of approximately 108 feet in width by 212 feet in length, and a lot size of 22,108 square feet. Parcel 2 will have lot dimensions of approximately 108 feet in width by 212 feet in length, and a lot size of 21,783 square feet. Both parcels are consistent with the City's development standards for lot size, lot depth, and lot width in the R3 zone (Municipal Code Section 9.03.040), and are consistent with the one-half acre requirement for parcels with septic systems per the County of Riverside Department of Environmental Health requirements.

The site is fairly flat with existing single family homes on the property. The property contains mature trees and landscaping. No additional landscaping is being required.

REVIEW PROCESS

The Tentative Parcel Map application was initially submitted in March 2016. City staff from various departments including Public Works and the Fire Prevention Bureau reviewed the Tentative Parcel Map. Public Works requested some technical revisions on the Tentative Parcel Map.

The Tentative Parcel Map was reviewed by the Planning Commission on August 25, 2015 Public Hearing meeting and the parcel map was continued to address additional information requested by the Planning Commission. The requested information regarded the septic systems and compliance with the septic system requirements of the County of Riverside Department of Environmental Health. The applicant since has plotted the existing septic systems on the Tentative Parcel Map, and provided a Preliminary Clearance form letter from the County of Riverside Department of Environmental Health. Although it took some time for the applicant to research and identify the locations of the existing septic systems that step has been completed. Over the course of the additional review process, staff and the applicant have successfully worked to resolve all design details.

ENVIRONMENTAL

Planning staff has reviewed the request in accordance with the latest edition of the California Environmental Quality Act (CEQA) Guidelines and has determined that the project qualifies for an exemption under the provisions of the CEQA as a Class 15 Categorical Exemption, CEQA Guidelines, Section 15315 for Minor Land Divisions.

The Class 15 exemption applies to the parcel map because the map is consistent with the criteria identified below:

- The site is located in an urbanized area and is a subdivision of four or fewer parcels.
- A variance is not required.
- All services and access to the proposed parcels to local standards are available.
- The parcel was not involved in a division of a larger parcel within the previous two years
- The parcel does not have an average slope greater than 20 percent.

NOTIFICATION

In accordance with Section 9.02.200 of the Municipal Code, public notification was sent to all property owners of record within 300' of the proposed project site on January 12, 2017 (Attachment 3). In addition, the public hearing notice for this project was posted on the project site on January 13, 2017 and published in the Press Enterprise newspaper on January 15, 2017.

STAFF RECOMMENDATION

Staff recommends that the Planning Commission **APPROVE** Resolution No. 2017-04, and thereby:

1. **CERTIFY** that PEN16-0103 (PA16-0013) Tentative Parcel Map 37104 qualifies as an exemption in accordance with the California Environmental Quality Act Guidelines, Section 15315 (Minor Land Divisions); and

2. **APPROVE** PEN16-0103 (PA16-0013) Tentative Parcel Map 37104 subject to the Conditions of Approval included as Exhibit A to Resolution No. 2017-04

PLANNING COMMISSION RESOLUTION NO. 2017-04

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY APPROVING TENTATIVE PARCEL MAP 37104 APPLICATION PEN16-0103 (PA16-0013), TO SUBDIVIDE ONE PARCEL INTO TWO PARCELS ON 1.1 GROSS ACRES AT THE NORTH EAST CORNER OF JERANELLA COURT AND ALESSANDRO BOULVARD. (APNS: 478-040-007 AND 478-040-008)

WHEREAS, LGS Engineering, Inc., has filed an application for the approval of Tentative Parcel Map 37104 application PEN16-0103 (PA16-0013), a proposal to subdivide one parcel into two parcels on a 1.1 gross acre site located within Assessor's Parcel Numbers 478-040-007 and 478-040-008 as described in the title of this Resolution; and

WHEREAS, the application has been evaluated in accordance with established City of Moreno Valley procedures, and with consideration of the General Plan and other applicable regulations; and

WHEREAS, upon completion of a thorough development review process the project was appropriately agendized and noticed for a public hearing before the Planning Commission of August 25, 2016; and

WHEREAS, on August 25, 2016, the Planning Commission of the City of Moreno Valley conducted a public hearing to consider the application; and

WHEREAS, on August 25, 2016, the Planning Commission of the City of Moreno Valley requested additional information on the septic systems on the project and the project was continued;

WHEREAS, upon completion of the additional information regarding the septic systems on the property and the development review process the project was appropriately agendized and noticed for a public hearing before the Planning Commission of January 26, 2017; and

WHEREAS, on January 26, 2017, the Planning Commission of the City of Moreno Valley conducted a public hearing to consider the application; and

WHEREAS, on January 26, 2017, the Planning Commission of the City of Moreno Valley made and issued an Environmental Determination that the project is exempt from the California Environmental Quality Act (CEQA) (Public Resources Code section 21000 et. seq.) under CEQA Guideline Section 15315, Minor Land Divisions;

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred; and

WHEREAS, pursuant to Government Code Section 66020(d)(1), **NOTICE IS HEREBY GIVEN** that this project is subject to certain fees, dedications, reservations and other exactions as provided herein.

NOW, THEREFORE, BE IT RESOLVED, by the Planning Commission of the City of Moreno Valley as follows:

A. This Planning Commission hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this Planning Commission during the above-referenced meeting on January 26, 2017, including written and oral staff reports, and the record from the public hearing, this Planning Commission hereby specifically finds as follows:

1. That the proposed map is consistent with applicable general and specific plans and the zoning ordinance;

FACT: The proposed tentative parcel map will create two residential parcels. The proposed parcel map is consistent with General Plan Objective 2.1.3 Land Use Plan. The current General Plan designation is residential 3. The current Municipal Code Zoning designation is single family residential 3 (R3). The allowed density for the R3 zone is a maximum of 3 dwelling units per acre. The project will not be adding additional units to the project site.

The project as designed and conditioned will achieve the objectives of the City of Moreno Valley's General Plan. The proposed project is consistent with the General Plan and does not conflict with the goals, objectives, policies, and programs established within the Plan.

2. That the design or improvement of the proposed subdivision is consistent with applicable general and specific plans;

FACT: The proposed parcel map is consistent with General Plan Objective 2.1.3 Land Use Plan. The current General Plan designation is residential 3. The current Municipal Code Zoning designation is single family residential 3 (R3). The allowed density for the R3 zone is a maximum of 3 dwelling units per acre. The project will not be adding additional units to the project site.

The areas surrounding the project site to the north, east, south and west are zoned as single family residential 3 (R3). There are existing single family homes to the west and east, and empty lots to the north and south.

The land division proposed by Tentative Parcel Map No. 37104 is consistent with the City's Municipal Code Section 9.14 Land Divisions. The proposed parcel map will subdivide the 1.1 gross acres located within Assessor's Parcel Numbers 478-040-007, and 478-040-008 into two residential parcels.

The subdivision as designed and conditioned is consistent with existing goals, objectives, policies and programs of the General Plan.

3. That the site is physically suitable for the type of development;

FACT: The project site is located at the north east corner of Jeranella Court and Alessandro Boulevard. The zoning for the site is single family residential 3 (R3). The project site has four existing single family homes and no new development is proposed.

4. That the site of the proposed land division is physically suitable for the proposed density of the development;

FACT: The project site is rectangular in shape and is comprised of topography that is fairly flat. The parcel map is designed in accordance with the provisions of the City's Municipal Code Section 9.14 Land Divisions. The project site is physically suitable for the proposed density of the existing development. No additional density is being added as part of this project. The project site has four existing single family homes and no new development is proposed.

5. That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat;

FACT: The project site has four existing single family homes and no new development is proposed.

Planning staff has reviewed the request in accordance with the latest edition of the California Environmental Quality Act (CEQA) Guidelines and has determined that the project qualifies for an exemption under the provisions of the CEQA as a Class 15 Categorical Exemption, CEQA Guidelines, Section 15315 for Minor Land divisions.

The Class 15 exemption applies to the parcel map because the map is consistent with the criteria identified below:

- The site is located in an urbanized area and is a subdivision of four or fewer parcels.
- The land division is consistent with the General Plan and zoning.
- A variance is not required.
- All services and access to the proposed parcels to local standards are available.
- The parcel was not involved in a division of a larger parcel within the previous two years.
- The parcel does not have an average slope greater than 20 percent.

Therefore, the parcel map will not cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

6. That the design of the subdivision or type of improvements is not likely to cause serious public health problems;

FACT: As conditioned, the proposed parcel map will not cause serious public health problems. The project site has four existing single family homes and no new development is proposed. There are no known hazardous conditions associated with the property, the design of the land division.

The parcel map has been designed consistent with the City's Municipal Code Section 9.14 Land Divisions and meets all City requirements related to subdividing a property.

7. That the design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision;

FACT: The tentative parcel map has been designed to accommodate and not conflict with existing easements on the subject site including utility and storm drain easements. The project site has four existing single family homes and no new development is proposed.

8. That the proposed land division and the associated design and improvements are consistent with applicable ordinances of the city.

FACT: The land division proposed by Tentative Parcel Map No. 37104 is consistent with the City's Municipal Code Section 9.14

Land Divisions. The subdivision as designed and conditioned is consistent with applicable ordinances of the city.

The design of the Parcel Map will create two legal parcels from one parcel. Parcel 1 will have roughly lot dimensions of 108 feet in width by 212 feet in length, and have a lot size of 22,108 square feet. Parcel 2 will have roughly lot dimensions of 108 feet in width by 212 feet in length, and have a lot size of 21,783 square feet. Both parcels are consistent with the City's development standards for lot size, lot depth, and lot width in the R3 zone Municipal Code Section 9.03.040. In addition both parcels are consistent with the half acre (21,780 sq. ft.) requirement for parcels with septic systems per the County of Riverside Department of Environmental Health requirements.

C. FEES, DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

1. FEES

Impact, mitigation and other fees are due and payable under applicable ordinances and resolutions. These fees may include but are not limited to: Development Impact Fee, Transportation Uniform Mitigation Fee (TUMF), Multi-species Habitat Conservation Plan (MSHCP) Mitigation Fee, Stephens Kangaroo Habitat Conservation fee, Underground Utilities in lieu Fee, Area Drainage Plan fee, Bridge and Thoroughfare Mitigation fee (Future) and Traffic Signal Mitigation fee. The final amount of fees payable is dependent upon information provided by the applicant and will be determined at the time the fees become due and payable.

Unless otherwise provided for by this resolution, all impact fees shall be calculated and collected at the time and in the manner provided in Chapter 3.32 of the City of Moreno Valley Municipal Code or as so provided in applicable ordinances and resolutions. The City expressly reserves the right to amend the fees and the fee calculations consistent with applicable law.

2. DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

The adopted Conditions of Approval for PEN16-0103 (PA16-0013), incorporated herein by reference, include dedications, reservations, and exactions pursuant to Government Code Section 66020 (d) (1).

3. CITY RIGHT TO MODIFY/ADJUST; PROTEST LIMITATIONS

The City expressly reserves the right to establish, modify or adjust any fee, dedication, reservation or other exaction to the extent permitted and as authorized by law.

Pursuant to Government Code Section 66020(d)(1), NOTICE IS FURTHER GIVEN that the 90 day period to protest the imposition of any impact fee, dedication, reservation, or other exaction described in this resolution begins on the effective date of this resolution and any such protest must be in a manner that complies with Government Code Section 66020(a) and failure to follow this procedure in a timely fashion will bar any subsequent legal action to attack, review, set aside, void or annul imposition.

The right to protest the fees, dedications, reservations, or other exactions does not apply to planning, zoning, grading, or other similar application processing fees or service fees in connection with this project and it does not apply to any fees, dedication, reservations, or other exactions of which a notice has been given similar to this, nor does it revive challenges to any fees for which the Statute of Limitations has previously expired.

BE IT FURTHER RESOLVED that the Planning Commission **HEREBY APPROVES** Resolution No. 2017-04 and thereby:

1. **CERTIFY** that Tentative Parcel Map 37104 application PEN16-0103 (PA16-0013) is exempt from the provisions of the California Environmental Quality Act (CEQA), as a Class 15 Categorical Exemption, CEQA Guidelines, Section 15315 for Minor Land Divisions; and

2. **APPROVE** Tentative Parcel Map 37104 application PEN16-0103 (PA16-0013) based on the findings contained in the resolution and subject to the conditions of approval included as Exhibit A of the resolution.

APPROVED on this 26th day of January, 2017.

MR – Map Recordation
AOS – Acceptance of Streets
CP – Construction Permit
GP - Grading Permits
BF – Building Final
P - Any permit
MA – Map Approval
WP - Water Improvement Plans
IPA – Improvement Plan Approval
SI – Street Improvements

Governing Document (see abbreviation at the end of the affected condition):

GP - General Plan
MC - Municipal Code
Ord - Ordinance
Res - Resolution
UBC - Uniform Building Code
SBM - Subdivision Map Act
MC – Municipal Code
CEQA - California Environmental Quality Act
Ldscp - Landscape Development Guidelines and Specs
UFC - Uniform Fire Code

P4. All undeveloped portions of the site shall be maintained in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)

P5. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)

PUBLIC WORKS DEPARTMENT

Transportation Engineering Division

Based on the information contained in our standard review process we recommend the following conditions of approval be placed on this project:

General Conditions

TE1. Alessandro Boulevard is classified as a 4-lane Divided Arterial at this location per City Standard Plan No. MVSI-103A-0. Any modifications or improvements undertaken by this project shall be consistent with the City's standards for this.

TE2. Jeranella Court is classified as a Local Street per City Standard Plan No. MVSI-107A-0. Any modifications or improvements undertaken by this project shall be consistent with the City's standards for this facility

TE3. All driveways shall conform to Section 9.11.080, and Table 9.11.080-14 of the City's Development Code - Design Guidelines and City Standard Plan No. MVSI-111A-0 for residential driveway approach.

Land Development Division

The following are the Public Works Department – Land Development Division Conditions of Approval for this project and shall be completed at no cost to any government agency. All questions regarding the intent of the following conditions shall be referred to the Land Development Division.

General Conditions

LD1. (G) The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). [MC 9.14.010]

LD2. (G) The tentative parcel map shall correctly show all existing easements, traveled ways, and drainage courses. Any omission may require the map or plans associated with this application to be resubmitted for further consideration. [MC 9.14.040(A)]

Prior to Map Approval

LD3. (MA) Final maps (prepared by a registered civil engineer and/or licensed surveyor) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

LD4. (MA) All street dedications shall be free of all encumbrances, irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer.

LD5. (EP) A digital (pdf) copy of the final map shall be submitted to the Land Development Division.

LD6. (CO) All outstanding fees shall be paid.

Special Conditions

LD7. Prior to approval of the final map, the map shall show the following as depicted on the approved tentative tract map:

(a) A 20 foot (20') wide street right of way dedication along the westerly limits of proposed Parcel 1 (APN 478-040-008), which results in a total easterly right of way half-width of 30 feet (30') on Jeranella Court. Jeranella Court will be per MVSI-107A-0 (modified).

(b) Corner cut-back dedication per City Standard MVSI-165-0 at the northeast corner of Alessandro Boulevard and Jeranella Court.

This may affect your property.

Notice of
PUBLIC HEARING

Notice is hereby given that a Public Hearing will be held by the Planning Commission of the City of Moreno Valley on the following item(s):

Project: PEN16-0103 (PA16-0013 Tentative Parcel Map)
Applicant: LGS Engineering, Inc
Owner: Catherine Kormos
Representative: David Knell
A.P. No(s): 478-040-007 & 478-040-008
Location: North-east corner of Jeranella Ct. & Alessandro Blvd.
Proposal: Tentative Parcel Map 37104 will subdivide one legal parcel into two parcels on 1.1 gross acres. The property is developed with existing single family homes. The current zoning is R3.
Council District: 3

The project has been evaluated against criteria set forth in the California Environmental Quality Act (CEQA) Guidelines and it was determined that the project will not have a significant effect on the environment. Therefore, a recommendation to find the project exempt from the provisions of the CEQA as a Class 15 Categorical Exemption, CEQA Guidelines, Section 15315 for Minor Land Divisions is being carried forward with the project.

A public hearing before the Planning Commission has been scheduled for the proposed project. Any person interested in commenting on the proposal and recommended environmental determination may speak at the hearing or provide written testimony at or prior to the hearing. The project application, supporting plans and environmental documents may be inspected at the Community Development Department at 14177 Frederick Street, Moreno Valley, California during normal business hours (7:30 a.m. to 5:30 p.m., Monday through Thursday; 7:30 a.m. to 4:30 p.m., Friday), or you may telephone (951) 413-3206 for further information.

The Planning Commission, at the Hearing or during deliberations, could approve changes or alternatives to the proposal. If you challenge any of these items in court, you may be limited to raising only those items you or someone else raised at the Public Hearing described in this notice, or in written correspondence delivered to the Planning Commission at, or prior to, the Public Hearing.

LOCATION N ↑

PLANNING COMMISSION HEARING

City Council Chamber, City Hall
14177 Frederick Street
Moreno Valley, Calif. 92553

DATE AND TIME: January 26, 2017 at 7 PM
CONTACT PLANNER: Gabriel Diaz
PHONE: (951) 413-3226

Upon request and in compliance with the Americans wit Disabilities Act of 1990, any person with a disability who require a modification or accommodation in order to participate in meeting should direct such request to Guy Pegan, AD Coordinator, at 951.413.3120 at least 48 hours before th meeting. The 48-hour notification will enable the City to mak reasonable arrangements to ensure accessibility to this meeting.

(SAN-53)

DATE: 1/9/17 PARCELS/LOTS: 2
TRACT/PARCEL MAP #: 37104 ZONING: R-3
APN: 478-040-007, -008 MAP SCHEDULE: ______

AT THIS TIME, DEH DOES NOT OBJECT TO THE CONSIDERATION OF THIS MAP. FURTHER INFORMATION MAY BE REQUIRED AT SPECIFIC MILESTONES.

1. DOMESTIC WATER:

- ☐ THE ______ WATER DISTRICT HAS AGREED IN WRITING TO FURNISH DOMESTIC WATER TO EACH AND EVERY LOT WITHIN THIS SUBDIVISION AS PER LETTER DATED ______.
- ☐ ACCEPTABLE WATER SUPPLY PERMIT APPLICATION IS ON FILE WITH THIS DEPARTMENT TO FORM THE ______ WATER COMPANY.
- ☒ EVIDENCE OF EXISTING WATER SUPPLY IN THE FORM OF A UTILITY BILL FROM: EASTERN MUNICIPAL WATER DISTRICT (EMWD).
- ☐ INDIVIDUAL WELL(S) ______

2. DOMESTIC SEWAGE DISPOSAL:

- ☐ CONNECTION TO ______ SEWER SYSTEM AS PER LETTER DATED ______.
- ☒ EXISTING ONSITE WASTEWATER TREATMENT SYSTEMS (OWTS) AS CERTIFIED BY LICENSED C-42 CONTRACTOR: TIM TAYLOR (LIC#: 879314)

ADDITIONAL COMMENTS:
Any repairs/modifications/upgrades of existing OWTS shall meet the current requirements of the Department's Local Agency Management (LAMP) and any other applicable codes or regulations. If sewer is available, the site will be required to connect to sewer and abandon existing OWTS under permit with this Department.

Since Parcel 1 (APN: 478-040-008) has 3 existing structures that have been verified by both this Department and the Santa Ana Regional Water Quality Control Board (SARWQCB), to have existed prior to minimum lot size requirements, the existing structures can continue to exist but if any repairs/modifications/upgrades are required, they will need to be designed to use Advanced Treatment Units (ATUs).

Additional items may be required upon official project submittal to this Department for review such as a Phase I Environmental Site Assessm

and/or a Noise study.

STAFF REPORT

Meeting Date: January 26, 2017

PEN16-0119 PLOT PLAN & PEN16-0120 TENTATIVE TRACT MAP 35429

Case:	PEN16-0119 Plot Plan & PEN16-0120 Tentative Tract Map 35429
Applicant:	Creative Design Associates
Owner:	ENR Resources, LLC
Representative:	Creative Design Associates
Location:	Northwest corner of Alessandro Boulevard and Chara Street
Case Planner:	Gabriel Diaz
Council District:	3

SUMMARY

The proposal is to develop 58 multifamily condominium units with common open space. The project is located on 4.8 net acres. The proposal includes two and three unit building types. All units within the project include three bedrooms. Buildings are two-story with enclosed garages. The project is located on the northwest corner of Alessandro Boulevard and Chara Street, and the site is zoned Residential 15 (R15) which allows for up to 15 dwelling units per acre.

The project, as designed and conditioned, conforms to all development standards of the R15 zone and the design guidelines for multifamily residential uses as prescribed within the City's Municipal Code and Landscape Standards.

PROJECT DESCRIPTION

Project

The project consists of a Plot Plan and Tentative Tract Map application for a new 58-unit multifamily condominium project on vacant 4.8 net acres of land on the northwest corner of Alessandro Boulevard and Chara Street. The project includes 22 buildings; there are 14 building with three units and eight buildings with two units. All units within the project include three bedroom floor plans. Buildings are two-story in height and include enclosed garages. The two story buildings are set back a minimum of fifty-seven feet from the property line adjacent to the existing single-family homes located along the easterly property line of the project.

The project is providing common open space on the northern and southern portions of the site, and each unit meets the minimum requirement of 150 square feet of private open space. Parking for the development will include a combination of attached garages and standard parking surface spaces.

The project includes four floor plans (A, B, C & D) ranging in size from 1,518 square feet to 1,656 square feet. All first floor plans consist of a two car garage, kitchen, dining room, living room, and powder room. The second floor plans consist of two bedrooms and a master bedroom with walk in closet for a total of three bedrooms, a laundry room, and a bathroom. Floor Plan A has a total living area of 1,518 square feet. Floor Plan B has a total living area of 1,526 square feet. Floor Plan C has a total living area of 1,725 square feet. Floor Plan D has a total living area of 1,656 square feet. Floor Plan C is the only option with a loft on the second floor.

The project provides numerous amenities including common open space for activities and a children's play area. The project achieves required private space through the patio and entry design features. Required public common open space is achieved throughout the project in courtyards and other gathering areas.

The project is consistent with the existing R15 zoning which allows for up to 15 dwelling units per acre.

Site

The project site is zoned Residential 15 (R15) and is located on the northwest corner of Alessandro Boulevard and Chara Street. The project site is relatively flat. There are tree stumps and some older stockpiled dirt mounds on the site. The project site is vacant of any buildings, and is comprised of two rectangular shaped parcels and one rectangular shape parcel (Assessor Parcels Nos. 479-230-011, 479-230-012 & 479-230-027). The total project site is 4.8 net acres.

The site has been routinely disked for weed abatement over the years. There are some older existing trees on the site, along with olive trees adjacent to Alessandro Boulevard. A condition of approval has been placed on the project to ensure the relocation and/or replacement of mature trees as provided for in the City's Municipal Code. There is no evidence of sensitive habitat or riparian areas within the project site.

Surrounding Area

The project site is bounded to the north by a concrete storm channel and single-family homes zoned Residential 5 (R5). Existing single-family homes consistent with the Residential 5 (R5) zone (maximum five dwelling units per acre) are located to the east. To the south, the site is bounded by Alessandro Boulevard and the New Horizon Mobile Park (Residential 15 (R15)). The Moreno Valley School District offices (Office (O)) are located to the west.

Overall, the proposed multifamily residential condominium development has been found to be consistent with the objectives, goals and policies outlined in the City's General Plan, and compatible with the existing and planned land uses in the project area.

Access/Parking

The primary vehicular access to the proposed development will be from two driveways located on Timo Street and Chara Street. Both driveway entrances are on the eastern boundary of the project. There is no access driveway from Alessandro Boulevard. The proposed project would construct medians on Alessandro Boulevard. Timo Street dead ends into the project and becomes a private cul-de-sac at the property line which leads to the internal circulation of the units.

Internal circulation within the project site includes driveway aisles that measure 24 feet wide and which will meet all City's design standards. The driveways and interior drive aisles within the site have been reviewed and approved by the Fire Prevention Bureau for fire truck access. The site design has been evaluated to ensure adequate truck maneuvering and turnaround for delivery trucks and trash pick-up.

The project as designed provides a total of 158 parking spaces including 116 garages, and 42 open parking spaces for residents and guests. Based on Municipal Code Section 9.11, the project requires a total of 145 parking spaces, of which 116 must be covered. The project as designed satisfies all parking requirements of the City's Municipal Code including ADA accessible parking. Applicable building code/Cal Green requirements shall be addressed through building plan check. If required to be designed to the 2016 building code standards, infrastructure for future electric vehicle supply equipment (EVSE), including EV parking spaces if applicable, will be addressed prior to building permit issuance.

Design/Landscaping

This project, as designed and conditioned, conforms to all development standards of the R15 zone and the design guidelines for multifamily residential condominium developments prescribed in the City's Municipal Code and City Landscape Standards.

The design guidelines for multifamily projects call for buildings to include a variety of colors and architectural features to break up the massing of buildings and provide visual interest. This variation has been demonstrated in the project design. The architectural design of the condominiums includes stucco exteriors with architectural features around windows and entrances to the buildings to break up massing and add focal points to the building. These detailed features include, concrete tile roofs, window trim and shutters, colored trim, wood siding, wood trellises, wrought iron guard rails, covered balconies and stone veneer. Variation among the buildings is created with the mixture of two and three unit buildings, roof lines, two different colored concrete tiles, porches, balconies, and a proposed color palette of earth tones.

The building elevations and six foot wall along Alessandro Boulevard have been enhanced to provide visual interest from the street view. This includes the addition of stone veneer to facades. The proposed wall along Alessandro Boulevard has been upgraded with a combination or tubular steel fence on top of a decorative block wall that includes a combination of split face and precision block, along with decorative block columns with a cap.

The proposed project includes two double-bin trash enclosures, which exceeds the City's design standard of one trash enclosure for every 48 residential units. The trash enclosures are evenly distributed throughout the site to ensure ease of access to all residential units. The enclosures will be designed to the City's standards, which will include solid roofs compatible with the overall project architecture.

The project has been designed to meet the needs of residents as set forth in the design guidelines. The project entries off of Timo Street and Chara Street provide centralized access to accommodate arriving guests and residents. The project includes both outdoor open space and gathering areas, and balconies and patios to provide the required private open space area for each residential unit. The project includes common open areas with a tot lot for children.

All walls and fences on the site will be constructed with decorative block, wrought iron, and vinyl. The walls and trash enclosures for this project are conditioned to be consistent with the City's Municipal Code standards for placement, height and materials.

ENVIRONMENTAL

Planning staff has reviewed the request in accordance with the latest edition of the California Environmental Quality Act (CEQA) Guidelines and has determined that the project qualifies for an exemption under the provisions of the CEQA as a Class 32 Categorical Exemption, CEQA Guidelines, Section 15332 for In-Fill Development Projects.

The Class 32 exemption applies to the 58-unit multifamily condominium project because the Plot Plan and Tentative Tract Map are consistent with the criteria identified below:

- The project is consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations.
- The proposed development occurs within city limits on a project site of no more than five acres substantially surrounded by urban uses.
- The project site has no value as habitat for endangered, rare or threatened species.
- Approval of the project would not result in any significant effects relating to traffic, noise, air quality, or water quality.

- The site can be adequately served by all required utilities and public services.

NOTIFICATION

The public hearing notice for this project was published in the local newspaper on January 15, 2017. Public notice was sent to all property owners of record within 300 feet of the project site on January 12, 2017. The public hearing notice for this project was also posted on the project site on January 13, 2017.

As of the date of report preparation, staff had received no phone calls or other correspondence in response to the noticing for this project.

REVIEW / AGENCY COMMENTS

The project was submitted in November 2013. The Plot Plan and Tentative Tract Map warranted a comprehensive review, therefore, the plans were routed through several City departments, including Public Works, Fire Department, Public Safety, Building, and Planning, and various outside agencies including, but not limited to Moreno Valley Unified School District, Eastern Municipal Water District, Riverside Transit Agency, U.S. Post Office, gas and electric utilities for their review.

Upon completion of the initial plan review, the project was reviewed by the Pre-Project Review Staff Committee (Pre-PRSC) in December 2013, and then the Project Review Staff Committee (PRSC) in January 2014. Modifications were requested to the plot plan, preliminary grading plans and map to address building setbacks, parking, density, and a variety of site design considerations. Written comments were provided to the applicant.

Revised plans were submitted by the applicant in November 2014, and progressed through subsequent reviews to work through various site design options between February 2015 and September 2016. Upon resolution of all outstanding site, building, preliminary grading and map comments, the project was scheduled for the Planning Commission public hearing on January 26, 2017.

STAFF RECOMMENDATION

Staff recommends that the Planning Commission **APPROVE** Resolution No. 2017-01 and Resolution No. 2017-02, and thereby:

1. **CERTIFY** that PEN16-0119 (PA13-0061) Plot Plan and PEN16-0120 (PA13-0162) Tentative Tract Map 35429 qualifies as an exemption in accordance with the California Environmental Quality Act Guidelines, Section 15332 (In-Fill Developments). The project is within the city limits, on a project site of no more than five acres substantially surrounded by

urban uses, and consistent with all applicable general plan and zoning designations; and

2. **APPROVE** Resolution No. 2017-01 and thereby **APPROVE** Plot Plan PEN16-0119 (PA13-0061), subject to the attached conditions of approval included as Exhibit B; and

3. **APPROVE** Resolution No. 2017-02 and thereby **APPROVE** Tentative Tract Map PEN16-0020 (PA13-0062), subject to the attached conditions of approval included as Exhibit B.

Notice of
PUBLIC HEARING

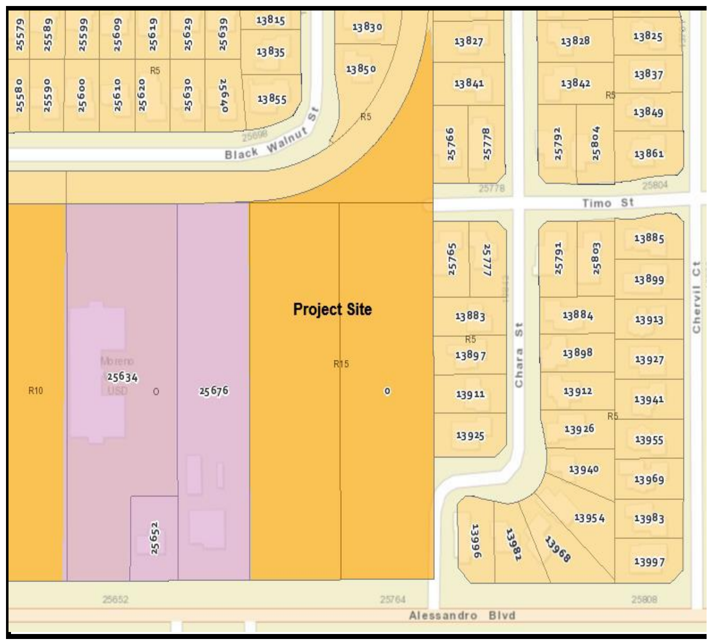
Notice is hereby given that a Public Hearing will be held by the Planning Commission of the City of Moreno Valley on the following item(s):

Project: PEN16-0119 (PA13-0061 Plot Plan) & PEN16-0120 (PA13-0062 Tentative Tract Map 35429)
Applicant: Creative Design Associates
Owner: ENR Resources, LLC
Representative: Creative Design Associates
A.P. No(s): 479-230-011, 479-230-012 & 479-230-027
Location: Northwest corner of Alessandro Boulevard and Chara Street
Proposal: Plot Plan and Tentative Tract Map applications for 58 multi-family condominium units with common open space. The project is located on 4.8 net acres. The proposal includes two and three unit building types. All condominium units within the project include three bedrooms. Buildings are two-story with enclosed garages. The project is consistent with the current R15 zoning which allows for up to 15 dwelling units per acre.
Council District: 3

The project has been evaluated against criteria set forth in the California Environmental Quality Act (CEQA) Guidelines and it was determined that the project is exempt from the provisions of CEQA as a Class 32 Categorical Exemption, CEQA Guidelines, Section 15332 In-Fill Development Projects in that the project site is of no more than five acres and is consistent with all of the other conditions identified in CEQA Guidelines Section 15332.

A public hearing before the Planning Commission has been scheduled for the proposed project. Any person interested in commenting on the proposal and recommended environmental determination may speak at the hearing or provide written testimony at or prior to the hearing. The project application, supporting plans and environmental documents may be inspected at the Community Development Department at 14177 Frederick Street, Moreno Valley, California during normal business hours (7:30 a.m. to 5:30 p.m., Monday through Thursday; 7:30 a.m. to 4:30 p.m., Friday), or you may telephone (951) 413-3206 for further information.

The Planning Commission, at the Hearing or during deliberations, could approve changes or alternatives to the proposal. If you challenge any of these items in court, you may be limited to raising only those items you or someone else raised at the Public Hearing described in this notice or in written correspondence delivered to the Planning Commission at, or prior to, the Public Hearing.



LOCATION N

PLANNING COMMISSION HEARING

City Council Chamber, City Hall
14177 Frederick Street
Moreno Valley, Calif. 92553

DATE AND TIME: January 26, 2017 at 7 PM
CONTACT PLANNER: Gabriel Diaz
PHONE: (951) 413-3226

Upon request and in compliance with the Americans with Disabilities Act of 1990, any person with a disability who requires a modification or accommodation in order to participate in a meeting should direct such request to Guy Pegan, ADA Coordinator, at 951.413.3120 at least 48 hours before the meeting. The 48-hour notification will enable the City to make reasonable arrangements to ensure accessibility to this meeting.

PLANNING COMMISSION RESOLUTION NO. 2017-01

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY APPROVING PLOT PLAN APPLICATION PEN16-0119 (PA13-0061) FOR DEVELOPMENT OF A 58 UNIT MULTIFAMILY RESIDENTIAL CONDOMINIUM PROJECT ON AN APPROXIMATELY 4.8 ACRE SITE LOCATED ON THE NORTHWEST CORNER OF ALESSANDRO BOULEVARD AND CHARA STREET (ASSESSOR'S PARCEL NUMBERS 479-230-011, 479-230-012 & 479-230-027).

WHEREAS, Creative Design Associates, has filed an application for the approval of Plot Plan PEN16-0119 (PA13-0061) for development of a 58 unit multifamily residential condominium project located on the northwest corner of Alessandro Boulevard and Chara Street as described in the title above; and

WHEREAS, the application has been evaluated in accordance with established City of Moreno Valley (City) procedures, and with consideration of the General Plan and other applicable regulations; and

WHEREAS, upon completion of a thorough development review process the project was appropriately agendized and noticed for a public hearing before the Planning Commission of the City of Moreno Valley (Planning Commission); and

WHEREAS, the public hearing notice for this project was published in the local newspaper on January 15, 2017. Public notice was sent to all property owners of record within 300 feet of the project site on January 12, 2017. The public hearing notice for this project was also posted on the project site on January 13, 2017; and

WHEREAS, on January 26, 2017, the Planning Commission held a public hearing to consider the application; and

WHEREAS, on January 26, 2017, the Planning Commission of the City of Moreno Valley determined that the project is exempt from the California Environmental Quality Act (CEQA) (Public Resources Code section 21000 et. seq.) under CEQA Guideline Section 15332, In-Fill Development Projects; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred; and

WHEREAS, pursuant to Government Code Section 66020(d)(1), **NOTICE IS HEREBY GIVEN** that this project is subject to certain fees, dedications, reservations and other exactions as provided herein.

NOW, THEREFORE, BE IT RESOLVED, it is hereby found, determined and resolved by the Planning Commission as follows:

A. This Planning Commission hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this Planning Commission during the above-referenced meeting on January 26, 2017, including written and oral staff reports, public testimony and the record from the public hearing, this Planning Commission hereby specifically finds as follows:

1. **Conformance with General Plan Policies –** The proposed use is consistent with the General Plan, and its goals, objectives, policies and programs.

FACT: The project proposes development of a 58 unit multifamily residential condominium project on an approximately 4.8 net acre site. The General Plan land use designation for the project site is within the Residential/Office.

The project is consistent with General Plan policies and objectives. General Plan Policy 2.4.6 states that the primary purpose of areas designated Residential/Office is to provide areas for the establishment of office-based working environments or residential developments of up to 15 dwelling units per acre.

The project as designed and conditioned meets the stated General Plan policies for residential development.

The project as proposed is consistent with General Plan Goal 2.4 which identifies the need for a supply of housing in sufficient numbers suitable to meet the diverse needs of future residents and to support healthy economic development without creating an oversupply of any particular type of housing. The project is also consistent with General Plan Objective 2.2 which states that the City will provide a wide range of residential opportunities and dwelling types to meet the demands of present and future residents of all socioeconomic groups.

This project, as designed and conditioned, conforms to all development standards of the R15 zone and the design guidelines for multifamily residential condominium developments prescribed in the City's Municipal Code and City Landscape Standards.

The design guidelines for multifamily projects call for buildings to include a variety of colors and architectural features to break up the massing of buildings and provide visual interest. This variation has been demonstrated in the project design. The architectural design of the condominiums includes stucco exteriors with architectural features around windows and entrances to the buildings to break up massing and add focal points to the building. These detailed features include, concrete tile roofs, window trim and shutters, colored trim, wood siding, wood trellises, wrought iron guard rails, covered balconies and stone veneer. Variation among the buildings is created with the mixture of two and three unit buildings, roof lines, two different colored concrete tiles, porches, balconies, and a proposed color palette of earth tones.

The project as designed and conditioned will achieve the objectives of the City of Moreno Valley's General Plan. The proposed project is consistent with the General Plan and does not conflict with the goals, objectives, policies, and programs established within the Plan.

2. **Conformance with Zoning Regulations –** The proposed use complies with all applicable zoning and other regulations.

FACT: The project site is currently zoned R15. The proposed project is within the range of density allowed under the R15 zoning. The project provides a residential density of 12.08 dwelling units to the acre within the density range permitted within the R15 zone (12 to 15 dwelling units per acre).

The project is designed in accordance with the provisions of Section 9.03 Residential Districts and Section 9.16 Design Guidelines of the City's Municipal Code. The project as designed and conditioned would comply with all applicable zoning and other regulations.

3. **Health, Safety and Welfare –** The proposed use will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity.

FACT: The proposed multifamily residential condominium project as designed and conditioned will provide acceptable levels of protection from natural and man-made hazards to life, health, and property consistent with General Goal 9.6.1. The project site is located within approximately one and one half miles from Fire Station No. 99. Therefore, adequate emergency services can be provided to the site consistent with General Plan Goal 9.6.2.

The proposed multifamily residential condominium project will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity. Planning staff has reviewed the request in accordance with the latest edition of the California Environmental Quality Act (CEQA) Guidelines and has determined that the project qualifies for an exemption under the provisions of the CEQA as a Class 32 Categorical Exemption, CEQA Guidelines, Section 15332 for In-Fill Development Projects.

The Class 32 exemption applies to the multifamily residential condominium project because the Plot Plan is consistent with the criteria identified below:

- The project is consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations.
- The proposed development occurs within city limits on a project site of no more than five acres substantially surrounded by urban uses.
- The project site has no value as habitat for endangered, rare or threatened species.
- Approval of the project would not result in any significant effects relating to traffic, noise, air quality, or water quality.
- The site can be adequately served by all required utilities and public services.

The project as designed and conditioned will result in a development that will minimize the potential for loss of life and protect residents and visitors to the City from physical injury and property damage due to seismic ground shaking and flooding as provided for in General Plan Objective 6.1 and General Plan Objective 6.2. The project as designed and conditioned will be required to comply with the Municipal Code and all applicable building codes, and will be consistent with the City's Municipal Code, Section 9.03 Residential Districts.

4. **Location, Design and Operation –** The location, design and operation of the proposed project will be compatible with existing and planned land uses in the vicinity.

FACT: The project site is consistent with the Residential/Office General Plan and Residential 15 zoning designations. The surrounding area has already been developed consistent with the existing General Plan and zoning designations. This includes existing single-family homes to the north and east, a residential mobile home park to the south, and existing school district offices to the west.

The project includes 22 buildings with a mix of two and three unit building types. There are 14 building with three units and 8 buildings with two units. All units within the project include three bedroom floor plans. Buildings are two-story with enclosed garages. In addition the project is providing common open space on the northern and southern portions of the site, and each unit meets the minimum requirement of 150 square feet of private open space. Parking for the development will include a combination of attached garages and standard parking surface spaces. The project includes four floor plans (A, B, C & D), all first floor plans consist of a two car garage, kitchen, dining room, living room, and powder room. The second floor plans consist of two bedrooms and a master bedroom with walk in closet for a total of three bedrooms, a laundry room, and a bathroom. Floor Plan A has a total living area of 1,518 square feet. Floor Plan B has a total living area of 1,526 square feet. Floor Plan C has a total living area of 1,725 square feet. Floor Plan D has a total living area of 1,656 square feet. Floor Plan C is the only option within a loft on the second floor, and Floor Plan D is the only option with a sixty-three square foot balcony. The two story buildings are setback a minimum of fifty-seven feet from the property line adjacent to the existing single-family homes located along the easterly property line of the project. The project achieves required private space through the patio and entry design features. Required public common open space is achieved throughout the project in courtyards and other gathering areas.

The architectural design of the condominiums includes stucco exteriors with architectural features around windows and entrances to the buildings to break up massing and add focal points to the building. These detailed features include, concrete tile roofs, window trim and shutters, colored trim, wood siding, wood trellises, wrought iron guard rails, covered balconies and stone veneer. Variation among the buildings is created with the mixture of two and three unit buildings, roof lines, two different colored concrete tiles, porches, balconies, and a proposed color palette of earth tones.

The building elevations and six foot wall along Alessandro Boulevard have been enhanced to provide visual interest from the street view. The buildings have been enhanced with the addition of stone veneer. The proposed wall along Alessandro Boulevard has been upgraded with tubular steel fence on top of a decorative block wall that includes a combination of split face and precision block, along with decorative block columns with a cap.

The project has been designed to minimize the impact on the residential collector streets, and meet the needs of residents as set forth in the design guidelines. The project entries off of Timo Street and Chara Street are centralized access to accommodate arriving guests and residents. There is no access provided from Alessandro Boulevard.

As designed and conditioned the proposed multifamily residential condominium project is compatible with existing and proposed land uses in the vicinity.

C. FEES, DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

1. FEES

Impact, mitigation and other fees are due and payable under currently applicable ordinances and resolutions. These fees may include but are not limited to: Development Impact Fee, Transportation Uniform Mitigation Fee (TUMF), Multi-species Habitat Conservation Plan (MSHCP) Mitigation Fee, Stephens Kangaroo Habitat Conservation fee, Underground Utilities in lieu Fee, Area Drainage Plan fee, Bridge and Thoroughfare Mitigation fee (Future) and Traffic Signal Mitigation fee. The final amount of fees payable is dependent upon information provided by the applicant and will be determined at the time the fees become due and payable.

Unless otherwise provided for by this Resolution, all impact fees shall be calculated and collected at the time and in the manner provided in Chapter 3.32 of the City of Moreno Valley Municipal Code or as so provided in the applicable ordinances and resolutions. The City expressly reserves the right to amend the fees and the fee calculations consistent with applicable law.

2. DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

The adopted Conditions of Approval for PEN16-0119 (PA13-0061), incorporated herein by reference, may include dedications, reservations, and exactions pursuant to Government Code Section 66020 (d) (1).

3. CITY RIGHT TO MODIFY/ADJUST; PROTEST LIMITATIONS

The City expressly reserves the right to establish, modify or adjust any fee, dedication, reservation or other exaction to the extent permitted and as authorized by law.

Pursuant to Government Code Section 66020(d)(1), NOTICE IS FURTHER GIVEN that the 90 day period to protest the imposition of any impact fee, dedication, reservation, or other exaction described in this Resolution begins on the effective date of this Resolution and any such protest must be in a manner that complies with Section 66020(a) and failure to timely follow this procedure will bar any subsequent legal action to attack, review, set aside, void or annul imposition.

The right to protest the fees, dedications, reservations, or other exactions does not apply to planning, zoning, grading, or other similar application processing fees or service fees in connection with this project and it does not apply to any fees, dedication, reservations, or other exactions of which a notice has been given similar to this, nor does it revive challenges to any fees for which the applicable statute of limitations has previously expired.

BE IT FURTHER RESOLVED that the Planning Commission **HEREBY APPROVES** Resolution No. 2017-01, and thereby:

1. **CERTIFY** that Plot Plan PEN16-0119 (PA13-0061) is exempt from the provisions of the California Environmental Quality Act (CEQA), as a Class

32 Categorical Exemption, CEQA Guidelines, Section 15332 for In-Fill Development Projects; and

2. **APPROVE** Plot Plan PEN16-0119 based on the findings contained in this resolution, and subject to the attached conditions of approval included as Exhibit A.

APPROVED on this 26th day of January, 2017.

Attached: Conditions of Approval

PLANNING COMMISSION RESOLUTION NO. 2017-02

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY APPROVING TENTATIVE TRACT MAP 35429 APPLICATION PEN16-0120 (PA13-0062), CREATING ONE LOT FOR CONDOMINIUM PURPOSES FOR THE DEVELOPMENT OF A 58 UNIT MULTIFAMILY CONDOMINIUM PROJECT ON AN APPROXIMATELY 4.8 ACRE SITE LOCATED ON THE NORTHWEST CORNER OF ALESSANDRO BOULEVARD AND CHARA STREET (ASSESSOR'S PARCEL NUMBERS 479-230-011, 479-230-012 & 479-230-027).

WHEREAS, Creative Design Associates, has filed an application for the approval of Tentative Tract Map 35429 PEN16-0120 (PA13-0062), a proposal to create one lot for condominium purposes for the development of a 58 unit multifamily residential condominium project, merging three parcels into one on a 4.8 net acre site located within Assessor's Parcel Numbers 479-230-011, 479-230-012 & 479-230-027 as described in the title of this Resolution; and

WHEREAS, the application has been evaluated in accordance with established City of Moreno Valley (City) procedures, and with consideration of the General Plan and other applicable regulations; and

WHEREAS, upon completion of a thorough development review process the project was appropriately agendized and noticed for a public hearing before the Planning Commission of the City of Moreno Valley (Planning Commission); and

WHEREAS, the public hearing notice for this project was published in the local newspaper on January 15, 2017. Public notice was sent to all property owners of record within 300 feet of the project site on January 12, 2017. The public hearing notice for this project was also posted on the project site on January 13, 2017; and

WHEREAS, on January 26, 2017, the Planning Commission of the City of Moreno Valley conducted a public hearing to consider the application; and

WHEREAS, on January 26, 2017, the Planning Commission of the City of Moreno Valley determined that the project is exempt from the California Environmental Quality Act (CEQA) (Public Resources Code section 21000 et. seq.) under CEQA Guideline Section 15332, In-Fill Development Projects; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred; and

WHEREAS, pursuant to Government Code Section 66020(d)(1), **NOTICE IS HEREBY GIVEN** that this project is subject to certain fees, dedications, reservations and other exactions as provided herein.

NOW, THEREFORE, BE IT RESOLVED, by the Planning Commission of the City of Moreno Valley as follows:

A. This Planning Commission hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this Planning Commission during the above-referenced meeting on January 26, 2017, including written and oral staff reports, and the record from the public hearing, this Planning Commission hereby specifically finds as follows:

1. That the proposed map is consistent with applicable general and specific plans and the zoning ordinance;

FACT: The proposed tentative tract map will create one lot for condominium purposes for the development of a 58 unit multifamily residential condominium project. The proposed tract map is consistent with General Plan Objective 2.1.3 Land Use Plan. The current General Plan designation is Residential/Office. The current Municipal Code Zoning designation is Residential 15 (R15). The proposed project is within the range of density allowed under the R15 zoning. The project provides a residential density of 12.08 dwelling units to the acre. The range for density permitted within the R15 zone is 12 to 15 dwelling units per acre.

The project is consistent with General Plan policies and objectives. General Plan Policy 2.4.6 states that the primary purpose of areas designated Residential/Office is to provide areas for the establishment of office-based working environments or residential developments of up to 15 dwelling units per acre.

The project as proposed is consistent with General Plan Goal 2.4 which identifies the need for a supply of housing in sufficient numbers suitable to meet the diverse needs of future residents and to support healthy economic development without creating an oversupply of any particular type of housing. The project is also consistent with General Plan Objective 2.2 which states that the City will provide a wide range of residential opportunities and dwelling types to meet the demands of present and future residents of all socioeconomic groups.

The tract map as designed and conditioned will achieve the objectives of the City of Moreno Valley's General Plan. The proposed map is consistent with the General Plan and does not conflict with the goals, objectives, policies, and programs established within the Plan.

2. That the design or improvement of the proposed subdivision is consistent with applicable general and specific plans;

FACT: The proposed parcel map is consistent with General Plan Objective 2.1.3 Land Use Plan. The General Plan land use designation for the project site is within the Residential/Office. The current Municipal Code Zoning designation is Residential 15 (R15). The allowed density for the R15 zone is a maximum of 15 dwelling units per acre.

Tentative Tract Map No. 35429 for condominium purposes is consistent with the City's Municipal Code Section 9.14 Land Divisions. The proposed tract map will create one lot for condominium purposes for the development of a 58 unit multifamily residential condominium project, merging three parcels into one on a 4.8 net acre site located within Assessor's Parcel Numbers 479-230-011, 479-230-012 & 479-230-027.

The subdivision as designed and conditioned is consistent with existing goals, objectives, policies and programs of the General Plan.

3. That the site is physically suitable for the type of development;

FACT: The project site is vacant and relatively flat located at the northwest corner of Alessandro Boulevard and Chara Street. The zoning for the site is Residential 15 (R15). The project site is consistent with the Residential 15 zoning designations. The surrounding area has already been developed consistent with the existing General Plan and zoning designations. This includes existing single-family homes to the north and east, a residential mobile home park to the south, and existing school district offices to the west.

4. That the site of the proposed land division is physically suitable for the proposed density of the development;

FACT: The project site is vacant of any buildings, and is comprised of two rectangular shaped parcels and one rectangular shape parcel and is comprised of topography that is fairly flat. The tract map establishes one lot physically suitable for condominium development. The tract map is designed in accordance with the provisions of the City's Municipal Code Section 9.14 Land Divisions.

5. That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat;

FACT: The project site is vacant and relatively flat and the surrounding area has already been developed consistent with the existing General Plan and zoning designations. This includes existing single-family homes to the north and east, a residential mobile home park to the south, and existing school district offices to the west.

Planning staff has reviewed the request in accordance with the latest edition of the California Environmental Quality Act (CEQA) Guidelines and has determined that the project qualifies for an exemption under the provisions of the CEQA as a Class 32 Categorical Exemption, CEQA Guidelines, Section 15332 for In-Fill Development Projects.

The Class 32 exemption applies to the tract map because the map is consistent with the criteria identified below:

- The project is consistent with the applicable general plan designation and all applicable general plan policies as well as with applicable zoning designation and regulations.
- The proposed development occurs within city limits on a project site of no more than five acres substantially surrounded by urban uses.
- The project site has no value as habitat for endangered, rare or threatened species.
- Approval of the project would not result in any significant effects relating to traffic, noise, air quality, or water quality.
- The site can be adequately served by all required utilities and public services.

Therefore, the parcel map will not cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

6. That the design of the subdivision or type of improvements is not likely to cause serious public health problems;

FACT: As conditioned, the proposed tract map will not cause serious public health problems. Based on the available environmental resources information, there are no known hazardous conditions associated with the property.

The tract map has been designed consistent with the City's Municipal Code Section 9.14 Land Divisions and meets all City requirements related to subdividing a property.

7. That the design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large for access through or use of property within the proposed subdivision;

FACT: The tentative tract map has been designed to accommodate and not conflict with existing easements on the subject site including utility and storm drain easements. The tract map proposal is to create one lot for condominium purposes for the development of a 58 unit multifamily residential condominium project, merging three parcels into one on a 4.8 net acre site located within Assessor's Parcel Numbers 479-230-011, 479-230-012 & 479-230-027.

8. That the proposed land division and the associated design and improvements are consistent with applicable ordinances of the city.

FACT: The land division proposed by Tentative Tract Map No. 35429 is consistent with the City's Municipal Code Section 9.14 Land Divisions. The one lot for condominium purposes as designed and conditioned is consistent with applicable ordinances of the City.

C. FEES, DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

1. FEES

Impact, mitigation and other fees are due and payable under applicable ordinances and resolutions. These fees may include but are not limited to: Development Impact Fee, Transportation Uniform Mitigation Fee (TUMF), Multi-species Habitat Conservation Plan (MSHCP) Mitigation Fee, Stephens Kangaroo Habitat Conservation fee, Underground Utilities in lieu Fee, Area Drainage Plan fee, Bridge and Thoroughfare Mitigation fee (Future) and Traffic Signal Mitigation fee. The final amount of fees payable is dependent upon information provided by the applicant and will be determined at the time the fees become due and payable.

Unless otherwise provided for by this resolution, all impact fees shall be calculated and collected at the time and in the manner provided in Chapter 3.32 of the City of Moreno Valley Municipal Code or as so provided in applicable ordinances and resolutions. The City expressly reserves the right to amend the fees and the fee calculations consistent with applicable law.

2. DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

The adopted Conditions of Approval for PEN16-0120 (PA13-0062), incorporated herein by reference, include dedications, reservations, and exactions pursuant to Government Code Section 66020 (d) (1).

3. CITY RIGHT TO MODIFY/ADJUST; PROTEST LIMITATIONS

The City expressly reserves the right to establish, modify or adjust any fee, dedication, reservation or other exaction to the extent permitted and as authorized by law.

Pursuant to Government Code Section 66020(d)(1), NOTICE IS FURTHER GIVEN that the 90 day period to protest the imposition of any impact fee, dedication, reservation, or other exaction described in this resolution begins on the effective date of this resolution and any such protest must be in a manner that complies with Government Code Section 66020(a) and failure to follow this procedure in a timely fashion will bar any subsequent legal action to attack, review, set aside, void or annul imposition.

The right to protest the fees, dedications, reservations, or other exactions does not apply to planning, zoning, grading, or other similar application processing fees or service fees in connection with this project and it does not apply to any fees, dedication, reservations, or other exactions of which a notice has been given similar to this, nor does it revive challenges to any fees for which the Statute of Limitations has previously expired.

BE IT FURTHER RESOLVED that the Planning Commission **HEREBY APPROVES** Resolution No. 2017-02, and thereby:

1. **CERTIFY** that Tentative Tract Map PEN16-0120 (PA13-0062) is exempt from the provisions of the California Environmental Quality Act (CEQA), as a Class 32 Categorical Exemption, CEQA Guidelines, Section 15332 for In-Fill Development Projects; and

2. **APPROVE** Tentative Tract Map PEN16-0120 based on the findings contained in this resolution, and subject to the attached conditions of approval included as Exhibit A.

APPROVED on this 26th day of January, 2017.

CITY OF MORENO VALLEY
CONDITIONS OF APPROVAL
PLOT PLAN PEN16-0119 (PA13-0061) FOR A
58 UNIT CONDOMINIUM PROJECT &
TENTATIVE TRACT MAP 35429 PEN16-0120 (PA13-0062)
ASSESSOR'S PARCEL NUMBERS: 479-230-011, 479-230-012 & 479-230-027

Effective Approval Date:
Effective Expiration Date:

COMMUNITY DEVELOPMENT DEPARTMENT

Planning Division

P1. Plot Plan PEN16-0119 and Tentative Tract Map PEN16-0120 has been approved for the development of a new 58-unit multifamily condominium project on vacant 4.8 net acres of land on the northwest corner of Alessandro Boulevard and Chara Street. The project includes 22 buildings; there are 14 building with three units and eight buildings with two units. All units within the project include three bedroom floor plans. Buildings are two-story in height and include enclosed garages. The two story buildings are set back a minimum of fifty-seven feet from the property line adjacent to the existing single-family homes located along the easterly property line of the project.

The project as designed provides a total of 158 parking spaces including 116 garages, and 42 open parking spaces for residents and guests. Based on Municipal Code Section 9.11, the project requires a total of 145 parking spaces, of which 116 must be covered.

P2. This approval shall comply with all applicable requirements of the City of Moreno Valley Municipal Code.

P3. This tentative map shall expire three years after the approval date of this tentative map unless extended as provided by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever in the event the applicant or any successor in interest fails to properly file a final map before the date of expiration. (MC 9.02.230, 9.14.050, 080)

Timing Mechanisms for Conditions (see abbreviation at beginning of affected condition):

R - Map Recordation	GP - Grading Permits	CO - Certificate of Occupancy or building final
WP - Water Improvement Plans	BP - Building Permits	P - Any permit

Governing Document (see abbreviation at the end of the affected condition):

GP - General Plan	MC - Municipal Code	CEQA - California Environmental Quality Act
Ord - Ordinance	DG - Design Guidelines	Ldscp - Landscape Development Guidelines and Specs
Res - Resolution	UFC - Uniform Fire Code	UBC - Uniform Building Code
	SBM - Subdivision Map Act	

P4. This plot plan shall expire three years after the approval date unless extended as provided by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever. (MC 9.02.230)

P5. The site shall be developed in accordance with the approved plot plan and tentative tract map on file in the Community Development Department - Planning Division, the General Plan, the Municipal Code regulations, and the conditions contained herein. (MC 9.14.020)

P6. All undeveloped portions of the site shall be maintained in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)

P7. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)

P8. Any signs indicated on the submitted plans are not included with this approval. Any signs, whether permanent (e.g. wall, monument) or temporary (e.g. banner, flag), proposed for this development shall be designed in conformance with the sign provisions of the Municipal Code or an approved sign program, if applicable, and shall require separate application and approval by the Planning Division. No signs are permitted in the public right of way. (MC 9.12)

P9. All site plans, grading plans, landscape and irrigation plans, and street improvement plans shall be coordinated for consistency with this approval.

P10. The design of all swales and basins that are visible from the public right-of-way shall be integrated with the surrounding landscape areas.

PRIOR TO GRADING

P11. (GP) Prior to approval of any grading permit, the developer shall submit a tree plan to the Planning Division for review and approval. The plan shall identify all mature trees (4 inch trunk diameter or larger) on the subject property and City right-of-way. Using the grading plan as a base, the plan shall indicate trees to be relocated, retained, and removed. Replacement trees shall be: shown on the plan; be a minimum size of 24 inch box; and meet a ratio of three replacement trees for each mature tree removed or as approved by the Community Development Director or designee. (GP Objective 4.4, 4.5, DG)

P12. (GP) Prior to issuance of grading permits, the developer shall pay the applicable Stephen's' Kangaroo Rat (SKR) Habitat Conservation Plan mitigation fee. (Ord)

P13. (GP) Prior to the issuance of grading permits, final erosion control landscape and irrigation plans for all cut or fill slopes over 3 feet in height shall be submitted to the Planning Division for review and approval for the phase in process. The plans shall be designed in accordance with the slope erosion plan as required by the City Engineer for that phase. Man-made slopes greater than 10 feet in height shall be "land formed" to conform to the natural terrain and shall be landscaped and stabilized to minimize visual scarring. (GP Objective 1.5, MC 9.08.080, DG)

P14. (GP) If potential historic, archaeological, or paleontological resources are uncovered during excavation or construction activities at the project site, work in the affected area will cease immediately and a qualified person (meeting the Secretary of the Interior's standards (36CFR61)) shall be consulted by the applicant to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, prehistoric, or paleontological resource. Determinations and recommendations by the consultant shall be implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all affected Native American Tribes before any further work commences in the affected area.

If human remains are discovered, work in the affected area shall cease immediately and the County Coroner shall be notified. If it is determined that the remains are potentially Native American, the California Native American Heritage Commission and any and all affected Native American Indians tribes such as the Morongo Band of Mission Indians or the Pechanga Band of Luiseno Indians shall be notified and appropriate measures provided by State law shall be implemented. (GP Objective 23.3, DG, CEQA).

P15. (GP) Prior to approval of any grading permits, final median enhancement/landscape/irrigation plans shall be submitted to the Planning Division, and Public Works Department – Special Districts Division for review and approval by each division. (GP - Circulation Master Plan) Timing of installation shall be determined by Special Districts.

P16. (GP) Prior to the issuance of grading permits, the grading plan shall show decorative concrete paving for all driveway ingress/egress locations of the project and across drive aisles throughout the development to connect required paths of travel with the public right-of-way.

P17. (GP) Prior to issuance of grading permits, the developer shall submit wall/fence plans to the Planning Division for review and approval and of any proposed retaining walls. The wall and fence materials shall be decorative in nature, while the combination of retaining and other walls on top shall not exceed the City's height requirement.

P18. (GP) Within thirty (30) days prior to any grading or other land disturbance, a pre-construction survey for Burrowing Owls shall be conducted pursuant to the established guidelines of the Multiple Species Habitat Conservation Plan.

PRIOR TO RECORDATION OF FINAL MAP

P19. (R) Prior to final map recordation, subdivision phasing (including any proposed common open space or improvement phasing, if applicable), shall be subject to the Planning Division approval. Any proposed phasing shall provide for adequate vehicular access to all lots in each phase as determined by the City Transportation Engineer or designee and shall substantially conform to all intent and purpose of the subdivision approval. (MC 9.14.080)

P20. (R) Prior to recordation of the final map, final median enhancement/landscape/irrigation plans shall be reviewed and approved by the Planning Division, and Public Works Department - Special Districts Administration for review and approval by each division. (GP - Circulation Master Plan)

P21. (R) Prior to recordation of the final subdivision map, the developer shall submit for review and approval the following documents to the Planning Division which shall demonstrate that the project will be developed and maintained in accordance with the intent and purpose of the approval:

a. The document to convey title
b. Deed restrictions, easements, or Covenants, Conditions and Restrictions to be recorded

The approved documents shall be recorded at the same time that the subdivision map is recorded. The documents shall contain provisions for general maintenance of the site, joint access to proposed parcels, open space use restrictions, conservation easements, guest parking, feeder trails, water quality basins, lighting, landscaping and common area use items such as general building maintenance (apartments, condominiums and townhomes) tot lot/public seating areas and other recreation facilities or buildings. The approved documents shall also contain a provision, which provides that they may not be terminated and/or substantially amended without the consent of the City and the developer's successor-in-interest. (MC 9.14.090)

In addition, the following deed restrictions and disclosures shall be included within the document and grant deed of the properties:

- The developer and homeowners association shall promote the use of native plants and trees and drought tolerant species to the extent feasible.

- (R) All lots designated for open space and or detention basins, shall be included as an easement to, and maintained by a Homeowners Association (HOA) or other private maintenance entity. All reverse frontage landscape areas shall also be maintained by the onsite HOA. Language to this effect shall be included and reviewed within the required Covenant Conditions and Restrictions (CC&Rs) prior to the approval of the final map.

- Maintenance of any and all common facilities.

- A conservation easement for lettered lots shall be recorded on the deed of the property and shown on the final map. Said easement shall include access restrictions prohibiting motorized vehicles from these areas.

PRIOR TO BUILDING PERMITS

P22. (BP) Prior to issuance of building permits, the Planning Division shall review and approve the location and method of enclosure or screening of transformer cabinets, commercial gas meters and back flow preventers as shown on the final working drawings. Location and screening shall comply with the following criteria: transformer cabinets and commercial gas meters shall not be located within required setbacks and shall be screened from public view either by architectural treatment or landscaping; multiple electrical meters shall be fully enclosed and incorporated into the overall architectural design of the building(s); back-flow preventers shall be screened by landscaping. (GP Objective 43.30, DG)

P23. (BP) Prior to issuance of building permits, screening details shall be addressed on plans for roof top equipment and trash enclosures submitted for Planning Division review and approval. All equipment shall be completely screened so as not to be visible from public view, and the screening shall be an integral part of the building. For trash enclosures, landscaping shall be included on at least three sides. The trash enclosure, including any roofing, shall be compatible with the architecture for the building(s). (GP Objective 43.6, DG)

P24. (BP) Prior to issuance of building permits, two copies of a detailed, on-site, computer generated, point-by-point comparison lighting plan, including exterior building, parking lot, and landscaping lighting, shall be submitted to the Planning Division for review and approval. The lighting plan shall be generated on the plot plan and shall be integrated with the final landscape plan. The plan shall indicate the manufacturer's specifications for light fixtures used and shall include style, illumination, location, height and method of shielding. The lighting shall be designed in such a manner so that it does not exceed one-quarter foot-candle minimum maintained lighting measured from within five feet of any property line. The lighting level for all parking lots or structures shall be a minimum coverage of one foot-candle of light with a maximum of eight foot-candles. After the third plan check review for lighting plans, an additional plan check fee will apply. (MC 9.08.100, DG)

P25. (BP) Prior to issuance of building permits, for multi-family projects that propose phased occupancy, a phasing plan application shall be submitted to the Planning Division for approval.

P26. (BP) Prior to issuance of building permits, the developer or developer's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), Multi-species Habitat Conservation Plan (MSHCP) mitigation fees, and the City's adopted Development Impact Fees. (Ord)

P27. (BP) Prior to the issuance of building permits, the site plan shall include landscape for trash enclosures to include landscape on three sides, while elevation plans for trash enclosures shall be provided that include decorative enhancements such as an enclosed roof and other decorative features that are consistent with the architecture of the proposed buildings on the site, subject to the approval of the Planning Division.

P28. (BP) Prior to issuance of any building permits, final landscaping and irrigation plans shall be submitted for review and approved by the Planning Division. After the third plan check review for landscape plans, an additional plan check fee shall apply. The plans shall be prepared in accordance with the City's Landscape Standards and shall include:

A. A three (3) foot high decorative wall, solid hedge or berm shall be placed in any setback areas between a public right of way and a parking lot for screening.
B. Drought tolerant landscape shall be used. Sod shall be limited to gathering and recreation areas.
C. Street trees shall be provided every 40 feet on center in the parkway along the Alessandro Boulevard, Chara Street and Timo Street frontages.
D. On-site trees shall be planted at an equivalent of one (1) tree per thirty (30) linear feet of the perimeter of a parking lot and per thirty linear feet of a building dimension for the portions of the building visible from a parking lot or right of way. Trees may be massed for pleasing aesthetic effects.
E. Enhanced landscaping shall be provided at all driveway entries and street corner locations and along the Alessandro Boulevard, Chara Street and Timo frontages.
F. The review of all utility boxes, transformers etc. shall be coordinated to provide adequate screening from public view.
G. Landscaping on three sides of any trash enclosure.
H. All site perimeter and parking lot landscape and irrigation shall be installed prior to the release of certificate of any occupancy permits for the site.
I. Bio-retention or other water quality or storm water infrastructure placed in a required landscape planter shall be landscaped per Municipal Code Section 9.17 and the City's Landscape Standards.

PRIOR TO BUILDING FINAL

P30. (BF) Prior to building final, the required landscaping and irrigation shall be installed. (MC 9.03.040)

P31. (BF) Prior to building final all required and proposed fences and walls shall be constructed according to the approved plans on file in the Planning Division. (MC 9.080.070).

P32. (BF) Prior to building final, installed landscaping and irrigation shall be inspected by the Planning Division. All on-site and common area landscaping shall be installed in accordance with the City's Landscape Standards and the approved project landscape plans and all site clean-up shall be completed. All site perimeter and parking lot landscape and irrigation shall be installed prior building final for the site or pad in question.

P33. (BF) Prior to building final, Planning approved/stamped landscape plans shall be provided to the Community Development Department – Planning Division on a CD disk.

MORENO VALLEY UNIFIED SCHOOL DISTRICT

S1. (BP) Prior to issuance of building permits, the developer shall provide to the Community Development Director a written certification by the affected school district that either: (1) the project has complied with the fee or other exaction levied on the project by the governing board of the district, pursuant to Government Code Section 65996; or (2) the fee or other requirement does not apply to the project.

UNITED STATES POSTAL SERVICE

PO1. (BP) Prior to the issuance of building permits, the developer shall contact the U.S. Postal Service to determine the appropriate type and location of mailboxes.

BUILDING AND SAFETY DIVISION

GENERAL CONDITIONS OF APPROVAL

The following conditions have been generated based on the information provided with your application. Please note that future revisions or changes in scope to the project may require additional items. Fee estimates for plan review and permits can be obtained by contacting the Building Safety Division at 951.413.3350.

B1. All new structures shall be designed in conformance to the latest design standards adopted by the State of California in the California Building Code, (CBC) Part 2, Title 24, California Code of Regulations including requirements for allowable area, occupancy separations, fire suppression systems, accessibility, etc. The current code edition is the 2016 CBC.

B2. The proposed residential project shall comply with The California Green Building Standards Code, Section 4.106.4, mandatory requirements for Electric Vehicle Charging Station (EVCS)

B3. Prior to submittal, all new development, including residential second units, are required to obtain a valid property address prior to permit application. Addresses can be obtained by contacting the Building Safety Division at 951.413.3350.

B4. The proposed project's occupancy shall be classified by the Building Official and must comply with exiting, occupancy separation(s) and minimum plumbing fixture requirements of the 2016 California Plumbing Code Table 4-1.

B5. Building plans submitted shall be signed and sealed by a California licensed design professional as required by the State Business and Professions Code.

B6. The proposed residential project (3 or more dwelling units) shall comply with the latest Federal Law, Americans with Disabilities Act, and State Law, California Code of Regulations, Title 24, Chapter 11A for accessibility standards for the disabled including access to the site, exits, kitchens, bathrooms, common spaces, pools/spas, etc.

B7. The proposed development is subject to the payment of required development fees as required by the City's current Fee Ordinance at the time a building application is submitted or prior to the issuance of permits as determined by the City.

B8. The proposed project is subject to approval by the Eastern Municipal Water District and all applicable fees and charges shall be paid prior to permit issuance. Contact the water district at 951.928.3777 for specific details.

B9. Prior to permit issuance, every applicant shall submit a properly completed Waste Management Plan (WMP), as a portion of the building or demolition permit process. (MC 8.80.030)

B10. Any construction within the city shall only be as follows: Monday through Friday (except for holidays) seven a.m. to seven p.m.; Saturday from eight a.m. to four p.m., unless written approval is first obtained from the Building Official or City Engineer per City of Moreno Valley Municipal Code (MC 8.14.040E).

B11. Contact the Building Safety Division for permit application submittal requirements.

FIRE PREVENTION BUREAU

With respect to the conditions of approval, the following fire protection measures shall be provided in accordance with Moreno Valley City Ordinances and/or recognized fire protection standards:

F1. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in force at the time of building plan submittal.

F2. The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with the C.F.C., MVMC, and NFPA 24. A fire hydrant shall be located within 50 feet of the fire department connection for buildings protected with a fire sprinkler system. Fire hydrants shall not be closer than 40 feet to the structures. The size and number of outlets required for the approved fire hydrants are (6” x 4” x 2 ½”) (CFC 507.5.1, 507.5.7, Appendix C, NFPA 24-7.2.3, MVMC 912.2.1)

F3. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.2 and 503.2.5)

F4. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire Prevention Bureau with an approved site plan for fire lane signage, address display boards and fire hydrant placement. (MVMC 8.36.050 and CFC 501.3)

F5. Prior to construction and issuance of building permits, all locations where structures are to be built shall have an approved Fire Department emergency vehicular access road (all weather surface) capable of sustaining an imposed load of 80,000 lbs. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4 and MVMC 8.36.050 Section A)

F6. Prior to construction and issuance of Building Permits, fire lanes and fire apparatus access roads shall have an unobstructed width of not less than twenty–four (24) feet as approved by the Fire Prevention Bureau and an unobstructed vertical clearance of not less the thirteen (13) feet six (6) inches. (CFC 503.2.1 and MVMC 8.36.060[E])

F7. Prior to construction, all roads, driveways and private roads shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.060[G])

F8. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4)

F9. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.3)

F10. Prior to building construction, dead end roadways and streets which have not been completed shall have a turnaround capable of accommodating fire apparatus. (CFC 503.2.5)

F11. Prior to issuance of Building Permits, the applicant/developer shall participate in the Fire Impact Mitigation Program. (Fee Resolution as adopted by City Council)

F12. Prior to issuance of Building Permits, plans for private water mains supplying fire sprinkler systems and/or private fire hydrants shall be submitted to the Fire Prevention Bureau for approval. Fire hydrants shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction (CFC 105 and CFC 3312.1)

F13. Prior to issuance of Certificate of Occupancy or Building Final, "Blue Reflective Markers" shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 509.1 and MVLT 440A-0 through MVLT 440C-0)

F14. Prior to issuance of Certificate of Occupancy or Building Final, all <u>multi-family residences</u> shall display the address in accordance with the Riverside County Fire Department Premises Identification standard 07-01. (CFC 505.1)

F15. Prior to issuance of a Certificate of Occupancy or Building Final, a directory display monument sign shall be required for apartment, condominium, townhouse or mobile home parks. Each complex shall have an illuminated diagrammatic layout of the complex which indicates the name of the complex, all streets, building identification, unit numbers, and fire hydrant locations within the complex. Location of the sign and design specifications shall be submitted to, and approved by, the Community Development Department – Planning Division and the Fire Prevention Bureau prior to installation. (MVMC 9.12.060 [H,I])

F16. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9)

F17. All exterior security emergency access gates shall be electronically operated and be provided with Knox key switches for access by emergency personnel. (CFC

506.1)

F18. The angle of approach and departure for any means of Fire Department access shall be a maximum of 6 percent grade for 25 feet of approach/departure. (CFC 503)

F19. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire alarm system monitored by an approved Underwriters Laboratory listed central station based on a requirement for monitoring the sprinkler system, occupancy or use. Fire alarm panel shall be accessible from exterior of building in an approved location. Plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9 and MVMC 8.36.100)

F20 Approval of the safety precautions required for buildings being constructed, altered or demolished shall be required in addition to other approvals required for specific operations or processes associated with such construction, alteration or demolition. (CFC Chapter 14 & CBC Chapter 33)

F21. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.

PUBLIC WORKS DEPARTMENT

SPECIAL DISTRICTS DIVISION

Acknowledgement of Conditions

The following are the Special Districts Division's Conditions of Approval for PEN16-0119 (PA13-0061) and PEN16-0120 (PA13-0062); this project shall be completed at no cost to any Government Agency. All questions regarding the following Conditions including but not limited to intent, requests for change/modification, variance and/or request for extension of time shall be sought from the Special Districts Division of the Public Works Department 951.413.3480 or by emailing specialdistricts@moval.org.

General Conditions

SD-1 The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services District Zone A (Parks & Community Services) and Zone C (Arterial Street Lighting). All assessable parcels therein shall be subject to annual parcel taxes for Zone A and Zone C for operations and capital improvements.

SD-2 Plans for median landscape areas designated in the project's Conditions of Approval for incorporation into a City coordinated landscape maintenance program, shall be prepared and submitted in accordance with the City of Moreno Valley Public Works Department Landscape Design Guidelines. The guidelines are available on the City's website at www.moval.org/sd or from the Special Districts Division (951.413.3480 or specialdistricts@moval.org).

SD-3 The Developer, or the Developer's successors or assignees shall be responsible for all median landscape maintenance for a period of one (1) year commencing from the time all items of work have been completed to the satisfaction of Special Districts staff as per the City of Moreno Valley Public Works Department Landscape Design Guidelines, or until such time as the District accepts maintenance responsibilities.

SD-4 Any damage to existing landscape areas maintained by the City of Moreno Valley due to project construction shall be repaired/replaced by the Developer, or Developer's successors in interest, at no cost to the City of Moreno Valley.

SD-5 The removal of existing trees with four-inch or greater trunk diameters (calipers), shall be replaced, at a three to one ratio, with minimum twenty-four (24) inch box size trees of the same species, or a minimum thirty-six (36) inch box for a one to one replacement, where approved. (MC 9.17.030)

SD-6 The ongoing maintenance of any parkway landscaping required to be installed behind the curb on Alessandro Blvd, Chara St., and Timo St. shall be the responsibility of the property owner.

SD-7 Plan check fees for review of median landscape plans for improvements that shall be maintained by the City of Moreno Valley are due upon the first plan submittal. (MC 3.32.040)

SD-8 Inspection fees for the monitoring of median landscape installation associated with the City of Moreno Valley maintained medians are due prior to the required pre-construction meeting. (MC 3.32.040)

SD-9 Street Light Authorization forms for all street lights that are conditioned to be installed as part of this project must be submitted to the Special Districts Division for approval, prior to street light installation. The Street Light Authorization form can be obtained from the utility company providing electric service to the project, either Moreno Valley Utility or Southern California Edison. For questions, contact the Special Districts Division at 951.413.3480 or specialdistricts@moval.org.

Prior to Recordation of Final Map

SD-10 (R) This project has been conditioned to provide a funding source for the continued maintenance, enhancement, and/or retrofit of parks, open spaces, linear parks, and/or trail systems. The Developer shall satisfy this condition with one of the options below.

a. Participate in a special election for annexation into Community Facilities District No. 1 and pay all associated costs of the special election process and formation, if any; or

b. Establish an endowment fund to cover future maintenance costs for new neighborhood parks.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. A minimum of 90 days is needed to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

Annexation to CFD No. 1 shall be completed or proof of payment to establish the endowment fund shall be provided prior to the issuance of the first building permit for this project.

SD-11 (R) This project has been identified to be included in the formation of a Community Facilities District for Public Safety services including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. The property owner(s) shall not protest the formation; however, they retain the right to object to the rate and method of maximum special tax. In compliance with Proposition 218, the property owner shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district that may already be established. The Developer must notify the Special Districts Division at 951.413.3480 or specialdistricts@moval.org of its intent to record the final map for the development 90 days prior to City Council action authorizing recordation of the map. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution. (California Government Code Section 53313 et. seq.)

SD-12 (R) This project is conditioned to provide a funding source for the following special financing program(s):

a. Street Lighting Services for capital improvements, energy charges, and maintenance.
b. Landscape Maintenance Services for median landscaping on Alessandro Blvd.

The Developer's responsibility is to provide a funding source for the capital improvements and the continued maintenance of the landscaped area. The Developer shall satisfy this condition with one of the options below.

i. Participate in a special election (mail ballot proceeding) and pay all associated costs of the special election and formation, if any. Financing may be structured through a Community Services District zone, Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

ii. Establish a Property Owner's Association (POA) or Home Owner's Association (HOA) which will be responsible for any and all operation and maintenance costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. The option for participating in a special election requires approximately 90 days to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

The financial option selected shall be in place prior to the issuance of the first building permit for this project.

SD-13 (R) This project is conditioned to provide a funding source for the operation and maintenance of public improvements and/or services associated with new development in that territory. The Developer shall satisfy this condition with one of the options below.

a. Participate in a special election for maintenance/services and pay all associated costs of the election process and formation, if any. Financing may be structured through a Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

b. Establish an endowment fund to cover the future maintenance and/or service costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. A minimum of 90 days is needed to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

The financial option selected shall be in place prior to the issuance of the first building permit for the project.

SD-14 *Residential* (R) If Land Development, a Division of the Public Works Department, requires this project to supply a funding source necessary to provide for, but not limited to, stormwater utilities services for the required continuous operation, maintenance, monitoring, systems evaluation and enhancements of on-site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated storm water regulations, a funding source needs to be established. The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option for the National Pollution Discharge Elimination System (NPDES) program (see Land Development's related condition). Participating in a special election the process requires a 90 day period prior to City Council action authorizing recordation of the final map for the development and to participate in a special election process. This allows adequate time to be in compliance with the provisions of Article 13D of the California Constitution. California Health and Safety Code Sections 5473 through 5473.8 (Ord. 708 Section 3.1, 2006) & City of Moreno Valley Municipal Code Title 3, Section 3.50.050.)

Prior to Building Permit Issuance

SD-15 (BP) This project has been identified to potentially be included in the formation of a Map Act Area of Benefit Special District for the construction of major thoroughfares and/or freeway improvements. The property owner(s) shall participate in such District and pay any special tax, assessment, or fee levied upon the project property for such District. At the time of the public hearing to consider formation of the district, the property owner(s) will not protest the formation, but will retain the right to object any eventual assessment that is not equitable should the financial burden of the assessment not be reasonably proportionate to the benefit the affected property obtains from the improvements to be installed. The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option when submitting an application for the first building permit to determine whether the development will be subjected to this condition. If subject to the condition, the special election requires a 90 day process in compliance with the provisions of Article 13C of the California Constitution. (Street & Highway Code, GP Objective 2.14.2, MC 9.14.100).

SD-16 (BP) Prior to the issuance of the first building permit for this project, the Developer shall pay Advanced Energy fees for all applicable Residential and Arterial Street Lights required for this development. Payment shall be made to the City of Moreno Valley and collected by the Land Development Division. Fees are based upon the Advanced Energy fee rate in place at the time of payment, as set forth in the current Listing of City Fees, Charges, and Rates adopted by City Council. The Developer shall provide a copy of the receipt to the Special Districts Division *(specialdistricts@moval.org).* Any change in the project which may increase the number of street lights to be installed will require payment of additional Advanced Energy fees at the then current fee. Questions may be directed to the Special Districts Division at 951.413.3480 or specialdistricts@moval.org.

SD-17 (BP) For those areas to be maintained by the City and prior to the issuance of the first Building Permit, Planning Division (Community Development Department), Special Districts Division (the Public Works Department) and Transportation Division (the Public Works Department) shall review and approve the final median landscape/irrigation plans as designated on the tentative map or in these Conditions of Approval prior to the issuance of the first Building Permit.

SD-18 (BP) Median landscaping specified in the project's Conditions of Approval shall be constructed in compliance with the City of Moreno Valley Public Works Design Guidelines and completed prior to the issuance of 25% (or 15) of the dwelling permits for this tract or 12 months from the issuance of the first dwelling permit, whichever comes first. In cases where a phasing plan is submitted, the actual percentage of dwelling permits issued prior to the completion of the landscaping shall be subject to the review of the construction phasing plan.

Prior to Certificate of Occupancy

SD-19 (CO) Landscape and irrigation plans for median landscape areas designated to be maintained by the City shall be placed on compact disk (CD) in pdf format. The CD shall include "As Built" plans, revisions, and changes. The CD will become the property of the City of Moreno Valley and the Moreno Valley Community Services District.

LAND DEVELOPMENT DIVISION

The following are the Public Works Department – Land Development Division Conditions of Approval for this project and shall be completed at no cost to any government agency. All questions regarding the intent of the following conditions shall be referred to the Land Development Division.

General Conditions

LD1. (G) The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). [MC 9.14.010]

LD2. (G) The tentative map shall correctly show all existing easements, traveled ways, and drainage courses. Any omission may require the map or plans associated with this application to be resubmitted for further consideration. [MC 9.14.040(A)]

LD3. (G) In the event right of way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right of way in accordance with the Land Development Division's administrative policy. If unsuccessful, the Developer shall enter into an agreement with the City to acquire the necessary right of way or offsite easements and complete the improvements at such time the City acquires the right of way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right of way or easement acquisition. [GC 66462.5]

LD4. (G) If improvements associated with this project are not initiated within two (2) years of the date of approval of the Public Improvement Agreement (PIA), the City Engineer may require that the engineer's estimate for improvements associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the PIA or issuance of a permit.

LD5. (G) The developer shall monitor, supervise and control all construction and construction supportive activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:

a. Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.

b. Observance of working hours as stipulated on permits issued by the Land Development Division.

c. The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.

d. All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements during the grading operations.

Violation of any condition, restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedy as noted in City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.

LD6. (G) The developer shall protect downstream properties from damage caused by alteration of drainage patterns (i.e. concentration or diversion of flow, etc.). Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. [MC 9.14.110]

LD7. (G) Public drainage easements, when required, shall be a minimum of 25 feet wide and shall be shown on the map and plan, and noted as follows: *"Drainage Easement – no structures, obstructions, or encroachments by landfills are allowed."* In addition, the grade within the easement area shall not exceed a 3:1 (H:V) slope, unless approved by the City Engineer.

LD8. (G) Prior to any plan approval, a final detailed drainage study (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer. The study shall include existing and proposed hydrologic conditions as well as hydraulic calculations for all drainage control devices and storm drain lines. [MC 9.14.110(A.1)]. A digital (pdf) copy of the approved drainage study shall be submitted to the Land Development Division.

LD9. (G) Water quality best management practices (BMPs) designed to meet Water Quality Management Plan (WQMP) requirements for single-family residential development shall not be used as a construction BMP. Water quality BMPs shall be maintained for the entire duration of the project construction and be used to treat runoff from those developed portions of the project. Water quality BMPs shall be protected from upstream construction related runoff by having proper best management practices in place and maintained. Water quality BMPs shall be graded per the approved design plans.

LD10. (G) The final approved conditions of approval (COAs) and any applicable Mitigation Measures issued by the Planning Division shall be photographically or electronically placed on Mylar sheets and included in the Grading and Street Improvement plans.

LD11. (G) Aggregate slurry, as defined in Section 203-5 of Standard Specifications for Public Works Construction, may be required just prior to the end of the one-year warranty period of the public streets at the discretion of the City Engineer. If slurry is required, a slurry mix design shall be submitted for review and approved by the City Engineer. The latex additive shall be Ultra Pave 70 (for anionic) or Ultra Pave 65 K (for cationic) or an approved equal per the geotechnical report. The latex shall be added at the emulsion plant after weighing the asphalt and before the addition of mixing water. The latex shall be added at a rate of two to two-and-one-half (2 to 2½) parts to one-hundred

(100) parts of emulsion by volume. Any existing striping shall be removed prior to slurry application and replaced per City standards.

Prior to Grading Plan Approval

LD13. (GPA) Grading plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

LD14. (GPA) Landscape & Irrigation plans (prepared by a registered/licensed landscape architect) for water quality BMPs shall be submitted for review and approved by the City Engineer per the current submittal requirements, if applicable.

LD15. (GPA) The developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:

a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.

b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.

c. All improvement plans are substantially complete and appropriate clearance letters are provided to the City.

d. A soils/geotechnical report (addressing the soil's stability and geological conditions of the site) shall be submitted to the Land Development Division for review. A digital (pdf) copy of the soils/geotechnical report shall be submitted to the Land Development Division.

LD16. (GPA) The developer shall select Low Impact Development (LID) Best Management Practices (BMPs) designed per the latest version of the Water Quality Management Plan (WQMP) - a guidance document for the Santa Ana region of Riverside County.

LD17. (GPA) For projects that will result in discharges of storm water associated with construction with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID#) from the State Water Quality Control Board (SWQCB) which shall be noted on the grading plans.

LD18. (GPA) Two (2) copies of the final project-specific Water Quality Management Plan (WQMP) shall be submitted for review and approved by the City Engineer, which:

a. Addresses Site Design Best Management Practices (BMPs) such as minimizing impervious areas, maximizing permeability, minimizes directly connected impervious areas to the City's street and storm drain systems, and conserves natural areas;

b. Incorporates Source Control BMPs and provides a detailed description of their implementation;

c. Describes the long-term operation and maintenance requirements for BMPs requiring maintenance; and

d. Describes the mechanism for funding the long-term operation and maintenance of the BMPs.

A copy of the final WQMP template can be obtained on the City's Website or by contacting the Land Development Division. A digital (pdf) copy of the approved final project-specific Water Quality Management Plan (WQMP) shall be submitted to the Land Development Division.

LD19. (GPA) A Storm Water Pollution Prevention Plan (SWPPP) shall be prepared in conformance with the State's current Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request.

LD20. (GPA) The developer shall pay all remaining plan check fees.

LD21. (GPA) Resolution of all drainage issues shall be as approved by the City Engineer.

Prior to Grading Permit

LD22. (GP) A receipt showing payment of the Area Drainage Plan (ADP) fee to Riverside County Flood Control and Water Conservation District shall be submitted. [MC 9.14.100(O)]

LD23. (GP) Security, in the form of a cash deposit (preferable), or letter of credit shall be submitted as a guarantee of the completion of the grading operations for the project. [MC 8.21.070]

LD24. (GP) Security, in the form of a cash deposit (preferable), or letter of credit shall be submitted as a guarantee of the implementation and maintenance of erosion control measures. At least twenty-five (25) percent of the required security shall be in the form of a cash deposit with the City. [MC 8.21.160(H)]

LD25. (GP) The developer shall pay all applicable inspection fees.

LD26. (GP) A digital (pdf) copy of the approved grading plans shall be submitted to the Land Development Division.

Prior to Map Approval

LD27. (MA) Final maps (prepared by a registered civil engineer and/or licensed surveyor) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

LD28. (MA) Resolution of all drainage issues shall be as approved by the City Engineer.

LD29. (MA) All street dedications shall be free of all encumbrances, irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer.

LD30. (MA) The developer shall guarantee the completion of all related improvements required for this project by executing a Public Improvement Agreement (PIA) with the City and posting the required security. [MC 9.14.220]

LD31. (MA) All public improvement plans required for this project shall be approved by the City Engineer in order to execute the Public Improvement Agreement (PIA).

LD32. (MA) The developer shall enter into a Cooperative Agreement with the City and Riverside County Flood Control and Water Conservation District establishing the terms and conditions covering the inspection, operation and maintenance of Master Drainage Plan facilities required to be constructed as part of the project.

LD33. (MA) The developer shall comply with the requirements of the City Engineer based on recommendations of the Riverside County Flood Control District regarding the construction of County Master Plan Facilities.

LD34. (MA) All proposed street names shall be submitted for review and approved by the City Engineer, if applicable. [MC 9.14.090(E.2.k)]

LD35. (MA) After recordation, a digital (pdf) copy of the recorded map shall be submitted to the Land Development Division.

LD36. (MA) A copy of the Covenants, Conditions and Restrictions (CC&Rs) shall be submitted for review and approved by the City Engineer. The CC&Rs shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project, and any water quality BMPs required by the City.

<u>Prior to Improvement Plan Approval</u>

LD37. (IPA) All public improvement plans (prepared by a licensed/registered civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

LD38. (IPA) The developer shall submit clearances from all applicable agencies, and pay all applicable plan check fees.

LD39. (IPA) The street improvement plans shall comply with current City policies, plans and applicable City standards (i.e. MVSI-160 series, etc.) throughout this project.

LD40. (IPA) The design plan and profile shall be based upon a centerline, extending beyond the project boundaries a minimum distance of 300 feet at a grade and alignment approved by the City Engineer.

LD41. (IPA) The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts for trench repairs may be allowed for emergency repairs or as specifically approved by the City Engineer.

LD42. (IPA) Prior to improvement plan approval, all dry and wet utilities shall be shown on the plans and any crossings shall be potholed to determine actual location and elevation. Any conflicts shall be identified and addressed on the plans. The pothole survey data shall be submitted to Land Development with the public improvement plans for reference purposes only. The developer is responsible to coordinate with all affected utility companies and bear all costs of any utility relocation.

LD43. (IPA) The developer is required to bring any existing access ramps adjacent to and fronting the project to current ADA (Americans with Disabilities Act) requirements. However, when work is required in an intersection that involves or impacts existing access ramps, all access ramps in that intersection shall be retrofitted to comply with current ADA requirements, unless approved otherwise by the City Engineer.

LD44. (IPA) Drainage facilities (i.e. catch basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.

LD45. (IPA) The hydrology study shall be designed to accept and properly convey all off-site drainage flowing onto or through the site. All storm drain design and improvements shall be submitted for review and approved of the City Engineer. In the event that the City Engineer permits the use of streets for drainage purposes, the provisions of current City standards shall apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, as in the case where one travel lane in each direction shall not be used for drainage conveyance for emergency vehicle access on streets classified as minor arterials and greater, the developer shall provide adequate facilities as approved by the City Engineer. [MC 9.14.110 A.2]

<u>Prior to Encroachment Permit</u>

LD46. (EP) All work performed within public right of way requires an encroachment permit. Security (in the form of a cash deposit or other approved means) may be required as determined by the City Engineer. For non-subdivision projects, the City Engineer may require the execution of a Public Improvement Agreement (PIA) as a condition of the issuance of a construction or encroachment permit. All inspection fees shall be paid prior to issuance of construction permit. [MC 9.14.100(C.4)]

LD47. (EP) A digital (pdf) copy of all approved improvement plans shall be submitted to the Land Development Division.

LD48. (EP) All applicable inspection fees shall be paid.

Prior to Building Permit

LD49. (BP) For all subdivision projects, the map shall be recorded (excluding model homes). [MC 9.14.190]

LD50. (BP) An engineered-fill certification, rough grade certification and compaction report shall be submitted for review and approved by the City Engineer. A digital (pdf) copy of the approved compaction report shall be submitted to the Land Development Division. All pads shall meet pad elevations per approved grading plans as noted by the setting of “blue-top” markers installed by a registered land surveyor or licensed civil engineer.

Prior to Occupancy

LD51. (CO) All required as-built plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

LD52. (CO) The final/precise grade certification shall be submitted for review and approved by the City Engineer.

LD53. (CO) All outstanding fees shall be paid.

LD54. (CO) For commercial, industrial and multi-family projects, in compliance with Proposition 218, the developer shall agree to approve the City of Moreno Valley NPDES Regulatory Rate Schedule that is in place at the time of certificate of occupancy issuance. Under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System (NPDES) as mandated by the Federal Clean Water Act, this project is subject to the following requirements:

a. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation, maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.

   i. Participate in the mail ballot proceeding in compliance with Proposition 218, for the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process; or

   ii. Establish an endowment to cover future City costs as specified in the Common Interest, Commercial, Industrial and Quasi-Public Use NPDES Regulatory Rate Schedule.

b. Notify the Special Districts Division of the intent to request building permits 90 days prior to their issuance and the financial option selected. The financial option selected shall be in place prior to the issuance of certificate of occupancy. [California Government Code & Municipal Code]

LD55. (CO) The developer shall complete all public improvements in conformance with current City standards, except as noted in the Special Conditions, including but not limited to the following:

a. Street improvements including, but not limited to: pavement, base, curb and/or gutter, cross gutters, spandrel, sidewalks, drive approaches, pedestrian ramps, street lights, signing, striping, under sidewalk drains, landscaping and irrigation, medians, redwood header boards, pavement tapers/transitions and traffic control devices as appropriate.

b. Storm drain facilities including, but not limited to: storm drain pipe, storm drain laterals, open channels, catch basins and local depressions.

c. City-owned utilities.

d. Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.

e. Under grounding of all existing and proposed utilities adjacent to and on-site. [MC 9.14.130]

f. Relocation of overhead electrical utility lines including, but not limited to: electrical, cable and telephone.

LD56. (CO) For commercial, industrial and multi-family projects, a “Stormwater Treatment Device and Control Measure Access and Maintenance Covenant” shall be recorded to provide public notice of the maintenance requirements to be implemented per the approved final project-specific WQMP. A boilerplate copy of the “Stormwater Treatment Device and Control Measure Access and Maintenance Covenant” can be obtained by contacting the Land Development Division.

LD57. (CO) The applicant shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit:

a. Field verification that structural Site Design, Source Control and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP).

b. Certification of best management practices (BMPs) from a state licensed civil engineer. An original WQMP BMP Certification shall be submitted for review and approved by the City Engineer.

<u>Special Conditions</u>

LD58. Prior to final map approval, the map shall show the following:

a. The appropriate right-of-way dedication along Alessandro Boulevard as shown on the approved tentative tract map.

b. The appropriate right-of-way dedication along Chara Street as shown on the approved tentative tract map. This includes additional right-of-way to include public sidewalk, ADA ramps and parkway at the proposed project entrance.

c. The appropriate right-of-way dedication along Timo Street as shown on the approved tentative tract map. This includes full street right-of-way to include public sidewalk and parkway for the construction of the proposed cul-de-sac.

d. A 4-foot minimum pedestrian right-of-way dedication behind any driveway approach, per City Standard MVSI-112C-0, as determined by the City Engineer.

LD59. Prior to final map approval, the Developer shall guarantee the construction of the following improvements by entering into a public improvement agreement and posting security. The improvements along the project frontage shall be completed prior to occupancy of the first building or as otherwise determined by the City Engineer.

a. Alessandro Boulevard, Divided Major Arterial, City Standard MVSI-101A-0 (134-foot RW / 110-foot CC) shall be constructed to complete the half-width, plus 23 feet south of the centerline, along the entire project frontage. Improvements shall consist of, but not be limited to: asphalt base, asphalt pavement, road tapers to accommodate improvements, curb & gutter, an 18 foot wide raised median, sidewalk, drainage structures, storm drain, streetlights, pedestrian access ramps, undergrounding of overhead utility lines less than 115,000 volts, and dry and wet utilities. This includes remaining public improvements fronting APNs 479-230-010 and 479-230-009 to join the existing improvements along APN 479-230-008.

b. Chara Street, Local (modified), City Standard MVSI-107A-0 (60-foot RW / 40-foot CC) shall be constructed to half-width along the entire project's south frontage. Improvements shall consist of, but not be limited to, asphalt pavement, asphalt base, curb & gutter, sidewalk, driveway approach, drain, streetlights, pedestrian access ramps, and dry and wet utilities.

c. Timo Street, Local (modified), City Standard MVSI-107A-0 (60-foot RW / 40-foot CC) and offset cul-de-sac (modified) MVSI-163B-0 shall be fully constructed. Improvements shall consist of, but not be limited to, asphalt pavement, asphalt base, curb & gutter, sidewalk, driveway approach, and streetlights.

d. Sunnymead Master Drainage Plan Line M-16 within Alessandro Boulevard. This includes, but not limited to, construction of a 48-inch storm drain starting from the current Line M-16 terminus and continuing easterly along the project frontage to Chara Street, laterals, catch basins, and local depressions.

e. Removal of cross gutter and reconstruction of intersection at Alessandro Boulevard and Chara Street to accommodate street drainage. This includes, but not limited to, asphalt pavement, asphalt base, curb & gutter, sidewalk and ADA ramps.

LD60. Prior to issuance of a grading permit, the developer may submit a Development Impact Fee (DIF) Improvement Credit Agreement to secure credit for the construction of applicable improvements. If the developer fails to complete this agreement prior to payment of the DIF fees, no credits will be given. The developer shall pay current DIF fees adopted by the City Council. [Ord. 695 § 1.1 (part), 2005] [MC 3.38.030, 040, 050]

LD61. Prior to issuance of grading permit, the developer may submit a Transportation Uniform Mitigation Fee (TUMF) Improvement Credit Agreement to secure credit for the construction of applicable improvements. If the developer fails to complete this agreement prior to payment of the TUMF fees, no credits will be given. The developer shall pay current TUMF fees adopted by the City Council. [Ord. 835 § 2.1, 2012] [MC 3.44.060]

LD62. Prior to rough grading plan approval, this project shall demonstrate, via a final drainage study, that the increased runoff resulting from the development of this site is mitigated. During no storm event shall the flow leaving the site in the developed condition be larger than that of the pre-developed condition, unless the study demonstrates that the existing or proposed drainage facilities can accommodate the increased run-off. The drainage study shall analyze the following events: 1, 3, 6 and 24-hour duration events for the 2, 5, 10 and 100-year storm events. The applicant understands that additional detention measures may be required beyond those shown on the tentative map and preliminary drainage study.

LD63. Prior to rough grading plan approval, the Applicant shall prepare and submit for approval a final, project-specific water quality management plan (F-WQMP). The F-WQMP shall be consistent with the approved P-WQMP, as well as in full conformance with the document; “Water Quality Management Plan - A Guidance Document for the Santa Ana Region of Riverside County” dated October 22, 2012. The F-WQMP shall be submitted and approved prior to application for and issuance of grading permits. At a minimum, the F-WQMP shall include the following: Site Design BMPs; Source Control BMPs, Treatment Control BMPs, Operation and Maintenance requirements for BMPs and sources of funding for BMP implementation.

a. The Applicant has proposed to incorporate the use of an infiltration trench with filters as pretreatment. Final design and sizing details of all BMPs must be provided in the first submittal of the F-WQMP. The Applicant acknowledges that more area than currently shown on the plans may be required to treat site runoff as required by the WQMP guidance document.

b. The Applicant shall substantiate the applicable Hydrologic Condition of Concerns (HCOC) in the F-WQMP. The HCOC designates that the project will comply with HCOC mitigation criteria 3; therefore, the condition must be addressed in the F-WQMP.

c. All proposed LID BMP's shall be designed in accordance with the RCFC&WCD's Design Handbook for Low Impact Development Best Management Practices, dated September 2011.

d. The proposed LID BMP's as identified in the project-specific P-WQMP shall be incorporated into the Final WQMP.

e. The NPDES notes per City Standard Drawing No. MVFE-350-0 shall be included in the grading plans.

f. Post-construction treatment control BMPs, once placed into operation for post-construction water quality control, shall not be used to treat runoff from construction sites or unstabilized areas of the site.

LD64. Prior to precise grading plan approval, the grading plan shall show any proposed trash enclosure as dual bin (one bin for trash and one bin for recyclables) with solid covered roof.

LD65. Prior to issuance of a building permit, the precise grading plans shall be approved.

LD66. Prior to issuance of a building permit, the applicant shall schedule a walk through with a Public Works Inspector to inspect existing improvements within public right-of-way along project perimeter. The applicant may be required to install, replace and/or repair any missing, damaged or substandard improvements that do not meet current City standards.

LD67. Prior to occupancy, all overhead utility lines less than 115,000 volts fronting or within the entire project site boundary shall be placed underground per Section 9.14.130C of the City Municipal Code.

LD68. The Applicant shall, prior to building or grading permit closeout or the issuance of a certificate of occupancy, demonstrate:

a. That all structural BMPs have been constructed and installed in conformance with the approved plans and specifications;

b. That all structural BMPs described in the F-WQMP have been implemented in accordance with approved plans and specifications;

c. That the Applicant is prepared to implement all non-structural BMPs included in the F-WQMP, conditions of approval, and building/grading permit conditions; and

d. That an adequate number of copies of the approved F-WQMP are available for the future owners/occupants of the project.

TRANSPORTATION ENGINEERING DIVISION

Based on the information contained in our standard review process we recommend the following conditions of approval be placed on this project:

GENERAL CONDITIONS

TE1. Alessandro Boulevard is classified as a Divided Major Arterial (134'RW/110'CC) per City Standard Plan No. MVSI-101A-0. Any improvements undertaken by this project shall be consistent with the City's standards for this facility. Citywide Communications Conduit along project frontage on Alessandro Boulevard shall be required per City Standard Plan No. MVSI-186-0.

TE2. All project driveways shall conform to Section 9.11.080, and Table 9.11.080-14 of the City's Development Code - Design Guidelines and shall conform to City of Moreno Valley Standard No. MVSI-112C-0 for Commercial Driveway Approaches or as approved by the City Engineer.

TE3. All proposed on-site traffic signing and striping should be accordance with the 2014 California Manual on Uniform Traffic Control Devices (CAMUTCD).

TE4. Conditions of approval may be modified if project is phased or altered from any approved plans.

PRIOR TO IMPROVEMENT PLAN APPROVAL OR CONSTRUCTION PERMIT

TE5. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per City of Moreno Valley Standard Plans - Section 4 for all streets. End-of-road treatment per City Standard Plan No. MVLT-416A,B-0 shall be provided for Timo Street cul-de-sac.

TE6. Prior to issuance of a construction permit, construction traffic control plans prepared by a qualified, registered Civil or Traffic engineer shall be required for plan approval or as required by the City Traffic Engineer.

TE7. Prior to final approval of the street improvement and/or landscape plans, the project plans shall demonstrate that sight distance at proposed streets and driveways conforms to City Standard Plan No. MVSI-164A, B, C-0.

PRIOR TO CERTIFICATE OF OCCUPANCY OR BUILDING FINAL

TE8. (CO) Prior to issuance of a Certificate of Occupancy, any necessary signing and striping shall be installed per the approved plans and to the satisfaction of the City Traffic Engineer.

PRIOR TO ACCEPTANCE OF STREETS INTO THE CITY-MAINTAINED ROAD SYSTEM

TE9. Prior to the acceptance of streets into the City-maintained road system, all approved traffic control and signing and striping shall be installed per current City Standards and the approved plans.

FINANCIAL AND MANAGEMENT SERVICES DEPARTMENT

MORENO VALLEY UTILITY

Acknowledgement of Conditions

The following items are Moreno Valley Utility's Conditions of Approval for project PEN16-0119 (PA13-0061) & PEN16-0120 (PA13-0062); this project shall be completed at no cost to any Government Agency. All questions regarding Moreno Valley Utility's Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from Moreno Valley Utility (the Electric Utility Division) of the Public Works Department 951.413.3500. The applicant is fully responsible for communicating with Moreno Valley Utility staff regarding their conditions.

PRIOR TO ENERGIZING MVU ELECTRIC UTILITY SYSTEM AND CERTIFICATE OF OCCUPANCY

MVU-1 (R) For single family subdivisions, a three foot easement along each side yard property line shall be shown on the final map and offered for dedication to the City of Moreno Valley for public utility purposes, unless otherwise approved by the City Engineer. If the project is a multi-family development, townhome, condominium, apartment, commercial or industrial project, and it requires the installation of electric distribution facilities within common areas, a non-exclusive easement shall be provided to Moreno Valley Utility to include all such common areas. All easements shall include the rights of ingress and egress for the purpose of operation, maintenance, facility repair, and meter reading.

MVU-2 (BP) City of Moreno Valley Municipal Utility Service – Electrical Distribution: Prior to constructing the MVU Electric Utility System, the developer shall submit a detailed engineering plan showing design, location and schematics for the utility system to be approved by the City Engineer. In accordance with Government Code Section 66462, the Developer shall execute an agreement with the City providing for the installation, construction, improvement and dedication of the utility system following recordation of final map and concurrent with trenching operations and other subdivision improvements so long as said agreement incorporates the approved engineering plan and provides financial security to guarantee completion and dedication of the utility system.

The Developer shall coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to the City, or the City's designee, all utility infrastructure (including but not limited to conduit, equipment, vaults, ducts, wires, switches, conductors, transformers, and "bring-up" facilities including electrical capacity to serve the identified development and other adjoining/abutting/ or benefiting projects as determined by Moreno Valley Utility) – collectively referred to as "utility system" (to and through the development), along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and /or delivery of any and all "utility services" to each lot and unit within the Tentative Map. For purposes of this condition, "utility services" shall mean electric, cable television, telecommunication (including video, voice, and data) and other similar services designated by the City Engineer. "Utility services" shall not include sewer, water, and natural gas services, which are addressed by other conditions of approval.

The City, or the City's designee, shall utilize dedicated utility facilities to ensure safe, reliable, sustainable and cost effective delivery of utility services and maintain the integrity of streets and other public infrastructure. Developer shall, at developer's sole expense, install or cause the installation of such interconnection facilities as may be necessary to connect the electrical distribution infrastructure within the project to the Moreno Valley Utility owned and controlled electric distribution system.

MVU-3 This project may be subject to a Reimbursement Agreement. The project may be responsible for a proportionate share of costs associated with electrical distribution infrastructure previously installed that directly benefits the project. Payment shall be required prior to issuance of building permits.

MVU-4 For all new projects, existing Moreno Valley Utility electrical infrastructure shall be preserved in place. The developer will be responsible, at developer expense, for any and all costs associated with the relocation of any of Moreno Valley Utility's underground electrical distribution facilities, as determined by Moreno Valley Utility, which may be in conflict with any developer planned construction on the project site.

PARKS & COMMUNITY SERVICES (PCS)

GENERAL CONDITIONS

PCS-GC-1 This project is required to supply a funding source for the continued maintenance, enhancement, and or retrofit of neighborhood parks, open spaces, linear parks, and/or trails systems. This can be achieved through annexing into Community Facilities District No. 1 (Park Maintenance). Please contact the Special Districts Division at 951.413.3480 or specialdistricts@moval.org to complete the annexation process.

PCS-GC-2 The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services District Zone A (Parks and Community Services). All assessable parcels therein shall be subject to the annual Zone 'A' charge for operations and capital improvements. Proof of such shall be supplied to Parks and Community Services upon Final Map and at Building Permits.

PCS-GC-3 This project is subject to current Development Impact Fees.

PCS-GC-4 This project is subject to current Quimby Fees.

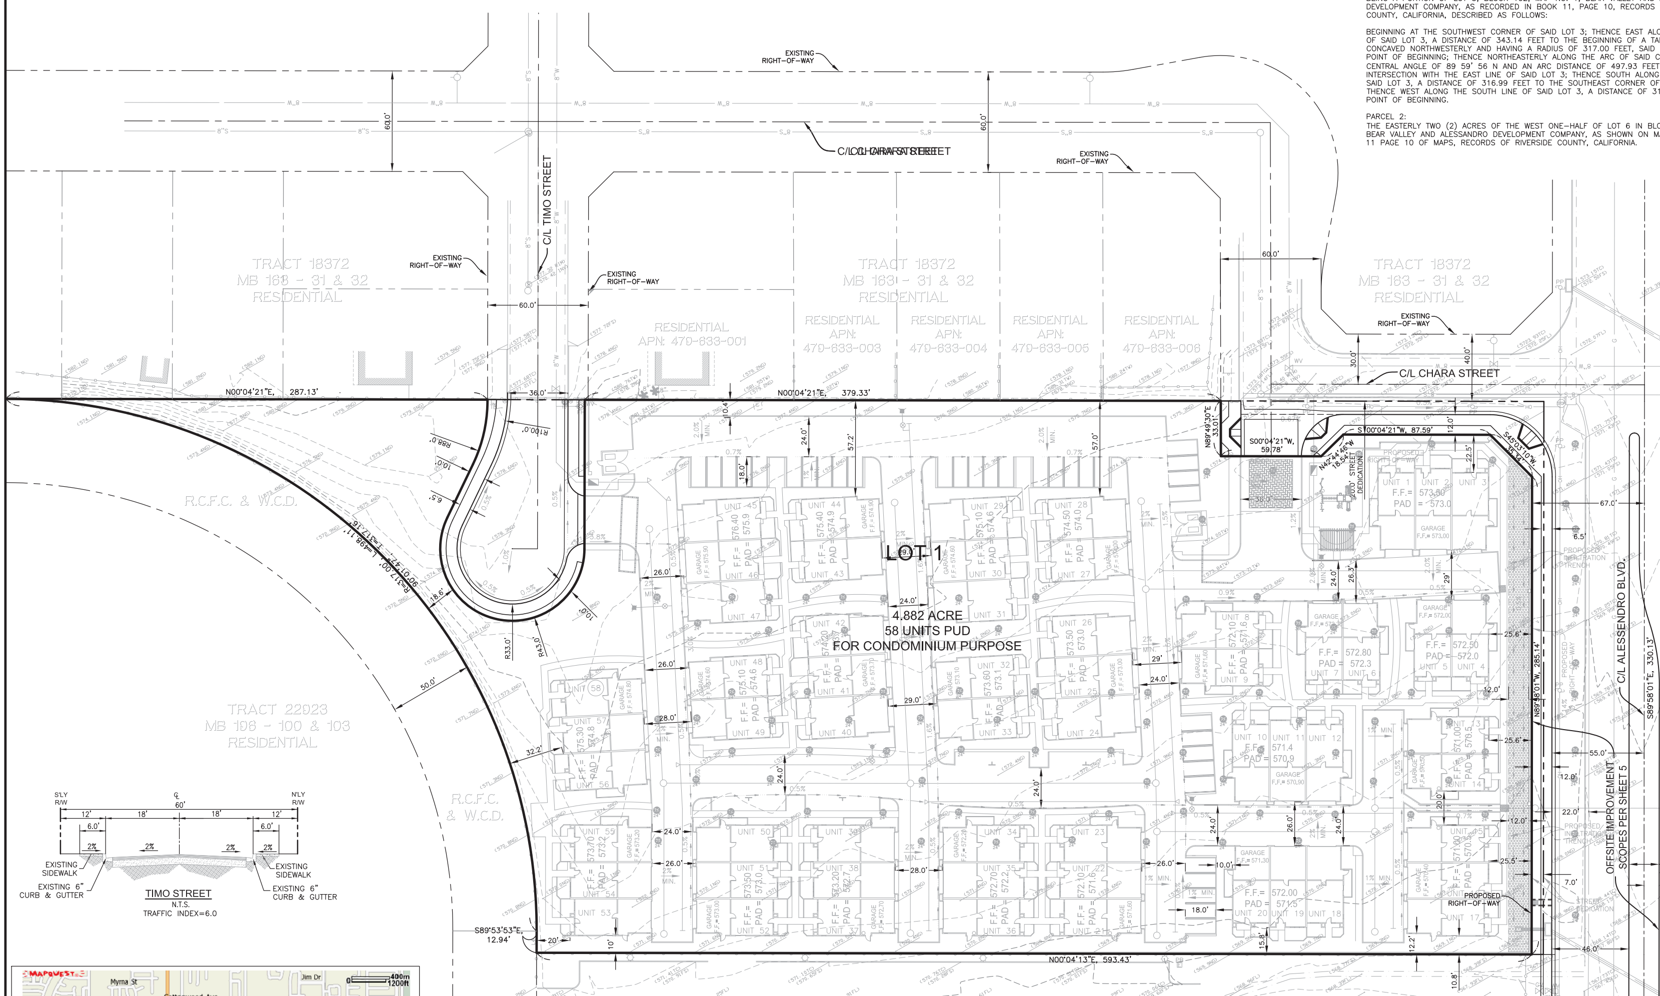
TENTATIVE TRACT MAP 35429

CITY OF MORENO VALLEY, RIVERSIDE

FOR CONDOMINIUM PURPOSES



THIS MAP OR PLAT OF SURVEY OF THE PREMISES SHOWN HEREON IS THE SAME AS THAT DESCRIBED IN LAWYERS TITLE COMPANY FILE NUMBER 113094079, DATED SEPTEMBER 19, 2013.

LEGAL DESCRIPTION:

PARCEL 1:
BEING A PORTION OF LOT 3, BLOCK 102, MAP NO. 1, BEAR VALLEY AND ALESSANDRO DEVELOPMENT COMPANY, AS RECORDED IN BOOK 11, PAGE 10, RECORDS OF RIVERSIDE COUNTY, CALIFORNIA, DESCRIBED AS FOLLOWS:

BEGINNING AT THE SOUTHWEST CORNER OF SAID LOT 3; THENCE EAST ALONG THE SOUTH LINE OF SAID LOT 3, A DISTANCE OF 343.14 FEET TO THE BEGINNING OF A TANGENT CURVE CONCAVED NORTHWESTERLY AND HAVING A RADIUS OF 317.00 FEET, SAID POINT BEING THE POINT OF BEGINNING; THENCE NORTHEASTERLY ALONG THE ARC OF SAID CURVE THROUGH A CENTRAL ANGLE OF 89 59' 56 N AND AN ARC DISTANCE OF 497.93 FEET, TO ITS INTERSECTION WITH THE EAST LINE OF SAID LOT 3; THENCE SOUTH ALONG THE EAST LINE OF SAID LOT 3, A DISTANCE OF 316.99 FEET TO THE SOUTHEAST CORNER OF SAID LOT 3; THENCE WEST ALONG THE SOUTH LINE OF SAID LOT 3, A DISTANCE OF 316.99 FEET TO THE POINT OF BEGINNING.

PARCEL 2:
THE EASTERLY TWO (2) ACRES OF THE WEST ONE-HALF OF LOT 6 IN BLOCK 102 OF THE BEAR VALLEY AND ALESSANDRO DEVELOPMENT COMPANY, AS SHOWN ON MAP ON FILE IN BOOK 11 PAGE 10 OF MAPS, RECORDS OF RIVERSIDE COUNTY, CALIFORNIA.

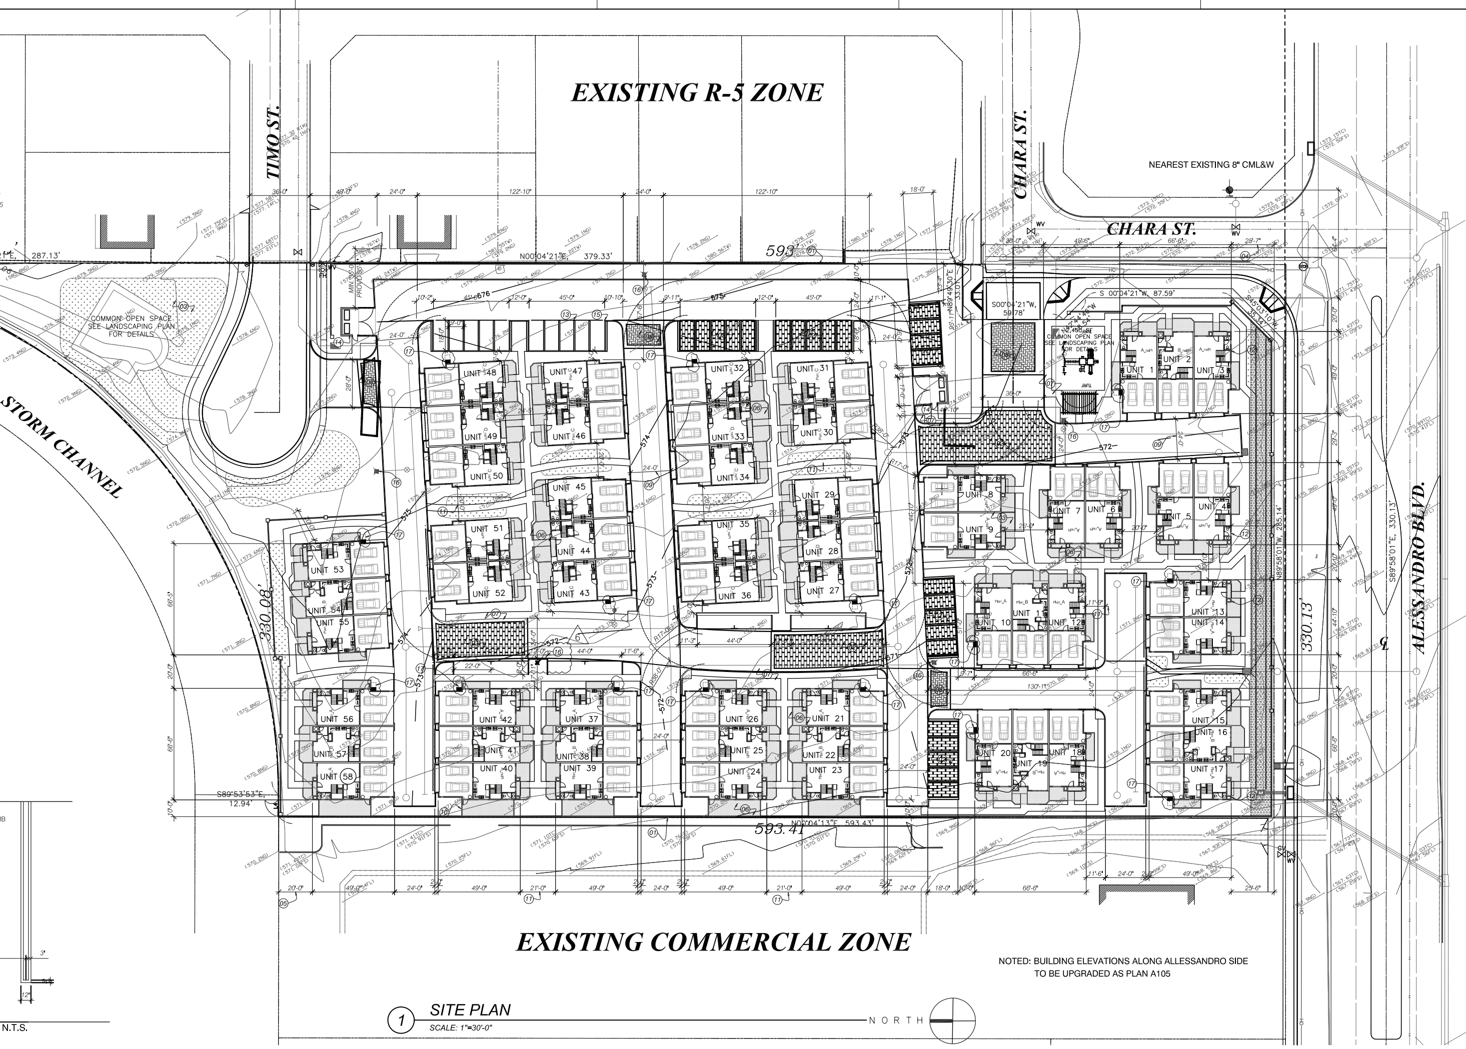
- BUILDING ELEVATIONS FACING ALLESSANDRO BLVD TO BE UPGRADED AS PLAN 1/A105
- PARKING STRIP DETAIL SEE X/A001
- 14 TRASH ENCLOSURE TO BE FULLY COVERED AND SIMILAR MATERIALS AND COLOR TO MATCH THE RESIDENTIAL UNIT, WITH ONE BIN FOR RECYCLE AND THE OTHER FOR TRASH. SEE DETAIL Y/A105
- 15 PARKING STEP OUT SHALL HAVE AT LEAST 18" CLEARANCE. SEE DETAIL Y
- 16 NEW FIRE HYDRANT
- 17 FIRE - FDC LOCATION (FOR BLDG MORE THAN 2 UNITS) A MIN. CLR OF 36" X 36" AND HEIGHT CLEARANCE OF 78" IS REQUIRED IN FRONT OF THE FDC

FIRE DEPARTMENT NOTES:
The outside turning radius is 38 feet, inside is 17 feet. The egress gate would normally be required to have a 60' clearance from curb to gate. Other than that ladder truck apparatus could be as much as 49 feet in length. Any setback would have to allow for any easements or landscaping required by land development and planning. The egress gate setback for fire would need to be determined only if there were no other egress available such as is planned on Timo and Chara. As long as the circulation provided for these two routes of egress the other setback requirements (for LD and planning) would be ok



NOTED: BUILDING ELEVATIONS ALONG ALESSANDRO SIDE TO BE UPGRADED AS PLAN A105

CITY OF MORENO VALLEY
CONDITIONS of APPROVAL
Case No: PA13-0061, PA13-0062
APN: 482-152-047
DATE: 1/26/2016

FIRE PREVENTION BUREAU

With respect to the conditions of approval, the following fire protection measures shall be provided in accordance with Moreno Valley City Ordinances and/or recognized fire protection standards:

F1. Final fire and life safety conditions will be addressed when the Fire Prevention Bureau reviews building plans. These conditions will be based on occupancy, use, California Building Code (CBC), California Fire Code (CFC), and related codes, which are in force at the time of building plan submittal.

F2. The minimum number of fire hydrants required, as well as the location and spacing of fire hydrants, shall comply with the C.F.C., MVMC, and NFPA 24. A fire hydrant shall be located within 50 feet of the fire department connection for buildings protected with a fire sprinkler system. Fire hydrants shall not be closer than 40 feet to the structures. The size and number of outlets required for the approved fire hydrants are (6" x 4" x 2 ½") (CFC 507.5.1, 507.5.7, Appendix C, NFPA 24-7.2.3, MVMC 912.2.1)

F3. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.2 and 503.2.5)

F4. Prior to issuance of Building Permits, the applicant/developer shall provide the Fire Prevention Bureau with an approved site plan for fire lane signage and fire hydrant placement. (MVMC 8.36.050 and CFC 501.3)

F5. Prior to construction and issuance of building permits, all locations where structures are to be built shall have an approved Fire Department emergency vehicular access road (all weather surface) capable of sustaining an imposed load of 80,000 lbs. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4 and MVMC 8.36.050 Section A)

F6. Prior to construction and issuance of Building Permits, fire lanes and fire apparatus access roads shall have an unobstructed width of not less than twenty-four (24) feet as approved by the Fire Prevention Bureau and an unobstructed vertical clearance of not less the thirteen (13) feet six (6) inches. (CFC 503.2.1 and MVMC 8.36.060[E])

F7. Prior to construction, all roads, driveways and private roads shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.060[G])

F8. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4)

F9. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.3)

F10. Prior to building construction, dead end roadways and streets which have not been completed shall have a turnaround capable of accommodating fire apparatus. (CFC 503.2.5)

F11. Prior to issuance of Building Permits, the applicant/developer shall participate in the Fire Impact Mitigation Program. (Fee Resolution as adopted by City Council)

F12. Plans for private water mains supplying fire sprinkler systems and/or private fire hydrants shall be submitted to the Fire Prevention Bureau for approval. (CFC 105 and CFC 3312.1)

F13. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall:

a) Be signed by a registered civil engineer or a certified fire protection engineer;
b) Contain a Fire Prevention Bureau approval signature block; and
c) Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau.

After the local water company signs the plans, the originals shall be presented to the Fire Prevention Bureau for signatures. The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 507.5)

F13. Prior to issuance of Certificate of Occupancy or Building Final, "Blue Reflective Markers" shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 509.1 and MVLT 440A-0 through MVLT 440C-0)

F14. Prior to issuance of Certificate of Occupancy or Building Final, all multi-family residences shall display the address in accordance with the Riverside County Fire Department Premises Identification standard 07-01. (CFC 505.1)

F15. Prior to issuance of a Certificate of Occupancy or Building Final, a directory display monument sign shall be required for apartment, condominium, townhouse or mobile home parks. Each complex shall have an illuminated diagrammatic layout of the complex which indicates the name of the complex, all streets, building identification, unit numbers, and fire hydrant locations within the complex. Location of the sign and design specifications shall be submitted to, and approved by, the Community Development Department – Planning Division and the Fire Prevention Bureau prior to installation. (MVMC 9.12.060 [H,I])

F16. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9)

F17. All exterior security emergency access gates shall be electronically operated and be provided with Knox key switches for access by emergency personnel. (CFC 506.1)

F18. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft (0.3 m drop in 6 m), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503 and MVMC 8.36.060)

F19. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire alarm system monitored by an approved Underwriters Laboratory listed central station based on a requirement for monitoring the sprinkler system, occupancy or use. Fire alarm panel shall be accessible from exterior of building in an approved location. Plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9 and MVMC 8.36.100)

F20 Approval of the safety precautions required for buildings being constructed, altered or demolished shall be required in addition to other approvals required for specific operations or processes associated with such construction, alteration or demolition. (CFC Chapter 14 & CBC Chapter 33)

F21. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.

PUBLIC WORKS DEPARTMENT – SPECIAL DISTRICTS DIVISION
CONDITIONS OF APPROVAL
CASE NO: PA13-0061 (CUP for a Planned Unit Development)
APNs: 479-230-011, -012, and -027

Conditions are standard to all or most development projects. Some special conditions, modified conditions or clarification of conditions may be included. Please review conditions as listed and contact the Division at 951.413.3480 for any questions.

Acknowledgement of Conditions

The following items are the Special Districts Division's Conditions of Approval for project **PA13-0061**; this project shall be completed at no cost to any Government Agency. All questions regarding the following Conditions including but not limited to intent, requests for change/modification, variance and/or request for extension of time shall be sought from the Special Districts Division of the Public Works Department 951.413.3480 or by emailing specialdistricts@moval.org.

General Conditions

SD-1 The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services District Zone A (Parks & Community Services) and Zone C (Arterial Street Lighting). All assessable parcels therein shall be subject to annual parcel taxes for Zone A and Zone C for operations and capital improvements.

SD-2 Plans for parkway, median, slope, and/or open space landscape areas designated in the project's Conditions of Approval for incorporation into a City coordinated landscape maintenance program, shall be prepared and submitted in accordance with the City of Moreno Valley Public Works Department Landscape Design Guidelines. The guidelines are available on the City's website at www.moval.org and or from the Special Districts Division (951.413.3480 or specialdistricts@moval.org).

SD-3 The Developer, or the Developer's successors or assignees shall be responsible for all parkway and/or median landscape maintenance for a period of one (1) year commencing from the time all items of work have been completed to the satisfaction of Special Districts staff as per the City of Moreno Valley Public Works Department Landscape Design Guidelines, or until such time as the District accepts maintenance responsibilities.

SD-4 Any damage to existing landscape areas maintained by the City of Moreno Valley due to project construction shall be repaired/replaced by the Developer, or Developer's successors in interest, at no cost to the City of Moreno Valley.

PUBLIC WORKS DEPARTMENT – SPECIAL DISTRICTS DIVISION
CONDITIONS OF APPROVAL
CASE NO: PA13-0061
APNs: 479-230-011, -012, and -027

SD-5 The ongoing maintenance of any landscaping required to be installed behind the curb on **Alessandro Blvd., Chara St., and Timo St.** shall be the responsibility of the property owner.

SD-6 Plan check fees for review of parkway/median landscape plans for improvements that shall be maintained by the City of Moreno Valley are due upon the first plan submittal. (MC 3.32.040)

SD-7 Inspection fees for the monitoring of landscape installation associated with the City of Moreno Valley maintained parkways/medians are due prior to the required pre-construction meeting. (MC 3.32.040)

SD-8 Street Light Authorization forms for all street lights that are conditioned to be installed as part of this project must be submitted to the Special Districts Division for approval, prior to street light installation. The Street Light Authorization form can be obtained from the utility company providing electric service to the project, either Moreno Valley Utility or Southern California Edison. For questions, contact the Special Districts Division at 951.413.3480 or specialdistricts@moval.org.

Prior to Building Permit Issuance

SD-9 (BP) This project has been conditioned to provide a funding source for the continued maintenance, enhancement, and or retrofit of neighborhood parks, open spaces, linear parks, and/or trails systems. The Developer shall satisfy this condition with one of the options below.

a. Participate in a special election for annexation into **Community Facilities District No. 1** and pay all associated costs with the special election process and formation, if any; or

b. Establish an endowment fund to cover future maintenance costs for new neighborhood parks.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org when submitting the application for building permit issuance of its selected financial option. If option a. is selected, the special election will require a 90 day process prior to building permit issuance. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution.

Annexation to CFD No. 1 shall be completed or proof of payment to establish the endowment fund shall be provided prior to the issuance of the first certificate of occupancy for the project.

PUBLIC WORKS DEPARTMENT – SPECIAL DISTRICTS DIVISION
CONDITIONS OF APPROVAL
CASE NO: PA13-0061
APNs: 479-230-011, -012, and -027

SD-10 (BP) This project has been identified to be included in the formation of a Community Facilities District (Mello-Roos) for **Public Safety** services, including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. The property owner(s) shall not protest the formation; however, they retain the right to object to the rate and method of maximum special tax. In compliance with Proposition 218, the property owner shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district. The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org when submitting the application for building permit issuance to determine the requirement for participation. If the first building permit is pulled prior to formation of the district, this condition will not apply. If the condition applies, the special election will require a minimum of 90 days prior to issuance of the first building permit. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution. (California Government Code Section 53313 et. seq.)

SD-11 (BP) This project is conditioned to provide a funding source for the following special financing program(s):

a. Street Lighting Services for capital improvements, energy charges, and maintenance.
b. Landscape Maintenance Services for median landscaping on Alessandro Blvd.

The Developer's responsibility is to provide a funding source for the capital improvements and the continued maintenance. The Developer shall satisfy this condition with one of the options below.

i. Participate in a special election (mail ballot proceeding) and pay all associated costs of the special election and formation, if any. Financing may be structured through a Community Services District zone, Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or
ii. Establish a Property Owner's Association (POA) or Home Owner's Association (HOA) which will be responsible for any and all operation and maintenance costs

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option when submitting the application for building permit issuance. The option for participating in a special election requires approximately 90 days to

PUBLIC WORKS DEPARTMENT – SPECIAL DISTRICTS DIVISION
CONDITIONS OF APPROVAL
CASE NO: PA13-0061
APNs: 479-230-011, -012, and -027

complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the Caifornia Constitution.

The financial option selected shall be in place prior to the issuance of the first certificate of occupancy for the project.

SD-12 (BP) This project is conditioned for a proposed district to provide a funding source for the operation and maintenance of public improvements and/or services associated with new development in that territory. The Developer shall satisfy this condition with one of the options outlined below.

a. Participate in a special election for **maintenance/services** and pay all associated costs of the election process and formation, if any. Financing may be structured through a Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

b. Establish an endowment fund to cover the future maintenance and/or service costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org when submitting the application for building permit issuance. If the first building permit is pulled prior to formation of the district, this condition will not apply. If the district has been or is in the process of being formed the Developer must inform the Special Districts Division of its selected financing option (a. or b. above). The option for participating in a special election requires 90 days to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution.

The financial option selected shall be in place prior to the issuance of the first certificate of occupancy for the project.

SD-13 *Residential* (BP) If Land Development, a Division of the Public Works Department, requires this project to suppy a funding source necessary to provide for, but not limited to, stormwater utilities services for the required continuous operation, maintenance, monitoring, system evaluations and enhancements, remediation and/or replacement of on-site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated storm water regulations, a funding source needs to be established. The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option for the National Pollution Discharge Elimination System (NPDES) program when submitting the application for the first building permit issuance. (see Land Development's related condition). Participating in a special election the process requires a 90 day period prior to the City's issuance of a

PUBLIC WORKS DEPARTMENT – SPECIAL DISTRICTS DIVISION
CONDITIONS OF APPROVAL
CASE NO: PA13-0061
APNs: 479-230-011, -012, and -027

building permit. This allows adequate time to be in compliance with the provisions of Article 13D of the California Constitution. (California Health and Safety Code Sections 5473 through 5473.8 (Ord. 708 Section 3.1, 2006) & City of Moreno Valley Municipal Code Title 3, Section 3.50.050.)

SD-14 (BP) Prior to the issuance of the first building permit for this project, the Developer shall pay Advanced Energy fees for all applicable Residential and Arterial Street Lights required for this development. Payment shall be made to the City of Moreno Valley and collected by the Land Development Division. Fees are based upon the Advanced Energy fee rate in place at the time of payment, as set forth in the current Listing of City Fees, Charges, and Rates adopted by City Council. The Developer shall provide a copy of the receipt to the Special Districts Division (*specialdistricts@moval.org*). Any change in the project which may increase the number of street lights to be installed will require payment of additional Advanced Energy fees at the then current fee. Questions may be directed to the Special Districts Division at 951.413.3480 or specialdistricts@moval.org.

SD-15 (BP) For those areas to be maintained by the City and prior to the issuance of the first Building Permit, Planning Division (Community Development Department), Special Districts Division (the Public Works Department) and Transportation Division (the Public Works Department) shall review and approve the final median, parkway, slope, and/or open space landscape/irrigation plans as designated on the tentative map or in these Conditions of Approval prior to the issuance of the first Building Permit.

SD-16 (BP) Parkway, open space, and/or median landscaping specified in the project's Conditions of Approval shall be constructed in compliance with the City of Moreno Valley Public Works Design Guidelines and completed prior to the issuance of 25% (or 15) of the dwelling permits for this tract or 12 months from the issuance of the first dwelling permit, whichever comes first. In cases where a phasing plan is submitted, the actual percentage of dwelling permits issued prior to the completion of the landscaping shall be subject to the review of the construction phasing plan.

Prior to Certificate of Occupancy

SD-17 (CO) Landscape and irrigation plans for parkway, median, slope, and/or open space landscape areas designated to be maintained by the City shall be placed on compact disk (CD) in pdf format. The CD shall include "As Built" plans, revisions, and changes. The CD will become the property of the City of Moreno Valley and the Moreno Valley Community Services District.

PUBLIC WORKS DEPARTMENT – SPECIAL DISTRICTS DIVISION
CONDITIONS OF APPROVAL
CASE NO: PA13-0062 (TTM 35429 for 58 residential units)
APNs: 479-230-011, -012, and -027

Conditions are standard to all or most development projects. Some special conditions, modified conditions or clarification of conditions may be included. Please review conditions as listed and contact the Division at 951.413.3480 for any questions.

Acknowledgement of Conditions

The following items are the Special Districts Division's Conditions of Approval for **PA13-0062**; this project shall be completed at no cost to any Government Agency. All questions regarding the following Conditions including but not limited to intent, requests for change/modification, variance and/or request for extension of time shall be sought from the Special Districts Division of the Public Works Department 951.413.3480 or by emailing specialdistricts@moval.org.

General Conditions

SD-1 The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services District Zone A (Parks & Community Services) and Zone C (Arterial Street Lighting). All assessable parcels therein shall be subject to annual parcel taxes for Zone A and Zone C for operations and capital improvements.

SD-2 Plans for parkway, median, slope, and/or open space landscape areas designated in the project's Conditions of Approval for incorporation into a City coordinated landscape maintenance program, shall be prepared and submitted in accordance with the City of Moreno Valley Public Works Department Landscape Design Guidelines. The guidelines are available on the City's website at www.moval.org/sd or from the Special Districts Division (951.413.3480 or specialdistricts@moval.org).

SD-3 The Developer, or the Developer's successors or assignees shall be responsible for all parkway and/or median landscape maintenance for a period of one (1) year commencing from the time all items of work have been completed to the satisfaction of Special Districts staff as per the City of Moreno Valley Public Works Department Landscape Design Guidelines, or until such time as the District accepts maintenance responsibilities.

SD-4 Any damage to existing landscape areas maintained by the City of Moreno Valley due to project construction shall be repaired/replaced by the Developer, or Developer's successors in interest, at no cost to the City of Moreno Valley.

SD-5 The ongoing maintenance of any landscaping required to be installed behind the curb on **Alessandro Blvd., Chara St., and Timo St.** shall be the responsibility of the property owner.

SD-6 Plan check fees for review of parkway/median landscape plans for improvements that shall be maintained by the City of Moreno Valley are due upon the first plan submittal. (MC 3.32.040)

SD-7 Inspection fees for the monitoring of landscape installation associated with the City of Moreno Valley maintained parkways/medians are due prior to the required pre-construction meeting. (MC 3.32.040)

SD-8 Street Light Authorization forms for all street lights that are conditioned to be installed as part of this project must be submitted to the Special Districts Division for approval, prior to street light installation. The Street Light Authorization form can be obtained from the utility company providing electric service to the project, either Moreno Valley Utility or Southern California Edison. For questions, contact the Special Districts Division at 951.413.3480 or specialdistricts@moval.org.

Prior to Recordation of Final Map

SD-9 (R) This project has been conditioned to provide a funding source for the continued maintenance, enhancement, and/or retrofit of parks, open spaces, linear parks, and/or trail systems. The Developer shall satisfy this condition with one of the options below.

a. Participate in a special election for annexation into **Community Facilities District No. 1** and pay all associated costs of the special election process and formation, if any; or

b. Establish an endowment fund to cover future maintenance costs for new neighborhood parks.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. A minimum of 90 days is needed to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

Annexation to CFD No. 1 shall be completed or proof of payment to establish the endowment fund shall be provided prior to the issuance of the first building permit for this project.

SD-10 (R) This project has been identified to be included in the formation of a Community Facilities District for **Public Safety** services including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. The property owner(s) shall not protest the formation; however, they retain the right to object to the rate and method of maximum special tax. In compliance with Proposition 218, the property owner shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district that may already be established. The Developer must notify the Special Districts Division at 951.413.3480 or specialdistricts@moval.org of its intent to record the final map for the development 90 days prior to City Council action authorizing recordation of the map. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution. (California Government Code Section 53313 et. seq.)

SD-11 (R) This project is conditioned to provide a funding source for the following special financing program(s):

a. Street Lighting Services for capital improvements, energy charges, and maintenance.
b. Landscape Maintenance Services for median landscaping on Alessandro Blvd.

The Developer's responsibility is to provide a funding source for the capital improvements and the continued maintenance of the landscaped area. The Developer shall satisfy this condition with one of the options below.

i. Participate in a special election (mail ballot proceeding) and pay all associated costs of the special election and formation, if any. Financing may be structured through a Community Services District zone, Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

ii. Establish a Property Owner's Association (POA) or Home Owner's Association (HOA) which will be responsible for any and all operation and maintenance costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. The option for participating in a special election requires approximately 90 days to complete the special election process. This

allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

The financial option selected shall be in place prior to the issuance of the first building permit for this project.

SD-12 (R) This project is conditioned to provide a funding source for the operation and maintenance of public improvements and/or services associated with new development in that territory. The Developer shall satisfy this condition with one of the options below.

a. Participate in a special election for **maintenance/services** and pay all associated costs of the election process and formation, if any. Financing may be structured through a Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

b. Establish an endowment fund to cover the future maintenance and/or service costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. A minimum of 90 days is needed to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

The financial option selected shall be in place prior to the issuance of the first building permit for this project.

SD-13 *Residential* (R) If Land Development, a Division of the Public Works Department, requires this project to supply a funding source necessary to provide for, but not limited to, stormwater utilities services for the required continuous operation, maintenance, monitoring, systems evaluation and enhancements of on-site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated storm water regulations, a funding source needs to be established. The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option for the National Pollution Discharge Elimination System (NPDES) program (see Land Development's related condition). Participating in a special election the process requires a 90 day period prior to City Council action authorizing recordation of the final map for the development and to participate in a special election process. This allows adequate time to be in compliance with the provisions of Article 13D of the California Constitution. California

Health and Safety Code Sections 5473 through 5473.8 (Ord. 708 Section 3.1, 2006) & City of Moreno Valley Municipal Code Title 3, Section 3.50.050.)

Prior to Building Permit Issuance

SD-14 (BP) Prior to the issuance of the first building permit for this project, the Developer shall pay Advanced Energy fees for all applicable Residential and Arterial Street Lights required for this development. Payment shall be made to the City of Moreno Valley and collected by the Land Development Division. Fees are based upon the Advanced Energy fee rate in place at the time of payment, as set forth in the current Listing of City Fees, Charges, and Rates adopted by City Council. The Developer shall provide a copy of the receipt to the Special Districts Division *(specialdistricts@moval.org)*. Any change in the project which may increase the number of street lights to be installed will require payment of additional Advanced Energy fees at the then current fee. Questions may be directed to the Special Districts Division at 951.413.3480 or specialdistricts@moval.org.

SD-15 (BP) For those areas to be maintained by the City and prior to the issuance of the first Building Permit, Planning Division (Community Development Department), Special Districts Division (the Public Works Department) and Transportation Division (the Public Works Department) shall review and approve the final median, parkway, slope, and/or open space landscape/irrigation plans as designated on the tentative map or in these Conditions of Approval prior to the issuance of the first Building Permit.

SD-16 (BP) Parkway, open space, and/or median landscaping specified in the project's Conditions of Approval shall be constructed in compliance with the City of Moreno Valley Public Works Design Guidelines and completed prior to the issuance of 25% (or 15) of the dwelling permits for this tract or 12 months from the issuance of the first dwelling permit, whichever comes first. In cases where a phasing plan is submitted, the actual percentage of dwelling permits issued prior to the completion of the landscaping shall be subject to the review of the construction phasing plan.

Prior to Certificate of Occupancy

SD-17 (CO) Landscape and irrigation plans for parkway, median, slope, and/or open space landscape areas designated to be maintained by the City shall be placed on compact disk (CD) in pdf format. The CD shall include "As Built" plans, revisions, and changes. The CD will become the property of the City of Moreno Valley and the Moreno Valley Community Services District.

WHERE DREAMS SOAR

CITY OF MORENO VALLEY
Public Works Department
Transportation Engineering Division

MEMORANDUM

To: Gabriel Diaz, Associate Planner
From: Vincent Tran, Associate Engineer
Date: January 26, 2016
Subject: **Conditions of Approval for PA13-0061/0062** – CUP and TTM 35429 for 58 condominium units located on the northwest corner of Alessandro Boulevard and Chara Street.

Attached are the Transportation Engineering Conditions of approval for the subject project.

CITY OF MORENO VALLEY

CONDITIONS OF APPROVAL
PA13-0055
CUP and TTM 35429 for 58 condominium units located on the northwest corner of Alessandro Boulevard and Chara Street.

Note: All Special conditions are in bold lettering. All other conditions are standard to all or most development projects.

Transportation Engineering Division – Conditions of Approval

Based on the information contained in our standard review process we recommend the following conditions of approval be placed on this project:

GENERAL CONDITIONS

TE1. Alessandro Boulevard is classified as a Divided Major Arterial (134'RW/110'CC) per City Standard Plan No. MVSI-101A-0. Any improvements undertaken by this project shall be consistent with the City's standards for this facility. Citywide Communications Conduit along project frontage on Alessandro Boulevard shall be required per City Standard Plan No. MVSI-186-0.

TE2. All project driveways shall conform to Section 9.11.080, and Table 9.11.080-14 of the City's Development Code - Design Guidelines and shall conform to City of Moreno Valley Standard No. MVSI-112C-0 for Commercial Driveway Approaches or as approved by the City Engineer.

TE3. All proposed on-site traffic signing and striping should be accordance with the 2014 California Manual on Uniform Traffic Control Devices (CAMUTCD).

TE4. Conditions of approval may be modified if project is phased or altered from any approved plans.

PRIOR TO IMPROVEMENT PLAN APPROVAL OR CONSTRUCTION PERMIT

TE5. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per City of Moreno Valley Standard Plans - Section 4 for all streets. End-of-road treatment per City Standard Plan No. MVLT-416A,B-0 shall be provided for Timo Street cul-de-sac.

TE6. Prior to issuance of a construction permit, construction traffic control plans prepared by a qualified, registered Civil or Traffic engineer shall be required for plan approval or as required by the City Traffic Engineer.

TE7. Prior to final approval of the street improvement and/or landscape plans, the project plans shall demonstrate that sight distance at proposed streets and driveways conforms to City Standard Plan No. MVSI-164A, B, C-0.

PRIOR TO CERTIFICATE OF OCCUPANCY OR BUILDING FINAL

TE8. (CO) Prior to issuance of a Certificate of Occupancy, any necessary signing and striping shall be installed per the approved plans and to the satisfaction of the City Traffic Engineer.

PRIOR TO ACCEPTANCE OF STREETS INTO THE CITY-MAINTAINED ROAD SYSTEM

TE9. Prior to the acceptance of streets into the City-maintained road system, all approved traffic control and signing and striping shall be installed per current City Standards and the approved plans.

PLANNING COMMISSION

STAFF REPORT

Meeting Date: January 26, 2017

LEGACY PARK PROJECT

Case:	PEN16-0092 (PA16-0018) – General Plan Amendment PEN16-0093 (PA16-0019) – Zone Change PEN16-0094 (PA14-0052) – Conditional Use Permit PEN16-0095 (PA14-0052) –Tentative Tract Map 36760
Applicant:	Mission Pacific Land Company
Owner:	MPLC Legacy 75 Associates, LP
Representative:	Rick Engineering Company
Location:	Southeast corner of Indian Street and Gentian Avenue
Case Planner:	Jeff Bradshaw
Council District:	4

SUMMARY

The Mission Pacific Land Company, has proposed The Legacy Park project to develop a 221 single family residential lot Planned Unit Development on approximately 53 acres at the southeast corner of Indian Street and Gentian Avenue and on the west side of the California Aqueduct. The project as proposed requires legislative actions by the City Council for a General Plan Amendment and Zone Change in order to change the land use and zoning designation for the 15 acre western portion of the project site from Residential 30 (R30) to Residential 5 (R5). In addition, the applicant is seeking approval of a Tentative Tract Map and Conditional Use Permit to allow for the Planned Unit Development, which set out the neighborhood design, lot configurations, park and open space, and design guidelines.

PROJECT DESCRIPTION

The Legacy Park project proposes to develop a 221 unit single family residential lot Planned Unit Development on approximately 53 vacant acres at the southeast corner of Indian Street and Gentian Avenue. Current zoning on the project site is a mix of R30 and R5 zoning. The proposed project will result in an overall density of 4.17 dwelling units per gross acre. In order to achieve the desired product type and density, the project requires a General Plan Amendment and Zone Change to convert the present R30 zoning on the western 15 acre portion of the project area to R5 to match the current zoning on the remainder of the project area, and requires a Conditional Use Permit to allow for the flexibility afforded in the City Municipal Code for Planned Unit Developments (MC Section 9.03.060). The Tentative Tract Map serves as the instrument to subdivide the property into the intended lot configurations and infrastructure systems needed.

Project

General Plan Amendment/Zone Change

The project site is comprised of three Assessor's Parcel Numbers totaling 53 acres. Assessor's Parcel Numbers 485-220-023 and 485-220-032 (collectively approximately 38 acres) making up the eastern portion of the project area are currently designated R5 on the General Plan Land Use map, and zoned R5 in the City Zoning Atlas. Assessor's Parcel Number 485-220-040 (approximately 15 acres) makes up the western portion of the project area and is currently zoned R30 in the City Zoning Atlas.

Properties to the west and northwest of the project area have a General Plan land use designation of R10 and Zoning designation of RS-10. The properties to the north of the project area have both a General Plan land use designation and Zoning designation of R5. Properties south of the project area have General Plan land use and Zoning designations as R30 and Public (P). The property east of the project area has a General Plan land use and Zoning designation as Commercial and Community Commercial respectively.

The applicant proposes to change the General Plan designation for approximately 15 acres of the site from Residential 30 (maximum of 30 dwelling units acre) to Residential 5 (maximum of five dwelling units per acre) and the zoning district from R30 to R5. This allows for the entire site to be developed as a lower density high quality planned community through application for a Planned Unit Development (PUD), which PUD would be governed with well-developed design guidelines that ensure opportunity for greater innovation in housing products and unique development standards not otherwise available within the typical underlying zoning regulations.

The 15 acre portion of the project site was previously designated R5 and was changed to R30 in 2013 as part of an effort by the City to meet its 2008-2014 State-mandated Regional Housing Needs Assessment (RHNA) numbers, as well as provide a wider range of housing choices for the burgeoning Moreno Valley workforce. Other areas within the City were also changed at that time to R30 along Alessandro Boulevard at Day Street, Alessandro Boulevard at Elsworth Street, Alessandro Boulevard and Morrison Street and Perris Boulevard at Iris Avenue. Additionally, there have been individual projects that have established R30 designations on a per project basis.

Staff has examined the proposed change and determined that there is a sufficient inventory of R 30 designated land within the City of Moreno Valley so that the modification of the 15 acres of R30 land to R5 will not place the City in jeopardy of maintaining zoning areas to satisfy State-mandated Regional Housing Needs Assessment (RHNA) numbers.

Conditional Use Permit

Municipal Code Section 9.03.060 requires that a Conditional Use Permit be approved for all Planned Unit Developments (PUD). One of the stated purposes of the PUD is to provide greater innovation in housing development and greater diversity of housing choices than would otherwise be possible with strict application of the underlying site development regulations contained in Title 9 of the Municipal Code. Planned unit developments may deviate from the site development standards of the applicable zoning district regarding lot area, lot dimensions, lot coverage, setbacks, and building height. Any such deviation(s) must be to the minimum degree necessary to achieve one or more of the stated purposes of the PUD section.

The PUD for the Legacy Park project application will establish minimum lot sizes of 4,000 and 5,000 square feet. Seventy-six of the lots fall within the 4,000 square foot minimum, and based on the current layout have an average lot size of 4,848 square feet. One-hundred and forty-five lots fall within the 5,000 square foot minimum, and based on the current layout have an average lot size of 6,291 square feet. As a whole, based on the layout and lot mix the overall average lot size calculates out to approximately 5,800 square feet as compared to the 7,200 square feet typically required in R5 zone property. The PUD guidelines further establish unique development standards along with architectural guidelines for development of a 221 lot planned residential community. The Design Guidelines for the project as proposed outline the specific and desired site development standards, architectural styles of the buildings, and criteria for community walls, fences and landscape, including hardscape and common area elements.

The following development standards are proposed for this PUD:

Legacy Park Standards

Minimum Lot Size	4,000 SF	5,000 SF
Number of Plans	3	4
Number of Homes	76	145
Number of Elevations	3	4
Min. Lot Width (at setback line)	50’	50’

Min. Lot Depth*	80’	100’
Typical House Width	40’	40’
Max. Building height	2-story or 35’	2-story or 35’
Front Setbacks		
Street-facing Garage**	18’	18’
Two-story Living Space	12’	12’
Single-story Living Space	10’	10’
Porch***/ Portico	4’	4’
Rear Setbacks****		
Two-story Living Space	10’	15’
Two-story Deck	10’	15’
Single-story Living Space	5’	10’
California Rooms (has up to 3 sides)	5’	10’
Patio Cover or Trellis	5’	10’
Side Setbacks		
Typical Condition	5’	5’
Side Street	10’	10’
Min. Distance Between Living Spaces	10’	10’
Max. Coverage (including garage)	50%	50%
Note: All setbacks are considered minimums as measured from the right-of-way.		
*Except at knuckles and cul-de-sacs. **Garages shall be 20’ along D Street and L Street. ***Minimum porch depth shall be 6’. ****Rear setbacks measured from lot line not landscaped easement.		

Amenities unique to the PUD include pocket parks, landscape paseos, trail connections to the adjacent Juan Bautista de Anza trail, decorative treatment in Street L at major intersections, and a median in Street L at Gentian.

The project as designed and conditioned satisfies the requirements for a PUD as set forth in Municipal Code Section 9.03.060. Findings in support of the Conditional Use Permit for the PUD have been prepared in Resolution 2017-10 attached to this staff report.

<u>Tentative Tract Map 36760</u>

Tentative Tract Map 36760 proposes to subdivide the 53 acres into 221 single family residential tract lots with additional lettered lots for basins for storm water/water quality treatment, a segment of the Juan Bautista de Anza trail over the California Aqueduct, public streets, pocket parks, and a 2.0 acres neighborhood park site.

Consistent with City General Plan Policies 4.2.1 and 4.2.14 the City’s Master Plan of Trails and the Master Plan of Parks, this project has been conditioned to construct and then convey to the City a segment of the Juan Bautista De Anza trail within the adjacent California Aqueduct easement and to construct and convey to the City a public park of approximately 2.0 acres in size with numerous amenities. These amenities include play equipment, a picnic shelter, a gazebo, large group barbeques, concrete picnic tables and benches, concrete waste/recycle containers; drinking fountains, walkway security lighting, decorative concrete walkways, and a decomposed granite walking path.

In addition, a condition of approval has been crafted and include in Exhibit A to the project Resolution requiring a four-foot (4') high tubular steel fence be erected surrounding the park. The developer participated in discussions with City staff regarding the design of the public park including this requirement for perimeter fencing and there are still some interests with respect to accessibility, appearance, connectivity and compatibility with the residential neighborhood being weighed against the safety and security interests that are the present key drivers for fencing. Fencing of the park is an interest we feel warrants particular attention and discussion by the Planning Commission. Design input and consideration could include suggestions on adjustments to the conceptual park design layout, enhanced flow into and around the park with the neighborhood, removal of visual and physical barriers, right-sizing fencing, thoughts on landscape elements that can meet safety and security interests, and ideas to bring the park out to the street so to speak to activate it, draw people, ensure good visibility, thereby making it a defensible space.

The proposed subdivision has been designed for consistency with the City's R5 zone and with the proposed development standards of the Legacy Park PUD.

Site

The project site is located at the southeast corner of Indian Street and Gentian Avenue and on the west side of the California Aqueduct. The site totals approximately 53 acres with mostly flat topography. The project site is comprised of three parcels and is mostly rectangular in shape with a triangular shaped parcel located along the California Aqueduct. The California Aqueduct runs along the site's eastern property line in a diagonal northwest/southeast alignment.

There is no sensitive habitat or riparian area within the project site and no rock outcroppings, trees or historic structures.

Surrounding Area

The project site is bounded by existing single-family tract homes to the west and northwest in an RS-10, a zone that allows for minimum lot sizes of 4,500 square feet. The property immediate to the north is zoned R5 and has been subdivided with a recorded map, Tract Map 22180. This tract is approved for single-family residential development. Grading for that project is underway. Existing single-family tract homes are located further to the north in an R5 zone. Southwest of the project site are single-family homes in another R5 zone. March Middle School and Rainbow Elementary School are located immediately to the south. Some vacant and some developed land (non-conforming single-family residences) make up the R30 zone located south of the project site's eastern area.

The California Aqueduct borders the property along its eastern property line with vacant Community Commercial zoned property to the east. This commercially zoned site to the east was recently approved for development as a Walmart retail center. Additional existing commercial retail establishments are located southeast of the project area at the intersection of Perris Boulevard and Iris Avenue. The City Corporate Yard is located approximately 1,400 feet to the east across Perris Boulevard. March Air Reserve Base is located approximately three-quarters of a mile to the west of the project site.

Access/Parking

Access to the project site is gained via local streets connecting to Indian Street and Gentian Avenue, as well as along Street L where is connects to the future segment of Santiago Drive and Emma Lane that will connect to Perris Boulevard. The project will be conditioned to complete off-site improvements and extend Santiago Drive to Perris Boulevard. All interior circulation throughout the project will be by public local streets.

The project includes garage parking for the residents. As designed and conditioned, the project satisfies all parking requirements of the City's Municipal Code.

Design/Landscaping

As stated previously, the PUD for this project proposes unique development standards for Tentative Tract Map 36760 including site development standards and architectural requirements to establish consistent and desired architectural styles. The design guidelines also outline criteria for community walls, fences and landscape.

This project, as designed and conditioned and set forth in the PUD guidelines, achieves development objectives of the City General Plan, City Landscape Standards and the Legacy Park Design Guidelines.

REVIEW PROCESS

The project was originally reviewed by the Project Review Staff Committee (PRSC) in October 2014. Modifications were required to the subdivision design and requests were made for required technical studies.

Revised plans were submitted in October 2015, May 2016, September 2016, October 2016, and November 2016. The design of the subdivision evolved as the developer worked with staff to incorporate a neighborhood park and public interior roadways (as opposed to private streets) into the design of the project.

Upon review of final drafts of required technical studies, the tract map, preliminary grading plan, and completion of the Initial Study / Mitigated Negative Declaration in December 2016, a determination was made to schedule this project for a Planning Commission public hearing on January 26, 2017.

ENVIRONMENTAL

An Initial Study was prepared which examined the potential of the proposed project to have an impact on the environment. The Initial Study provides information in support of the findings for a Mitigated Negative Declaration. The proposed project will not have a significant effect on the environment with the implementation of mitigation measures. Studies prepared for this project included an air quality study, greenhouse gas study, traffic study, a cultural resource assessment, a biological assessment, a preliminary hydrology study and a preliminary water quality management plan, and geotechnical studies.

Public notice of the availability of the Initial Study / Mitigated Negative Declaration for public review was published in the newspaper 20 days in advance of the Planning Commission public hearing. The public notification is consistent with the requirements of the California Environmental Quality Act (CEQA) Guidelines.

Based upon the findings and recommendations identified in technical studies prepared for this project and the completed Initial Study, it was determined that mitigation is necessary to reduce potential biological resources and traffic impacts to a less than significant level. No other environmental factors considered were identified to be impacted.

A mitigation monitoring program has been prepared to ensure implementation of the mitigation measures for potential biological resource and traffic impact (see Attachment 8). Additional conditions of approval are incorporated in the program to ensure compliance with City General Plan policies and other standard requirements related to Noise and Cultural Resources.

NOTIFICATION

The public hearing notice for this project was published in the local newspaper on January 6, 2017. Public notice was sent to all property owners of record within 300 feet of the project site on January 12, 2017. The public hearing notice for this project was posted on the project site on January 13, 2017.

As of the date of report preparation, staff has received no phone calls or correspondence in response to the noticing for this project.

REVIEW AGENCY COMMENTS

During the course of the plan review phase of the entitlement processing the following potentially affected reviewing agencies were engage in the process and all requisite responses and coordination has taken place with no outstanding issues. Where applicable, conditions of approval have been included in the project Resolutions to address concerns from the responding agencies.

Agency	Response Date	Comments
Moreno Valley Utility	September 22, 2014	Will serve notice
Val Verde Unified School District	October 1, 2014	Comment letter
Riverside County Flood Control	November 2, 2015	Comment letter
Airport Land Use Commission	May 10, 2016	Consistency Letter

Furthermore, the City complied with the requirements of State Assembly Bill 52 and State Bill 18 which require notice to Native American tribal groups, and conducted consultation if requested. The City coordinated with all participating Native American tribal groups requesting consultation for this project and has incorporated conditions of approval and mitigation measures as appropriate in the mitigation monitoring program.

STAFF RECOMMENDATION

Staff recommends that the Planning Commission:

1. **APPROVE** Resolution No. 2017-08 and thereby **RECOMMEND** that the City Council:

   - **ADOPT** a Mitigated Negative Declaration for General Plan Amendment application PEN16-0092, pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

   - **APPROVE** General Plan Amendment application PEN16-0092 based on the findings contained in this resolution, and as shown on the attachment included as Exhibit A.

2. **APPROVE** Resolution No. 2017-09 and thereby **RECOMMEND** that the City Council:

   - **ADOPT** a Mitigated Negative Declaration for Zone Change application PEN16-0093, pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

   - **APPROVE** Zone Change application PEN16-0093 based on the findings contained in this resolution, and as shown on the attachment included as Exhibit A.

3. **APPROVE** Resolution No. 2017-10 and thereby **RECOMMEND** that the City Council:

   - **ADOPT** a Mitigated Negative Declaration for Conditional Use Permit application PEN16-0094, pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

- **APPROVE** the Mitigation Monitoring and Reporting Program prepared for Conditional Use Permit PEN16-0094 pursuant to the California Environmental Quality Act (CEQA) Guidelines, included as Exhibit A; and

- **APPROVE** Conditional Use Permit application PEN16-0094 based on the findings contained in this resolution, and subject to the attached conditions of approval included as Exhibit A.

4. **APPROVE** Resolution No. 2017-11 and thereby **RECOMMEND** that the City Council:

   - **ADOPT** a Mitigated Negative Declaration for Tentative Tract Map 36760 (PEN16-0095), pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

   - **APPROVE** the Mitigation Monitoring and Reporting Program prepared for Tentative Tract Map 36760 (PEN16-0095) pursuant to the California Environmental Quality Act (CEQA) Guidelines, included as Exhibit A; and

   - **APPROVE** Tentative Tract Map 36760 (PEN16-0095) based on the findings contained in this resolution, and subject to the attached conditions of approval included as Exhibit A.

Notice of PUBLIC HEARING

Notice is hereby given that a Public Hearing will be held by the Planning Commission of the City of Moreno Valley on the following item(s):

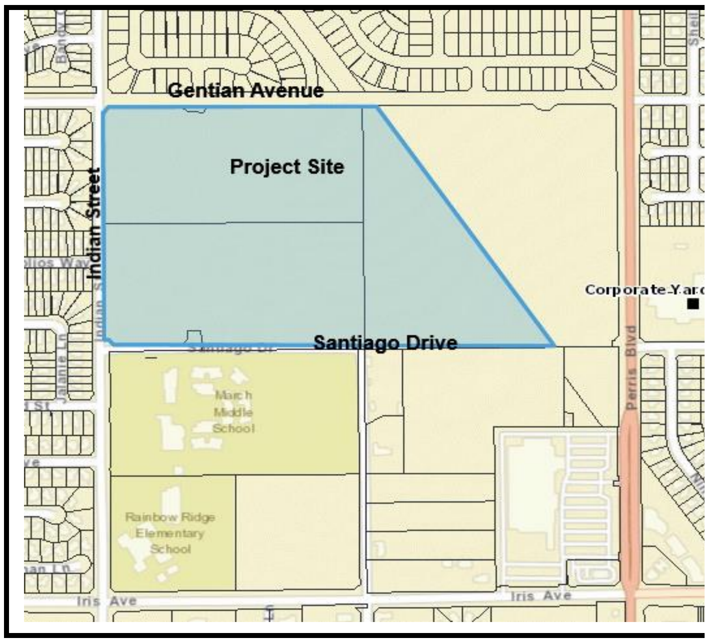
Project: PEN16-0092 (PA16-0018) – General Plan Amendment
PEN16-0093 (PA16-0019) – Zone Change
PEN16-0094 (PA14-0052) – Conditional Use Permit
PEN16-0095 (PA14-0053) – TTM 36760

Applicant: Mission Pacific Land Company
Owner: MPLC Legacy 75 Associates, LP
Representative: Rick Engineering Company
A.P. No: 485-220-023, -032, and -040
Location: Southeast corner Gentian Avenue and Indian Street
Proposal: General Plan Amendment from Residential 30 to Residential 5 and Zone Change from R30 to R5 for a 15.06 acre portion of a 53 acre site. This project includes Tentative Tract Map 36760 to subdivide the 53 acre site into a total of 221 single family residential lots and a Conditional Use Permit for a Planned Unit Development (PUD). The PUD application will establish minimum lot sizes of 4,000 and 5,000 square feet and establish unique lot widths and setback standards along with architectural guidelines.
Council District: 4

The project has been evaluated against criteria set forth in the California Environmental Quality Act (CEQA) Guidelines and it was determined that the project will not have a significant effect on the environment with the incorporation of mitigation measures. A Mitigated Negative Declaration is recommended. Mitigation measures have been required of the project that will reduce potential impacts to a less than significant level.

A public hearing before the Planning Commission has been scheduled for the proposed project. Any person interested in commenting on the proposal and recommended environmental determination may speak at the hearing or provide written testimony at or prior to the hearing. The project application, supporting plans and environmental documents may be inspected at the Community Development Department at 14177 Frederick Street, Moreno Valley, California during normal business hours (7:30 a.m. to 5:30 p.m., Monday through Thursday and 7:30 a.m. to 4:30 p.m., Friday), or you may telephone (951) 413-3206 for further information.

The Planning Commission, at the Hearing or during deliberations, could approve changes or alternatives to the proposal. If you challenge any of these items in court, you may be limited to raising only those items you or someone else raised at the Public Hearing described in this notice or in written correspondence delivered to the Planning Commission at, or prior to, the Public Hearing.



LOCATION N ↑

PLANNING COMMISSION HEARING

City Council Chamber, City Hall
14177 Frederick Street
Moreno Valley, Calif. 92553

DATE AND TIME: January 26, 2017, 7:00 p.m.
CONTACT PLANNER: Jeff Bradshaw
PHONE: (951) 413-3224

Upon request and in compliance with the Americans with Disabilities Act of 1990, any person with a disability who requires a modification or accommodation in order to participate in a meeting should direct such request to Guy Pegan, ADA Coordinator, at 951.413.3120 at least 48 hours before the meeting. The 48-hour notification will enable the City to make reasonable arrangements to ensure accessibility to this meeting.

Attachment: Public Hearing Notice (2444 : Legacy Park Project)

PLANNING COMMISSION RESOLUTION NO. 2017-08

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY RECOMMENDING THAT THE CITY COUNCIL APPROVE APPLICATION NO. PEN16-0092 (PA16-0018): AN AMENDMENT TO THE GENERAL PLAN LAND USE MAP, CHANGING THE LAND USE DESIGNATION FROM RESIDENTIAL 30 TO RESIDENTIAL 5 FOR APPROXIMATELY 15 ACRES GENERALLY LOCATED ON THE SOUTH SIDE OF GENTIAN AVENUE AND THE WEST SIDE OF THE CALIFORNIA AQUEDUCT (ASSESSOR'S PARCEL NUMBER: 485-220-040).

WHEREAS, the applicant, Mission Pacific Land Company, filed Application No. PEN16-0092, requesting an amendment to the Moreno Valley General Plan, as described in the title of this resolution and the attached Exhibit A.

WHEREAS, on January 26, 2017, the Planning Commission of the City of Moreno Valley held a public hearing to consider the subject applications and all of the environmental documentation prepared for the project.

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred.

WHEREAS, the Planning Commission considered the initial study prepared for the project for the purpose of compliance with the California Environmental Quality Act (CEQA). Based on the initial study, it was determined that the project impacts are less than significant with mitigation and approval of a Mitigated Negative Declaration is recommended.

NOW, THEREFORE, BE IT RESOLVED, it is hereby found, determined and resolved by the Planning Commission of the City of Moreno Valley as follows:

A. This Planning Commission hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this Planning Commission during the above-referenced meeting, including written and oral staff reports, and the record from the public hearing, this Planning Commission hereby specifically finds as follows:

1. **Conformance with General Plan Policies –** The proposed general plan amendment is consistent with the General Plan, and its goals, objectives, policies and programs.

   FACT: The project includes four applications – a General Plan Amendment, a Zone Change, a Conditional Use Permit and a

Tentative Tract Map. The project proposes to develop a 221 lot planned residential community on approximately 53 acres. The General Plan Amendment application proposes to change the General Plan designation for approximately 15 acres from Residential 30 to Residential 5.

The project site is bounded by existing single-family tract homes to west and northwest in the RS-10 zone with minimum lot sizes of 4,500 square feet. The property immediately to the north is zoned R5 and has been subdivided with a recorded map, Tract Map 22180. Further to the north are existing single-family tract homes in the R5 zone. Southwest of the project site are single-family homes in the R5 zone. March Middle School and Rainbow Elementary School are located immediately to the south. Vacant and developed land (non-conforming single-family residences) in the R30 zone is located to the southeast of the project site.

The property is bounded by California Aqueduct along the eastern property line with vacant Community Commercial zoned property to the east. The site to the east was recently approved for development as a Walmart retail center. Additional commercial exiting retail centers are located to the southeast at the intersection of Perris Boulevard and Iris Avenue in the Community Commercial zone. March Air Reserve Base is located approximately three-quarters of a mile to the west with the City Corporate Yard located approximately 1,400 feet to the east.

The change in the General Plan designation from Residential 30 to Residential 5 for the 15 acre portion of the project site reflects reconsideration of land use patterns in this area of the community. The change will also allow the potential for a planned residential community consistent with the R5 zoning designation.

The General Plan Amendment will not conflict with any General Plan policies. Consistent with General Plan Community Goals 2.1 and 2.4, the proposed General Plan Amendment will establish a single family land use designation that is compatible with surrounding residential land uses and will promote development of the site's undeveloped parcels.

2. **Health, Safety and Welfare –** The proposed general plan amendment will not be detrimental to the public health, safety or welfare.

FACT: The proposed General Plan Amendment will not result in unacceptable levels of protection from natural and man-made hazards to life, health, and property and is therefore consistent with General Goal 9.6.1. The project site is located approximately 2,000 feet south of the Kennedy Park Fire Station and within close proximity to emergency services which is consistent with General Plan Goal 9.6.2

which requires emergency services that are adequate to meet minor emergency and major catastrophic situations. The proposed General Plan Amendment will not allow for development that would be inconsistent with General Plan Objective 6.1 to minimize the potential for loss of life and protect residents, workers, and visitors to the City from physical injury and property damage due to seismic ground shaking and secondary effects or General Plan Objective 6.2 to minimize the potential for loss of life and protect residents, workers, and visitors to the City from physical injury and property damage, and to minimize nuisances due to flooding.

The California Environmental Quality Act (CEQA) is a statewide environmental law contained in Public Resources Code §§21000-21177. CEQA applies to most public agency decisions to carry out, authorize, or approve actions that have the potential to affect the environment. CEQA requires that public agencies analyze and acknowledge the environmental consequences of their discretionary actions and consider alternatives and mitigation measures that could avoid or reduce significant adverse impacts to the environment when avoidance or reduction is feasible. The CEQA compliance process provides public agencies and the general public an opportunity to comment on a proposed project's environmental effects. The proposed project is not exempt from CEQA. It was determined that an Initial Study would be prepared to determine whether the proposed project may have a significant effect on the environment.

The Mitigated Negative Declaration is an informational document that provides the City, other public agencies, and the public at-large with an objective assessment of the potential environmental impacts that could result from implementation of the proposed project.

An Initial Study / Mitigated Negative Declaration were prepared which assessed the potential of the proposed General Plan Amendment and the related Zone Change, Conditional Use Permit and Tentative Tract Map applications to impact the environment. The project proposes to develop a 221 lot planned residential community on approximately 53 acres. The project site is located at the southeast corner of the intersection of Indian Street and Gentian Avenue.

The Initial Study provided the documentation of the factual basis for the finding in the Mitigated Negative Declaration that the proposed project will not have a significant effect on the environment with the implementation of mitigation measures. The City as the Lead Agency has prepared a Mitigated Negative Declaration (MND) pursuant to Sections 15070 et seq. of the State CEQA Guidelines.

The Mitigated Negative Declaration is an informational document that provides the City, other public agencies, and the public at-large with an objective assessment of the potential environmental impacts that could result from implementation of the proposed project. The preparation and review of the Initial Study/Mitigated Negative Declaration reflects the independent judgment of the City.

The Mitigated Negative Declaration has been considered by the Planning Commission and prepared as there is no evidence that the proposed project will have a significant impact on public health or be materially injurious to surrounding properties of the environment as a whole.

BE IT FURTHER RESOLVED that the Planning Commission **HEREBY APPROVES** Resolution No. 2017-08, and **RECOMMENDS** that the City Council:

1. **ADOPT** a Mitigated Negative Declaration for Application No. PEN16-0092 pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

2. **APPROVE** General Plan Amendment Application No. PEN16-0092, based on the findings contained in this resolution.

APPROVED this 26th day of January, 2017.

Exhibit A to ATT 2

PLANNING COMMISSION RESOLUTION NO. 2017-09

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY RECOMMENDING THAT THE CITY COUNCIL APPROVE ZONE CHANGE APPLICATION NO. PEN16-0093 (PA16-0019): AN AMENDMENT TO THE OFFICIAL ZONING ATLAS, CHANGING THE ZONING CLASSIFICATION FROM R30 TO R5 FOR APPROXIMATELY 15 ACRES GENERALLY LOCATED ON THE SOUTH SIDE OF GENTIAN AVENUE AND THE WEST SIDE OF THE CALIFORNIA AQUEDUCT (ASSESSOR'S PARCEL NUMBER: 485-220-040).

WHEREAS, the applicant, Mission Pacific Land Company filed Application No. PEN16-0093, requesting an amendment to Pages 124 and 139 of the Official Zoning Atlas to the zoning classification for certain property, as described in the title of this resolution and the attached Exhibit A; and

WHEREAS, on January 26, 2017, the Planning Commission of the City of Moreno Valley held a public hearing to consider the subject applications and all of the environmental documentation prepared for the project; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred; and

WHEREAS, the Planning Commission considered the initial study prepared for the project for the purpose of compliance with the California Environmental Quality Act (CEQA). Based on the initial study, it was determined that the project impacts are less than significant with mitigation and approval of a Mitigated Negative Declaration is recommended.

NOW, THEREFORE, BE IT RESOLVED, it is hereby found and determined and resolved by the Planning Commission of the City of Moreno Valley as follows:

A. This Planning Commission hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this Planning Commission during the above-referenced meeting, including written and oral staff reports, and the record from the public hearing, this Planning Commission hereby specifically finds as follows:

1. **Conformance with General Plan Policies –** The proposed General Plan Amendment and Change of Zone is consistent with the General Plan, and its goals, objectives, policies and programs.

FACT: The project includes four applications; a General Plan Amendment, a Zone Change, a Conditional Use Permit and a Tentative Tract Map. The project proposes to develop a 221 lot planned residential community on approximately 53 acres. The Zone Change application proposes to change the zoning district for approximately 15 acres from R30 to R5.

The project site is bounded by existing single-family tract homes to west and northwest in the RS-10 zone with minimum lot sizes of 4,500 square feet. The property immediately to the north is zoned R5 and has been subdivided with a recorded map, Tract Map 22180. Further to the north are existing single-family tract homes in the R5 zone. Southwest of the project site are single-family homes in the R5 zone. March Middle School and Rainbow Elementary School are located immediately to the south. Vacant and developed land (non-conforming single-family residences) in the R30 zone is located to the southeast of the project site.

The property is bound by the California Aqueduct along the eastern property line with vacant Community Commercial zoned property to the east. The site to the east was recently approved for development as a Walmart retail center. Additional commercial exiting retail centers are located to the southeast at the intersection of Perris Boulevard and Iris Avenue in the Community Commercial zone. March Air Reserve Base is located approximately three-quarters of a mile to the west with the City Corporate Yard located approximately 1,400 feet to the east.

Consistent with General Plan Community Goals 2.1 and 2.4, the proposed Zone Change will establish a single family land use zoning designation that is compatible with surrounding residential land uses and will promote development of the site's undeveloped parcels.

Upon approval of a General Plan Amendment from R30 to R15 on the approximately 15 acre site, the Change of Zone will be consistent with the General Plan designation for the property.

2. **Conformance with the Zoning Regulations –** The proposed zoning is consistent with the purposes and intent of Title 9 of the City of Moreno Valley Municipal Code.

   FACT: As proposed, the Change of Zone from R30 to R5 for the 15 acre portion of the project site is consistent with the purposes and intent of Title 9. A residential development under the R5 would continue to further the comprehensive and orderly development of the site and surrounding areas.

The area surrounding the site has been developed primarily with single family residential land uses. Vacant and developed land (non-conforming single-family residences) in the R30 zone is located to the southeast of the project site. Commercial land uses have been developed to the east along Perris Boulevard and to the southeast at the intersection of Perris Boulevard and Iris Avenue.

Existing single-family residences are located to west, southwest and north of the project site. Vacant R5 zoned land is located immediately to the north. The vacant land has a recorded map (Tract 22180) which is currently under development with approved construction plans on file with the City. March Middle School and Rainbow Elementary School are located immediately to the south of the project site.

The proposed Zone Change to R5 is compatible with the established zoning designations of the parcels in the area. The change from the existing R30 to R5 for the 15 acre portion of the project site reflects reconsideration of land use patterns in this area of the community. The change will also allow the potential for a planned community consistent with the R5 zoning designation.

3. **Health, Safety and Welfare –** The proposal will not be detrimental to the public health, safety or welfare.

FACT: The proposed Zone Change will not result in unacceptable levels of protection from natural and man-made hazards to life, health, and property and is therefore consistent with General Goal 9.6.1. The project site is located approximately 2,000 feet south of the Kennedy Park Fire Station and within close proximity to emergency services which is consistent with General Plan Goal 9.6.2 which requires emergency services that are adequate to meet minor emergency and major catastrophic situations. The proposed Zone Change will not allow for development that would be inconsistent with General Plan Objective 6.1 to minimize the potential for loss of life and protect residents, workers, and visitors to the City from physical injury and property damage due to seismic ground shaking and secondary effects or General Plan Objective 6.2 to minimize the potential for loss of life and protect residents, workers, and visitors to the City from physical injury and property damage, and to minimize nuisances due to flooding.

The proposed Zone Change will not adversely affect the public health, safety or general welfare. The California Environmental Quality Act (CEQA) is a statewide environmental law contained in Public Resources Code §§21000-21177. CEQA applies to most public agency decisions to carry out, authorize, or approve actions that have the potential to affect the environment. CEQA requires that public agencies analyze and acknowledge the environmental consequences of their discretionary actions and consider alternatives and mitigation measures that could avoid or reduce significant adverse impacts to the environment when avoidance or reduction is feasible. The CEQA compliance process provides public agencies and the general public an opportunity to comment on a proposed project's environmental effects.

The Mitigated Negative Declaration is an informational document that provides the City, other public agencies, and the public at-large with an objective assessment of the potential environmental impacts that could result from implementation of the proposed project.

An Initial Study / Mitigated Negative Declaration was prepared which assessed the potential of the proposed General Plan Amendment and the related Zone Change, Conditional Use Permit and Tentative Tract Map applications to impact the environment. The project proposes to develop a 221 lot planned residential community on approximately 53 acres. The project site is located at the southeast corner of the intersection of Indian Street and Gentian Avenue.

The Initial Study provided the documentation of the factual basis for the finding in the Mitigated Negative Declaration that the proposed project will not have a significant effect on the environment with the implementation of mitigation measures. The City as the Lead Agency has prepared a Mitigated Negative Declaration (MND) pursuant to Sections 15070 et seq. of the State CEQA Guidelines. The preparation and review of the Initial Study/Mitigated Negative Declaration reflects the independent judgment of the City.

The Mitigated Negative Declaration has been considered by the Planning Commission and there is no evidence that the proposed project will have a significant impact on public health or be materially injurious to surrounding properties of the environment as a whole.

BE IT FURTHER RESOLVED that the Planning Commission **HEREBY APPROVES** Resolution No. 2017-09, and **RECOMMENDS** that the City Council:

1. **ADOPT** a Negative Declaration for Application No. PEN16-0093 pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

2. **APPROVE** Change of Zone Application No. PEN16-0093, based on the findings contained in this resolution.

APPROVED this 26th day of January, 2017.

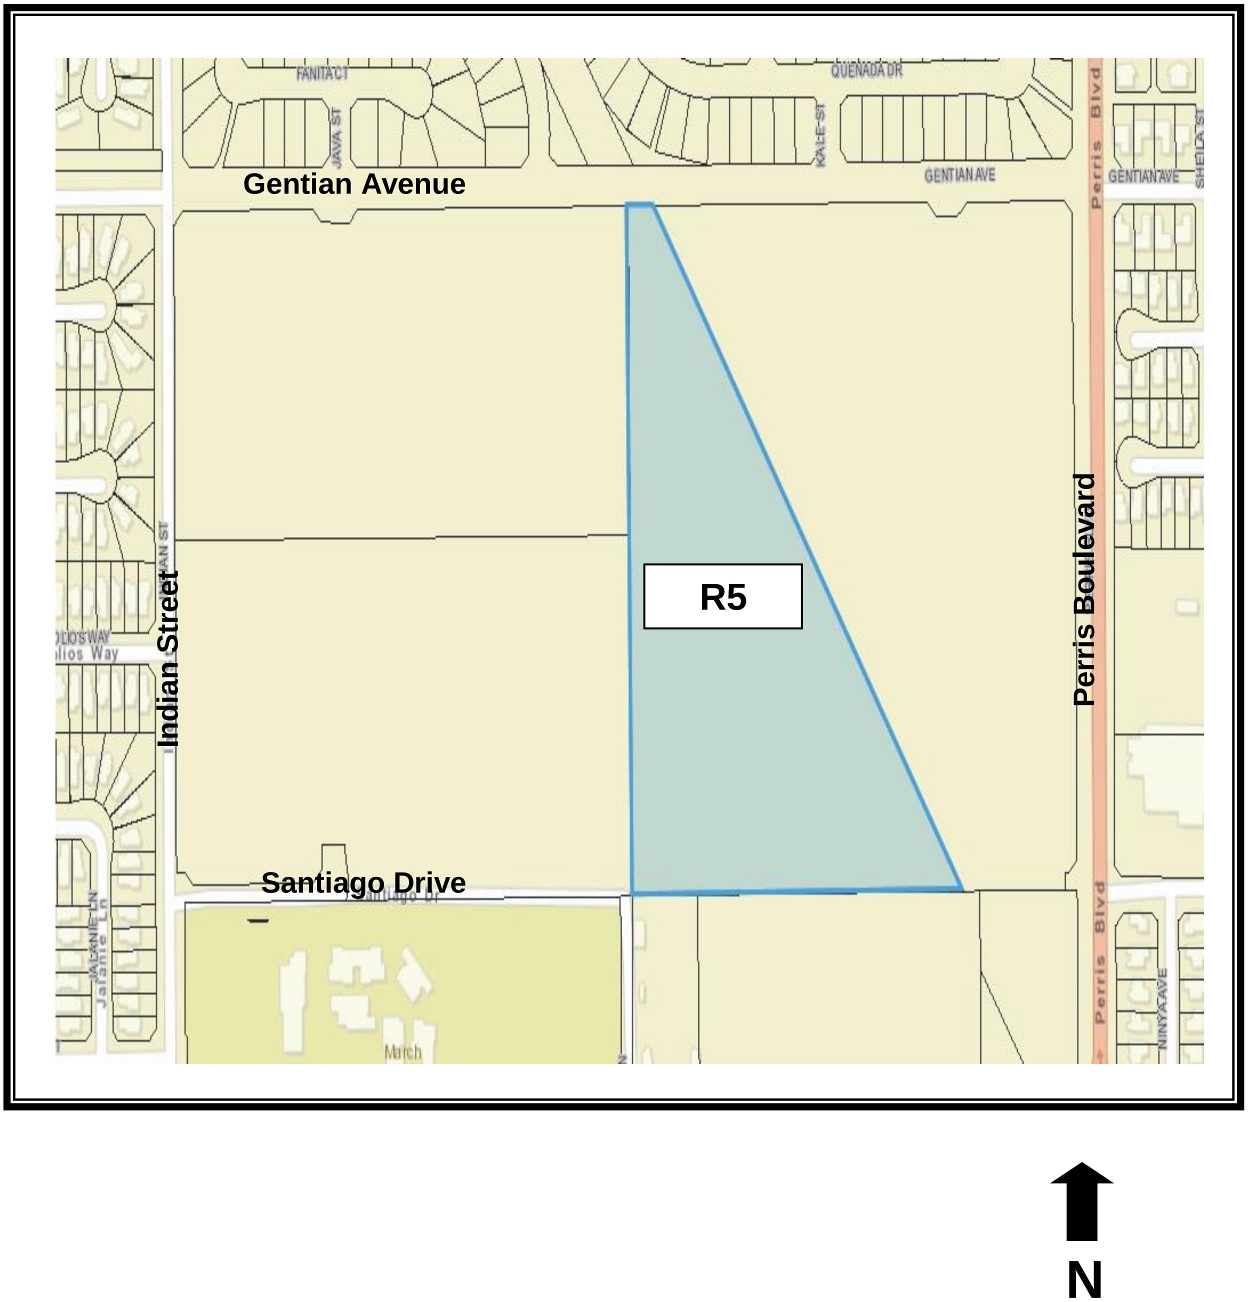
Application No. PEN16-0093
APN's 485-220-040
Resolution No. 2017-09



Attachment: Exhibit A to Resolution 2017-09 (2444 : Legacy Park Project)

Exhibit A to ATT 3

PLANNING COMMISSION RESOLUTION NO. 2017-10

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY RECOMMENDING THAT THE CITY COUNCIL APPROVE CONDITIONAL USE PERMIT APPLICATION NO. PEN16-0094 (PA14-0052) FOR A PLANNED UNIT DEVELOPMENT FOR A 221 LOT SINGLE FAMILY RESIDENTIAL SUBDIVISION LOCATED SOUTHEASTERLY OF THE CORNER OF INDIAN STREET AND GENTIAN AVENUE (ASSESSOR'S PARCEL NUMBERS: 485-220-023, 485-220-032, AND 485-220-040).

WHEREAS, the applicant, Mission Pacific Land Company, has filed an application for the approval of Conditional Use Permit PEN16-0094 for development of a Planned Unit Development (PUD). The PUD application will establish unique development standards, including allowing for minimum lot sizes of 4,000 and 5,000 square feet, and architectural guidelines; and

WHEREAS, the application has been evaluated in accordance with established City of Moreno Valley (City) procedures, and with consideration of the General Plan and other applicable regulations; and

WHEREAS, the City has prepared an Initial Study and Mitigated Negative Declaration consistent with the California Environmental Quality Act (CEQA) based on a thorough analysis of potential environmental impacts; and

WHEREAS, upon completion of a thorough development review process the project was appropriately agendized and noticed for a public hearing before the Planning Commission of the City of Moreno Valley (Planning Commission); and

WHEREAS, the public hearing notice for this project was published in the local newspaper on January 6, 2017. Public notice was sent to all property owners of record within 300 feet of the project site on January 12, 2017. The public hearing notice for this project was also posted on the project site on January 13, 2017; and

WHEREAS, on January 26, 2017, the Planning Commission held a public hearing to consider the application; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred; and

WHEREAS, pursuant to Government Code Section 66020(d)(1), **NOTICE IS HEREBY GIVEN** that this project is subject to certain fees, dedications, reservations and other exactions as provided herein.

NOW, THEREFORE, BE IT RESOLVED, it is hereby found, determined and resolved by the Planning Commission as follows:

A. This Planning Commission hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this Planning Commission during the above-referenced meeting on January 26, 2017, including written and oral staff reports, public testimony and the record from the public hearing, this Planning Commission hereby specifically finds as follows:

1. **Conformance with General Plan Policies –** The proposed use is consistent with the General Plan, and its goals, objectives, policies and programs.

   FACT: General Plan Objective 2.2 states that it is the intent of the City to provide a wide range of residential opportunities and dwelling types to meet the demands of present and future residents of all socioeconomic groups. The existing residential land use designation for the site allows for development of single family residences consistent with this objective.

   The project site is bounded by existing single-family tract homes to the west and northwest in the RS-10 zone with minimum lot sizes of 4,500 square feet. The property immediately to the north is zoned R5 and has been subdivided with a recorded map, Tract Map 22180. Further to the north are existing single-family tract homes in the R5 zone. Southwest of the project site are single-family homes in the R5 zone. March Middle School and Rainbow Elementary School are located immediately to the south. Vacant and developed land (non-conforming single-family residences) in the R30 zone is located to the southeast of the project site.

   The property is bounded by the California Aqueduct along the eastern property line with vacant Community Commercial zoned property to the east. The site to the east was recently approved for development as a Walmart retail center. Additional commercial existing retail centers are located to the southeast at the intersection of Perris Boulevard and Iris Avenue in the Community Commercial zone. March Air Reserve Base is located approximately three-quarters of a mile to the west with the City Corporate Yard located approximately 1,400 feet to the east.

   Consistent with City General Plan Policies 4.2.1 and 4.2.14 the City's Master Plan of Trails and the Master Plan of Parks, this project has been conditioned to construct and then convey to the City a segment of the Juan Bautista De Anza trail within the adjacent California Aqueduct and to construct and convey to the City a public park of approximately 2.0 acres in size with amenities that would include play equipment, a picnic shelter, a gazebo, large group barbeques, concrete picnic tables and benches, concrete waste/recycle containers; drinking fountains, walkway security lighting, decorative concrete walkways, decomposed granite walking path; and tubular steel fencing surrounding the park.

The project as designed and conditioned will achieve the objectives of the City of Moreno Valley's General Plan. Subject to approval of a General Plan Amendment from R30 to R5, the proposed project is consistent with the General Plan and does not conflict with the goals, objectives, policies, and programs established within the Plan.

2. **Conformance with Zoning Regulations –** The proposed use complies with all applicable zoning and other regulations.

FACT: The project site is located generally at the southeast corner of Indian Street and Gentian Avenue. The majority of the site is zoned R5. The applicant is proposing to change a 15 acre portion of the site from R30 to R5. The project site is bounded by existing single-family tract homes to west and northwest in the RS-10 zone with minimum lot sizes of 4,500 square feet. The property immediately to the north is zoned R5 and has been subdivided with a recorded map, Tract Map 22180. Further to the north are existing single-family tract homes in the R5 zone. Southwest of the project site are single-family homes in the R5 zone. March Middle School and Rainbow Elementary School are located immediately to the south. Vacant and developed land (non-conforming single-family residences) in the R30 zone is located to the southeast of the project site.

The proposal for a Planned Unit Development requires approval of a Conditional Use Permit per Municipal Code Section 9.03.060. The Planned Unit Development establishes unique zoning standards along with design guidelines that will allow for a quality, well designed project that will be consistent with the intent of Title 9 which is to protect and promote the public health, safety and welfare of present and future residents of the City.

The project is designed in accordance with the applicable provisions of Section 9.03 Residential Districts, Section 9.16.130 Design Guidelines for single family residences, and Section 9.03.060 Planned Unit Developments of the City's Municipal Code. The project has also been designed for consistency with the Legacy Park Design Guidelines. The project as designed and conditioned would comply with all applicable zoning and other regulations.

3. **Health, Safety and Welfare –** The proposed use will not be detrimental to the public health, safety or welfare or materially injurious to properties or improvements in the vicinity.

FACT: The proposed master plot plan as designed and conditioned will provide acceptable levels of protection from natural and man-made hazards to life, health, and property consistent with General Goal 9.6.1. The project site is located approximately 2,000 feet south of the Kennedy Park Fire Station and within close proximity to emergency services which is consistent with General Plan Goal 9.6.2 which requires emergency services that are adequate to meet minor emergency and major catastrophic situations.

The proposed project as designed and conditioned will result in a development that will minimize the potential for loss of life and protect residents, workers, and visitors to the City from physical injury and property damage due to seismic ground shaking and flooding as provided for in General Plan Objective 6.1 and General Plan Objective 6.2.

The project has been designed consistent with the City's Municipal Code Section 9.03 Residential Districts and will satisfy all City requirements related to light and noise. Planning staff prepared an Initial Study and Mitigated Negative Declaration in accordance with the provisions of the California Environmental Quality Act (CEQA) based on a thorough analysis of potential environmental impacts. With the implementation of mitigation measures, the project will not result in a significant impact. The Mitigated Negative Declaration represents the City's independent judgment and analysis.

4. **Location, Design and Operation –** The location, design and operation of the proposed project will be compatible with existing and planned land uses in the vicinity.

FACT: The project site is bounded by existing single-family tract homes to west and northwest in the RS-10 zone with minimum lot sizes of 4,500 square feet. The property immediately to the north is zoned R5 and has been subdivided with a recorded map, Tract Map 22180. Further to the north are existing single-family tract homes in the R5 zone. Southwest of the project site are single-family homes in the R5 zone. March Middle School and Rainbow Elementary School are located immediately to the south. Vacant and developed land (non-conforming single-family residences) in the R30 zone is located to the southeast of the project site.

The property is bounded by the California Aqueduct along the eastern property line with vacant Community Commercial zoned property to the east. The site to the east was recently approved for development as a Walmart retail center. Additional commercial existing retail centers are located to the southeast at the intersection of Perris Boulevard and Iris Avenue in the Community Commercial zone. March Air Reserve Base is located approximately three-quarters of a mile to the west with the City Corporate Yard located approximately 1,400 feet to the east.

As designed and conditioned and with the implementation of required mitigation measures, the Planned Unit Development is compatible with existing and proposed land uses in the vicinity.

FEES, DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

1. FEES

Impact, mitigation and other fees are due and payable under currently applicable ordinances and resolutions. These fees may include but are not limited to: Development Impact Fee, Transportation Uniform Mitigation Fee (TUMF), Multi-species Habitat Conservation Plan (MSHCP) Mitigation Fee, Stephens Kangaroo Habitat Conservation fee, Underground Utilities in lieu Fee, Area Drainage Plan fee, Bridge and Thoroughfare Mitigation fee (Future) and Traffic Signal Mitigation fee. The final amount of fees payable is dependent upon information provided by the applicant and will be determined at the time the fees become due and payable.

Unless otherwise provided for by this Resolution, all impact fees shall be calculated and collected at the time and in the manner provided in Chapter 3.32 of the City of Moreno Valley Municipal Code or as so provided in the applicable ordinances and resolutions. The City expressly reserves the right to amend the fees and the fee calculations consistent with applicable law.

2. DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

The adopted Conditions of Approval for PEN16-0094, incorporated herein by reference, may include dedications, reservations, and exactions pursuant to Government Code Section 66020 (d) (1).

3. CITY RIGHT TO MODIFY/ADJUST; PROTEST LIMITATIONS

The City expressly reserves the right to establish, modify or adjust any fee, dedication, reservation or other exaction to the extent permitted and as authorized by law.

Pursuant to Government Code Section 66020(d)(1), NOTICE IS FURTHER GIVEN that the 90 day period to protest the imposition of any impact fee, dedication, reservation, or other exaction described in this Resolution begins on the effective date of this Resolution and any such protest must be in a manner that complies with Section 66020(a) and failure to timely follow this procedure will bar any subsequent legal action to attack, review, set aside, void or annul imposition.

The right to protest the fees, dedications, reservations, or other exactions does not apply to planning, zoning, grading, or other similar application processing fees or service fees in connection with this project and it does not apply to any fees, dedication, reservations, or other exactions of which a notice has been given similar to this, nor does it revive challenges to any fees for which the applicable statute of limitations has previously expired.

BE IT FURTHER RESOLVED that the Planning Commission **HEREBY APPROVES** Resolution No. 2017-10, and **RECOMMENDS** that the City Council:

1. **ADOPT** a Mitigated Negative Declaration for Conditional Use Permit PEN16-0094, pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

2. **APPROVE** the Mitigation Monitoring and Reporting Program prepared for Conditional Use Permit PEN16-0094 pursuant to the California Environmental Quality Act (CEQA) Guidelines, included as Exhibit A; and

3. **APPROVE** Conditional Use Permit PEN16-0094 based on the findings contained in this resolution, and subject to the attached conditions of approval included as Exhibit B.

APPROVED this 26th day of January, 2017.

Legacy Park Project – Mitigation Monitoring and Reporting Program

Conditional Use Permit PEN16-0094 / Tentative Tract Map 36760 (PEN16-0095)

Introduction

This Mitigation Monitoring and Reporting Program has been prepared for use in implementing mitigation for the Mitigated Negative Declaration (MND) for The Legacy Park (Conditional Use Permit PEN16-0094 and Tentative Tract Map 36760). The program has been prepared in compliance with State law and the MND prepared for the project.

The California Environmental Quality Act (CEQA) requires adoption of a reporting or monitoring program for those measures places on a project to mitigated or avoid adverse effects on the environment (Public Resources Code Section 21081.6). The law states that the reporting or monitoring program shall be designed to ensure compliance during project implementation.

The monitoring program contains the following elements:

- 1. The mitigation measures are recorded with the action and procedure necessary to ensure compliance. In some instances, one action may be used to verify implementation of several mitigation measures.
- 2. A procedure for compliance and verification has been outlined for each action necessary. This procedure designates who will take action, what action will be taken and when, and to whom and when compliance will be reported.
- 3. The program has been designed to be flexible. As monitoring progresses, changes to compliance procedures may be necessary based upon recommendations by those responsible for the program. As changes are made, new monitoring compliance procedures are records will be developed and incorporated into the program.

Mitigation Monitoring and Responsibilities

As the Leady Agency, the City of Moreno Valley is responsible for ensuring full compliance with the mitigation measures adopted for the proposed project. The City will monitor and report on all mitigation activities. Mitigation measures will be implemented at different stages of development throughout the project. In this regards, the responsibilities for implementation have been assigned to the Applicant, Contractor, or a combination thereof. If during the course of project implementation, any of the mitigation measures identified herein cannot be successfully implemented, the City shall be immediately informed, and the City will then inform any affected responsible agencies. The City, in conjunction with any affected responsible agencies, will then determine if modification to the project is required and/or whether alternative mitigation is appropriate.

Mitigation Monitoring and Reporting Program Checklist

Project: Legacy Park Project (Conditional Use Permit PEN16-0094 and Tentative Tract Map 36760)

Applicant: Mission Pacific Land Company

Date: January 18, 2017

Mitigation Measure No.	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/Initials	Sanctions for Non-Compliance
Traffic/Transportation						
TR-1: Prior to the issuance of building permits, the Project applicant shall participate in the City's DIF and County TUMF fee programs by paying the requisite fees at the time of building permit, and in addition pay the Project's fair share amount of $43,497 for improvements at the intersections of Indian Street at Cactus Avenue and Indian Street at Gentian Avenue as identified in Table 1-5 that are consistent with the improvements shown on Table 6-3, or as otherwise agreed to by the City and Project Applicant. Project fair share payment shall only be collected if the City creates a fee program that includes the improvements the fair share contribution is intended to construct.	City of Moreno Valley Transportation Engineering Division and Planning Division	Ongoing during construction	Prior to Building Final	Review of paid DIF invoice and receipt		Withhold Building Final
TR-2: Prior to the final approval of the street improvement plans, traffic signal plans will be required for a new traffic signal located at the intersection of Perris Boulevard and Santiago Drive. Prior to issuance of Certificate of Occupancy, the traffic signal and Perris Boulevard and Santiago Drive shall be completed per the approved plans to the satisfaction of the City Engineer.	City of Moreno Valley Transportation Engineering Division , Land Development and Planning Division	Ongoing during construction	Prior to Building Final	Final Inspection of signal improvements		Withhold Building Final

Mitigation Measure No.	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/Initials	Sanctions for Non-Compliance
Biological Resources						
BR-1. A qualified biologist will conduct a pre-construction presence/absence survey for burrowing owls within 14 days prior to site disturbance. If burrowing owls are detected onsite, the owls will be relocated/excluded from the site outside of the breeding season following accepted protocols, and subject to the approval of the RCA and wildlife agencies.	City of Moreno Valley Planning Division	Ongoing during grading plan check	Prior to Issuance of a grading permit	Review of and approval of pre-construction survey		Withhold Grading Permit
BR-2. As feasible, vegetation clearing should be conducted outside of the nesting season, which is generally identified as February 1 through September 15. If avoidance of the nesting season is not feasible, then a qualified biologist shall conduct a nesting bird survey within three days prior to any disturbance of the site, including disking, demolition activities, and grading. If active nests are identified, the biologist shall establish suitable buffers around the nests, and the buffer areas shall be avoided until the nests are no longer occupied and the juvenile birds can survive independently from the nests.	City of Moreno Valley Planning Division	Ongoing during grading plan check	Prior to Issuance of a grading permit	Review of and approval of survey		Withhold Grading Permit
Mitigation Measure No.	**Responsible for Monitoring**	**Monitoring Frequency**	**Timing of Verification**	**Method of Verification**	**Verified Date/Initials**	**Sanctions for Non-Compliance**
Cultural Resources						
CR-1: Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a professional archaeological monitor has been retained by the Applicant to conduct monitoring of all mass grading and trenching activities and that the monitor has the authority to temporarily halt and redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project archaeologist, with input from the	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations.	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order

appropriate Tribe, shall prepare a Cultural Resources Monitoring Plan (CRMP) to document protocols for inadvertent finds, to determine potential protection measures from further damage and destruction for any identified archaeological resource(s)/ tribal cultural resources (TCRs), outline the process for monitoring and for completion of the final Phase IV Monitoring Report. If any archaeological and/or TCRs are identified during monitoring, these will also be documented and addressed per standard archaeological protocols in the Phase IV report, with the exception of human remains which will be addressed per CUL-5. The Project Archaeologist shall attend the pregrading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.						
CR-2: At least 30 days prior to the issuance of a grading permit, the Applicant shall contact the appropriate Luiseño tribe to develop a Cultural Resources Treatment Agreement and shall provide evidence to the City of Moreno Valley that the professionally qualified Luiseño Native American monitor(s) has been secured from the interested tribe(s), and that the monitor shall be allowed to monitor all mass grading and trenching activities. The Tribal representative(s) shall attend the pre-grading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations.	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order
CR-3: If, during mass grading and trenching activities, the Archaeologist or Tribal representatives suspect that an archaeological resource and/or TCR may have been unearthed, the monitor identifying the potential resources, in consultation with the other monitor as appropriate, shall immediately halt and redirect grading operations in a 100-foot radius around the find to allow identification	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order

and evaluation of the suspected resource. The Native American monitor(s) or appropriate representative(s) and the archaeological monitor shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2. The archaeological monitor and tribal monitor(s) or appropriate representative(s), the Project Applicant, and the City Planning Division shall confer regarding mitigation of the discovered resource(s). All sacred sites, should they be encountered within the Project area, shall be avoided and preserved as the preferred mitigation, if feasible.						
CR-4: Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan: "If any suspected archaeological resources are discovered during ground-disturbing activities and the archaeological monitor or Tribal representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal representatives to the site to assess the significance of the find."	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order
CR-5: If human remains are encountered, California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to California Public Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner. If the Riverside County Coroner determines the remains to be Native American, the California Native American Heritage Commission must be contacted within 24 hours. The Native American Heritage Commission must then	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order

immediately notify the "most likely descendant(s)" of receiving notification of the discovery. The most likely descendant(s) shall then make recommendations within 48 hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code §5097.98.						
CR-6: Prior to construction involving excavation four feet or more below existing surface grade, the construction contractor shall provide evidence that a qualified paleontologist has been retained, and that the paleontologist(s) shall be present during all grading and other significant ground-disturbing activities that reach four feet or more below existing surface grade. In the event fossiliferous deposits are encountered, the following measures shall be implemented: • Monitoring shall be conducted by qualified paleontological monitor(s) of excavation in areas identified as likely to contain paleontological resources, including very old alluvial fan deposits. Paleontological monitors shall be equipped to salvage fossils as they are unearthed, to avoid construction delays, and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. Monitors shall be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Monitoring may be reduced if the potentially fossiliferous units are determined upon exposure and examination by qualified paleontological personnel to have low potential to contain fossil resources.	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order

• Paleontological monitoring of any earthmoving will be conducted by a monitor, under direct guidance of a qualified paleontologist. Earthmoving in areas of the parcel where previously undisturbed sediments are buried, but not otherwise disturbed, will not be monitored. • If too few fossil remains are found after 50 percent of the planned-for earthmoving has been completed, monitoring can be reduced or discontinued in those areas at the Project paleontologist's direction. • Preparation of recovered specimens to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates. • Identification and curation of specimens into a professional, fully accredited museum repository with permanent retrievable storage. The paleontologist must have a written repository agreement in hand prior to the initiation of mitigation activities. • Preparation or a report of findings with and appended itemized inventory of specimens. The report and inventory, when submitted to the city along with confirmation of the curation of recovered of recovered specimens into an established, accredited museum repository, will signify completion of the program to mitigate impacts to paleontological resources.						

Mitigation Measure No.	**Responsible for Monitoring**	**Monitoring Frequency**	**Timing of Verification**	**Method of Verification**	**Verified Date/Initials**	**Sanctions for Non-Compliance**
Noise						
N-1: Construction activities shall be operated in a manner that limits noise impacts on surrounding uses (General Plan Policy 6.5.2). In order to limit noise impacts on surrounding property, the construction contractor will ensure the following: • All construction equipment powered by gasoline or diesel engines will be required to have sound-control devices at least as effective as those originally provided by the manufacturer; no equipment will be permitted to have an unmuffled exhaust. • Mobile noise-generating equipment and machinery will be shut off when not in use; • Construction vehicles assessing the site will be required to use the shortest possible route to and from local freeways, provided the routes do not expose additional receptors to noise	City of Moreno Valley Engineering and Building and Safety Planning Division	Once prior to Grading and during grading and construction operations.	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order
N-2: The staging of construction equipment and the construction trailer shall be placed as far as possible from the existing single-family residences located to the west and south and the schools to the south.	City of Moreno Valley Engineering and Building and Safety Planning Division	Once prior to Grading and during grading and construction operations.	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order

Expiration Date:

COMMUNITY DEVELOPMENT DEPARTMENT

Planning Division

For questions regarding any Planning condition of approval, please contact the Planning Division at (951) 413-3206.

P1. Tentative Tract Map 36760 (PEN16-0095) has been approved for development of a 221 lot subdivision in the R5 zone.

P2. Conditional Use Permit PEN16-0094 for a Planned Unit Development (Legacy Park) has been approved with Design Guidelines to establish unique development standards, architectural standards, fence and walls, and common area pathways and landscape area for Tentative Tract Map 36760 in the R5 zone. The PUD allows for minimum lot sizes of 4,000 square feet (76 lots) and 5,000 square feet (145 lots) in two distinct areas of the tract map.

P3. Conditional Use Permit PEN16-0094 and Tentative Tract Map 36760 (PEN16-0095) are approved subject to approval of a General Plan Amendment from Residential 30 to Residential 5 and a Zone Change from R30 to R5.

P4. Conditional Use Permit PEN16-0094 establishes the following development standards for single-family residential development in Tentative Tract Map 36760:

- Minimum Lot Size – 4,000 square feet (50’ x 80’)
- Minimum Lot Size -- 5,000 square feet (50’ x 100’)
- Maximum Lot Coverage – 50%

Timing Mechanisms for Conditions (see abbreviation at beginning of affected condition):

R - Map Recordation
GPA – Grading Plan Approval
BP - Building Permits
MR – Map Recordation
AOS – Acceptance of Streets
CP – Construction Permit
GP - Grading Permits
BF – Building Final
P - Any permit
MA – Map Approval
WP - Water Improvement Plans
IPA – Improvement Plan Approval
SI – Street Improvements

Governing Document (see abbreviation at the end of the affected condition):

GP - General Plan
MC - Municipal Code
Ord - Ordinance
Res - Resolution
UBC - Uniform Building Code
SBM - Subdivision Map Act
MC – Municipal Code
CEQA - California Environmental Quality Act
Ldscp - Landscape Development Guidelines and Specs
UFC - Uniform Fire Code

- Maximum Height – 2-story or 35 feet

P5. Tentative Tract Map 36760 and Conditional Use Permit PEN16-0094 are approved for the use of decorative concrete treatments within the public right-of-way at key intersections of Street L within the project.

P6. This approval shall comply with all applicable requirements of the City of Moreno Valley Municipal Code.

P7. This tentative map shall expire three years after the approval date of this tentative map unless extended as provided by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever in the event the applicant or any successor in interest fails to properly file a final map before the date of expiration. (MC 9.02.230, 9.14.050, 080)

P8. The site shall be developed in accordance with the approved tentative map on file in the Community Development Department -Planning Division, the Municipal Code regulations, General Plan, and the Legacy Park Design Guidelines (PEN16-0094), and the conditions of approval contained herein. (MC 9.14.020)

P9. A drought tolerant, low water using landscape palette shall be utilized throughout the tract to the extent feasible.

P10. All undeveloped portions of the site shall be maintained in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)

P11. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)

P12. (BP) Enhanced architectural treatments shall be included on the approved plans for all homes having side and/or reverse frontages to public streets or open space areas.

P13. All site plans, grading plans, landscape and irrigation plans, and street improvement plans shall be coordinated for consistency with this approval.

<u>PRIOR TO GRADING</u>

P14. (GP) Prior to issuance of grading permits, the developer shall pay the applicable Stephen's' Kangaroo Rat (SKR) Habitat Conservation Plan mitigation fee. (Ord)

P15. (GP) Prior to the issuance of grading permits, final erosion control landscape and irrigation plans for all cut or fill slopes over 3 feet in height shall be submitted to the Planning Division for review and approval for the phase in process. The plans shall be designed in accordance with the slope erosion plan as required by the City Engineer for that phase. Man-made slopes greater than 10 feet in height shall be "land formed" to conform to the natural terrain and shall be landscaped and stabilized to minimize visual scarring. (GP Objective 1.5, MC 9.08.080, DG)

P16. (GP) Prior to approval of precise grading plan, final front and street side yard landscape and irrigation plans shall be submitted to the Planning Division for review. The plans shall be prepared in accordance with the City's Municipal Code and landscape specifications, and include required street trees.

P17. (GP) If potential historic, archaeological, or paleontological resources are uncovered during excavation or construction activities at the project site, work in the affected area will cease immediately and a qualified person (meeting the Secretary of the Interior's standards (36CFR61)) shall be consulted by the applicant to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, prehistoric, or paleontological resource. Determinations and recommendations by the consultant shall be implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all affected Native American Tribes before any further work commences in the affected area.

If human remains are discovered, work in the affected area shall cease immediately and the County Coroner shall be notified. If it is determined that the remains are potentially Native American, the California Native American Heritage Commission and any and all affected Native American Indians tribes such as the Morongo Band of Mission Indians or the Pechanga Band of Luiseno Indians shall be notified and appropriate measures provided by State law shall be implemented. (GP Objective 23.3, DG, CEQA).

P18. (GP) Prior to issuance of grading permits, landscape plans for front yards, street trees, common areas, reverse frontage parkways and basins, common area lighting and fences and walls, shall be submitted to the Planning Division for review subject to the requirements of the Legacy Park Design Guidelines the City of Moreno Valley Municipal Code.

P19. (GP) Prior to issuance of grading permits, plans for any security gate system shall be submitted to the Planning Division for review and approval.

P20. (GP) Prior to the issuance of grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein. A mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant within 30 days of project or tentative map approval. No City permit or approval shall be issued until such fee is paid. (CEQA)

PRIOR TO RECORDATION OF FINAL MAP

P22. (R) Prior to final map recordation, subdivision phasing (including any proposed common open space or improvement phasing, if applicable), shall be subject to the Planning Division approval. Any proposed phasing shall provide for adequate vehicular access to all lots in each phase as determined by the City Transportation Engineer or designee and shall substantially conform to all intent and purpose of the subdivision approval. (MC 9.14.080)

P23. (R) Prior to final map recordation any required trail easements shall be provided.

P24. (R) Prior to recordation of the final subdivision map, the developer shall submit for review and approval the following documents to the Planning Division which shall demonstrate that the project will be developed and maintained in accordance with the intent and purpose of the approval:

a. The document to convey title
b. Deed restrictions, easements, or Covenants, Conditions and Restrictions to be recorded

The approved documents shall be recorded at the same time that the subdivision map is recorded. The documents shall contain provisions for general maintenance and ownership of common area pathways and landscape, common area lighting, and common recreation areas. The approved documents shall also contain a provision, which provides that they may not be terminated and/or substantially amended without the consent of the City and the developer's successor-in-interest. (MC 9.14.090)

In addition, the following deed restrictions and disclosures shall be included within the document and grant deed of the properties:

- The developer and homeowners association shall promote the use of native plants and trees and drought tolerant species to the extent feasible.

PRIOR TO BUILDING PERMIT

P25. (BP) Prior to issuance of building permits, the developer or developer's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), Multi-species Habitat Conservation Plan (MSHCP) mitigation fees, and the City's adopted Development Impact Fees. (Ord)

P26. (BP) Prior to issuance of building permits, final front and street side yard landscape and irrigation plans, private slope landscape plans, basin landscape plans, common area lighting and fence and wall plans shall be approved.

PRIOR TO BUILDING FINAL

P27. (BF) Prior to the issuance of Certificates of Occupancy or building final all private and common area landscape and irrigation, common area lighting, and fence and walls shall be installed. Landscaping on lots not yet having dwelling units shall be maintained by the developer weed and disease free. (MC 9.03.040)

Mitigation Measures

Traffic

TR-1: Prior to the issuance of building permits, the Project applicant shall participate in the City's DIF and County TUMF fee programs by paying the requisite fees at the time of building permit, and in addition pay the Project's fair share amount of $43,497 for improvements at the intersections of Indian Street at Cactus Avenue and Indian Street at Gentian Avenue as identified in Table 1-5 that are consistent with the improvements shown on Table 6-3, or as otherwise agreed to by the City and Project Applicant. Project fair share payment shall only be collected if the City creates a fee program that includes the improvements the fair share contribution is intended to construct.

TR-2: Prior to the final approval of the street improvement plans, traffic signal plans will be required for a new traffic signal located at the intersection of Perris Boulevard and Santiago Drive. Prior to issuance of Certificate of Occupancy, the traffic signal and Perris Boulevard and Santiago Drive shall be completed per the approved plans to the satisfaction of the City Engineer.

Biological Resources

BR-1. A qualified biologist will conduct a pre-construction presence/absence survey for burrowing owls within 14 days prior to site disturbance. If burrowing owls are detected onsite, the owls will be relocated/excluded from the site outside of the breeding season following accepted protocols, and subject to the approval of the RCA and wildlife agencies.

BR-2. As feasible, vegetation clearing should be conducted outside of the nesting season, which is generally identified as February 1 through September 15. If avoidance of the nesting season is not feasible, then a qualified biologist shall conduct a nesting bird survey within three days prior to any disturbance of the site, including disking, demolition activities, and grading. If active nests are identified, the biologist shall establish suitable buffers around the nests, and the buffer areas shall be avoided until the nests are no longer occupied and the juvenile birds can survive independently from the nests.

Cultural Resources

CR-1: Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a professional archaeological monitor has been retained by the Applicant to conduct monitoring of all mass grading and trenching activities and that the monitor has the authority to temporarily halt and redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project archaeologist, with input from the appropriate Tribe, shall prepare a Cultural Resources Monitoring Plan (CRMP) to document protocols for inadvertent finds, to determine potential protection measures from further damage and destruction for any identified archaeological resource(s)/ tribal cultural resources (TCRs), outline the process for monitoring and for completion of the final Phase IV Monitoring Report. If any archaeological and/or TCRs are identified during monitoring, these will also be documented and addressed per standard archaeological protocols in the Phase IV report, with the exception of human remains which will be addressed per CUL-5. The Project Archaeologist shall attend the pregrading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.

CR-2: At least 30 days prior to the issuance of a grading permit, the Applicant shall contact the appropriate Luiseño tribe to develop a Cultural Resources Treatment Agreement and shall provide evidence to the City of Moreno Valley that the professionally qualified Luiseño Native American monitor(s) has been secured from the interested tribe(s), and that the monitor shall be allowed to monitor all mass grading and trenching activities. The Tribal representative(s) shall attend the pre-grading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.

CR-3: If, during mass grading and trenching activities, the Archaeologist or Tribal representatives suspect that an archaeological resource and/or TCR may have been unearthed, the monitor identifying the potential resources, in consultation with the other monitor as appropriate, shall immediately halt and redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. The Native American monitor(s) or appropriate representative(s) and the archaeological monitor shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2. The archaeological monitor and tribal monitor(s) or appropriate representative(s), the Project Applicant, and the City Planning Division shall confer regarding mitigation of the discovered resource(s). All sacred sites, should they be encountered within the Project area, shall be avoided and preserved as the preferred mitigation, if feasible.

CR-4: Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan:

> "If any suspected archaeological resources are discovered during ground-disturbing activities and the archaeological monitor or Tribal representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal representatives to the site to assess the significance of the find."

CR-5: If human remains are encountered, California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to California Public Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner. If the Riverside County Coroner determines the remains to be Native American, the California Native American Heritage Commission must be contacted within 24 hours. The Native American Heritage Commission must then immediately notify the "most likely descendant(s)" of receiving notification of the discovery. The most likely descendant(s) shall then make recommendations within 48 hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code §5097.98.

CR-6: Prior to construction involving excavation four feet or more below existing surface grade, the construction contractor shall provide evidence that a qualified paleontologist has been retained, and that the paleontologist(s) shall be present during all grading and other significant ground-disturbing activities that reach four feet or more below existing surface grade. In the event fossiliferous deposits are encountered, the following measures shall be implemented:

- Monitoring shall be conducted by qualified paleontological monitor(s) of excavation in areas identified as likely to contain paleontological resources, including very old alluvial fan deposits. Paleontological monitors shall be equipped to salvage fossils as they are unearthed, to avoid construction delays, and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. Monitors shall be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Monitoring may be reduced if the potentially fossiliferous units are determined upon exposure and examination by qualified paleontological personnel to have low potential to contain fossil resources.

- Paleontological monitoring of any earthmoving will be conducted by a monitor, under direct guidance of a qualified paleontologist. Earthmoving in areas of the parcel where previously undisturbed sediments are buried, but not otherwise disturbed, will not be monitored.

- If too few fossil remains are found after 50 percent of the planned-for earthmoving has been completed, monitoring can be reduced or discontinued in those areas at the Project paleontologist's direction.

- Preparation of recovered specimens to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates.

- Identification and curation of specimens into a professional, fully accredited museum repository with permanent retrievable storage. The paleontologist must have a written repository agreement in hand prior to the initiation of mitigation activities.

- Preparation or a report of findings with and appended itemized inventory of specimens. The report and inventory, when submitted to the city along with confirmation of the curation of recovered of recovered specimens into an established, accredited museum repository, will signify completion of the program to mitigate impacts to paleontological resources.

<u>Noise</u>

N-1: Construction activities shall be operated in a manner that limits noise impacts on surrounding uses (General Plan Policy 6.5.2). In order to limit noise impacts on surrounding property, the construction contractor will ensure the following:

- All construction equipment powered by gasoline or diesel engines will be required to have sound-control devices at least as effective as those originally provided by the manufacturer; no equipment will be permitted to have an unmuffled exhaust.
- Mobile noise-generating equipment and machinery will be shut off when not in use;

Construction vehicles assessing the site will be required to use the shortest possible route to and from local freeways, provided the routes do not expose additional receptors to noise.

N-2: The staging of construction equipment and the construction trailer shall be placed as far as possible from the existing single-family residences located to the west and south and the schools to the south.

Building and Safety Division

The following are general comments generated on the information provided and do not constitute a complete list of potential items or issues for this project proposal. Fee estimates for plan review and permits can be obtained by contacting the Building and Safety Division at 951.413.3350.

B1. All new structures shall be designed in conformance to the latest design standards adopted by the State of California in the California Building Code, (CBC) Part 2, Title 24, California Code of Regulations including requirements for allowable area, occupancy separations, fire suppression systems, etc. The current code edition is the 2016 CBC.

B2. The proposed project may be classified as an R-3/U occupancy and shall comply with the 2016 California Residential Code (CRC).

B3. Building plans submitted shall be signed and sealed by a California licensed design professional as required by the State Business and Professions Code.

B4. The proposed development may be subject to the payment of required development fees as required by the City's Fee Ordinance at the time an application is submitted or prior to the issuance of permits as determined by the City.

B5. The proposed project may be subject to approval by the Water District serving this location and all applicable fees and charges shall be paid to the District prior to permit issuance. Contact the appropriate water district for details.

B6. Prior to final inspection, all plans shall be placed on a CD Rom for reference and verification. Plans will include "as built" plans, revisions and changes. The CD will also include Title 24 energy calculations, structural calculations and all other pertinent information. It will be the responsibility of the developer and or the building or property owner(s) to bear all costs required for this process. The CD will be presented to the Building and Safety Division for review prior to final inspection and building occupancy. The CD will become the property of the Moreno Valley Building and Safety Division. In addition, a site plan showing the path of travel from public right of way with elevations will be required.

SCHOOL DISTRICT

S1. (BP) Prior to issuance of building permits, the developer shall provide to the Community & Economic Development Director a written certification by the affected school district that either: (1) the project has complied with the fee or other exaction levied on the project by the governing board of the district, pursuant to Government Code Section 65996; or (2) the fee or other requirement does not apply to the project.

UNITED STATES POSTAL SERVICE

PO1. (BP) Prior to the issuance of building permits, the developer shall contact the U.S. Postal Service to determine the appropriate type and location of mailboxes.

FIRE PREVENTION BUREAU

With respect to the conditions of approval, the following fire protection measures shall be provided in accordance with Moreno Valley City Ordinances and/or recognized fire protection standards:

F1. Prior to issuance of Certificate of Occupancy or Building Final, “Blue Reflective Markers” shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 509.1 and MVLT 440A-0 through MVLT 440C-0)

F2. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)

F3. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4)

F4. Prior to construction and issuance of building permits, all locations where structures are to be built shall have an approved Fire Department emergency vehicular access road (all weather surface) capable of sustaining an imposed load of 80,000 lbs. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4 and MV City Standard Engineering Plan 108d)

F5. Prior to construction and issuance of Building Permits, fire lanes and fire apparatus access roads shall have an unobstructed width of not less than twenty–four (24) feet as approved by the Fire Prevention Bureau and an unobstructed vertical clearance of not less the thirteen (13) feet six (6) inches. (CFC 503.2.1 and MVMC 8.36.060[E])

F6. Prior to construction, all roads, driveways and private roads shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.060[G])

F7. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4)

F8. Prior to building construction, dead end roadways and streets which have not been completed shall have a turnaround capable of accommodating fire apparatus. (CFC 503.2.5)

F9. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft (0.3 m drop in 6 m), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503 and MVMC 8.36.060)

F10. Prior to issuance of the building permit for development, independent paved access to the nearest paved road, maintained by the City shall be designed and constructed by the developer within the public right of way in accordance with City Standards. (MVMC 8.36.060, CFC 501.4)

F11. Prior to construction, “private” driveways over 150 feet in length shall have a turn-around as determined by the Fire Prevention Bureau capable of accommodating fire apparatus. Driveway grades shall not exceed 12 percent. (CFC 503 and MVMC 8.36.060, CFC 501.4)

F12. Prior to issuance of Certificate of Occupancy or Building Final, all <u>residential dwellings</u> shall display street numbers in a prominent location on the street side of the residence in such a position that the numbers are easily visible to approaching emergency vehicles. The numbers shall be located consistently on each dwelling throughout the development. The numerals shall be no less than four (4) inches in height and shall be low voltage lighted fixtures. (CFC 505.1, MVMC 8.36.060[I])

F13. Prior to issuance of Building Permits, the applicant/developer shall participate in the Fire Impact Mitigation Program. (Fee Resolution as adopted by City Council)

F14. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9, MVMC 8.36.100[D])

F15. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall:

a) Be signed by a registered civil engineer or a certified fire protection engineer;
b) Contain a Fire Prevention Bureau approval signature block; and
c) Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau.

The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 507, 501.3)

F16. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.

F17. Single Family Dwellings. Schedule "A" fire prevention approved standard fire hydrants (6” x 4” x 2 ½”) shall be located at each intersection of all residential streets. Hydrants shall be spaced no more than 500 feet apart in any direction so that no point on the street is more than 250 feet from a hydrant. Minimum fire flow shall be 1000 GPM for 1 hour duration of 20 PSI. Where new water mains are extended along streets where hydrants are not needed for protection of structures or similar fire problems, serving one and two-family residential developments, standard fire hydrants shall be provided at spacing not to exceed 1000 feet along the tract boundary for transportation hazards. (CFC 507.3, Appendix B, MVMC 8.36.060).

PUBLIC WORKS DEPARTMENT

Land Development Division

The following are the Public Works Department – Land Development Division Conditions of Approval for this project and shall be completed at no cost to any government agency. All questions regarding the intent of the following conditions shall be referred to the Land Development Division.

General Conditions

LD1. (G) The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). [MC 9.14.010]

LD2. (G) The tentative map shall correctly show all existing easements, traveled ways, and drainage courses. Any omission may require the map or plans associated with this application to be resubmitted for further consideration. [MC 9.14.040(A)]

LD3. (G) In the event right of way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right of way in accordance with the Land Development Division's administrative policy. If unsuccessful, the Developer shall enter into an agreement with the City to acquire the necessary right of way or offsite easements and complete the improvements at such time the City acquires the right of way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right of way or easement acquisition. [GC 66462.5]

LD4. (G) If improvements associated with this project are not initiated within two (2) years of the date of approval of the Public Improvement Agreement (PIA), the City Engineer may require that the engineer's estimate for improvements associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the PIA or issuance of a permit.

LD5. (G) The developer shall monitor, supervise and control all construction and construction supportive activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:

a. Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.

b. Observance of working hours as stipulated on permits issued by the Land Development Division.

c. The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.

d. All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements during the grading operations.

Violation of any condition, restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedy as noted in City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.

LD6. (G) The developer shall protect downstream properties from damage caused by alteration of drainage patterns (i.e. concentration or diversion of flow, etc.). Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. [MC 9.14.110]

LD7. (G) Public drainage easements, when required, shall be a minimum of 25 feet wide and shall be shown on the map and plan, and noted as follows: *"Drainage Easement – no structures, obstructions, or encroachments by landfills are allowed."* In addition, the grade within the easement area shall not exceed a 3:1 (H:V) slope, unless approved by the City Engineer.

LD8. (G) For single family residential subdivisions, all lots shall drain toward the street unless otherwise approved by the City Engineer. Residential lot drainage to the street shall be by side yard swales, and must be directed to a driveway or drainage devices located outside the right of way in accordance with City Standard MVSI-154-0. No cross-lot or over the sidewalk drainage shall be allowed.

LD9. (G) Prior to any plan approval, a final detailed drainage study (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer. The study shall include existing and proposed hydrologic conditions as well as hydraulic calculations for all drainage control devices and storm drain lines. [MC 9.14.110(A.1)]. A digital (pdf) copy of the approved drainage study shall be submitted to the Land Development Division.

LD10. (G) Water quality best management practices (BMPs) designed to meet Water Quality Management Plan (WQMP) requirements for single-family residential development shall not be used as a construction BMP. Water quality BMPs shall be maintained for the entire duration of the project construction and be used to treat runoff from those developed portions of the project. Water quality BMPs shall be protected from upstream construction related runoff by having proper best management practices in place and maintained. Water quality BMPs shall be graded per the approved design plans and once landscaping and irrigation has been installed, it and its maintenance shall be turned over to an established Homeowner's Association (HOA). The Homeowner's Association shall enter into an agreement with the City for basin maintenance.

LD11. (G) The final approved conditions of approval (COAs) and any applicable Mitigation Measures issued by the Planning Division shall be photographically or electronically placed on Mylar sheets and included in the Grading and Street Improvement plans.

LD12. (G) Aggregate slurry, as defined in Section 203-5 of Standard Specifications for Public Works Construction, may be required just prior to the end of the one-year warranty period of the public streets at the discretion of the City Engineer. If slurry is required, a slurry mix design shall be submitted for review and approved by the City Engineer. The latex additive shall be Ultra Pave 70 (for anionic) or Ultra Pave 65 K (for cationic) or an approved equal per the geotechnical report. The latex shall be added at the emulsion plant after weighing the asphalt and before the addition of mixing water. The latex shall be added at a rate of two to two-and-one-half (2 to 2½) parts to one-hundred (100) parts of emulsion by volume. Any existing striping shall be removed prior to slurry application and replaced per City standards.

<u>Prior to Grading Plan Approval</u>

LD13. (GPA) Grading plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

LD14. (GPA) Landscape & Irrigation plans (prepared by a registered/licensed landscape architect) for water quality BMPs shall be submitted for review and approved by the City Engineer per the current submittal requirements, if applicable.

LD15. (GPA) The developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:

a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.

b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.

c. All improvement plans are substantially complete and appropriate clearance letters are provided to the City.

d. A soils/geotechnical report (addressing the soil's stability and geological conditions of the site) shall be submitted to the Land Development Division for review. A digital (pdf) copy of the soils/geotechnical report shall be submitted to the Land Development Division.

LD16. (GPA) The developer shall select Low Impact Development (LID) Best Management Practices (BMPs) designed per the latest version of the Water Quality Management Plan (WQMP) - a guidance document for the Santa Ana region of Riverside County.

LD17. (GPA) For projects that will result in discharges of storm water associated with construction with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID#) from the State Water Quality Control Board (SWQCB) which shall be noted on the grading plans.

LD18. (GPA) Two (2) copies of the final project-specific Water Quality Management Plan (WQMP) shall be submitted for review and approved by the City Engineer, which:

a. Addresses Site Design Best Management Practices (BMPs) such as minimizing impervious areas, maximizing permeability, minimizes directly connected impervious areas to the City's street and storm drain systems, and conserves natural areas;

b. Incorporates Source Control BMPs and provides a detailed description of their implementation;

c. Describes the long-term operation and maintenance requirements for BMPs requiring maintenance; and

d. Describes the mechanism for funding the long-term operation and maintenance of the BMPs.

A copy of the final WQMP template can be obtained on the City's Website or by contacting the Land Development Division. A digital (pdf) copy of the approved final project-specific Water Quality Management Plan (WQMP) shall be submitted to the Land Development Division.

LD19. (GPA) A Storm Water Pollution Prevention Plan (SWPPP) shall be prepared in conformance with the State's current Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request.

LD20. (GPA) The developer shall pay all remaining plan check fees.

LD21. (GPA) Resolution of all drainage issues shall be as approved by the City Engineer.

<u>Prior to Grading Permit</u>

LD22. (GP) The developer shall submit recorded slope easements from adjacent property owners in all areas where grading resulting in slopes is proposed to take place outside of the project boundaries. For all other offsite grading, written permission from adjacent property owners shall be submitted.

LD23. (GP) A receipt showing payment of the Area Drainage Plan (ADP) fee to Riverside County Flood Control and Water Conservation District shall be submitted. [MC 9.14.100(O)]

LD24. (GP) Security, in the form of a cash deposit (preferable), or letter of credit shall be submitted as a guarantee of the completion of the grading operations for the project. [MC 8.21.070]

LD25. (GP) Security, in the form of a cash deposit (preferable), or letter of credit shall be submitted as a guarantee of the implementation and maintenance of erosion control measures. At least twenty-five (25) percent of the required security shall be in the form of a cash deposit with the City. [MC 8.21.160(H)]

LD26. (GP) The developer shall pay all applicable inspection fees.

LD27. (GP) A digital (pdf) copy of the approved grading plans shall be submitted to the Land Development Division.

Prior to Map Approval

LD28. (MA) Final maps (prepared by a registered civil engineer and/or licensed surveyor) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

LD29. (MA) Resolution of all drainage issues shall be as approved by the City Engineer.

LD30. (MA) A copy of the Covenants, Conditions and Restrictions (CC&Rs) shall be submitted for review and approved by the City Engineer. The CC&Rs shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project. In addition, for single-family residential development, bylaws and articles of incorporation shall also be included as part of the maintenance agreement for any water quality BMPs.

LD31. (MA) All street dedications shall be free of all encumbrances, irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer.

LD32. (MA) The developer shall guarantee the completion of all related improvements required for this project by executing a Public Improvement Agreement (PIA) with the City and posting the required security. [MC 9.14.220]

LD33. (MA) All public improvement plans required for this project shall be approved by the City Engineer in order to execute the Public Improvement Agreement (PIA).

LD34. (MA) The developer shall enter into a Cooperative Agreement with the City and Riverside County Flood Control and Water Conservation District establishing the terms and conditions covering the inspection, operation and maintenance of Master Drainage Plan facilities required to be constructed as part of the project.

LD35. (MA) The developer shall comply with the requirements of the City Engineer based on recommendations of the Riverside County Flood Control District regarding the construction of County Master Plan Facilities.

LD36. (MA) If the project involves the subdivision of land, maps may be developed in phases with the approval of the City Engineer. Financial security shall be provided for all public improvements associated with each phase of the map. The boundaries of any multiple map increment shall be subject to the approval of the City Engineer. If the project does not involve the subdivision of land and it is necessary to dedicate right of way/easements, the developer shall make the appropriate offer of dedication by separate instrument. In either case, the City

Engineer may require the dedication and construction of necessary utility, street or other improvements beyond the project boundary, if the improvements are needed for circulation, parking, access, or for the welfare or safety of the public. [MC 9.14.080(B)(C), GC 66412 & 66462.5]

LD37. (MA) All proposed street names shall be submitted for review and approved by the City Engineer, if applicable. [MC 9.14.090(E.2.k)]

LD38. (MA) Under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System (NPDES) as mandated by the Federal Clean Water Act, this project is subject to the following requirements:

a. Establish a Home Owners Association (HOA) to finance the maintenance of the “Water Quality BMPs”. Any lots which are identified as “Water Quality BMPs” shall be owned in fee by the HOA.

b. Dedicate a maintenance easement to the City of Moreno Valley.

c. Execute a maintenance agreement between the City of Moreno Valley and the HOA, which shall be approved by City Council.

d. Establish a trust fund per the terms of the maintenance agreement.

e. Provide a certificate of insurance per the terms of the maintenance agreement.

f. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation, maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.

   i. Participate in the mail ballot proceeding in compliance with Proposition 218, for the Residential NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process, or

   ii. Establish an endowment to cover future maintenance costs for the Residential NPDES Regulatory Rate Schedule.

g. Notify the Special Districts Division of the intent to record the final map 90 days prior to City Council action authorizing recordation of the final map and the financial option selected. The final option selected shall be in place prior to the issuance of certificate of occupancy. [California Government Code & Municipal Code]

LD39. (MA) After recordation, a digital (pdf) copy of the recorded map shall be submitted to the Land Development Division.

Prior to Improvement Plan Approval

LD40. (IPA) All public improvement plans (prepared by a licensed/registered civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

LD41. (IPA) The developer shall submit clearances from all applicable agencies, and pay all applicable plan check fees.

LD42. (IPA) The street improvement plans shall comply with current City policies, plans and applicable City standards (i.e. MVSI-160 series, etc.) throughout this project.

LD43. (IPA) The design plan and profile shall be based upon a centerline, extending beyond the project boundaries a minimum distance of 300 feet at a grade and alignment approved by the City Engineer.

LD44. (IPA) The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts for trench repairs may be allowed for emergency repairs or as specifically approved by the City Engineer.

LD45. (IPA) All dry and wet utilities shall be shown on the plans and any crossings shall be potholed to determine actual location and elevation. Any conflicts shall be identified and addressed on the plans. The pothole survey data shall be submitted to Land Development with the public improvement plans for reference purposes only. The developer is responsible to coordinate with all affected utility companies and bear all costs of any utility relocation.

LD46. (IPA) The developer is required to bring any existing access ramps adjacent to and fronting the project to current ADA (Americans with Disabilities Act) requirements. However, when work is required in an intersection that involves or impacts existing access ramps, all access ramps in that intersection shall be retrofitted to comply with current ADA requirements, unless approved otherwise by the City Engineer.

LD47. (IPA) Drainage facilities (i.e. catch basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.

LD48. (IPA) The hydrology study shall be designed to accept and properly convey all off-site drainage flowing onto or through the site. All storm drain design and improvements shall be submitted for review and approved of the City Engineer. In the event that the City Engineer permits the use of streets for drainage purposes, the provisions of current City standards shall apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, as in the case where one travel lane in each direction shall not be used for drainage conveyance for emergency vehicle access on streets classified as minor arterials and greater, the developer shall provide adequate facilities as approved by the City Engineer. [MC 9.14.110 A.2]

Prior to Encroachment Permit

LD49. (EP) All work performed within public right of way requires an encroachment permit. Security (in the form of a cash deposit or other approved means) may be required as determined by the City Engineer. For non-subdivision projects, the City Engineer may require the execution of a Public Improvement

Agreement (PIA) as a condition of the issuance of a construction or encroachment permit. All inspection fees shall be paid prior to issuance of construction permit. [MC 9.14.100(C.4)]

LD50. (EP) A digital (pdf) copy of all approved improvement plans shall be submitted to the Land Development Division.

LD51. (EP) All applicable inspection fees shall be paid.

Prior to Building Permit

LD52. (BP) For all subdivision projects, the map shall be recorded (excluding model homes). [MC 9.14.190]

LD53. (BP) Certification to the line, grade, flow test, and system invert elevations for the water quality control BMPs shall be submitted or review and approved by the City Engineer (excluding models homes).

LD54. (BP) An engineered-fill certification, rough grade certification and compaction report shall be submitted for review and approved by the City Engineer. A digital (pdf) copy of the approved compaction report shall be submitted to the Land Development Division. All pads shall meet pad elevations per approved grading plans as noted by the setting of "blue-top" markers installed by a registered land surveyor or licensed civil engineer.

Prior to Occupancy

LD55. (CO) All required as-built plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

LD56. (CO) The engineered final/precise grade certification shall be submitted for review and approved by the City Engineer.

LD57. (CO) All outstanding fees shall be paid.

LD58. (CO) The developer shall complete all public improvements in conformance with current City standards, except as noted in the Special Conditions, including but not limited to the following:

a. Street improvements including, but not limited to: pavement, base, curb and/or gutter, cross gutters, spandrel, sidewalks, drive approaches, pedestrian ramps, street lights, signing, striping, under sidewalk drains, landscaping and irrigation, medians, redwood header boards, pavement tapers/transitions and traffic control devices as appropriate.

b. Storm drain facilities including, but not limited to: storm drain pipe, storm drain laterals, open channels, catch basins and local depressions.

c. City-owned utilities.

d. Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.

e. Under grounding of all existing and proposed utilities adjacent to and on-site. [MC 9.14.130]

f. Relocation of overhead electrical utility lines including, but not limited to: electrical, cable and telephone.

LD59. (CO) For residential subdivisions, prior to releasing the last 20% or last 5 permitted structures (whichever is greater, unless otherwise determined by the City Engineer) of any Map Phase, punch list work for improvements and capping of streets in that phase shall be completed and approved for acceptance by the City Engineer.

LD60. (CO) The Developer shall comply with the following water quality related items:

a. Notify the Land Development Division prior to construction and installation of all structural BMPs so that an inspection can be performed.

b. Demonstrate that all structural BMPs described in the approved final project-specific WQMP have been constructed and installed in conformance with the approved plans and specifications;

c. Demonstrate that Developer is prepared to implement all non-structural BMPs described in the approved final project-specific WQMP; and

d. Demonstrate that an adequate number of copies of the approved final project-specific WQMP are available for future owners/occupants.

e. Clean and repair the water quality BMP's, including re-grading to approved civil drawings if necessary.

f. Provide City with updated Engineer's Line and Grade Certification.

g. Obtain approval and complete installation of the irrigation and landscaping.

LD61. (CO) The applicant shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit:

a. Field verification that structural Site Design, Source Control and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP).

b. Certification of best management practices (BMPs) from a state licensed civil engineer. An original WQMP BMP Certification shall be submitted for review and approved by the City Engineer.

<u>Special Conditions</u>

LD62. (GP) Prior to the payment of the Development Impact Fee (DIF), the developer may enter into a DIF Improvement Credit Agreement to secure credit for the construction of applicable improvements. The Agreement must submitted prior to the issuance of a grading permit and must be approved by the City Council prior to receiving credit for applicable improvements. If the developer fails to complete this agreement prior to the timing specified above, no credits will be given. The developer shall pay current DIF fees adopted by the City Council. [Ord. 695 § 1.1 (part), 2005] [MC 3.38.030, 040, 050]

LD63. (GP) Prior to the payment of the Transportation Uniform Mitigation Fee (TUMF), the developer may enter into a TUMF Improvement Credit Agreement to secure credit for the construction of applicable improvements. The Agreement must submitted prior to the issuance of a grading permit and must be approved by the City Council prior to receiving credit for applicable improvements. If the developer fails to complete this agreement by the timing specified above, no credits will be given. The developer shall pay current TUMF fees adopted by the City Council. [Ord. 835 § 2.1, 2012] [MC 3.44.060]

LD64. Prior to final map approval, the map shall show the following:

a. The appropriate right-of-way dedication along Indian Street frontage shown as Lot S on the tentative tract map. This includes right-of-way required for a bus turn-out as conditioned by the Transportation Engineering Division.
b. The appropriate right-of-way dedication on Santiago Drive frontage shown as Lots Q and R on the tentative tract map.
c. The appropriate right-of-way dedication on Gentian Street frontage shown as Lot D on the tentative parcel map.
d. A 10-foot landscape easement along the east side of Indian Street and south side of Gentian Avenue.
e. A 1.5-foot landscape easement along the north side of Santiago Drive.

LD65. Prior to final map approval, the Developer shall guarantee the construction of the following improvements by entering into a public improvement agreement and posting security. The improvements along the project frontage shall be completed prior to occupancy of the first building or as otherwise determined by the City Engineer:

a. Indian Street, Minor Arterial, City Standard MVSI-105A-0 (88-foot RW / 64-foot CC) shall be constructed to complete the half-width along the entire project's east frontage. Remaining improvements shall consist of, but not be limited to pavement and base, sidewalk, catch basin, streetlights, pedestrian access ramps, and dry and wet utilities. In addition, the applicant will be required to install, replace and/or repair any missing, damaged or substandard improvements that do not meet current City standards.
b. Santiago Drive (east), Collector, City Standard MVSI-106B-0 (66-foot RW / 44-foot CC) shall be constructed to half-width plus an additional 12 feet south of the centerline from Street "L" to the project easterly boundary and half-width plus an additional 18 feet south of the centerline from the project easterly boundary to Perris Boulevard. Improvements shall consist of, but not be limited to, pavement and base, curb, gutter, sidewalk, driveway approaches, catch basins, storm drain, streetlights, pedestrian access ramps, and dry and wet utilities.
c. Santiago Drive (west), Collector, City Standard MVSI-106B-0 (66-foot RW / 44-foot CC) shall be constructed to full-width between Indian Street and

Street "N". Improvements shall consist of, but not be limited to, pavement and base, curb, gutter, sidewalk, driveway approaches, catch basins, storm drain, streetlights, pedestrian access ramps, and dry and wet utilities.

d. Gentian Street, Minor Arterial (modified), City Standard MVSI-105A-0 (88-foot RW / 64-foot CC) shall be constructed to half-width plus an additional 18 feet north of the centerline, along the entire project's north frontage. Improvements shall consist of, but not be limited to, a raised median, pavement and base, curb, gutter, sidewalk, catch basins, streetlights, pedestrian access ramps, dry and wet utilities.

e. Street "D", Local Street (modified), City Standard MVSI-107A-0 (56-foot RW / 36-foot CC) shall be constructed to full-width as shown on the tentative map. Improvements shall consist of, but not be limited to, pavement and base, curb, gutter, sidewalk, catch basins, storm drain streetlights, pedestrian access ramps, dry and wet utilities.

f. Street "L", Collector (modified), City Standard MVSI-106B-0 (66-foot RW / 40-foot CC) shall be constructed to full-width as shown on the tentative map. Improvements shall consist of, but not be limited to, pavement and base, curb, gutter, sidewalk, catch basins, storm drain, streetlights, pedestrian access ramps, dry and wet utilities.

g. Streets "A", "B", "C", "E", "F", "G", "H", "I", "J", "K" "M", "N", "O", and "P", Local Street, City Standard MVSI-107A-0 (56-foot RW / 36-foot CC) shall be constructed to full-width as shown on the tentative map. Improvements shall consist of, but not be limited to, pavement and base, curb, gutter, sidewalk, catch basins, storm drain streetlights, pedestrian access ramps, dry and wet utilities.

h. All knuckles and cul-de-sacs shall be constructed per City Standards MVSI-162-0 and MVSI-163A-0, respectively.

i. Sunnymead Master Drainage Plan (MDP) Line M-2 within the public right-of-way in Santiago Drive, Perris Boulevard and Iris Avenue or an alignment as approved by both the RCFC&WCD and the City. This includes, but not limited to, construction of a 39-inch minimum storm drain, laterals, catch basins/inlets, and local depressions as needed.

j. The intersection of Perris Boulevard and Santiago Drive shall be fully improved to the ultimate right-of-way and street width in order to construct a traffic signal required by the Transportation Engineering Division condition TE8.

LD66. Lettered Lots "AA" and "DD" shall be designated for water quality bio-retention purposes and shall be reserved in fee title for the owner, heirs and assigns.

LD67. Lettered Lots "CC" and "HH" shall be designated for park purposes and reserved per the Parks and Community Services Department requirements.

LD68. Lettered Lots "BB", "EE", "FF", "GG", "II", "JJ", "KK", "LL" "MM", and "NN", shall be designated open space and reserved in fee title for the owner, heirs and assigns.

LD69. Lettered Lots “BB”, “EE”, and “FF” shall show a 25-foot drainage easement for storm drain maintenance purposes.

LD70. Prior to the final map approval, the developer shall secure the following:

a. Additional right-of-way along the south side of Santiago Drive (east) between Street “L” and approximately 650 feet east of Street “L” for the construction of an eastbound travel lane as shown on the tentative map. The dedication shall be submitted for review, approval, and recorded.
b. Additional right-of-way between Indian Street and Street “N” for the full construction of Santiago Drive (west) as shown on the tentative map. The dedication shall be submitted for review, approval, and recorded.
c. Vacation of a portion of the south side of Santiago Drive (west), including utilities and drainage easements, as shown on the approved tentative tract map and as approved by City Engineer

LD71. Prior to rough grading plan approval, this project shall demonstrate, via a final drainage study, that the increased runoff resulting from the development of this site is mitigated. During no storm event shall the flow leaving the site in the developed condition be larger than that of the pre-developed condition, unless the study demonstrates that the existing or proposed drainage facilities can accommodate the increased run-off. The drainage study shall analyze the following events: 1, 3, 6 and 24-hour duration events for the 2, 5, 10 and 100-year storm events. The applicant understands that additional detention measures may be required beyond those shown on the tentative map and preliminary drainage study.

LD72. Prior to rough grading plan approval, the Applicant shall prepare and submit for approval a final, project-specific water quality management plan (F-WQMP). The F-WQMP shall be consistent with the approved P-WQMP, as well as in full conformance with the document; “Water Quality Management Plan - A Guidance Document for the Santa Ana Region of Riverside County” dated October 22, 2012. The F-WQMP shall be submitted and approved prior to application for and issuance of grading permits. At a minimum, the F-WQMP shall include the following: stormwater BMPs; LID principles; Source control BMPs; Operation and Maintenance requirements for BMPs; and sources of funding for BMP implementation.

a. The Applicant has proposed to incorporate the use of two (2) bio-retention basins. Final design and sizing details of all BMPs must be provided in the first submittal of the F-WQMP. The Applicant acknowledges that more area than currently shown on the plans may be required to treat site runoff as required by the WQMP guidance document.
b. All proposed LID BMP’s shall be designed in accordance with the RCFC&WCD’s Design Handbook for Low Impact Development Best Management Practices, dated September 2011.
c. The proposed LID BMP’s as identified in the project-specific P-WQMP shall be incorporated into the Final WQMP.

d. The NPDES notes per City Standard Drawing No. MVFE-350-0 shall be included in grading plans.
e. Post-construction treatment control BMPs, once placed into operation for post-construction water quality control, shall not be used to treat runoff from construction sites or unstabilized areas of the site.

LD73. Prior to precise grading plan approval, emergency overflow area(s) shall be shown at all applicable drainage improvement locations in the event that the drainage improvement fails or exceeds full capacity. This may include, but not be limited to, an emergency spillway in the proposed detention basin(s).

LD74. Prior to issuance of a building permit, the precise grading plans shall be approved.

LD75. Prior to street improvement plan approval, all dry and wet utilities shall be shown on the plans and any crossings shall be potholed to determine actual location and elevation. Any conflicts shall be identified and addressed on the plans. The pothole survey data shall be submitted to Land Development with the public improvement plans for reference purposes only. The developer is responsible to coordinate with all affected utility companies and bear all costs of any utility relocation.

LD76. Prior to occupancy, all overhead utility lines less than 115,000 volts fronting or within the entire project site boundary shall be placed underground per Section 9.14.130C of the City Municipal Code.

LD77. The Applicant shall, prior to building or grading permit closeout or the issuance of a certificate of occupancy, demonstrate:

a. That all structural BMPs have been constructed and installed in conformance with the approved plans and specifications;
b. That all structural BMPs described in the F-WQMP have been implemented in accordance with approved plans and specifications;
c. That the Applicant is prepared to implement all non-structural BMPs included in the F-WQMP, conditions of approval, and building/grading permit conditions; and
d. That an adequate number of copies of the approved F-WQMP are available for the future owners/occupants of the project.

LD78. Prior to occupancy, as-built street improvement plans, storm drain plans and precise grading plans shall be submitted for review and approved.

Special Districts Division

Conditions are standard to all or most development projects. Some special conditions, modified conditions or clarification of conditions may be included. Please review conditions as listed and contact the Division at 951.413.3480 for any questions.

Acknowledgement of Conditions

The following are the Special Districts Division's Conditions of Approval for PA14-0052 and PA14-0053; this project shall be completed at no cost to any Government Agency. All questions regarding the following Conditions including but not limited to intent, requests for change/modification, variance and/or request for extension of time shall be sought from the Special Districts Division of the Public Works Department 951.413.3480 or by emailing specialdistricts@moval.org.

General Conditions

SD-1 The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services District Zone A (Parks & Community Services) and Zone C (Arterial Street Lighting). All assessable parcels therein shall be subject to annual parcel taxes for Zone A and Zone C for operations and capital improvements.

SD-2 Plans for external parkway and median landscape areas designated in the project's Conditions of Approval for incorporation into a City coordinated landscape maintenance program, shall be prepared and submitted in accordance with the City of Moreno Valley Public Works Department Landscape Design Guidelines. The guidelines are available on the City's website at www.moval.org/sd or from the Special Districts Division (951.413.3480 or specialdistricts@moval.org).

SD-3 In the event the City of Moreno Valley determines that funds authorized by any Proposition 218 mail ballot proceeding are insufficient to meet the costs for external parkway maintenance and utility charges, the City shall have the right, at its option, to terminate the grant of any or all parkway maintenance easements. This power of termination, should it be exercised, shall be exercised in the manner provided by law to quit claim and abandon the property so conveyed to the District, and to revert to the Developer or the Developer's successors in interest, all rights, title, and interest in said parkway areas, including but not limited to responsibility for perpetual maintenance of said areas.

SD-4 The Developer, or the Developer's successors or assignees shall be responsible for all parkway and median landscape maintenance for a period of one (1) year commencing from the time all items of work have been completed to the satisfaction of Special Districts staff as per the City of Moreno Valley Public Works Department Landscape Design Guidelines, or until such time as the District accepts maintenance responsibilities.

SD-5 Any damage to existing landscape areas maintained by the City of Moreno Valley due to project construction shall be repaired/replaced by the Developer, or Developer's successors in interest, at no cost to the City of Moreno Valley.

SD-6 The ongoing maintenance of any internal parkway landscaping required to be installed within the tract shall be the responsibility of the Home Owner's Association.

SD-7 Plan check fees for review of parkway/median landscape plans for improvements that shall be maintained by the City of Moreno Valley are due upon the first plan submittal. (MC 3.32.040)

SD-8 Inspection fees for the monitoring of landscape installation associated with the City of Moreno Valley maintained parkways/medians are due prior to the required pre-construction meeting. (MC 3.32.040)

SD-9 Street Light Authorization forms for all street lights that are conditioned to be installed as part of this project must be submitted to the Special Districts Division for approval, <u>prior to</u> street light installation. The Street Light Authorization form can be obtained from the utility company providing electric service to the project, either Moreno Valley Utility or Southern California Edison. For questions, contact the Special Districts Division at 951.413.3480 or specialdistricts@moval.org.

SD-10 Parkway and median landscape areas maintained as part of the City of Moreno Valley Community Facilities District 2014-01 shall be required to have independent utility systems, including but not limited to water, electric, and telephone services. An independent irrigation controller and pedestal will also be required. Combining utility systems with existing or future landscape areas not associated with the City of Moreno Valley Community Facilities District (CFD) landscaping will not be permitted.

<u>Prior to Grading Permit</u>

SD-11 This project is included within the future annexation boundaries for Community Facilities District No. 7 (CFD No. 7) – Improvement Area No. 3. <u>If Bonds have been sold for CFD No. 7 – Improvement Area No. 3</u>, then the Local Component portion of the Area Drainage Plan (ADP) fee for Riverside County Flood Control and Water Conservation District (RCFCWCD) has been allocated toward the debt service payments on CFD No. 7 bonds and/or paid directly for acquisition of RCFCD facilities.

In order for the Developer to meet its financial obligation, it must notify the Special Districts Division when submitting the application for grading permit and select one of the funding options outlined below.

Or

If a grading permit is not required, the Developer must notify the Special Districts Division at 951.413.3480 or specialdistricts@moval.org when submitting the application for building permit issuance and select one of the funding options outlined below.

a. Participate in a special election to annex into CFD No. 7 and pay the equivalent to the Local Component portion of the ADP fee including interest as a special tax levied annually on the Riverside County property tax bill; or

b. Pay the Local Component portion of the ADP fee directly to the City of Moreno Valley, Special Districts Division which shall be used for any authorized purpose for CFD No. 7.

If the funding option selected is participation in a special election, a minimum of 90 days is needed to complete the special election process. This allows adequate time to complete the special election process in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

Annexation to CFD No. 7 shall be completed or proof of payment of the Local Component portion of the ADP fee shall be provided to the Special Districts Division prior to the issuance of the first building permit for this project.

Prior to Recordation of Final Map

SD-12 (R) This project has been conditioned to provide a funding source for the continued maintenance, enhancement, and/or retrofit of parks, open spaces, linear parks, and/or trail systems. The Developer shall satisfy this condition with one of the options below.

a. Participate in a special election for annexation into Community Facilities District No. 1 and pay all associated costs of the special election process and formation, if any; or

b. Establish an endowment fund to cover future maintenance costs for new neighborhood parks.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. A minimum of 90 days is needed to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

Annexation to CFD No. 1 shall be completed or proof of payment to establish the endowment fund shall be provided prior to the issuance of the first building permit for this project.

SD-13 (R) This project has been identified to be included in the formation of a Community Facilities District for Public Safety services including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. The property owner(s) shall not protest the formation; however, they retain the right to object to the rate and method of maximum special tax. In compliance with Proposition 218, the property owner shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district that may already be established. The Developer must notify the Special Districts Division at 951.413.3480 or specialdistricts@moval.org of its intent to record the final map for the development 90 days prior to City Council action authorizing recordation of the map. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution. (California Government Code Section 53313 et. seq.)

SD-14 (R) This project is conditioned to provide a funding source for the following special financing program(s):

a. Street Lighting Services for capital improvements, energy charges, and maintenance.
b. Landscape Maintenance Services for external parkway and median landscaping on Indian Street, Gentian Avenue, and Santiago Drive.

The Developer's responsibility is to provide a funding source for the capital improvements and the continued maintenance of the landscaped area. The Developer shall satisfy this condition with one of the options below.

i. Participate in a special election (mail ballot proceeding) and pay all associated costs of the special election and formation, if any. Financing may be structured through a Community Services District zone, Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

ii. Establish a Property Owner's Association or Home Owner's Association which will be responsible for any and all operation and maintenance costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. The option for participating in a special election requires approximately 90 days to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

The financial option selected shall be in place prior to the issuance of the first building permit for this project.

SD-15 (R) This project is conditioned to provide a funding source for the operation and maintenance of public improvements and/or services associated with new development in that territory. The Developer shall satisfy this condition with one of the options below.

a. Participate in a special election for maintenance/services and pay all associated costs of the election process and formation, if any. Financing may be structured through a Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

b. Establish an endowment fund to cover the future maintenance and/or service costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. A minimum of 90 days is needed to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

The financial option selected shall be in place prior to the issuance of the first building permit for the project.

SD-16 *Residential* (R) If Land Development, a Division of the Public Works Department, requires this project to supply a funding source necessary to provide for, but not limited to, stormwater utilities services for the required continuous operation, maintenance, monitoring, systems evaluation and enhancements of on-site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated storm water regulations, a funding source needs to be established. The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option for the National Pollution Discharge Elimination System (NPDES) program (see Land Development's related condition). Participating in a special election the process requires a 90 day period prior to City Council action authorizing recordation of the final map for the development and to participate in a special election process. This allows adequate time to be in compliance with the provisions of Article 13D of the California Constitution. California Health and Safety Code Sections 5473 through 5473.8 (Ord. 708 Section 3.1, 2006) & City of Moreno Valley Municipal Code Title 3, Section 3.50.050.)

SD-17 (R) Easements for reverse frontage parkway areas abutting Indian Street, Gentian Avenue, and Santiago Drive shall be 6 ft. or to top of parkway facing slope or to face of perimeter tract wall, whichever is greater. Easements shall be dedicated to the City of Moreno Valley for landscape maintenance purposes, and shall be depicted on the final map, and an offer of their dedication made thereon.

SD-18 (R) Prior to the recordation of the final map, the Developer shall provide all necessary documents to convey to the City the required easements for parkway and/or slope maintenance as specified on the tentative map or in these Conditions of Approval.

Prior to Building Permit Issuance

SD-19 (BP) Prior to the issuance of the first building permit for this project, the Developer shall pay Advanced Energy fees for all applicable Residential and Arterial Street Lights required for this development. Payment shall be made to the City of Moreno Valley and collected by the Land Development Division. Fees are based upon the Advanced Energy fee rate in place at the time of payment, as set forth in the current Listing of City Fees, Charges, and Rates adopted by City Council. The Developer shall provide a copy of the receipt to the Special Districts Division *(specialdistricts@moval.org).* Any change in the project which may increase the number of street lights to be installed will require payment of additional Advanced Energy fees at the then current fee. Questions may be directed to the Special Districts Division at 951.413.3480 or specialdistricts@moval.org.

SD-20 (BP) For those areas to be maintained by the City and prior to the issuance of the first Building Permit, Planning Division (Community Development Department), Special Districts Division (the Public Works Department) and Transportation Division (the Public Works Department) shall review and approve the final median and external parkway landscape/irrigation plans as designated on the tentative map or in these Conditions of Approval prior to the issuance of the first Building Permit.

SD-21 (BP) External parkway and median landscaping specified in the project's Conditions of Approval shall be constructed in compliance with the City of Moreno Valley Public Works Design Guidelines and completed prior to the issuance of 25% (or 55) of the dwelling permits for this tract or 12 months from the issuance of the first dwelling permit, whichever comes first. In cases where a phasing plan is submitted, the actual percentage of dwelling permits issued prior to the completion of the landscaping shall be subject to the review of the construction phasing plan.

Prior to Certificate of Occupancy

SD-22 (CO) Landscape and irrigation plans for parkway, median, slope, and/or open space landscape areas designated to be maintained by the City shall be placed on compact disk (CD) in pdf format. The CD shall include "As Built" plans, revisions, and changes. The CD will become the property of the City of Moreno Valley and the Moreno Valley Community Services District.

Transportation Engineering Division

GENERAL CONDITIONS

TE1. Indian Street is classified as a Minor Arterial (88'RW/64'CC) per City Standard Plan No. MVSI-105A-0. Traffic Signal Interconnect along project frontage shall be required per City Standard Plan No. MVSI-186-0. Any improvements undertaken by this project shall be consistent with the City's standards for this facility.

TE2. Gentian Avenue is classified as a Minor Arterial (88'RW/64'CC) per City Standard Plan No. MVSI-105A-0, modified for a raised median. Traffic Signal Interconnect along project frontage shall be required per City Standard Plan No. MVSI-186-0. Any improvements undertaken by this project shall be consistent with the City's standards for this facility.

TE3. Santiago Drive is designated as a Collector (66'RW/44'CC) per City Standard Plan No. MVSI-106B-0. Any improvements undertaken by this project shall be consistent with the City's standards for this facility.

TE4. Interior street (A-P, except L) is designated as a Local Street (56'RW/36'CC) per City Standard Plan No. MVSI-107A-0. Any improvements undertaken by this project shall be consistent with the City's standards for this facility.

TE5. Sight distance at the proposed roadways and driveways shall conform to City of Moreno Valley Standard No. MVSI-164A,B,C-0 at the time of preparation of final grading, landscape, and street improvement plans.

TE6. Conditions of approval may be modified if project is phased or altered from any approved plans.

PRIOR TO IMPROVEMENT PLAN APPROVAL OR CONSTRUCTION PERMIT

TE7. Prior to the final approval of the street improvement plans, traffic signal modification plans shall be required for the existing traffic signal located at Indian Street and Santiago Drive intersection. Modifications may include, but not limited to, new signal poles, new pull boxes, new traffic detector loops or video detection system, relocation of signal controller cabinet, etc.

TE8. Prior to the final approval of the street improvement plans, traffic signal plans will be required for a new traffic signal located at the intersection of Perris Boulevard and Santiago Drive.

TE9. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per the latest edition of the California Manual on Uniform Traffic Control Devices (CAMUTCD) and City of Moreno Valley Standard Plans for Indian Street, Gentian Avenue, Santiago Drive, and all interior streets A-P.

TE10. Prior to the final approval of the street improvement plans, the intersection of Indian Street and Gentian Avenue shall be designed to provide the following (at a minimum):

- Northbound: One left turn lane, two through lanes;
- Southbound: One left turn lane, two through lanes;
- Eastbound: One left turn lane, one shared through/right turn lane;
- Westbound: One left turn lane, one shared through/right turn lane.

TE11. Prior to issuance of a construction permit, construction traffic control plans prepared by a qualified, registered Civil or Traffic Engineer shall be required for plan approval or as required by the City Traffic Engineer.

TE12. Prior to final approval of the street improvement plans, the project plans shall demonstrate that sight distance at proposed streets and driveways conforms to City Standard Plan No. MVSI-164A-0 through MVSI-164C-0.

PRIOR TO CERTIFICATE OF OCCUPANCY OR BUILDING FINAL

TE13. (CO) Prior to issuance of Certificate of Occupancy, improvements identified in TE7, TE8, TE9, and TE10 shall be completed per the approved plans to the satisfaction of the City Engineer.

TE14. (CO) Prior to issuance of Certificate of Occupancy, all signing and striping shall be installed per current City Standards and the approved plans.

PRIOR TO ACCEPTANCE OF STREETS INTO THE CITY-MAINTAINED ROAD SYSTEM

TE15. Prior to acceptance of streets into the City-maintained road system, all approved signing and striping shall be installed per current City Standards and the approved plans.

PARKS AND COMMUNITY SERVICES DEPARTMENT

Acknowledgement of Conditions

The following items are Parks and Community Services Department Conditions of Approval for project PEN16-0094 AND PEN16-0095 (Tract 36760); this project shall be completed at no cost to any Government Agency. All questions regarding Parks and Community Services Department Conditions including but not limited to: intent, requests for change/modification, variance and/or request for extension of time shall be sought from the Parks and Community Services Department 951.413.3280. The applicant is fully responsible for communicating with the Parks and Community Services Department project manager regarding the conditions.

Specific Conditions of Approval

PCS1. The developer shall construct a 2-acre (approximate) active park, per these CONDITIONS OF APPROVAL, BONDS, and the PUBLIC FACILITIES FEE CREDIT AGREEMENT for TRACT 36760 (PA14-0052/53) and ASSOCIATED CUP/PUD, FOR DEDICATION AND CONSTRUCTION OF PUBLIC PARK. The developer shall additionally dedicate and construct a BIKEWAY LINEAR PARK WITHIN THE DWR RIGHT-OF-WAY, per these CONDITIONS OF APPROVAL and BONDS for TRACT 36760 (PA14-0052/53) and ASSOCIATED CUP/PUD.

Appropriate Quimby and Parkland Facility Fee credits will be credited to Tract 36760 for the dedication and construction of the active park.

A neighborhood park shall be located within the site per the Conditions of Approval for Tract 36760. The park shall be constructed to the latest edition of the City of Moreno Valley Parks and Community Services Department “Park Specification Guide”, “GREENBOOK FOR PUBLIC WORKS CONSTRUCTION”, CALIFORNIA BUILDING CODE”, and “City Standard Plans”. Additionally, the developer shall comply with the following:

a. Minimum site amenities shall include: separate play equipment for ages 2 to 5 and 5 to 12 on; one (1) 30’ x 50’ picnic shelter and one (1) 24’ hexagon gazebo; large group barbeques; concrete picnic tables, concrete benches; concrete waste/recycle containers; two (2) drinking fountains (Std. MVGF-615B-0); lighted monument signs; LED walkway security lighting; conduit and wiring for security cameras; 10’ wide decorative concrete walkways; stabilized decomposed granite walking path; combination of 24” and 30” boxed trees, 5-gallon sized shrubs; 1-gallon sized ground cover; sodded turfgrass; Calsense irrigation controller; 4’ tall tubular steel fencing surrounding the park; anti-graffiti coating on all adjacent walls, restroom, and monument sign(s); and other amenities typical of parks. All drainage from the park shall be contained in the tract’s water quality basin.

b. The park and bikeway/linear park design shall be fully completed and approved in conjunction with the grading plans. Construction shall commence prior to the issuance of 30% of building permits for residential units and be completed prior to the issuance of 70% of building permits for residential units.

c. The developer shall enter into a Facilities Fee Credit Agreement to obtain credit/reimbursement of Quimby and Parkland Facilities Development Impact Fees (DIF).

d. The park and bikeway/linear park shall be shown as lettered lots and dedicated in fee to the Moreno Valley Community Services District, on the Final Map.

PCS2. A bikeway/linear park shall be designated for Tract 36760, per the Bikeway Master Plan. The bikeway shall have an adjacent walkway for pedestrians. Access points from the tract and the adjacent commercial center to the bikeway/walkway shall be provided. Planters, automated (Calsense) irrigation, turf areas, waste containers, and three-rail PVC fencing typical of parks shall be included in the design. Additionally, the developer shall comply with the following:

PCS3. Any recreational amenities within the pocket park located on Gentian Avenue and adjacent to the DWR aqueduct shall be reviewed and approved by Parks and Community Services. Dedication of such facilities to the CSD shall be at the discretion of the CSD.

<u>STANDARD CONDITIONS:</u>

PCS4. A restriction shall be placed on lots that back up to City/CSD owned or maintained parks, trails, bikeways, and landscaped areas, preventing openings or gates accessing the City/CSD owned or maintained property. This shall be documented through Covenants, Conditions, and Restrictions (CC&R's). A copy of the CC&R's with this restriction noted shall be submitted and approved by the Director of Parks and Community Services or his/her designee, prior to the recordation of the Final Map.

PSC5. Within the improvements for PCS, the applicant shall show all existing and planned easements on all maps and plans. Easements on City/CSD owned or maintained parks, trails, bikeways, and landscape shall be identified on each of these plans with the instrument number of the recorded easement.

PCS6. The following plans require PCS written approval: Tentative tract/parcel maps; rough grading plans (including all Delta changes); Final Map; precise grading plans; street improvement plans; traffic signal plans; fence and wall plans; landscape plans for areas adjacent to bikeways; trail improvement plans. PCS will not approve any permits without review and approval of the above items.

PCS7. Prior to recordation of the Final Map, the applicant shall post security to guarantee construction or modification of parks, trails and/or bikeways for the City/CSD. Copies of said documentation shall be provided to PCS, prior to the approval of the Final Map.

PCS8. Detailed final plans (mylars, PDF, and AutoCAD file on a DVD-R) for parks, trails/bikeways, fencing, and adjoining landscaped areas shall be submitted to and approved by the Director of Parks and Community Services, or his/her designee, prior to the issuance of any building permits. All plans are to include a profile showing grade changes.

PSC9. Applicable plan check and inspection fees shall be paid, per the approved City fee schedule.

PCS10. This project may be required to supply a funding source for the continued maintenance, enhancement, and or retrofit of neighborhood parks, open spaces, linear parks, and/or trails systems. This can be achieved through annexing into Community Facilities District No. 1 (Park Maintenance). Please contact the Special Districts Division at 951.413.3480 or specialdistricts@moval.org to complete the annexation process.

PCS11. The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services District Zone A (Parks and Community Services). All assessable parcels therein shall be subject to the annual Zone ‘A’ charge for operations and capital improvements. Proof of such shall be supplied to Parks and Community Services upon Final Map and at Building Permits.

PSC12. This project is subject to current Development Impact Fees, at time of building permit issuance (unless exempted in a Public Facilities Fee Credit Agreement).

PCS13. This project is subject to current Quimby Fees, at time of building permit issuance (unless exempted in a Public Facilities Fee Credit Agreement).

MORENO VALLEY UTILITY

Acknowledgement of Conditions

The following items are Moreno Valley Utility's Conditions of Approval for project PEN16-0094 AND PEN16-0095; this project shall be completed at no cost to any Government Agency. All questions regarding Moreno Valley Utility's Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from Moreno Valley Utility (the Electric Utility Division) of the Finance and Management Services Department 951.413.3500, mvuengineering@moval.org. The applicant is fully responsible for communicating with Moreno Valley Utility staff regarding their conditions.

PRIOR TO ENERGIZING MVU ELECTRIC UTILITY SYSTEM AND CERTIFICATE OF OCCUPANCY

MVU-1 (R) This project requires the installation of electric distribution facilities. A non-exclusive easement shall be provided to Moreno Valley Utility and shall include the rights of ingress and egress for the purpose of operation, maintenance, facility repair, and meter reading.

MVU-2 (BP) City of Moreno Valley Municipal Utility Service – Electrical Distribution: Prior to constructing the MVU Electric Utility System, the developer shall submit a detailed engineering plan showing design, location and schematics for the utility system to be approved by the City Engineer. In accordance with Government Code Section 66462, the Developer shall execute an agreement with the City providing for the installation, construction, improvement and dedication of the utility system following recordation of final map and concurrent with trenching operations and other subdivision improvements so long as said agreement incorporates the approved engineering plan and provides financial security to guarantee completion and dedication of the utility system.

The Developer shall coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to the City, or the City's designee, all utility infrastructure (including but not limited to conduit, equipment, vaults, ducts, wires, switches, conductors, transformers, and "bring-up" facilities including electrical capacity to serve the identified development and other adjoining/abutting/ or benefiting projects as determined by Moreno Valley Utility) – collectively referred to as "utility system" (to and through the development), along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and /or delivery of any and all "utility services" to each lot and unit within the Tentative Map. For purposes of this condition, "utility services" shall mean electric, cable television, telecommunication (including video, voice, and data) and other similar services designated by the City Engineer. "Utility services" shall not include sewer, water, and natural gas services, which are addressed by other conditions of approval.

The City, or the City's designee, shall utilize dedicated utility facilities to ensure safe, reliable, sustainable and cost effective delivery of utility services and maintain the integrity of streets and other public infrastructure. Developer shall, at developer's sole expense, install or cause the installation of such interconnection facilities as may be necessary to connect the electrical distribution infrastructure within the project to the Moreno Valley Utility owned and controlled electric distribution system.

MVU-3 This project is subject to a Reimbursement Agreement and is responsible for a proportionate share of costs associated with electrical distribution infrastructure previously installed that directly benefits the project.
Payment shall be required prior to issuance of building permits.

MVU-4 For all new projects, existing Moreno Valley Utility electrical infrastructure shall be preserved in place. The developer will be responsible, at developer expense, for any and all costs associated with the relocation of any of Moreno Valley Utility's underground electrical distribution facilities, as determined by Moreno Valley Utility, which may be in conflict with any developer planned construction on the project site.

POLICE DEPARTMENT

PD1. Prior to the start of any construction, temporary security fencing shall be erected. The fencing shall be a minimum of six (6) feet high with locking, gated access and shall remain through the duration of construction. Security fencing is required if there is: construction, unsecured structures, unenclosed storage of materials and/or equipment, and/or the condition of the site constitutes a public hazard as determined by the Public Works Department. If security fencing is required, it shall remain in place until the project is completed or the above conditions no longer exist. (DC 9.08.080)

PD2. (GP) Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:

a. The name (if applicable) and address of the development.

b. The developer's name, address, and a 24-hour emergency telephone number. (MC 9.08.080)

PD3. (CO) Prior to the issuance of a Certificate of Occupancy, an Emergency Contact information Form for the project shall be completed at the permit counter of the Community Development Department - Building Division for routing to the Police Department. (MC 9.08.080)

PLANNING COMMISSION RESOLUTION NO. 2017-11

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MORENO VALLEY RECOMMENDING THAT THE CITY COUNCIL APPROVE TENTATIVE TRACT MAP 36760 (APPLICATION PEN16-0095 / PA14-0053) TO SUBDIVIDE THE APPROXIMATELY 53 ACRES LOCATED WITHIN ASSESSOR'S PARCEL NUMBERS 485-220-023, 485-220-032, AND 485-220-040 INTO 221 SINGLE FAMLY RESIDENTIAL LOTS LOCATED SOUTHERLY OF THE SOUTHEAST CORNER OF INDIAN STREET AND GENTIAN AVENUE.

WHEREAS, the applicant, Mission Pacific Land Company, has filed an application for the approval of Tentative Tract Map 36760 (application PEN16-0095), a proposal to subdivide the approximately 53 acres located within Assessor's Parcel Numbers 485-220-023, 485-220-032, and 485-220-040 into 221 single family lots as described in the title of this Resolution;

WHEREAS, the application has been evaluated in accordance with established City of Moreno Valley (City) procedures, and with consideration of the General Plan and other applicable regulations; and

WHEREAS, the City has prepared an Initial Study and Mitigated Negative Declaration consistent with the California Environmental Quality Act (CEQA) based on a thorough analysis of potential environmental impacts. The Mitigated Negative Declaration represents the City's independent judgment and analysis; and

WHEREAS, upon completion of a thorough development review process the project was appropriately agendized and noticed for a public hearing before the Planning Commission of the City of Moreno Valley (Planning Commission); and

WHEREAS, the public hearing notice for this project was published in the local newspaper on January 6, 2017. Public notice was sent to all property owners of record within 300 feet of the project site on January 12, 2017. The public hearing notice for this project was also posted on the project site on January 13, 2017; and

WHEREAS, on January 26, 2017, the Planning Commission held a public hearing to consider the application; and

WHEREAS, all legal prerequisites to the adoption of this Resolution have occurred; and

WHEREAS, pursuant to Government Code Section 66020(d)(1), **NOTICE IS HEREBY GIVEN** that this project is subject to certain fees, dedications, reservations and other exactions as provided herein.

NOW, THEREFORE, BE IT RESOLVED, it is hereby found, determined and resolved by the Planning Commission of the City of Moreno Valley as follows:

A. This Planning Commission hereby specifically finds that all of the facts set forth above in this Resolution are true and correct.

B. Based upon substantial evidence presented to this Planning Commission during the above-referenced meeting on May 12, 2016, including written and oral staff reports, and the record from the public hearing, this Planning Commission hereby specifically finds as follows:

1. That the proposed map is consistent with applicable general and specific plans and the zoning ordinance;

FACT: General Plan Objective 2.2 states that it is the intent of the City to provide a wide range of residential opportunities and dwelling types to meet the demands of present and future residents of all socioeconomic groups. The proposed project has a Residential land use designation that would allow for development of single family residences consistent with this objective.

The project site is located generally at the southeast corner of Indian Street and Gentian Avenue. The majority of the site is zoned R5. The applicant is proposing to change a 15 acre portion of the site from R30 to R5. The project site is bounded by existing single-family tract homes to west and northwest in the RS-10 zone with minimum lot sizes of 4,500 square feet. The property immediately to the north is zoned R5 and has been subdivided with a recorded map, Tract Map 22180. Further to the north are existing single-family tract homes in the R5 zone. Southwest of the project site are single-family homes in the R5 zone. March Middle School and Rainbow Elementary School are located immediately to the south. Vacant and developed land (non-conforming single-family residences) in the R30 zone is located to the southeast of the project site.

The project is designed in accordance with the provisions of Chapter 9.03 Residential Districts, Section 9.16.130 Design Guidelines and Section 9.14 Land Divisions of the City's Municipal Code. The project as designed and conditioned would comply with all applicable zoning and other regulations.

2. That the design or improvement of the proposed subdivision is consistent with applicable general and specific plans;

FACT: General Plan Objective 2.2 states that it is the intent of the City to provide a wide range of residential opportunities and dwelling types to meet the demands of present and future residents of all socioeconomic groups. The proposed project has a residential land use designation that would allow for development of single family residences consistent with this objective.

The project site is bounded by existing single-family tract homes to west and northwest in the RS-10 zone with minimum lot sizes of 4,500 square feet. The property immediately to the north is zoned R5 and has been subdivided with a recorded map, Tract Map 22180. Further to the north are existing single-family tract homes in the R5 zone. Southwest of the project site are single-family homes in the R5 zone with March Middle School and Rainbow Elementary School located immediately to the south. Vacant and developed land (non-conforming single-family residences) in the R30 zone is located to the southeast of the project site.

The property is bounded by the California Aqueduct along the eastern property line with vacant Community Commercial zoned property to the east. The site to the east was recently approved for development as a Walmart retail center. Additional commercial existing retail centers are located to the southeast at the intersection of Perris Boulevard and Iris Avenue in the Community Commercial zone. March Air Reserve Base is located approximately three-quarters of a mile to the west with the City Corporate Yard located approximately 1,400 feet to the east.

Consistent with City General Plan Policies 4.2.1 and 4.2.14 the City's Master Plan of Trails and the Master Plan of Parks, this project has been conditioned to construct and then convey to the City a segment of the Juan Bautista De Anza trail within the adjacent California Aqueduct and to construct and convey to the City a public park of approximately 2.0 acres in size with amenities that would include play equipment, a picnic shelter, a gazebo, large group barbeques, concrete picnic tables and benches, concrete waste/recycle containers; drinking fountains, walkway security lighting, decorative concrete walkways, decomposed granite walking path; and tubular steel fencing surrounding the park.

Subject to approval of a General Plan Amendment from R30 to R5, the proposed project is consistent with the General Plan and does not conflict with the goals, objectives, policies, and programs established within the Plan. The project as designed and conditioned will achieve the objectives of the City of Moreno Valley's General Plan.

3. That the site is physically suitable for the type of development;

FACT: The project site is located at the southeast corner of Indian Street and Gentian Avenue on the west side of the California Aqueduct. The zoning for the majority of the site is R5. The applicant proposes a General Plan Amendment and Zone Change for a 15 acre portion of the site from R30 to R5 in order to develop a 221 lot single family planned community. The project site is rectangular in shape with a triangular shaped parcel adjacent to the California Aqueduct and is comprised of flat topography. Overall, the project site is well suited for the proposed subdivision.

4. That the site of the proposed land division is physically suitable for the proposed density of the development;

   FACT: The project site is rectangular in shape with a triangular shaped parcel adjacent to the California Aqueduct and is comprise of flat topography. The tentative tract map is designed in accordance with the provisions of the City's Municipal Code Section 9.14 Land Divisions. The approximately 53 acre project site is physically suitable for the proposed density of the development.

5. That the design of the subdivision or the proposed improvements are not likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat;

   FACT: There are no existing trees, streambeds, drainage features or riparian vegetation on the project site. Based upon information from the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) Full Report and review of the MSHCP Plan, there are no identified candidate, sensitive or special status species associated with the project site. An Initial Study and Mitigated Negative Declaration have been prepared for the project concluding that with the implementation of mitigation measures, project impacts are reduced to a less than significant impact. Therefore, the tentative tract map will not cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat

6. That the design of the subdivision or type of improvements is not likely to cause serious public health problems;

   FACT: As conditioned, the proposed parcel map would not cause serious public health problems. The Eastern Municipal Water District will provide water and sewer services to the project site. There are no known hazardous conditions associated with the property, the design of the land division or the type of improvements.

   The tentative tract map as designed and conditioned will provide protection from natural and man-made hazards to life, health, and property and is therefore consistent with General Goal 9.6.1. The project site is located approximately 2,000 feet south of the Kennedy Park Fire Station and within close proximity to emergency services which is consistent with General Plan Goal 9.6.2 which requires emergency services that are adequate to meet minor emergency and major catastrophic situations.

   The tentative tract map as designed and conditioned will be consistent with General Plan Objective 6.1 and General Plan Objective 6.2 which are intended to protect residents from physical injury and property damage due to seismic groundshaking, and nuisances due to flooding.

The tentative tract map has been designed consistently with the City's Municipal Code Section 9.14 Land Divisions and meets all City requirements related to subdividing a property.

7. That the design of the subdivision or the type of improvements will not conflict with easements, acquired by the public at large, for access through or use of, property within the proposed subdivision;

FACT: The tentative tract map has been designed to accommodate and not conflict with existing easements on the subject site including utility, storm drain and California Aqueduct easements.

8. That the proposed land division and the associated design and improvements are consistent with applicable ordinances of the city.

FACT: The land division proposed by Tentative Tract Map No. 36760 is consistent with the City's Municipal Code Section 9.14 Land Divisions. The subdivision as designed and conditioned is consistent with applicable ordinances of the city.

FEES, DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

1. FEES

Impact, mitigation and other fees are due and payable under currently applicable ordinances and resolutions. These fees may include but are not limited to: Development Impact Fee, Transportation Uniform Mitigation Fee (TUMF), Multi-species Habitat Conservation Plan (MSHCP) Mitigation Fee, Stephens Kangaroo Habitat Conservation fee, Underground Utilities in lieu Fee, Area Drainage Plan fee, Bridge and Thoroughfare Mitigation fee (Future) and Traffic Signal Mitigation fee. The final amount of fees payable is dependent upon information provided by the applicant and will be determined at the time the fees become due and payable.

Unless otherwise provided for by this Resolution, all impact fees shall be calculated and collected at the time and in the manner provided in Chapter 3.32 of the City of Moreno Valley Municipal Code or as so provided in the applicable ordinances and resolutions. The City expressly reserves the right to amend the fees and the fee calculations consistent with applicable law.

2. DEDICATIONS, RESERVATIONS, AND OTHER EXACTIONS

The adopted Conditions of Approval for PEN16-0095, incorporated herein by reference, may include dedications, reservations, and exactions pursuant to Government Code Section 66020 (d) (1).

3. CITY RIGHT TO MODIFY/ADJUST; PROTEST LIMITATIONS

The City expressly reserves the right to establish, modify or adjust any fee, dedication, reservation or other exaction to the extent permitted and as authorized by law.

Pursuant to Government Code Section 66020(d)(1), NOTICE IS FURTHER GIVEN that the 90 day period to protest the imposition of any impact fee, dedication, reservation, or other exaction described in this Resolution begins on the effective date of this Resolution and any such protest must be in a manner that complies with Section 66020(a) and failure to timely follow this procedure will bar any subsequent legal action to attack, review, set aside, void or annul imposition.

The right to protest the fees, dedications, reservations, or other exactions does not apply to planning, zoning, grading, or other similar application processing fees or service fees in connection with this project and it does not apply to any fees, dedication, reservations, or other exactions of which a notice has been given similar to this, nor does it revive challenges to any fees for which the applicable statute of limitations has previously expired.

BE IT FURTHER RESOLVED that the Planning Commission **HEREBY APPROVES** Resolution No. 2017-11, and **RECOMMENDS** that the City Council:

1. **ADOPT** a Mitigated Negative Declaration for Tentative Tract Map 36760 (application PEN16-0095), pursuant to the California Environmental Quality Act (CEQA) Guidelines; and

2. **APPROVE** the Mitigation Monitoring and Reporting Program prepared for Conditional Use Permit PEN16-0095 pursuant to the California Environmental Quality Act (CEQA) Guidelines, included as Exhibit A; and

3. **APPROVE** Tentative Tract Map 36760 (application PEN16-0095) based on the findings contained in this resolution, and subject to the attached conditions of approval included as Exhibit B.

APPROVED this 26th day of January, 2017.

Legacy Park Project – Mitigation Monitoring and Reporting Program

Conditional Use Permit PEN16-0094 / Tentative Tract Map 36760 (PEN16-0095)

Introduction

This Mitigation Monitoring and Reporting Program has been prepared for use in implementing mitigation for the Mitigated Negative Declaration (MND) for The Legacy Park (Conditional Use Permit PEN16-0094 and Tentative Tract Map 36760). The program has been prepared in compliance with State law and the MND prepared for the project.

The California Environmental Quality Act (CEQA) requires adoption of a reporting or monitoring program for those measures places on a project to mitigated or avoid adverse effects on the environment (Public Resources Code Section 21081.6). The law states that the reporting or monitoring program shall be designed to ensure compliance during project implementation.

The monitoring program contains the following elements:

- 1. The mitigation measures are recorded with the action and procedure necessary to ensure compliance. In some instances, one action may be used to verify implementation of several mitigation measures.
- 2. A procedure for compliance and verification has been outlined for each action necessary. This procedure designates who will take action, what action will be taken and when, and to whom and when compliance will be reported.
- 3. The program has been designed to be flexible. As monitoring progresses, changes to compliance procedures may be necessary based upon recommendations by those responsible for the program. As changes are made, new monitoring compliance procedures are records will be developed and incorporated into the program.

Mitigation Monitoring and Responsibilities

As the Leady Agency, the City of Moreno Valley is responsible for ensuring full compliance with the mitigation measures adopted for the proposed project. The City will monitor and report on all mitigation activities. Mitigation measures will be implemented at different stages of development throughout the project. In this regards, the responsibilities for implementation have been assigned to the Applicant, Contractor, or a combination thereof. If during the course of project implementation, any of the mitigation measures identified herein cannot be successfully implemented, the City shall be immediately informed, and the City will then inform any affected responsible agencies. The City, in conjunction with any affected responsible agencies, will then determine if modification to the project is required and/or whether alternative mitigation is appropriate.

Mitigation Monitoring and Reporting Program Checklist

Project: Legacy Park Project (Conditional Use Permit PEN16-0094 and Tentative Tract Map 36760)

Applicant: Mission Pacific Land Company

Date: January 18, 2017

Mitigation Measure No.	**Responsible for Monitoring**	**Monitoring Frequency**	**Timing of Verification**	**Method of Verification**	**Verified Date/Initials**	**Sanctions for Non-Compliance**
Traffic/Transportation						
TR-1: Prior to the issuance of building permits, the Project applicant shall participate in the City's DIF and County TUMF fee programs by paying the requisite fees at the time of building permit, and in addition pay the Project's fair share amount of $43,497 for improvements at the intersections of Indian Street at Cactus Avenue and Indian Street at Gentian Avenue as identified in Table 1-5 that are consistent with the improvements shown on Table 6-3, or as otherwise agreed to by the City and Project Applicant. Project fair share payment shall only be collected if the City creates a fee program that includes the improvements the fair share contribution is intended to construct.	City of Moreno Valley Transportation Engineering Division and Planning Division	Ongoing during construction	Prior to Building Final	Review of paid DIF invoice and receipt		Withhold Building Final
TR-2: Prior to the final approval of the street improvement plans, traffic signal plans will be required for a new traffic signal located at the intersection of Perris Boulevard and Santiago Drive. Prior to issuance of Certificate of Occupancy, the traffic signal and Perris Boulevard and Santiago Drive shall be completed per the approved plans to the satisfaction of the City Engineer.	City of Moreno Valley Transportation Engineering Division , Land Development and Planning Division	Ongoing during construction	Prior to Building Final	Final Inspection of signal improvements		Withhold Building Final

Mitigation Measure No.	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/Initials	Sanctions for Non-Compliance
Biological Resources						
BR-1. A qualified biologist will conduct a pre-construction presence/absence survey for burrowing owls within 14 days prior to site disturbance. If burrowing owls are detected onsite, the owls will be relocated/excluded from the site outside of the breeding season following accepted protocols, and subject to the approval of the RCA and wildlife agencies.	City of Moreno Valley Planning Division	Ongoing during grading plan check	Prior to Issuance of a grading permit	Review of and approval of pre-construction survey		Withhold Grading Permit
BR-2. As feasible, vegetation clearing should be conducted outside of the nesting season, which is generally identified as February 1 through September 15. If avoidance of the nesting season is not feasible, then a qualified biologist shall conduct a nesting bird survey within three days prior to any disturbance of the site, including disking, demolition activities, and grading. If active nests are identified, the biologist shall establish suitable buffers around the nests, and the buffer areas shall be avoided until the nests are no longer occupied and the juvenile birds can survive independently from the nests.	City of Moreno Valley Planning Division	Ongoing during grading plan check	Prior to Issuance of a grading permit	Review of and approval of survey		Withhold Grading Permit
Mitigation Measure No.	**Responsible for Monitoring**	**Monitoring Frequency**	**Timing of Verification**	**Method of Verification**	**Verified Date/Initials**	**Sanctions for Non-Compliance**
Cultural Resources						
CR-1: Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a professional archaeological monitor has been retained by the Applicant to conduct monitoring of all mass grading and trenching activities and that the monitor has the authority to temporarily halt and redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project archaeologist, with input from the	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations.	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order

appropriate Tribe, shall prepare a Cultural Resources Monitoring Plan (CRMP) to document protocols for inadvertent finds, to determine potential protection measures from further damage and destruction for any identified archaeological resource(s)/ tribal cultural resources (TCRs), outline the process for monitoring and for completion of the final Phase IV Monitoring Report. If any archaeological and/or TCRs are identified during monitoring, these will also be documented and addressed per standard archaeological protocols in the Phase IV report, with the exception of human remains which will be addressed per CUL-5. The Project Archaeologist shall attend the pregrading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.						
CR-2: At least 30 days prior to the issuance of a grading permit, the Applicant shall contact the appropriate Luiseño tribe to develop a Cultural Resources Treatment Agreement and shall provide evidence to the City of Moreno Valley that the professionally qualified Luiseño Native American monitor(s) has been secured from the interested tribe(s), and that the monitor shall be allowed to monitor all mass grading and trenching activities. The Tribal representative(s) shall attend the pre-grading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations.	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order
CR-3: If, during mass grading and trenching activities, the Archaeologist or Tribal representatives suspect that an archaeological resource and/or TCR may have been unearthed, the monitor identifying the potential resources, in consultation with the other monitor as appropriate, shall immediately halt and redirect grading operations in a 100-foot radius around the find to allow identification	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order

and evaluation of the suspected resource. The Native American monitor(s) or appropriate representative(s) and the archaeological monitor shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2. The archaeological monitor and tribal monitor(s) or appropriate representative(s), the Project Applicant, and the City Planning Division shall confer regarding mitigation of the discovered resource(s). All sacred sites, should they be encountered within the Project area, shall be avoided and preserved as the preferred mitigation, if feasible.						
CR-4: Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan: "If any suspected archaeological resources are discovered during ground-disturbing activities and the archaeological monitor or Tribal representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal representatives to the site to assess the significance of the find."	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order
CR-5: If human remains are encountered, California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to California Public Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner. If the Riverside County Coroner determines the remains to be Native American, the California Native American Heritage Commission must be contacted within 24 hours. The Native American Heritage Commission must then	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order

immediately notify the "most likely descendant(s)" of receiving notification of the discovery. The most likely descendant(s) shall then make recommendations within 48 hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code §5097.98.						
CR-6: Prior to construction involving excavation four feet or more below existing surface grade, the construction contractor shall provide evidence that a qualified paleontologist has been retained, and that the paleontologist(s) shall be present during all grading and other significant ground-disturbing activities that reach four feet or more below existing surface grade. In the event fossiliferous deposits are encountered, the following measures shall be implemented: • Monitoring shall be conducted by qualified paleontological monitor(s) of excavation in areas identified as likely to contain paleontological resources, including very old alluvial fan deposits. Paleontological monitors shall be equipped to salvage fossils as they are unearthed, to avoid construction delays, and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. Monitors shall be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Monitoring may be reduced if the potentially fossiliferous units are determined upon exposure and examination by qualified paleontological personnel to have low potential to contain fossil resources.	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order

• Paleontological monitoring of any earthmoving will be conducted by a monitor, under direct guidance of a qualified paleontologist. Earthmoving in areas of the parcel where previously undisturbed sediments are buried, but not otherwise disturbed, will not be monitored. • If too few fossil remains are found after 50 percent of the planned-for earthmoving has been completed, monitoring can be reduced or discontinued in those areas at the Project paleontologist's direction. • Preparation of recovered specimens to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates. • Identification and curation of specimens into a professional, fully accredited museum repository with permanent retrievable storage. The paleontologist must have a written repository agreement in hand prior to the initiation of mitigation activities. • Preparation or a report of findings with and appended itemized inventory of specimens. The report and inventory, when submitted to the city along with confirmation of the curation of recovered of recovered specimens into an established, accredited museum repository, will signify completion of the program to mitigate impacts to paleontological resources.						

Mitigation Measure No.	**Responsible for Monitoring**	**Monitoring Frequency**	**Timing of Verification**	**Method of Verification**	**Verified Date/Initials**	**Sanctions for Non-Compliance**
Noise						
N-1: Construction activities shall be operated in a manner that limits noise impacts on surrounding uses (General Plan Policy 6.5.2). In order to limit noise impacts on surrounding property, the construction contractor will ensure the following: • All construction equipment powered by gasoline or diesel engines will be required to have sound-control devices at least as effective as those originally provided by the manufacturer; no equipment will be permitted to have an unmuffled exhaust. • Mobile noise-generating equipment and machinery will be shut off when not in use; • Construction vehicles assessing the site will be required to use the shortest possible route to and from local freeways, provided the routes do not expose additional receptors to noise	City of Moreno Valley Engineering and Building and Safety Planning Division	Once prior to Grading and during grading and construction operations.	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order
N-2: The staging of construction equipment and the construction trailer shall be placed as far as possible from the existing single-family residences located to the west and south and the schools to the south.	City of Moreno Valley Engineering and Building and Safety Planning Division	Once prior to Grading and during grading and construction operations.	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order

COMMUNITY DEVELOPMENT DEPARTMENT

Planning Division

For questions regarding any Planning condition of approval, please contact the Planning Division at (951) 413-3206.

P1. Tentative Tract Map 36760 (PEN16-0095) has been approved for development of a 221 lot subdivision in the R5 zone.

P2. Conditional Use Permit PEN16-0094 for a Planned Unit Development (Legacy Park) has been approved with Design Guidelines to establish unique development standards, architectural standards, fence and walls, and common area pathways and landscape area for Tentative Tract Map 36760 in the R5 zone. The PUD allows for minimum lot sizes of 4,000 square feet (76 lots) and 5,000 square feet (145 lots) in two distinct areas of the tract map.

P3. Conditional Use Permit PEN16-0094 and Tentative Tract Map 36760 (PEN16-0095) are approved subject to approval of a General Plan Amendment from Residential 30 to Residential 5 and a Zone Change from R30 to R5.

P4. Conditional Use Permit PEN16-0094 establishes the following development standards for single-family residential development in Tentative Tract Map 36760:

- Minimum Lot Size – 4,000 square feet (50' x 80')
- Minimum Lot Size -- 5,000 square feet (50' x 100')
- Maximum Lot Coverage – 50%

Timing Mechanisms for Conditions (see abbreviation at beginning of affected condition):

R - Map Recordation	GP - Grading Permits
GPA – Grading Plan Approval	BF – Building Final
BP - Building Permits	P - Any permit
MR – Map Recordation	MA – Map Approval
AOS – Acceptance of Streets	WP - Water Improvement Plans
CP – Construction Permit	IPA – Improvement Plan Approval
	SI – Street Improvements

Governing Document (see abbreviation at the end of the affected condition):

GP - General Plan	MC – Municipal Code
MC - Municipal Code	CEQA - California Environmental Quality Act
Ord - Ordinance	Ldscp - Landscape Development Guidelines and Specs
Res - Resolution	UFC - Uniform Fire Code
UBC - Uniform Building Code	
SBM - Subdivision Map Act	

- Maximum Height – 2-story or 35 feet

P5. Tentative Tract Map 36760 and Conditional Use Permit PEN16-0094 are approved for the use of decorative concrete treatments within the public right-of-way at key intersections of Street L within the project.

P6. This approval shall comply with all applicable requirements of the City of Moreno Valley Municipal Code.

P7. This tentative map shall expire three years after the approval date of this tentative map unless extended as provided by the City of Moreno Valley Municipal Code; otherwise it shall become null and void and of no effect whatsoever in the event the applicant or any successor in interest fails to properly file a final map before the date of expiration. (MC 9.02.230, 9.14.050, 080)

P8. The site shall be developed in accordance with the approved tentative map on file in the Community Development Department -Planning Division, the Municipal Code regulations, General Plan, and the Legacy Park Design Guidelines (PEN16-0094), and the conditions of approval contained herein. (MC 9.14.020)

P9. A drought tolerant, low water using landscape palette shall be utilized throughout the tract to the extent feasible.

P10. All undeveloped portions of the site shall be maintained in a manner that provides for the control of weeds, erosion and dust. (MC 9.02.030)

P11. All landscaped areas shall be maintained in a healthy and thriving condition, free from weeds, trash and debris. (MC 9.02.030)

P12. (BP) Enhanced architectural treatments shall be included on the approved plans for all homes having side and/or reverse frontages to public streets or open space areas.

P13. All site plans, grading plans, landscape and irrigation plans, and street improvement plans shall be coordinated for consistency with this approval.

<u>PRIOR TO GRADING</u>

P14. (GP) Prior to issuance of grading permits, the developer shall pay the applicable Stephen's' Kangaroo Rat (SKR) Habitat Conservation Plan mitigation fee. (Ord)

P15. (GP) Prior to the issuance of grading permits, final erosion control landscape and irrigation plans for all cut or fill slopes over 3 feet in height shall be submitted to the Planning Division for review and approval for the phase in process. The plans shall be designed in accordance with the slope erosion plan as required by the City Engineer for that phase. Man-made slopes greater than 10 feet in height shall be "land formed" to conform to the natural terrain and shall be landscaped and stabilized to minimize visual scarring. (GP Objective 1.5, MC 9.08.080, DG)

P16. (GP) Prior to approval of precise grading plan, final front and street side yard landscape and irrigation plans shall be submitted to the Planning Division for review. The plans shall be prepared in accordance with the City's Municipal Code and landscape specifications, and include required street trees.

P17. (GP) If potential historic, archaeological, or paleontological resources are uncovered during excavation or construction activities at the project site, work in the affected area will cease immediately and a qualified person (meeting the Secretary of the Interior's standards (36CFR61)) shall be consulted by the applicant to evaluate the find, and as appropriate recommend alternative measures to avoid, minimize or mitigate negative effects on the historic, prehistoric, or paleontological resource. Determinations and recommendations by the consultant shall be implemented as deemed appropriate by the Community Development Director, in consultation with the State Historic Preservation Officer (SHPO) and any and all affected Native American Tribes before any further work commences in the affected area.

If human remains are discovered, work in the affected area shall cease immediately and the County Coroner shall be notified. If it is determined that the remains are potentially Native American, the California Native American Heritage Commission and any and all affected Native American Indians tribes such as the Morongo Band of Mission Indians or the Pechanga Band of Luiseno Indians shall be notified and appropriate measures provided by State law shall be implemented. (GP Objective 23.3, DG, CEQA).

P18. (GP) Prior to issuance of grading permits, landscape plans for front yards, street trees, common areas, reverse frontage parkways and basins, common area lighting and fences and walls, shall be submitted to the Planning Division for review subject to the requirements of the Legacy Park Design Guidelines the City of Moreno Valley Municipal Code.

P19. (GP) Prior to issuance of grading permits, plans for any security gate system shall be submitted to the Planning Division for review and approval.

P20. (GP) Prior to the issuance of grading permits, mitigation measures contained in the Mitigation Monitoring Program approved with this project shall be implemented as provided therein. A mitigation monitoring fee, as provided by City ordinance, shall be paid by the applicant within 30 days of project or tentative map approval. No City permit or approval shall be issued until such fee is paid. (CEQA)

PRIOR TO RECORDATION OF FINAL MAP

P22. (R) Prior to final map recordation, subdivision phasing (including any proposed common open space or improvement phasing, if applicable), shall be subject to the Planning Division approval. Any proposed phasing shall provide for adequate vehicular access to all lots in each phase as determined by the City Transportation Engineer or designee and shall substantially conform to all intent and purpose of the subdivision approval. (MC 9.14.080)

P23. (R) Prior to final map recordation any required trail easements shall be provided.

P24. (R) Prior to recordation of the final subdivision map, the developer shall submit for review and approval the following documents to the Planning Division which shall demonstrate that the project will be developed and maintained in accordance with the intent and purpose of the approval:

a. The document to convey title
b. Deed restrictions, easements, or Covenants, Conditions and Restrictions to be recorded

The approved documents shall be recorded at the same time that the subdivision map is recorded. The documents shall contain provisions for general maintenance and ownership of common area pathways and landscape, common area lighting, and common recreation areas. The approved documents shall also contain a provision, which provides that they may not be terminated and/or substantially amended without the consent of the City and the developer's successor-in-interest. (MC 9.14.090)

In addition, the following deed restrictions and disclosures shall be included within the document and grant deed of the properties:

- The developer and homeowners association shall promote the use of native plants and trees and drought tolerant species to the extent feasible.

PRIOR TO BUILDING PERMIT

P25. (BP) Prior to issuance of building permits, the developer or developer's successor-in-interest shall pay all applicable impact fees, including but not limited to Transportation Uniform Mitigation fees (TUMF), Multi-species Habitat Conservation Plan (MSHCP) mitigation fees, and the City's adopted Development Impact Fees. (Ord)

P26. (BP) Prior to issuance of building permits, final front and street side yard landscape and irrigation plans, private slope landscape plans, basin landscape plans, common area lighting and fence and wall plans shall be approved.

PRIOR TO BUILDING FINAL

P27. (BF) Prior to the issuance of Certificates of Occupancy or building final all private and common area landscape and irrigation, common area lighting, and fence and walls shall be installed. Landscaping on lots not yet having dwelling units shall be maintained by the developer weed and disease free. (MC 9.03.040)

Mitigation Measures

Traffic

TR-1: Prior to the issuance of building permits, the Project applicant shall participate in the City's DIF and County TUMF fee programs by paying the requisite fees at the time of building permit, and in addition pay the Project's fair share amount of $43,497 for improvements at the intersections of Indian Street at Cactus Avenue and Indian Street at Gentian Avenue as identified in Table 1-5 that are consistent with the improvements shown on Table 6-3, or as otherwise agreed to by the City and Project Applicant. Project fair share payment shall only be collected if the City creates a fee program that includes the improvements the fair share contribution is intended to construct.

TR-2: Prior to the final approval of the street improvement plans, traffic signal plans will be required for a new traffic signal located at the intersection of Perris Boulevard and Santiago Drive. Prior to issuance of Certificate of Occupancy, the traffic signal and Perris Boulevard and Santiago Drive shall be completed per the approved plans to the satisfaction of the City Engineer.

Biological Resources

BR-1. A qualified biologist will conduct a pre-construction presence/absence survey for burrowing owls within 14 days prior to site disturbance. If burrowing owls are detected onsite, the owls will be relocated/excluded from the site outside of the breeding season following accepted protocols, and subject to the approval of the RCA and wildlife agencies.

BR-2. As feasible, vegetation clearing should be conducted outside of the nesting season, which is generally identified as February 1 through September 15. If avoidance of the nesting season is not feasible, then a qualified biologist shall conduct a nesting bird survey within three days prior to any disturbance of the site, including disking, demolition activities, and grading. If active nests are identified, the biologist shall establish suitable buffers around the nests, and the buffer areas shall be avoided until the nests are no longer occupied and the juvenile birds can survive independently from the nests.

<u>Cultural Resources</u>

CR-1: Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a professional archaeological monitor has been retained by the Applicant to conduct monitoring of all mass grading and trenching activities and that the monitor has the authority to temporarily halt and redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project archaeologist, with input from the appropriate Tribe, shall prepare a Cultural Resources Monitoring Plan (CRMP) to document protocols for inadvertent finds, to determine potential protection measures from further damage and destruction for any identified archaeological resource(s)/ tribal cultural resources (TCRs), outline the process for monitoring and for completion of the final Phase IV Monitoring Report. If any archaeological and/or TCRs are identified during monitoring, these will also be documented and addressed per standard archaeological protocols in the Phase IV report, with the exception of human remains which will be addressed per CUL-5. The Project Archaeologist shall attend the pregrading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.

CR-2: At least 30 days prior to the issuance of a grading permit, the Applicant shall contact the appropriate Luiseño tribe to develop a Cultural Resources Treatment Agreement and shall provide evidence to the City of Moreno Valley that the professionally qualified Luiseño Native American monitor(s) has been secured from the interested tribe(s), and that the monitor shall be allowed to monitor all mass grading and trenching activities. The Tribal representative(s) shall attend the pre-grading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.

CR-3: If, during mass grading and trenching activities, the Archaeologist or Tribal representatives suspect that an archaeological resource and/or TCR may have been unearthed, the monitor identifying the potential resources, in consultation with the other monitor as appropriate, shall immediately halt and redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. The Native American monitor(s) or appropriate representative(s) and the archaeological monitor shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2. The archaeological monitor and tribal monitor(s) or appropriate representative(s), the Project Applicant, and the City Planning Division shall confer regarding mitigation of the discovered resource(s). All sacred sites, should they be encountered within the Project area, shall be avoided and preserved as the preferred mitigation, if feasible.

CR-4: Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan:

> "If any suspected archaeological resources are discovered during ground-disturbing activities and the archaeological monitor or Tribal representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal representatives to the site to assess the significance of the find."

CR-5: If human remains are encountered, California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to California Public Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner. If the Riverside County Coroner determines the remains to be Native American, the California Native American Heritage Commission must be contacted within 24 hours. The Native American Heritage Commission must then immediately notify the "most likely descendant(s)" of receiving notification of the discovery. The most likely descendant(s) shall then make recommendations within 48 hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code §5097.98.

CR-6: Prior to construction involving excavation four feet or more below existing surface grade, the construction contractor shall provide evidence that a qualified paleontologist has been retained, and that the paleontologist(s) shall be present during all grading and other significant ground-disturbing activities that reach four feet or more below existing surface grade. In the event fossiliferous deposits are encountered, the following measures shall be implemented:

- Monitoring shall be conducted by qualified paleontological monitor(s) of excavation in areas identified as likely to contain paleontological resources, including very old alluvial fan deposits. Paleontological monitors shall be equipped to salvage fossils as they are unearthed, to avoid construction delays, and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. Monitors shall be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Monitoring may be reduced if the potentially fossiliferous units are determined upon exposure and examination by qualified paleontological personnel to have low potential to contain fossil resources.

- Paleontological monitoring of any earthmoving will be conducted by a monitor, under direct guidance of a qualified paleontologist. Earthmoving in areas of the parcel where previously undisturbed sediments are buried, but not otherwise disturbed, will not be monitored.

- If too few fossil remains are found after 50 percent of the planned-for earthmoving has been completed, monitoring can be reduced or discontinued in those areas at the Project paleontologist's direction.

- Preparation of recovered specimens to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates.

- Identification and curation of specimens into a professional, fully accredited museum repository with permanent retrievable storage. The paleontologist must have a written repository agreement in hand prior to the initiation of mitigation activities.

- Preparation or a report of findings with and appended itemized inventory of specimens. The report and inventory, when submitted to the city along with confirmation of the curation of recovered of recovered specimens into an established, accredited museum repository, will signify completion of the program to mitigate impacts to paleontological resources.

Noise

N-1: Construction activities shall be operated in a manner that limits noise impacts on surrounding uses (General Plan Policy 6.5.2). In order to limit noise impacts on surrounding property, the construction contractor will ensure the following:

- All construction equipment powered by gasoline or diesel engines will be required to have sound-control devices at least as effective as those originally provided by the manufacturer; no equipment will be permitted to have an unmuffled exhaust.
- Mobile noise-generating equipment and machinery will be shut off when not in use;

Construction vehicles assessing the site will be required to use the shortest possible route to and from local freeways, provided the routes do not expose additional receptors to noise.

N-2: The staging of construction equipment and the construction trailer shall be placed as far as possible from the existing single-family residences located to the west and south and the schools to the south.

Building and Safety Division

The following are general comments generated on the information provided and do not constitute a complete list of potential items or issues for this project proposal. Fee estimates for plan review and permits can be obtained by contacting the Building and Safety Division at 951.413.3350.

B1. All new structures shall be designed in conformance to the latest design standards adopted by the State of California in the California Building Code, (CBC) Part 2, Title 24, California Code of Regulations including requirements for allowable area, occupancy separations, fire suppression systems, etc. The current code edition is the 2016 CBC.

B2. The proposed project may be classified as an R-3/U occupancy and shall comply with the 2016 California Residential Code (CRC).

B3. Building plans submitted shall be signed and sealed by a California licensed design professional as required by the State Business and Professions Code.

B4. The proposed development may be subject to the payment of required development fees as required by the City's Fee Ordinance at the time an application is submitted or prior to the issuance of permits as determined by the City.

B5. The proposed project may be subject to approval by the Water District serving this location and all applicable fees and charges shall be paid to the District prior to permit issuance. Contact the appropriate water district for details.

B6. Prior to final inspection, all plans shall be placed on a CD Rom for reference and verification. Plans will include "as built" plans, revisions and changes. The CD will also include Title 24 energy calculations, structural calculations and all other pertinent information. It will be the responsibility of the developer and or the building or property owner(s) to bear all costs required for this process. The CD will be presented to the Building and Safety Division for review prior to final inspection and building occupancy. The CD will become the property of the Moreno Valley Building and Safety Division. In addition, a site plan showing the path of travel from public right of way with elevations will be required.

SCHOOL DISTRICT

S1. (BP) Prior to issuance of building permits, the developer shall provide to the Community & Economic Development Director a written certification by the affected school district that either: (1) the project has complied with the fee or other exaction levied on the project by the governing board of the district, pursuant to Government Code Section 65996; or (2) the fee or other requirement does not apply to the project.

UNITED STATES POSTAL SERVICE

PO1. (BP) Prior to the issuance of building permits, the developer shall contact the U.S. Postal Service to determine the appropriate type and location of mailboxes.

FIRE PREVENTION BUREAU

With respect to the conditions of approval, the following fire protection measures shall be provided in accordance with Moreno Valley City Ordinances and/or recognized fire protection standards:

F1. Prior to issuance of Certificate of Occupancy or Building Final, "Blue Reflective Markers" shall be installed to identify fire hydrant locations in accordance with City specifications. (CFC 509.1 and MVLT 440A-0 through MVLT 440C-0)

F2. During phased construction, dead end roadways and streets which have not been completed shall have a turn-around capable of accommodating fire apparatus. (CFC 503.1 and 503.2.5)

F3. If construction is phased, each phase shall provide an approved emergency vehicular access way for fire protection prior to any building construction. (CFC 501.4)

F4. Prior to construction and issuance of building permits, all locations where structures are to be built shall have an approved Fire Department emergency vehicular access road (all weather surface) capable of sustaining an imposed load of 80,000 lbs. GVW, based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4 and MV City Standard Engineering Plan 108d)

F5. Prior to construction and issuance of Building Permits, fire lanes and fire apparatus access roads shall have an unobstructed width of not less than twenty–four (24) feet as approved by the Fire Prevention Bureau and an unobstructed vertical clearance of not less the thirteen (13) feet six (6) inches. (CFC 503.2.1 and MVMC 8.36.060[E])

F6. Prior to construction, all roads, driveways and private roads shall not exceed 12 percent grade. (CFC 503.2.7 and MVMC 8.36.060[G])

F7. Prior to construction, all locations where structures are to be built shall have an approved Fire Department access based on street standards approved by the Public Works Director and the Fire Prevention Bureau. (CFC 501.4)

F8. Prior to building construction, dead end roadways and streets which have not been completed shall have a turnaround capable of accommodating fire apparatus. (CFC 503.2.5)

F9. The angle of approach and departure for any means of Fire Department access shall not exceed 1 ft drop in 20 ft (0.3 m drop in 6 m), and the design limitations of the fire apparatus of the Fire Department shall be subject to approval by the AHJ. (CFC 503 and MVMC 8.36.060)

F10. Prior to issuance of the building permit for development, independent paved access to the nearest paved road, maintained by the City shall be designed and constructed by the developer within the public right of way in accordance with City Standards. (MVMC 8.36.060, CFC 501.4)

F11. Prior to construction, “private” driveways over 150 feet in length shall have a turn-around as determined by the Fire Prevention Bureau capable of accommodating fire apparatus. Driveway grades shall not exceed 12 percent. (CFC 503 and MVMC 8.36.060, CFC 501.4)

F12. Prior to issuance of Certificate of Occupancy or Building Final, all residential dwellings shall display street numbers in a prominent location on the street side of the residence in such a position that the numbers are easily visible to approaching emergency vehicles. The numbers shall be located consistently on each dwelling throughout the development. The numerals shall be no less than four (4) inches in height and shall be low voltage lighted fixtures. (CFC 505.1, MVMC 8.36.060[I])

F13. Prior to issuance of Building Permits, the applicant/developer shall participate in the Fire Impact Mitigation Program. (Fee Resolution as adopted by City Council)

F14. Prior to issuance of Certificate of Occupancy or Building Final, the applicant/developer shall install a fire sprinkler system based on square footage and type of construction, occupancy or use. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval prior to installation. (CFC Chapter 9, MVMC 8.36.100[D])

F15. Prior to issuance of Building Permits, the applicant/developer shall furnish one copy of the water system plans to the Fire Prevention Bureau for review. Plans shall:

a) Be signed by a registered civil engineer or a certified fire protection engineer;
b) Contain a Fire Prevention Bureau approval signature block; and
c) Conform to hydrant type, location, spacing of new and existing hydrants and minimum fire flow required as determined by the Fire Prevention Bureau.

The required water system, including fire hydrants, shall be installed, made serviceable, and be accepted by the Moreno Valley Fire Department prior to beginning construction. They shall be maintained accessible.

Existing fire hydrants on public streets are allowed to be considered available. Existing fire hydrants on adjacent properties shall not be considered available unless fire apparatus access roads extend between properties and easements are established to prevent obstruction of such roads. (CFC 507, 501.3)

F16. Prior to construction, all traffic calming designs/devices must be approved by the Fire Marshal and City Engineer.

F17. Single Family Dwellings. Schedule "A" fire prevention approved standard fire hydrants (6” x 4” x 2 ½”) shall be located at each intersection of all residential streets. Hydrants shall be spaced no more than 500 feet apart in any direction so that no point on the street is more than 250 feet from a hydrant. Minimum fire flow shall be 1000 GPM for 1 hour duration of 20 PSI. Where new water mains are extended along streets where hydrants are not needed for protection of structures or similar fire problems, serving one and two-family residential developments, standard fire hydrants shall be provided at spacing not to exceed 1000 feet along the tract boundary for transportation hazards. (CFC 507.3, Appendix B, MVMC 8.36.060).

PUBLIC WORKS DEPARTMENT

Land Development Division

The following are the Public Works Department – Land Development Division Conditions of Approval for this project and shall be completed at no cost to any government agency. All questions regarding the intent of the following conditions shall be referred to the Land Development Division.

General Conditions

LD1. (G) The developer shall comply with all applicable City ordinances and resolutions including the City's Municipal Code (MC) and if subdividing land, the Government Code (GC) of the State of California, specifically Sections 66410 through 66499.58, said sections also referred to as the Subdivision Map Act (SMA). [MC 9.14.010]

LD2. (G) The tentative map shall correctly show all existing easements, traveled ways, and drainage courses. Any omission may require the map or plans associated with this application to be resubmitted for further consideration. [MC 9.14.040(A)]

LD3. (G) In the event right of way or offsite easements are required to construct offsite improvements necessary for the orderly development of the surrounding area to meet the public health and safety needs, the developer shall make a good faith effort to acquire the needed right of way in accordance with the Land Development Division's administrative policy. If unsuccessful, the Developer shall enter into an agreement with the City to acquire the necessary right of way or offsite easements and complete the improvements at such time the City acquires the right of way or offsite easements which will permit the improvements to be made. The developer shall be responsible for all costs associated with the right of way or easement acquisition. [GC 66462.5]

LD4. (G) If improvements associated with this project are not initiated within two (2) years of the date of approval of the Public Improvement Agreement (PIA), the City Engineer may require that the engineer's estimate for improvements associated with the project be modified to reflect current City construction costs in effect at the time of request for an extension of time for the PIA or issuance of a permit.

LD5. (G) The developer shall monitor, supervise and control all construction and construction supportive activities, so as to prevent these activities from causing a public nuisance, including but not limited to, insuring strict adherence to the following:

a. Removal of dirt, debris, or other construction material deposited on any public street no later than the end of each working day.

b. Observance of working hours as stipulated on permits issued by the Land Development Division.

c. The construction site shall accommodate the parking of all motor vehicles used by persons working at or providing deliveries to the site.

d. All dust control measures per South Coast Air Quality Management District (SCAQMD) requirements during the grading operations.

Violation of any condition, restriction or prohibition set forth in these conditions shall subject the owner, applicant, developer or contractor(s) to remedy as noted in City Municipal Code 8.14.090. In addition, the City Engineer or Building Official may suspend all construction related activities for violation of any condition, restriction or prohibition set forth in these conditions until such time as it has been determined that all operations and activities are in conformance with these conditions.

LD6. (G) The developer shall protect downstream properties from damage caused by alteration of drainage patterns (i.e. concentration or diversion of flow, etc.). Protection shall be provided by constructing adequate drainage facilities, including, but not limited to, modifying existing facilities or by securing a drainage easement. [MC 9.14.110]

LD7. (G) Public drainage easements, when required, shall be a minimum of 25 feet wide and shall be shown on the map and plan, and noted as follows: *"Drainage Easement – no structures, obstructions, or encroachments by landfills are allowed."* In addition, the grade within the easement area shall not exceed a 3:1 (H:V) slope, unless approved by the City Engineer.

LD8. (G) For single family residential subdivisions, all lots shall drain toward the street unless otherwise approved by the City Engineer. Residential lot drainage to the street shall be by side yard swales, and must be directed to a driveway or drainage devices located outside the right of way in accordance with City Standard MVSI-154-0. No cross-lot or over the sidewalk drainage shall be allowed.

LD9. (G) Prior to any plan approval, a final detailed drainage study (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer. The study shall include existing and proposed hydrologic conditions as well as hydraulic calculations for all drainage control devices and storm drain lines. [MC 9.14.110(A.1)]. A digital (pdf) copy of the approved drainage study shall be submitted to the Land Development Division.

LD10. (G) Water quality best management practices (BMPs) designed to meet Water Quality Management Plan (WQMP) requirements for single-family residential development shall not be used as a construction BMP. Water quality BMPs shall be maintained for the entire duration of the project construction and be used to treat runoff from those developed portions of the project. Water quality BMPs shall be protected from upstream construction related runoff by having proper best management practices in place and maintained. Water quality BMPs shall be graded per the approved design plans and once landscaping and irrigation has been installed, it and its maintenance shall be turned over to an established Homeowner's Association (HOA). The Homeowner's Association shall enter into an agreement with the City for basin maintenance.

LD11. (G) The final approved conditions of approval (COAs) and any applicable Mitigation Measures issued by the Planning Division shall be photographically or electronically placed on Mylar sheets and included in the Grading and Street Improvement plans.

LD12. (G) Aggregate slurry, as defined in Section 203-5 of Standard Specifications for Public Works Construction, may be required just prior to the end of the one-year warranty period of the public streets at the discretion of the City Engineer. If slurry is required, a slurry mix design shall be submitted for review and approved by the City Engineer. The latex additive shall be Ultra Pave 70 (for anionic) or Ultra Pave 65 K (for cationic) or an approved equal per the geotechnical report. The latex shall be added at the emulsion plant after weighing the asphalt and before the addition of mixing water. The latex shall be added at a rate of two to two-and-one-half (2 to 2½) parts to one-hundred (100) parts of emulsion by volume. Any existing striping shall be removed prior to slurry application and replaced per City standards.

<u>Prior to Grading Plan Approval</u>

LD13. (GPA) Grading plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

LD14. (GPA) Landscape & Irrigation plans (prepared by a registered/licensed landscape architect) for water quality BMPs shall be submitted for review and approved by the City Engineer per the current submittal requirements, if applicable.

LD15. (GPA) The developer shall ensure compliance with the City Grading ordinance, these Conditions of Approval and the following criteria:

a. The project street and lot grading shall be designed in a manner that perpetuates the existing natural drainage patterns with respect to tributary drainage area and outlet points. Unless otherwise approved by the City Engineer, lot lines shall be located at the top of slopes.

b. Any grading that creates cut or fill slopes adjacent to the street shall provide erosion control, sight distance control, and slope easements as approved by the City Engineer.

c. All improvement plans are substantially complete and appropriate clearance letters are provided to the City.

d. A soils/geotechnical report (addressing the soil's stability and geological conditions of the site) shall be submitted to the Land Development Division for review. A digital (pdf) copy of the soils/geotechnical report shall be submitted to the Land Development Division.

LD16. (GPA) The developer shall select Low Impact Development (LID) Best Management Practices (BMPs) designed per the latest version of the Water Quality Management Plan (WQMP) - a guidance document for the Santa Ana region of Riverside County.

LD17. (GPA) For projects that will result in discharges of storm water associated with construction with a soil disturbance of one or more acres of land, the developer shall submit a Notice of Intent (NOI) and obtain a Waste Discharger's Identification number (WDID#) from the State Water Quality Control Board (SWQCB) which shall be noted on the grading plans.

LD18. (GPA) Two (2) copies of the final project-specific Water Quality Management Plan (WQMP) shall be submitted for review and approved by the City Engineer, which:

a. Addresses Site Design Best Management Practices (BMPs) such as minimizing impervious areas, maximizing permeability, minimizes directly connected impervious areas to the City's street and storm drain systems, and conserves natural areas;

b. Incorporates Source Control BMPs and provides a detailed description of their implementation;

c. Describes the long-term operation and maintenance requirements for BMPs requiring maintenance; and

d. Describes the mechanism for funding the long-term operation and maintenance of the BMPs.

A copy of the final WQMP template can be obtained on the City's Website or by contacting the Land Development Division. A digital (pdf) copy of the approved final project-specific Water Quality Management Plan (WQMP) shall be submitted to the Land Development Division.

LD19. (GPA) A Storm Water Pollution Prevention Plan (SWPPP) shall be prepared in conformance with the State's current Construction Activities Storm Water General Permit. A copy of the current SWPPP shall be kept at the project site and be available for review upon request.

LD20. (GPA) The developer shall pay all remaining plan check fees.

LD21. (GPA) Resolution of all drainage issues shall be as approved by the City Engineer.

Prior to Grading Permit

LD22. (GP) The developer shall submit recorded slope easements from adjacent property owners in all areas where grading resulting in slopes is proposed to take place outside of the project boundaries. For all other offsite grading, written permission from adjacent property owners shall be submitted.

LD23. (GP) A receipt showing payment of the Area Drainage Plan (ADP) fee to Riverside County Flood Control and Water Conservation District shall be submitted. [MC 9.14.100(O)]

LD24. (GP) Security, in the form of a cash deposit (preferable), or letter of credit shall be submitted as a guarantee of the completion of the grading operations for the project. [MC 8.21.070]

LD25. (GP) Security, in the form of a cash deposit (preferable), or letter of credit shall be submitted as a guarantee of the implementation and maintenance of erosion control measures. At least twenty-five (25) percent of the required security shall be in the form of a cash deposit with the City. [MC 8.21.160(H)]

LD26. (GP) The developer shall pay all applicable inspection fees.

LD27. (GP) A digital (pdf) copy of the approved grading plans shall be submitted to the Land Development Division.

Prior to Map Approval

LD28. (MA) Final maps (prepared by a registered civil engineer and/or licensed surveyor) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

LD29. (MA) Resolution of all drainage issues shall be as approved by the City Engineer.

LD30. (MA) A copy of the Covenants, Conditions and Restrictions (CC&Rs) shall be submitted for review and approved by the City Engineer. The CC&Rs shall include, but not be limited to, access easements, reciprocal access, private and/or public utility easements as may be relevant to the project. In addition, for single-family residential development, bylaws and articles of incorporation shall also be included as part of the maintenance agreement for any water quality BMPs.

LD31. (MA) All street dedications shall be free of all encumbrances, irrevocably offered to the public and shall continue in force until the City accepts or abandons such offers, unless otherwise approved by the City Engineer.

LD32. (MA) The developer shall guarantee the completion of all related improvements required for this project by executing a Public Improvement Agreement (PIA) with the City and posting the required security. [MC 9.14.220]

LD33. (MA) All public improvement plans required for this project shall be approved by the City Engineer in order to execute the Public Improvement Agreement (PIA).

LD34. (MA) The developer shall enter into a Cooperative Agreement with the City and Riverside County Flood Control and Water Conservation District establishing the terms and conditions covering the inspection, operation and maintenance of Master Drainage Plan facilities required to be constructed as part of the project.

LD35. (MA) The developer shall comply with the requirements of the City Engineer based on recommendations of the Riverside County Flood Control District regarding the construction of County Master Plan Facilities.

LD36. (MA) If the project involves the subdivision of land, maps may be developed in phases with the approval of the City Engineer. Financial security shall be provided for all public improvements associated with each phase of the map. The boundaries of any multiple map increment shall be subject to the approval of the City Engineer. If the project does not involve the subdivision of land and it is necessary to dedicate right of way/easements, the developer shall make the appropriate offer of dedication by separate instrument. In either case, the City

Engineer may require the dedication and construction of necessary utility, street or other improvements beyond the project boundary, if the improvements are needed for circulation, parking, access, or for the welfare or safety of the public. [MC 9.14.080(B)(C), GC 66412 & 66462.5]

LD37. (MA) All proposed street names shall be submitted for review and approved by the City Engineer, if applicable. [MC 9.14.090(E.2.k)]

LD38. (MA) Under the current permit for storm water activities required as part of the National Pollutant Discharge Elimination System (NPDES) as mandated by the Federal Clean Water Act, this project is subject to the following requirements:

a. Establish a Home Owners Association (HOA) to finance the maintenance of the “Water Quality BMPs”. Any lots which are identified as “Water Quality BMPs” shall be owned in fee by the HOA.

b. Dedicate a maintenance easement to the City of Moreno Valley.

c. Execute a maintenance agreement between the City of Moreno Valley and the HOA, which shall be approved by City Council.

d. Establish a trust fund per the terms of the maintenance agreement.

e. Provide a certificate of insurance per the terms of the maintenance agreement.

f. Select one of the following options to meet the financial responsibility to provide storm water utilities services for the required continuous operation, maintenance, monitoring system evaluations and enhancements, remediation and/or replacement, all in accordance with Resolution No. 2002-46.

   i. Participate in the mail ballot proceeding in compliance with Proposition 218, for the Residential NPDES Regulatory Rate Schedule and pay all associated costs with the ballot process, or

   ii. Establish an endowment to cover future maintenance costs for the Residential NPDES Regulatory Rate Schedule.

g. Notify the Special Districts Division of the intent to record the final map 90 days prior to City Council action authorizing recordation of the final map and the financial option selected. The final option selected shall be in place prior to the issuance of certificate of occupancy. [California Government Code & Municipal Code]

LD39. (MA) After recordation, a digital (pdf) copy of the recorded map shall be submitted to the Land Development Division.

Prior to Improvement Plan Approval

LD40. (IPA) All public improvement plans (prepared by a licensed/registered civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

LD41. (IPA) The developer shall submit clearances from all applicable agencies, and pay all applicable plan check fees.

LD42. (IPA) The street improvement plans shall comply with current City policies, plans and applicable City standards (i.e. MVSI-160 series, etc.) throughout this project.

LD43. (IPA) The design plan and profile shall be based upon a centerline, extending beyond the project boundaries a minimum distance of 300 feet at a grade and alignment approved by the City Engineer.

LD44. (IPA) The plans shall indicate any restrictions on trench repair pavement cuts to reflect the City's moratorium on disturbing newly-constructed pavement less than three (3) years old and recently slurry sealed streets less than one (1) year old. Pavement cuts for trench repairs may be allowed for emergency repairs or as specifically approved by the City Engineer.

LD45. (IPA) All dry and wet utilities shall be shown on the plans and any crossings shall be potholed to determine actual location and elevation. Any conflicts shall be identified and addressed on the plans. The pothole survey data shall be submitted to Land Development with the public improvement plans for reference purposes only. The developer is responsible to coordinate with all affected utility companies and bear all costs of any utility relocation.

LD46. (IPA) The developer is required to bring any existing access ramps adjacent to and fronting the project to current ADA (Americans with Disabilities Act) requirements. However, when work is required in an intersection that involves or impacts existing access ramps, all access ramps in that intersection shall be retrofitted to comply with current ADA requirements, unless approved otherwise by the City Engineer.

LD47. (IPA) Drainage facilities (i.e. catch basins, etc.) with sump conditions shall be designed to convey the tributary 100-year storm flows. Secondary emergency escape shall also be provided.

LD48. (IPA) The hydrology study shall be designed to accept and properly convey all off-site drainage flowing onto or through the site. All storm drain design and improvements shall be submitted for review and approved of the City Engineer. In the event that the City Engineer permits the use of streets for drainage purposes, the provisions of current City standards shall apply. Should the quantities exceed the street capacity or the use of streets be prohibited for drainage purposes, as in the case where one travel lane in each direction shall not be used for drainage conveyance for emergency vehicle access on streets classified as minor arterials and greater, the developer shall provide adequate facilities as approved by the City Engineer. [MC 9.14.110 A.2]

<u>Prior to Encroachment Permit</u>

LD49. (EP) All work performed within public right of way requires an encroachment permit. Security (in the form of a cash deposit or other approved means) may be required as determined by the City Engineer. For non-subdivision projects, the City Engineer may require the execution of a Public Improvement

Agreement (PIA) as a condition of the issuance of a construction or encroachment permit. All inspection fees shall be paid prior to issuance of construction permit. [MC 9.14.100(C.4)]

LD50. (EP) A digital (pdf) copy of all approved improvement plans shall be submitted to the Land Development Division.

LD51. (EP) All applicable inspection fees shall be paid.

Prior to Building Permit

LD52. (BP) For all subdivision projects, the map shall be recorded (excluding model homes). [MC 9.14.190]

LD53. (BP) Certification to the line, grade, flow test, and system invert elevations for the water quality control BMPs shall be submitted or review and approved by the City Engineer (excluding models homes).

LD54. (BP) An engineered-fill certification, rough grade certification and compaction report shall be submitted for review and approved by the City Engineer. A digital (pdf) copy of the approved compaction report shall be submitted to the Land Development Division. All pads shall meet pad elevations per approved grading plans as noted by the setting of “blue-top” markers installed by a registered land surveyor or licensed civil engineer.

Prior to Occupancy

LD55. (CO) All required as-built plans (prepared by a registered/licensed civil engineer) shall be submitted for review and approved by the City Engineer per the current submittal requirements.

LD56. (CO) The engineered final/precise grade certification shall be submitted for review and approved by the City Engineer.

LD57. (CO) All outstanding fees shall be paid.

LD58. (CO) The developer shall complete all public improvements in conformance with current City standards, except as noted in the Special Conditions, including but not limited to the following:

a. Street improvements including, but not limited to: pavement, base, curb and/or gutter, cross gutters, spandrel, sidewalks, drive approaches, pedestrian ramps, street lights, signing, striping, under sidewalk drains, landscaping and irrigation, medians, redwood header boards, pavement tapers/transitions and traffic control devices as appropriate.

b. Storm drain facilities including, but not limited to: storm drain pipe, storm drain laterals, open channels, catch basins and local depressions.

c. City-owned utilities.

d. Sewer and water systems including, but not limited to: sanitary sewer, potable water and recycled water.

e. Under grounding of all existing and proposed utilities adjacent to and on-site. [MC 9.14.130]

f. Relocation of overhead electrical utility lines including, but not limited to: electrical, cable and telephone.

LD59. (CO) For residential subdivisions, prior to releasing the last 20% or last 5 permitted structures (whichever is greater, unless otherwise determined by the City Engineer) of any Map Phase, punch list work for improvements and capping of streets in that phase shall be completed and approved for acceptance by the City Engineer.

LD60. (CO) The Developer shall comply with the following water quality related items:

a. Notify the Land Development Division prior to construction and installation of all structural BMPs so that an inspection can be performed.

b. Demonstrate that all structural BMPs described in the approved final project-specific WQMP have been constructed and installed in conformance with the approved plans and specifications;

c. Demonstrate that Developer is prepared to implement all non-structural BMPs described in the approved final project-specific WQMP; and

d. Demonstrate that an adequate number of copies of the approved final project-specific WQMP are available for future owners/occupants.

e. Clean and repair the water quality BMP's, including re-grading to approved civil drawings if necessary.

f. Provide City with updated Engineer's Line and Grade Certification.

g. Obtain approval and complete installation of the irrigation and landscaping.

LD61. (CO) The applicant shall ensure the following, pursuant to Section XII. I. of the 2010 NPDES Permit:

a. Field verification that structural Site Design, Source Control and Treatment Control BMPs are designed, constructed and functional in accordance with the approved Final Water Quality Management Plan (WQMP).

b. Certification of best management practices (BMPs) from a state licensed civil engineer. An original WQMP BMP Certification shall be submitted for review and approved by the City Engineer.

<u>Special Conditions</u>

LD62. (GP) Prior to the payment of the Development Impact Fee (DIF), the developer may enter into a DIF Improvement Credit Agreement to secure credit for the construction of applicable improvements. The Agreement must submitted prior to the issuance of a grading permit and must be approved by the City Council prior to receiving credit for applicable improvements. If the developer fails to complete this agreement prior to the timing specified above, no credits will be given. The developer shall pay current DIF fees adopted by the City Council. [Ord. 695 § 1.1 (part), 2005] [MC 3.38.030, 040, 050]

LD63. (GP) Prior to the payment of the Transportation Uniform Mitigation Fee (TUMF), the developer may enter into a TUMF Improvement Credit Agreement to secure credit for the construction of applicable improvements. The Agreement must submitted prior to the issuance of a grading permit and must be approved by the City Council prior to receiving credit for applicable improvements. If the developer fails to complete this agreement by the timing specified above, no credits will be given. The developer shall pay current TUMF fees adopted by the City Council. [Ord. 835 § 2.1, 2012] [MC 3.44.060]

LD64. Prior to final map approval, the map shall show the following:

a. The appropriate right-of-way dedication along Indian Street frontage shown as Lot S on the tentative tract map. This includes right-of-way required for a bus turn-out as conditioned by the Transportation Engineering Division.
b. The appropriate right-of-way dedication on Santiago Drive frontage shown as Lots Q and R on the tentative tract map.
c. The appropriate right-of-way dedication on Gentian Street frontage shown as Lot D on the tentative parcel map.
d. A 10-foot landscape easement along the east side of Indian Street and south side of Gentian Avenue.
e. A 1.5-foot landscape easement along the north side of Santiago Drive.

LD65. Prior to final map approval, the Developer shall guarantee the construction of the following improvements by entering into a public improvement agreement and posting security. The improvements along the project frontage shall be completed prior to occupancy of the first building or as otherwise determined by the City Engineer:

a. Indian Street, Minor Arterial, City Standard MVSI-105A-0 (88-foot RW / 64-foot CC) shall be constructed to complete the half-width along the entire project's east frontage. Remaining improvements shall consist of, but not be limited to pavement and base, sidewalk, catch basin, streetlights, pedestrian access ramps, and dry and wet utilities. In addition, the applicant will be required to install, replace and/or repair any missing, damaged or substandard improvements that do not meet current City standards.
b. Santiago Drive (east), Collector, City Standard MVSI-106B-0 (66-foot RW / 44-foot CC) shall be constructed to half-width plus an additional 12 feet south of the centerline from Street "L" to the project easterly boundary and half-width plus an additional 18 feet south of the centerline from the project easterly boundary to Perris Boulevard. Improvements shall consist of, but not be limited to, pavement and base, curb, gutter, sidewalk, driveway approaches, catch basins, storm drain, streetlights, pedestrian access ramps, and dry and wet utilities.
c. Santiago Drive (west), Collector, City Standard MVSI-106B-0 (66-foot RW / 44-foot CC) shall be constructed to full-width between Indian Street and

Street “N”. Improvements shall consist of, but not be limited to, pavement and base, curb, gutter, sidewalk, driveway approaches, catch basins, storm drain, streetlights, pedestrian access ramps, and dry and wet utilities.

d. Gentian Street, Minor Arterial (modified), City Standard MVSI-105A-0 (88-foot RW / 64-foot CC) shall be constructed to half-width plus an additional 18 feet north of the centerline, along the entire project’s north frontage. Improvements shall consist of, but not be limited to, a raised median, pavement and base, curb, gutter, sidewalk, catch basins, streetlights, pedestrian access ramps, dry and wet utilities.
e. Street “D”, Local Street (modified), City Standard MVSI-107A-0 (56-foot RW / 36-foot CC) shall be constructed to full-width as shown on the tentative map. Improvements shall consist of, but not be limited to, pavement and base, curb, gutter, sidewalk, catch basins, storm drain streetlights, pedestrian access ramps, dry and wet utilities.
f. Street “L”, Collector (modified), City Standard MVSI-106B-0 (66-foot RW / 40-foot CC) shall be constructed to full-width as shown on the tentative map. Improvements shall consist of, but not be limited to, pavement and base, curb, gutter, sidewalk, catch basins, storm drain, streetlights, pedestrian access ramps, dry and wet utilities.
g. Streets “A”, “B”, “C”, “E”, “F”, “G”, “H”, “I”, “J”, “K” “M”, “N”, “O”, and “P”, Local Street, City Standard MVSI-107A-0 (56-foot RW / 36-foot CC) shall be constructed to full-width as shown on the tentative map. Improvements shall consist of, but not be limited to, pavement and base, curb, gutter, sidewalk, catch basins, storm drain streetlights, pedestrian access ramps, dry and wet utilities.
h. All knuckles and cul-de-sacs shall be constructed per City Standards MVSI-162-0 and MVSI-163A-0, respectively.
i. Sunnymead Master Drainage Plan (MDP) Line M-2 within the public right-of-way in Santiago Drive, Perris Boulevard and Iris Avenue or an alignment as approved by both the RCFC&WCD and the City. This includes, but not limited to, construction of a 39-inch minimum storm drain, laterals, catch basins/inlets, and local depressions as needed.
j. The intersection of Perris Boulevard and Santiago Drive shall be fully improved to the ultimate right-of-way and street width in order to construct a traffic signal required by the Transportation Engineering Division condition TE8.

LD66. Lettered Lots “AA” and “DD” shall be designated for water quality bio-retention purposes and shall be reserved in fee title for the owner, heirs and assigns.

LD67. Lettered Lots “CC” and “HH” shall be designated for park purposes and reserved per the Parks and Community Services Department requirements.

LD68. Lettered Lots “BB”, “EE”, “FF”, “GG”, “II”, “JJ”, “KK”, “LL” “MM”, and “NN”, shall be designated open space and reserved in fee title for the owner, heirs and assigns.

LD69. Lettered Lots “BB”, “EE”, and “FF” shall show a 25-foot drainage easement for storm drain maintenance purposes.

LD70. Prior to the final map approval, the developer shall secure the following:

a. Additional right-of-way along the south side of Santiago Drive (east) between Street “L” and approximately 650 feet east of Street “L” for the construction of an eastbound travel lane as shown on the tentative map. The dedication shall be submitted for review, approval, and recorded.
b. Additional right-of-way between Indian Street and Street “N” for the full construction of Santiago Drive (west) as shown on the tentative map. The dedication shall be submitted for review, approval, and recorded.
c. Vacation of a portion of the south side of Santiago Drive (west), including utilities and drainage easements, as shown on the approved tentative tract map and as approved by City Engineer

LD71. Prior to rough grading plan approval, this project shall demonstrate, via a final drainage study, that the increased runoff resulting from the development of this site is mitigated. During no storm event shall the flow leaving the site in the developed condition be larger than that of the pre-developed condition, unless the study demonstrates that the existing or proposed drainage facilities can accommodate the increased run-off. The drainage study shall analyze the following events: 1, 3, 6 and 24-hour duration events for the 2, 5, 10 and 100-year storm events. The applicant understands that additional detention measures may be required beyond those shown on the tentative map and preliminary drainage study.

LD72. Prior to rough grading plan approval, the Applicant shall prepare and submit for approval a final, project-specific water quality management plan (F-WQMP). The F-WQMP shall be consistent with the approved P-WQMP, as well as in full conformance with the document; “Water Quality Management Plan - A Guidance Document for the Santa Ana Region of Riverside County” dated October 22, 2012. The F-WQMP shall be submitted and approved prior to application for and issuance of grading permits. At a minimum, the F-WQMP shall include the following: stormwater BMPs; LID principles; Source control BMPs; Operation and Maintenance requirements for BMPs; and sources of funding for BMP implementation.

a. The Applicant has proposed to incorporate the use of two (2) bio-retention basins. Final design and sizing details of all BMPs must be provided in the first submittal of the F-WQMP. The Applicant acknowledges that more area than currently shown on the plans may be required to treat site runoff as required by the WQMP guidance document.
b. All proposed LID BMP’s shall be designed in accordance with the RCFC&WCD’s Design Handbook for Low Impact Development Best Management Practices, dated September 2011.
c. The proposed LID BMP’s as identified in the project-specific P-WQMP shall be incorporated into the Final WQMP.

d. The NPDES notes per City Standard Drawing No. MVFE-350-0 shall be included in grading plans.
e. Post-construction treatment control BMPs, once placed into operation for post-construction water quality control, shall not be used to treat runoff from construction sites or unstabilized areas of the site.

LD73. Prior to precise grading plan approval, emergency overflow area(s) shall be shown at all applicable drainage improvement locations in the event that the drainage improvement fails or exceeds full capacity. This may include, but not be limited to, an emergency spillway in the proposed detention basin(s).

LD74. Prior to issuance of a building permit, the precise grading plans shall be approved.

LD75. Prior to street improvement plan approval, all dry and wet utilities shall be shown on the plans and any crossings shall be potholed to determine actual location and elevation. Any conflicts shall be identified and addressed on the plans. The pothole survey data shall be submitted to Land Development with the public improvement plans for reference purposes only. The developer is responsible to coordinate with all affected utility companies and bear all costs of any utility relocation.

LD76. Prior to occupancy, all overhead utility lines less than 115,000 volts fronting or within the entire project site boundary shall be placed underground per Section 9.14.130C of the City Municipal Code.

LD77. The Applicant shall, prior to building or grading permit closeout or the issuance of a certificate of occupancy, demonstrate:

a. That all structural BMPs have been constructed and installed in conformance with the approved plans and specifications;
b. That all structural BMPs described in the F-WQMP have been implemented in accordance with approved plans and specifications;
c. That the Applicant is prepared to implement all non-structural BMPs included in the F-WQMP, conditions of approval, and building/grading permit conditions; and
d. That an adequate number of copies of the approved F-WQMP are available for the future owners/occupants of the project.

LD78. Prior to occupancy, as-built street improvement plans, storm drain plans and precise grading plans shall be submitted for review and approved.

Special Districts Division

Conditions are standard to all or most development projects. Some special conditions, modified conditions or clarification of conditions may be included. Please review conditions as listed and contact the Division at 951.413.3480 for any questions.

Acknowledgement of Conditions

The following are the Special Districts Division's Conditions of Approval for PA14-0052 and PA14-0053; this project shall be completed at no cost to any Government Agency. All questions regarding the following Conditions including but not limited to intent, requests for change/modification, variance and/or request for extension of time shall be sought from the Special Districts Division of the Public Works Department 951.413.3480 or by emailing specialdistricts@moval.org.

General Conditions

SD-1 The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services District Zone A (Parks & Community Services) and Zone C (Arterial Street Lighting). All assessable parcels therein shall be subject to annual parcel taxes for Zone A and Zone C for operations and capital improvements.

SD-2 Plans for external parkway and median landscape areas designated in the project's Conditions of Approval for incorporation into a City coordinated landscape maintenance program, shall be prepared and submitted in accordance with the City of Moreno Valley Public Works Department Landscape Design Guidelines. The guidelines are available on the City's website at www.moval.org/sd or from the Special Districts Division (951.413.3480 or specialdistricts@moval.org).

SD-3 In the event the City of Moreno Valley determines that funds authorized by any Proposition 218 mail ballot proceeding are insufficient to meet the costs for external parkway maintenance and utility charges, the City shall have the right, at its option, to terminate the grant of any or all parkway maintenance easements. This power of termination, should it be exercised, shall be exercised in the manner provided by law to quit claim and abandon the property so conveyed to the District, and to revert to the Developer or the Developer's successors in interest, all rights, title, and interest in said parkway areas, including but not limited to responsibility for perpetual maintenance of said areas.

SD-4 The Developer, or the Developer's successors or assignees shall be responsible for all parkway and median landscape maintenance for a period of one (1) year commencing from the time all items of work have been completed to the satisfaction of Special Districts staff as per the City of Moreno Valley Public Works Department Landscape Design Guidelines, or until such time as the District accepts maintenance responsibilities.

SD-5 Any damage to existing landscape areas maintained by the City of Moreno Valley due to project construction shall be repaired/replaced by the Developer, or Developer's successors in interest, at no cost to the City of Moreno Valley.

SD-6 The ongoing maintenance of any internal parkway landscaping required to be installed within the tract shall be the responsibility of the Home Owner's Association.

SD-7 Plan check fees for review of parkway/median landscape plans for improvements that shall be maintained by the City of Moreno Valley are due upon the first plan submittal. (MC 3.32.040)

SD-8 Inspection fees for the monitoring of landscape installation associated with the City of Moreno Valley maintained parkways/medians are due prior to the required pre-construction meeting. (MC 3.32.040)

SD-9 Street Light Authorization forms for all street lights that are conditioned to be installed as part of this project must be submitted to the Special Districts Division for approval, prior to street light installation. The Street Light Authorization form can be obtained from the utility company providing electric service to the project, either Moreno Valley Utility or Southern California Edison. For questions, contact the Special Districts Division at 951.413.3480 or specialdistricts@moval.org.

SD-10 Parkway and median landscape areas maintained as part of the City of Moreno Valley Community Facilities District 2014-01 shall be required to have independent utility systems, including but not limited to water, electric, and telephone services. An independent irrigation controller and pedestal will also be required. Combining utility systems with existing or future landscape areas not associated with the City of Moreno Valley Community Facilities District (CFD) landscaping will not be permitted.

Prior to Grading Permit

SD-11 This project is included within the future annexation boundaries for Community Facilities District No. 7 (CFD No. 7) – Improvement Area No. 3. If Bonds have been sold for CFD No. 7 – Improvement Area No. 3, then the Local Component portion of the Area Drainage Plan (ADP) fee for Riverside County Flood Control and Water Conservation District (RCFCWCD) has been allocated toward the debt service payments on CFD No. 7 bonds and/or paid directly for acquisition of RCFCD facilities.

In order for the Developer to meet its financial obligation, it must notify the Special Districts Division when submitting the application for grading permit and select one of the funding options outlined below.

Or

If a grading permit is not required, the Developer must notify the Special Districts Division at 951.413.3480 or specialdistricts@moval.org when submitting the application for building permit issuance and select one of the funding options outlined below.

a. Participate in a special election to annex into CFD No. 7 and pay the equivalent to the Local Component portion of the ADP fee including interest as a special tax levied annually on the Riverside County property tax bill; or

b. Pay the Local Component portion of the ADP fee directly to the City of Moreno Valley, Special Districts Division which shall be used for any authorized purpose for CFD No. 7.

If the funding option selected is participation in a special election, a minimum of 90 days is needed to complete the special election process. This allows adequate time to complete the special election process in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

Annexation to CFD No. 7 shall be completed or proof of payment of the Local Component portion of the ADP fee shall be provided to the Special Districts Division prior to the issuance of the first building permit for this project.

Prior to Recordation of Final Map

SD-12 (R) This project has been conditioned to provide a funding source for the continued maintenance, enhancement, and/or retrofit of parks, open spaces, linear parks, and/or trail systems. The Developer shall satisfy this condition with one of the options below.

a. Participate in a special election for annexation into Community Facilities District No. 1 and pay all associated costs of the special election process and formation, if any; or

b. Establish an endowment fund to cover future maintenance costs for new neighborhood parks.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. A minimum of 90 days is needed to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

Annexation to CFD No. 1 shall be completed or proof of payment to establish the endowment fund shall be provided prior to the issuance of the first building permit for this project.

SD-13 (R) This project has been identified to be included in the formation of a Community Facilities District for Public Safety services including but not limited to Police, Fire Protection, Paramedic Services, Park Rangers, and Animal Control services. The property owner(s) shall not protest the formation; however, they retain the right to object to the rate and method of maximum special tax. In compliance with Proposition 218, the property owner shall agree to approve the mail ballot proceeding (special election) for either formation of the CFD or annexation into an existing district that may already be established. The Developer must notify the Special Districts Division at 951.413.3480 or specialdistricts@moval.org of its intent to record the final map for the development 90 days prior to City Council action authorizing recordation of the map. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution. (California Government Code Section 53313 et. seq.)

SD-14 (R) This project is conditioned to provide a funding source for the following special financing program(s):

a. Street Lighting Services for capital improvements, energy charges, and maintenance.
b. Landscape Maintenance Services for external parkway and median landscaping on Indian Street, Gentian Avenue, and Santiago Drive.

The Developer's responsibility is to provide a funding source for the capital improvements and the continued maintenance of the landscaped area. The Developer shall satisfy this condition with one of the options below.

i. Participate in a special election (mail ballot proceeding) and pay all associated costs of the special election and formation, if any. Financing may be structured through a Community Services District zone, Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

ii. Establish a Property Owner's Association or Home Owner's Association which will be responsible for any and all operation and maintenance costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. The option for participating in a special election requires approximately 90 days to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

The financial option selected shall be in place prior to the issuance of the first building permit for this project.

SD-15 (R) This project is conditioned to provide a funding source for the operation and maintenance of public improvements and/or services associated with new development in that territory. The Developer shall satisfy this condition with one of the options below.

a. Participate in a special election for maintenance/services and pay all associated costs of the election process and formation, if any. Financing may be structured through a Community Facilities District, Landscape and Lighting Maintenance District, or other financing structure as determined by the City; or

b. Establish an endowment fund to cover the future maintenance and/or service costs.

The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option prior to City Council action authorizing recordation of the final map for the development. A minimum of 90 days is needed to complete the special election process. This allows adequate time to be in compliance with the provisions of Article 13C of the California Constitution for conducting a special election.

The financial option selected shall be in place prior to the issuance of the first building permit for the project.

SD-16 *Residential* (R) If Land Development, a Division of the Public Works Department, requires this project to supply a funding source necessary to provide for, but not limited to, stormwater utilities services for the required continuous operation, maintenance, monitoring, systems evaluation and enhancements of on-site facilities and performing annual inspections of the affected areas to ensure compliance with state mandated storm water regulations, a funding source needs to be established. The Developer must notify the Special Districts Division at 951.413.3480 or at specialdistricts@moval.org of its selected financial option for the National Pollution Discharge Elimination System (NPDES) program (see Land Development's related condition). Participating in a special election the process requires a 90 day period prior to City Council action authorizing recordation of the final map for the development and to participate in a special election process. This allows adequate time to be in compliance with the provisions of Article 13D of the California Constitution. California Health and Safety Code Sections 5473 through 5473.8 (Ord. 708 Section 3.1, 2006) & City of Moreno Valley Municipal Code Title 3, Section 3.50.050.)

SD-17 (R) Easements for reverse frontage parkway areas abutting Indian Street, Gentian Avenue, and Santiago Drive shall be 6 ft. or to top of parkway facing slope or to face of perimeter tract wall, whichever is greater. Easements shall be dedicated to the City of Moreno Valley for landscape maintenance purposes, and shall be depicted on the final map, and an offer of their dedication made thereon.

SD-18 (R) Prior to the recordation of the final map, the Developer shall provide all necessary documents to convey to the City the required easements for parkway and/or slope maintenance as specified on the tentative map or in these Conditions of Approval.

Prior to Building Permit Issuance

SD-19 (BP) Prior to the issuance of the first building permit for this project, the Developer shall pay Advanced Energy fees for all applicable Residential and Arterial Street Lights required for this development. Payment shall be made to the City of Moreno Valley and collected by the Land Development Division. Fees are based upon the Advanced Energy fee rate in place at the time of payment, as set forth in the current Listing of City Fees, Charges, and Rates adopted by City Council. The Developer shall provide a copy of the receipt to the Special Districts Division *(specialdistricts@moval.org).* Any change in the project which may increase the number of street lights to be installed will require payment of additional Advanced Energy fees at the then current fee. Questions may be directed to the Special Districts Division at 951.413.3480 or specialdistricts@moval.org.

SD-20 (BP) For those areas to be maintained by the City and prior to the issuance of the first Building Permit, Planning Division (Community Development Department), Special Districts Division (the Public Works Department) and Transportation Division (the Public Works Department) shall review and approve the final median and external parkway landscape/irrigation plans as designated on the tentative map or in these Conditions of Approval prior to the issuance of the first Building Permit.

SD-21 (BP) External parkway and median landscaping specified in the project's Conditions of Approval shall be constructed in compliance with the City of Moreno Valley Public Works Design Guidelines and completed prior to the issuance of 25% (or 55) of the dwelling permits for this tract or 12 months from the issuance of the first dwelling permit, whichever comes first. In cases where a phasing plan is submitted, the actual percentage of dwelling permits issued prior to the completion of the landscaping shall be subject to the review of the construction phasing plan.

Prior to Certificate of Occupancy

SD-22 (CO) Landscape and irrigation plans for parkway, median, slope, and/or open space landscape areas designated to be maintained by the City shall be placed on compact disk (CD) in pdf format. The CD shall include "As Built" plans, revisions, and changes. The CD will become the property of the City of Moreno Valley and the Moreno Valley Community Services District.

Transportation Engineering Division

GENERAL CONDITIONS

TE1. Indian Street is classified as a Minor Arterial (88’RW/64’CC) per City Standard Plan No. MVSI-105A-0. Traffic Signal Interconnect along project frontage shall be required per City Standard Plan No. MVSI-186-0. Any improvements undertaken by this project shall be consistent with the City’s standards for this facility.

TE2. Gentian Avenue is classified as a Minor Arterial (88’RW/64’CC) per City Standard Plan No. MVSI-105A-0, modified for a raised median. Traffic Signal Interconnect along project frontage shall be required per City Standard Plan No. MVSI-186-0. Any improvements undertaken by this project shall be consistent with the City’s standards for this facility.

TE3. Santiago Drive is designated as a Collector (66’RW/44’CC) per City Standard Plan No. MVSI-106B-0. Any improvements undertaken by this project shall be consistent with the City’s standards for this facility.

TE4. Interior street (A-P, except L) is designated as a Local Street (56’RW/36’CC) per City Standard Plan No. MVSI-107A-0. Any improvements undertaken by this project shall be consistent with the City’s standards for this facility.

TE5. Sight distance at the proposed roadways and driveways shall conform to City of Moreno Valley Standard No. MVSI-164A,B,C-0 at the time of preparation of final grading, landscape, and street improvement plans.

TE6. Conditions of approval may be modified if project is phased or altered from any approved plans.

PRIOR TO IMPROVEMENT PLAN APPROVAL OR CONSTRUCTION PERMIT

TE7. Prior to the final approval of the street improvement plans, traffic signal modification plans shall be required for the existing traffic signal located at Indian Street and Santiago Drive intersection. Modifications may include, but not limited to, new signal poles, new pull boxes, new traffic detector loops or video detection system, relocation of signal controller cabinet, etc.

TE8. Prior to the final approval of the street improvement plans, traffic signal plans will be required for a new traffic signal located at the intersection of Perris Boulevard and Santiago Drive.

TE9. Prior to the final approval of the street improvement plans, a signing and striping plan shall be prepared per the latest edition of the California Manual on Uniform Traffic Control Devices (CAMUTCD) and City of Moreno Valley Standard Plans for Indian Street, Gentian Avenue, Santiago Drive, and all interior streets A-P.

TE10. Prior to the final approval of the street improvement plans, the intersection of Indian Street and Gentian Avenue shall be designed to provide the following (at a minimum):

- Northbound: One left turn lane, two through lanes;
- Southbound: One left turn lane, two through lanes;
- Eastbound: One left turn lane, one shared through/right turn lane;
- Westbound: One left turn lane, one shared through/right turn lane.

TE11. Prior to issuance of a construction permit, construction traffic control plans prepared by a qualified, registered Civil or Traffic Engineer shall be required for plan approval or as required by the City Traffic Engineer.

TE12. Prior to final approval of the street improvement plans, the project plans shall demonstrate that sight distance at proposed streets and driveways conforms to City Standard Plan No. MVSI-164A-0 through MVSI-164C-0.

PRIOR TO CERTIFICATE OF OCCUPANCY OR BUILDING FINAL

TE13. (CO) Prior to issuance of Certificate of Occupancy, improvements identified in TE7, TE8, TE9, and TE10 shall be completed per the approved plans to the satisfaction of the City Engineer.

TE14. (CO) Prior to issuance of Certificate of Occupancy, all signing and striping shall be installed per current City Standards and the approved plans.

PRIOR TO ACCEPTANCE OF STREETS INTO THE CITY-MAINTAINED ROAD SYSTEM

TE15. Prior to acceptance of streets into the City-maintained road system, all approved signing and striping shall be installed per current City Standards and the approved plans.

PARKS AND COMMUNITY SERVICES DEPARTMENT

Acknowledgement of Conditions

The following items are Parks and Community Services Department Conditions of Approval for project PEN16-0094 AND PEN16-0095 (Tract 36760); this project shall be completed at no cost to any Government Agency. All questions regarding Parks and Community Services Department Conditions including but not limited to: intent, requests for change/modification, variance and/or request for extension of time shall be sought from the Parks and Community Services Department 951.413.3280. The applicant is fully responsible for communicating with the Parks and Community Services Department project manager regarding the conditions.

Specific Conditions of Approval

PCS1. The developer shall construct a 2-acre (approximate) active park, per these CONDITIONS OF APPROVAL, BONDS, and the PUBLIC FACILITIES FEE CREDIT AGREEMENT for TRACT 36760 (PA14-0052/53) and ASSOCIATED CUP/PUD, FOR DEDICATION AND CONSTRUCTION OF PUBLIC PARK. The developer shall additionally dedicate and construct a BIKEWAY LINEAR PARK WITHIN THE DWR RIGHT-OF-WAY, per these CONDITIONS OF APPROVAL and BONDS for TRACT 36760 (PA14-0052/53) and ASSOCIATED CUP/PUD.

Appropriate Quimby and Parkland Facility Fee credits will be credited to Tract 36760 for the dedication and construction of the active park.

A neighborhood park shall be located within the site per the Conditions of Approval for Tract 36760. The park shall be constructed to the latest edition of the City of Moreno Valley Parks and Community Services Department “Park Specification Guide”, “GREENBOOK FOR PUBLIC WORKS CONSTRUCTION”, CALIFORNIA BUILDING CODE”, and “City Standard Plans”. Additionally, the developer shall comply with the following:

a. Minimum site amenities shall include: separate play equipment for ages 2 to 5 and 5 to 12 on; one (1) 30’ x 50’ picnic shelter and one (1) 24’ hexagon gazebo; large group barbeques; concrete picnic tables, concrete benches; concrete waste/recycle containers; two (2) drinking fountains (Std. MVGF-615B-0); lighted monument signs; LED walkway security lighting; conduit and wiring for security cameras; 10’ wide decorative concrete walkways; stabilized decomposed granite walking path; combination of 24” and 30” boxed trees, 5-gallon sized shrubs; 1-gallon sized ground cover; sodded turfgrass; Calsense irrigation controller; 4’ tall tubular steel fencing surrounding the park; anti-graffiti coating on all adjacent walls, restroom, and monument sign(s); and other amenities typical of parks. All drainage from the park shall be contained in the tract’s water quality basin.

b. The park and bikeway/linear park design shall be fully completed and approved in conjunction with the grading plans. Construction shall commence prior to the issuance of 30% of building permits for residential units and be completed prior to the issuance of 70% of building permits for residential units.

c. The developer shall enter into a Facilities Fee Credit Agreement to obtain credit/reimbursement of Quimby and Parkland Facilities Development Impact Fees (DIF).

d. The park and bikeway/linear park shall be shown as lettered lots and dedicated in fee to the Moreno Valley Community Services District, on the Final Map.

PCS2. A bikeway/linear park shall be designated for Tract 36760, per the Bikeway Master Plan. The bikeway shall have an adjacent walkway for pedestrians. Access points from the tract and the adjacent commercial center to the bikeway/walkway shall be provided. Planters, automated (Calsense) irrigation, turf areas, waste containers, and three-rail PVC fencing typical of parks shall be included in the design. Additionally, the developer shall comply with the following:

PCS3. Any recreational amenities within the pocket park located on Gentian Avenue and adjacent to the DWR aqueduct shall be reviewed and approved by Parks and Community Services. Dedication of such facilities to the CSD shall be at the discretion of the CSD.

<u>STANDARD CONDITIONS:</u>

PCS4. A restriction shall be placed on lots that back up to City/CSD owned or maintained parks, trails, bikeways, and landscaped areas, preventing openings or gates accessing the City/CSD owned or maintained property. This shall be documented through Covenants, Conditions, and Restrictions (CC&R's). A copy of the CC&R's with this restriction noted shall be submitted and approved by the Director of Parks and Community Services or his/her designee, prior to the recordation of the Final Map.

PSC5. Within the improvements for PCS, the applicant shall show all existing and planned easements on all maps and plans. Easements on City/CSD owned or maintained parks, trails, bikeways, and landscape shall be identified on each of these plans with the instrument number of the recorded easement.

PCS6. The following plans require PCS written approval: Tentative tract/parcel maps; rough grading plans (including all Delta changes); Final Map; precise grading plans; street improvement plans; traffic signal plans; fence and wall plans; landscape plans for areas adjacent to bikeways; trail improvement plans. PCS will not approve any permits without review and approval of the above items.

PCS7. Prior to recordation of the Final Map, the applicant shall post security to guarantee construction or modification of parks, trails and/or bikeways for the City/CSD. Copies of said documentation shall be provided to PCS, prior to the approval of the Final Map.

PCS8. Detailed final plans (mylars, PDF, and AutoCAD file on a DVD-R) for parks, trails/bikeways, fencing, and adjoining landscaped areas shall be submitted to and approved by the Director of Parks and Community Services, or his/her designee, prior to the issuance of any building permits. All plans are to include a profile showing grade changes.

PSC9. Applicable plan check and inspection fees shall be paid, per the approved City fee schedule.

PCS10. This project may be required to supply a funding source for the continued maintenance, enhancement, and or retrofit of neighborhood parks, open spaces, linear parks, and/or trails systems. This can be achieved through annexing into Community Facilities District No. 1 (Park Maintenance). Please contact the Special Districts Division at 951.413.3480 or specialdistricts@moval.org to complete the annexation process.

PCS11. The parcel(s) associated with this project have been incorporated into the Moreno Valley Community Services District Zone A (Parks and Community Services). All assessable parcels therein shall be subject to the annual Zone 'A' charge for operations and capital improvements. Proof of such shall be supplied to Parks and Community Services upon Final Map and at Building Permits.

PSC12. This project is subject to current Development Impact Fees, at time of building permit issuance (unless exempted in a Public Facilities Fee Credit Agreement).

PCS13. This project is subject to current Quimby Fees, at time of building permit issuance (unless exempted in a Public Facilities Fee Credit Agreement).

MORENO VALLEY UTILITY

Acknowledgement of Conditions

The following items are Moreno Valley Utility's Conditions of Approval for project PEN16-0094 AND PEN16-0095; this project shall be completed at no cost to any Government Agency. All questions regarding Moreno Valley Utility's Conditions including but not limited to, intent, requests for change/modification, variance and/or request for extension of time shall be sought from Moreno Valley Utility (the Electric Utility Division) of the Finance and Management Services Department 951.413.3500, mvuengineering@moval.org. The applicant is fully responsible for communicating with Moreno Valley Utility staff regarding their conditions.

PRIOR TO ENERGIZING MVU ELECTRIC UTILITY SYSTEM AND CERTIFICATE OF OCCUPANCY

MVU-1 (R) This project requires the installation of electric distribution facilities. A non-exclusive easement shall be provided to Moreno Valley Utility and shall include the rights of ingress and egress for the purpose of operation, maintenance, facility repair, and meter reading.

MVU-2 (BP) City of Moreno Valley Municipal Utility Service – Electrical Distribution: Prior to constructing the MVU Electric Utility System, the developer shall submit a detailed engineering plan showing design, location and schematics for the utility system to be approved by the City Engineer. In accordance with Government Code Section 66462, the Developer shall execute an agreement with the City providing for the installation, construction, improvement and dedication of the utility system following recordation of final map and concurrent with trenching operations and other subdivision improvements so long as said agreement incorporates the approved engineering plan and provides financial security to guarantee completion and dedication of the utility system.

The Developer shall coordinate and receive approval from the City Engineer to install, construct, improve, and dedicate to the City, or the City's designee, all utility infrastructure (including but not limited to conduit, equipment, vaults, ducts, wires, switches, conductors, transformers, and "bring-up" facilities including electrical capacity to serve the identified development and other adjoining/abutting/ or benefiting projects as determined by Moreno Valley Utility) – collectively referred to as "utility system" (to and through the development), along with any appurtenant real property easements, as determined by the City Engineer to be necessary for the distribution and /or delivery of any and all "utility services" to each lot and unit within the Tentative Map. For purposes of this condition, "utility services" shall mean electric, cable television, telecommunication (including video, voice, and data) and other similar services designated by the City Engineer. "Utility services" shall not include sewer, water, and natural gas services, which are addressed by other conditions of approval.

The City, or the City's designee, shall utilize dedicated utility facilities to ensure safe, reliable, sustainable and cost effective delivery of utility services and maintain the integrity of streets and other public infrastructure. Developer shall, at developer's sole expense, install or cause the installation of such interconnection facilities as may be necessary to connect the electrical distribution infrastructure within the project to the Moreno Valley Utility owned and controlled electric distribution system.

MVU-3 This project is subject to a Reimbursement Agreement and is responsible for a proportionate share of costs associated with electrical distribution infrastructure previously installed that directly benefits the project.
Payment shall be required prior to issuance of building permits.

MVU-4 For all new projects, existing Moreno Valley Utility electrical infrastructure shall be preserved in place. The developer will be responsible, at developer expense, for any and all costs associated with the relocation of any of Moreno Valley Utility's underground electrical distribution facilities, as determined by Moreno Valley Utility, which may be in conflict with any developer planned construction on the project site.

POLICE DEPARTMENT

PD1. Prior to the start of any construction, temporary security fencing shall be erected. The fencing shall be a minimum of six (6) feet high with locking, gated access and shall remain through the duration of construction. Security fencing is required if there is: construction, unsecured structures, unenclosed storage of materials and/or equipment, and/or the condition of the site constitutes a public hazard as determined by the Public Works Department. If security fencing is required, it shall remain in place until the project is completed or the above conditions no longer exist. (DC 9.08.080)

PD2. (GP) Prior to the issuance of grading permits, a temporary project identification sign shall be erected on the site in a secure and visible manner. The sign shall be conspicuously posted at the site and remain in place until occupancy of the project. The sign shall include the following:

a. The name (if applicable) and address of the development.

b. The developer's name, address, and a 24-hour emergency telephone number. (MC 9.08.080)

PD3. (CO) Prior to the issuance of a Certificate of Occupancy, an Emergency Contact information Form for the project shall be completed at the permit counter of the Community Development Department - Building Division for routing to the Police Department. (MC 9.08.080)

MITIGATED NEGATIVE DECLARATION

PROJECT TITLE AND FILE NUMBERS: PEN16-0092 (PA16-0018) – General Plan Amendment PEN16-0093 (PA16-0019) – Zone Change PEN16-0094 (PA14-0052) – Conditional Use Permit PEN16-0095 (PA14-0053) – Tentative Tract Map 36760
PROJECT APPLICANT: Mission Pacific Land Company **TELEPHONE NUMBER:** (949) 333-6752
PROJECT LOCATION: Southeast corner of Indian Street and Gentian Avenue, Moreno Valley, Riverside County, CA
PROJECT DESCRIPTION: The project proposes a General Plan Amendment from Residential 30 to Residential 5 and a Zone Change from R30 to R5 for a 15.06 acre portion of a 53 acre site. This project includes Tentative Tract Map 36760 to subdivide the 53 acre site into a total of 221 single family residential lots and a Conditional Use Permit for a Planned Unit Development (PUD). The PUD application will establish minimum lot sizes of 4,000 and 5,000 square feet and establish unique lot widths and setback standards along with architectural guidelines.

FINDING

The City of Moreno Valley has reviewed the above project in accordance with the City of Moreno Valley's Guidelines for the Implementation of the California Environmental Quality Act, and has determined that an Environmental Impact Report need not be prepared because:

[ ] The proposed project will not have a significant effect on the environment.

[x] Although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because mitigation measures described in the attached Initial Study and hereby made a part of this Mitigated Negative Declaration have been added to the project. The Final Conditions of Approval contain the final form and content of all mitigation measures.

This determination is based upon an Initial Study. The project file, including the Initial Study and related documents is available for review during normal business hours (7:30 a.m. to 5:30 p.m. Monday through Thursday, and 7:30 a.m. to 4:30 p.m. on Friday) at the City of Moreno Valley, Community Development Department, Planning Division, 14177 Frederick Street, Moreno Valley, California 92553, Telephone (951) 413-3206.

PREPARED BY: Jeff Bradshaw DATE: December 19, 2017

NOTICE

The public is invited to comment on the Mitigated Negative Declaration. The appropriateness and adoption of the Mitigated Negative Declaration is considered at the time of project approval in light of comments received.

DATE ADOPTED: ____________________________ BY:

INITIAL STUDY/
ENVIRONMENTAL CHECKLIST FORM
CITY OF MORENO VALLEY

1.	Project Title:	Legacy Park Project PEN16-0092 (PA16-0018) – General Plan Amendment PEN16-0093 (PA16-0019) – Zone Change PEN16-0094 (PA14-0052) – Conditional Use Permit PEN16-0095 (PA14-0053) – Tentative Tract Map 36760 PEN16-0096 (P16-030) – Expanded Initial Study
2.	Lead Agency Name and Address:	City of Moreno Valley 14177 Frederick Street Moreno Valley, CA 92553
3.	Contact Person and Phone Number:	Jeff Bradshaw, Associate Planner (951) 413-3224
4.	Project Location:	Southeast corner of Gentian Avenue and Indian Street
5.	Project Sponsor's Name and Address:	Mission Pacific Land Company 4100 Newport Beach Place, Ste. #480 Newport Beach, CA 92660
6.	Existing General Plan Designation:	Residential 5 (37.18 acres) and Residential 30 (15.06 acres)
7.	Proposed General Plan Designation:	Residential 5 (52.24 acres)
8.	Existing Zoning:	R5 (37.18 acres) and R30 (15.06 acres)
9.	Proposed Zoning:	R5 (52.24 acres)

10. Description of the Project:

The project proposes to develop the Legacy Park planned community on an approximately 53 acre site. Applications include a General Plan Amendment from Residential 30 to Residential 5 and a Zone Change from R30 to R5 for a 15.06 acre portion of a 53 acre site. This project includes an application for Tentative Tract Map 36760 to subdivide the 53 acre site into a total of 221 single family residential lots and a Conditional Use Permit for a Planned Unit Development (PUD). The PUD application will establish minimum lot sizes of 4,000 and 5,000 square feet and establish unique development standards for future single family residential construction within the community. The proposed 221 lots does not exceed the allowable density for the R5 zone. Common amenities include passive open space, trail segments, decorative treatment in Street L at major intersections, and a median in Street L at Gentian.

Off-site improvements that the project will be responsible for completing include:

- Master Plan Storm Drain system Line M2 and associated utility relocation. Approximately 3,000 feet of off-site improvements in Santiago Drive, Perris Boulevard, and Iris Avenue;
- Master Plan Storm Drain system Line D1. Approximately 300 feet of off-site improvements in Indian Avenue;
- Park improvements on a 0.85 acre parcel within Lot A TPM 36606 (open space area on adjacent Walmart center site);
- Trail and passive park improvements within the adjacent California Aqueduct easement which is under the authority of the Department of Water Resources (DWR). This will satisfy General Plan requirements under the City's Master Plan of Trails for development of the City's portion of the Juan Bautista De Anza trail system;
- A new traffic signal at the intersection of Perris Boulevard and Santiago Drive;
- Street Improvements outside the map boundary on fronting streets:
    - Gentian Ave. – Raised median;
    - Indian Ave. – Street widening, curb/gutter, and parkway improvements; and
    - Santiago Drive - Street widening, curb/gutter, and parkway improvements.

This project is also conditioned to construct and then convey to the City a public park of approximately two acres in size with amenities that would include play equipment, a picnic shelter, a gazebo, large group barbeques, concrete picnic tables and benches, concrete waste/recycle containers; drinking fountains, walkway security lighting, decorative concrete walkways, decomposed granite walking path; and tubular steel fencing surrounding the park.

11. Surrounding Land Uses and Setting:

The project site is bounded by existing single-family tract homes to the west and northwest in the RS-10 zone with minimum lot sizes of 4,500 square feet. The property immediately to the north is zoned R5 and has been subdivided with a recorded map, Tract Map 22180. Further to the north are existing single-family tract homes in the R5 zone. Southwest of the project site are single-family homes in the R5 zone with March Middle School and Rainbow Elementary School located immediately to the south. Vacant and developed land (non-conforming single-family residences) in the R30 zone is located to the southeast of the project site.

The California Aqueduct bounds the property along its eastern property line with vacant Community Commercial zoned property to the east. The site to the east was recently approved for development as a Walmart retail center. Additional commercial existing retail centers are located to the southeast at the intersection of Perris Boulevard and Iris Avenue.

March Air Reserve Base is located approximately three-quarters of a mile to the west. The City Corporate Yard is located approximately 1,400 feet to the east.

Overall, the proposed residential development is compatible with the City's General Plan and existing land uses.

12. Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code section 21080.3.1? If so, has consultation begun?

The City received requests for consultation from the following Native American tribes and consultation has begun:

- Agua Caliente Band of Cahuilla Indians;
- Pechanga Band of Luiseno Indians; and
- Soboba Band of Luiseno Indians.

13. Other public agencies whose approval is required:

Riverside County Flood Control and Water Conservation District will require an encroachment permit for connecting to existing storm drain infrastructure located in Perris Boulevard and the State of California Department of Water Resources will require an encroachment permit for work alongside and within the easement for the California Aqueduct.

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below(■) would be potentially affected by this project, involving at least one impact that is a “Potentially Significant Impact” as indicated by the checklist on the following pages.

	Aesthetics		Greenhouse Gas Emissions		Population/Housing
	Agricultural Resources		Hazards & Hazardous Materials		Public Services
	Air Quality		Hydrology/Water Quality		Recreation
	Biological Resources		Land Use/Planning		Transportation/Traffic
	Cultural Resources		Mineral Resources		Utilities/Service Systems
	Geology/Soils		Noise		Mandatory Findings of Significance
	Tribal Cultural Resources				

DETERMINATION: (To be completed by the Lead Agency)

On the basis of this initial evaluation:

I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.	
I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.	■
I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.	
I find that the proposed project MAY have a “potential significant impact” or “potentially significant unless mitigated” impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.	
I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.	

December 19, 2016

EVALUATION OF ENVIRONMENTAL IMPACTS

1) A brief explanation is required for all answers except "No Impact" answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A "No Impact" answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g. the project falls outside a fault rupture zone). A "No Impact" answer should be explained where it is based on project-specific factors as well as general standards (e.g. the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).

2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.

3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. "Potentially Significant Impact" is appropriate if there is substantial evidence that an effect may be significant. If there are one or more "Potentially Significant Impact" entries when the determination is made, an EIR is required.

4) "Negative Declaration: Potentially Significant Unless Mitigation Incorporated" applies where the incorporation of mitigation measures has reduced an effect from "Potentially Significant Impact" to a "Less Significant Impact." The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level (mitigation measures from "Earlier Analysis," as described in (5) below, may be cross-referenced).

5) Earlier analysis may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063 (c) (3) (d). In this case, a brief discussion should identify the following:

   (a) Earlier Analysis Used. Identify and state where they are available for review.

   (b) Impacts Adequately Addressed. Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.

   (c) Mitigation Measures. For effects that are "Less than Significant with Mitigation Measures Incorporated," describe the mitigation measures which were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.

6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g. general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.

7) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.

8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.

9) The analysis of each issue should identify: (a) the significance criteria or threshold used to evaluate each question; and (b) the mitigation measure identified, if any, to reduce the impact to less than significance.

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact

I. **AESTHETICS.** Would the project:				
a) Have a substantial adverse effect on a scenic vista?				■
The Moreno Valley General Plan identifies scenic highways, panoramic viewsheds, and photographic viewing locations within the aesthetic resource element. The General Plan identifies no scenic roadways or panoramic viewsheds in the project vicinity. The project site is comprised of level topography with no rock outcroppings. As designed and conditioned, the proposed project will have no effect on a scenic vista.				
b) Substantially damage scenic resources, including, but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway?				■
The project property topography is flat. Based upon site visits by staff and review of the General Plan, the subject site does not include scenic resources. There are no rock outcroppings, trees or historic buildings on site. There are no scenic highways in the area. The site has been previously disturbed through weed abatement. As designed and conditioned, the proposed project will not substantially damage scenic resources.				
c) Substantially degrade the existing visual character or quality of the site and its surroundings?			■	
The Legacy Park project proposes to subdivide the 53 acre site for development of a 221 lot planned community within the R5 zoning district. Development of the site will require installation of public street improvements along Gentian Avenue, Indian Street and Santiago Drive frontages, the installation of a new segment of raised landscaped median and the undergrounding of overhead utility lines. The Legacy Park Design Guidelines and the Municipal Code provide a framework that ensures that any new development would be designed and constructed in a manner that is compatible with surrounding land uses. The Planned Unit Development and related Design Guidelines provide a framework for coordinating architectural style, design, materials, colors, perimeter walls, pedestrian access and circulation for the development. The proposed project as designed is aesthetically compatible with adjacent residential uses. The Planned Unit Development and related Design Guidelines provide a framework for coordinating architectural style, design, materials, colors, perimeter walls, pedestrian access and circulation for the development. As designed and conditioned, the proposed project would not significantly degrade the existing visual character or quality of the site and surroundings.				
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			■	
The project would introduce some additional new light sources into the area as the project site is currently vacant. The proposed residential development would include required street lighting and exterior wall mounted lights on the residences. The project has been conditioned for compliance with the City's light standards as referenced in Municipal Code Section 9.08.100 including the shielding of lighting and restrictions on the intensity of exterior lighting which will reduce light and glare impacts to City accepted levels on surrounding properties. Therefore, potential impacts related to substantial light or glare are less than significant and no mitigation would be required.				
II. **AGRICULTURE & FORESTRY RESOURCES:** In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project?				
a) Convert Prime Farmland, Unique Farmland or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency to non-agricultural use?				■
The site is designated as 'Farmland of Local Importance' on the 2015 State Important Farmland Map. This category is described as soils that would be classified as Prime and Statewide but lack available irrigation water. The site is bounded on the north and west by existing residential development with an approved retail center to the east and a middle school and elementary school and single-family residences to the south. There are currently no agriculturally productive activities occurring within the project boundaries. There will be no impact to farmlands as the development of this project will not result in the conversion of Prime Farmland, Unique Farmland or Farmland of Statewide Importance.				
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?				■
The site is not currently in agricultural use, or under Williamson Act control. There is no existing surrounding agricultural use, or sites under Williamson Act contract within the City limits. The Municipal Code allows for agricultural uses such as crops in all zoning districts, therefore, the proposed project does not conflict with existing zoning for agricultural use, or impact sites under Williamson Act contract.				
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public				■

Attachment: Initial Study Checklist (2444 : Legacy Park Project)

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?				
The project site is not zoned or designated on the City's General Plan for forest land, timberland, or timberland zoned Timberland Production. The City does not have any forest lands, or timberland as defined in the State Public Resources Code and Government Code within the City limits. Therefore, since the project will not result in impacts to forest land, timberland, or timberland zoned timberland production, no impacts would occur and no mitigation measures would be required.				
d) Result in the loss of forest land or conversion of forest land to non-forest use?				■
The project site is not forest land as defined by Public Resources Code section 1220(g). The project site does not involve the loss of forest land or the conversion of forest land to non-forest use. Therefore, since the project will not result in the loss of forest land or the conversion of forest land to non-forest use, no impacts would occur and no mitigation measures would be required.				
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?				■
There is no immediate surrounding or proposed agricultural use. The proposed project will not involve changes to the existing environment, which will result in the conversion of farmland to non-agricultural use, or conversion of forest land to non-forest land.				
III. **AIR QUALITY:** Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?			■	
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation.			■	
(a and b) The Air Quality Management Plan (AQMP) adopted by the South Coast Air Quality Management District (SCAQMD) in 2012 sets forth a comprehensive program that will lead the air basin into compliance with all federal and state air quality standards. The proposed project is located within the boundaries of the AQMP. The AQMP control measures and related emission reduction estimates are based upon emissions projections for a future development scenario derived from General Plan land use, population, and employment characteristics defined in consultation with local governments. Moreno Valley's General Plan Land Use Element was considered in the preparation of the 2012 AQMP. Accordingly, conformance with the AQMP for development projects is determined by demonstrating compliance with local land use plans and/or population projections. Based upon the conclusions of the Air Quality study prepared for this project by Urban Crossroads on November 3, 2016, the Project would not result in or cause federal and/or state ambient air quality standards (NAAQS or CAAQS) violations. The Project proposed General Plan Amendment and Zone Change from R30 to R5 would not increase the density allowed in the General Plan and therefore not result in a land use that is more intense than that anticipated by the General Plan. Furthermore, the Project would not exceed any applicable regional or local thresholds. As such, the Project is therefore considered to be consistent with the AQMP. <u>Construction-Source Emissions</u> For regional emissions, the Project would not exceed the numerical thresholds of significance established by the SCAQMD for any criteria pollutant. It should be noted that impacts without mitigation take credit for reductions achieved through standard regulatory requirements (Rule 403 and Rule 1113). Thus a less than significant impact would occur for Project-related construction-source emissions and no mitigation measures are required. For localized emissions, the Project would not exceed the SCAQMD's localized significance threshold. Therefore, a less than significant impact would occur and no mitigation is required. Project construction-source emissions would not conflict with the applicable AQMP. <u>Operation-Source Emissions</u> For regional emissions, the Project would not exceed the numerical thresholds of significance established by the SCAQMD. Thus a less than significant impact would occur for Project-related operational-source emissions and no mitigation is required. Project operational-source emissions would not result in or cause a significant localized air quality impact as discussed in the operational LSTs section of this report. The proposed Project would not result in a significant CO "hotspot" as a result of Project related traffic during ongoing operations, nor would the Project result in a significant adverse health impact as discussed in Section 3.8, thus a less than significant impact to sensitive receptors during operational activity is expected.				
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?			■	

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact

CEQA Section 21100 (e) addresses evaluation of cumulative effects allowing the use of approved land use documents in a cumulative impact analysis. CEQA Guidelines Section 15064 (i)(3) further stipulates that for an impact involving a resource that is addressed by an approved plan or mitigation program, the lead agency may determine that a project's incremental contribution is not cumulatively considerable if the project complies with the adopted plan or program. In addressing cumulative effects for air quality, the AQMP is the most appropriate document to use because the AQMP sets forth a comprehensive program that will lead the air basin, including the project area, into compliance with all federal and state air quality standards and utilizes control measures and related emission reduction estimates based upon emissions projections for a future development scenario derived from land use, population, and employment characteristics defined in consultation with local governments.

The Air Quality Management Plan (AQMP) sets forth a comprehensive program that will lead the air basin into compliance with all federal and state air quality standards. The AQMP control measures and related emission reduction estimates are based upon emissions projections for a future development scenario derived from General Plan land use, population, and employment characteristics defined in consultation with local governments. Accordingly, conformance with the AQMP for development projects is determined by demonstrating compliance with local land use plans and/or population projections. The AQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR. Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant."

The SCAQMD has recognized that there is typically insufficient information to quantitatively evaluate the cumulative contributions of multiple projects because each project applicant has no control over nearby projects. Nevertheless, the potential cumulative impacts from the Project and other projects are discussed below.

A cumulative project list was developed for this analysis and is shown in Table 3-11 of the Air Quality study. The Project area is designated as an extreme non-attainment area for ozone, and a nonattainment area for PM10, PM2.5, and lead. Related projects could contribute to an existing or projected air quality exceedance because the Basin is currently nonattainment for ozone, PM10, and PM2.5. With regard to determining the significance of the contribution from the Project, the SCAQMD recommends that any given project's potential contribution to cumulative impacts should be assessed using the same significance criteria as for project-specific impacts. Therefore, this analysis assumes that individual projects that do not generate operational or construction emissions that exceed the SCAQMD's recommended daily thresholds for project-specific impacts would also not cause a commutatively considerable increase in emissions for those pollutants for which the Basin is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact.

As previously noted, the Project would not result in any construction-source or operational-source emissions exceedances. Therefore the Project would result in a less than significant impact on a project-specific and cumulative basis.

d) Expose sensitive receptors to substantial pollutant concentrations?			■	

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact

The nearest sensitive receptors include March Middle School located immediately to the south and Rainbow Elementary School located 700 feet further to the south on Indian Street and existing single-family homes to the north, west and south.

Construction-Source Emissions LST Analysis
Table 3-7 identifies the localized impacts at the nearest receptor location in the vicinity of the Project. As shown below, emissions during construction activity would not exceed the SCAQMD's localized significance thresholds for any criteria pollutant and a less than significant impact would occur.

Localized Significance – Long-Tem Operational Activity
The proposed project involves the construction and operation of 221 single family residential dwelling units. According to SCAQMD LST methodology, LSTs would apply to the operational phase of a proposed project, if the project includes stationary sources, or attracts mobile sources that may spend long periods queuing and idling at the site (e.g., transfer facilities and warehouse buildings). The proposed project does not include such uses, and thus, due to the lack of significant stationary source emissions, no long-term localized significance threshold analysis is needed.

CO "Hot Spot" Analysis
The proposed Project considered herein would not produce the volume of traffic required to generate a CO "hot spot" either in the context of the 2003 Los Angeles hot spot study, or based on representative BAAQMD CO threshold considerations, as shown on Table 3-10. Therefore, CO "hot spots" are not an environmental impact of concern for the proposed Project. Localized air quality impacts related to mobile-source emissions would therefore be less than significant.

Based upon the conclusions of the project Air Quality study, the project will not expose sensitive receptors to substantial pollutant concentrations.

e) Create objectionable odors affecting a substantial number of people?			■	

The Project does not contain land uses typically associated with emitting objectionable odors. Potential odor sources associated with the proposed Project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the proposed Project's (long-term operational) uses. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the City's solid waste regulations. The proposed Project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the proposed Project construction and operations would be less than significant and no mitigation is required.

IV. **BIOLOGICAL RESOURCES**. Would the project:

a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U. S. Fish and Wildlife Service?			■	
b) Have a substantially adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U. S. Wildlife Service?			■	

(a and b) The project site is bounded on the north, west and south by existing single-family residential development with vacant commercial land to the east which includes a recently approved retail center. Also, the March Middle School and Rainbow Elementary School are located to the south. The site is comprised of level topography and has been disturbed routinely through weed abatement of the site.

A Biological Technical report was prepared for the project by Glenn Lukos Associate, Inc. on September 18 2014. This report identifies and evaluates impacts to biological resources associated with the proposed Project in the context of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP), the California Environmental Quality Act (CEQA), and State and Federal regulations such as the Endangered Species Act (ESA), Clean Water Act (CWA), and the California Fish and Game Code.

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact

The Project site is located within the Reche Canyon/Badlands Area Plan of the MSHCP, but is not located within the MSHCP Criteria Area. The Project site is located within the burrowing owl survey area, but is not located within the NEPSSA, CAPSSA, amphibian, or mammal survey areas. Focused burrowing owl surveys were conducted for the Project site; however, no burrowing owls or burrows with owl sign were detected onsite. In compliance with the MSHCP, pre-construction burrowing owl surveys are required prior to site disturbance.

The Project site will not impact special-status plants, but will result in the loss of actual or potential habitat for special-status animals, including potential habitat for Stephens' kangaroo rat (Dipodomys stephensi) [SKR]. Impacts to SKR are covered under the SKR Habitat Conservation Plan (HCP) with payment of the SKR mitigation fee. The loss of potential habitat for other special-status animals would be less than significant due to the low degree of sensitivity of the species, the disturbed nature of the site, and the lack of adjacency to native open space. The Project site does not contain jurisdictional waters, MSHCP riparian/riverine areas, or MSHCP vernal pools.

The following discussion provides project-specific mitigation/avoidance measures for actual or potential impacts to special-status resources.

<u>Burrowing Owl</u>

The Project site contains suitable habitat for burrowing owls; however, burrowing owls were not detected onsite during focused surveys. MSHCP Objective 6 for burrowing owls requires that pre-construction surveys prior to site grading. As such, the following measure is recommended to avoid direct impacts to burrowing owls and to ensure consistency with the MSHCP:

BR1. A qualified biologist will conduct a pre-construction presence/absence survey for burrowing owls within 14 days prior to site disturbance. If burrowing owls are detected onsite, the owls will be relocated/excluded from the site outside of the breeding season following accepted protocols, and subject to the approval of the RCA and wildlife agencies.

<u>Nesting Birds</u>

The Project site contains vegetation with the potential to support nesting birds. As discussed above, the MBTA and California Fish and Game Code prohibit impacts to nesting birds. The following measure is recommended to avoid impacts to nesting birds:

BR2. As feasible, vegetation clearing should be conducted outside of the nesting season, which is generally identified as February 1 through September 15. If avoidance of the nesting season is not feasible, then a qualified biologist shall conduct a nesting bird survey within three days prior to any disturbance of the site, including disking, demolition activities, and grading. If active nests are identified, the biologist shall establish suitable buffers around the nests, and the buffer areas shall be avoided until the nests are no longer occupied and the juvenile birds can survive independently from the nests.

Therefore, the project as conditioned and subject to the biological resource mitigation measures listed above, will not have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U. S. Fish and Wildlife Service. The project will not have a substantially adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U. S. Wildlife Service.

c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?				■

The project site comprised of flat topography. There are no existing trees or vegetation on the project site. The project site is bounded on the north, west and south by existing single-family residential development with vacant commercial land to the east which includes a recently approved retail center. Also to the south are March Middle School and Rainbow Elementary School. Based upon the results of the Biological Technical report prepared for the project, the project site does not contain jurisdictional waters, MSHCP riparian/riverine areas, or MSHCP vernal pools. Therefore, no impacts would occur to federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.). through direct removal, filling, hydrological interruption, or other means, and no mitigation measures would be required.

d) Interfere substantially with the movement of any resident or migratory fish or wildlife species or with established native resident migratory wildlife corridors, or impede the use of native wildlife nursery sites?				■

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact

The project site comprised of flat topography. There are no existing trees or vegetation on the project site. The project site is bounded on the north, west and south by existing single-family residential development with vacant commercial land to the east which includes a recently approved retail center. Also, the March Middle School and Rainbow Elementary School are located to the south. Based upon the conclusions of the Biological Technical report prepared for this project, there is no evidence of resident or migratory fish or wildlife species was noted on the project site or the adjacent vacant parcel. Therefore, the project will not interfere substantially with the movement of any resident or migratory fish or wildlife species or with established native resident migratory wildlife corridors, or impede the use of native wildlife nursery sites.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?				■

The project site comprised of flat topography. There are no existing trees or vegetation on the project site. The project site is bounded on the north, west and south by existing single-family residential development with vacant commercial land to the east which includes a recently approved retail center. Also, the March Middle School and Rainbow Elementary School are located to the south. There are no existing trees or vegetation on the project site. Therefore related to any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance, no impacts would occur and no mitigation measures would be required.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state habitat conservation plan?			■	

The project site is not located within one of the Multiple Species Habitat Conservation Plan (MSHCP) criteria areas, which are potential habitat preservation areas. The proposed project will not conflict with the Stephen's Kangaroo Rat Habitat Conservation Plan (SKR HCP) or MSHCP or any other known local, regional or state habitat conservation plans. The project will be conditioned to pay required SKR mitigation fees. Also, the City participates in the MSHCP, a comprehensive habitat conservation-planning program addressing multiple species' needs, including preservation of habitat and native vegetation in Western Riverside County. This project will also be subject to impact fees to support the implementation of the Multiple Species Habitat Conservation Plan as provided for by City ordinance.

V. **CULTURAL RESOURCES**. Would the project:

a) Cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5?			■	
b) Cause a substantial adverse change in the significance of an archaeological resources pursuant to Section 15064.5?			■	
c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?			■	

(a, b and c)

A Cultural Resource Assessment for the project site was prepared by Helix Environmental Planning April 13, 2016. The cultural resources study included a record search, a Sacred Lands File search, tribal outreach, a review of historic maps and aerial photographs, an intensive survey by a HELIX archaeologist and a Native American monitor, and preparation of a report.

The project site is comprised of flat topography with no rock outcroppings or other unique geologic features. Based upon inspections of the project site in November 2015 and again in April 2016 and review of a 1987 citywide survey (Archeological Research Unit, University of California, Riverside), there are no known archaeological resources on the project site. There are no historical structures existing on the project site (General Plan, Figure 5.10-1, Historic Resources Inventory). There are no known historical paleontological or unique geological features on the project site (General Plan, Figures 5.10-2, Prehistoric Sites). Additionally, the City's Final Program EIR (June 2006), Figure 5.10-3 list the project site as low potential for paleontological sensitive area based on extensive field work (Page 5.10-10).

Based on the Cultural Resource Assessment, a record search of the project area and a one-mile radius from the Eastern Information Center (EIC) indicated that eight cultural resources had been recorded within the search radius (see Table 1 of the Cultural Resource Study). One resource (P-33-023936) was mapped within the project property. This resource is a historic period alfalfa farm that encompasses the property adjacent to the project area on the east as well as the southeastern corner of the project area. One feature from this site is located in the project area: the remnants of a grain loading dock from the Barron/Lantz Holdings, tentatively dated for use between 1948 and 1970. This historic feature is not considered a significant resource.

The current survey did not identify any cultural resources within the project area other than the previously recorded historic feature, which is not a significant resource. Therefore, no impacts to cultural resources are anticipated. However, the project site is in alluvial soils, where there is a potential for buried cultural resources. Based on this, it is recommended that an archaeological and Native American monitoring program be implemented. The monitoring program would include attendance by the archaeologist and Native

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact

American monitor(s) at a preconstruction meeting with the grading contractor and the presence of archaeological and Native American monitors during initial ground-disturbing activities on site. Both archaeological and Native American monitors would have the authority to temporarily halt or redirect grading and other ground-disturbing activity in the event that cultural resources are encountered.

The following mitigation measures have been introduced to ensure compliance with City General Plan Policies and the State Public Resources Code:

CR-1: Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a professional archaeological monitor has been retained by the Applicant to conduct monitoring of all mass grading and trenching activities and that the monitor has the authority to temporarily halt and redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project archaeologist, with input from the appropriate Tribe, shall prepare a Cultural Resources Monitoring Plan (CRMP) to document protocols for inadvertent finds, to determine potential protection measures from further damage and destruction for any identified archaeological resource(s)/ tribal cultural resources (TCRs), outline the process for monitoring and for completion of the final Phase IV Monitoring Report. If any archaeological and/or TCRs are identified during monitoring, these will also be documented and addressed per standard archaeological protocols in the Phase IV report, with the exception of human remains which will be addressed per CUL-5. The Project Archaeologist shall attend the pregrading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.

CR-2: At least 30 days prior to the issuance of a grading permit, the Applicant shall contact the appropriate Luiseño tribe to develop a Cultural Resources Treatment Agreement and shall provide evidence to the City of Moreno Valley that the professionally qualified Luiseño Native American monitor(s) has been secured from the interested tribe(s), and that the monitor shall be allowed to monitor all mass grading and trenching activities. The Tribal representative(s) shall attend the pre-grading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.

CR-3: If, during mass grading and trenching activities, the Archaeologist or Tribal representatives suspect that an archaeological resource and/or TCR may have been unearthed, the monitor identifying the potential resources, in consultation with the other monitor as appropriate, shall immediately halt and redirect grading operations in a 100-foot radius around the find to allow identification and evaluation of the suspected resource. The Native American monitor(s) or appropriate representative(s) and the archaeological monitor shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2. The archaeological monitor and tribal monitor(s) or appropriate representative(s), the Project Applicant, and the City Planning Division shall confer regarding mitigation of the discovered resource(s). All sacred sites, should they be encountered within the Project area, shall be avoided and preserved as the preferred mitigation, if feasible.

CR-4: Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan:

"If any suspected archaeological resources are discovered during ground-disturbing activities and the archaeological monitor or Tribal representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal representatives to the site to assess the significance of the find."

CR-5: If human remains are encountered, California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to California Public Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner. If the Riverside County Coroner determines the remains to be Native American, the California Native American Heritage Commission must be contacted within 24 hours. The Native American Heritage Commission must then immediately notify the "most likely descendant(s)" of receiving notification of the discovery. The most likely descendant(s) shall then make recommendations within 48 hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code §5097.98.

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact

CR-6: Prior to construction involving excavation four feet or more below existing surface grade, the construction contractor shall provide evidence that a qualified paleontologist has been retained, and that the paleontologist(s) shall be present during all grading and other significant ground-disturbing activities that reach four feet or more below existing surface grade. In the event fossiliferous deposits are encountered, the following measures shall be implemented:

- Monitoring shall be conducted by qualified paleontological monitor(s) of excavation in areas identified as likely to contain paleontological resources, including very old alluvial fan deposits. Paleontological monitors shall be equipped to salvage fossils as they are unearthed, to avoid construction delays, and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. Monitors shall be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Monitoring may be reduced if the potentially fossiliferous units are determined upon exposure and examination by qualified paleontological personnel to have low potential to contain fossil resources.

- Paleontological monitoring of any earthmoving will be conducted by a monitor, under direct guidance of a qualified paleontologist. Earthmoving in areas of the parcel where previously undisturbed sediments are buried, but not otherwise disturbed, will not be monitored.

- If too few fossil remains are found after 50 percent of the planned-for earthmoving has been completed, monitoring can be reduced or discontinued in those areas at the Project paleontologist's direction.

- Preparation of recovered specimens to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates.

- Identification and curation of specimens into a professional, fully accredited museum repository with permanent retrievable storage. The paleontologist must have a written repository agreement in hand prior to the initiation of mitigation activities.

- Preparation or a report of findings with and appended itemized inventory of specimens. The report and inventory, when submitted to the city along with confirmation of the curation of recovered of recovered specimens into an established, accredited museum repository, will signify completion of the program to mitigate impacts to paleontological resources.

Based on the proceeding information, development of the project will not result in substantial adverse change in the significance of a historical or archaeological resource or result directly or indirectly in the destruction of a unique paleontological resource or site or unique geologic feature.

d) Disturb any human remains, including those interred outside of dedicated cemeteries?			■	
No known human remains have been identified at the project site. Compliance with mitigation measure CR-5 as identified in the response to checklist questions a, b, and c for Cultural Resources will also serve to prevent the disturbance of any human remains.				
VI. **GEOLOGY AND SOILS**. Would the project:				
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury or death involving:				
(i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.				■

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
According to the City's General Plan, the project site is not on, or close to, any known earthquake fault. There is no new information that would indicate the existence of a fault or fault tract in proximity of the site. Accordingly, there is no risk of ground rupture due to faulting at the proposed project site.				
(ii) Strong seismic ground shaking?			■	
According to the City's General Plan, the project site is not on, or close to, any known earthquake fault. The nearest fault is the San Jacinto fault system, which is located about 8 miles to the northeast. The San Andreas fault system is more than 25 miles from the site. The active Sierra Madre and San Gabriel fault zones lie roughly 35 and 40 miles respectively to the northwest of the site. The active Elsinore and Newport-Inglewood fault zones lie approximately 20 and 45 miles, respectively, to the southwest of the site. This faulting is not considered a significant constraint to development on the site with the use of current building codes. Ground-shaking intensity could be moderately-high during a 100-year interval earthquake. Foundation designs will be reviewed to ensure incorporation of appropriate engineering recommendations to mitigate any such seismicity. There is no new information that would indicate the existence of a fault on the site.				
(iii) Seismic-related ground failure, including liquefaction?			■	
According to the City's General Plan, the project site is not on, or close to, any known earthquake fault. However, ground-shaking intensity could be moderately-high during a 100-year interval earthquake. Based on available resources and the City's General Plan, the potential for seismic related failure or liquefaction on the site is minimal based on the water table and soil conditions at the site.				
(iv) Landslides?				■
The project site is not near or adjacent to mountainside areas. Due to a lack of slopes within or nearby the project site seismically induced landslides are not anticipated to pose a danger to the project site. Development of the project will not result in impacts from landslides and no mitigation measures would be required.				
(b) Result in substantial soil erosion or the loss of topsoil?			■	
The development of the site will likely result in the reduction of erosion with the placement of buildings and landscaping on the site. During construction, there is the potential for less than significant impacts for short-term soil erosion from minimal excavation and grading. This will be addressed as part of standard construction, such as watering to reduce dust and sandbagging, if required, during raining periods.				
(c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?			■	
According to the City's environmental information, the geologic unit or soil is not known to be unstable (Western Riverside Area Soil Survey – University of California Agricultural Experiment Station, 1971). As designed and conditioned, the potential for the impacts resulting from a landslide, lateral spreading, subsidence, liquefaction or collapse is less than significant.				
(d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?			■	
According to the City's environmental information and the results of a Geotechnical Report prepared by Leighton and Associates, Inc. on June 9, 2004 and an Update prepared on August 29, 2016, project soils evaluated in a near surface sample have a very low expansion potential. The potential for the project to create substantial risks to life or property is less than significant.				
(e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?			■	
The proposed apartment project will operate on a sewer system that will be reviewed, approved and installed according to Eastern Municipal Water District requirements. The proposed project will not be introducing septic tanks or alternative water disposal systems.				
VII. **GREENHOUSE GAS EMISSIONS.** Would this project?				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			■	

Attachment: Initial Study Checklist (2444 : Legacy Park Project)

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact

Global climate change is caused by greenhouse gas (GHG) emissions throughout the world. Mitigating global climate change will require worldwide solutions. Greenhouse gases are gases emitted from the earth's surface that absorb infrared radiation in the atmosphere. Increases in these gases lead to more absorption of radiation and warm the lower atmosphere, and therefore increase evaporation rates and temperatures on the Earth's surface.

The City of Moreno Valley adopted a Climate Action Strategy on October 9, 2012. In 2012, the City of Moreno Valley completed a Greenhouse Gas Analysis (City's GHG Analysis) that addresses statewide legislation for sustainability through the preparation of GHG inventories and strategies to reduce emissions consistent with AB 32, which established a statewide target to reduce GHG emission to 1990 levels by 2020. The greenhouse gas analysis provides a policy framework for reducing emissions within the City. Following the state's adopted GHG reduction target, Moreno Valley set a goal to reduce emissions back to 1990 levels by the year 2020. This target was calculated as a 15 percent decrease from 2007 levels. Projects that demonstrate compliance with the reduction target described in the City's GHG Analysis are considered consistent with the AB 32 reduction target.

As provided for in the CEQA Guidelines (Section 15064.4), it is necessary for the lead agency to make a good-faith effort in considering GHG emissions on a project specific basis. A Greenhouse Gas Analysis (GHG) was prepared for the project by Urban Crossroads on November 3, 2016, to analyze potential construction resource and operational resource impacts.

The City of Moreno Valley has not adopted its own numeric threshold of significance for determining impacts with respect to GHG emissions. The SCAQMD has convened aWorking Group. Based on the last Working Group meeting (Meeting No. 15) held in September 2010, SCAQMD is proposing to adopt a tiered approach for evaluating GHG emissions for development projects where SCAQMD is not the lead agency. SCAQMD had proposed a Project level efficiency significance threshold, in which a 2020 statewide population and employment for land use sectors was divided by 2020 statewide SP, amounting to a 4.8 MTCO2e per service population threshold (1). The City will utilize the Project level efficiency significance threshold approach recommended in the SCAQMD's Interim Thresholds document for commercial, residential, and mixed use projects. Thus, and based on guidance from the SCAQMD, if a residential project would emit GHGs less than 4.8 MTCO2e per service population, the project is not considered a substantial GHG emitter and the GHG impact is less than significant. On the other hand, if a residential project would emit GHGs in excess of 4.8 MTCO2e per service population, then the project could be considered a substantial GHG emitter, requiring additional analysis and potential mitigation. As identified in Table 4-1 of the Greenhouse Gas Analysis, the proposed project would result in approximately 4.62 MTCO2e per service population and would not exceed the threshold of 4.8 MTCO2e per service population. Therefore, project-related emissions would not have a significant direct or indirect impact on GHG and climate change.

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?			■	

AB 32 is the primary plan, policy or regulation adopted in the State of California to reduce GHG emissions. The City's GHG Analysis in 2012 addressed statewide legislation for sustainability through the preparation of GHG inventories and strategies to reduce emissions consistent with AB 32, which established a statewide target to reduce GHG emission to 1990 levels by 2020. Preparing a greenhouse gas analysis supports AB 32 at the local level, and the greenhouse gas analysis provides a policy framework for how the City of Moreno Valley can do its part to reduce emissions.

The City of Moreno Valley adopted a Climate Action Strategy on October 9, 2012. In 2012, the City of Moreno Valley completed a Greenhouse Gas Analysis (City's GHG Analysis) that addresses statewide legislation for sustainability through the preparation of GHG inventories and strategies to reduce emissions consistent with AB 32, which established a statewide target to reduce GHG emission to 1990 levels by 2020. Preparing a greenhouse gas analysis supports AB 32 at the local level. The greenhouse gas analysis provides a policy framework for how the City of Moreno Valley can do its part to reduce emissions. Following the state's adopted GHG reduction target, Moreno Valley set a goal to reduce emissions back to 1990 levels by the year 2020. This target was calculated as a 15 percent decrease from 2007 levels. Projects that demonstrate compliance with the reduction target described in the City's GHG Analysis are considered consistent with the AB 32 reduction target.

The Project is consistent with and supports the City of Moreno Valley Energy Efficiency and Climate Action Strategy (CAS), which is the applicable plan, policy or regulation adopted for the purpose of reducing greenhouse gases. Project consistency with the CAS is detailed in Section 2.10 of the Greenhouse Gas Analysis.

Therefore, since the proposed Project meets and exceeds the City's GHG Analysis reduction target and complies with applicable measures that reduce GHG emissions, the proposed Project will not conflict with any applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases, and impacts in this regard are considered less than significant.

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
VIII. **HAZARDS AND HAZARDOUS MATERIALS.** Would the project?				
a) Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?				■
The proposed project will not involve the routine transport, use or disposal of hazardous materials. Since the project will not involve the routine transport, use or disposal of hazardous materials, there will be no potential for a significant hazard to the public or the environment.				
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?				■
The proposed project will not involve the routine transport, use or disposal of hazardous materials. The proposed project will not create a significant hazard to the public or the environment through the routine transport, or use or disposal of hazardous materials. Since the project will not involve the routine transport, use or disposal of hazardous materials, there will be no potential for a significant hazard to the public or the environment.				
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?				■
March Middle School is located immediately to the south of the project site and Rainbow Elementary School is located approximately 700 feet further to the south. The project as designed and conditioned will not emit hazardous emissions or handle hazardous materials.				
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result would it create a significant hazard to the public or the environment?				■
The site was checked against the list of hazardous material sites pursuant to Government Code Section 65962.5. The project is not located on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5.				
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?			■	
The nearest airport is the March Air Reserve Base located approximately three-quarters of a mile to the west. The distance to the runway is approximately one mile. The project site is located within Compatibility Zone E of the March Air Reserve Base/Inland Port Airport Land Use Compatibility Plan where residential density is not restricted. This project was reviewed by the Riverside County Airport Land Use Commission and in a letter dated May 10, 2016 it was determined to be consistent with the 2014 March Air Reserve Base/Inland Port Airport Land Use Compatibility Plan subject to certain requirements which have been incorporated into the project conditions of approval. The project, as conditioned, will not result in a safety hazard for future residents.				
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?				■
There are no private airstrips within the City of Moreno Valley. The project is not within proximity of a private airstrip. Therefore, the project would not result in a safety hazard pertaining to proximity of a private airstrip.				
g) Impair implementation of, or physically interfere with an adopted emergency response plan or emergency evacuation plan?				■
The proposed project would not have any direct effect on an adopted emergency response plan, or emergency evacuation plan. The City's emergency plans are also consistent with the General Plan. The proposed project has been designed and conditioned to provide required circulation and required fire access to allow for ingress of emergency vehicles and egress of passenger vehicles. Therefore, the proposed project would not be in conflict in any way with the emergency response or emergency evacuation plans.				
h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?				■
The proposed project site is not adjacent to wildlands and is not located within the Very High Fire Hazard Severity Zone. As designed and conditioned, the project would not expose people or structures to a significant risk of loss, injury or death involving wildland fires. In addition, the project is not located within a designated wildland area.				

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
IX. **HYDROLOGY AND WATER QUALITY**. Would the project:				
a) Violate any water quality standards or waste discharge requirements?			■	
Pursuant to the requirements of the Santa Ana Regional Water Quality Control Board, a project specific Water Quality Management Plan (WQMP) is required of certain projects involving discretionary approval. This project requires a WQMP to address pollutants of concern. Site Design and Source Control best management practices (BMP) are conditioned to be used throughout the project. The project has proposed the use of bioretention facilities and Low Impact Development (LID) BMP's. Treatment BMPs will be selected and implemented which are medium to highly effective in treating pollutants of concern. Final design and sizing details of all BMPs must be provided in the first submittal of the F-WQMP. The project has been conditioned to provide documentation that runoff will be treated in conformance with the "Riverside County Water Quality Management Plan for Urban Runoff" dated October 22, 2012 and approved by the Santa Ana Regional Water Quality Control Board (Guidance Document). Additionally, grading activities would temporarily expose soils to wind and water erosion that would contribute to downstream sedimentation. The proposed project would comply with all permits and development guidelines associated with urban water runoff and discharge set forth by the City of Moreno Valley and the Regional Water Quality Control Board. With the approval of the storm drainage facilities by the City Engineer and Riverside County Flood Control District (RCFCD), as well as complying with all applicable storm water discharge permits, impacts would be less than significant.				
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?			■	
The Eastern Municipal Water District (EMWD) would provide the proposed project with potable water as opposed to utilizing individual water wells. Potable water is adequate to serve the proposed project. Although the project would cover a majority of the site with impervious surfaces, the landscaped areas would still provide a means for groundwater recharge. Impacts would be less than significant.				
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?			■	
There is no streambed or river on the project site, so the project will not cause a change in the existing on-site drainage pattern that would result in substantial erosion or siltation on- or off-site. During construction of the project, there is the potential for some sediments to be discharged within the storm water system. Erosion control plans are required for projects prior to issuance of grading permits for preventing substantial erosion. The project as designed and conditioned will not change the existing drainage pattern that would result in substantial erosion or siltation on- or off-site. Impacts would be less than significant.				
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or surface runoff in a manner which would result in flooding on- or off site?			■	
There is no streambed or river on the project site. The on-site project storm drain infrastructure proposes to tie into existing storm drain infrastructure in Perris Boulevard. The project will be responsible for completing both and off-site storm drain infrastructure. The project as designed and conditioned will not cause a change in the existing drainage pattern that would result in substantial erosion or siltation on- or off-site. Therefore, project implementation would not result in modifications that could ultimately result in substantial erosion or siltation on- or off-site. Impacts would be less than significant.				
e) Create or contribute runoff which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?			■	

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact

The proposed project is consistent with the City's General Plan. All storm drainage improvements would be developed to the standards of the City Engineer and the Riverside County Flood Control and Water Conservation District (RCFCD). Additionally, the project has been designed in accordance with the City's standard conditions of approval, which includes measures pertaining to storm drainage facilities and runoff. RCFCD provided a letter dated November 2, 2015, indicating that the project site is within the limits of the Sunnymead Master Drainage Plan. The project proposes to construct on-site storm drain infrastructure and detention/water quality basins. Post-construction, the project will not discharge storm water that exceeds historic capacities and will not exceed the capacity of existing or planned stormwater drainage systems. The project will also construct Master Plan Storm Drain system Line M2 and the related utility relocation by constructing approximately 3,000 of off-site storm drain in Santiago Drive, Perris Boulevard, and Iris Avenue. The project will also construct Master Plan Storm Drain system Line D1 by constructing approximately 300 of off-site storm drain in Indian Avenue.

As with any urban project, runoff entering the storm drainage system would contain minor amounts of pollutants (including pesticides, fertilizers and motor oil). This would incrementally contribute to the degradation of surface and sub-surface water quality. Additionally, grading activities would temporarily expose soils to water erosion that would contribute to downstream sedimentation. However, the project is subject to the permit requirements of the Santa Ana Regional Water Quality Control Board. As the site is currently unpaved and exposed, development of the proposed project would lessen the existing site contribution to sediment runoff at project completion. Additionally, the approved Preliminary WQMP proposes Best Management Practices for water quality treatment at both the project construction and operational stages. With the approval of the storm drainage facilities by the City Engineer and RCFCD, incorporation of conditions of approval into the project's design, as well as compliance with all applicable storm water discharge permits, impacts would be less than significant.

f) Otherwise substantially degrade water quality?			■	

The proposed project is consistent with the City's General Plan. All storm drainage improvements would be developed to the standards of the City Engineer and the RCFCD. Additionally, the project has been designed in accordance with the City's standard conditions of approval, which includes measures pertaining to storm drainage facilities and runoff. As with any urban project, runoff entering the storm drainage system would contain minor amounts of pollutants (including pesticides, fertilizers and motor oil). This would incrementally contribute to the degradation of surface and sub-surface water quality. Additionally, grading activities would temporarily expose soils to water erosion that would contribute to downstream sedimentation. However, the tract is subject to the permit requirements of the Santa Ana Regional Water Quality Control Board. As the site is currently unpaved and exposed, development of the proposed project would lessen the existing site contribution to sediment runoff at project completion. With the approval the storm drainage facilities by the City Engineer and Riverside County Flood Control District, incorporation of conditions of approval into the project's design, as well as compliance with all applicable storm water discharge permits, impacts would be less than significant.

g) Place housing within a 100-year floodplain, as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?			■	
h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?			■	

(g and h) The proposed project site is located within Federal Emergency Management Agency Zone "X" area outside of the 100-year flood hazard area. This is an area determined to be outside of the 0.2% annual chance flood plain. The project is outside of the delineated dam inundation area for Perris Dam at Lake Perris Reservoir and will not place housing or structures within a 100-year flood hazard area. There are no mountains or steep slopes in proximity to the project site, therefore, there is no chance of mudflows from local mountains. Therefore, impacts would be less than significant. The project as designed and conditioned will not place structures which would impede or redirect flood flows.

i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?				■

The proposed project site is located within Federal Emergency Management Agency Zone "X" area outside of the 100-year flood hazard area. This is an area determined to be outside of the 0.2% annual chance flood plain. The project site is outside of the delineated dam inundation area for Perris Dam at Lake Perris Reservoir and will not expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam.

j) Inundation by seiche, tsunami, or mudflow?				■

The project site is not identified in the General Plan as a location subject to seiche, or mudflow. The project is outside of the delineated dam inundation area for Perris Dam at Lake Perris Reservoir. Additionally, due to the position of the proposed project, mudflows from local mountains would be unlikely due to surrounding development. There would be no impacts resulting from inundation by seiche, tsunami, or mudflow.

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
X. **LAND USE AND PLANNING**. Would the project:				
a) Physically divide an established community?			■	

The project proposes to develop a planned single-family residential community on approximately 53 acres in the R5 zone. Project applications include:

- General Plan Amendment from Residential 30 to Residential 5 for a 15.06 acre portion of the approximately 53 acre site;
- Zone Change from R30 to R5 for a 15.06 acre portion of the approximately 53 acre site;
- Conditional Use Permit for a Planned Unit Development (PUD) to create minimum lot sizes of 4,000 and 5,000 square and unique development standards; and
- Tentative Tract Map 36760 to subdivide the approximately 53 acre site into a total of 221 single family residential lots.

The project site is bounded by existing single-family tract homes to west and northwest in the RS-10 zone with minimum lot sizes of 4,500 square feet. The property immediate to the north is zoned R5 and has been subdivided with a recorded map, Tract Map 22180. Further to the north are existing single-family tract homes in the R5 zone. Southwest of the project site are single-family homes in the R5 zone. March Middle School and Rainbow Elementary School are located immediately to the south. The California Aqueduct bounds the property along its eastern property line with vacant Community Commercial zoned property to the east. The site to the east was recently approved for development as a Walmart retail center. Additional commercial existing retail centers are located to the southeast at the intersection of Perris Boulevard and Iris Avenue. March Air Reserve Base is located approximately three-quarters of a mile to the west with the City Corporate Yard located approximately 1,400 feet to the east. Since the residential development proposed at this location is an extension of an established land use pattern and is compatible with adjacent General Plan and Zoning districts and existing land uses, the project will not physically divide an established community and impacts would be less than significant under this category.

b) Conflict with an applicable land use plan, policy or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?			■	

This single-family residential project, proposes development that is a permitted use in the R5 zone and are consistent with the goals, objectives and policies of the Residential 5 General Plan designation for the project site.

Based upon the conclusions of a Traffic Impact Analysis Report prepared by Urban Crossroads on September 16, 2016, analysis of existing traffic patterns plus project traffic conditions does not result in direct impacts to studied roadway segments or intersections. Analysis of the year 2021 cumulative traffic plus project traffic conditions demonstrated cumulative impacts to three intersections (Indian Street at Cactus Avenue, Indian Street at Gentian Avenue, and Perris Boulevard at Santiago Drive). Mitigation measure requiring the payment of development impact fees and a fair share contribution have been placed on this project to reduce cumulative impacts to less than significant at these three intersections.

As designed and conditioned, and subject to implementation of mitigation measures, the project will not conflict with an applicable land use plan, policy or regulation of an agency with jurisdiction over the project including the City's General Plan.

c) Conflict with any applicable habitat conservation plan or natural community conservation plan?			■	

The project is not within one of the Multiple Species Habitat Conservation Plan (MSHCP) criteria areas, which are potential habitat preservation areas. The proposed project will not conflict with the Stephen's Kangaroo Rat Habitat Conservation Plan (SKR HCP) or MSHCP or any other known local, regional or state habitat conservation plans. The project will be conditioned to pay the required SKR mitigation fees. Also, the City participates in the MSHCP, a comprehensive habitat conservation-planning program addressing multiple species' needs, including preservation of habitat and native vegetation in Western Riverside County. This project will also be subject to fees per City ordinance to support the implementation of the Multiple Species Habitat Conservation Plan.

XI. **MINERAL RESOURCES.** Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				■
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?				■

(a and b) The project site is located in an urbanized area with additional development occurring in the vicinity. No active mines or mineral recovery programs are currently active within the project site or the surrounding area. Consequently, the development of the project site would not conflict with a mineral recovery plan as adopted by the General Plan. No significant impacts would occur.

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact

XII. **NOISE.** Would the project result in:				
a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			■	
b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?			■	

(a and b) The General Plan Environmental Impact Report (EIR) Noise Section for the City of Moreno Valley states that "The noise generated by construction is addressed by existing city regulations. It is unlawful to create noise that annoys reasonable people of normal sensitivity. The Public Works Department has a standard condition of approval regarding the public nuisance aspect of the construction activities. The construction operations including building related activities and deliveries shall be restricted to Monday through Friday (except for holidays which occur on weekdays), six a.m. to eight p.m.; weekends and holidays (as observed by the city and described in Chapter 2.55 of the Municipal Code), seven a.m. to eight p.m., unless written approval is obtained from the city building official or city engineer. Although construction activities will result in a noise impact, this impact will be short-term and will cease upon completion of construction. The temporary nature of the impact in conjunction with existing city regulations on hours of operation will lessen the potential of a significant impact due to construction noise. However, noise sensitive land use located adjacent to construction sites may be impacted by future construction in the planning area as a result of groundborne noise levels, noise levels that exceed existing standards, and temporary or periodic increases in the ambient noise level.

Although not required as mitigation measures to reduce a potentially significant impact to acceptable levels, the following mitigation measures have been introduced to ensure compliance with City General Plan Policies regarding noise:

N-1: Construction activities shall be operated in a manner that limits noise impacts on surrounding uses (General Plan Policy 6.5.2). In order to limit noise impacts on surrounding property, the construction contractor will ensure the following:

- All construction equipment powered by gasoline or diesel engines will be required to have sound-control devices at least as effective as those originally provided by the manufacturer; no equipment will be permitted to have an unmuffled exhaust.
- Mobile noise-generating equipment and machinery will be shut off when not in use;
- Construction vehicles assessing the site will be required to use the shortest possible route to and from local freeways, provided the routes do not expose additional receptors to noise.

N-2: The staging of construction equipment and the construction trailer shall be placed as far as possible from the existing single-family residences located to the west and south and the schools to the south.

The proposed residential development as designed and conditioned is consistent with City Municipal Code development standards and the City's design guidelines for single-family residential development. It is anticipated that project traffic will operate within acceptable Levels of Service at General Plan build-out, therefore, noise levels will be consistent with General Plan criteria for noise, and noise levels will not exceed the standards set forth in the General Plan. Perceptible groundborne vibrations are typically associated with blasting operations and potentially the use of pile drivers, neither of which will be used during construction of the Proposed Project. As such, no excessive groundborne vibration would be created by the Proposed Project. A less than significant impact would occur.

c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?			■	

The proposed residential development, as designed and conditioned is consistent with City Municipal Code development standards and Design Guidelines for single-family residential development. Permanent noise associated with the proposed residential development includes, but are not limited to, resident and visitor vehicular traffic, routine landscape and home maintenance, and maintenance of common landscape areas. However, these noise sources would be typical of the adjacent area and therefore, the project would not introduce unique noise sources. Although not required as mitigation measures to reduce a potentially significant impact to acceptable levels, mitigation measures N-1 and N-2 as referenced under Noise checklist questions (a) and (b) have been introduced to ensure compliance with City General Plan Policies related to noise regulation. Therefore, noise levels would be consistent with General Plan criteria for noise, and noise levels will not exceed the standards set forth in the General Plan. Impacts would be less than significant as a result of the proposed project.

d) A substantially temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?			■	

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
During construction, there will be the temporary impact of noise from construction equipment. The nearest sensitive receptors are March Middle School located immediately to the south and Rainbow Elementary School located approximately 700 feet further to the south and existing single-family tract homes to the west and northwest on the west side of Indian Street and to south. The Public Works Department has a standard condition of approval regarding the public nuisance aspect of the construction activities. Any construction within the city shall only be completed between the hours of seven a.m. to seven p.m. Monday through Friday, excluding holidays and from eight a.m. to four p.m. on Saturday, unless written approval is obtained from the city building official or city engineer. According to the Moreno Valley Municipal Code (9.10.030), all temporary construction activities are exempt from the noise standards as long as construction activities are limited to the daytime hours as described above and construction equipment is properly maintained with working mufflers. Although not required as mitigation measures to reduce a potentially significant impact to acceptable levels, mitigation measures N-1 and N-2 as referenced under Noise checklist questions (a) and (b) have been introduced to ensure compliance with City General Plan Policies related to noise regulation.				
e) For a project located within an airport land use plan, or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				■
The nearest airport is the March Air Reserve Base located approximately three-quarters of a mile to the west. The distance to the runway is approximately one mile. The project site is located within Compatibility Zone E of the March Air Reserve Base/Inland Port Airport Land Use Compatibility Plan. This area is considered a Flight Corridor Buffer zone. Noise impacts are identified as low since the project site is located beyond the 55 CNEL contour. The 55 CNEL contour is below the recommended exterior noise levels caused by aircraft over flight for new residential (65 CNEL) and other development (70 CNEL which requires insulation) as outlined General Plan Policies 6.3.2 and 6.3.3. Noise concerns within Zone E are related to occasional overflights intrusive to some outdoor activities. There are no restrictions on land use or density within this zone. This project was reviewed by the Riverside County Airport Land Use Commission and found to be consistent with the 2014 March Air Reserve Base/Inland Port Airport Land Use Compatibility Plan subject to certain requirements which have been incorporated into the project conditions of approval.				
f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?				■
There is no private airstrip within the vicinity of the site, or within the City of Moreno Valley.				
XIII. **POPULATION AND HOUSING.** Would the project:				
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?		■		
The project site is bounded on the west and south by development with improved street frontage along Indian Street and vacant R5 zone land to the north with a recorded map (Tract Map 22180). Vacant land for commercial (Community Commercial zoning) is located to the east (approved Walmart retail center). The project is surrounded by urban uses. The proposed residential development is consistent with surrounding General Plan land use and Zoning designations. The project will allow for the construction of 221 single-family residential homes. However, the numbers of residential units is less than the total number that would be allowed by the existing General Plan and zoning designations for the site. The project has been conditioned to construct all required on-site and off-site public infrastructure and to participate in the payment of applicable development impact fees.				
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?				■
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?				■
(b and c) This property is currently vacant, and no housing is currently located there. No housing will be displaced by development of this project. The project will not displace any residents.				
XIV. **PUBLIC SERVICES**. Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered government facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
a) Fire protection?			■	
The proposed project has incorporated the City's standard conditions of approval into its design. These standards specifically address concerns regarding the Fire Prevention Bureau. Standards such as providing approved fire hydrants, fire flow requirements; development impact fee programs and utilizing fire retardant materials have all been incorporated into the project's design. Insurance Services Office (ISO) ratings are given to firefighting districts in order to rank their operation level. This scale ranges from one (1) the highest possible score, to a ten (10), the worst possible score. The City of Moreno Valley currently has an ISO rating of four (4), which is considered high. With the implementation of the conditions of approval of the project pertaining to Fire Services, impacts would be less than significant.				

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
b) Police protection?			■	

The proposed project conforms to the City's Municipal Code and to the General Plan. Police protection to the project area is provided through the Moreno Valley Police Department. The Police Department was involved in the project review process. Conditions of approval have been included by Police Department to ensure health and safety is protected during construction. Development of the project site would increase the demand for services on the Police Department. The project will pay development impact fees related to Police Facilities. With payment of impact fees, the development of the proposed project would not over-burden their service ability in continuing to provide high quality police service.

c) Schools?				■
d) Parks?				■

(c and d) The project would directly increase the use of schools or park facilities through the development of a 221 lot single-family residential planned community. Consistent with City General Plan Policies 4.2.1 and 4.2.14 the City's Master Plan of Trails and the Master Plan of Parks, this project has been conditioned to construct and then convey to the City a segment of the Juan Bautista De Anza trail within the adjacent California Aqueduct and to construct and convey to the City a public park of approximately 2.0 acres in size with amenities that would include play equipment, a picnic shelter, a gazebo, large group barbeques, concrete picnic tables and benches, concrete waste/recycle containers; drinking fountains, walkway security lighting, decorative concrete walkways, decomposed granite walking path; and tubular steel fencing surrounding the park. The project will pay development impact fees collected and administered by the Moreno Valley Unified School District.

e) Other public facilities?			■	

There will be an incremental increase in the demand for new or altered public services including city hall, and city yard facilities. These facilities would be needed with or without the project. This project will be subject to development impact fees, which shall address the impact of the proposed development.

XV. **RECREATION.**

a) Would the project increase the use of existing neighborhood or regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?				■
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?				■

(a and b) As a residential use, the proposed development has the potential to increase the use of parks or other recreational facilities. The proposed project is designed to include private recreational amenities or facilities. The project has also been conditioned to construct and then convey to the City a segment of the Juan Bautista De Anza trail within the adjacent California Aqueduct and to construct and convey to the City a public park of approximately 2.0 acres.

XVI. **TRANSPORTATION/TRAFFIC.** Would the project:

a) Conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system, taking into account all modes of transportation including mass transit and non-motorized travel and relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit?		■		
b) Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?		■		

(a and b) A Traffic Impact Analysis Report prepared by Urban Crossroads on September 16, 2016, in order to evaluate the proposed General Plan Amendment and Zone Change and the potential circulation system deficiencies that may result from the development of the proposed Project, and to recommend improvements to achieve acceptable circulation system operational conditions.

At the City's direction, the evaluation of General Plan Buildout (2040) traffic conditions was contemplated for the purposes of this TIA. The development of the proposed Project (R5 land use designation) is anticipated to generate 1,799 fewer trip-ends per day with 135 fewer AM peak hour trips and 156 fewer PM peak hour trips, as compared to the currently adopted General Plan land uses (R5 and R30 land use designation). As such, evaluation of long-range traffic conditions was determined to be unnecessary as the proposed General Plan Amendment is anticipated to reduce the trips generated by the site. E+P and Opening Year Cumulative traffic conditions have been evaluated as part of this TIA in an effort to identify the near-term Project impacts, however, long-range traffic impacts are anticipated to be consistent with or less than those identified by the City's currently adopted General Plan.

Analysis of the year 2021 cumulative traffic plus project traffic conditions demonstrated cumulative impacts to three intersections

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact

(Indian Street at Cactus Avenue, Indian Street at Gentian Avenue, and Perris Boulevard at Santiago Drive). A mitigation measure requiring the payment of development impact fees and a fair share contribution have been placed on this project to reduce cumulative impacts to less than significant at these three intersections.

Improvement strategies have been recommended at intersections that have been identified as deficient to reduce each location's peak hour delay and improve the associated LOS grade to an acceptable LOS (LOS D or better). The effectiveness of the proposed recommended improvements is presented in Table 3-3 for Existing traffic conditions. Recommended improvements to address deficiencies for Existing traffic conditions are described below and analysis worksheets are provided in Appendix 3.4. of the Traffic Impact Analysis Report. The following mitigation measures apply to the project:

TR-1: Prior to the issuance of building permits, the Project applicant shall participate in the City's DIF and County TUMF fee programs by paying the requisite fees at the time of building permit, and in addition pay the Project's fair share amount of $43,497 for improvements at the intersections of Indian Street at Cactus Avenue and Indian Street at Gentian Avenue as identified in Table 1-5 that are consistent with the improvements shown on Table 6-3, or as otherwise agreed to by the City and Project Applicant. Project fair share payment shall only be collected if the City creates a fee program that includes the improvements the fair share contribution is intended to construct.

TR-2: Prior to the final approval of the street improvement plans, traffic signal plans will be required for a new traffic signal located at the intersection of Perris Boulevard and Santiago Drive. Prior to issuance of Certificate of Occupancy, the traffic signal and Perris Boulevard and Santiago Drive shall be completed per the approved plans to the satisfaction of the City Engineer.

As designed and conditioned, and subject to implementation of mitigation measures TR-1 and TR-2, the project will not conflict with an applicable plan, ordinance or policy establishing measures of effectiveness for the performance of the circulation system and will not conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highway.

c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?			■	

The nearest airport is the March Air Reserve Base located approximately three-quarters of a mile to the west. The distance to the runway is approximately one mile. The project site is located within Compatibility Zone E of the March Air Reserve Base/Inland Port Airport Land Use Compatibility Plan. This project was reviewed by the Riverside County Airport Land Use Commission and in a letter dated May 10, 2016 it was determined to be consistent with the 2014 March Air Reserve Base/Inland Port Airport Land Use Compatibility Plan subject to specific conditions related to the operation of the project. These conditions of approval have been made a requirement for this development. Therefore, as designed and conditioned, this project will not result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks.

d) Substantially increase hazards to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g. farm equipment)?			■	

In addition to the project's on-site public streets, the project has been conditioned by Public Works to complete street improvements where necessary along the site's Indian Street, Gentian Avenue and Santiago Drive frontages. The street improvements will include but not be limited to, pavement, curb, gutter, sidewalk, streetlights, storm drain, signing and striping, raised median and dry and wet utilities. As designed, the project will not result in hazards, but will help decrease potential hazards at this location. The project is not adjacent to any potential incompatible uses.

e) Result in inadequate emergency access?			■	

As designed and conditioned, all driveways and drive aisles will be built to the specifications of the City Engineer and Traffic Engineer, the Fire Prevention Bureau and the General Plan. This will ensure that no hazardous traffic situations would occur during construction or with completion of the project. The site will be readily accessible for emergency access.

f) Conflict with adopted policies or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities?				■

The project as designed and conditioned will not conflict with adopted alternative transportation policies, therefore, no adverse impacts would occur.

XVII. **UTILITIES AND SERVICE SYSTEMS.** Would the project:

a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?				■
b) Require or result in construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?				■

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
(a and b) A Prelminary Water Quality Management Plan (PWQMP) was prepared by Rick Engineering. The PWQMP identifies treatment Best Management Practices (BMP's) to address the project's pollutants of concern. The information presented in the PWQMP has been found by the City to be in general conformance with the document, "Water Quality Management Plan for the Santa Ana Region of Riverside County" dated October 22, 2012 and approved by the Santa Ana Regional Water Quality Control Board (Guidance Document). This project will not exceed the wastewater treatment requirements of the Regional Water Quality Control Board. The Eastern Municipal Water District (EMWD) is the sanitary district provider for the project. The project will not exceed wastewater treatment capacity of the Moreno Water Reclamation Facility.				
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?			■	
Riverside County Flood Control District (RCFCD) provided a letter dated November 2, 2015, indicating that the project site is within the limits of the Sunnymead Master Drainage Plan. The project proposes to construct Master Plan Storm Drain system Line M2 and the related utility relocation by constructing approximately 3,000 of off-site storm drain in Santiago Drive, Perris Boulevard, and Iris Avenue. The project will also construct Master Plan Storm Drain system Line D1 by constructing approximately 300 of off-site storm drain in Indian Avenue. Construction of the required on and off-site storm drain infrastructure will not cause significant environmental effects.				
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?				■
The water purveyor, Eastern Municipal Water District (EMWD), prepared an Urban Water Management Plan in 2010 demonstrating that it has or will have sufficient water supplies available to serve urban development within the City of Moreno Valley. EMWD's plan was based on the City's General Plan Land Use Element. The proposed residential development is consistent existing General Plan and Zoning designations. Therefore, sufficient water supplies exist to support the proposed project.				
e) Result in a determination by the wastewater treatment provider which serves or may serve the project determined that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?				■
The wastewater treatment provider is EMWD. The current wastewater treatment facility has adequate capacity to serve projects within Moreno Valley that are consistent with the General Plan and EMWD has plans for major expansions of the Moreno Water Reclamation Facility to serve future needs. Source: EIR for the 2006 General Plan Update.				
f)) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?				■
Waste Management provides waste hauling service to the City of Moreno Valley. The project will be served by a landfill in the Badlands with sufficient permitted capacity to accommodate the project's solid waste disposal needs. Source: EIR for the 2006 General Plan Update.				
g) Comply with federal, state, and local statues and regulations related to solid waste?				■
City policies require compliance with State and Federal regulations regarding solid waste. This project will be required to comply with the current policies regarding solid waste. (General Plan Objective 7.8 and Municipal Code Section 6.02)				
XVIII. **MANDATORY FINDINGS OF SIGNIFICANCE.**				
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory?			■	
There are no streambeds or riparian habitat within the project site. There were no surveyed rare plant or animal species noted on the project site. The project would not significantly degrade the quality of the environment or reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal. There are no historic structures on the site, and there will be no impact to historic resources. The project will not eliminate important examples of the major periods of California history or prehistory. The analysis in this Initial Study demonstrates that project and cumulative impacts would be less than significant. The project as designed and conditioned would not cause substantial adverse health effects on human beings.				
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?		■		

Issues and Supporting Information	Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Analysis of the year 2021 cumulative traffic plus project traffic conditions demonstrated cumulative impacts to three intersections (Indian Street at Cactus Avenue, Indian Street at Gentian Avenue, and Perris Boulevard at Santiago Drive). Mitigation measure requiring the payment of development impact fees and a fair share contribution have been placed on this project to reduce cumulative impacts to less than significant at these three intersections. Therefore, this project as conditioned and with mitigation will not create any impacts, that would be considered cumulatively considerable when viewed in connection with existing land uses, other recently approved projects, and existing land use designations. It is not expected that the proposed project would result in incremental effects. The analysis in this Initial Study demonstrates that with the implementation of mitigation measures for cumulative impacts to traffic infrastructure, the proposed project's cumulative impacts would be less than significant.				
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?			■	
The project proposes a General Plan Amendment from Residential 30 to Residential 5 and Zone Change from R30 to R5 for a 15.06 acre portion of a 53 acre site in order to develop a 221 lot planned residential community. The project includes applications for Tentative Tract Map 36760 to subdivide the 53 acre site into a total of 221 single family residential lots and a Conditional Use Permit for a Planned Unit Development (PUD). The PUD application will establish minimum lot sizes of 4,000 and 5,000 square feet and establish unique lot widths and setback standards along with architectural guidelines. Analysis of the year 2021 cumulative traffic plus project traffic conditions demonstrated cumulative impacts to three intersections (Indian Street at Cactus Avenue, Indian Street at Gentian Avenue, and Perris Boulevard at Santiago Drive). Mitigation measure requiring the payment of development impact fees and a fair share contribution have been placed on this project to reduce cumulative impacts to less than significant at these three intersections. The project as designed and conditioned and with mitigation will not cause substantial adverse effects on human beings, either directly or indirectly for the reasons described in this checklist/initial study.

Legacy Park Project – Mitigation Monitoring and Reporting Program

Conditional Use Permit PEN16-0094 / Tentative Tract Map 36760 (PEN16-0095)

Introduction

This Mitigation Monitoring and Reporting Program has been prepared for use in implementing mitigation for the Mitigated Negative Declaration (MND) for The Legacy Park (Conditional Use Permit PEN16-0094 and Tentative Tract Map 36760). The program has been prepared in compliance with State law and the MND prepared for the project.

The California Environmental Quality Act (CEQA) requires adoption of a reporting or monitoring program for those measures places on a project to mitigated or avoid adverse effects on the environment (Public Resources Code Section 21081.6). The law states that the reporting or monitoring program shall be designed to ensure compliance during project implementation.

The monitoring program contains the following elements:

- 1. The mitigation measures are recorded with the action and procedure necessary to ensure compliance. In some instances, one action may be used to verify implementation of several mitigation measures.
- 2. A procedure for compliance and verification has been outlined for each action necessary. This procedure designates who will take action, what action will be taken and when, and to whom and when compliance will be reported.
- 3. The program has been designed to be flexible. As monitoring progresses, changes to compliance procedures may be necessary based upon recommendations by those responsible for the program. As changes are made, new monitoring compliance procedures are records will be developed and incorporated into the program.

Mitigation Monitoring and Responsibilities

As the Leady Agency, the City of Moreno Valley is responsible for ensuring full compliance with the mitigation measures adopted for the proposed project. The City will monitor and report on all mitigation activities. Mitigation measures will be implemented at different stages of development throughout the project. In this regards, the responsibilities for implementation have been assigned to the Applicant, Contractor, or a combination thereof. If during the course of project implementation, any of the mitigation measures identified herein cannot be successfully implemented, the City shall be immediately informed, and the City will then inform any affected responsible agencies. The City, in conjunction with any affected responsible agencies, will then determine if modification to the project is required and/or whether alternative mitigation is appropriate.

Mitigation Monitoring and Reporting Program Checklist

Project: Legacy Park Project (Conditional Use Permit PEN16-0094 and Tentative Tract Map 36760)

Applicant: Mission Pacific Land Company

Date: January 18, 2017

Mitigation Measure No.	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/Initials	Sanctions for Non-Compliance
Traffic/Transportation						
TR-1: Prior to the issuance of building permits, the Project applicant shall participate in the City's DIF and County TUMF fee programs by paying the requisite fees at the time of building permit, and in addition pay the Project's fair share amount of $43,497 for improvements at the intersections of Indian Street at Cactus Avenue and Indian Street at Gentian Avenue as identified in Table 1-5 that are consistent with the improvements shown on Table 6-3, or as otherwise agreed to by the City and Project Applicant. Project fair share payment shall only be collected if the City creates a fee program that includes the improvements the fair share contribution is intended to construct.	City of Moreno Valley Transportation Engineering Division and Planning Division	Ongoing during construction	Prior to Building Final	Review of paid DIF invoice and receipt		Withhold Building Final
TR-2: Prior to the final approval of the street improvement plans, traffic signal plans will be required for a new traffic signal located at the intersection of Perris Boulevard and Santiago Drive. Prior to issuance of Certificate of Occupancy, the traffic signal and Perris Boulevard and Santiago Drive shall be completed per the approved plans to the satisfaction of the City Engineer.	City of Moreno Valley Transportation Engineering Division , Land Development and Planning Division	Ongoing during construction	Prior to Building Final	Final Inspection of signal improvements		Withhold Building Final

Mitigation Measure No.	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/Initials	Sanctions for Non-Compliance
Biological Resources						
BR-1. A qualified biologist will conduct a pre-construction presence/absence survey for burrowing owls within 14 days prior to site disturbance. If burrowing owls are detected onsite, the owls will be relocated/excluded from the site outside of the breeding season following accepted protocols, and subject to the approval of the RCA and wildlife agencies.	City of Moreno Valley Planning Division	Ongoing during grading plan check	Prior to Issuance of a grading permit	Review of and approval of pre-construction survey		Withhold Grading Permit
BR-2. As feasible, vegetation clearing should be conducted outside of the nesting season, which is generally identified as February 1 through September 15. If avoidance of the nesting season is not feasible, then a qualified biologist shall conduct a nesting bird survey within three days prior to any disturbance of the site, including disking, demolition activities, and grading. If active nests are identified, the biologist shall establish suitable buffers around the nests, and the buffer areas shall be avoided until the nests are no longer occupied and the juvenile birds can survive independently from the nests.	City of Moreno Valley Planning Division	Ongoing during grading plan check	Prior to Issuance of a grading permit	Review of and approval of survey		Withhold Grading Permit
Mitigation Measure No.	**Responsible for Monitoring**	**Monitoring Frequency**	**Timing of Verification**	**Method of Verification**	**Verified Date/Initials**	**Sanctions for Non-Compliance**
Cultural Resources						
CR-1: Prior to the issuance of a grading permit, the Project Applicant shall provide evidence to the City of Moreno Valley that a professional archaeological monitor has been retained by the Applicant to conduct monitoring of all mass grading and trenching activities and that the monitor has the authority to temporarily halt and redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. The Project archaeologist, with input from the	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations.	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order

appropriate Tribe, shall prepare a Cultural Resources Monitoring Plan (CRMP) to document protocols for inadvertent finds, to determine potential protection measures from further damage and destruction for any identified archaeological resource(s)/ tribal cultural resources (TCRs), outline the process for monitoring and for completion of the final Phase IV Monitoring Report. If any archaeological and/or TCRs are identified during monitoring, these will also be documented and addressed per standard archaeological protocols in the Phase IV report, with the exception of human remains which will be addressed per CUL-5. The Project Archaeologist shall attend the pregrading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.						
CR-2: At least 30 days prior to the issuance of a grading permit, the Applicant shall contact the appropriate Luiseño tribe to develop a Cultural Resources Treatment Agreement and shall provide evidence to the City of Moreno Valley that the professionally qualified Luiseño Native American monitor(s) has been secured from the interested tribe(s), and that the monitor shall be allowed to monitor all mass grading and trenching activities. The Tribal representative(s) shall attend the pre-grading meeting with the City and contractors to explain and coordinate the requirements of the monitoring program.	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations.	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order
CR-3: If, during mass grading and trenching activities, the Archaeologist or Tribal representatives suspect that an archaeological resource and/or TCR may have been unearthed, the monitor identifying the potential resources, in consultation with the other monitor as appropriate, shall immediately halt and redirect grading operations in a 100-foot radius around the find to allow identification	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order

and evaluation of the suspected resource. The Native American monitor(s) or appropriate representative(s) and the archaeological monitor shall evaluate the suspected resource and make a determination of significance pursuant to California Public Resources Code Section 21083.2. The archaeological monitor and tribal monitor(s) or appropriate representative(s), the Project Applicant, and the City Planning Division shall confer regarding mitigation of the discovered resource(s). All sacred sites, should they be encountered within the Project area, shall be avoided and preserved as the preferred mitigation, if feasible.						
CR-4: Prior to grading permit issuance, the City shall verify that the following note is included on the Grading Plan: "If any suspected archaeological resources are discovered during ground-disturbing activities and the archaeological monitor or Tribal representatives are not present, the construction supervisor is obligated to halt work in a 100-foot radius around the find and call the project archaeologist and the Tribal representatives to the site to assess the significance of the find."	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order
CR-5: If human remains are encountered, California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the Riverside County Coroner has made the necessary findings as to origin. Further, pursuant to California Public Resources Code Section 5097.98(b), remains shall be left in place and free from disturbance until a final decision as to the treatment and disposition has been made by the Coroner. If the Riverside County Coroner determines the remains to be Native American, the California Native American Heritage Commission must be contacted within 24 hours. The Native American Heritage Commission must then	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order

immediately notify the "most likely descendant(s)" of receiving notification of the discovery. The most likely descendant(s) shall then make recommendations within 48 hours, and engage in consultations concerning the treatment of the remains as provided in Public Resources Code §5097.98.						
CR-6: Prior to construction involving excavation four feet or more below existing surface grade, the construction contractor shall provide evidence that a qualified paleontologist has been retained, and that the paleontologist(s) shall be present during all grading and other significant ground-disturbing activities that reach four feet or more below existing surface grade. In the event fossiliferous deposits are encountered, the following measures shall be implemented: • Monitoring shall be conducted by qualified paleontological monitor(s) of excavation in areas identified as likely to contain paleontological resources, including very old alluvial fan deposits. Paleontological monitors shall be equipped to salvage fossils as they are unearthed, to avoid construction delays, and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. Monitors shall be empowered to temporarily halt or divert equipment to allow removal of abundant or large specimens. Monitoring may be reduced if the potentially fossiliferous units are determined upon exposure and examination by qualified paleontological personnel to have low potential to contain fossil resources.	City of Moreno Valley Land Development Division and Planning Division	Once prior to Grading and during grading and construction operations	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order

• Paleontological monitoring of any earthmoving will be conducted by a monitor, under direct guidance of a qualified paleontologist. Earthmoving in areas of the parcel where previously undisturbed sediments are buried, but not otherwise disturbed, will not be monitored. • If too few fossil remains are found after 50 percent of the planned-for earthmoving has been completed, monitoring can be reduced or discontinued in those areas at the Project paleontologist's direction. • Preparation of recovered specimens to a point of identification and permanent preservation, including washing of sediments to recover small invertebrates and vertebrates. • Identification and curation of specimens into a professional, fully accredited museum repository with permanent retrievable storage. The paleontologist must have a written repository agreement in hand prior to the initiation of mitigation activities. • Preparation or a report of findings with and appended itemized inventory of specimens. The report and inventory, when submitted to the city along with confirmation of the curation of recovered of recovered specimens into an established, accredited museum repository, will signify completion of the program to mitigate impacts to paleontological resources.						

Mitigation Measure No.	Responsible for Monitoring	Monitoring Frequency	Timing of Verification	Method of Verification	Verified Date/Initials	Sanctions for Non-Compliance
Noise						
N-1: Construction activities shall be operated in a manner that limits noise impacts on surrounding uses (General Plan Policy 6.5.2). In order to limit noise impacts on surrounding property, the construction contractor will ensure the following: • All construction equipment powered by gasoline or diesel engines will be required to have sound-control devices at least as effective as those originally provided by the manufacturer; no equipment will be permitted to have an unmuffled exhaust. • Mobile noise-generating equipment and machinery will be shut off when not in use; • Construction vehicles assessing the site will be required to use the shortest possible route to and from local freeways, provided the routes do not expose additional receptors to noise	City of Moreno Valley Engineering and Building and Safety Planning Division	Once prior to Grading and during grading and construction operations.	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order
N-2: The staging of construction equipment and the construction trailer shall be placed as far as possible from the existing single-family residences located to the west and south and the schools to the south.	City of Moreno Valley Engineering and Building and Safety Planning Division	Once prior to Grading and during grading and construction operations.	Prior to issuance of Grading Permit	Review of construction documents and on-site inspection		Withhold Grading Permit or Issuance of a Stop Work Order

13. THERE ARE NO ADJACENT STRUCTURES OR PROPERTY IMPROVEMENTS WITHIN 50' OF THE PROJECT BOUNDARY
14. THERE ARE NO KNOWN EXISTING BUILDINGS OR STRUCTURES ABOVE GROUND WITHIN THE SUBDIVISION
15. THERE ARE NO KNOWN EXISTING WELLS, IRRIGATION LINES, CESSPOOLS, SEPTIC TANKS, SEWAGE LEACH FIELDS, SEWERS, CULVERTS, STORM DRAINS, OR UNDERGROUND STRUCTURES WITHIN THE SUBDIVISION
16. THERE ARE NO KNOWN PREVIOUSLY FILLED AREAS, INCLUDING LIQUID AND SOLID WASTE DISPOSAL SITES, WITHIN THE SUBDIVISION
17. THERE ARE NO EXISTING WATERCOURSES OR FLOOD CONTROL CHANNELS WITHIN THE PROJECT SITE
18. THERE ARE NO KNOWN EXISTING TREES OR ROCKS ON SITE
19. WATER QUALITY MEASURES ARE DESCRIBED IN PRELIMINARY WATER QUALITY MANAGEMENT PLAN.
20. WATER QUALITY BASINS AND PROPOSED PARK SITE TO BE MAINTAINED BY THE HOA OR PUBLIC ENTITY.
21. TRAFFIC SIGNAL INTERCONNECT WILL BE PROVIDED AT GENTIAN AVE.
22. PROJECT SITE IS IN HCOC EXEMPT AREA. OUTLET FROM BASINS WILL NOT MATCH PRE-PROJECT FLOWS, BUT WILL BE SIZED TO STORM DRAIN SYSTEM CAPACITIES.
23. APPLICANT RESERVES THE RIGHT TO RECORD THE FINAL MAP IN PHASES.

LEGAL DESCRIPTION

LOTS 18 AND 23 IN BLOCK 3 OF RIVERSIDE ALFALFA ACRES, AS SHOWN BY MAP ON FILE IN BOOK 8, PAGE 21 OF MAPS, RIVERSIDE COUNTY RECORDS.

EXCEPTING THEREFROM ANY PORTION LYING WITHIN TRACT NO. 22180-2 AS PER MAP RECORDED IN BOOK 207 OF MAPS, PAGES 97 THROUGH 103, INCLUSIVE, RIVERSIDE COUNTY RECORDS.

ALSO EXCEPTING THEREFROM ANY PORTION LYING WITHIN TRACT NO. 22180-3 AS PER MAP RECORDED IN BOOK 208, OF MAPS, PAGES 1 THROUGH 6, INCLUSIVE, RIVERSIDE COUNTY RECORDS.

EASEMENTS

1. 100' CALIFORNIA DWR AQUEDUCT EASEMENT
2. 30' EMWD SEWER EASEMENT
3. PUBLIC UTILITY EASMENT 4' ON EACH SIDE OF LOT LINE REC 04/19.1977 # 67179
4. 6' PUBLIC UTLITY EASEMENT REC 04/19/1977
5. EASEMENT FOR ROADWAY PUBLIC UTILITY AND DRAINAGE, 04/06/2006 #0246722, 12/15/2006 #0919865

ESTIMATED GRADING QUANTITIES

ESTIMATED EXCAVATION: 108,000 C.Y.
ESTIMATED EMBANKMENT: 108,000 C.Y.

NOTE: THE GRADING QUANTITIES SHOWN HEREON ARE RAW QUANTITIES FOR PERMIT PURPOSES ONLY AND ARE NOT TO BE USED FOR FINAL PAY QUANTITIES.

Legacy Park

Table of Contents

Purpose

The purpose of the Legacy Park Planned Unit Development guidelines to promote a high standard of neighborhood design and architectural quality; provide innovation and diversity in housing choices, contribute to Moreno Valley open space and recreational facilities and instal storm water control systems. The Legacy Park Plan provides two new City parks one on-site and one off-site fitness park on the adjacent property as well as paseos that connect to the Department of Water Resources (DWR) Juan Bautista De Anza bikeway/trail and the two new retaining basins. The Plan promotes recreational opportunities through the addition of these new facilities. It is further intended that the community be designed to conserve energy and water use.

Figure 1: Illustrative Site Plan

Legacy Park

1.0 Site Planning and Design

This section includes design standards that avoid monotonous, repetitive appearances and that encourage a pleasant, pedestrian-oriented neighborhood environment. Two different lot sizes are provided to increase diversity of home types (Refer to Figure 2: Land Plan).

Figure 2: Land Plan

1.1 Standards

Standards for Legacy Park are shown on the table below.

Table 1: Legacy Park Standards

Standards		
Minimum Lot Size	4,000 SF	5,000 SF
Number of Homes	76	145
Number of Plans	3	4
Number of Elevations	3	4
Min. Lot Width (at setback line)	50′	50′
Min. Lot Depth*	80′	100′
Typical House Width	40′	40′
Max. Building height	2-story or 35′	
Front Setbacks		
Street-facing Garage**	18′	18′
Two-story Living Space	12′	12′
Single-story Living Space	10′	10′
Porch***/ Portico	4′	4′
Rear Setbacks****		
Two-story Living Space	10′	15′
Two-story Deck	10′	15′
Single-story Living Space	5′	10′
California Rooms (has up to 3 sides)	5′	10′
Patio Cover or Trellis	5′	10′
Side Setbacks		
Typical Condition	5′	5′
Side Street	10′	10′
Min. Distance Between Living Spaces	10′	10′
Max. Coverage (including garage)	50%	50%

Note: All setbacks are considered minimums as measured from the right-of-way.

*Except at knuckles and cul-de-sacs.
**Garages shall be 20′ along D Street and L Street.
***Minimum porch depth shall be 6′.
****Rear setbacks measured from lot line not landscaped easement.

Legacy Park

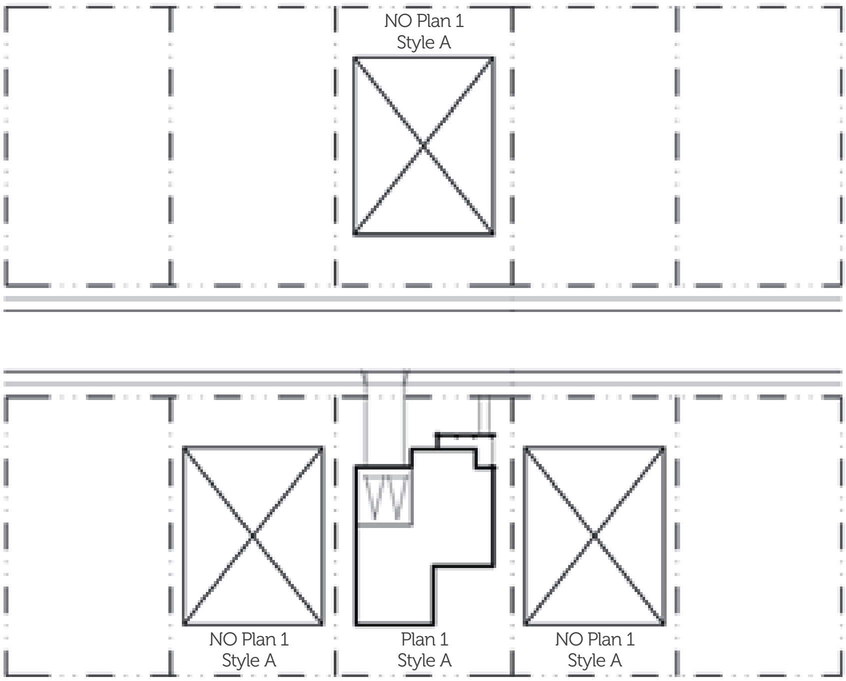

Figure 3: Plan/Elevation Style Plotting Diagram

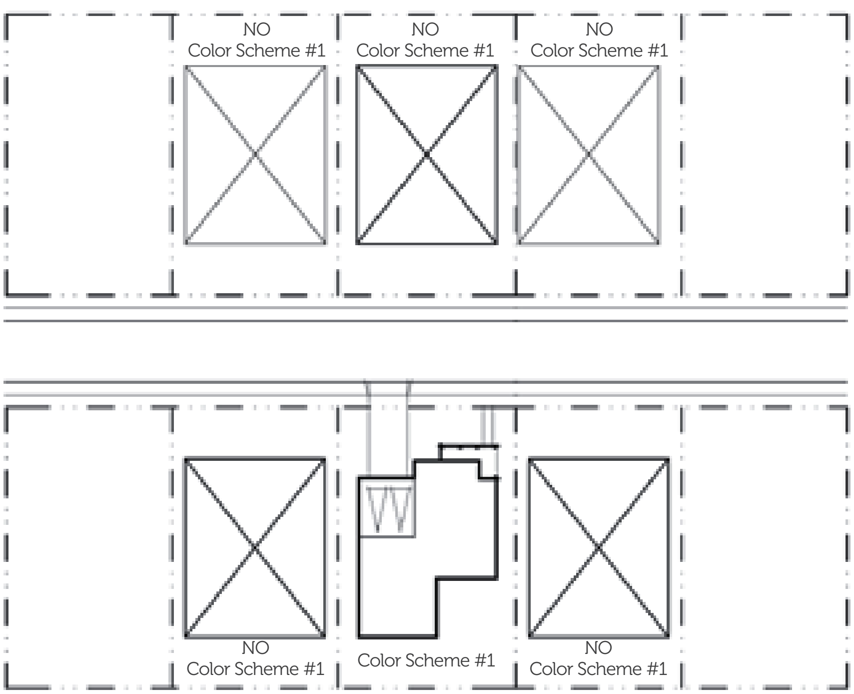

Figure 4: Color Scheme Plotting

1.2 Streetscape Diversity

In order to ensure architectural diversity above typical subdivision communities, plans should have variation in floor plans, massing and minor variations in size.

- Plot the minimum required floor plans and elevations from Table 1: Legacy Park Standards.
- Do not use a floor plan consecutively more than two (2) times in a row whether reversed or not.
- Prohibit the same plan and elevation on the lot most directly across from it and on the adjacent lots.
- Prohibit repeat of like color schemes even if on a different plan for the three (3) lots most directly across from it and on the single lot to each side of it.
- Improve opportunities for on-street parking by plotting garages next to garages and living space next to living space.
- Unless a street incline prevents otherwise, a left or right side garage may not be plotted more than 3 times in a row.

1.3 Street Activation

The living portions of the home should be the most visually interesting portion of the street scene. Home design should place entries, windows, front porches, covered terraces and living areas directly facing the street on most plan variations. Streetscape composition shall:

- Orient homes toward the street with clearly define entries.
- Provide a direct pedestrian path between the home and the sidewalk.

1.3.1 Outdoor Living

Outdoor living spaces, including porches and courtyards, activate the streetscene and promote neighbor interaction. Outdoor living spaces can also create indoor/outdoor environments to enhance livability.

A. Porches

Porches are encouraged to add architectural interest to the front of a residential structure. They help add depth to a building façade, break-up large wall masses and provide a pedestrian-friendly scale. The design of the porch shall be consistent with the architectural style. If provided, porches shall be at least 6 feet deep to accommodate seating.

B. Front Courtyards

The Spanish and Hacienda styles lend themselves to the use of front courtyards to promote social interaction. A 3½-foot high courtyard wall is permitted in the required front setback, provided there is 5-foot minimum setback from the property line to allow for landscape. The courtyard wall and gate shall have a finish material to match the architectural style, i.e. stucco, stone, wood, etc.

C. Entries

The entry shall be articulated as a focal point of the building's front elevation. Entries are encouraged to be covered or recessed in order to create a welcoming appearance, promote individuality and increase privacy. Where residences have front doors that are not visible from the street, an entry element such as a trellis, portal element, or similar architectural feature to identify the entry and a sense of arrival.

1.4 Visible Edges

Homes located along the edges of the community impact how residents and visitors view the development. Elevations facing outside edges shall provide the following:

- Main roof span shall have variety between plans (front-to-rear, side-to-side, gables and hipped roofs).
- Single-story alternative massing.
- Significant massing offset(s).
- Compatible color variety consistent with architectural style

Example of Rear Visible Edge

1.5 Garage Location and Design

Plot and reverse plans when possible so that garages and/or entries are adjacent to each other. Occasionally, break this pattern so that it will not become overly repetitious or reflect the massing directly across the street.

- Minimum 2-car garage size is 20-foot x 20-foot clear dimension with a 16-foot wide door or two single doors.
- Tandem garages recommended to be 36 feet deep.
- Only a 2-car garage space is permitted to face the street; additional garage spaces may be provided in tandem configurations.

1.5.1 Garage Doors

Garage doors are the most impactful feature of the garage. Builders are encouraged to consider the following in the design and selection of garage doors:

- Design garage door patterns consistent with the style of the home.
- Provide different style door patterns .
- Vary the inclusion of window lites.

1.6 Corner Lots

Corner lots also have high visibility and are important to design of a quality community. Typically, corner lots are wider to accommodate the side yard setback and allow for side porches. To encourage variety, more than one plan shall be used as a corner plan. Architecture on corner lots shall:

- Provide the same level of architecture as the front elevation
- Provide window details to match on side elevation.
- Create a significant massing offset.
- Where possible, expose ⅓ the length of the home.
- Consider wrap around porches, courtyards, or entry doors oriented toward the side street.

2.0 Architectural Requirements

The following principles will guide the architecture to ensure quality implementation:

- Use architectural elements and details that reinforce architectural styles.
- Choose appropriate massing, roof forms and colors to define the architectural styles.
- Ensure that plans and styles provide a degree of individual identity while being compatible.

2.1 Building Form and Massing

Homes should be broken down into smaller components to reduce the massing volume. This can be achieved through a variety of architectural techniques and treatments such as:

- Varied roof forms, pitches and heights.
- Changes in materials and color.
- Offset first-story and second-story massing.
- Clearly defined entry features.

2.2 Materials & Finishes

Specific materials are identified for each architectural style within these Guidelines. The natural colors of clay, wood and slate roof tile are encouraged when using concrete tile formulations.

- Lighter materials should be placed above materials of a heavier weight.
- Use complementary building materials that promote a harmonious appearance and provide interest and variety consistent with the architectural styles.
- Where possible, use style-appropriate concrete roof tile blends; prohibit overly dramatic blends with extreme contrast.

Material finishes should express permanence and quality.

- Create a more solid and permanent appearance with stone or other masonry materials, particularly as accents.
- Install masonry using traditional methods.
- Avoid frequent changes in materials.
- Detail finishes properly with the architectural style.
- Use high-quality, durable, low-maintenance materials.

2.2.1 Stucco

Stucco finish should project high quality and be appropriate to the architectural style. Heavy Lace and Spanish Texture stucco finishes are prohibited.

A. Stucco Details

All stucco trim details (such as window surrounds, window sills, roof eaves, column details, lintels, etc.) must be constructed with a level of precision and accuracy to express the authentic execution of the style.

- Use clean, crisp and smooth stucco details.
- Use a different trim stucco finish from the wall stucco finish.
- No rough, "blob"-like and uneven stucco finish.
- Carefully locate stucco control joints if applicable on elevation designs.

Medium Sand Float (16/20 Aggregate)

Heavy Lace Texture - Prohibited

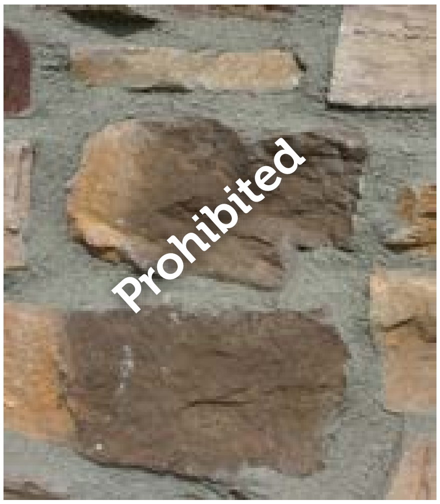
Fine Sand Float (20/30 Aggregate)

Spanish Texture - Prohibited

Source: Technical Services Information Bureau

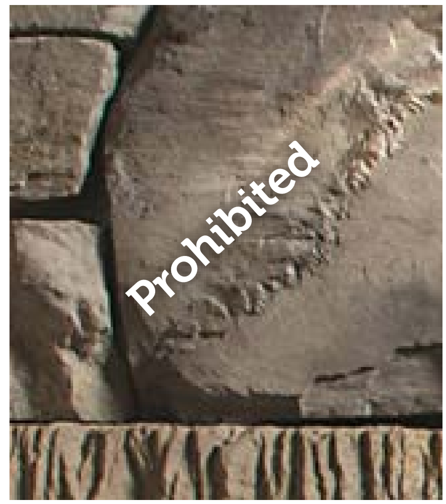
2.2.2 Veneers

Manufactured stone shall have a texture and color that mimics natural stone and be of exceptional quality. The mortar joint types and colors for each masonry product used should be specified.



Stone with poor application of color example

Unnatural looking stone from a worn out mold with poor detailing example



Unnatural looking stone from a old and deteriorating mold example

Stone corner application example

Stacked stone application example

Grouted stone application example

Legacy Park

Veneer close to slab as possible example

A. Stucco Screed Details

The stucco weep screed at stone or brick adhesively applied veneers should be detailed to be as close to finish grade/finish slab as possible while still maintaining the minimum dimensions required by the building code. Stucco weep screeds that "float" above the finished grade by more than six inches are prohibited.

Sufficient details, notes and specifications should be provided in the construction documents to ensure proper construction in the field.

B. Material Wrapping

Architectural elements must not end at the corner of a building and shall wrap around the corner and extend to a logical terminus point that is incorporated into the overall architectural design.

Wrap columns, tower elements and pilasters entirely.

Examples of veneers wrapping columns entirely

Example of siding terminating at an inside corner

2.2.3 Wood

Wood is a material used in many architectural styles. However, maintenance concerns, a desire for long-term architectural quality and new high-quality manufactured alternative wood materials make use of real wood material less desirable. Where "wood" is referred to in these Guidelines, it can also be interpreted as simulated wood trim with style-appropriate wood texture.

2.2.4 Ornamental Details

Use details that appear as functional elements and match the architectural style.

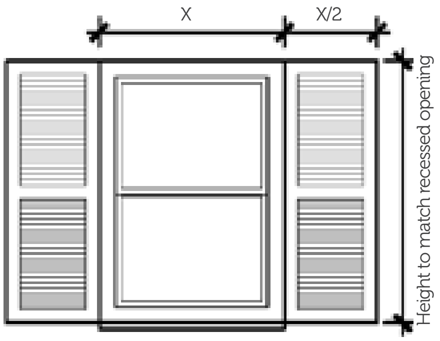
2.2.5 Gutters & Downspouts

Integrate gutters and downspouts into the home design when used.

2.2.6 Eave Paint

Eave paint shall match the fascia color (spray paint of the wall color on the eaves is prohibited).

Example of prohibited horizontal windows



Shutter size corresponds to window size

Example of prohibited embedded shutter

2.3 Windows

Window details differentiate architectural styles and can provide a high level of architectural enrichment. The selection and proportion of the windows to the façade shall be responsive to the architectural style of the building. Size and shape shall be considered to assure a balanced relationship with the surrounding roof and walls. Accent shutters are a way to further enhance the architecture and shall be proportionate to the window opening. In general, windows shall enhance rather than dominate the overall architectural character.

- No horizontal bathroom windows are permitted.
- Divided lite windows are encouraged and should reflect the architectural style.
- Non street-facing and rear yard windows may delete the divided lites.

2.3.1 Shutters

All shutters shall comply with the following:

- Mount shutters on finished wall material; embedded shutters prohibited.
- Match shutter size to the recessed opening window width.
- Use material at least 1.5-inches thick.

2.4 Lighting

Appropriate lighting is essential in creating an inviting evening atmosphere for the community. All lighting shall be non-obtrusive.

- Limit all exterior lighting to the minimum necessary for safety.
- Shield all exterior lighting to minimize glare and light spill onto adjacent properties.
- Use exterior entry lights that complement the architectural style.
- Use low voltage lighting whenever possible in common areas.

2.5 Mechanical Equipment

Mechanical equipment shall be screened from street view. Mechanical equipment includes:

- HVAC equipment.
- Gas and electric meters.
- Cable/TV panels.
- Pool and spa equipment.
- Exterior landscape/lighting equipment.

2.6 Addresses

Addresses must be a minimum of 6 inches high and clearly visible from the nearest emergency vehicle right-of-way.

2.7 Solid Waste

Space shall be provided for the refuse storage bins out of view from the street.

Exterior lighting matches architectural style

2.8 Gateways & Doors

Main entry doors and gateways should be thoughtfully selected to match the specific style of architecture. Courtyard openings and entries function as a statement for the entire home and add interest to the streetscape. These elements should be treated with detail of equal level.

Gateways shall:

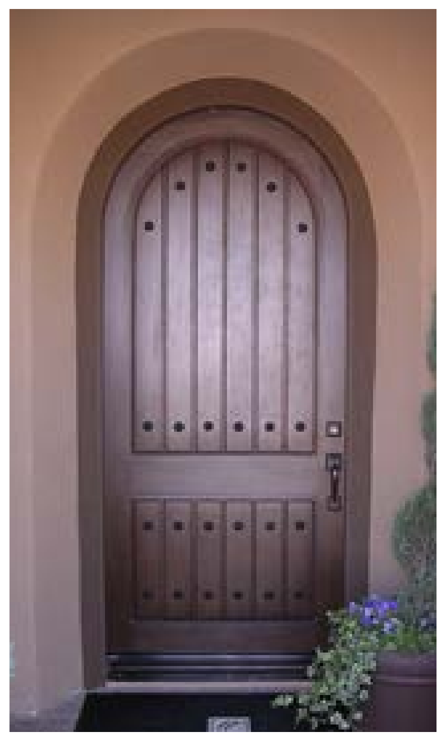
- Match or complement entry and garage doors in character, materials and finish.
- Include decorative iron gates when appropriate to the architectural style.

Entry doors shall:

- Accentuate and announce the main entry of the home.
- Reinforce the style of architecture.

Other doors shall:

- Use architecturally complementary garage and/or utility doors on visible corner-side elevations.
- Only use decorative screen doors with openings concealed in a private courtyard or similar space recessed under a covered roof.



Main entry door matches architectural style

2.9 Color

The use of color and materials is an essential ingredient to quality development. Successful application of color and materials improves the character and essence of the community.

The primary goal of color and materials palettes is to further enhance and define the architectural styles within these Guidelines. Equally important is the balance of diversity and harmony; variety of color and materials must be achieved within the context of a harmonious community.

Colors selected should be appropriate to the styles they represent and used to further differentiate from the other styles (i.e. the body color for an Arts & Crafts home should typically be darker than for a Spanish home).

Architectural screens, fences and accessory structures should be compatible in material, color and texture to the main buildings (Refer to Figure 4: Color Scheme Plotting for color plotting requirements).

3.0 Architectural Styles

These design guidelines are intended to be flexible and are, therefore, illustrative in nature. It is not the intent of these design guidelines to require that all of the identified design components and elements be incorporated into the actual building designs. Rather, these guidelines serve as a "palette" of character defining elements that can be used in home designs. Builders, along with their architects and planners, are encouraged to utilize creativity and imagination when developing exciting design proposals for Legacy Park.

3.1 Design Principles

While these design guidelines do not limit architectural styles, the styles employed should be authentic and distinct. Traditional styles tend to have defining features that should be consistently implemented across the product offering. Additional styles may be proposed however, they must follow the same principles and attention to detail as the specific styles listed here.

By emphasizing authentic styles, these guidelines discourage sameness and monotony. The multi-style streetscene should be diverse as to form, massing, features, windows, front doors, garage doors, materials and colors.

To some extent, resource efficiency should influence architectural styles. The concept of resource efficiency includes reduction of wasteful elements in the design and construction of the house as well as conservation of energy and water during occupancy of the house.

3.2 Authentic Adaptations

Recognizable authentic architecture is based on traditional forms, materials and details that reasonably express the heritage of a particular style. Historically derived, or authentically adapted, elevations continue to focus on forms and details, but allow for the integration of modern materials, colors and artistic interpretation to generate a contemporary, yet recognizable, expression of an architectural style. Historically adapted elevations combine these notions into physical reinterpretation of an architectural style.

Authentic adapted elevations should express a recognizable architectural style from the Legacy Park collection of styles but can use artistic design to incorporate new, modern or progressive forms, details and materials in the modern context of architecture. Any of the Legacy Park styles may be expressed as an authentic adapted or historically derived elevation using any, all, or a sampling of elements.

Legacy Park

Arts & Crafts

Arts & Crafts homes can be found nestled in the original town centers of older communities. Stylized by California architects such as Bernard Maybeck in Berkeley and the Greene brothers in Pasadena, the style focuses on exterior elements with tasteful and artful attention. This architecture relies on the simple house tradition, combining hip and gable roof forms with wide, livable porches and broad overhanging eaves.

Extensive built-in elements define this style, treating details such as windows and porches as if they were furniture. The horizontal nature is emphasized by exposed rafter tails and knee braces below broad overhanging eaves and rusticated, textural materials. The overall effect is the creation of a natural, warm and livable home of artful and expressive character.

Details	Standard	Enhancements
Roofs	Side-to-side gable with cross gable Roof pitches 3.5:12 to 8:12 Standard overhangs Exposed rafter tails Deeper rakes Bargeboard at gable end	Extended eaves Shaped rafter tails preferred Outlookers & brackets
Roof Materials	Flat, shake concrete tile	
Wall Materials	Medium sand float stucco finish (16/20) Horizontal siding	Shingle siding OR board & batten OR brick OR stone accents (natural OR painted to match stucco)
Architectural Elements	Porches OR covered OR defined entry	Heavy timber columns, posts & beams
Trim & Details	Appropriately sized columns	Gable end details Tapered OR double-post porch columns on brick OR stone piers
Windows	Vertically proportioned windows Window grids Fully trimmed windows	Grouped windows with continuous head trim Vertical windows at first floor Horizontal windows at 2nd floor along belt course
Doors & Gates	Paneled front entry doors Paneled garage door	Front entry wood & glass doors Garage door with windows

Farmhouse

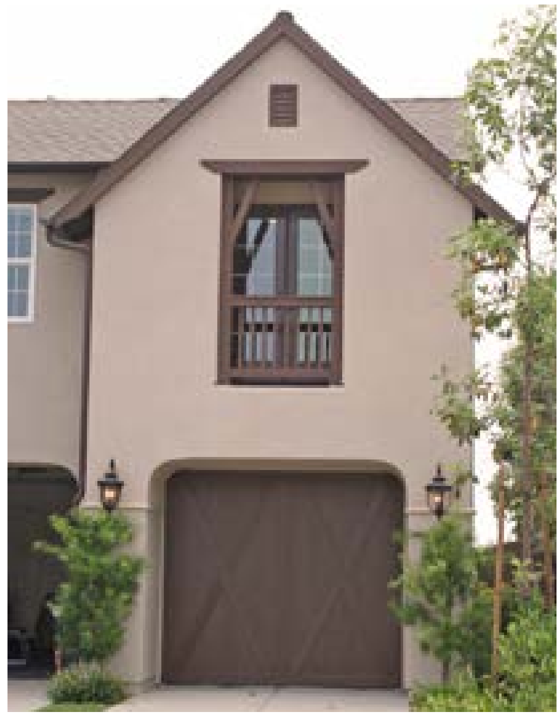
The California Farmhouse blends the country farm home with California sensibilities of outdoor living, earth colors and simple use of materials. Predominant features include large and sometimes wrapping front porch to extend the living space to the outside. This presents a warm welcome to neighbors. Wood columns and railings with cross braces, exposed rafter tails and siding accents give this style a charming appeal.

Details	Standard	Enhancements
Roofs	Clean, asymmetrical gable roof with cross gables Roof pitches 4:12 to 6:12 12" to 18" overhangs at eaves 6" to 12" overhangs at rakes	Dormer roof projections Simple shaped, square OR half round rafter tails Boxed eaves
Roof Materials	Flat tile OR composition roof	
Wall Materials	Stucco: 16/20 finish 30/30 finish at feature elements	Horizontal siding accents Stone accents
Architectural Elements	Simple square post & beam supports at porch	Proportionally large porch at entry Square "wood" columns with brackets, cross braces & railing
Trim & Details	Stucco-wrapped, high density foam trim Exposed eaves & simple square rafter tails	Wall mounted light fixtures at garage door
Windows	Horizontally proportioned windows with divided lites Unifying sill	Plank OR Lazy-Z shutters Balanced header & sill trim Pot shelves
Doors & Gates	Entry doors highlighted by roof element OR porch feature Well-placed & proportional entry light fixture	Rectangular OR arched surrounds (follows door design)

Legacy Park

European Cottage

The European Cottage is a picturesque style that evolved out of medieval Tudor and Norman domestic architecture. The evolving character that resulted in the English "cottage look" became extremely popular with the addition of stone and brick veneer details in the 1920s. Roof pitches are steeper and include gable, hip and half-hip roof forms. The primary exterior stucco is accented with stone and brick bases, veneers and tower elements. Some of the most recognizable features of this style are the accents in the gable end forms and the sculptured swooping walls at the front elevation.



Details	Standard	Enhancements
Roofs	4:12 to 12:12 roof pitches Standard overhangs Gable end details	Dormers Swoop roof
Roof Materials	Flat tile OR composition roof	
Wall Materials	Stucco: 16/20 finish	Stone accent ½ timbering
Architectural Elements	Traditional pediment surround entry Porches OR meaningful entries	Tower Element Bay windows
Trim & Details	Appropriately sized simple columns Plank OR Lazy-Z shutters	Metal details
Windows	Vertically proportioned windows Window grids on upper levels	Dormer windows
Doors & Gates	Paneled entry doors Paneled garage door with windows	

Italian

In the 1860s, the Italian Villa was one of the fashionable architectural styles in the United States based on the formal and symmetrical palaces of the Italian Renaissance. Italian homes are straightforward and boxy, with only window crowns and cornice moldings as ornamentation. The shallow pitched hipped roof, often with decorative brackets, identifies this style. As it became a popular building material, cast iron expanded the Italian style vocabulary to include a variety of embellished designs for porches, balconies, railings and fences.

Elements	Standards	Enhancements
Roofs	Main hip roof with hip ancillary roofs 1-story shed roofs permitted Roof pitches 3.5:12 to 5:12 Tight to 12-inch overhangs at rakes 12- to 18-inch overhangs at eaves	Closed/shaped eave with corbels at accent elements
Roof Materials	"S" concrete tile	Clay tile
Architectural Elements	Window & door trim	
Wall Materials	Medium sand float stucco finish (16/20)	Brick OR stone accents
Trim & Details	Formal entry with smooth stucco trim Rectangular OR full arch top with fine sand float stucco finish (20/30) OR smooth manufactured foam trim	Metal balconies & pot shelves Simulated precast surrounds, precast trim Simulated precast columns at entry OR between windows Belt course Base trim
Windows	Grid patterned at front & visible windows Trim around front & visible windows Paneled OR louvered shutters on accent window	Round arch top accent windows Symmetrically ordered & stacked windows & openings Recessed windows
Doors & Gates	Paneled front entry doors Paneled garage door	Garage door with windows

Legacy Park

Monterey

Influenced by both the Spanish Colonial and the New England Colonial homes, the Monterey style features Spanish detailing while maintaining the Colonial style form. With its stucco or masonry walls, red barrel, "S" or flat concrete shake roofs, this style exhibits many of the same elements as an historical Spanish home: simple building form and mass, rusticated corbels, head trim, posts or balconies (if used) and gable roof forms. Many successful adaptations of this style focused simply on careful massing, detail and the natural beauty inspired through its blend of rich Spanish and Colonial heritage.

Details	Standard	Enhancements
Roofs	Clean, uncomplicated roof solutions of hips OR gables Roof pitches 4:12 to 5:12 12" to 18" overhangs at eaves Tight rakes Balcony & main roof are same low pitch	Modest projected rafter tails, shaped tails preferred Parapets with barrel tile cap
Roof Materials	Concrete "S" tile OR flat tile	2-piece barrel tile with mud boost on 1st two courses
Wall Materials	Stucco: 16/20 finish 30/30 finish at feature elements Material change at second floor	Brick OR slump block on first floor at main entrance Board & batt OR horizontal siding at upper level
Architectural Elements		Balconies cantilevered OR supported Balconies & railings made of heavy timber wood
Trim & Details	Stucco-wrapped, high density foam trim Closed OR exposed eaves Well-placed & proportional entry light fixture Plank-style shutters on feature windows	Wood OR metal railing Gutter/downspouts exposed & treated as design feature
Windows	Vertically proportioned windows with divided lites	Awnings
Doors & Gates	Rectangular OR arched surrounds (follows door design)	Entry located under covered balcony

Spanish

The Spanish style attained wide-spread popularity after the Panama-California exposition of 1914 in San Diego. The Spanish style's most notable characteristics include the use of "S" or barrel tile roofs, stucco walls, feature entry doors and porticos, highlighted ornamental iron work and carefully proportioned windows appropriate to its wall mass.

Key features of this style were adapted to the California lifestyle. Plans were informally organized around a courtyard with the front elevation very simply articulated and detailed. The charm of this style lies in the directness, adaptability and contrasts of materials and textures.

Elements	Standards	Enhancements
Roofs	Hip OR gable roofs Roof pitches 3½:12 to 5:12 Tight to 18" overhangs at eaves Tight to 12" overhangs at rakes	Rafter tails, shaped tails preferred Parapets with barrel tile caps
Roof Materials	Concrete "S" tile	2-piece barrel clay tile Boosted tile (25%) Stacked tile on 1st two courses Mudded bird stops
Wall Materials	Medium sand float stucco finish (16/20)	Decorative ceramic tile OR brick accents
Architectural Elements		Porches, balconies OR verandas
Trim & Details	Stucco-wrapped, high density foam trim with fine sand float stucco finish (20/20) Closed OR exposed eaves Gable end details Decorative metal Well-placed & proportional entry light fixtures	Wall mounted light fixtures at garage door
Windows	Vertically proportioned windows with divided lites	Fabric awnings
Doors & Gates	Front entry doors without a porch, deeply recessed from front facade	Rectangular OR arched surrounds (following door design)

Legacy Park

Traditional

The American Traditional style is a combination of the early English and Dutch houses found on the Atlantic coast. Their origins were adaptations of Adams and other classical styles. Details from these original styles are loosely combined in many examples. Current interpretations have maintained the simple elegance of the early prototypes with added refinements and new design details. Another identifying feature of this style is the monumented entry with decorative crown (pediment) supported by pilasters or columns projecting forward of the otherwise flat facade to form an entry.

Elements	Standards	Enhancements
Roofs	Roof pitches 3:12 to 8:12 18" to 24" overhang at eaves & rakes Exposed rafter tails	Standing seam metal roof accents Cornice emphasized by dentils OR decorative molding
Roof Materials	Flat concrete shake tile OR flat concrete slate tile OR high definition asphalt shingles	
Wall Materials	Medium sand float stucco finish (16/20) Re-sawn wood siding accents	Wood siding Board & batt OR groove joint Brick
Architectural Elements	Entry feature with traditional pediments & substantial portico stoop OR surround	Front porches
Trim & Details	Head & sill trim shall consist of one of the following materials & be of proper proportion: Proportional, high density foam trim with fine sand float stucco finish (20/30) OR re-sawn wood trim Simple columns with base trim	Shaped wood corbels Louvered shutters flanking windows Low-walled entry courtyards with hardscape paving, in lieu of porches Balconies - cantilevered OR supported with posts Decorative metal at post to beam connection Plank style garage door
Windows	Window mullions	Round-top fan light Bay windows
Doors & Gates	Panel OR planked doors	Windows in garage doors

Attachment: Tract 36760 Design Guidelines (2444 : Legacy Park Project)

4.0 Landscape Design

The landscape and planting design provides the identity for Legacy Park that is sustainable over time and meets the City of Moreno Valley's Landscape standards. The plant palette chosen for the Legacy Park is appropriate to the site's climate while providing color and seasonal change. All Legacy Park community areas will be landscaped as shown on Figure 5: Overall Landscape Plan, Figure 6: Landscape Sections, and Figure 7: Landscape Plan Enlargements. The landscape will provide a unified look to the community. A community identity sign will be provided at the entry. Refer to Figure 8: Entry Monument Elevation.

Front yard landscaping is required on all lots and will be designed to meet the City of Moreno Valley landscape requirements to include drought tolerant/xeriscape landscaping on all of the lots. Refer to Figure 9: Front Yard Landscape Plan.

Landscaping adjacent to Indian and Gentian Avenue and shall be maintained by the City of Moreno Valley Landscape Maintenance District (LMD).

Special paving will be provided to identify key pedestrian crossings along the main entry drive and at the connection to the Juan Baustista De Anza Trail as shown on Figure 5: Overall Landscape Plan. The special stamped concrete provides additional pedestrian amenities and traffic calming. Final pavement color and texture is subject to the approval of the Public Works department.

Six exercise stations will be provided adjacent to the trail. The City of Moreno Valley will maintain the trail and exercise stations. Refer to Figure 10: Landscape Maintenance Plan.

4.1 Community Landscape, Walls and Fencing

The visible Legacy Park Theme walls include a six-foot high decorative tan split-face (street side only) block wall with pilasters with colored concrete caps. An entry monument will be located at the entrance to the community.

At rear yards adjacent open space areas, a split-face (visible open space side only) wall will be provided. Tubular steel fencing will also be provided adjacent to the detention basin per City of Moreno Valley standards except where private lots are adjacent.

The walls and fencing shall meet the following requirements as shown on Figure 11: Wall and Fence Plan and Details. All walls and fencing will be maintained by the Legacy Park HOA.

Examples of decorative paving for the public streets

Attachment: Tract 36760 Design Guidelines (2444 : Legacy Park Project)

Decorative Theme Walls

All decorative Theme walls will be block or an approved alternative. This includes perimeter and private areas.

Colored masonry caps to match the masonry color will be used at wall tops.

Theme wall pilasters will match block material and color and will have complementarily colored concrete caps.

Retaining walls will match block wall conditions.

Trail Fencing

The trail fencing will be per City standards.

Interior Fencing

The interior privacy fencing will be tan vinyl for both interior property line and fence return conditions.

All interior fencing height will vary but will be no lower than six feet high.

Gates will be constructed of tan vinyl to match the fence.

4.2 Detention Basin

The landscape plan provides for detention basins as shown and approved with the final recorded tract map and the Final Water Quality Plan. These areas will be maintained by the Legacy Park Homeowner's Association (HOA).

Legacy Park

PLANT PALETTE

TREES: (Conceptual list including but not limited to:)

		WUCOLS
ENTRY TREE (24" Box)		
Quercus agrifolia	Coast Live Oak	Low
INTERIOR STREET TREE (Two 24" Box per Standard Lot, Three per corner Lot):		
Koelreuteria bipinnata	Chinese Flame Tree	Moderate
Pistacia chinensis	Chinese Pistache	Moderate
Platanus acerfolia	London Plane Tree	Moderate
Ulmus parviflora 'True Green'	Chinese Elm	Moderate
INDIAN AND GENTIAN AVE - STREET TREE (One 24" Box):		
Koelreuteria bipinnatta	Chinese Flame Tree	Moderate
DETENTION BASIN AND COMMON AREA LOTS (15 Gallon)		
Cercis occidentalis	Western Redbud	Low
Gleditsia triacanthos	Honey Locust	Low
Laurus nobilis 'Saratoga'	Sweet Bay	Low
Rhus lancea	African Sumac	Low
Schinus molle	California Pepper	Low

INDIAN AND GENTIAN AVE - PARKWAY LANDSCAPE (LMD Maintained)

Proposed planting with combination of shrubs and trees at an equivalent o.c. spacing in addition to a drought-tolerant groundcover.
CONCEPTUAL PLANT PALETTE TO INCLUDE, BUT NOT BE LIMITED TO:
SHRUBS (One Gallon minimum @ max. 10' o.c.):

NOT SHOWN

Abelia x. grandiflora	Glossy Abelia Moderate	Moderate
Berberis thunbergii	'Crimson Pygmy' Japanese BarberrY	Moderate
Cistus x. purpureus	Orchid Rock Rose	Low
Escallonia 'Compacta'	Compact Escallonia	Moderate
Ligustrum japonicum	'Texanum' Texas Privet	Moderate
Pittosporum tobira	'Shima' Cream De Mint Mock Orange	Moderate
Plumbago capensis	Royal Cape Plumbago	Moderate
Rhaphiolepis i. 'Springtime'	Indian Hawthorne	Moderate
Salvia leucantha	Mexican Sage	Low

GROUNDCOVER (One Gallon @ 3' o.c. or rooted cuttings @ 18" o.c. traingular spaced):

Cotoneaster dammeri	'Lowfast' Bearberry Cotoneaster	Moderate
Rosmarinus o.	'Prostratus' Prostrate Rosemary	Low

WATER QUALITY BASIN / LOT "AA" AND "DD" PLANT PALETTE

Slopes exceeding a vertical height of 3' to be irrigated and planted with drought tolerant groundcover. Slopes exceeding 15' in vertical heights to be irrigated and planted with drought-tolerant shrubs at 10' o.c., or trees at 20' o.c., or a combination of shrubs and trees at an equivalent o.c. spacing in addition to a drought-tolerant groundcover.
CONCEPTUAL PLANT PALETTE TO INCLUDE, BUT NOT BE LIMITED TO:

SHRUBS (One Gallon minimum @ max. 10' o.c.):

Aloe arborescens	Torch Aloe	Low
Baccharis sarothroides	Desert Broom	Low
Cistus x. purpureus	Orchid Rock Rose	Low
Elaeagnus pungens	Silverberry	Low
Helictotrichon sempervirenS	Blue Oat Grass	Moderate
Heteromeles arbutifolia	Toyon	Low
Leucophyllum frutescens	Texas Ranger	Low
Muhlenbergia capillaris	Pink Muhly	Moderate
Plumbago capensis	Royal Cape Plumbago	Moderate

GROUNDCOVER (One Gallon @ 3' o.c. or rooted cuttings @ 18" o.c. traingular spaced):

Acacia redolens	'Low Boy' Low Boy Acacia	Low
Myoporum parvifolium	Myoporum	Low

LOT "B","E","F","G", "I" AND "J" - PLANT PALETTE

Planted along property walls and along slope embankments.
CONCEPTUAL PLANT PALETTE TO INCLUDE, BUT NOT BE LIMITED TO:
SHRUBS (One Gallon minimum @ max. 10' o.c.):

Baccharis sarothroides	Desert Broom	Low
Cistus x. purpureus	Orchid Rock Rose	Low
Muhlenbergia capillaris	Pink Muhly	Moderate
Plumbago capensis	Royal Cape Plumbago	Moderate

GROUNDCOVER (One Gallon @ 3' o.c. or rooted cuttings @ 18" o.c. traingular spaced):

Myoporum parvifolium	Myoporum	Low

VINE (Five Gallon @ 8' o.c. tied to wall with guy wires):

Calliandra haematocephala	Pink Powder Puff	Moderate

IN-TRACT PARKWAY PLANT PALETTE

Planted along interior parkways adjacent to property walls and along slope embankments.
CONCEPTUAL PLANT PALETTE TO INCLUDE, BUT NOT BE LIMITED TO:
SHRUBS (One Gallon minimum):

NOT SHOWN

Russelia equisetiformis	Coral Fountain	Moderate
Cistus x. purpureus	Orchid Rock Rose	Low
Hesperaloe parviflora	Redtipped Yucca	Low
Penstemon superbus	Superb Beardtongue	Low

GROUNDCOVER (One Gallon @ 3' o.c. or rooted cuttings @ 18" o.c. traingular spaced):

	Bat Faced Cuphea	Moderate

EXECUTIVE SUMMARY

ES-1 CONSTRUCTION-SOURCE EMISSIONS

REGIONAL IMPACTS

For regional emissions, the Project would not exceed the numerical thresholds of significance established by the South Coast Air Quality Management District (SCAQMD) for any criteria pollutant. It should be noted that impacts without mitigation take credit for reductions achieved through standard regulatory requirements (Rule 403 and Rule 1113). Thus a less than significant impact would occur for Project-related construction-source emissions and no mitigation measures are required.

Localized Impacts

For localized emissions, the Project would not exceed the SCAQMD's localized significance threshold. Thus a less than significant impact would occur and no mitigation is required.

Project construction-source emissions would not conflict with the applicable Air Quality Management Plan (AQMP).

ODORS

Established requirements addressing construction equipment operations, and construction material use, storage, and disposal requirements act to minimize odor impacts that may result from construction activities. Moreover, construction-source odor emissions would be temporary, short-term, and intermittent in nature and would not result in persistent impacts that would affect substantial numbers of people. Potential construction-source odor impacts are therefore considered less-than-significant.

ES-2 OPERATIONAL-SOURCE EMISSIONS

REGIONAL IMPACTS

For regional emissions, the Project would not exceed the numerical thresholds of significance established by the SCAQMD. Thus a less than significant impact would occur for Project-related operational-source emissions and no mitigation is required.

LOCALIZED IMPACTS

Project operational-source emissions would not result in or cause a significant localized air quality impact as discussed in the operational LSTs section of this report. The proposed Project would not result in a significant CO "hotspot" as a result of Project related traffic during ongoing operations, nor would the Project result in a significant adverse health impact as discussed in Section 3.8, thus a less than significant impact to sensitive receptors during operational activity is expected.

ODORS

Substantial odor-generating sources include land uses such as agricultural activities, feedlots, wastewater treatment facilities, landfills or various heavy industrial uses. The Project does not propose any such uses or activities that would result in potentially significant operational-source odor impacts. Potential sources of operational odors generated by the Project would include disposal of miscellaneous residential refuse. Moreover, SCAQMD Rule 402 acts to prevent occurrences of odor nuisances (1) . Consistent with City requirements, all Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with solid waste regulations. Potential operational-source odor impacts are therefore considered less-than-significant.

1 INTRODUCTION

This report presents the results of the air quality impact analysis (AQIA) prepared by Urban Crossroads, Inc., for the Legacy Park (Tentative Tract Map No. 36760) (referred to as "Project").

The purpose of this AQIA is to evaluate the potential impacts to air quality associated with construction and operation of the proposed Project, and recommend measures to mitigate impacts considered potentially significant in comparison to established air district thresholds.

1.1 SITE LOCATION

The proposed Legacy Park (Tentative Tract Map No. 36760) site is located on the southeast corner of Indian Street and Gentian Avenue in the City of Moreno Valley. The Project site is currently vacant. Residential land uses are located west of the Project site. The vacant land use located adjacent north and east of the Project site is designated as Residential and Commercial, respectively. March Middle School is located adjacent south of the Project. The Interstate 215 (I-215) Freeway is located approximately 2.20 miles west of the Project site.

1.2 PROJECT DESCRIPTION

The Project consists of 221 single family residential dwelling units, as shown on Exhibit 1-A.

For the purposes of this AQIA, it is assumed that the Project will be constructed and at full occupancy by 2021.

1.3 STANDARD REGULATORY REQUIREMENTS/BEST AVAILABLE CONTROL MEASURES (BACMS)

Measures listed below (or equivalent language) shall appear on all Project grading plans, construction specifications and bid documents, and the City shall ensure such language is incorporated prior to issuance of any development permits.

SCAQMD Rules that are currently applicable during construction activity for this Project include but are not limited to: Rule 1113 (Architectural Coatings) (2); Rule 431.2 (Low Sulfur Fuel); Rule 403 (Fugitive Dust) (3); and Rule 1186 / 1186.1 (Street Sweepers) (4). It should be noted that BACMs are not mitigation as they are standard regulatory requirements.

BACM AQ-1

The following measures shall be incorporated into Project plans and specifications as implementation of Rule 403 (4):

- All clearing, grading, earth-moving, or excavation activities shall cease when winds exceed 25 mph per SCAQMD guidelines in order to limit fugitive dust emissions.
- The contractor shall ensure that all disturbed unpaved roads and disturbed areas within the Project are watered at least three (3) times daily during dry weather. Watering, with complete coverage of disturbed areas, shall occur at least three times a day, preferably in the mid-morning, afternoon, and after work is done for the day.

- The contractor shall ensure that traffic speeds on unpaved roads and Project site areas are reduced to 15 miles per hour or less.

BACM AQ-2

The following measures shall be incorporated into Project plans and specifications as implementation of Rule 1113 (5):

- In order to limit the VOC content of architectural coatings used in the SCAB, architectural coatings shall be no more than a low VOC default level of 50 g/L unless otherwise specified in the SCAQMD Table of Standards (pg. 32-33).

1.4 PROJECT DESIGN FEATURES

Energy-saving and sustainable design features and operational programs would be incorporated into facilities developed pursuant to the currently-proposed Legacy Park (Tentative Tract Map No. 36760). The Project also incorporates and expresses the following design features and attributes promoting energy efficiency and sustainability. Because these features/attributes are integral to the Project, and/or are regulatory requirements, they are not considered to be mitigation measures.

- Regional vehicle miles traveled (VMT) and associated vehicular-source emissions are reduced by the following Project design features/attributes:
  - Pedestrian connections shall be provided to surrounding areas consistent with the City's General Plan. Providing a pedestrian access network to link areas of the Project site encourages people to walk instead of drive. The Project would provide a pedestrian access network that internally links all uses. The Project would minimize barriers to pedestrian access and interconnectivity.
  - The Project's proposed collocation of varied residential, school, park, and open spaces within ¼ mile proximity together with supporting amenities would tend to decrease the propensity for vehicle travel for local residents.

1.5 CONSTRUCTION-SOURCE MITIGATION MEASURES

Construction-source emissions will be less than significant. Therefore, no mitigation measures are required.

1.6 OPERATIONAL-SOURCE MITIGATION MEASURES

Operational-source emissions will be less than significant. Therefore, no mitigation measures are required.

EXHIBIT 1-A: SITE PLAN

This page intentionally left blank

2 AIR QUALITY SETTING

This section provides an overview of the existing air quality conditions in the Project area and region.

2.1 SOUTH COAST AIR BASIN

The Project site is located in the South Coast Air Basin (SCAB) within the jurisdiction of SCAQMD (6). The SCAQMD was created by the 1977 Lewis-Presley Air Quality Management Act, which merged four county air pollution control bodies into one regional district. Under the Act, the SCAQMD is responsible for bringing air quality in areas under its jurisdiction into conformity with federal and state air quality standards. As discussed above, the Project site is located within the South Coast Air Basin, a 6,745-square mile subregion of the SCAQMD, which includes portions of Los Angeles, Riverside, and San Bernardino Counties, and all of Orange County. The larger South Coast district boundary includes 10,743 square miles.

The SCAB is bound by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The Los Angeles County portion of the Mojave Desert Air Basin is bound by the San Gabriel Mountains to the south and west, the Los Angeles / Kern County border to the north, and the Los Angeles / San Bernardino County border to the east. The Riverside County portion of the Salton Sea Air Basin is bound by the San Jacinto Mountains in the west and spans eastward up to the Palo Verde Valley.

2.2 REGIONAL CLIMATE

The regional climate has a substantial influence on air quality in the SCAB. In addition, the temperature, wind, humidity, precipitation, and amount of sunshine influence the air quality.

The annual average temperatures throughout the SCAB vary from the low to middle 60s (degrees Fahrenheit). Due to a decreased marine influence, the eastern portion of the SCAB shows greater variability in average annual minimum and maximum temperatures. January is the coldest month throughout the SCAB, with average minimum temperatures of 47°F in downtown Los Angeles and 36°F in San Bernardino. All portions of the SCAB have recorded maximum temperatures above 100°F.

Although the climate of the SCAB can be characterized as semi-arid, the air near the land surface is quite moist on most days because of the presence of a marine layer. This shallow layer of sea air is an important modifier of SCAB climate. Humidity restricts visibility in the SCAB, and the conversion of sulfur dioxide to sulfates is heightened in air with high relative humidity. The marine layer provides an environment for that conversion process, especially during the spring and summer months. The annual average relative humidity within the SCAB is 71 percent along the coast and 59 percent inland. Since the ocean effect is dominant, periods of heavy early morning fog are frequent and low stratus clouds are a characteristic feature. These effects decrease with distance from the coast.

More than 90 percent of the SCAB's rainfall occurs from November through April. The annual average rainfall varies from approximately nine inches in Riverside to fourteen inches in downtown Los Angeles. Monthly and yearly rainfall totals are extremely variable. Summer rainfall usually consists of widely scattered thunderstorms near the coast and slightly heavier shower activity in the eastern portion of the SCAB with frequency being higher near the coast.

Due to its generally clear weather, about three-quarters of available sunshine is received in the SCAB. The remaining one-quarter is absorbed by clouds. The ultraviolet portion of this abundant radiation is a key factor in photochemical reactions. On the shortest day of the year there are approximately 10 hours of possible sunshine, and on the longest day of the year there are approximately 14 1/2 hours of possible sunshine.

The importance of wind to air pollution is considerable. The direction and speed of the wind determines the horizontal dispersion and transport of the air pollutants. During the late autumn to early spring rainy season, the SCAB is subjected to wind flows associated with the traveling storms moving through the region from the northwest. This period also brings five to ten periods of strong, dry offshore winds, locally termed "Santa Anas" each year. During the dry season, which coincides with the months of maximum photochemical smog concentrations, the wind flow is bimodal, typified by a daytime onshore sea breeze and a nighttime offshore drainage wind. Summer wind flows are created by the pressure differences between the relatively cold ocean and the unevenly heated and cooled land surfaces that modify the general northwesterly wind circulation over southern California. Nighttime drainage begins with the radiational cooling of the mountain slopes. Heavy, cool air descends the slopes and flows through the mountain passes and canyons as it follows the lowering terrain toward the ocean. Another characteristic wind regime in the SCAB is the "Catalina Eddy," a low level cyclonic (counterclockwise) flow centered over Santa Catalina Island which results in an offshore flow to the southwest. On most spring and summer days, some indication of an eddy is apparent in coastal sections.

In the SCAB, there are two distinct temperature inversion structures that control vertical mixing of air pollution. During the summer, warm high-pressure descending (subsiding) air is undercut by a shallow layer of cool marine air. The boundary between these two layers of air is a persistent marine subsidence/inversion. This boundary prevents vertical mixing which effectively acts as an impervious lid to pollutants over the entire SCAB. The mixing height for the inversion structure is normally situated 1,000 to 1,500 feet above mean sea level.

A second inversion-type forms in conjunction with the drainage of cool air off the surrounding mountains at night followed by the seaward drift of this pool of cool air. The top of this layer forms a sharp boundary with the warmer air aloft and creates nocturnal radiation inversions. These inversions occur primarily in the winter, when nights are longer and onshore flow is weakest. They are typically only a few hundred feet above mean sea level. These inversions effectively trap pollutants, such as NOX and CO from vehicles, as the pool of cool air drifts seaward. Winter is therefore a period of high levels of primary pollutants along the coastline.

2.3 WIND PATTERNS AND PROJECT LOCATION

The distinctive climate of the Project area and the SCAB is determined by its terrain and geographical location. The Basin is located in a coastal plain with connecting broad valleys and low hills, bounded by the Pacific Ocean in the southwest quadrant with high mountains forming the remainder of the perimeter.

Wind patterns across the south coastal region are characterized by westerly and southwesterly on-shore winds during the day and easterly or northeasterly breezes at night. Winds are characteristically light although the speed is somewhat greater during the dry summer months than during the rainy winter season.

2.4 EXISTING AIR QUALITY

Existing air quality is measured at established SCAQMD air quality monitoring stations. Monitored air quality is evaluated and in the context of ambient air quality standards. These standards are the levels of air quality that are considered safe, with an adequate margin of safety, to protect the public health and welfare. National Ambient Air Quality Standards (NAAQS) and California Ambient Air Quality Standards (CAAQS) currently in effect, as well health effects of each pollutant regulated under these standards are shown in Table 2-1 (7).

The determination of whether a region's air quality is healthful or unhealthful is determined by comparing contaminant levels in ambient air samples to the state and federal standards presented in Table 2-1. The air quality in a region is considered to be in attainment by the state if the measured ambient air pollutant levels for O3, CO, SO2, NO2, PM10, and PM2.5 are not equaled or exceeded at any time in any consecutive three-year period; and the federal standards (other than O3, PM10, PM2.5, and those based on annual averages or arithmetic mean) are not exceeded more than once per year. The O3 standard is attained when the fourth highest eight-hour concentration in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24-hour standard is attained when 99 percent of the daily concentrations, averaged over three years, are equal to or less than the standard.

TABLE 2-1: AMBIENT AIR QUALITY STANDARDS (1 OF 2)

Ambient Air Quality Standards

Pollutant	Averaging Time	California Standards[1] Concentration[3]	California Standards[1] Method[4]	National Standards[2] Primary[3,5]	National Standards[2] Secondary[3,6]	National Standards[2] Method[7]
Ozone (O_3)[8]	1 Hour	0.09 ppm (180 µg/m^3)	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8 Hour	0.070 ppm (137 µg/m^3)		0.070 ppm (137 µg/m^3)		
Respirable Particulate Matter (PM10)[9]	24 Hour	50 µg/m^3	Gravimetric or Beta Attenuation	150 µg/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m^3		—		
Fine Particulate Matter (PM2.5)[9]	24 Hour	—	—	35 µg/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m^3	Gravimetric or Beta Attenuation	12.0 µg/m^3	15 µg/m^3	
Carbon Monoxide (CO)	1 Hour	20 ppm (23 mg/m^3)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m^3)	—	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10 mg/m^3)		9 ppm (10 mg/m^3)	—	
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m^3)		—	—	
Nitrogen Dioxide (NO_2)[10]	1 Hour	0.18 ppm (339 µg/m^3)	Gas Phase Chemiluminescence	100 ppb (188 µg/m^3)	—	Gas Phase Chemiluminescence
	Annual Arithmetic Mean	0.030 ppm (57 µg/m^3)		0.053 ppm (100 µg/m^3)	Same as Primary Standard	
Sulfur Dioxide (SO_2)[11]	1 Hour	0.25 ppm (655 µg/m^3)	Ultraviolet Fluorescence	75 ppb (196 µg/m^3)	—	Ultraviolet Flourescence; Spectrophotometry (Pararosaniline Method)
	3 Hour	—		—	0.5 ppm (1300 µg/m^3)	
	24 Hour	0.04 ppm (105 µg/m^3)		0.14 ppm (for certain areas)[11]	—	
	Annual Arithmetic Mean	—		0.030 ppm (for certain areas)[11]	—	
Lead[12,13]	30 Day Average	1.5 µg/m^3	Atomic Absorption	—	—	High Volume Sampler and Atomic Absorption
	Calendar Quarter	—		1.5 µg/m^3 (for certain areas)[12]	Same as Primary Standard	
	Rolling 3-Month Average	—		0.15 µg/m^3		
Visibility Reducing Particles[14]	8 Hour	See footnote 14	Beta Attenuation and Transmittance through Filter Tape	No National Standards		
Sulfates	24 Hour	25 µg/m^3	Ion Chromatography			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m^3)	Ultraviolet Fluorescence			
Vinyl Chloride[12]	24 Hour	0.01 ppm (26 µg/m^3)	Gas Chromatography			

See footnotes on next page …

For more information please call ARB-PIO at (916) 322-2990 | California Air Resources Board (5/4/16)

TABLE 2-1: AMBIENT AIR QUALITY STANDARDS (2 OF 2)

1. California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1 and 24 hour), nitrogen dioxide, and particulate matter (PM10, PM2.5, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.
2. National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM10, the 24 hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 $\mu g/m^3$ is equal to or less than one. For PM2.5, the 24 hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard. Contact the U.S. EPA for further clarification and current national policies.
3. Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.
4. Any equivalent measurement method which can be shown to the satisfaction of the ARB to give equivalent results at or near the level of the air quality standard may be used.
5. National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.
6. National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.
7. Reference method as described by the U.S. EPA. An "equivalent method" of measurement may be used but must have a "consistent relationship to the reference method" and must be approved by the U.S. EPA.
8. On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.
9. On December 14, 2012, the national annual PM2.5 primary standard was lowered from 15 $\mu g/m^3$ to 12.0 $\mu g/m^3$. The existing national 24-hour PM2.5 standards (primary and secondary) were retained at 35 $\mu g/m^3$, as was the annual secondary standard of 15 $\mu g/m^3$. The existing 24-hour PM10 standards (primary and secondary) of 150 $\mu g/m^3$ also were retained. The form of the annual primary and secondary standards is the annual mean, averaged over 3 years.
10. To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb. Note that the national 1-hour standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the national 1-hour standard to the California standards the units can be converted from ppb to ppm. In this case, the national standard of 100 ppb is identical to 0.100 ppm.
11. On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated nonattainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

    Note that the 1-hour national standard is in units of parts per billion (ppb). California standards are in units of parts per million (ppm). To directly compare the 1-hour national standard to the California standard the units can be converted to ppm. In this case, the national standard of 75 ppb is identical to 0.075 ppm.
12. The ARB has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.
13. The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 $\mu g/m^3$ as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated nonattainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.
14. In 1989, the ARB converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

For more information please call ARB-PIO at (916) 322-2990 **California Air Resources Board (5/4/16)**

2.5 REGIONAL AIR QUALITY

The SCAQMD monitors levels of various criteria pollutants at 38 permanent monitoring stations and 5 single-pollutant source Lead (Pb) air monitoring sites throughout the air district (8). In 2015, the federal and state ambient air quality standards (NAAQS and CAAQS) were exceeded on one or more days for ozone, PM10, and PM2.5 at most monitoring locations (9). No areas of the SCAB exceeded federal or state standards for NO2, SO2, CO, sulfates or lead. See Table 2-2, for attainment designations for the SCAB (10). Appendix 3.1 provides geographic representation of the state and federal attainment status for applicable criteria pollutants within the SCAB.

TABLE 2-2: ATTAINMENT STATUS OF CRITERIA POLLUTANTS IN THE SOUTH COAST AIR BASIN (SCAB)

Criteria Pollutant	State Designation	Federal Designation
Ozone – 1-hour standard	Nonattainment	No Standard
Ozone - 8-hour standard	Nonattainment	Nonattainment
PM_{10}	Nonattainment	Attainment
$PM_{2.5}$	Nonattainment	Nonattainment
Carbon Monoxide	Attainment	Attainment
Nitrogen Dioxide	Attainment	Attainment
Sulfur Dioxide	Attainment	Attainment
Lead[1]	Attainment	Attainment

Source: State/Federal designations were taken from http://www.arb.ca.gov/desig/adm/adm.htm
Note: See Appendix 3.1 for a detailed map of State/National Area Designations within the South Coast Air Basin

2.6 LOCAL AIR QUALITY

Relative to the Project site, the nearest long-term air quality monitoring site for Ozone (O_3) and Particulate Matter ≤ 10 Microns (PM_{10}) is the South Coast Air Quality Management District Perris monitoring station (SRA 24), located approximately 4.8 miles south of the Project site (11). Data for Carbon Monoxide (CO), Nitrogen Dioxide (NO_2), and Ultra-Fine Particulates ($PM_{2.5}$) was obtained from the Metropolitan Riverside County 2 monitoring station (SRA 23) and Lake Elsinore monitoring station (SRA 25), located approximately 10.6 miles northwest and 13.50 miles southwest of the Project site, respectively. It should be noted that the Metropolitan Riverside County 2 and Lake Elsinore monitoring stations were utilized in lieu of the Perris monitoring station only where data was not available from the nearest monitoring site.

The most recent three (3) years of data available is shown on Table 2-3, and identifies the number of days ambient air quality standards were exceeded for the study area, which is was considered to be representative of the local air quality at the Project site (12). Additionally, data for SO2 has

[1] The Federal nonattainment designation for lead is only applicable towards the Los Angeles County portion of the SCAB.

been omitted as attainment is regularly met in the South Coast Air Basin and few monitoring stations measure SO2 concentrations.

TABLE 2-3: PROJECT AREA AIR QUALITY MONITORING SUMMARY 2013-2015

POLLUTANT	STANDARD	YEAR		
		2013	2014	2015
Ozone (O_3)				
Maximum 1-Hour Concentration (ppm)		0.108	0.117	0.124
Maximum 8-Hour Concentration (ppm)		0.090	0.094	0.102
Number of Days Exceeding State 1-Hour Standard	> 0.09 ppm	17	16	25
Number of Days Exceeding State 8-Hour Standard	> 0.07 ppm	60	63	50
Number of Days Exceeding Federal 1-Hour Standard	> 0.12 ppm	0	0	0
Number of Days Exceeding Federal 8-Hour Standard	> 0.075 ppm	34	38	31
Number of Days Exceeding Health Advisory	≥ 0.15 ppm	0	0	0
Carbon Monoxide (CO)				
Maximum 1-Hour Concentration (ppm)		--	2.0	--
Maximum 8-Hour Concentration (ppm)		1.6	1.4	--
Number of Days Exceeding State 1-Hour Standard	> 20 ppm	0	0	--
Number of Days Exceeding Federal / State 8-Hour Standard	> 9.0 ppm	0	0	--
Number of Days Exceeding Federal 1-Hour Standard	> 35 ppm	0	0	--
Nitrogen Dioxide (NO_2)*				
Maximum 1-Hour Concentration (ppm)		0.058	0.056	0.047
Annual Arithmetic Mean Concentration (ppm)		0.016	0.016	0.009
Number of Days Exceeding State 1-Hour Standard	> 0.18 ppm	0	0	0
Particulate Matter ≤ 10 Microns (PM_{10})				
Maximum 24-Hour Concentration (μg/m^3)		70	87	188
Annual Arithmetic Mean (μg/m^3)		33.6	35.1	33.1
Number of Samples		57	60	--
Number of Samples Exceeding State Standard	> 50 μg/m^3	7	6	4
Number of Samples Exceeding Federal Standard	> 150 μg/m^3	0	0	1
Particulate Matter ≤ 2.5 Microns ($PM_{2.5}$)*				
Maximum 24-Hour Concentration (μg/m^3)		53.7	30.9	42.2
Annual Arithmetic Mean (μg/m^3)		11.2	10.9	--
Number of Samples Exceeding Federal 24-Hour Standard	> 35 μg/m^3	0	0	--

-- = data not available from SCAQMD or ARB; *Data from the Riverside County 2 monitoring station is only available up to year 2014. As such, data from the Lake Elsinore monitoring station is used for the year 2015.

Attachment: Air Quality Study (2444 : Legacy Park Project)

Criteria pollutants are pollutants that are regulated through the development of human health based and/or environmentally based criteria for setting permissible levels. Criteria pollutants, their typical sources, and effects are identified below:

- Carbon Monoxide (CO): Is a colorless, odorless gas produced by the incomplete combustion of carbon-containing fuels, such as gasoline or wood. CO concentrations tend to be the highest during the winter morning, when little to no wind and surface-based inversions trap the pollutant at ground levels. Because CO is emitted directly from internal combustion engines, unlike ozone, motor vehicles operating at slow speeds are the primary source of CO in the Basin. The highest ambient CO concentrations are generally found near congested transportation corridors and intersections.
- Sulfur Dioxide (SO2): Is a colorless, extremely irritating gas or liquid. It enters the atmosphere as a pollutant mainly as a result of burning high sulfur-content fuel oils and coal and from chemical processes occurring at chemical plants and refineries. When SO2 oxidizes in the atmosphere, it forms sulfates (SO4). Collectively, these pollutants are referred to as sulfur oxides (SOX).
- Nitrogen Oxides (Oxides of Nitrogen, or NOx): Nitrogen oxides (NOx) consist of nitric oxide (NO), nitrogen dioxide (NO2) and nitrous oxide (N2O) and are formed when nitrogen (N2) combines with oxygen (O2). Their lifespan in the atmosphere ranges from one to seven days for nitric oxide and nitrogen dioxide, to 170 years for nitrous oxide. Nitrogen oxides are typically created during combustion processes, and are major contributors to smog formation and acid deposition. NO2 is a criteria air pollutant, and may result in numerous adverse health effects; it absorbs blue light, resulting in a brownish-red cast to the atmosphere and reduced visibility. Of the seven types of nitrogen oxide compounds, NO2 is the most abundant in the atmosphere. As ambient concentrations of NO2 are related to traffic density, commuters in heavy traffic may be exposed to higher concentrations of NO2 than those indicated by regional monitors.
- Ozone (O3): Is a highly reactive and unstable gas that is formed when volatile organic compounds (VOCs) and nitrogen oxides (NOX), both byproducts of internal combustion engine exhaust, undergo slow photochemical reactions in the presence of sunlight. Ozone concentrations are generally highest during the summer months when direct sunlight, light wind, and warm temperature conditions are favorable to the formation of this pollutant.
- PM10 (Particulate Matter less than 10 microns): A major air pollutant consisting of tiny solid or liquid particles of soot, dust, smoke, fumes, and aerosols. The size of the particles (10 microns or smaller, about 0.0004 inches or less) allows them to easily enter the lungs where they may be deposited, resulting in adverse health effects. PM10 also causes visibility reduction and is a criteria air pollutant.
- PM2.5 (Particulate Matter less than 2.5 microns): A similar air pollutant consisting of tiny solid or liquid particles which are 2.5 microns or smaller (which is often referred to as fine particles). These particles are formed in the atmosphere from primary gaseous emissions that include sulfates formed from SO2 release from power plants and industrial facilities and nitrates that are formed from NOX release from power plants, automobiles and other types of combustion sources. The chemical composition of fine particles highly depends on location, time of year, and weather conditions. PM2.5 is a criteria air pollutant.
- Volatile Organic Compounds (VOC): Volatile organic compounds are hydrocarbon compounds (any compound containing various combinations of hydrogen and carbon atoms) that exist in the ambient air. VOCs contribute to the formation of smog through atmospheric photochemical reactions and/or may be toxic. Compounds of carbon (also known as organic compounds) have

different levels of reactivity; that is, they do not react at the same speed or do not form ozone to the same extent when exposed to photochemical processes. VOCs often have an odor, and some examples include gasoline, alcohol, and the solvents used in paints. Exceptions to the VOC designation include: carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate. VOCs are a criteria pollutant since they are a precursor to O3, which is a criteria pollutant. The SCAQMD uses the terms VOC and ROG (see below) interchangeably.

- Reactive Organic Gases (ROG): Similar to VOC, Reactive Organic Gases (ROG) are also precursors in forming ozone. Smog is formed when ROG and nitrogen oxides react in the presence of sunlight. ROGs are a criteria pollutant since they are a precursor to O3, which is a criteria pollutant. The SCAQMD uses the terms ROG and VOC (see previous) interchangeably.
- Lead (Pb): Lead is a heavy metal that is highly persistent in the environment. In the past, the primary source of lead in the air was emissions from vehicles burning leaded gasoline. As a result of the removal of lead from gasoline, there have been no violations at any of the SCAQMD's regular air monitoring stations since 1982. Currently, emissions of lead are largely limited to stationary sources such as lead smelters. It should be noted that the Project is not anticipated to generate a quantifiable amount of lead emissions. Lead is a criteria air pollutant.

<u>Health Effects of Air Pollutants</u>

Ozone

Individuals exercising outdoors, children, and people with preexisting lung disease, such as asthma and chronic pulmonary lung disease, are considered to be the most susceptible sub-groups for ozone effects. Short-term exposure (lasting for a few hours) to ozone at levels typically observed in Southern California can result in breathing pattern changes, reduction of breathing capacity, increased susceptibility to infections, inflammation of the lung tissue, and some immunological changes. Elevated ozone levels are associated with increased school absences. In recent years, a correlation between elevated ambient ozone levels and increases in daily hospital admission rates, as well as mortality, has also been reported. An increased risk for asthma has been found in children who participate in multiple sports and live in communities with high ozone levels.

Ozone exposure under exercising conditions is known to increase the severity of the responses described above. Animal studies suggest that exposure to a combination of pollutants that includes ozone may be more toxic than exposure to ozone alone. Although lung volume and resistance changes observed after a single exposure diminish with repeated exposures, biochemical and cellular changes appear to persist, which can lead to subsequent lung structural changes.

Carbon Monoxide

Individuals with a deficient blood supply to the heart are the most susceptible to the adverse effects of CO exposure. The effects observed include earlier onset of chest pain with exercise, and electrocardiograph changes indicative of decreased oxygen supply to the heart. Inhaled CO has no direct toxic effect on the lungs, but exerts its effect on tissues by interfering with oxygen transport and competing with oxygen to combine with hemoglobin present in the blood to form carboxyhemoglobin (COHb). Hence, conditions with an increased demand for oxygen supply can be adversely affected by exposure to CO. Individuals most at risk include fetuses, patients with diseases involving heart and blood vessels, and patients with chronic hypoxemia (oxygen deficiency) as seen at high altitudes.

Reduction in birth weight and impaired neurobehavioral development have been observed in animals chronically exposed to CO, resulting in COHb levels similar to those observed in smokers. Recent studies have found increased risks for adverse birth outcomes with exposure to elevated CO levels; these include pre-term births and heart abnormalities.

Particulate Matter

A consistent correlation between elevated ambient fine particulate matter (PM10 and PM2.5) levels and an increase in mortality rates, respiratory infections, number and severity of asthma attacks and the number of hospital admissions has been observed in different parts of the United States and various areas around the world. In recent years, some studies have reported an association between long-term exposure to air pollution dominated by fine particles and increased mortality, reduction in life-span, and an increased mortality from lung cancer.

Daily fluctuations in PM2.5 concentration levels have also been related to hospital admissions for acute respiratory conditions in children, to school and kindergarten absences, to a decrease in respiratory lung volumes in normal children, and to increased medication use in children and adults with asthma. Recent studies show lung function growth in children is reduced with long-term exposure to particulate matter.

The elderly, people with pre-existing respiratory or cardiovascular disease, and children appear to be more susceptible to the effects of high levels of PM10 and PM2.5.

Nitrogen Dioxide

Population-based studies suggest that an increase in acute respiratory illness, including infections and respiratory symptoms in children (not infants), is associated with long-term exposure to NO2 at levels found in homes with gas stoves, which are higher than ambient levels found in Southern California. Increase in resistance to air flow and airway contraction is observed after short-term exposure to NO2 in healthy subjects. Larger decreases in lung functions are observed in individuals with asthma or chronic obstructive pulmonary disease (e.g., chronic bronchitis, emphysema) than in healthy individuals, indicating a greater susceptibility of these sub-groups.

In animals, exposure to levels of NO2 considerably higher than ambient concentrations results in increased susceptibility to infections, possibly due to the observed changes in cells involved in maintaining immune functions. The severity of lung tissue damage associated with high levels of ozone exposure increases when animals are exposed to a combination of ozone and NO2.

Sulfur Dioxide

A few minutes of exposure to low levels of SO2 can result in airway constriction in some asthmatics, all of whom are sensitive to its effects. In asthmatics, increase in resistance to air flow, as well as reduction in breathing capacity leading to severe breathing difficulties, are observed after acute exposure to SO2. In contrast, healthy individuals do not exhibit similar acute responses even after exposure to higher concentrations of SO2.

Animal studies suggest that despite SO2 being a respiratory irritant, it does not cause substantial lung injury at ambient concentrations. However, very high levels of exposure can cause lung edema (fluid accumulation), lung tissue damage, and sloughing off of cells lining the respiratory tract.

Some population-based studies indicate that the mortality and morbidity effects associated with fine particles show a similar association with ambient SO2 levels. In these studies, efforts to separate the effects of SO2 from those of fine particles have not been successful. It is not clear whether the two pollutants act synergistically or one pollutant alone is the predominant factor.

Lead

Fetuses, infants, and children are more sensitive than others to the adverse effects of Pb exposure. Exposure to low levels of Pb can adversely affect the development and function of the central nervous system, leading to learning disorders, distractibility, inability to follow simple commands, and lower intelligence quotient. In adults, increased Pb levels are associated with increased blood pressure.

Pb poisoning can cause anemia, lethargy, seizures, and death; although it appears that there are no direct effects of Pb on the respiratory system. Pb can be stored in the bone from early age environmental exposure, and elevated blood Pb levels can occur due to breakdown of bone tissue during pregnancy, hyperthyroidism (increased secretion of hormones from the thyroid gland) and osteoporosis (breakdown of bony tissue). Fetuses and breast-fed babies can be exposed to higher levels of Pb because of previous environmental Pb exposure of their mothers.

Odors

The science of odor as a health concern is still new. Merely identifying the hundreds of VOCs that cause odors poses a big challenge. Offensive odors can potentially affect human health in several ways. First, odorant compounds can irritate the eye, nose, and throat, which can reduce respiratory volume. Second, studies have shown that the VOCs that cause odors can stimulate sensory nerves to cause neurochemical changes that might influence health, for instance, by compromising the immune system. Finally, unpleasant odors can trigger memories or attitudes linked to unpleasant odors, causing cognitive and emotional effects such as stress.

2.7 REGULATORY BACKGROUND

2.7.1 FEDERAL REGULATIONS

The U.S. EPA is responsible for setting and enforcing the NAAQS for O3, CO, NOx, SO2, PM10, PM2.5, and lead (7). The U.S. EPA has jurisdiction over emissions sources that are under the authority of the federal government including aircraft, locomotives, and emissions sources outside state waters (Outer Continental Shelf). The U.S. EPA also establishes emission standards for vehicles sold in states other than California. Automobiles sold in California must meet the stricter emission requirements of the CARB.

The Federal Clean Air Act (CAA) was first enacted in 1955, and has been amended numerous times in subsequent years (1963, 1965, 1967, 1970, 1977, and 1990). The CAA establishes the federal air quality standards, the NAAQS, and specifies future dates for achieving compliance (13). The CAA also mandates that states submit and implement State Implementation Plans (SIPs) for local areas not meeting these standards. These plans must include pollution control measures that demonstrate how the standards will be met.

The 1990 amendments to the CAA that identify specific emission reduction goals for areas not meeting the NAAQS require a demonstration of reasonable further progress toward attainment and incorporate additional sanctions for failure to attain or to meet interim milestones. The sections of the CAA most directly applicable to the development of the Project site include Title I (Non-Attainment Provisions) and Title II (Mobile Source Provisions). Title I provisions were established with the goal of attaining the NAAQS for the following criteria pollutants O3, NO2, SO2, PM10, CO, PM2.5, and lead. The NAAQS were amended in July 1997 to include an additional standard for O3 and to adopt a NAAQS for PM2.5. Table 2-1 (previously presented) provides the NAAQS within the basin.

Mobile source emissions are regulated in accordance with Title II provisions. These provisions require the use of cleaner burning gasoline and other cleaner burning fuels such as methanol and natural gas. Automobile manufacturers are also required to reduce tailpipe emissions of hydrocarbons and nitrogen oxides (NOx). NOx is a collective term that includes all forms of nitrogen oxides (NO, NO2, NO3) which are emitted as byproducts of the combustion process.

2.7.2 CALIFORNIA REGULATIONS

The CARB, which became part of the California EPA in 1991, is responsible for ensuring implementation of the California Clean Air Act (AB 2595), responding to the federal CAA, and for regulating emissions from consumer products and motor vehicles. The California CAA mandates achievement of the maximum degree of emissions reductions possible from vehicular and other mobile sources in order to attain the state ambient air quality standards by the earliest practical date. The CARB established the CAAQS for all pollutants for which the federal government has NAAQS and, in addition, establishes standards for sulfates, visibility, hydrogen sulfide, and vinyl chloride. However, at this time, hydrogen sulfide and vinyl chloride are not measured at any monitoring stations in the SCAB because they are not considered to be a regional air quality problem. Generally, the CAAQS are more stringent than the NAAQS (14) (7).

Local air quality management districts, such as the SCAQMD, regulate air emissions from commercial and light industrial facilities. All air pollution control districts have been formally designated as attainment or non-attainment for each CAAQS.

Non-attainment areas are required to prepare air quality management plans that include specified emission reduction strategies in an effort to meet clean air goals. These plans are required to include:

- Application of Best Available Retrofit Control Technology to existing sources;
- Developing control programs for area sources (e.g., architectural coatings and solvents) and indirect sources (e.g. motor vehicle use generated by residential and commercial development);

- A District permitting system designed to allow no net increase in emissions from any new or modified permitted sources of emissions;
- Implementing reasonably available transportation control measures and assuring a substantial reduction in growth rate of vehicle trips and miles traveled;
- Significant use of low emissions vehicles by fleet operators;
- Sufficient control strategies to achieve a five percent or more annual reduction in emissions or 15 percent or more in a period of three years for ROGs, NOx, CO and PM10. However, air basins may use alternative emission reduction strategy that achieves a reduction of less than five percent per year under certain circumstances.

2.7.3 AIR QUALITY MANAGEMENT PLANNING

Currently, the NAAQS and CAAQS are exceeded in most parts of the SCAB. In response, the SCAQMD has adopted a series of Air Quality Management Plans (AQMPs) to meet the state and federal ambient air quality standards (15). AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy. A detailed discussion on the AQMP and Project consistency with the AQMP is provided in Section 3.9.

2.8 EXISTING PROJECT SITE AIR QUALITY CONDITIONS

Existing air quality conditions at the Project site would generally reflect ambient monitored conditions as presented previously at Table 2-3.

This page intentionally left blank

3 PROJECT AIR QUALITY IMPACT

3.1 INTRODUCTION

The Project has been evaluated to determine if it will violate an air quality standard or contribute to an existing or projected air quality violation. Additionally, the Project has been evaluated to determine if it will result in a cumulatively considerable net increase of a criteria pollutant for which the SCAB is non-attainment under an applicable federal or state ambient air quality standard. The significance of these potential impacts is described in the following section.

3.2 STANDARDS OF SIGNIFICANCE

The criteria used to determine the significance of potential Project-related air quality impacts are taken from the Initial Study Checklist in Appendix G of the State CEQA Guidelines (14 California Code of Regulations §§15000, et seq.). Based on these thresholds, a project would result in a significant impact related to air quality if it would (16):

- Conflict with or obstruct implementation of the applicable air quality plan.
- Violate any air quality standard or contribute to an existing or projected air quality violation.
- Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions, which exceed quantitative thresholds for ozone precursors).
- Expose sensitive receptors to substantial pollutant concentrations.
- Create objectionable odors affecting a substantial number of people.

The SCAQMD has also developed regional and localized significance thresholds for other regulated pollutants, as summarized at Table 3-1 (17). The SCAQMD's CEQA Air Quality Significance Thresholds (March 2015) indicate that any projects in the SCAB with daily emissions that exceed any of the indicated thresholds should be considered as having an individually and cumulatively significant air quality impact.

TABLE 3-1: MAXIMUM DAILY EMISSIONS THRESHOLDS (1 OF 2)

Pollutant	Construction	Operations
	Regional Thresholds	
NOx	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM10	150 lbs/day	150 lbs/day
PM2.5	55 lbs/day	55 lbs/day
Sox	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day
Lead	3 lbs/day	3 lbs/day

TABLE 3-1: MAXIMUM DAILY EMISSIONS THRESHOLDS (2 OF 2)

Pollutant	Construction	Operations
Localized Thresholds		
NOx	203 lbs/day (site preparation)	N/A
CO	1,114 lbs/day (site preparation)	N/A
PM10	9 lbs/day (site preparation)	N/A
PM2.5	5 lbs/day (site preparation)	N/A

3.3 PROJECT-RELATED SOURCES OF POTENTIAL IMPACT

Land uses such as the Project affect air quality through construction-source and operational-source emissions.

On October 14, 2016, the SCAQMD in conjunction with the California Air Pollution Control Officers Association (CAPCOA) and other California air districts, released the latest version of the California Emissions Estimator Model™ (CalEEMod™) v2016.3.1. The purpose of this model is to calculate construction-source and operational-source criteria pollutant (NO_x, VOC, PM_{10}, $PM_{2.5}$, SO_x, and CO) and greenhouse gas (GHG) emissions from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from mitigation measures (18). Accordingly, the latest version of CalEEMod™ has been used for this Project to determine construction and operational air quality emissions. Output from the model runs for both construction and operational activity are provided in Appendix 3.2.

3.4 CONSTRUCTION EMISSIONS

Construction activities associated with the Project will result in emissions of CO, VOCs, NOx, SOx, PM10, and PM2.5. Construction related emissions are expected from the following construction activities:

- Grading
- Building Construction
- Paving
- Architectural Coating
- Construction Workers Commuting

Construction is expected to commence in October 2017 and will last through December 2021. Construction duration by phase is shown on Table 3-2. The duration of construction activity was estimated based on past project experience and a 2021 opening year. The construction schedule utilized in the analysis, shown in Table 3-2, represents a "worst-case" analysis scenario should construction occur any time after the respective dates since emission factors for construction decrease as time passes and the analysis year increases due to emission regulations becoming more stringent.[2] The detailed summary of construction equipment, shown on Table 3-3, was estimated based on CalEEMod model defaults and past project experience. The site specific construction fleet may vary due to specific project needs at the time of construction. The duration of construction activity and associated equipment both represent a reasonable approximation of the expected construction fleet as required per CEQA guidelines. Please refer to specific detailed modeling inputs/outputs contained in Appendix 3.2 of this analysis.

Dust is typically a major concern during rough grading activities. Because such emissions are not amenable to collection and discharge through a controlled source, they are called "fugitive emissions". Fugitive dust emissions rates vary as a function of many parameters (soil silt, soil moisture, wind speed, area disturbed, number of vehicles, depth of disturbance or excavation, etc.). The CalEEMod model was utilized to calculate fugitive dust emissions resulting from this phase of activity. It is our understanding the Project is expected to balance (will not require import/export of soil).

A review of aerial image indicates the Project site is currently vacant, therefore no demolition is required.

The Project shall comply with SCAQMD rules and regulations regarding handling and disturbances of toxics, such as asbestos and lead-based paint, that may be encountered during building materials and demolition. Inspections for these hazardous materials shall be performed prior to any demolition activities and compliance with the applicable rules and regulations, such as Rule 1403 for asbestos removal, will be required.

Construction emissions for construction worker vehicles traveling to and from the Project site, as well as vendor trips (construction materials delivered to the Project site) were estimated based on information CalEEMod model defaults.

TABLE 3-2: CONSTRUCTION DURATION

Phase Name	Start Date	End Date	Days
Grading	10/01/2017	01/12/2018	75
Paving	01/13/2018	03/30/2018	55
Building Construction	03/31/2018	09/25/2020	650
Architectural Coatings	06/29/2019	12/24/2021	650

[2] As shown in the California Emissions Estimator Model (CalEEMod) User's Guide Version 2013.2, Table 3.4 "OFFROAD Equipment Emission Factors" as the analysis year increases, emission factors for the same equipment pieces decrease due to the natural turnover of older equipment being replaced by newer less polluting equipment and new regulatory requirements.

TABLE 3-3: CONSTRUCTION EQUIPMENT

Activity	Equipment	Number	Hours Per Day
Grading	Excavators	2	8

3.4.1 CONSTRUCTION EMISSIONS SUMMARY

The SCAQMD Rules that are currently applicable during construction activity for this Project include but are not limited to: Rule 1113 (Architectural Coatings) (19); Rule 431.2 (Low Sulfur Fuel) (20); Rule 403 (Fugitive Dust) (21); and Rule 1186 / 1186.1 (Street Sweepers) (22). Notwithstanding, credit for BACMs AQ-1 (Rule 1113) and AQ-2 (Rule 403) have been taken.

The estimated maximum daily construction emissions are summarized on Table 3-4. Detailed construction model outputs are presented in Appendix 3.2. It should be noted that credit has been taken for reductions achieved through standard regulatory requirements, such as BACM AQ-1 and BACM AQ-2. Under the assumed scenarios, emissions resulting from the Project construction would not exceed numerical thresholds established by the SCAQMD for any criteria pollutant. Therefore, a less than significant impact would occur and no mitigation is required.

TABLE 3-4: EMISSIONS SUMMARY OF OVERALL CONSTRUCTION

Year	Emissions (pounds per day)					
	VOC	NOx	CO	SOx	PM10	PM2.5
2017	6.60	75.32	43.00	0.07	7.03	4.59
2018	5.80	65.36	38.80	0.09	1.47	4.11
2019	10.36	38.79	39.04	0.10	1.27	2.85
2020	9.86	35.19	35.19	0.10	1.27	2.62

3.5 OPERATIONAL EMISSIONS

Operational activities associated with the proposed Project will result in emissions of VOCs, NOx, CO, SOx, PM10, and PM2.5. Operational emissions would be expected from the following primary sources:

- Area Source Emissions
- Energy Source Emissions
- Mobile Source Emissions

3.5.1 AREA SOURCE EMISSIONS

Architectural Coatings

Over a period of time the buildings that are part of this Project will be subject to emissions resulting from the evaporation of solvents contained in paints, varnishes, primers, and other surface coatings as part of Project maintenance. The emissions associated with architectural coatings were calculated using the CalEEMod model.

Consumer Products

Consumer products include, but are not limited to detergents, cleaning compounds, polishes, personal care products, and lawn and garden products. Many of these products contain organic compounds which when released in the atmosphere can react to form ozone and other photochemically reactive pollutants. The emissions associated with use of consumer products were calculated based on defaults provided within the CalEEMod model.

Hearths/Fireplaces

The emissions associated with use of hearths/fireplaces were calculated based on assumptions provided in the CalEEMod model. The Project is required to comply with SCAQMD Rule 445, which prohibits the use of wood burning stoves and fireplaces in new development. In order to account for the requirements of this Rule, the unmitigated CalEEMod model estimates were adjusted to remove wood burning stoves and fireplaces. As the project is required to comply with SCAQMD Rule 445, the removal of wood burning stoves and fireplaces is not considered "mitigation" although it must be identified as such in CalEEMod in order to treat the case appropriately.

Landscape Maintenance Equipment

Landscape maintenance equipment would generate emissions from fuel combustion and evaporation of unburned fuel. Equipment in this category would include lawnmowers, shedders/grinders, blowers, trimmers, chain saws, and hedge trimmers used to maintain the landscaping of the Project. The emissions associated with landscape maintenance equipment were calculated based on assumptions provided in the CalEEMod model.

3.5.2 ENERGY SOURCE EMISSIONS

Combustion Emissions Associated with Natural Gas and Electricity

Electricity and natural gas are used by almost every project. Criteria pollutant emissions are emitted through the generation of electricity and consumption of natural gas. However, because electrical generating facilities for the Project area are located either outside the region (state) or offset through the use of pollution credits (RECLAIM) for generation within the SCAB, criteria pollutant emissions from offsite generation of electricity is generally excluded from the evaluation of significance and only natural gas use is considered. The emissions associated with natural gas use were calculated using the CalEEMod model.

3.5.3 MOBILE SOURCE EMISSIONS

Vehicles

Project operational (vehicular) impacts are dependent on both overall daily vehicle trip generation and the effect of the Project on peak hour traffic volumes and traffic operations in the vicinity of the Project. The Project related operational air quality impacts derive primarily from vehicle trips generated by the Project. Trip characteristics available from the report, Legacy Park (Tentative Tract Map No. 36760) Trip Generation Evaluation (Urban Crossroads) 2016 were utilized in this analysis (23). A fleet mix consistent with the Caltrans ITS Transportation Project-Level Carbon Monoxide Protocol was used in this report in order to appropriately represent vehicular trips from a primarily residential development (24).

3.5.4 OPERATIONAL EMISSIONS SUMMARY

The estimated operation-source emissions are summarized on Table 3-5. Detailed operation model outputs are presented in Appendix 3.2. Under the assumed scenarios, emissions resulting from the Project operations would not exceed the numerical thresholds established by the SCAQMD for any criteria pollutant. Therefore, a less than significant impact would occur and no mitigation is required.

TABLE 3-5: MAXIMUM DAILY OPERATIONAL EMISSIONS SUMMARY

Operational Activities – Summer Scenario	Emissions (pounds per day)					
	VOC	NO_x	CO	SO_x	PM_{10}	$PM_{2.5}$

3.6 LOCALIZED SIGNIFICANCE - CONSTRUCTION ACTIVITY

BACKGROUND ON LOCALIZED SIGNIFICANCE THRESHOLD (LST) DEVELOPMENT

The analysis makes use of methodology included in the SCAQMD *Final Localized Significance Threshold Methodology* (Methodology) (19). The SCAQMD has established that impacts to air quality are significant if there is a potential to contribute or cause localized exceedances of the federal and/or state ambient air quality standards (NAAQS/CAAQS). Collectively, these are referred to as Localized Significance Thresholds (LSTs).

The significance of localized emissions impacts depends on whether ambient levels in the vicinity of any given project are above or below State standards. In the case of CO and NO2, if ambient levels are below the standards, a project is considered to have a significant impact if project emissions result in an exceedance of one or more of these standards. If ambient levels already exceed a state or federal standard, then project emissions are considered significant if they increase ambient concentrations by a measurable amount. This would apply to PM10 and PM2.5; both of which are non-attainment pollutants.

The SCAQMD established LSTs in response to the SCAQMD Governing Board's Environmental Justice Initiative I-4. LSTs represent the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard at the nearest residence or sensitive receptor. The SCAQMD states that lead agencies can use the LSTs as another indicator of significance in its air quality impact analyses.

LSTs were developed in response to environmental justice and health concerns raised by the public regarding exposure of individuals to criteria pollutants in local communities. To address the issue of localized significance, the SCAQMD adopted LSTs that show whether a project would cause or contribute to localized air quality impacts and thereby cause or contribute to potential localized adverse health effects. The analysis makes use of methodology included in the SCAQMD *Final Localized Significance Threshold Methodology* (LST Methodology) (25).

EMISSIONS CONSIDERED

SCAQMD's Methodology clearly states that "off-site mobile emissions from the Project should NOT be included in the emissions compared to LSTs (26)." Therefore, for purposes of the construction LST analysis only emissions included in the CalEEMod "on-site" emissions outputs were considered.

APPLICABILITY OF LSTS FOR THE PROJECT

For this Project, the appropriate Source Receptor Area (SRA) for the LST is the Perris monitoring station (SRA 24). LSTs apply to carbon monoxide (CO), nitrogen dioxide (NO2), particulate matter ≤ 10 microns (PM10), and particulate matter ≤ 2.5 microns (PM2.5). The SCAQMD produced look-up tables for projects less than or equal to 5 acres in size.

In order to determine the appropriate methodology for determining localized impacts that could occur as a result of Project-related construction, the following process is undertaken:

- The CalEEMod model is utilized to determine the maximum daily on-site emissions that will occur during construction activity.
- The SCAQMD's Fact Sheet for Applying CalEEMod to Localized Significance Thresholds (21) is used to determine the maximum site acreage that is actively disturbed based on the construction equipment fleet and equipment hours as estimated in CalEEMod.
- If the total acreage disturbed is less than or equal to five acres per day, then the SCAQMD's screening look-up tables are utilized to determine if a Project has the potential to result in a significant impact (the SCAQMD recommends that Projects exceeding the screening look-up tables undergo dispersion modeling to determine actual impacts). The look-up tables establish a maximum daily emissions threshold in pounds per day that can be compared to CalEEMod outputs.
- For projects that exceed 5 acres, the 5-acre LST look-up values can be used as a screening tool to determine which pollutants require detailed analysis.[3] This approach is conservative as it assumes that all on-site emissions would occur within a 5-acre area and would over predict potential localized impacts (i.e., more pollutant emissions occurring within a smaller area and within closer proximity to potential sensitive receptors). If the project exceeds the LST look-up values, then the SCAQMD recommends that project specific air quality modeling be performed.

3 Personal communication with Mr. Ian MacMillan, November 17, 2011

MAXIMUM DAILY DISTURBED-ACREAGE

Table 3-6 is used to determine the maximum daily disturbed-acreage for purposes of modeling localized emissions. As shown, the proposed Project could actively disturb 3.0 acres per day for the grading phase of construction.

TABLE 3-6: MAXIMUM DAILY DISTURBED-ACREAGE

Construction Phase	Equipment Type	Equipment Quantity	Acres graded per 8 hour day	Operating Hours per Day	Acres graded per day
Grading	Rubber Tired Dozers	1	0.5	8	0.5
	Crawler Tractors	0	0.5	8	0
	Graders	1	0.5	8	0.5
	Scrapers	2	1	8	2
Total acres graded per day during Grading					3

Sensitive Receptors

Some people are especially sensitive to air pollution and are given special consideration when evaluating air quality impacts from projects. These groups of people include children, the elderly, persons with preexisting respiratory or cardiovascular illness, and athletes and others who engage in frequent exercise. Structures that house these persons or places where they gather to exercise are defined as "sensitive receptors".

The nearest sensitive receptor is the residential community located immediately adjacent west of the Project site. Notwithstanding, the *Methodology* explicitly states that "*It is possible that a project may have receptors closer than 25 meters. Projects with boundaries located closer than 25 meters to the nearest receptor should use the LSTs for receptors located at 25 meters* (27)." Therefore, LSTs for receptors located at 25 meters were utilized in this AQIA.

CONSTRUCTION-SOURCE EMISSIONS LST ANALYSIS

Table 3-7 identifies the localized impacts at the nearest receptor location in the vicinity of the Project. As shown below, emissions during construction activity would not exceed the SCAQMD's localized significance thresholds for any criteria pollutant and a less than significant impact would occur.

TABLE 3-7: LOCALIZED SIGNIFICANCE SUMMARY CONSTRUCTION

On-Site Grading Emissions	Emissions (pounds per day)			
	NO_x	CO	PM_{10}	$PM_{2.5}$
Maximum Daily Emissions	**75.22**	**41.70**	**6.77**	**4.52**
SCAQMD Localized Threshold	203	1,114	9	5
Threshold Exceeded?	**NO**	**NO**	**NO**	**NO**

3.7 LOCALIZED SIGNIFICANCE – LONG-TERM OPERATIONAL ACTIVITY

The proposed project involves the construction and operation of 221 single family residential dwelling units. According to SCAQMD LST methodology, LSTs would apply to the operational phase of a proposed project, if the project includes stationary sources, or attracts mobile sources that may spend long periods queuing and idling at the site (e.g., transfer facilities and warehouse buildings). The proposed project does not include such uses, and thus, due to the lack of significant stationary source emissions, no long-term localized significance threshold analysis is needed.

3.8 CO "HOT SPOT" ANALYSIS

As discussed below, the Project would not result in potentially adverse CO concentrations or "hot spots." Further, detailed modeling of Project-specific carbon monoxide (CO) "hot spots" is not needed to reach this conclusion.

An adverse CO concentration, known as a "hot spot", would occur if an exceedance of the state one-hour standard of 20 ppm or the eight-hour standard of 9 ppm were to occur. At the time of the 1993 Handbook, the SCAB was designated nonattainment under the California AAQS and National AAQS for CO (28).

It has long been recognized that CO hotspots are caused by vehicular emissions, primarily when idling at congested intersections. In response, vehicle emissions standards have become increasingly stringent in the last twenty years. Currently, the allowable CO emissions standard in California is a maximum of 3.4 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of increasingly sophisticated and efficient emissions control technologies, CO concentration in the SCAB is now designated as attainment, as previously noted in Table 2-2. Also, CO concentrations in the Project vicinity have steadily declined, as indicated by historical emissions data presented previously at Table 2-3.

To establish a more accurate record of baseline CO concentrations affecting the SCAB, a CO "hot spot" analysis was conducted in 2003 for four busy intersections in Los Angeles at the peak morning and afternoon time periods. This "hot spot" analysis did not predict any violation of CO standards, as shown on Table 3-8.

Based on the SCAQMD's 2003 AQMP and the 1992 Federal Attainment Plan for Carbon Monoxide (1992 CO Plan), peak carbon monoxide concentrations in the SCAB were a result of unusual meteorological and topographical conditions and not a result of traffic volumes and congestion at a particular intersection. As evidence of this, for example, 9.3 ppm 8-hr CO concentration measured at the Long Beach Blvd. and Imperial Hwy. intersection (highest CO generating intersection within the "hot spot" analysis), only 0.7 ppm was attributable to the traffic volumes and congestion at this intersection; the remaining 8.6 ppm were due to the ambient air measurements at the time the 2003 AQMP was prepared (28). In contrast, the ambient 8-hr CO concentration within the Project study area is estimated at 1.4 ppm—1.6 ppm (please refer to previous Table 2-3). Therefore, even if the traffic volumes for the proposed Project were double or even triple of the traffic volumes generated at the Long Beach Blvd. and Imperial Hwy. intersection, coupled with the on-going improvements in ambient air quality, the Project would not be capable of resulting in a CO "hot spot" at any study area intersections.

Similar considerations are also employed by other Air Districts when evaluating potential CO concentration impacts. More specifically, the Bay Area Air Quality Management District (BAAQMD) concludes that under existing and future vehicle emission rates, a given project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour—or 24,000 vehicles per hour where vertical and/or horizontal air does not mix—in order to generate a significant CO impact (29).

Traffic volumes generating the CO concentrations for the "hot spot" analysis, shown on Table 3-9. The busiest intersection evaluated was that at Wilshire Blvd. and Veteran Ave., which has a daily traffic volume of approximately 100,000 vehicles per day. The 2003 AQMP estimated that the 1-hour concentration for this intersection was 4.6 ppm; this indicates that, should the daily traffic volume increase four times to 400,000 vehicles per day, CO concentrations (4.6 ppm x 4= 18.4 ppm) would still not likely exceed the most stringent 1-hour CO standard (20.0 ppm).[4] At buildout of the Project, the highest average daily trips on a segment of road would be 44,300 daily trips on Perris Blvd.) south of John F. Kennedy Dr., which is lower than the highest daily traffic volumes generated at the busiest intersection in the CO "hot spot" analysis (30).

The proposed Project considered herein would not produce the volume of traffic required to generate a CO "hot spot" either in the context of the 2003 Los Angeles hot spot study, or based on representative BAAQMD CO threshold considerations, as shown on Table 3-10. Therefore, CO "hot spots" are not an environmental impact of concern for the proposed Project. Localized air quality impacts related to mobile-source emissions would therefore be less than significant.

TABLE 3-8: CO MODEL RESULTS

Intersection Location	Carbon Monoxide Concentrations (ppm)		
	Morning 1-hour	Afternoon 1-hour	8-hour
Wilshire-Veteran	4.6	3.5	4.2
Sunset-Highland	4	4.5	3.9
La Cienega-Century	3.7	3.1	5.8
Long Beach-Imperial	3	3.1	9.3

3.9 AIR QUALITY MANAGEMENT PLANNING

The Project site is located within the SCAB, which is characterized by relatively poor air quality. The SCAQMD has jurisdiction over an approximately 10,743 square-mile area consisting of the four-county Basin and the Los Angeles County and Riverside County portions of what use to be referred to as the Southeast Desert Air Basin. In these areas, the SCAQMD is principally responsible for air pollution control, and works directly with the Southern California Association of Governments (SCAG), county transportation commissions, local governments, as well as state and federal agencies to reduce emissions from stationary, mobile, and indirect sources to meet state and federal ambient air quality standards.

Currently, these state and federal air quality standards are exceeded in most parts of the Basin. In response, the SCAQMD has adopted a series of Air Quality Management Plans (AQMPs) to meet the state and federal ambient air quality standards. AQMPs are updated regularly in order to more effectively reduce emissions, accommodate growth, and to minimize any negative fiscal impacts of air pollution control on the economy.

The Final 2012 AQMP was adopted by the AQMD Governing Board on December 7, 2012 (31) (15). The 2012 AQMP incorporates the latest scientific and technological information and planning assumptions, including the 2012 Regional Transportation Plan/Sustainable Communities Strategy and updated emission inventory methodologies for various source categories.

Similar to the 2007 AQMP, the 2012 AQMP was based on assumptions provided by both CARB and SCAG in the latest available EMFAC model for the most recent motor vehicle and demographics information, respectively. The air quality levels projected in the 2012 AQMP are based on several assumptions. For example, the 2012 AQMP has assumed that development associated with general plans, specific plans, residential projects, and wastewater facilities will be constructed in accordance with population growth projections identified by SCAG in its 2012 RTP. The 2012 AQMP also has assumed that such development projects will implement strategies to reduce emissions generated during the construction and operational phases of development.

In June 2016, the AQMD released the draft 2016 AQMP for public review. The 2016 draft AQMP continues to evaluate current integrated strategies and control measures to meet the NAAQS, as well as, explore new and innovative methods to reach its goals. Some of these approaches include utilizing incentive programs, recognizing existing co-benefit programs from other sectors, and developing a strategy with fair-share reductions at the federal, state, and local levels (32). As the draft 2016 AQMP has not been formally adopted by the AQMD, the Project's consistency with the AQMP will be determined using the 2012 AQMP, discussed below.

Criteria for determining consistency with the AQMP are defined in Chapter 12, Section 12.2 and Section 12.3 of the SCAQMD's CEQA Air Quality Handbook (1993) (33). These indicators are discussed below:

- Consistency Criterion No. 1: The proposed Project will not result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations, or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP.

Construction Impacts

Consistency Criterion No. 1 refers to violations of the CAAQS and NAAQS. CAAQS and NAAQS violations would occur LSTs were exceeded. As evaluated as part of the Project LST analysis (previously presented), the Project's localized construction-source emissions would not exceed applicable LSTs.

Operational Impacts

The Project regional analysis demonstrates that Project operational-source emissions would not exceed applicable thresholds, and would therefore not result in or cause violations of the CAAQS and NAAQS.

On the basis of the preceding discussion, the Project is determined to be consistent with the first criterion.

- Consistency Criterion No. 2: The Project will not exceed the assumptions in the AQMP based on the years of Project build-out phase.

Overview

The 2012 AQMP demonstrates that the applicable ambient air quality standards can be achieved within the timeframes required under federal law. Growth projections from local general plans adopted by cities in the district are provided to the Southern California Association of Governments (SCAG), which develops regional growth forecasts, which are then used to develop future air quality forecasts for the AQMP. Development consistent with the growth projections in the City of Moreno Valley General Plan (referred to as the "General Plan") is considered to be consistent with the AQMP.

Construction Impacts

Peak day emissions generated by construction activities are largely independent of land use assignments, but rather are a function of development scope and maximum area of disturbance. Irrespective of the site's land use designation, development of the site to its maximum potential would likely occur, with disturbance of the entire site occurring during construction activities.

Operational Impacts

The General Plan currently designates the Project site as a Suburban Residential Use. The Project is currently zoned as "R-5" and "R-30", which allows a maximum density of 5 dwellings per acre and 30 dwelling units per acre, respectively (34).

The Project proposes to construct 221 single-family residential dwelling units, with a density of 4.18 dwelling units per acre, which is permitted under both the R-5 and R-30 zones. Furthermore, the Project is proposing a partial zone change for the R-30 zoned area to R-5, which would decrease the maximum allowed density from 30 dwelling units per acre to 5 dwelling units per acre. As such, the partial zone change to R-5 would be more conservative than the existing zone and would be more consistent with the Project. Additionally, the Project would not exceed any applicable regional or local thresholds. As such, the development proposed by the Project is generally consistent with the goals and objectives of the AQMP.

On the basis of the preceding discussion, the Project is determined to be consistent with the second criterion.

AQMP Consistency Conclusion

The Project would not result in or cause NAAQS or CAAQS violations. The Project would not increase the growth intensities allowed in the General Plan. Furthermore, the Project would not exceed any applicable regional or local thresholds. As such, the Project is therefore considered to be consistent with the AQMP.

3.10 POTENTIAL IMPACTS TO SENSITIVE RECEPTORS

The potential impact of Project-generated air pollutant emissions at sensitive receptors has also been considered. Sensitive receptors can include uses such as long term health care facilities, rehabilitation centers, and retirement homes. Residences, schools, playgrounds, child care centers, and athletic facilities can also be considered as sensitive receptors.

Results of the LST analysis indicate that the Project would not exceed the SCAQMD localized significance thresholds during construction. Therefore, sensitive receptors would not be subject to a significant air quality impact during Project construction.

Results of the LST analysis indicate that the Project would not exceed the SCAQMD localized significance thresholds during operational activity. The proposed Project would not result in a CO "hotspot" as a result of Project related traffic during ongoing operations, nor would the Project result in a significant adverse health impact as discussed in Section 3.8. Thus a less than significant impact to sensitive receptors during operational activity is expected.

3.11 ODORS

The potential for the Project to generate objectionable odors has also been considered. Land uses generally associated with odor complaints include:

- Agricultural uses (livestock and farming)
- Wastewater treatment plants
- Food processing plants
- Chemical plants
- Composting operations
- Refineries
- Landfills
- Dairies
- Fiberglass molding facilities

The Project does not contain land uses typically associated with emitting objectionable odors. Potential odor sources associated with the proposed Project may result from construction equipment exhaust and the application of asphalt and architectural coatings during construction activities and the temporary storage of typical solid waste (refuse) associated with the proposed Project's (long-term operational) uses. Standard construction requirements would minimize odor impacts from construction. The construction odor emissions would be temporary, short-term, and intermittent in nature and would cease upon completion of the respective phase of construction and is thus considered less than significant. It is expected that Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with the City's solid waste regulations. The proposed Project would also be required to comply with SCAQMD Rule 402 to prevent occurrences of public nuisances. Therefore, odors associated with the proposed Project construction and operations would be less than significant and no mitigation is required.

3.12 CUMULATIVE IMPACTS

The Project area is designated as an extreme non-attainment area for ozone, and a non-attainment area for PM_{10}, $PM_{2.5}$, and lead.

The AQMD has published a report on how to address cumulative impacts from air pollution: *White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution* (35). In this report the AQMD clearly states (Page D-3):

"…the AQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR. The only case where the significance thresholds for project specific and cumulative impacts differ is the Hazard Index (HI) significance threshold for toxic air contaminant (TAC) emissions. The project specific (project increment) significance threshold is HI > 1.0 while the cumulative (facility-wide) is HI > 3.0. It should be noted that the HI is only one of three TAC emission significance thresholds considered (when applicable) in a CEQA analysis. The other two are the maximum individual cancer risk (MICR) and the cancer burden, both of which use the same significance thresholds (MICR of 10 in 1 million and cancer burden of 0.5) for project specific and cumulative impacts.

Projects that exceed the project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant."

Therefore, this analysis assumes that individual projects that do not generate operational or construction emissions that exceed the SCAQMD's recommended daily thresholds for project-specific impacts would also not cause a cumulatively considerable increase in emissions for those pollutants for which the Basin is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact. Alternatively, individual project-related construction and operational emissions that exceed SCAQMD thresholds for project-specific impacts would be considered cumulatively considerable.

CRITERION 1; REGIONAL EMISSIONS ANALYSIS

Construction Impacts

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that Project construction-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, Project construction-source emissions would be considered less than significant on a project-specific and cumulative basis.

Operational Impacts

The Project-specific evaluation of emissions presented in the preceding analysis demonstrates that Project operational-source air pollutant emissions would not result in exceedances of regional thresholds. Therefore, Project operational-source emissions would be considered less than significant on a project-specific and cumulative basis.

CRITERION 2; LOCAL EMISSIONS ANALYSIS UTILIZING LIST APPROACH

A list approach is used, in accordance with Section 15130(b) of the CEQA Guidelines, which states the following:

> *The following elements are necessary to an adequate discussion of significant cumulative impacts: 1) Either: (A) A list of past, present, and probable future projects producing related or cumulative impacts, including, if necessary, those projects outside the control of the agency, or (B) A summary of projections contained in an adopted general plan or related planning document, or in a prior environmental document which has been adopted or certified, which described or evaluated regional or area wide conditions contributing to the cumulative impact.*

The SCAQMD has recognized that there is typically insufficient information to quantitatively evaluate the cumulative contributions of multiple projects because each project applicant has no control over nearby projects. Nevertheless, the potential cumulative impacts from the Project and other projects are discussed below. A cumulative project list was developed for this analysis and is shown in Table 3-11.

Related projects could contribute to an existing or projected air quality exceedance because the Basin is currently nonattainment for ozone, PM10, and PM2.5. With regard to determining the significance of the contribution from the Project, the SCAQMD recommends that any given project's potential contribution to cumulative impacts should be assessed using the same significance criteria as for project-specific impacts. Therefore, this analysis assumes that individual projects that do not generate operational or construction emissions that exceed the SCAQMD's recommended daily thresholds for project-specific impacts would also not cause a commutatively considerable increase in emissions for those pollutants for which the Basin is in nonattainment, and, therefore, would not be considered to have a significant, adverse air quality impact. Alternatively, individual project-related construction and operational emissions that exceed SCAQMD thresholds for project-specific impacts would be considered cumulatively considerable. As previously noted, the Project would not result in any construction-source or operational-source emissions exceedances. Therefore the Project would result in a less than significant impact on a project-specific and cumulative basis.

TABLE 3-11: CUMULATIVE LIST OF PROJECTS

TAZ	Project Name	Land Use[1]	Quantity	Units[2]
CITY OF MORENO VALLEY				
MV-1	PA 06-0152 & PA 06-0153 (First Park Nandina I & II)	High-Cube Warehouse	483.767	TSF
MV-2	Bella Vista Apartments	Apartments	220.00	DU

4 FINDINGS & CONCLUSIONS

4.1 CONSTRUCTION-SOURCE EMISSIONS

REGIONAL IMPACTS

For regional emissions, the Project would not exceed the numerical thresholds of significance established by the SCAQMD for any criteria pollutant. It should be noted that impacts without mitigation take credit for reductions achieved through standard regulatory requirements (Rule 403 and Rule 1113). Thus a less than significant impact would occur for Project-related construction-source emissions and no mitigation measures are required.

Localized Impacts

For localized emissions, the Project would not exceed the SCAQMD's localized significance threshold. Thus a less than significant impact would occur and no mitigation is required.

Project construction-source emissions would not conflict with the applicable AQMP.

Odors

Established requirements addressing construction equipment operations, and construction material use, storage, and disposal requirements act to minimize odor impacts that may result from construction activities. Moreover, construction-source odor emissions would be temporary, short-term, and intermittent in nature and would not result in persistent impacts that would affect substantial numbers of people. Potential construction-source odor impacts are therefore considered less-than-significant.

4.2 OPERATIONAL-SOURCE EMISSIONS

REGIONAL IMPACTS

For regional emissions, the Project would not exceed the numerical thresholds of significance established by the SCAQMD. Thus a less than significant impact would occur for Project-related operational-source emissions and no mitigation is required.

LOCALIZED IMPACTS

Project operational-source emissions would not result in or cause a significant localized air quality impact as discussed in the operational LSTs section of this report. The proposed Project would not result in a significant CO "hotspot" as a result of Project related traffic during ongoing operations, nor would the Project result in a significant adverse health impact as discussed in Section 3.8, thus a less than significant impact to sensitive receptors during operational activity is expected.

ODORS

Substantial odor-generating sources include land uses such as agricultural activities, feedlots, wastewater treatment facilities, landfills or various heavy industrial uses. The Project does not propose any such uses or activities that would result in potentially significant operational-source odor impacts. Potential sources of operational odors generated by the Project would include disposal of miscellaneous residential refuse. Moreover, SCAQMD Rule 402 acts to prevent occurrences of odor nuisances (1). Consistent with City requirements, all Project-generated refuse would be stored in covered containers and removed at regular intervals in compliance with solid waste regulations. Potential operational-source odor impacts are therefore considered less-than-significant.

6 CERTIFICATION

The contents of this air study report represent an accurate depiction of the environmental impacts associated with the proposed Legacy Park (Tentative Tract Map No. 36760) Project. The information contained in this air quality impact assessment report is based on the best available data at the time of preparation. If you have any questions, please contact me directly at (949) 336-5987.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Other Asphalt Surfaces	12.00	Acre	12.00	522,720.00	0
Single Family Housing	221.00	Dwelling Unit	40.90	512,278.00	632

1.2 Other Project Characteristics

Urbanization Urban **Wind Speed (m/s)** 2.4 **Precipitation Freq (Days)** 28

Climate Zone 10 **Operational Year** 2021

Utility Company Southern California Edison

CO2 Intensity (lb/MWhr) 479.9 **CH4 Intensity (lb/MWhr)** 0.029 **N2O Intensity (lb/MWhr)** 0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - CPUC GHG Calculator version 3c, worksheet tab "CO2 Allocations," cells AH/AQ 35-44.

Land Use - Based on site plan dated September 19, 2016; Total lot acreage: 52.9; Average home size: 2,318 s.f

Construction Phase - Based on past project experience and a 2021 opening year

Off-road Equipment - Based on 8 hour workday

Off-road Equipment - Based on 8 hour workday

Off-road Equipment - Based on past project experience

Off-road Equipment -

Grading -

Vehicle Trips -

Woodstoves - Rule 445- Gas stoves only

Energy Use - Title-24 Electricity Energy Intensity and Natural Gas Energy Intensity were adjusted by 28% to reflect 2016 Title 24 requirements. Source: 2016 Title 24 Energy Efficiency Standards Adoption Hearing 06/10/15

Construction Off-road Equipment Mitigation -

Mobile Land Use Mitigation -

Fleet Mix - Based on Caltrans ITS Transportation Project-Level Carbon Monixide Protocol to reflect residential land use trips.

F. **Report Summary:**

This document provides the results of general and focused biological surveys for the approximately 53-acre Tentative Tract 36760 Project ("Project") located in the City of Moreno Valley, Riverside County, California. This report identifies and evaluates impacts to biological resources associated with the proposed Project in the context of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP), the California Environmental Quality Act (CEQA), and State and Federal regulations such as the Endangered Species Act (ESA), Clean Water Act (CWA), and the California Fish and Game Code.

The Project site consists of a flat, undeveloped parcel that has been heavily disturbed through past and ongoing activities, including disking. The majority of the site is dominated by plants associated with ruderal areas.

The Project site is located within the Reche Canyon/Badlands Area Plan of the MSHCP, but is not located within the MSHCP Criteria Area. As such, the Project is not subject to the HANS or JPR processes. The Project site located within the burrowing owl survey area, but it not located within the NEPSSA, CAPSSA, amphibian, or mammal survey areas. Focused burrowing owl surveys were conducted for the Project site; however, no burrowing owls or burrows with owl sign were detected onsite. In compliance with the MSHCP, pre-construction burrowing owl surveys are required prior to site disturbance.

The Project site will not impact special-status plants, but will result in the loss of actual or potential habitat for special-status animals, including potential habitat for Stephens' kangaroo rat (Dipodomys stephensi) [SKR]. Impacts to SKR are covered under the SKR Habitat Conservation Plan (HCP) with payment of the SKR Fee. The loss of potential habitat for other special-status animals would be less than significant due to the low degree of sensitivity of the species, the disturbed nature of the site, and the lack of adjacency to native open space.

The Project site does not contain jurisdictional waters, MSHCP riparian/riverine areas, or MSHCP vernal pools.

The proposed Project will be consistent with the biological requirements of the MSHCP; specifically pertaining to the Project's relationship to reserve assembly, *Section 6.1.2* (Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools), *Section 6.1.3* (Protection of Narrow Endemic Plant Species), *Section 6.1.4* (Guidelines Pertaining to the Urban/Wildlands Interface), and *Section 6.3.2* (Additional Survey Needs and Procedures).

1.0 INTRODUCTION

1.1 Background and Scope of Work

This document provides the results of general and focused biological surveys for the approximately 53-acre Tentative Tract 36760 Project ("Project") located in the City of Moreno Valley, Riverside County, California. This report identifies and evaluates impacts to biological resources associated with the proposed Project in the context of the Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP), the California Environmental Quality Act (CEQA), and State and Federal regulations such as the Endangered Species Act (ESA), Clean Water Act (CWA), and the California Fish and Game Code.

The scope of this report includes a discussion of existing conditions for the Project site, all methods employed regarding the general and focused biological surveys, the documentation of botanical and wildlife resources identified (including special-status species), and an analysis of impacts to biological resources. Methods of the study include a review of relevant literature, field surveys, and a Geographical Information System (GIS)-based analysis of vegetation communities. As appropriate, this report is consistent with accepted scientific and technical standards and survey guideline requirements issued by the U.S. Fish and Wildlife Service (USFWS), the California Department of Fish and Wildlife (CDFW), the California Native Plant Society (CNPS), and other applicable agencies/organizations.

The field study focused on a number of primary objectives that would comply with CEQA requirements, including (1) general biological surveys and vegetation mapping; (2) habitat assessments for special-status plant species (including species with applicable MSHCP survey requirements); (3) habitat assessments for special-status wildlife species (including species with applicable MSHCP survey requirements); (4) assessments for MSHCP riparian/riverine areas and vernal pools; and (5) assessments for areas subject to the jurisdiction of the U.S. Army Corps of Engineers (Corps) jurisdiction pursuant to Section 404 of the Clean Water Act, and CDFW jurisdiction pursuant to Division 2, Chapter 6, Section 1600–1616 of the California Fish and Game Code. Observations of all plant and wildlife species were recorded during the general biological surveys and are included in this report.

1.2 Project Location

The Project site comprises approximately 53 acres in the City of Moreno Valley, Riverside California [Exhibit 1 – Regional Map] and is located within Section 19 of Township 3 South, Range 3 West, of the U.S. Geological Survey (USGS) 7.5" quadrangle map Sunnymead, California (dated 1967 and photorevised in 1980)[Exhibit 2 – Vicinity Map]. The Project site is comprised of three parcels (APN# 485-220-023, 485-220-032, and 485-220-040. The Project site is bordered by Indian Avenue and residential development to the west, an undeveloped parcel and residential development to the north, an undeveloped parcel and Perris Boulevard to the east, and March Middle School to the south.

1.3 Project Description

The proposed Project will subdivide 53.0 gross acres into 189 single family detached lots, one park lot, nine common area open space lots, and two remainder parcels. The Project is designed to accommodate two lot size product types (4,000 and 5,000 sf) as a Planned Unit Development (PUD).

1.4 Existing Conditions

The Project site consists of a flat, undeveloped parcel that has been heavily disturbed through past and ongoing activities, including disking. The majority of the site is dominated by plants associated with ruderal areas. The dominant plant at the site is Russian thistle (*Salsola tragus*). Additional plant species detected onsite include tumbling pigweed (*Amaranthus albus*), puncture vine (*Tribulus terrestris*), vinegar weed (*Trichostema lanceolatum*), telegraph weed (*Heterotheca grandiflora*), annual bur-sage (*Ambrosia acanthicarpa*), lamb's quarters (*Chenopodium album*), and common sunflower (*Helianthus annuus*).

1.5 Relationship of the Project Site to the MSHCP

1.5.1 MSHCP Background

The Western Riverside County MSHCP is a comprehensive habitat conservation/planning program for Western Riverside County. The intent of the MSHCP is to preserve native vegetation and meet the habitat needs of multiple species, rather than focusing preservation efforts on one species at a time. The MSHCP provides coverage (including take authorization for listed species) for special-status plant and animal species, as well as mitigation for impacts to special-status species and associated native habitats.

Through agreements with the U.S. Fish and Wildlife Service (USFWS) and CDFW, the MSHCP designates 146 special-status animal and plant species as Covered Species, of which the majority have no project-specific survey/conservation requirements. The MSHCP provides mitigation for project-specific impacts to these species for Projects that are compliant/consistent with MSHCP requirements, such that the impacts are reduced to below a level of significance pursuant to CEQA.

The Covered Species that are not yet adequately conserved have additional requirements in order for these species to ultimately be considered "adequately conserved". A number of these species have survey requirements based on a project's occurrence within a designated MSHCP survey area and/or based on the presence of suitable habitat. These include Narrow Endemic Plant Species (MSHCP *Volume I, Section 6.1.3*), as identified by the Narrow Endemic Plant Species Survey Areas (NEPSSA); Criteria Area Plant Species (MSHCP *Volume I, Section 6.3.2*) identified by the Criteria Area Plant Species Survey Areas (CAPSSA); animals species (burrowing owl, mammals, amphibians) identified by survey areas (MSHCP *Volume I, Section 6.3.2*); and species associated with riparian/riverine areas and vernal pool habitats, i.e., least Bell's vireo, southwestern willow flycatcher, western yellow-billed cuckoo, and three species of listed fairy shrimp (MSHCP *Volume I, Section 6.1.2*).

The goal of the MSHCP is to have a total Conservation Area in excess of 500,000 acres, including approximately 347,000 acres on existing Public/Quasi-Public (PQP) Lands, and approximately 153,000 acres of Additional Reserve Lands targeted within the MSHCP Criteria Area. The MSHCP is divided into 16 separate Area Plans, each with its own conservation goals and objectives. Within each Area Plan, the Criteria Area is divided into Subunits, and further divided into Criteria Cells and Cell Groups (a group of criteria cells). Each Cell Group and ungrouped, independent Cell has designated "criteria" for the purpose of targeting additional conservation lands for acquisition. Projects located within the Criteria Area are subject to the Habitat Evaluation and Acquisition Negotiation Strategy (HANS) process to determine if lands are targeted for inclusion in the MSHCP Reserve. In addition, all Projects located within the Criteria Area are subject to the Joint Project Review (JPR) process, where the Project is reviewed by the Regional Conservation Authority (RCA) to determine overall compliance/consistency with the biological requirements of the MSHCP.

1.6.2 Relationship of the Project Site to the MSHCP

The Project site is located within the Reche Canyon/Badlands Area Plan of the MSHCP, but is not located within the MSHCP Criteria Area. As such, the Project is not subject to the HANS or JPR processes. The Project site located within the burrowing owl survey area, but it not located within the NEPSSA, CAPSSA, amphibian, or mammal survey areas [Exhibit 3 – MSHCP Overlay Map].

Within the designated Survey Areas, the MSHCP requires habitat assessments, and focused surveys within areas of suitable habitat. For locations with positive survey results, the MSHCP requires that 90 percent of those portions of the property that provide for long-term conservation value for the identified species shall be avoided until it is demonstrated that conservation goals for the particular species have been met throughout the MSHCP. Findings of equivalency shall be made demonstrating that the 90-percent standard has been met, if applicable. If equivalency findings cannot be demonstrated, then "biologically equivalent or superior preservation" must be provided.

2.0 METHODOLOGY

2.1 Summary of Surveys

GLA conducted biological surveys in order to identify and analyze actual or potential impacts to biological resources associated with the Project. The scope of the biological surveys was determined through a review of the CNDDB [CDFW 2014], CNPS 8th edition online inventory (CNPS 2010), Natural Resource Conservation Service (NRCS) soil data, MSHCP species and habitat maps, MSHCP sensitive soil maps, other pertinent literature, and knowledge of the region. Fieldwork included general biological surveys and habitat assessments, and focused surveys for the burrowing owl (*Athene cunicularia*). Observations of all plant and wildlife species were recorded during each of the above mentioned survey efforts. In addition, the site surveys included an assessment for aquatic resources, including MSHCP riparian/riverine areas and vernal pools; and waters subject to the jurisdiction of the U.S. Army Corps of Engineers (Corps), Regional Water Quality Control Board (Regional Board), and CDFW.

Table 2-1 provides a summary list of survey dates, survey types and personnel.

General Biological Survey Habitat Assessments Focused Burrow Survey	8/21	DM
Focused Burrowing Owl Surveys	8/21 8/27 8/28 8/29	DM DS DS DM

DM = David Moskovitz, DS = David Smith

Individual plants and wildlife species are evaluated in this report based on their “special-status.” For the purpose of this report, plants were considered “special-status” based on one or more of the following criteria:

- Listing through the Federal and/or State Endangered Species Act (ESA);
- Occurrence in the CNPS Rare Plant Inventory (Rank 1A/1B, 2A/2B, 3, or 4); and/or
- Occurrence in the CNDDB inventory.

Wildlife species were considered “special-status” based on one or more of the following criteria:

- Listing through the Federal and/or State ESA; and
- Designation by the State as a Species of Special Concern (SSC) or California Fully Protected (CFP) species.

Vegetation communities and habitats were considered "special-status" based on one or more of the following criteria:

- Global (G) and/or State (S) ranking of category 3 or less based on CDFW (see Section 3.2.2 below for further explanation); and
- Riparian habitat.

2.2 <u>Botanical Resources</u>

A site-specific survey program was designed to accurately document the botanical resources within the Project site, and consisted of five components: (1) a literature search; (2) preparation of a list of target special-status plant species and sensitive vegetation communities that could occur within the Project site; (3) general biological surveys; (4) vegetation mapping; and (5) habitat assessments for special-status plants.

2.2.1 Literature Search

Prior to conducting fieldwork, pertinent literature on the flora of the region was examined. A thorough archival review was conducted using available literature and other historical records. These resources included the following:

- CNPS *Inventory of Rare and Endangered Plants of California* (eighth edition). Rare Plant Advisory Committee, David Tibor, Convening Editor, California Native Plant Society. Sacramento, CA x + 388pp; (CNPS 2010); and

- CNDDB for the USGS 7.5' quadrangles: Sunnymead and surrounding quadrangles (CNDDB 2014).

2.2.2 Vegetation Mapping

Vegetation communities within the Project site were mapped according to the List of Vegetation Alliances and Associations (or Natural Communities List). The list is based on A Manual of California Vegetation, Second Edition or MCVII, which is the California expression of the National Vegetation Classification. Where necessary, deviations were made when areas did not fit into exact habitat descriptions. These vegetation communities were named based on the dominant plant species present. Plant communities were mapped in the field directly onto a 200-scale (1"=200') aerial photograph. A vegetation map is included as Exhibit 4. Representative site photographs are included as Exhibit 5.

2.2.3 Special-Status Plant Species and Habitats Evaluated for the Project Site

A literature search was conducted to obtain a list of special status plants with the potential to occur within the Project site. The CNDDB was initially consulted to determine well-known occurrences of plants and habitats of special concern in the region. Other sources used to develop a list of target species for the survey program included the CNPS online inventory (2010).

Based on this information, vegetation profiles and a list of sensitive plant species that could occur within the Project site were developed and incorporated into a mapping and survey program to achieve the following goals: (1) characterize the vegetation associations and land use; (2) identify the potential for any special status plants that may occur within the Project site; and (3) prepare a map showing the distribution of any sensitive botanical resources associated with the Project site, if applicable.

The Project site is not located within the MSHCP Narrow Endemic Plant Species Survey Area (NEPSSA) or Criteria Area Plant Species Survey Area (CAPSSA). As such, focused plant surveys are not required pursuant to the MSHCP.

2.3 Wildlife Resources

Wildlife species were evaluated and detected during field surveys by sight, call, tracks, and scat. Site reconnaissance was conducted in such a manner as to allow inspection of the entire Project Site by direct observation, including the use of binoculars. Observations of physical evidence and direct sightings of wildlife were recorded in field notes during the visit. Scientific nomenclature and common names for vertebrate species referred to in this report follow the Complete List of Amphibian, Reptile, Bird, and Mammal Species in California (CDFG 2008), Standard Common and Scientific Names for North American Amphibians, Turtles, Reptiles, and Crocodilians 6^{th} Edition, Collins and Taggert (2009) for amphibians and reptiles, and the American Ornithologists' Union Checklist 7^{th} Edition (2009) for birds. The methodology (including any applicable survey protocols) utilized to conduct general surveys, habitat assessments, and/or focused surveys for special-status animals are included below.

2.3.1 General Surveys

Birds

During the general biological and reconnaissance survey within the Project site, birds were identified incidentally within each habitat type. Birds were detected by both direct observation and by vocalizations, and were recorded in field notes.

Mammals

During general biological and reconnaissance survey within the Project site, mammals were identified incidentally within each habitat type. Mammals were detected both by direct observations and by the presence of diagnostic sign (i.e., tracks, burrows, scat, etc.).

Reptiles and Amphibians

During general biological and reconnaissance surveys within the Project site, reptiles and amphibians were identified incidentally during surveys within each habitat type. Habitats were examined for diagnostic reptile sign, which include shed skins, scat, tracks, snake prints, and lizard tail drag marks. All reptiles and amphibian species observed, as well as diagnostic sign, were recorded in field notes.

2.3.2 Special-Status Animal Species Evaluated for the Project Site

A literature search was conducted in order to obtain a list of special-status wildlife species with the potential to occur within the Project site. Species were evaluated based on two factors, including: 1) species identified by the CNDDB as occurring (either currently or historically) on or in the vicinity of the Project site, and 2) any other special-status animals that are known to occur within the vicinity of the Project site, or for which potentially suitable habitat occurs on the Project site.

2.3.3 Habitat Assessment for Special Status Animal Species

GLA biologist David Moskovitz conducted habitat assessments for special-status animal species on August 21, 2014. An aerial photograph, soil map and/or topographic map were used to determine the community types and other physical features that may support special-status and uncommon taxa within the Project site.

2.3.4 Focused Burrowing Owl Surveys

The Project site is located within the MSHCP burrowing owl survey area. GLA biologists David Moskovitz and David Smith conducted focused surveys for the burrowing owl for all suitable habitat areas within the Project site. Surveys were conducted in accordance with survey guidelines described in the 2006 MSHCP Burrowing Owl Survey Instructions. The guidelines stipulate that four focused survey visits should be conducted between March 1 and August 31. Within areas of suitable habitat, the MSHCP first requires a focused burrow survey to map all suitable burrows. The focused burrow survey was conducted on August 21, 2014. Focused burrowing owl surveys were conducted on August 27, 28, and 29, 2014. Weather conditions during the surveys were conducive to a high level of bird activity.

Surveys were conducted by walking meandering transects throughout areas of suitable habitat. Transects were spaced no more than 30 meters apart, adjusting for vegetation height and density, in order to provide adequate visual coverage of the survey areas. At the start of each transect, and at least every 100 meters along transects, the survey area was scanned for burrowing owls using binoculars. All suitable burrows were inspected for diagnostic owl sign (e.g., pellets, prey remains, whitewash, feathers, bones, and/or decoration) in order to identify potentially occupied burrows. Exhibit 6 provides locations of suitable burrows mapped during the transect surveys. Table 2-2 summarizes the burrowing owl survey visits. The results of the burrowing owl surveys are documented in Section 4.0 of this report.

Table 2-2. Summary of Burrowing Owl Surveys

Survey Date	Biologist	Start/End Time	Start/End Temperature	Start/End Wind Speed (mph)	Cloud Cover
8/21/14	DM	7:05/10:30	66/73	0-2	40%/20%
8/27/14	DS	6:00/7:15	60/66	0-2	Clear
8/28/14	DS	6:05/7:15	60/69	0-2	20%/Clear
8/29/14	DM	7:10/10:00	62/82	0-2	Clear

DM = David Moskovitz, DS = David Smith

2.4 Jurisdictional Delineation

Prior to beginning the field delineation a 200-scale color aerial photograph and the previously cited USGS topographic maps were examined to determine the locations of potential areas of Corps/CDFW jurisdiction. Suspected jurisdictional areas were field checked for the presence of definable channels and/or wetland vegetation, soils and hydrology. Potential wetland habitats at the subject site were evaluated using the methodology set forth in the U.S. Army Corps of Engineers 1987 Wetland Delineation Manual[1] (Wetland Manual) and the 2008 Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Supplement (Arid West Supplement)[2]. The presence of an Ordinary High Water Mark (OHWM) was determined using the 2008 Field Guide to Identification of the Ordinary High Water Mark (OHWM) in the Arid West Region of the Western United States[3] in conjunction with the Updated Datasheet for the Identification of the Ordinary High Water Mark (OHWM) in the Arid West Region of the Western United States.[4] While in the field the limits of the OHWM, wetlands, and CDFW jurisdiction were recorded using GPS technology and/or on copies of the aerial photography. Other data were recorded onto the appropriate datasheets.

2.5 MSHCP Riparian/Riverine Areas and Vernal Pools

GLA surveyed the site for riparian/riverine areas and vernal pool/seasonal pool habitat. *Volume I, Section 6.1.2* of the MSHCP describes the process through which protection of riparian/riverine areas and vernal pools would occur within the MSCHP Plan Area. The purpose is to ensure that the biological functions and values of these areas throughout the MSHCP Plan Area are maintained such that habitat values for species inside the MSCHP Conservation Area

are maintained. The MSHCP requires that as projects are proposed within the overall Plan Area, the effect of those projects on riparian/riverine areas and vernal pools must be addressed.

The MSHCP defines riparian/riverine areas as *lands which contain Habitat dominated by trees, shrubs, persistent emergent mosses and lichens, which occur close to or which depend upon soils moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year*.

The MSHCP defines vernal pools as *seasonal wetlands that occur in depression areas that have wetlands indicators of all three parameters (soils, vegetation, and hydrology) during the wetter portion of the growing season but normally lack wetland indictors of hydrology and/or vegetation during the drier portion of the growing season.*

With the exception of wetlands created for the purpose of providing wetlands Habitat or resulting from human actions to create open waters or from the alteration of natural stream courses, areas demonstrating characteristics as described above which are artificially created are not included in these definitions.

3.0 REGULATORY SETTING

The proposed Project is subject to state and federal regulations associated with a number of regulatory programs. These programs often overlap and were developed to protect natural resources, including: state- and federally listed plants and animals; aquatic resources including rivers and creeks, ephemeral streambeds, wetlands, and areas of riparian habitat; other special-status species which are not listed as threatened or endangered by the state or federal governments; and other special-status vegetation communities.

3.1 State and/or Federally Listed Plants or Animals

3.1.1 State of California Endangered Species Act

California's Endangered Species Act (CESA) defines an endangered species as "a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant which is in serious danger of becoming extinct throughout all, or a significant portion, of its range due to one or more causes, including loss of habitat, change in habitat, overexploitation, predation, competition, or disease." The State defines a threatened species as "a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that, although not presently threatened with extinction, is likely to become an Endangered species in the foreseeable future in the absence of the special protection and management efforts required by this chapter. Any animal determined by the commission as rare on or before January 1, 1985 is a threatened species." Candidate species are defined as "a native species or subspecies of a bird, mammal, fish, amphibian, reptile, or plant that the commission has formally noticed as being under review by the department for addition to either the list of endangered species or the list of threatened species, or a species for which the commission has published a notice of proposed regulation to add the species to either list." Candidate species may be afforded temporary protection as though they were already listed as threatened or endangered at the discretion of the Fish and Game Commission. Unlike the Federal Endangered Species Act (FESA), CESA does not list invertebrate species.

Article 3, Sections 2080 through 2085, of the CESA addresses the taking of threatened, endangered, or candidate species by stating "No person shall import into this state, export out of this state, or take, possess, purchase, or sell within this state, any species, or any part or product thereof, that the commission determines to be an endangered species or a threatened species, or attempt any of those acts, except as otherwise provided." Under the CESA, "take" is defined as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." Exceptions authorized by the state to allow "take" require permits or memoranda of understanding and can be authorized for endangered species, threatened species, or candidate species for scientific, educational, or management purposes and for take incidental to otherwise lawful activities. Sections 1901 and 1913 of the California Fish and Game Code provide that notification is required prior to disturbance.

3.1.2 Federal Endangered Species Act

The FESA of 1973 defines an endangered species as "any species that is in danger of extinction throughout all or a significant portion of its range." A threatened species is defined as "any species that is likely to become an Endangered species within the foreseeable future throughout all or a significant portion of its range." Under provisions of Section 9(a)(1)(B) of the FESA it is unlawful to "take" any listed species. "Take" is defined in Section 3(18) of FESA: "...harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." Further, the USFWS, through regulation, has interpreted the terms "harm" and "harass" to include certain types of habitat modification that result in injury to, or death of species as forms of "take." These interpretations, however, are generally considered and applied on a case-by-case basis and often vary from species to species. In a case where a property owner seeks permission from a Federal agency for an action that could affect a federally listed plant and animal species, the property owner and agency are required to consult with USFWS. Section 9(a)(2)(b) of the FESA addresses the protections afforded to listed plants.

3.1.3 State and Federal Take Authorizations for Listed Species

Federal or state authorizations of impacts to or incidental take of a listed species by a private individual or other private entity would be granted in one of the following ways:

- Section 7 of the FESA stipulates that any federal action that may affect a species listed as threatened or endangered requires a formal consultation with USFWS to ensure that the action is not likely to jeopardize the continued existence of the listed species or result in destruction or adverse modification of designated critical habitat. 16 U.S.C. 1536(a)(2).
- In 1982, the FESA was amended to give private landowners the ability to develop Habitat Conservation Plans (HCP) pursuant to Section 10(a) of the FESA. Upon development of an HCP, the USFWS can issue incidental take permits for listed species where the HCP specifies at minimum, the following: (1) the level of impact that will result from the taking, (2) steps that will minimize and mitigate the impacts, (3) funding necessary to implement the plan, (4) alternative actions to the taking considered by the applicant and the reasons why such alternatives were not chosen, and (5) such other measures that the Secretary of the Interior may require as being necessary or appropriate for the plan.
- Sections 2090-2097 of the CESA require that the state lead agency consult with CDFW on projects with potential impacts on state-listed species. These provisions also require CDFW to coordinate consultations with USFWS for actions involving federally listed as well as state-listed species. In certain circumstances, Section 2080.1 of the California Fish and Game Code allows CDFW to adopt the federal incidental take statement or the 10(a) permit as its own based on its findings that the federal permit adequately protects the species under state law.

3.1.4 Take Authorizations Pursuant to the MSHCP

The Western Riverside County MSHCP was adopted on June 17, 2003, and an Implementing Agreement (IA) was executed between the Federal and State Wildlife Agencies (USFWS and CDFW) and participating entities. The MSHCP is a comprehensive habitat conservation-planning program for western Riverside County. The intent of the MSHCP is to preserve native vegetation and meet the habitat needs of multiple species, rather than focusing preservation efforts on one species at a time. As such, the MSHCP is intended to streamline review of individual projects with respect to the species and habitats addressed in the MSHCP, and to provide for an overall

Conservation Area that would be of greater benefit to biological resources than would result from a piecemeal regulatory approach. The MSHCP provides coverage (including take authorization for listed species) for special-status plant and animal species, as well as mitigation for impacts to sensitive species.

Through agreements with the U.S. Fish and Wildlife Service (USFWS) and the California Department of Fish and Wildlife (CDFW), the MSHCP designates 146 special-status animal and plant species that receive some level of coverage under the plan. Of the 146 "Covered Species" designated under the MSHCP, the majority of these species have no additional survey/conservation requirements. In addition, through project participation with the MSHCP, the MSHCP provides mitigation for project-specific impacts to Covered Species so that the impacts would be reduced to below a level of significance pursuant to CEQA. As noted above, project-specific survey requirements exist for species designated as "Covered Species not yet adequately conserved". These include Narrow Endemic Plant Species, as identified by the Narrow Endemic Plant Species Survey Areas (NEPSSA); Criteria Area Plant Species identified by the Criteria Area Species Survey Areas (CASSA); animals species as identified by survey area; and plant and animal species associated with riparian/riverine areas and vernal pool habitats (*Volume I, Section 6.1.2* of the MSHCP document).

3.2 California Environmental Quality Act

3.2.1 CEQA Guidelines Section 15380

CEQA requires evaluation of a project's impacts on biological resources and provides guidelines and thresholds for use by lead agencies for evaluating the significance of proposed impacts. Sections 5.1.1 and 5.2.2 below set forth these thresholds and guidelines. Furthermore, pursuant to the CEQA Guidelines Section 15380, CEQA provides protection for non-listed species that could potentially meet the criteria for state listing. For plants, CDFW recognizes that plants on Lists 1A, 1B, or 2 of the CNPS *Inventory of Rare and Endangered Plants in California* may meet the criteria for listing and should be considered under CEQA. CDFW also recommends protection of plants, which are regionally important, such as locally rare species, disjunct populations of more common plants, or plants on the CNPS Lists 3 or 4.

3.2.2 Non-Listed Special-Status Plants, Wildlife and Vegetation Communities Evaluated Under CEQA

Federally Designated Special-Status Species

Within recent years, the USFWS instituted changes in the listing status of candidate species. Former C1 (candidate) species are now referred to simply as candidate species and represent the only candidates for listing. Former C2 species (for which the USFWS had insufficient evidence to warrant listing) and C3 species (either extinct, no longer a valid taxon or more abundant than was formerly believed) are no longer considered as candidate species. Therefore, these species are no longer maintained in list form by the USFWS, nor are they formally protected. This term is employed in this document, but carries no official protections. All references to federally protected species in this report (whether listed, proposed for listing, or candidate) include the most current published status or candidate category to which each species has been assigned by USFWS.

For this report the following acronyms are used for federal special-status species:

- FE Federally listed as Endangered
- FT Federally listed as Threatened
- FPE Federally proposed for listing as Endangered
- FPT Federally proposed for listing as Threatened
- FC Federal Candidate Species (former C1 species)
- FSC Federal Species of Concern (former C2 species)

State-Designated Special-Status Species

Some mammals and birds are protected by the state as Fully Protected (SFP) Mammals or Fully Protected Birds, as described in the California Fish and Game Code, Sections 4700 and 3511, respectively. California SSC are designated as vulnerable to extinction due to declining population levels, limited ranges, and/or continuing threats. This list is primarily a working document for the CDFW's CNDDB project. Informally listed taxa are not protected, but warrant consideration in the preparation of biotic assessments. For some species, the CNDDB is only concerned with specific portions of the life history, such as roosts, rookeries, or nest sites.

For this report the following acronyms are used for State special-status species:

- SE State-listed as Endangered
- ST State-listed as Threatened
- SR State-listed as Rare
- SCE State Candidate for listing as Endangered
- SCT State Candidate for listing as Threatened
- SFP State Fully Protected
- SP State Protected
- SSC State Species of Special Concern

CNDDB Global/State Rankings

The CNDDB provides global and state rankings for species and communities based on a system developed by The Nature Conservancy to measure rarity of a species. The ranking provides a shorthand formula about how rare a species/community is, and is based on the best information available from multiple sources, including state and federal listings, and other groups that recognize species as sensitive (e.g., Bureau of Land Management, Audubon Society, etc.). State and global rankings are used to prioritize conservation and protection efforts so that the rarest species/communities receive immediate attention. In both cases, the lower ranking (i.e., G1 or S1) indicates extreme rarity. Rare species are given a ranking from 1 to 3. Species with a ranking of 4 or 5 is considered to be common. If the exact global/state ranking is undetermined, a range is generally provided. For example, a global ranking of "G1G3" indicates that a species/community global rarity is between G1 and G3. If the animal being considered is a subspecies of a broader species, a "T" ranking is attached to the global ranking. The following are descriptions of global and state rankings:

Global Rankings

- G1 – Critically imperiled globally because of extreme rarity (5 or fewer occurrences), or because of some factor(s) making it especially vulnerable to extinction.
- G2 – Imperiled globally because of rarity (6-20 occurrences), or because of some other factor(s) making it very vulnerable to extinction throughout its range.
- G3 – Either very rare and local throughout its range (21 to 100 occurrences), or found locally (even abundantly at some of its locations) in a restricted range (e.g., a physiographic region), or because of some other factor(s) making it vulnerable to extinction throughout its range.
- G4 – Uncommon but not rare; some cause for long-term concern due to declines or other factors.
- G5 – Common, widespread and abundant.

State Rankings

- S1 – Extremely rare; typically 5 or fewer known occurrences in the state; or only a few remaining individuals; may be especially vulnerable to extirpation.
- S2 – Very rare; typically between 6 and 20 known occurrences; may be susceptible to becoming extirpated.
- S3 – Rare to uncommon; typically 21 to 50 known occurrences; S3 ranked species are not yet susceptible to becoming extirpated in the state but may be if additional populations are destroyed.
- S4 - Uncommon but not rare; some cause for long-term concern due to declines or other factors.
- S5 - Common, widespread, and abundant in the state.

California Native Plant Society

The CNPS is a private plant conservation organization dedicated to the monitoring and protection of sensitive species in California. The CNPS's Eighth Edition of the *California Native Plant Society's Inventory of Rare and Endangered Plants of California* separates plants of interest into five ranks. CNPS has compiled an inventory comprised of the information focusing on geographic distribution and qualitative characterization of Rare, Threatened, or Endangered vascular plant species of California. The list serves as the candidate list for listing as threatened and endangered by CDFW. CNPS has developed five categories of rarity that are summarized in Table 3-1.

Table 3-1. CNPS Ranks 1, 2, 3, & 4, and Threat Code Extensions

CNPS Rank	Comments
Rank 1A – Presumed Extinct in California	Thought to be extinct in California based on a lack of observation or detection for many years.
Rank 1B – Rare or Endangered in California and Elsewhere	Species, which are generally rare throughout their range that are also judged to be vulnerable to other threats such as declining habitat.
Rank 2A – Presumed Extinct in California, More Common Elsewhere	Species that are presumed extinct in California but more common outside of California
Rank 2B - Rare or Endangered in California, More Common Elsewhere	Species that are rare in California but more common outside of California
Rank 3 – Need More Information	Species that are thought to be rare or in decline but CNPS lacks the information needed to assign to the appropriate list. In most instances, the extent of surveys for these species is not sufficient to allow CNPS to accurately assess whether these species should be assigned to a specific rank. In addition, many of the Rank 3 species have associated taxonomic problems such that the validity of their current taxonomy is unclear.
Rank 4 – Plants of Limited Distribution	Species that are currently thought to be limited in distribution or range whose vulnerability or susceptibility to threat is currently low. In some cases, as noted above for Rank 3 species, CNPS lacks survey data to accurately determine status in California. Many species have been placed on Rank 4 in previous editions of the "Inventory" and have been removed as survey data has indicated that the species are more common than previously thought. CNPS recommends that species currently included on this list should be monitored to ensure that future substantial declines are minimized.
Extension	**Comments**
.1 – Seriously endangered in California	Species with over 80% of occurrences threatened and/or have a high degree and immediacy of threat.
.2 – Fairly endangered in California	Species with 20-80% of occurrences threatened.
.3 – Not very endangered in California	Species with <20% of occurrences threatened or with no current threats known.

3.3 Jurisdictional Waters

3.3.1 Army Corps of Engineers

Pursuant to Section 404 of the Clean Water Act, the Corps regulates the discharge of dredged and/or fill material into waters of the United States. The term "waters of the United States" is defined in Corps regulations at 33 CFR Part 328.3(a) as:

(1) All waters which are currently used, or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;
(2) All interstate waters including interstate wetlands;

(3) All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, the use, degradation or destruction of which could affect foreign commerce including any such waters:

(i) Which are or could be used by interstate or foreign travelers for recreational or other purposes; or

(ii) From which fish or shell fish are or could be taken and sold in interstate or foreign commerce; or

(iii) Which are used or could be used for industrial purpose by industries in interstate commerce;

(4) All impoundments of waters otherwise defined as waters of the United States under the definition;

(5) Tributaries of waters identified in paragraphs (a) (1)-(4) of this section;

(6) The territorial seas;

(7) Wetlands adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs (a) (1)-(6) of this section.

Waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of CWA (other than cooling ponds as defined in 40 CFR 123.11(m) which also meet the criteria of this definition) are not waters of the United States.

(8) Waters of the United States do not include prior converted cropland.[5]

Notwithstanding the determination of an area's status as prior converted cropland by any other federal agency, for the purposes of the Clean Water Act, the final authority regarding Clean Water Act jurisdiction remains with the EPA.

In the absence of wetlands, the limits of Corps jurisdiction in non-tidal waters, such as intermittent streams, extend to the OHWM which is defined at 33 CFR 328.3(e) as:

...that line on the shore established by the fluctuation of water and indicated by physical characteristics such as clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas.

The term “wetlands” (a subset of “waters of the United States”) is defined at 33 CFR 328.3(b) as "those areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support...a prevalence of vegetation typically adapted for life in saturated soil conditions." In 1987 the Corps published a manual to guide its field personnel in determining jurisdictional wetland boundaries. The methodology set forth in the 1987 Wetland

---

[5] The term “prior converted cropland” is defined in the Corps’ Regulatory Guidance Letter 90-7 (dated September 26, 1990) as “wetlands which were both manipulated (drained or otherwise physically altered to remove excess water from the land) and cropped before 23 December 1985, to the extent that they no longer exhibit important wetland values. Specifically, prior converted cropland is <u>inundated for no more than 14 consecutive days</u> during the growing season….” [Emphasis added.]

Delineation Manual and the Arid West Supplement generally require that, in order to be considered a wetland, the vegetation, soils, and hydrology of an area exhibit at least minimal hydric characteristics. While the manual and Supplement provide great detail in methodology and allow for varying special conditions, a wetland should normally meet each of the following three criteria:

- more than 50 percent of the dominant plant species at the site must be typical of wetlands (i.e., rated as facultative or wetter in the National List of Plant Species that Occur in Wetlands[6]);

- soils must exhibit physical and/or chemical characteristics indicative of permanent or periodic saturation (e.g., a gleyed color, or mottles with a matrix of low chroma indicating a relatively consistent fluctuation between aerobic and anaerobic conditions); and

- Whereas the 1987 Manual requires that hydrologic characteristics indicate that the ground is saturated to within 12 inches of the surface for at least five percent of the growing season during a normal rainfall year, the Arid West Supplement does not include a quantitative criteria with the exception for areas with "problematic hydrophytic vegetation", which require a minimum of 14 days of ponding to be considered a wetland.

On January 9, 2001 and June 5, 2007 the Supreme Court of the United States issued two rulings *(Solid Waste Agency of Northern Cook County v. United States Army Corps of Engineers, et al [SWANCC]. and Rapanos v. United States and Carabell v. United States [Rapanos], respectively). The first case reiterated that "isolated" waters (those with no interstate commerce connection) are not subject to federal jurisdiction under Section 404 of the Clean Water Act. The second case determined (in a plurality vote) that a water must have a nexus with a "traditionally navigable water (an undefined term) to be subject to federal jurisdiction under Section 404 of the Clean Water Act. The Corps and EPA continue to grapple with providing clear guidance on these two decisions and continue to propose and/or issue guidance. In the meantime, applicants who believe they have waters that would be exempt from federal jurisdiction pursuant to these two rulings must go through a formal process with the Corps* ***and*** *EPA to obtain concurrence.*

3.3.2 Regional Water Quality Control Board

Section 401 of the Clean Water Act requires any applicant for a Section 404 permit to obtain certification from the State that the discharge (and the operation of the facility being constructed) will comply with the applicable effluent limitation and water quality standards. In California this 401 certification is obtained from the Regional Water Quality Control Board. The Corps, by law, cannot issue a Section 404 permit until a 401 certification is issued or waived.

Subsequent to the SWANCC decision, the Chief Counsel for the State Water Resources Control Board issued a memorandum that addressed the effects of the SWANCC decision on the Section

[6] Lichvar, R. W. 2013. *The National Wetland Plant List:* 2013 wetland ratings. Phytoneuron 2013-49: 1-241.

401 Water Quality Certification Program.[7] The memorandum stating that for waters that are no longer considered subject to federal jurisdiction pursuant to Section 404 of the Clean Water Act, but which remain "waters of the state", the State will continue to regulate discharges under the Porter-Cologne Act. In such cases the applicant must apply for and obtain a Waste Discharge Requirement from the Regional Board.

3.3.3 California Department of Fish and Wildlife

Pursuant to Division 2, Chapter 6, Sections 1600-1603 of the California Fish and Game Code, the CDFCDFW regulates all diversions, obstructions, or changes to the natural flow or bed, channel, or bank of any river, stream, or lake, which supports fish or wildlife.

CDFW defines a "stream" (including creeks and rivers) as "a body of water that flows at least periodically or intermittently through a bed or channel having banks and supports fish or other aquatic life. This includes watercourses having surface or subsurface flow that supports or has supported riparian vegetation." CDFW's definition of "lake" includes "natural lakes or man-made reservoirs."

CDFW jurisdiction within altered or artificial waterways is based upon the value of those waterways to fish and wildlife. CDFW Legal Advisor has prepared the following opinion[8]:

- Natural waterways that have been subsequently modified and which have the potential to contain fish, aquatic insects and riparian vegetation will be treated like natural waterways...

- Artificial waterways that have acquired the physical attributes of natural stream courses and which have been viewed by the community as natural stream courses, should be treated by [CDFW] as natural waterways...

- Artificial waterways without the attributes of natural waterways should generally not be subject to Fish and Game Code provisions...

Thus, CDFW jurisdictional limits closely mirror those of the Corps. Exceptions are CDFW's addition of artificial stock ponds and irrigation ditches constructed on uplands, and the addition of riparian habitat supported by a river, stream, or lake regardless of the riparian area's federal wetland status.

4.0 RESULTS

This section provides the results of general biological surveys, vegetation mapping, habitat assessments for special-status plants and animals, focused burrowing owl surveys, an assessment for MSHCP riparian/riverine areas and vernal pools, and an assessment for Waters of the United States (including wetlands) subject to the jurisdiction of the Corps and Regional Board, and streams (including riparian vegetation) and lakes subject to the jurisdiction of CDFW.

4.1 Existing Conditions

The Project site consists of a flat, undeveloped parcel that has been heavily disturbed through past and ongoing activities, including disking. The majority of the site is dominated by plants associated with ruderal areas. The dominant plant at the site is Russian thistle (*Salsola tragus*). Additional plant species detected onsite include tumbling pigweed (*Amaranthus albus*), puncture vine (*Tribulus terrestris*), vinegar weed (*Trichostema lanceolatum*), telegraph weed (*Heterotheca grandiflora*), annual bur-sage (*Ambrosia acanthicarpa*), lamb's quarters (*Chenopodium album*), and common sunflower (*Helianthus annuus*).

Wildlife detected during the surveys included birds such as mourning dove (*Zenaida macroura*), rock dove (*Columbia livia*), American crow (*Corvus brachyrhynchos*), American kestrel (*Falco sparverius*), California horned lark (*Eremophila alpestris actia*), house finch (*Carpodacus mexicanus*), European starling (*Sturnus vulgaris*), Brewer's blackbird (*Euphagus cyanocephalus*), lark sparrow (*Chondestes grammacus*), killdeer (*Charadrius vociferus*), barn swallow (*Hirundo rustica*), cliff swallow (*Petrochelidon pyrrhonota*), red-tailed hawk (*Buteo jamaicensis*), western kingbird (*Tyrannus verticalis*), and black phoebe (*Sayornis nigricans*). Mammals observed at the Project site included coyote (*Canis latrans*) and Audubon's cottontail (*Sylvilagus audubonii*).

4.2 Vegetation Mapping

The entire Project site is disturbed by past and ongoing activities, including disking. The majority of the site supports plant species typical of ruderal areas. A Vegetation Map is attached as Exhibit 4. Photographs depicting the various vegetation types and land uses are attached as Exhibit 5.

4.3 Special-Status Habitats

The CNDDB identifies the following special-status vegetation communities for the Sunnymead and surrounding quadrangle maps: Southern Coast Live Oak Riparian Forest, Southern Cottonwood Willow Riparian Forest, Southern Sycamore Alder Riparian Woodland, and Southern Riparian Scrub. The Project site does not contain any special-status vegetation types, including those identified by the CNDDB.

4.4 Special-Status Plants

No special-status plants were detected at the Project site, and in general no special-status plants are expected to occur due to the lack of suitable habitat. Table 4-1 provides a list of special-status plants evaluated for the Project site through general biological surveys and habitat assessments. Species were evaluated based the following factors: 1) species identified by the CNDDB and CNPS as occurring (either currently or historically) on or in the vicinity of the Project site, 2) applicable MSHCP survey areas, and 3) any other special-status plants that are known to occur within the vicinity of the Project site, or for which potentially suitable habitat occurs within the site.

Table 4-1. Special-Status Plants Evaluated for the Project Site

Status

Federal
FE – Federally Endangered
FT – Federally Threatened
FC – Federal Candidate

State
SE – State Endangered
ST – State Threatened

CNPS
Rank 1B – Plants rare, threatened, or endangered in California and elsewhere.
Rank 2A – Plants rare, threatened, or endangered in California, but more common elsewhere.
Rank 2B – Plants rare, threatened, or endangered in California, but more common elsewhere.
Rank 3 – Plants about which more information is needed.
Rank 4 – Plants of limited distribution (a watch list).

Threat Code extension
.1 – Seriously endangered in California (over 80% occurrences threatened)
.2 – Fairly endangered in California (20-80% occurrences threatened)
.3 – Not very endangered in California (<20% of occurrences threatened or no current threats known)

Occurrence

- Does not occur – The site does not contain habitat for the species and/or the site does not occur within the geographic range of the species.
- Absent – The site contains suitable habitat for the species, but the species has been confirmed absent through focused surveys.
- Not expected to occur – The species is not expected to occur onsite due to low habitat quality, however absence cannot be ruled out.
- Potential to occur – The species has a potential to occur onsite based on suitable habitat, however its presence/absence could not be confirmed.
- Present – The species was detected onsite incidentally or through focused surveys.

Species Name	Status	Habitat Requirements	Occurrence
California screw-moss *Tortula californica*	Federal: None State: None CNPS: List 1B.2	Sandy soil in chenopod scrub, and valley and foothill grassland.	Does not occur.
California Orcutt grass *Orcuttia californica*	Federal: FE State: SE CNPS: List 1B	Vernal pools	Does not occur.

Species Name	Status	Habitat Requirements	Occurrence
Chaparral sand verbena *Abronia villosa* var. *aurita*	Federal: None State: None CNPS: List 1B.1	Sandy soils in chaparral, coastal sage scrub.	Does not occur.
Coulter's goldfields *Lasthenia glabrata* ssp. *coulteri*	Federal: None State: None CNPS: List 1B.1	Playas, vernal pools, marshes and swamps (coastal salt).	Does not occur.
Coulter's saltbush *Atriplex coulteri*	Federal: None State: None CNPS: List 1B.2	Coastal bluff scrub, coastal dunes, coastal sage scrub, valley and foothill grassland. Occurring on alkaline or clay soils.	Does not occur.
Davidson's saltscale *Atriplex serenana* var. *davidsonii*	Federal: None State: None CNPS: List 1B	Alkaline soils in coastal sage scrub, coastal bluff scrub.	Does not occur.
Jaeger's milk-vetch *Astragalus pachypus* var. *jaegeri*	Federal: None State: None CNPS: List 1B.1	Sandy or rocky soils in chaparral, cismontane woodland, coastal scrub, and valley and foothill grassland.	Does not occur.
Little mousetail *Myosurus minimus* ssp. *apus*	Federal: SOC State: None CNPS: List 3	Valley and foothill grassland, vernal pools (alkaline soils).	Does not occur.
Long-spined spineflower *Chorizanthe polygonoides* var. *longispina*	Federal: None State: None CNPS: List 1B.2	Clay soils in chaparral, coastal sage scrub, meadows and seeps, and valley and foothill grasslands	Does not occur.
Many-stemmed dudleya *Dudleya multicaulis*	Federal: None State: None CNPS: List 1B.2	Chaparral, coastal sage scrub, valley and foothill grassland. Often occurring in clay soils.	Does not occur.
Marsh sandwort *Arenaria paludicola*	Federal: FE State: SE CNPS: List 1B.1	Bogs and fens, freshwater marshes and swamps.	Does not occur.
Mud nama *Nama stenocarpum*	Federal: None State: None CNPS: List 2	Marshes and swamps	Does not occur.
Munz's onion *Allium munzii*	Federal: FE State: ST CNPS: List 1B.1	Clay soils in chaparral, coastal sage scrub, and valley and foothill grasslands	Does not occur.
Nevin's barberry *Berberis nevinii*	Federal: FE State: SE CNPS: List 1B.1	Sandy or gravelly soils in chaparral, cismontane woodland, coastal scrub, and riparian scrub.	Does not occur.
Palmer's grapplinghook *Harpagonella palmeri*	Federal: None State: None CNPS: List 4.2	Chaparral, coastal sage scrub, valley and foothill grassland. Occurring in clay soils.	Does not occur.

Species Name	Status	Habitat Requirements	Occurrence
Parish's brittlescale *Atriplex parishii*	Federal: None State: None CNPS: List 1B	Chenopod scrub, playas, vernal pools.	Does not occur.
Parry's spineflower *Chorizanthe parryi* var. *parryi*	Federal: None State: None CNPS: List 1B.1	Sandy or rocky soils in open habitats of chaparral and coastal sage scrub.	Does not occur.
Payson's jewelflower *Caulanthus simulans*	Federal: None State: None CNPS: List 4.2	Sandy or granitic soils in chaparral and coastal scrub.	Does not occur.
Plummer's mariposa lily *Calochortus plummerae*	Federal: None State: None CNPS: List 1B.2	Granitic, rock soils within chaparral, cismontane woodland, coastal sage scrub, lower montane coniferous forest, valley and foothill grassland.	Does not occur.
Prostrate navarretia *Navarretia prostrata*	Federal: None State: None CNPS: List 1B.1	Coastal sage scrub, valley and foothill grassland (alkaline), vernal pools. Occurring in mesic soils.	Does not occur.
Robinson's pepper grass *Lepidium virginicum* var. *robinsonii*	Federal: None State: None CNPS: List 1B.2	Chaparral, coastal sage scrub	Does not occur.
Round-leaved filaree *California macrophylla*	Federal: None State: None CNPS: List 1B.1	Clay soils in cismontane woodland, valley and foothill grassland	Does not occur.
Salt marsh bird's-beak *Chloropyron maritimum* ssp. *maritimum*	Federal: FE State: SE CNPS: List 1B.2	Coastal dune, coastal salt marshes and swamps.	Does not occur.
Salt spring checkerbloom *Sidalcea neomexicana*	Federal: None State: None CNPS: List 2.2	Mesic, alkaline soils in chaparral, coastal sage scrub, lower montane coniferous forest, Mojavean desert scrub, and playas.	Does not occur.
San Bernardino aster *Symphyotrichum defoliatum*	Federal: None State: None CNPS: List 1B.2	Cismontane woodland, coastal scrub, lower montane coniferous forest, meadows and seeps, marshes and swamps, valley and foothill grassland (vernally mesic).	Does not occur.
San Diego ambrosia *Ambrosia pumila*	Federal: FE State: None CNPS: List 1B.1	Chaparral, coastal sage scrub, valley and foothill grassland, vernal pools. Often in disturbed habitats.	Does not occur.
San Jacinto Valley crownscale *Atriplex coronata* var. *notatior*	Federal: FE State: None CNPS: List 1B	Alkaline soils in chenopod scrub, valley and foothill grassland, vernal pools.	Does not occur.

Species Name	Status	Habitat Requirements	Occurrence
Slender-horned spineflower *Dodecahema leptoceras*	Federal: FE State: SE CNPS: List 1B.1	Sandy soils in alluvial scrub, chaparral, cismontane woodland.	Does not occur.
Smooth tarplant *Centromadia pungens* ssp. *laevis*	Federal: None State: None CNPS: List 1B.1	Alkaline soils in chenopod scrub, meadows and seeps, playas, riparian woodland, valley and foothill grasslands, disturbed habitats.	Does not occur.
Thread-leaved brodiaea *Brodiaea filifolia*	Federal: FT State: SE CNPS: List 1B.1	Clay soils in chaparral (openings), cismontane woodland, coastal sage scrub, playas, valley and foothill grassland, vernal pools.	Does not occur.
Wright's trichocoronis *Trichocoronis wrightii* var. *wrightii*	Federal: None State: None CNPS: List 2	Alkaline soils in meadows and seeps, marshes and swamps, riparian scrub, vernal pools.	Does not occur.

4.5 Special-Status Animals

One special-status animal (California horned lark) was detected onsite during biological surveys, although this species is covered under the MSHCP without additional survey/conservation requirements. Additional special-status animals have some potential to occur onsite, though the potential for use is limited due to the disturbed nature of the site, and the fact that the site is surrounded by development. Table 4-2 provides a list of special-status animals evaluated for the Project site through general biological surveys, habitat assessments, and focused surveys. Species were evaluated based on two factors, including: 1) species identified by the CNDDB as occurring (either currently or historically) on or in the vicinity of the Project site, 2) applicable MSHCP survey areas, and 3) any other special-status animals that are known to occur within the vicinity of the Project site, for which potentially suitable habitat occurs on the site.

Table 4-2. Special Status Animals Evaluated for the Project Site

Status

FC – Federal Candidate

State
SE – State Endangered
ST – State Threatened
CFP – California Fully-Protected Species
SSC – Species of Special Concern

Western Bat Working Group (WBWG)
H – High Priority
LM – Low-Medium Priority
M – Medium Priority
MH – Medium-High Priority

Occurrence

- Does not occur – The site does not contain habitat for the species and/or the site does not occur within the geographic range of the species.
- Absent – The site contains suitable habitat for the species, but the species has been confirmed absent through focused surveys.
- Not expected to occur – The species is not expected to occur onsite due to low habitat quality, however absence cannot be ruled out.
- Potential to occur – The species has a potential to occur onsite based on suitable habitat, however its presence/absence could not be confirmed.
- Present – The species was detected onsite incidentally or through focused surveys.

Species Name	Status	Habitat Requirements	Occurrence
Invertebrates			
Riverside fairy shrimp *Streptocephalus woottoni*	Federal: FE State: None	Restricted to deep seasonal vernal pools, vernal pool-like ephemeral ponds, and stock ponds.	Does not occur.
Vernal pool fairy shrimp *Branchinecta lynchi*	Federal: FT State: None	Seasonal vernal pools	Does not occur.
Amphibians			
Western spadefoot *Scaphiopus hammondii*	Federal: None State: SSC	Seasonal pools in coastal sage scrub, chaparral, and grassland habitats.	Does not occur.
Reptiles			
Coast patch-nosed snake *Salvadora hexalepis virgultea*	Federal: None State: SSC	Occurs in coastal chaparral, desert scrub, washes, sandy flats, and rocky areas.	Does not occur.
Coast horned lizard *Phrynosoma blainvillii*	Federal: None State: SSC	Occurs in a variety of vegetation types including coastal sage scrub, chaparral, annual grassland, oak woodland, and riparian woodlands.	Does not occur.

Species Name	Status	Habitat Requirements	Occurrence
Coastal whiptail *Aspidoscelis tigris*	Federal: None State: None	Open, often rocky areas with little vegetation, or sunny microhabitats within shrub or grassland associations.	Potential to occur.
Northern red-diamond rattlesnake *Crotalus exsul*	Federal: None State: SSC	Habitats with heavy brush and rock outcrops, including coastal sage scrub and chaparral.	Does not occur.
Orangethroat whiptail *Aspidoscelis hyperythra*	Federal: None State: SSC	Coastal sage scrub, chaparral, non-native grassland, oak woodland, and juniper woodland.	Does not occur.
Rosy boa *Charina trivirgata*	Federal: None State: SSC	Coastal sage scrub, chaparral, or mixed habitats, commonly with rocky soils and outcrops. Also in oak woodlands and riparian areas bordering scrub habitats.	Does not occur.
San Bernardino ringneck snake *Diadophis punctatus modestus*	Federal: None State: None	Moist habitats including woodlands, forest, grasslands, chaparral, farms, and gardens.	Does not occur.
Silvery legless lizard *Anniella pulchra pulchra*	Federal: None State: SSC	Occurs primarily in areas with sandy or loose organic soil, or where there is plenty of leaf litter. Associated with coastal sage scrub, chaparral, coastal dunes, valley/foothill grasslands, oak woodlands, and pine forests.	Does not occur.
Southwestern pond turtle *Emys marmorata pallida*	Federal: None State: SSC	Slow-moving permanent or intermittent streams, small ponds and lakes, reservoirs, abandoned gravel pits, permanent and ephemeral shallow wetlands, stock ponds, and treatment lagoons. Abundant basking sites and cover necessary, including logs, rocks, submerged vegetation, and undercut banks.	Does not occur.
Two-striped garter snake *Thamnophis hammondii*	Federal: None State: SSC	Aquatic snake typically associated with wetland habitats such as streams, creeks, and pools.	Does not occur.

Attachment: Biological Report (2444 : Legacy Park Project)

Species Name	Status	Habitat Requirements	Occurrence
Birds			
Bell's sage sparrow *Amphispiza belli belli*	Federal: FSC State: SSC	Chaparral and coastal sage scrub along the coastal lowlands, inland valleys, and in the lower foothills of local mountains.	Does not occur.
Burrowing owl *Athene cunicularia*	Federal: None State: SSC	Shortgrass prairies, grasslands, lowland scrub, agricultural lands (particularly rangelands), coastal dunes, desert floors, and some artificial, open areas as a year-long resident. Occupies abandoned ground squirrel burrows as well as artificial structures such as culverts and underpasses.	Potential to occur.
California horned lark *Eremophila alpestris actia*	Federal: None State: None	Occupies a variety of open habitats, usually where trees and large shrubs are absent.	Present.
Coastal cactus wren *Campylorhynchus brunneicapillus couesi*	Federal: None State: SSC	Occurs almost exclusively in cactus (cholla and prickly pear) dominated coastal sage scrub.	Does not occur.
Coastal California gnatcatcher *Polioptila californica californica*	Federal: FT State: SSC	Low elevation coastal sage scrub and coastal bluff scrub.	Does not occur.
Ferruginous hawk (wintering) *Buteo regalis*	Federal: FSC State: SSC	Open, dry country, perching on trees, posts, and mounds. In California, wintering habitat consists of open terrain and grasslands of the plains and foothills.	Potential to occur for winter foraging.
Golden eagle *Aquila chrysaetos*	Federal: None State: SSC	In southern California, occupies grasslands, brushlands, deserts, oak savannas, open coniferous forests, and montane valleys. Nests on rock outcrops and ledges.	Does not occur.
Least Bell's vireo *Vireo bellii pusillus*	Federal: FE State: SE	Dense riparian habitats with a stratified canopy, including southern willow scrub, mule fat scrub, and riparian forest.	Does not occur.

Species Name	Status	Habitat Requirements	Occurrence
Loggerhead shrike *Lanius ludovicianus*	Federal: None State: SSC	Forages over open ground within areas of short vegetation, pastures with fence rows, old orchards, mowed roadsides, cemeteries, golf courses, riparian areas, open woodland, agricultural fields, desert washes, desert scrub, grassland, broken chaparral and beach with scattered shrubs.	Potential to occur.
Long-eared owl *Asio otus*	Federal: None State: SSC	Riparian habitats are required by the long-eared owl, but it also uses live-oak thickets and other dense stands of trees.	Does not occur.
Northern harrier (nesting) *Circus cyaneus*	Federal: None State: SSC	A variety of habitats, including open wetlands, grasslands, wet pasture, old fields, dry uplands, and croplands.	Does not occur.
Southwestern willow flycatcher *Empidonax traillii extimus*	Federal: FE State: SE	Riparian woodlands along streams and rivers with mature dense thickets of trees and shrubs.	Does not occur.
Tricolored blackbird *Agelaius tricolor*	Federal: FSC State: SSC	Breeding colonies require nearby water, a suitable nesting substrate, and open-range foraging habitat of natural grassland, woodland, or agricultural cropland.	Does not occur.
Western yellow-billed cuckoo *Coccyzus americanus occidentalis*	Federal: FC State: SE	Dense, wide riparian woodlands with well-developed understories.	Does not occur.
White-faced ibis (nesting colony) *Plegadis chihi*	Federal: FSC State: SSC	Winter foraging occurs in wet meadows, marshes, ponds, lakes, rivers, and agricultural fields. Requires extensive marshes for nesting.	Does not occur.
White-tailed kite (nesting) *Elanus leucurus*	Federal: None State: CFP	Low elevation open grasslands, savannah-like habitats, agricultural areas, wetlands, and oak woodlands. Dense canopies used for nesting and cover.	Does not occur.

Attachment: Biological Report (2444 : Legacy Park Project)

Species Name	Status	Habitat Requirements	Occurrence
Yellow-breasted chat *Icteria virens*	Federal: None State: SSC	Dense, relatively wide riparian woodlands and thickets of willows, vine tangles, and dense brush with well-developed understories.	Does not occur.
Yellow warbler *Setophaga petechia*	Federal: None State: SSC	Breed in lowland and foothill riparian woodlands dominated by cottonwoods, alders, or willows and other small trees and shrubs typical of low, open-canopy riparian woodland. During migration, forages in woodland, forest, and shrub habitats.	Does not occur.
Mammals			
American badger *Taxidea taxus*	Federal: None State: SSC	Most abundant in drier open stages of most scrub, forest, and herbaceous habitats, with friable soils.	Does not occur.
Los Angeles pocket mouse *Perognathus longimembris brevinasus*	Federal: None State: SSC	Fine, sandy soils in coastal sage scrub and grasslands.	Does not occur.
Northwestern San Diego pocket mouse *Chaetodipus fallax fallax*	Federal: None State: SSC	Coastal sage scrub, sage scrub/grassland ecotones, and chaparral.	Does not occur.
Pallid bat *Antrozous pallidus*	Federal: None State: SSC	Deserts, grasslands, shrublands, woodlands, and forests. Most common in open, dry habitats with rocky areas for roosting.	Does not occur.
Pocketed free-tailed bat *Nyctinomops femorosaccus*	Federal: None State: SSC	Rocky areas with high cliffs in pine-juniper woodlands, desert scrub, palm oasis, desert wash, and desert riparian.	Does not occur.
San Bernardino kangaroo rat *Dipodomys merriami parvus*	Federal: FE State: SSC	Typically found in Riversidean alluvial fan sage scrub and sandy loam soils, alluvial fans and floodplains, and along washes with nearby sage scrub.	Does not occur.
San Diego black-tailed jackrabbit *Lepus californicus bennettii*	Federal: None State: SSC	Occupies a variety of habitats, but is most common among shortgrass habitats. Also occurs in sage scrub, but needs open habitats.	Potential to occur.

Species Name	Status	Habitat Requirements	Occurrence
San Diego desert woodrat *Neotoma lepida intermedia*	Federal: None State: SSC	Occurs in a variety of shrub and desert habitats, primarily associated with rock outcrops, boulders, cacti, or areas of dense undergrowth.	Does not occur.
Southern grasshopper mouse *Onychomys torridus ramona*	Federal: None State: SSC	Desert areas, especially scrub habitats with friable soils for digging. Prefers low to moderate shrub cover.	Does not occur.
Stephens' kangaroo rat *Dipodomys stephensi*	Federal: FE State: ST	Open grasslands or sparse shrublands with less than 50% vegetation cover during the summer.	Potential to occur.
Western mastiff bat *Eumops perotis californicus*	Federal: None State: SSC	Occurs in many open, semi-arid to arid habitats, including conifer and deciduous woodlands, coastal scrub, grasslands, and chaparral. Roosts in crevices in cliff faces, high buildings, trees, and tunnels.	Does not occur.
Western yellow bat *Lasiurus xanthinus*	Federal: None State: SSC	Found in valley foothill riparian, desert riparian, desert wash, and palm oasis habitats. Roosts in trees, particularly palms. Forages over water and among trees.	Does not occur.
Yuma Myotis Myotis yumanensis	Federal: None State: None CDFG: CSC	Optimal habitats are open forests and woodlands with sources of water over which to feed. Distribution is closely tied to bodies of water. Maternity colonies in caves, mines, buildings or crevices.	Does not occur.

4.5.1 Special-Status Wildlife Species Observed or with a Potential to Occur within the Project Site

As noted in the above table, one special-status wildlife species (California horned lark) was detected at the Project site. Several other species have the potential to occur, including the coastal whiptail, burrowing owl, ferruginous hawk, loggerhead shrike, San Diego black-tailed jackrabbit, and Stephens' kangaroo rat (SKR). With the exception of the SKR, all of the other species are designated as Covered Species under the MSHCP. The SKR is covered under the prior SKR Habitat Conservation Plan (HCP).

Of these species, only one species (burrowing owl) has project-specific survey/conservation requirements under the MSHCP. The MSHCP requires focused surveys for the burrowing for projects located within the burrowing owl survey area, and that contain suitable habitat. As noted above, the Project site is located within the MSHCP Burrowing Owl Survey Area and so focused burrowing owl surveys were conducted for the site. No burrowing owls or burrows with owl sign were detected onsite. Pursuant to the MSHCP, pre-construction burrowing owl surveys will be required prior to grading to confirm the absence of burrowing owls. The requirement for pre-construction burrowing owl surveys is further discussed in Section 6.0 of this report.

The Project site has a low potential to support SKR, but as noted impacts to SKR are covered pursuant to the SKR HCP. The Project site is located within the SKR Fee Area, and so the Project is required to pay an SKR Fee in compliance with the SKR HCP.

4.6 Critical Habitat

The Project site is not located within any Critical Habitat areas designated by the USFWS.

4.7 Raptor Use

The Project Site provides suitable foraging habitat for a number of raptor species, but does not contain suitable breeding habitat for raptors, including special-status species identified above in Table 4-2.

4.8 Nesting Birds

The Project site contains vegetation that provides suitable habitat for nesting migratory birds. Impacts to nesting birds are prohibited under the Migratory Bird Treaty Act (MBTA) and California Fish and Game Code.[9]

4.9 Soil Mapping

The Natural Resource Conservation Service (NRCS) identifies the following soil types (series) as occurring (currently or historically) within the Project site [Exhibit 7]:

- Greenfield Sandy Loam (Gya), 0 to 2 percent slopes
- Hanford Coarse Sandy Loam (HcA), 0 to 2 percent slopes

Neither of these soil types is considered sensitive by the MSHCP, since neither are generally associated with Narrow Endemic or Criteria Area Plants.

[9] The MBTA makes it unlawful to take, possess, buy, sell, purchase, or barter any migratory bird listed in 50 C.F.R. Part 10, including feathers or other parts, nests, eggs, or products, except as allowed by implementing regulations (50 C.F.R.21). In addition, sections 3505, 3503.5, and 3800 of the California Department of Fish and Game Code prohibit the take, possession, or destruction of birds, their nests or eggs.

4.10 Jurisdictional Delineation

The Project site does not contain any waters subject to the jurisdictions of the Corps, Regional Board, and/or CDFW.

4.11 MSHCP Riparian/Riverine Areas and Vernal Pools

The Project site does not contain any MSHCP riparian/riverine areas or vernal pools.

5.0 IMPACT ANALYSIS

The following discussion examines the potential impacts to plant and wildlife resources that would occur as a result of the proposed project. Impacts (or effects) can occur in two forms, direct and indirect. Direct impacts are considered to be those that involve the loss, modification or disturbance of plant communities, which in turn, directly affect the flora and fauna of those habitats. Direct impacts also include the destruction of individual plants or animals, which may also directly affect regional population numbers of a species or result in the physical isolation of populations thereby reducing genetic diversity and population stability.

Indirect impacts pertain to those impacts that result in a change to the physical environment, but which is not immediately related to a project. Indirect (or secondary) impacts are those that are reasonably foreseeable and caused by a project, but occur at a different time or place. Indirect impacts can occur at the urban/wildland interface of projects, to biological resources located downstream from projects, and other off site areas where the effects of the project may be experienced by plants and wildlife. Examples of indirect impacts include the effects of increases in ambient levels of noise or light; predation by domestic pets; competition with exotic plants and animals; introduction of toxics, including pesticides; and other human disturbances such as hiking, off-road vehicle use, unauthorized dumping, etc. Indirect impacts are often attributed to the subsequent day-to-day activities associated with project build-out, such as increased noise, the use of artificial light sources, and invasive ornamental plantings that may encroach into native areas. Indirect effects may be both short-term and long-term in their duration. These impacts are commonly referred to as “edge effects” and may result in a slow replacement of native plants by non-native invasives, as well as changes in the behavioral patterns of wildlife and reduced wildlife diversity and abundance in habitats adjacent to project sites.

Cumulative impacts refer to two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts. A cumulative impact can occur from multiple individual effects from the same project, or from several projects. The cumulative impact from several projects is the change in the environment resulting from the incremental impact of the project when added to other closely related past, present, and reasonably foreseeable probable future projects. Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time.

5.1 California Environmental Quality Act (CEQA)

5.1.1 Thresholds of Significance

Environmental impacts to biological resources are assessed using impact significance threshold criteria, which reflect the policy statement contained in CEQA, Section 21001(c) of the California Public Resources Code. Accordingly, the State Legislature has established it to be the policy of the State of California:

> *"Prevent the elimination of fish or wildlife species due to man's activities, ensure that fish and wildlife populations do not drop below self-perpetuating levels, and preserve for future generations representations of all plant and animal communities..."*

Determining whether a project may have a significant effect, or impact, plays a critical role in the CEQA process. According to CEQA, Section 15064.7 (Thresholds of Significance), each public agency is encouraged to develop and adopt (by ordinance, resolution, rule, or regulation) thresholds of significance that the agency uses in the determination of the significance of environmental effects. A threshold of significance is an identifiable quantitative, qualitative or performance level of a particular environmental effect, non-compliance with which means the effect will normally be determined to be significant by the agency and compliance with which means the effect normally will be determined to be less than significant. In the development of thresholds of significance for impacts to biological resources CEQA provides guidance primarily in Section 15065, Mandatory Findings of Significance, and the CEQA Guidelines, Appendix G, Environmental Checklist Form. Section 15065(a) states that a project may have a significant effect where:

> *"The project has the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or wildlife community, reduce the number or restrict the range of an endangered, rare, or threatened species, ..."*

Therefore, for the purpose of this analysis, impacts to biological resources are considered potentially significant (before considering offsetting mitigation measures) if one or more of the following criteria discussed below would result from implementation of the proposed project.

5.1.2 Criteria for Determining Significance Pursuant to CEQA

Appendix G of the 1998 State CEQA guidelines indicate that a project may be deemed to have a significant effect on the environment if the project is likely to:

> *a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service.*

b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service.

c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.

d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites.

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.

f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

5.2 Impacts to Native Vegetation

The proposed Project will not impact any native vegetation communities, including special-status communities. Impacts to vegetation would be less than significant and do not require mitigation.

5.3 Impacts to Special-Status Plants

The proposed Project will not impact special-status plants.

5.4 Impacts to Special-Status Animals

The proposed Project will result in the loss of habitat that supports special-status species, including the California horned lark, and with the potential to support other special-status animals as discussed above in Section 4.5 and Table 4-2. Potential impacts include one federally and state-listed species (Stephens' kangaroo rat), which if present would be considered potentially significant under CEQA. As noted above, the SKR is covered under the SKR HCP, and with payment of the SKR Fee, the Project would receive coverage or the actual or potential loss of habitat for SKR. With this measure, any impacts to SKR would be covered by the existing HCP, and those impacts would be reduced to below a level of significance.

The Project site has the potential to support burrowing owls. As discussed above, burrowing owls were not detected onsite during focused surveys. However, the MSHCP requires that pre-construction surveys be conducted prior to grading in order to confirm the absence of burrowing owls. The loss of occupied burrowing owl habitat and exclusion of individual owls is considered potentially significant under CEQA. However, compliance with MSHCP, including performance of pre-construction surveys and owl relocation (if present), would reduce impacts to below a level of significance. Pre-construction surveys are further described in Section 6.0 of this report as a project-specific avoidance/mitigation measure.

For the additional special-status species with a potential to occur onsite, due to the low degree of sensitivity and the disturbed nature of the property, the loss of habitat for these species would be less than significant.

5.5 Impacts to Critical Habitat

The proposed Project will not impact lands designated as critical habitat by the USFWS.

5.6 Impacts to Nesting Birds

The proposed Project has the potential to impact active bird nests if vegetation is removed during the nesting season (February 1 to August 31). Impacts to nesting birds are prohibited by the MBTA and California Fish and Game Code. A project-specific avoidance measure is identified in Section 6.0 of this report to avoid impacts to nesting birds.

5.7 Impacts to MSHCP Riparian/Riverine Areas

The proposed Project will not impact MSHCP riparian/riverine areas.

5.8 Impacts to Jurisdictional Waters

The proposed Project will not impact jurisdictional waters.

5.9 Indirect Impacts to Biological Resources

In the context of biological resources, indirect effects are those effects associated with developing areas adjacent to adjacent native open space. Potential indirect effects associated with development include water quality impacts from associated with drainage into adjacent open space/downstream aquatic resources; lighting effects; noise effects; invasive plant species from landscaping; and effects from human access into adjacent open space, such as recreational activities (including off-road vehicles and hiking), pets, dumping, etc. Temporary, indirect effects may also occur as a result of construction-related activities. The MSHCP requires the implementation of Urban/Wildlands Interface Guidelines (*Volume I, Section 6.1.4* of the MSHCP) for those projects (particularly development) located in proximity to the MSHCP Conservation Area.

The proposed Project is not located adjacent to the MSHCP Conservation Area or any other native open space. The Project will not result in indirect impacts to sensitive biological resources.

5.10 Cumulative Impacts to Biological Resources

Cumulative impacts are defined as the direct and indirect effects of a proposed project which, when considered alone, would not be deemed a substantial impact, but when considered in addition to the impacts of related projects in the area, would be considered potentially significant. "Related projects" refers to past, present, and reasonably foreseeable probable future projects, which would have similar impacts to the proposed project. Through compliance with the MSHCP and the SKR HCP, any cumulative impacts would be reduced to below a level of significance.

6.0 MITIGATION/AVOIDANCE MEASURES

The following discussion provides project-specific mitigation/avoidance measures for actual or potential impacts to special-status resources.

6.1 Burrowing Owl

The Project site contains suitable habitat for burrowing owls; however, burrowing owls were not detected onsite during focused surveys. MSHCP Objective 6 for burrowing owls requires that pre-construction surveys prior to site grading. As such, the following measure is recommended to avoid direct impacts to burrowing owls and to ensure consistency with the MSHCP:

- A qualified biologist will conduct a pre-construction presence/absence survey for burrowing owls within 14 days prior to site disturbance. If burrowing owls are detected onsite, the owls will be relocated/excluded from the site outside of the breeding season following accepted protocols, and subject to the approval of the RCA and wildlife agencies.

6.2 Nesting Birds

The Project site contains vegetation with the potential to support nesting birds. As discussed above, the MBTA and California Fish and Game Code prohibit impacts to nesting birds. The following measure is recommended to avoid impacts to nesting birds:

- As feasible, vegetation clearing should be conducted outside of the nesting season, which is generally identified as February 1 through September 15. If avoidance of the nesting season is not feasible, then a qualified biologist shall conduct a nesting bird survey within three days prior to any disturbance of the site, including disking, demolition activities, and grading. If active nests are identified, the biologist shall establish suitable buffers around the nests, and the buffer areas shall be avoided until the nests are no longer occupied and the juvenile birds can survive independently from the nests.

7.0 MSHCP CONSISTENCY ANALYSIS

The purpose of this section is to provide an analysis of the proposed Project with respect to compliance with biological aspects of the Western Riverside County MSHCP. Specifically, this analysis evaluates the proposed Project with respect to the Project's consistency with MSHCP Reserve assembly requirements, *Section 6.1.2* (Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools), *Section 6.1.3* (Protection of Narrow Endemic Plant Species), *Section 6.1.4* (Guidelines Pertaining to the Urban/Wildlands Interface), and *Section 6.3.2* (Additional Survey Needs and Procedures).

7.1 Project Relationship to Reserve Assembly

The proposed Project is not located within the MSHCP Criteria Area, and therefore is not subject to the Habitat Evaluation and Acquisition Negotiation Strategy (HANS) process or Joint Project Review (JPR). The proposed Project will be consistent with MSHCP Reserve Assembly requirements.

7.2 Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools

Volume I, Section 6.1.2 of the MSHCP describes the process through which protection of riparian/riverine areas and vernal pools would occur within the MSCHP Plan Area. The purpose is to ensure that the biological functions and values of these areas throughout the MSHCP Plan Area are maintained such that habitat values for species inside the MSCHP Conservation Area are maintained. The MSHCP requires that as projects are proposed within the overall Plan Area, the effect of those projects on riparian/riverine areas and vernal pools must be addressed.

The MSHCP defines riparian/riverine areas as *lands which contain Habitat dominated by trees, shrubs, persistent emergent mosses and lichens, which occur close to or which depend upon soils moisture from a nearby fresh water source; or areas with fresh water flow during all or a portion of the year.*

The MSHCP defines vernal pools as *seasonal wetlands that occur in depression areas that have wetlands indicators of all three parameters (soils, vegetation, and hydrology) during the wetter portion of the growing season but normally lack wetland indictors of hydrology and/or vegetation during the drier portion of the growing season.*

The Project will not impact MSHCP riparian/riverine areas of vernal pools, and therefore will be consistent with riparian/riverine policies as identified in Volume I, Section 6.1.2 of the MSHCP.

7.3 Protection of Narrow Endemic Plants

Volume I, Section 6.1.3 of the MSHCP requires that within identified Narrow Endemic Plant Species Survey Areas (NEPSSA), site-specific focused surveys for Narrow Endemic Plants Species will be required for all public and private projects where appropriate soils and habitat are present.

The Project is not located within the NEPSSA, and therefore is not required to perform focused plant surveys for Narrow Endemic Plants. The proposed Project will be consistent with *Volume I, Section 6.1.3* of the MSHCP.

7.4 Guidelines Pertaining to the Urban/Wildland Interface

The MSHCP Urban/Wildland Interface Guidelines are intended to address indirect effects associated with locating development in proximity to the MSHCP Conservation Area. As the MSHCP Conservation Area is assembled, development is expected to occur adjacent to the Conservation Area. Future development in proximity to the MSHCP Conservation Area may result in edge effects with the potential to adversely affect biological resources within the Conservation Area. To minimize such edge effects, the guidelines shall be implemented in conjunction with review of individual public and private development projects in proximity to the MSHCP Conservation Area and address the following:

- Drainage;
- Toxics;
- Lighting;
- Noise;
- Invasive species;
- Barriers;
- Grading/Land Development.

As discussed in Section 5.0 of this report, the Urban/Wildland Interface Guidelines do not apply to the proposed Project since the Project site is not located adjacent to the MSHCP Conservation Area. The Project will be consistent with *Volume I, Section 6.1.4* of the MSHCP.

7.5 Additional Survey Needs and Procedures

Volume I, Section 6.3.2 of the MSHCP identifies survey and conservation requirements for projects located within designated survey areas, including CAPSSA, burrowing owl, mammals, and amphibians. The Project site is located within the burrowing owl survey area, but not within any other survey area. Focused burrowing owl surveys were conducted for the Project due to the presence of suitable habitat, but no burrowing owls or burrows with owl sign were detected during the surveys. As identified above in Section 6.2 of this report, the Project will perform a pre-construction survey prior to site disturbance to avoid direct impacts to burrowing owls. Any owl detected onsite will be relocated/excluded subject to the approval of the RCA and wildlife agencies. With the implementation of this measure, the proposed Project will be consistent with *Volume I, Section 6.3.2* of the MSHCP.

7.6 Conclusion of MSHCP Consistency

As outlined above, the proposed Project will be consistent with the biological requirements of the MSHCP; specifically pertaining to the Project's relationship to reserve assembly, *Section 6.1.2* (Protection of Species Associated with Riparian/Riverine Areas and Vernal Pools), *Section*

6.1.3 (Protection of Narrow Endemic Plant Species), *Section 6.1.4* (Guidelines Pertaining to the Urban/Wildlands Interface), and *Section 6.3.2* (Additional Survey Needs and Procedures).

Mr. Jason Keller, PE
Mission Pacific Land Company
4100 Newport Place, Suite 480
Newport Beach, CA 92660

Subject: Moreno Valley Tentative Tract Map 36760 Project Cultural Resources Study Report

Dear Mr. Keller:

HELIX Environmental Planning, Inc., (HELIX) was contracted to conduct a cultural resources study for the Moreno Valley Tentative Tract Map 36760 Project (project) in the City of Moreno Valley, California. The cultural resources study included a record search, a Sacred Lands File search, tribal outreach, a review of historic maps and aerial photographs, an intensive survey by a HELIX archaeologist and a Native American monitor, and preparation of this letter report. While one historic feature has been identified within the project property, it is not considered a significant resource. This letter report details the methods and results of the cultural resources study.

PROJECT DESCRIPTION

The Moreno Valley Tentative Tract Map 36760 project is located near March Air Force Base, in the City of Moreno Valley (City) in northwestern Riverside County. The project is located east of March Air Force Base and northwest of Perris Reservoir (Figures 1 and 2, *Regional Location Map*, and *Project Vicinity [USGS Topography]*, respectively). The approximately 53-acre parcel is bordered by Indian Street on the west, with Santiago Drive and March Middle School on the south and empty lots to the east and north. Perris Boulevard is the nearest road to the east, and Fay Avenue is the nearest road to the north (Figure 3, *Project Vicinity [Aerial Photograph]*). The project is bordered on the east by the California Aqueduct easement. The continuation of Gentian Avenue between its current termini on the east and west of the project site will form the northern project boundary (Figure 4, *Project Plan*). The parcel is within Township 3 South, Range 3 West, Section 19, on the U.S. Geological Survey (USGS) 7.5’ Sunnymead quadrangle (Figure 2).

The applicant proposes to develop 221 suburban residences including the installation of all necessary utilities and new roads leading from Gentian Avenue and Santiago Drive. Construction activities would produce an estimated 114,545 cubic yards of excavated soil.

ENVIRONMENTAL BACKGROUND

The project area is in the Moreno Valley in the foothills of Riverside County. The Badlands, San Bernardino and San Jacinto Mountains lie to the east, the Santa Ana Mountains lie to the west, and the Box Spring Mountains are to the north. Average annual temperatures range from a January low of about 46.9 degrees Fahrenheit (°F) to an August high of about 95.8°F, and maximum monthly rainfall averages around 2.98 inches in December (Weather Currents 2016). The property is located on a flat field previously used for agriculture (Figure 2). Elevation remains fairly level between 1,510 and 1,520 feet above mean sea level (amsl). The property is about 6.5 miles northwest of the current location of the San Jacinto River (the alignment of the river has changed over time) and about 3.25 miles northwest of the Perris Reservoir. Various drainages in the vicinity would have made fresh water easily accessible to native populations living in the area.

Geologically, the project area is underlain by young alluvium, as is the whole of Moreno Valley and the connecting Perris Valley. The nearby hills south and west of the Valley are Mesozoic granitic formations, and the Badlands to the east are of undivided Pliocene nonmarine formations (Morton et al. 1999). Two soil series are mapped for the project site: Greenfield sandy loam, 0 to 2 percent slopes, and Hanford coarse sandy loam, 0 to 2 percent slopes. The Greenfield soil comprises about 59 percent of the site and Hanford about 41 percent (Web Soil Survey n.d.). Both soil series are granite-derived alluviums found in alluvial fans and terraces that generally support wild oats, ripgut brome, soft chess, filaree, foxtail, mustard, and coast live oak (Bowman 1973). The project area has been disturbed by past agricultural activities yet many of these grass, brome, and forb species are present on site. Native grassland species and coast live oak would have been used by native populations for food, medicine, tools, and ceremonial and other uses (Christenson 1990; Hedges and Beresford 1986). Many of the animal species living within these communities (such as rabbits, deer, small mammals, and birds) would have been used by native inhabitants as well.

CULTURAL BACKGROUND

The culture history presented here (up to the discussion of the Late Prehistoric period) is based on Wallace's (1978) discussion of the Post-Pleistocene for Southern California (circa 9000 BCE to 2000 BCE). The earliest inhabitants of California subsisted mainly by hunting, as attested to by "the finding of projectile points and other stone implements adapted to the chase at ancient campsites" throughout California (Wallace 1978:25). Wallace refers to this early period as Period I: Hunting. It generally equates with the Paleoindian or Lithic stage (Willey and Phillips 1958), in which little diversity of resource exploitation is evident.

Wallace's (1978) Period II: Food Collecting equates with Willey and Phillips (1958) Archaic stage and is often referred to in Southern California as the Early Archaic, Early Milling period, or Milling Stone Horizon. "A changeover from hunting to the collection of seed foods is clearly reflected in the archaeological record for the period between 6000 and 3000 B.C. The importance of seeds in the diet of the prehistoric peoples can be seen in the numbers of food-grinding implements present at their settlements" (Wallace 1978:28).

After about 3000 BCE, a more diversified subsistence strategy is evident throughout Southern California. "Everywhere increased subsistence efficiency in the form of wider exploitation of available food resources can be seen" (Wallace 1978:30). The artifact assemblages changed slowly over time, with a few additions or changes. "By the end of the millennium the new ways and techniques had become firmly established and formed the basis for succeeding cultural traditions" (Wallace 1978:35).

"Perhaps as early as 1500-1000 B.C. the Takic branch of Uto-Aztecan [including the forebears of the Luiseño and Cahuilla people] began to spread westward across the Mojave Desert" (Moratto 1984:560). There is disagreement about the date of the "Shoshonean intrusion" into various parts of Southern California, including Riverside County. Moratto indicated that Kowta (1969:50) "proposed dates of circa 1000 B.C. for the entry of 'Shoshoneans' in the Los Angeles Basin" (Moratto 1984:560). "Considering both linguistic and archaeological data, C. Bull (1977:56) sets the western movement of the 'Luisenic language family' at circa 500 B.C." (Moratto 1984:165).

It must be noted that this interpretation by archaeologists and linguistic anthropologists differs from the beliefs of the Luiseño and Cahuilla people. The creation stories indicates that the Luiseño and Cahuilla people have always been here, not migrating from elsewhere. The creation story of the Pechanga Band of the Luiseño tells that the world was created at Temecula. "The Káamalam [first people] moved to a place called Nachíivo Pomíisavo, but it was too small so they moved to a place called 'exva Teméeku, this place you now know as Temeku. Here they settled while everything was still in darkness (DuBois 1908)" (Masiel-Zamora 2013:2).

While some ethnographers place the area of the project site in the traditional territory of the Luiseño people (see Kroeber 1976:Plate 57), others show it as within traditional Cahuilla territory (see Bean 1978; Bean and Shipek 1978). Most probably, this is a transitional area between the two related cultural groups.

"During the Spanish Period, Riverside County proved to be too far inland to include any missions or asistencias within its limits. Although both San Luis Rey and San Juan Capistrano claimed a large part of southwestern Riverside County. Mission San Juan Capistrano and San Luis Rey were established in 1776 and 1798, respectively" (Goodwin 2013:6).

The project area is in proximity to the former Mexican land grant Rancho San Jacinto Nuevo y Potrero, which was granted to Miguel Pedrorena, in 1846. Pedrorena was the son-in-law of Jose Antonio Estudillo, administrator and major domo of Mission San Luis Rey. The land grant was later patented to Thomas W. Sutherland, guardian of the minor children of Pedrorena and his widow.

In the late 1800s, John Butterfield's Overland Mail Company stagecoach route ran through Moreno and Perris Valleys on its way between Tucson and San Francisco via San Diego and

Los Angeles. The Moreno Valley, which consisted of small, unincorporated communities, got its name from Frank E. Brown ("Moreno" in Spanish), who formed the Bear Valley Land and Water Company in 1883. Brown built a dam at Bear Valley and provided water to the Perris and Moreno communities until 1899, when he lost a legal suit, and thereby water rights, to the City of Redlands. This litigation and a period of natural drought devastated the local farming communities, forcing families to either move or abandon their homes in favor of better irrigated areas. The few who remained turned to "the dry farming of hay, grain, and grapes" (City of Moreno Valley, n.d.).

The community was revived in 1918, with the construction of March Field in anticipation of America's entry into World War I. It began as a temporary base for training fighter pilots but was established as a permanent base and flight training school in the late 1920s. This led to a population boom in the Moreno Valley, with the Base supporting up to 85,000 troops at a time. The establishment of the Riverside International Raceway in 1958 and the Lake Perris Recreation Area in 1973 led to further population increases until the unincorporated communities of Moreno, Edgemont, and Sunnymead were combined into the City of Moreno Valley in 1984 (City of Moreno Valley, n.d.).

The site record for CA-RIV-11757 (P-33-023936) gives a detailed history of the ownership and agricultural use of the section in which the project site is located (McKenna 2014a).

REGULATORY FRAMEWORK

Resource importance is assigned to districts, sites, buildings, structures, and objects that possess exceptional value or quality illustrating or interpreting the heritage of the region in history, architecture, archaeology, engineering, and culture. Several criteria are used in demonstrating resource importance. Specifically, criteria outlined in the California Environmental Quality Act (CEQA) provide the guidance for making such a determination. The City's General Plan also addresses cultural resources. This section details the criteria that a resource must meet in order to be determined significant.

California Environmental Quality Act (CEQA)

The CEQA Guidelines (§15064.5) address determining the significance of impacts to archaeological and historic resources.

(a) For purposes to this section, the term "historical resources" shall include the following:

(1) A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the California Register of Historical Resources (CRHR) (Public Resources Code §5024.1, Title 14 California Code of Regulations [CCR], Section 4850 et seq.).

(2) A resource included in a local register of historical resources, as defined in Section 5020.1(k) of the Public Resources Code or identified as significant in an historical resource survey meeting the requirements of section 5024.1(g) of the Public

Resources Code, shall be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.

(3) Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be an historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource shall be considered by the lead agency to be "historically significant" if the resource meets the criteria for listing on the California Register of Historical Resources (Public Resources Code §5024.1, Title 14, Section 4852) including the following:

(A) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;

(B) Is associated with the lives of persons important in our past;

(C) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or

(D) Has yielded, or may be likely to yield, information important in prehistory or history.

(4) The fact that a resource is not listed in or determined eligible for listing in the California Register of Historical Resources, not included in a local register of historical resources (pursuant to section 5020.1(k) of the Public Resources Code), or identified in an historical resources survey (meeting the criteria in section 5024.1(g) of the Public Resources Code) does not preclude a lead agency from determining that the resource may be an historical resource as defined in Public Resources Code Section 5020.1(j) or 5024.1.

(b) A project with an effect that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment.

(1) Substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired.

(2) The significance of an historical resource is materially impaired when a project:

(A) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register of Historical Resources; or

(B) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the Public Resources Code or its identification in an historical resources survey meeting the requirements of Section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

(C) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register of Historical Resources as determined by a lead agency for purposes of CEQA.

(c) CEQA applies to effects on archaeological sites.

(1) When a project will impact an archaeological site, a lead agency shall first determine whether the site is an historical resource, as defined in subsection (a).

(2) If a lead agency determines that the archaeological site is an historical resource, it shall refer to the provisions of Section 21084.1 of the Public Resources Code, and this section, Section 15126.4 of the Guidelines, and the limits contained in Section 21083.2 of the Public Resources Code do not apply.

(3) If an archaeological site does not meet the criteria defined in subsection (a), but does meet the definition of a unique archaeological resource in Section 21083.2 of the Public Resources Code, the site shall be treated in accordance with the provisions of Section 21083.2. The time and cost limitations described in Public Resources Code Section 21083.2 (c-f) do not apply to surveys and site evaluation activities intended to determine whether the project location contains unique archaeological resources.

(4) If an archaeological resource is neither a unique archaeological nor an historical resource, the effects of the project on those resources shall not be considered a significant effect on the environment. It shall be sufficient that both the resource and the effect on it are noted in the Initial Study or Environmental Impact Report (EIR), if one is prepared to address impacts on other resources, but they need not be considered further in the CEQA process.

Section 15064.5 (d) & (e) contain additional provisions regarding human remains. Regarding Native American human remains, paragraph (d) provides:

(d) When an Initial Study identifies the existence of, or the probable likelihood, of Native American human remains within the project, a lead agency shall work with the appropriate Native Americans as identified by the Native American Heritage Commission as provided in

Public Resources Code §5097.98. The applicant may develop an agreement for treating or disposing of, with appropriate dignity, the human remains and any items associated with Native American burials with the appropriate Native Americans as identified by the Native American Heritage Commission. Action implementing such an agreement is exempt from:

(1) The general prohibition on disinterring, disturbing, or removing human remains from any location other than a dedicated cemetery (Health and Safety Code Section 7050.5).

(2) The requirements of CEQA and the Coastal Act.

City of Moreno Valley General Plan

The City's General Plan (2006) includes Objective 7.6 and related policies regarding cultural and historical resources as part of the Conservation Element.

Objective 7.6

Identify and preserve Moreno Valley's unique historical and archaeological resources for future generations.

Policies:

7.6.1: Historical, cultural and archaeological resources shall be located and preserved, or mitigated consistent with their intrinsic value.

7.6.2: Implement appropriate mitigation measures to conserve cultural resources that are uncovered during excavation and construction activities.

7.6.3: Minimize damage to the integrity of historic structures when they are altered.

7.6.4: Encourage restoration and adaptive reuse of historical buildings worthy of preservation.

7.6.5: Encourage documentation of historic buildings when such buildings must be demolished (City of Moreno Valley 2006: 9-37).

METHODS

HELIX submitted a record search request of all previously recorded cultural resources, archaeological studies, and historic addresses within the project area and a one-mile radius to the Eastern Information Center (EIC) on March 4, 2016. This was received on March 24, 2016 and is attached to this report as Confidential Appendix A. Historic aerial photographs ranging from 1966 to 2012 (NETR Online 2016) and historic topographic maps were reviewed to assess historic land usage and the potential for historic archaeological resources. A Sacred Lands File search was requested from the Native American Heritage Commission (NAHC) on March 4, 2016.

HELIX archaeologists Nicole Falvey and Mary Villalobos and Native American monitor Billy Swan from the Soboba Band of Luiseño Indians surveyed the property on March 25, 2016. The survey was conducted in parallel transects spaced 15 meters (m) apart across the project site; all areas of visible soil, including rodent backfill piles, were carefully examined for cultural resources.

RESULTS

A record search of the project area and a one-mile radius from the EIC indicated that eight cultural resources had been recorded within the search radius (see Table 1). One resource (P-33-023936) was mapped within the project property. This resource is a historic period alfalfa farm that encompasses the property adjacent to the project area on the east as well as the southeastern corner of the project area. One feature from this site is located in the project area: the remnants of a grain loading dock from the Barron/Lantz Holdings, tentatively dated for use between 1948 and 1970 (McKenna 2014a). The following description of the feature is from the site record. The "project area" referred to is immediately east of the TPM 36760 project area.

> This wooden structure consists of two walls oriented at 90 degree angles (south and west sides) and two earthen embankments (north and east sides). The wooden walls are fashioned with a series of upright and lateral beams to the exterior and supplemental planks lining the inside of the structure. The structure is finished with an earthen core, creating a platform supported by the wooden walls. The walls are approximately four feet high. The tops of the walls are covered with cut truck tires, forming a buffer to protect the cap of the walls.
>
> McKenna et al. has interpreted this structure as a loading dock associated with the harvesting of the grains grown by the Barrons and Lantzes (post-1948). The grains would be harvested and taken to this feature on the southern property boundary, loaded into the hauling truck(s), and carried off the property along the Santiago Drive access route. The hauling truck would back up to the structure and the tires used to cap the walls would protect the structure from damage, should the truck "bump" the structure.
>
> Although located outside the project area, McKenna et al. has recorded this feature as part of the larger holdings of Henry and Emile Barrow (approximately 20 acres). This property, in turn, was also part of the larger holdings of Camillo and Francis Martin (pre-1892-1912). Despite the recording of this historic property, McKenna et al. has also concluded the property is not a significant resource. It fails to meet any of the four criteria for consideration as a historical resource worthy of listing on any of the applicable registries. The property is not associated with any significant event, person, architectural feature or sensitive for archaeological resources [McKenna 2014a:6-7].

Of the other resources in the search radius, two are prehistoric isolates (P-33-017967 and -015301), and the remaining five are historic. These include three structures associated with the March Village Medical Campus (P-33-017968, -017969, and -017970), one historic residence (P-33-007290), and one historic site (P-33-024195) consisting of the Brown-Bridges farm and associated materials.

Table 1
PREVIOUSLY RECORDED CULTURAL RESOURCES WITHIN ONE-MILE RADIUS

Site (P-33-#)	Site Type	Recorder, Date
023936	Flat, open farmland once under alfalfa. Loading dock located in western half. Currently bisected by the modern California Aqueduct. Site boundaries defined by property definition and ownership history. CA-RIV-11757	McKenna, 2014
007290	Historic residence	Warner, 1983
015301	Prehistoric pestle isolate	Chandler, 2005
017967	Prehistoric mano isolate	McKenna, 2008
017968	March Village Medical Campus Works Progress Administration (WPA) Canal	McKenna, 2008
017969	March Village Medical Campus Building 768	McKenna, 2008
017970	March Village Medical Campus Building 755	McKenna, 2008
024195	Historic Brown-Bridges farm and associated material remains (privy/dump/trash scatter, multiple family property, farm/ranch)	McKenna, 2015

The EIC has a record of 18 cultural resource studies that have been conducted within the search radius, one of which covered a portion of the project. This study (Foster et al. 1991) was a cultural resource field survey for The Metropolitan Water District of Southern California and followed the California Pipeline that runs along the eastern perimeter of the project area. No resources were recorded within the project area during this study. Two studies were conducted adjacent to the project area, one immediately east (McKenna 2014b) and one across Santiago Drive to the south (McKenna et al. 2005). Both consisted of a field survey and the former recorded one historic resource (P-33-023936, as addressed above).

A review of historic aerial photographs revealed that the project property was used as agricultural fields from 1966 to at least 2012; no earlier historic aerial photographs were available for review. No structures are visible on site in historic topographic maps from 1901 (Elsinore 30') and 1943 (Perris 15'), nor do any appear on the property in historic aerial photographs (NETR Online 2016). Indian Street, Perris Boulevard, Iris Avenue (to the south), and Eschscholtzia Avenue (to the north, renamed John F Kennedy Drive) are present in the 1901 topographic map. By the 1966 aerial photograph, structures are located just south of the property at the modern location of residential houses on Emma Lane.

The Sacred Lands File search results were received from the NAHC on March 8, 2016. The search was negative for any sacred lands within the project vicinity. Letters were sent to the tribal contacts indicated by the NAHC in April 2016. The applicant and the City of Moreno Valley will be kept apprised of any tribal responses.

The field survey was conducted on March 25, 2016. The property consisted of a flat, open field. Visibility was good overall, with areas of poor to no visibility where Russian thistle obscured the ground, particularly in the west and southwest. Other vegetation included seasonal grasses and forbs such as wild oats, ripgut brome, and nettle. All visible soil was brown alluvium sandy silt. The entire property is scarred by tractor marks, and modern trash was scattered throughout, collecting in piles around the western and southern perimeters. The loading dock feature (P-33-023936) recorded by McKenna (2014) was observed in the southeastern corner of the project area along the southern perimeter. It was covered in modern trash and had modern tire rubber attached over the tops of the wooden posts that constitute the walls. As noted in the site record, it did not appear to be architecturally, aesthetically, or historically significant. No other historic and no cultural resources were observed.

CONCLUSIONS

A cultural resources survey was conducted by HELIX for the Moreno Valley Tentative Tract Map 36760 project including a record search, a review of historic maps and aerial photographs, a Sacred Lands File search, tribal outreach, an intensive field survey, and this letter report. The record search revealed eight previously recorded cultural resources within a one-mile radius of the property. The current survey did not identify any cultural resources within the project area other than the previously recorded historic feature, which is not a significant resource. Therefore, no impacts to cultural resources are anticipated.

However, the project site is in alluvial soils, where there is a potential for buried cultural resources. Based on this, it is recommended that an archaeological and Native American monitoring program be implemented. The monitoring program would include attendance by the archaeologist and Native American monitor at a preconstruction meeting with the grading contractor and the presence of archaeological and Native American monitors during initial ground-disturbing activities on site. Both archaeological and Native American monitors would have the authority to temporarily halt or redirect grading and other ground-disturbing activity in the event that cultural resources are encountered. If significant cultural material is encountered, the monitors will coordinate with the applicant and City staff to develop and implement appropriate mitigation measures.

Attention: Mr. Thomas Owen

Subject: Preliminary Geotechnical Investigation, Proposed 104-Acre Residential Development, Northwest of Perris Boulevard and Iris Avenue, City of Moreno Valley, California

In response to your request, Leighton and Associates, Inc. has conducted a preliminary geotechnical investigation of the proposed residential development to be located northwest of Perris Boulevard and Iris Avenue in the City of Moreno Valley, California. The purpose of our investigation has been to explore the subsurface conditions at the site, to evaluate the general soil characteristics, and to provide preliminary geotechnical recommendations for the design and construction of the proposed improvements.

Based upon our investigation, the proposed development is feasible from a geotechnical viewpoint, provided our recommendations are incorporated in the design and construction of the project. The following report presents our geotechnical findings, conclusions, and preliminary recommendations. Additional geotechnical investigation and analysis may be necessary, based on the actual development plans for submittal with the project grading plans.

1.0 INTRODUCTION

1.1 Site Location and Project Description

The site is located northwest of Perris Boulevard and Iris Avenue in the City of Moreno Valley, California (see Figure 1, Site Location Map). The project area is bounded on the east by Perris Boulevard and the Home Depot shopping center, on the south by Iris Avenue, on the west by Indian Street and an elementary school, and on the north by vacant land. March Air Reserve Base is approximately one mile west. The East Branch California Aqueduct crosses the eastern portion of the site. The approximately 104-acre flat site is irregular in shape and is currently vacant. Vegetation consists of seasonal grasses, brush, and several scattered small trees.

Based on our review of historic aerial photographs, the site was used for agricultural purposes within the period of at least 1953 to 1980, and was otherwise vacant.

It is our understanding that the intended use of the site is a residential development. Although grading and construction plans are not yet available, we anticipate that minor cuts and fills will be required to attain the desired finish grades. We anticipate the one- and two-story single-family residences will be constructed. A parcel map provided by you was used as the base map for our Geotechnical Map, Figure 2 (rear of text).

1.2 Purpose of Investigation

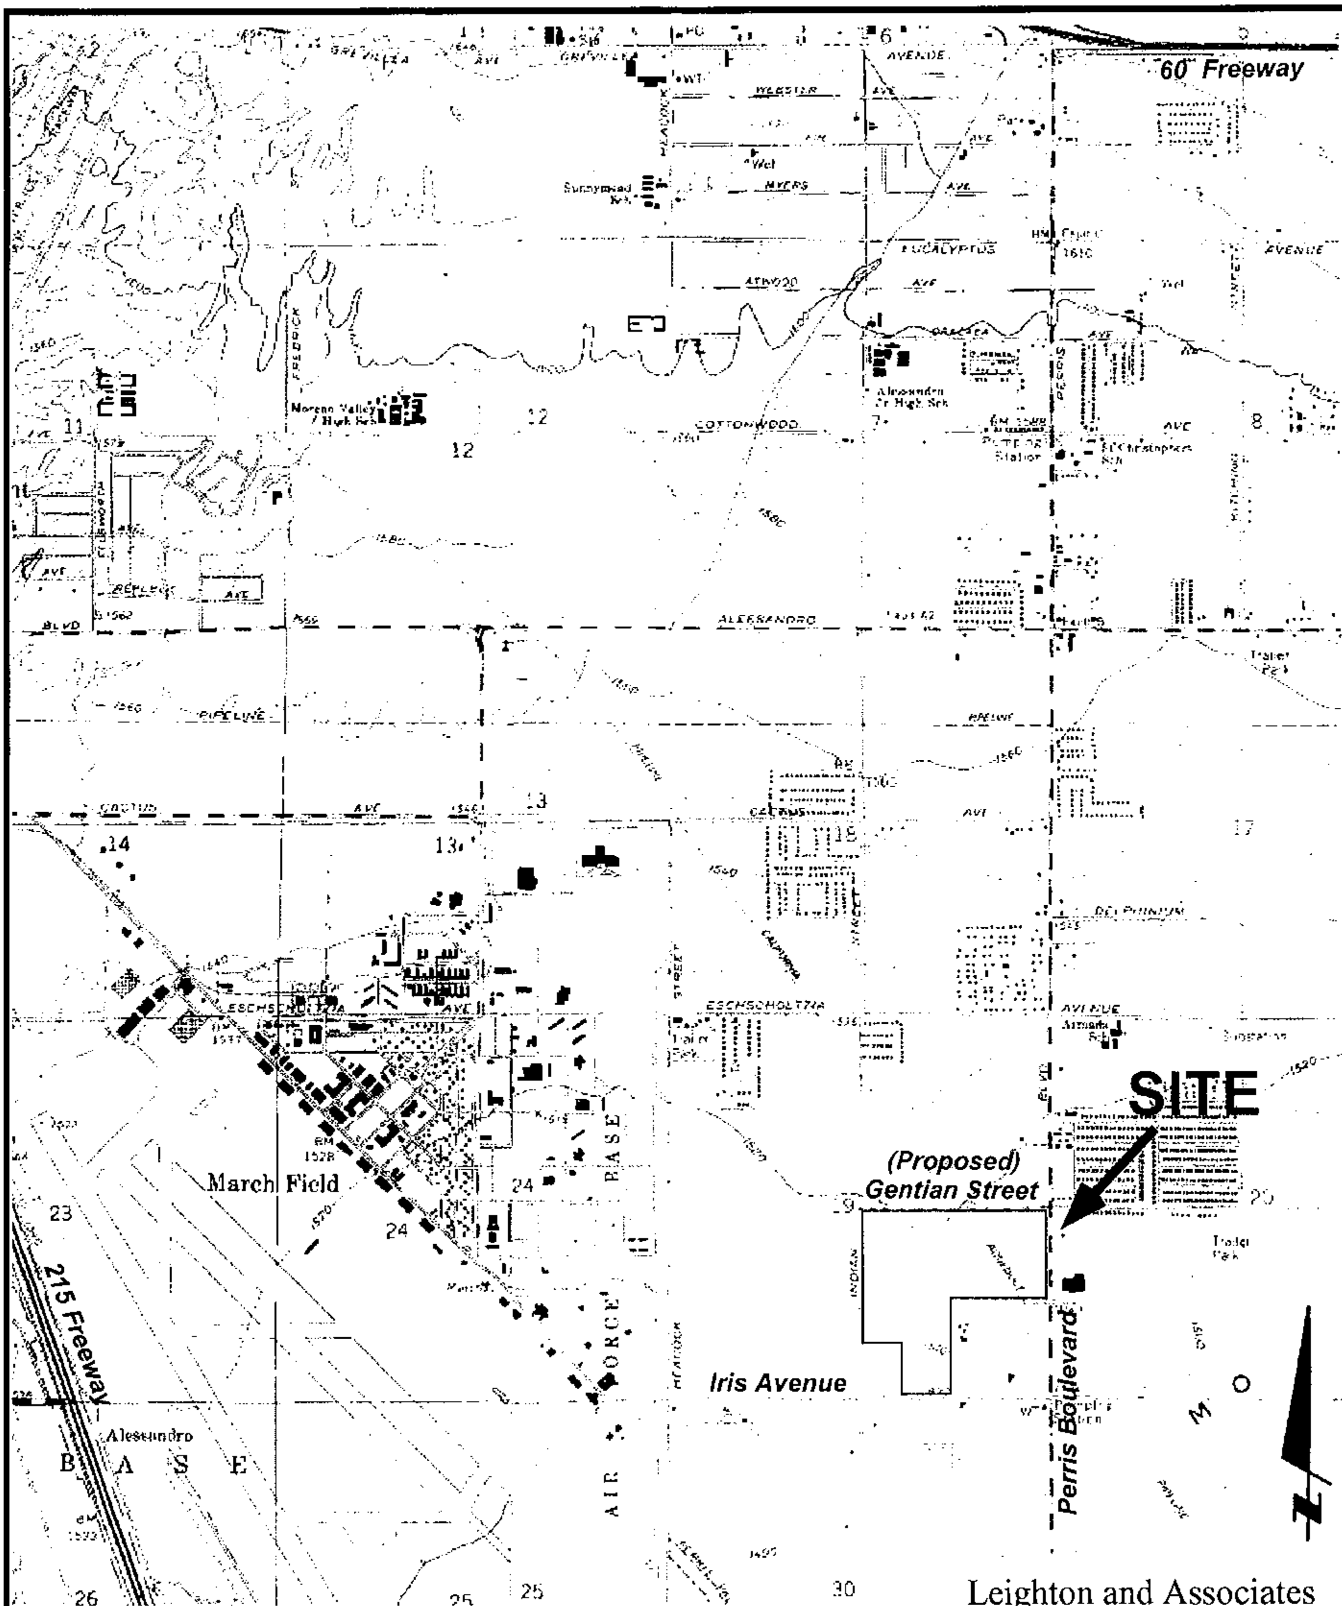
The purpose of this study has been to evaluate the general geotechnical conditions at the site, to identify significant geotechnical or geologic issues that would impact site development, and to provide preliminary geotechnical recommendations for design and construction.

1.3 Scope of Investigation

The scope of our investigation has included the following tasks:

- Background Review - A background review of readily available, relevant, in-house geotechnical literature, and aerial photographs was performed.
- Pre-field Investigation Activities - Coordinated with Underground Service Alert (USA) to have existing underground utilities located and marked prior to our subsurface investigation.

Leighton



PROPOSED 104-ACRE RESIDENTIAL DEVELOPMENT NORTHWEST OF PERRIS BOULEVARD AND IRIS AVENUE, City of Moreno Valley, California	SITE LOCATION MAP	PROJECT NO. 021164-001 DATE June, 2004 Figure 1

Attachment: Geotechnical Study (2444 : Legacy Park Project)

- Field Investigation - Our field investigation consisted of the excavation of borings and test pits as follows:

  Borings
  Eight hollow-stem auger borings were excavated, logged and sampled at representative locations within the site. One boring was excavated to a depth of 51.5 feet and seven borings were excavated to depths of 21.5 feet below the existing ground surface. Each boring was logged by a member of our technical staff. Relatively undisturbed soil samples were obtained at selected intervals within the borings using Standard Penetration Testing and a California Ring Sampler. Logs of the geotechnical borings are presented in Appendix B. Approximate boring locations are shown on the accompanying Geotechnical Map, Figure 2.

  Test Pits
  Eight backhoe test pits were excavated and logged at representative locations within the site to a maximum depth of 5.5 feet below the existing ground surface. Each test pit was logged by a member of our technical staff. Bulk soil samples were obtained from the test pits. Logs of the test pits are presented in Appendix C. Approximate test pit locations are shown on the accompanying Geotechnical Map, Figure 2.

- Laboratory Tests - Laboratory tests were conducted on selected relatively undisturbed and bulk soil samples obtained during our field investigation. The laboratory testing program was designed to evaluate the engineering characteristics of the onsite soil. Results of the laboratory testing are presented in Appendix D. The laboratory tests conducted during this investigation include:

  - In situ moisture content and dry density.
  - Sieve analysis for grain size distribution.
  - Consolidation and hydrocollapse characteristics.
  - Expansion Index.
  - Maximum dry density and optimum moisture content.
  - R-value for pavement recommendations.

- Water-soluble sulfate concentration in the soil for cement type recommendations.

- Resistivity, chloride content and pH to evaluate corrosion potential.

- Engineering Analysis - The data obtained from our background review and field exploration was evaluated and analyzed in order to provide the conclusions and preliminary recommendations in the following sections.

- Report Preparation - The results of our geotechnical investigation have been summarized in this report, presenting our findings, conclusions and preliminary recommendations.

2.0 FINDINGS

2.1 Site Geology

The site is located in the Perris block of the Peninsular Ranges Geomorphic Province of southern California. The Perris block is a structural block bounded on the north by the San Jacinto Fault Zone (located 8 kilometers northeast of the site) and on the south by the Elsinore Fault Zone (located 29 kilometers southwest of the site). These faults have experienced significant activity in the recent geologic past. These and other northwest-trending right lateral strike slip faults dominate the structure of the Peninsular Ranges. Cretaceous igneous rocks of the Southern California Batholith underlie the Peninsular Ranges in this area. Locally, the site vicinity is underlain by older alluvial soil deposits of clay, silt, sand and gravel (SCGS, 1982; Morton, 1978). Bedrock outcrops of quartz diorite are present approximately ¾ mile east of the site.

2.2 Subsurface Soil Conditions

Based upon our review of pertinent geotechnical literature, and our subsurface exploration, the site is underlain by alluvial soil deposits. The soil encountered during our subsurface exploration in the upper 15 feet generally consisted of loose to medium dense silty sand to gravelly sand and soft to stiff sandy silt. Below a depth of 15 feet, the soil generally consisted of stiff to very stiff sandy silt to clay. These soils were typically characterized as slightly moist to very moist to the depths excavated. Moisture contents in the upper 10 feet ranged from 2 to 10 percent.

2.3 Groundwater

Groundwater was not encountered in any of our borings performed during this investigation to a depth of 51.5 feet. Based on our review of regional groundwater data, groundwater is expected to be on the order of 120 to 140 feet below the ground surface in the site vicinity (CDWR, 2000). However, relatively shallow perched ground water may occur locally (WMWD, 2003).

2.4 Faulting and Seismicity

The two principal seismic considerations for most sites in southern California are surface rupture along active fault traces and damage to structures due to seismically-induced ground shaking. An active fault is one that has moved in the Holocene (last 11,000 years). The closest mapped active fault that could affect the site is the San Jacinto (San

Jacinto Valley) fault, located approximately 9 kilometers northeast of the site. The San Jacinto fault is capable of producing a maximum moment magnitude of 6.9 and an average slip rate of 12 millimeter per year (CDMG, 1998). Other known regional active faults that could affect the site include the San Jacinto (San Bernardino), San Andreas, Elsinore, Chino-Central Avenue and Cucamonga faults.

No traces of active or potentially active faults have been observed to cross the project site. The site is not within an Alquist-Priolo Earthquake Fault Zone (CDMG, 2000). The potential for fault ground rupture at the site is considered very low.

Peak Horizontal Ground Accelerations (PHGA) for the site were estimated using a deterministic seismic hazard analysis, based on currently available earthquake and fault information. The analysis computes the site PHGA that could be expected to result from an earthquake on a specific fault using the estimated maximum magnitude earthquake event. PHGA's were estimated using the EQFAULT computer program (Blake, 2000), based on the attenuation relationship by Sadigh et al. (1997). Based on the analysis, the San Jacinto (San Jacinto Valley) Fault Zone is potentially capable of producing the greatest PHGA at the site, due to its proximity, fault type, and its maximum earthquake magnitude of 6.9 (M_W). It is estimated that such an earthquake on this fault near the site could produce seismic shaking with a PHGA of 0.32g.

The PHGA was also estimated using a probabilistic seismic hazard analsyis. The computer program FRISKSP (Blake, 2000) was used for the analysis. Attenuation relationships used in the computer analysis were developed by Abrahamson and Silva (1997) for soil, Campbell (1997 and 2000) for alluvium, and Sadigh et al. (1997) for deep soil deposits. The analysis indicated an average value of 0.59g for peak horizontal ground acceleration (PHGA) with a 10 percent probability of exceedance in 50 years. The predominant magnitude is approximately 6.8 (Mw) at a distance on the order of 10 kilometers.

2.5 Secondary Seismic Hazards

Liquefaction Potential

Liquefaction is the loss of soil strength or stiffness due to a buildup of excess pore-water pressure during strong ground shaking. Liquefaction is associated primarily with loose (low density), granular, saturated soil. Effects of severe liquefaction can include sand boils, excessive settlement, bearing capacity failures, and lateral spreading.

The Generalized Liquefaction Map for Riverside County (2003) indicates the site is located in an area of shallow groundwater with sediments considered highly susceptible to liquefaction. Our exploratory borings indicate that moderately dense soil underlies the site. In addition, regional groundwater data indicates that shallow groundwater conditions do not exist locally, nor have they existed historically. Based on these findings, the potential for liquefaction appears to be low.

Seismically Induced Settlement

During a strong seismic event, seismically induced settlement can occur within loose to moderately dense, dry or saturated granular soil. Settlement caused by ground shaking can be nonuniformly distributed, resulting in differential settlement. We have performed analyses to estimate seismically-induced settlement using the simplified method set forth by Tokimatsu and Seed (1987).

Based on this preliminary study, the potential total settlement resulting from seismic loading is estimated to be approximately 1½ inches. Differential settlement resulting from seismic loading is generally assumed to be one-half of the total seismically induced settlement over a distance of 40 feet. Seismic settlement is not considered a geotechnical constraint to the project.

2.6 Compressible and Collapsible Soil

Based on our investigation, the upper 5 to 15 feet of older alluvium is generally considered to be slightly to moderately compressible. Partial removal and recompaction of this material will be necessary to reduce the potential for excessive total and differential settlement of the proposed structures.

Hydrocollapse potential refers to the potential settlement of a soil under existing stresses upon being wetted. Representative samples of the upper 5 to 20 feet of the subsurface soil were tested for hydrocollapse potential. Test results indicate that the near-surface soil onsite has a negligible to minor hydrocollapse potential (1 percent or less).

2.7 Expansive Soils

Representative samples of the subsurface soil were tested for expansion potential. Test results indicate an Expansion Index of 0 to 5. Based on these results and the relatively granular nature of the near-surface soil, the onsite soil generally has a very low expansion potential.

2.8 Sulfate Content

Water-soluble sulfates in soil can react adversely with concrete. However, concrete in contact with soil containing sulfate concentrations of less than 0.10 percent are considered to have negligible sulfate exposure (UBC, 1997 edition, Chapter 19).

Near-surface soil samples were tested during this investigation for soluble sulfate content. The results of these tests indicated sulfate contents of less than 0.01 percent by weight, indicating negligible sulfate exposure. As such, the soils exposed at pad grade are not expected to pose a significant potential for sulfate reaction with concrete.

2.9 Resistivity, Chloride and pH

Soil corrosivity to ferrous metals can be estimated by the soil's pH level, electrical resistivity, and chloride content. In general, soil having a minimum resistivity less than 2,000 ohm-cm is considered corrosive. Soil with a chloride content of 500 ppm or more is considered corrosive to ferrous metals.

As a screening for potentially corrosive soil, representative soil samples were tested during this investigation to determine minimum resistivity, chloride content, and pH level. The tests indicated a chloride content of 42 ppm, a pH value of approximately 7.0, and a minimum resistivity of 7,000 ohm-cm. Based on the test results, the onsite soil is considered mildly corrosive to buried ferrous metals.

3.0 CONCLUSIONS AND RECOMMENDATIONS

Based upon this study, the proposed improvements are feasible from a geotechnical standpoint. The recommendations presented below are preliminary. Additional geotechnical investigation and analysis may be necessary, based on the actual development plans for submittal with the project grading plans.

3.1 General Earthwork and Grading

All grading should be performed in accordance with the General Earthwork and Grading Specifications presented in Appendix D, unless specifically revised or amended below or by future recommendations based on final development plans.

Site Preparation

Prior to construction, the site should be cleared of vegetation, trash, and debris. Trees should be removed and grubbed out, and the excavations should be backfilled with compacted fill. Any underground obstructions onsite should be removed. The resulting cavities should be properly backfilled and compacted. Efforts should be made to locate any existing utility lines. Those lines should be removed or rerouted if they interfere with the proposed construction, and the resulting cavities should be properly backfilled and compacted. In addition, any uncontrolled artificial fill, if encountered, should be removed.

Overexcavation and Recompaction

To reduce the potential for adverse differential settlement of the proposed structures, the underlying subgrade soil should be prepared in such a manner that a uniform response to the applied loads is achieved. The soil underneath conventional shallow footings should be overexcavated and recompacted to a minimum depth of 3 feet below the bottom of the proposed foundations for residential structures or 3 feet below the existing grade, whichever is deeper. The overexcavation and recompaction should extend a minimum lateral distance of 5 feet from the footings. Local conditions may require that deeper overexcavation be performed; such areas should be evaluated by Leighton and Associates during grading.

Areas outside the overexcavation limits of buildings planned for asphalt or concrete pavement, flatwork, site walls, and retaining walls (less than 6 feet in height), and areas to receive fill should be overexcavated to a minimum depth of 12 inches below the existing ground surface or 12 inches below the proposed finish subgrade, whichever is deeper.

After completion of the overexcavation, and prior to fill placement, the exposed surfaces should be scarified to a minimum depth of 6 inches, moisture-conditioned to or slightly above optimum moisture content, and recompacted to a minimum 90 percent relative compaction.

Fill Placement and Compaction

The onsite soil is suitable for use as compacted structural fill, provided it is free of debris, and oversized material (greater than 8 inches in largest dimension). Any soil to be placed as fill, whether onsite or imported material, should be accepted by Leighton and Associates.

All fill soil should be placed in thin, loose lifts, moisture-conditioned, as necessary, to near optimum moisture content, and compacted to a minimum 90 percent relative compaction as determined by ASTM Test Method D1557. Aggregate base should be compacted to a minimum of 95 percent relative compaction.

Shrinkage and Subsidence

The change in volume of excavated and recompacted soil varies according to soil type and location. This volume change is represented as a percentage increase (bulking) or decrease (shrinkage) in volume of fill after removal and recompaction. Subsidence occurs as natural ground is moisture-conditioned and densified to receive fill. Field and laboratory data used in our calculations included laboratory-measured maximum dry densities for soil types encountered at the subject site and the measured in-place densities of soils encountered. We estimate the following earth volume changes will occur during grading:

Shrinkage	Approximately 15 percent
Subsidence	Approximately 0.15 foot

The level of fill compaction, variations in the dry density of the existing soils and other factors influence the amount of volume change. Some adjustments to earthwork volume should be anticipated during grading of the site.

Leighton

3.2 Foundations

Based on our preliminary investigation and our experience in the region, conventional shallow or post-tensioned foundations may be used to support the loads of one- to two-story, frame-type structures. Overexcavation and recompaction of the footing subgrade soil should be performed as detailed in Section 3.1.

Conventional Shallow Foundations

Based on our preliminary investigation, the footings for 2-story structures should have an embedment depth of 18 inches, with a minimum width of 24 and 15 inches for isolated and continuous footings, respectively. The footings for 1-story residential structures should have an embedment depth of 12 inches, with a minimum width of 24 and 12 inches for isolated and continuous footings, respectively.

An allowable bearing capacity of 2,000 psf may be used for preliminary design, based on the minimum embedment depth and width. The allowable bearing value may be increased by 300 psf per foot increase in depth or width to a maximum allowable bearing pressure of 3,500 psf. The allowable bearing pressure is for the total dead load and frequently applied live loads.

The soil resistance available to withstand lateral loads on a shallow foundation is a function of the frictional resistance along the base of the footing and the passive resistance that may develop as the face of the structure tends to move into the soil. The frictional resistance between the base of the foundation and the subgrade soil may be computed using a coefficient of friction of 0.35. The passive resistance may be computed using an equivalent fluid pressure of 350 pounds per cubic foot (pcf), assuming there is constant contact between the footing and undisturbed soil.

The allowable bearing pressure and coefficient of friction values may be increased by one third when considering loads of short duration, such as those imposed by wind and seismic forces.

Footing reinforcement should be designed by the structural engineer.

The recommended allowable bearing capacity is generally based on a total allowable, post construction settlement of 1 inch. Differential settlement is estimated at ½ inch over a horizontal distance of 30 feet. Since settlement is a function of footing size and contact bearing pressure, differential settlement can be expected between adjacent columns or walls where a large differential loading condition exists. These settlement estimates should be reevaluated by Leighton and Associates when foundation plans for the proposed structures become available.

Post-Tensioned Foundations

As an alternative to conventional spread footings, post-tension foundation systems can be used. Post-tension slab foundations should be designed by the project structural engineer. The following table provides post-tension slab design information for soil with a low expansion potential. Post-tension slabs should be designed in accordance with Section 1816 of the current edition of the UBC.

Post-Tension Foundation Design Recommendations		
Very Low Expansion		
Edge Moisture Variation Distance, e_m	Center Lift	5.5 feet
	Edge Lift	3.0 feet
Differential Swell, Y_m	Center Lift	1.0 inch
	Edge Lift	0.4 inch
Modulus of subgrade Reaction		120 pci

Exterior footings (thickened edges) should have a minimum depth of 12 inches below the lowest adjacent soil grade and a minimum width of 12 inches. These footings may be designed for a maximum allowable bearing pressure of 2,000 pounds per square foot. The allowable bearing capacity may be increased by one-third for short-term loading.

These recommendations are based on preliminary data. Additional testing of the soil present near finish grade will be conducted to confirm the final foundation design information. Local agencies, the structural engineer or the Uniform Building Code may have requirements that are more stringent.

3.3 Slab-On-Grade

Concrete slabs subjected to special loads should be designed by the structural engineer. Where conventional light floor loading conditions exist, the following minimum recommendations, which are based on a very low soil expansion potential, should be used:

- A minimum slab thickness of 4 inches (nominal). Reinforcement steel should be design by the structural engineer, but as a minimum should be No. 3 rebar placed at 24 inches on center. Reinforcement should be supported on "chairs" to position the reinforcement within the middle third of the slab thickness.

- A moisture barrier consisting of 6-mil Visqueen (or equivalent) placed below slabs where moisture-sensitive floor coverings or equipment is planned. The moisture barrier should be covered with a minimum of 2 inches of sand.

- The subgrade soil should be moisture conditioned to at least optimum moisture content to a minimum depth of 12 inches prior to placing the moisture barrier, steel or concrete.

The use of reinforcement or post-tensioned cables in slabs and foundations can generally reduce the potential for concrete cracking. However, minor cracking of the concrete as it cures, due to drying and shrinkage, is normal and should be expected. However, cracking is often aggravated by a high water/cement ratio, high concrete temperature at the time of placement, small nominal aggregate size, and rapid moisture loss due to hot, dry, and/or windy weather conditions during placement and curing. Cracking due to temperature and moisture fluctuations can also be expected. The use of low slump concrete can reduce the potential for shrinkage cracking.

Moisture barriers can retard, but not eliminate moisture vapor movement from the underlying soils up through the slab. Floor covering manufacturers should be consulted for specific recommendations.

3.4 Seismic Design Parameters

Seismic parameters presented in this report should be considered during project design. In order to reduce the effects of ground shaking produced by regional seismic events, seismic design should be performed in accordance with the most recent edition of the Uniform Building Code (UBC). The following data should be considered for the seismic analysis of the subject site:

Leighton

Seismic Design Parameters	
Seismic Source	San Jacinto (San Jacinto Valley) Fault
Distance	Approximately 9 km
Seismic Source Type (UBC, Table 16-U):	B
Seismic Zone Factor, Z (UBC, Table 16-I):	0.4
Soil Profile Type (UBC, 16-J):	S_D
Near-Source Factor N_a (UBC, Table 16-S):	1.0
Source Factor N_v (UBC, Table 16-T):	1.04

3.5 Retaining Walls

We recommend that retaining walls be backfilled with onsite, very low expansive soil and constructed with a backdrain in accordance with the recommendations provided on Figure 3 (rear of text). Using expansive soil as retaining wall backfill will result in higher lateral earth pressures exerted on the wall. Based on these recommendations, the following parameters may be used for the design of conventional retaining walls up to 6 feet tall:

Static Equivalent Fluid Weight (pcf)	
Conditions	Level
Active	35
At-Rest	55
Passive	350 (Maximum of 3,500 psf)

The above values do not contain an appreciable factor of safety, so the structural engineer should apply the applicable factors of safety and/or load factors during design.

Cantilever walls that are designed to yield at least 0.001H, where H is equal to the wall height, may be designed using the active condition. Rigid walls and walls braced at the top should be designed using the at-rest condition.

Passive pressure is used to compute soil resistance to lateral structural movement. In addition, for sliding resistance, a frictional resistance coefficient of 0.35 may be used at the concrete and soil interface. The lateral passive resistance should be taken into account only if it is ensured that the soil providing passive resistance, embedded against the foundation elements, will remain intact with time.

In addition to the above lateral forces due to retained earth, surcharge due to improvements, such as an adjacent structure or traffic loading, should be considered in the design of the retaining wall. Loads applied within a 1:1 projection from the surcharging structure on the stem of the wall should be considered in the design.

A soil unit weight of 120 pcf may be assumed for calculating the actual weight of the soil over the wall footing.

Retaining wall footings should have a minimum width of 12 inches and a minimum embedment of 12 inches below the lowest adjacent grade. An allowable bearing capacity of 2,000 psf may be used for retaining wall footing design, based on the minimum footing width and depth. This bearing value may be increased by 300 psf per foot increase in width or depth to a maximum allowable bearing pressure of 3,500 psf.

3.6 Pavement Design

A representative soil sample tested during this investigation had an R-value of 61. Based on the design procedures outlined in the current Caltrans Highway Design Manual, preliminary flexible pavement section recommendations are presented in the following table for the Traffic Indices indicated. Final pavement design should be based on the Traffic Index determined by the project civil engineer and R-value testing provided near the completion of street grading. These pavement sections meet the City of Moreno Valley's current minimum pavement requirements.

AC PAVEMENT SECTION THICKNESS		
Traffic Index	Asphaltic Concrete (AC) Thickness (feet)	Class 2 Aggregate Base (AB) Thickness (feet)
6 or less	0.30	.040
7	0.35	0.40

If the pavement is to be constructed prior to construction of the structures, we recommend that the full depth of the pavement section be placed in order to support heavy construction traffic.

All pavement construction should be performed in accordance with the Standard Specifications for Public Works Construction. Field inspection and periodic testing, as needed during placement of the base course materials, should be undertaken to ensure that the requirements of the standard specifications are fulfilled. Prior to placement of aggregate base, the subgrade soil should be processed to a minimum depth of 6 inches, moisture-conditioned, as necessary, and recompacted to a minimum of 90 percent relative compaction. Aggregate base should be moisture conditioned, as necessary, and compacted to a minimum of 95 percent relative compaction.

3.7 Temporary Excavations

All temporary excavations, including utility trenches, retaining wall excavations, etc. should be performed in accordance with project plans, specifications and all OSHA requirements.

No surcharge loads should be permitted within a horizontal distance equal to the height of cut or 5 feet, whichever is greater from the top of the slope, unless the cut is shored appropriately. Excavations that extend below an imaginary plane inclined at 45 degrees below the edge of any adjacent existing structure should be properly shored to maintain support of the structure.

Typical cantilever shoring should be designed based on the active fluid pressure presented in the retaining wall section. If excavations are braced at the top and at specific design intervals, the active pressure may then be approximated by a rectangular soil pressure distribution with the pressure per foot of width equal to 22H, where H is equal to the depth of the excavation being shored.

During construction, the soil conditions should be regularly evaluated to verify that conditions are as anticipated. The contractor should be responsible for providing the "competent person" required by OSHA standards to evaluate soil conditions. Close coordination between the competent person and the geotechnical engineer should be maintained to facilitate construction while providing safe excavations.

3.8 Trench Backfill

Utility-type trenches onsite can be backfilled with the onsite material, provided it is free of debris, significant organic material and oversized material. Prior to backfilling the trench, pipes should be bedded and shaded in a granular material that has a sand equivalent of 30 or greater. The sand should extend 12 inches above the top of the pipe. The bedding/shading sand should be densified in-place by jetting. The native backfill should be placed in loose layers, moisture conditioned, as necessary, and mechanically compacted using a minimum standard of 90 percent relative compaction.

3.9 Surface Drainage

Surface drainage should be designed to be directed away from foundations and toward approved drainage devices. Irrigation of landscaping should be controlled to maintain, as much as possible, a consistent moisture content sufficient to provide healthy plant growth without overwatering.

3.10 Cement Type and Corrosion Protection

Based on the results of laboratory testing, concrete structures in contact with the onsite soil will have negligible exposure to water-soluble sulfates in the soil. Common Type II cement may be used for concrete construction onsite and the concrete should be designed in accordance with Table 19-A-4 of the Uniform Building Code.

Based on our laboratory testing, the onsite soil is considered mildly corrosive to ferrous metals. The corrosion information presented in this report should be provided to your underground utility subcontractors.

3.11 Additional Geotechnical Investigation and Services

The preliminary geotechnical recommendations presented in this report are based on subsurfacc conditions as interpreted from limited subsurface explorations and limited laboratory testing. Our preliminary geotechnical recommendations provided in this report are based on information available at the time the report was prepared and may change as plans are developed. Additional geotechnical investigation and analysis may be required based on final development plans. Leighton and Associates should review the site and grading plans when available and comment further on the geotechnical aspects of the project. Geotechnical observation and testing should be conducted during excavation and all phases of grading operations. The conclusions and preliminary recommendations presented herein should be reviewed and verified by Leighton and Associates during construction and revised accordingly if geotechnical conditions encountered vary from our preliminary findings and interpretations. Geotechnical observation and testing should be provided:

- After completion of site clearing.
- During overexcavation of compressible soil.
- During compaction of all fill materials.

- After excavation of all footings and prior to placement of concrete.
- During utility trench backfilling and compaction.
- During pavement subgrade and base preparation.
- When any unusual conditions are encountered.

APPENDIX E

LEIGHTON AND ASSOCIATES, INC.

GENERAL EARTHWORK AND GRADING SPECIFICATIONS FOR ROUGH GRADING

Table of Contents

Attachment: Geotechnical Study (2444 : Legacy Park Project)

1.0 General

1.1 Intent: These General Earthwork and Grading Specifications are for the grading and earthwork shown on the approved grading plan(s) and/or indicated in the geotechnical report(s). These Specifications are a part of the recommendations contained in the geotechnical report(s). In case of conflict, the specific recommendations in the geotechnical report shall supersede these more general Specifications. Observations of the earthwork by the project Geotechnical Consultant during the course of grading may result in new or revised recommendations that could supersede these specifications or the recommendations in the geotechnical report(s).

1.2 The Geotechnical Consultant of Record: Prior to commencement of work, the owner shall employ the Geotechnical Consultant of Record (Geotechnical Consultant). The Geotechnical Consultants shall be responsible for reviewing the approved geotechnical report(s) and accepting the adequacy of the preliminary geotechnical findings, conclusions, and recommendations prior to the commencement of the grading.

Prior to commencement of grading, the Geotechnical Consultant shall review the "work plan" prepared by the Earthwork Contractor (Contractor) and schedule sufficient personnel to perform the appropriate level of observation, mapping, and compaction testing.

During the grading and earthwork operations, the Geotechnical Consultant shall observe, map, and document the subsurface exposures to verify the geotechnical design assumptions. If the observed conditions are found to be significantly different than the interpreted assumptions during the design phase, the Geotechnical Consultant shall inform the owner, recommend appropriate changes in design to accommodate the observed conditions, and notify the review agency where required. Subsurface areas to be geotechnically observed, mapped, elevations recorded, and/or tested include natural ground after it has been cleared for receiving fill but before fill is placed, bottoms of all "remedial removal" areas, all key bottoms, and benches made on sloping ground to receive fill.

The Geotechnical Consultant shall observe the moisture-conditioning and processing of the subgrade and fill materials and perform relative compaction testing of fill to determine the attained level of compaction. The Geotechnical Consultant shall provide the test results to the owner and the Contractor on a routine and frequent basis.

1.3 The Earthwork Contractor: The Earthwork Contractor (Contractor) shall be qualified, experienced, and knowledgeable in earthwork logistics, preparation and processing of ground to receive fill, moisture-conditioning and processing of fill, and compacting fill. The Contractor shall review and accept the plans, geotechnical report(s), and these Specifications prior to commencement of grading. The

Contractor shall be solely responsible for performing the grading in accordance with the plans and specifications.

The Contractor shall prepare and submit to the owner and the Geotechnical Consultant a work plan that indicates the sequence of earthwork grading, the number of "spreads" of work and the estimated quantities of daily earthwork contemplated for the site prior to commencement of grading. The Contractor shall inform the owner and the Geotechnical Consultant of changes in work schedules and updates to the work plan at least 24 hours in advance of such changes so that appropriate observations and tests can be planned and accomplished. The Contractor shall not assume that the Geotechnical Consultant is aware of all grading operations.

The Contractor shall have the sole responsibility to provide adequate equipment and methods to accomplish the earthwork in accordance with the applicable grading codes and agency ordinances, these Specifications, and the recommendations in the approved geotechnical report(s) and grading plan(s). If, in the opinion of the Geotechnical Consultant, unsatisfactory conditions, such as unsuitable soil, improper moisture condition, inadequate compaction, insufficient buttress key size, adverse weather, etc., are resulting in a quality of work less than required in these specifications, the Geotechnical Consultant shall reject the work and may recommend to the owner that construction be stopped until the conditions are rectified.

2.0 Preparation of Areas to be Filled

2.1 Clearing and Grubbing: Vegetation, such as brush, grass, roots, and other deleterious material shall be sufficiently removed and properly disposed of in a method acceptable to the owner, governing agencies, and the Geotechnical Consultant.

The Geotechnical Consultant shall evaluate the extent of these removals depending on specific site conditions. Earth fill material shall not contain more than 1 percent of organic materials (by volume). No fill lift shall contain more than 5 percent of organic matter. Nesting of the organic materials shall not be allowed.

If potentially hazardous materials are encountered, the Contractor shall stop work in the affected area, and a hazardous material specialist shall be informed immediately for proper evaluation and handling of these materials prior to continuing to work in that area.

As presently defined by the State of California, most refined petroleum products (gasoline, diesel fuel, motor oil, grease, coolant, etc.) have chemical constituents that are considered to be hazardous waste. As such, the indiscriminate dumping or spillage of these fluids onto the ground may constitute a misdemeanor, punishable by fines and/or imprisonment, and shall not be allowed.

2.2 Processing: Existing ground that has been declared satisfactory for support of fill by the Geotechnical Consultant shall be scarified to a minimum depth of 6 inches. Existing ground that is not satisfactory shall be overexcavated as specified in the following section. Scarification shall continue until soils are broken down and free of large clay lumps or clods and the working surface is reasonably uniform, flat, and free of uneven features that would inhibit uniform compaction.

2.3 Overexcavation: In addition to removals and overexcavations recommended in the approved geotechnical report(s) and the grading plan, soft, loose, dry, saturated, spongy, organic-rich, highly fractured or otherwise unsuitable ground shall be overexcavated to competent ground as evaluated by the Geotechnical Consultant during grading.

2.4 Benching: Where fills are to be placed on ground with slopes steeper than 5:1 (horizontal to vertical units), the ground shall be stepped or benched. Please see the Standard Details for a graphic illustration. The lowest bench or key shall be a minimum of 15 feet wide and at least 2 feet deep, into competent material as evaluated by the Geotechnical Consultant. Other benches shall be excavated a minimum height of 4 feet into competent material or as otherwise recommended by the Geotechnical Consultant. Fill placed on ground sloping flatter than 5:1 shall also be benched or otherwise overexcavated to provide a flat subgrade for the fill.

2.5 Evaluation/Acceptance of Fill Areas: All areas to receive fill, including removal and processed areas, key bottoms, and benches, shall be observed, mapped, elevations recorded, and/or tested prior to being accepted by the Geotechnical Consultant as suitable to receive fill. The Contractor shall obtain a written acceptance from the Geotechnical Consultant prior to fill placement. A licensed surveyor shall provide the survey control for determining elevations of processed areas, keys, and benches.

Attachment: Geotechnical Study (2444 : Legacy Park Project)

3.0 Fill Material

3.1 General: Material to be used as fill shall be essentially free of organic matter and other deleterious substances evaluated and accepted by the Geotechnical Consultant prior to placement. Soils of poor quality, such as those with unacceptable gradation, high expansion potential, or low strength shall be placed in areas acceptable to the Geotechnical Consultant or mixed with other soils to achieve satisfactory fill material.

3.2 Oversize: Oversize material defined as rock, or other irreducible material with a maximum dimension greater than 8 inches, shall not be buried or placed in fill unless location, materials, and placement methods are specifically accepted by the Geotechnical Consultant. Placement operations shall be such that nesting of oversized material does not occur and such that oversize material is completely surrounded by compacted or densified fill. Oversize material shall not be placed within 10 vertical feet of finish grade or within 2 feet of future utilities or underground construction.

3.3 Import: If importing of fill material is required for grading, proposed import material shall meet the requirements of Section 3.1. The potential import source shall be given to the Geotechnical Consultant at least 48 hours (2 working days) before importing begins so that its suitability can be determined and appropriate tests performed.

4.0 Fill Placement and Compaction

4.1 Fill Layers: Approved fill material shall be placed in areas prepared to receive fill (per Section 3.0) in near-horizontal layers not exceeding 8 inches in loose thickness. The Geotechnical Consultant may accept thicker layers if testing indicates the grading procedures can adequately compact the thicker layers. Each layer shall be spread evenly and mixed thoroughly to attain relative uniformity of material and moisture throughout.

4.2 Fill Moisture Conditioning: Fill soils shall be watered, dried back, blended, and/or mixed, as necessary to attain a relatively uniform moisture content at or slightly over optimum. Maximum density and optimum soil moisture content tests shall be performed in accordance with the American Society of Testing and Materials (ASTM Test Method D1557-91).

4.3 Compaction of Fill: After each layer has been moisture-conditioned, mixed, and evenly spread, it shall be uniformly compacted to not less than 90 percent of maximum dry density (ASTM Test Method D1557-91). Compaction equipment shall be adequately sized and be either specifically designed for soil compaction or of proven reliability to efficiently achieve the specified level of compaction with uniformity.

4.4 Compaction of Fill Slopes: In addition to normal compaction procedures specified above, compaction of slopes shall be accomplished by backrolling of slopes with sheepsfoot rollers at increments of 3 to 4 feet in fill elevation, or by other methods producing satisfactory results acceptable to the Geotechnical Consultant. Upon completion of grading, relative compaction of the fill, out to the slope face, shall be at least 90 percent of maximum density per ASTM Test Method D1557-91.

4.5 Compaction Testing: Field tests for moisture content and relative compaction of the fill soils shall be performed by the Geotechnical Consultant. Location and frequency of tests shall be at the Consultant's discretion based on field conditions encountered. Compaction test locations will not necessarily be selected on a random basis. Test locations shall be selected to verify adequacy of compaction levels in areas that are judged to be prone to inadequate compaction (such as close to slope faces and at the fill/bedrock benches).

4.6 Frequency of Compaction Testing: Tests shall be taken at intervals not exceeding 2 feet in vertical rise and/or 1,000 cubic yards of compacted fill soils embankment. In addition, as a guideline, at least one test shall be taken on slope faces for each 5,000 square feet of slope face and/or each 10 feet of vertical height of slope. The Contractor shall assure that fill construction is such that the testing schedule can be accomplished by the Geotechnical Consultant. The Contractor shall stop or slow down the earthwork construction if these minimum standards are not met.

4.7 Compaction Test Locations: The Geotechnical Consultant shall document the approximate elevation and horizontal coordinates of each test location. The Contractor shall coordinate with the project surveyor to assure that sufficient grade stakes are established so that the Geotechnical Consultant can determine the test locations with sufficient accuracy. At a minimum, two grade stakes within a horizontal distance of 100 feet and vertically less than 5 feet apart from potential test locations shall be provided.

5.0 Subdrain Installation

Subdrain systems shall be installed in accordance with the approved geotechnical report(s), the grading plan, and the Standard Details. The Geotechnical Consultant may recommend additional subdrains and/or changes in subdrain extent, location, grade, or material depending on conditions encountered during grading. All subdrains shall be surveyed by a land surveyor/civil engineer for line and grade after installation and prior to burial. Sufficient time should be allowed by the Contractor for these surveys.

6.0 Excavation

Excavations, as well as over-excavation for remedial purposes, shall be evaluated by the Geotechnical Consultant during grading. Remedial removal depths shown on geotechnical plans are estimates only. The actual extent of removal shall be determined by the Geotechnical Consultant based on the field evaluation of exposed conditions during grading. Where fill-over-cut slopes are to be graded, the cut portion of the slope shall be made, evaluated, and accepted by the Geotechnical Consultant prior to placement of materials for construction of the fill portion of the slope, unless otherwise recommended by the Geotechnical Consultant.

7.0 Trench Backfills

7.1 Safety: The Contractor shall follow all OHSA and Cal/OSHA requirements for safety of trench excavations.

7.2 Bedding and Backfill: All bedding and backfill of utility trenches shall be done in accordance with the applicable provisions of Standard Specifications of Public Works Construction. Bedding material shall have a Sand Equivalent greater than 30 (SE>30). The bedding shall be placed to 1 foot over the top of the conduit and densified by jetting. Backfill shall be placed and densified to a minimum of 90 percent of maximum from 1 foot above the top of the conduit to the surface.

The Geotechnical Consultant shall test the trench backfill for relative compaction. At least one test should be made for every 300 feet of trench and 2 feet of fill.

7.3 Lift Thickness: Lift thickness of trench backfill shall not exceed those allowed in the Standard Specifications of Public Works Construction unless the Contractor can demonstrate to the Geotechnical Consultant that the fill lift can be compacted to the minimum relative compaction by his alternative equipment and method.

7.4 Observation and Testing: The jetting of the bedding around the conduits shall be observed by the Geotechnical Consultant.

Leighton and Associates, Inc.
A LEIGHTON GROUP COMPANY

August 29, 2016

Project No. 11427.001

Mission Pacific Land Company
4100 Newport Place, Suite 480
Newport Beach, California 92660

Attention: Mr. Jason Keller, P.E.

Subject: Geotechnical Update Report
Residential Development, Tentative Tract Map 36760
APNs: 485-220-023, 485-220-032, 485-220-040
Moreno Valley, California

In accordance with your request, Leighton & Associates Inc. (Leighton) is pleased to present herewith a geotechnical update for the subject project. We understand that you are requesting this update letter to confirm that the soils conditions and the recommendations included in our referenced reports still apply to the proposed development. Our previous investigation evaluated approximately 104 acres, of which the subject 53 acre property is a part. We include herein updated CBC seismic design coefficients for foundation design. Percolation testing for the proposed 1.2 Acre water quality bioretention basin in the southeast corner will be performed later and the results presented in a separate report.

SITE DESCRIPTION AND PROPOSED DEVELOPMENT

The subject site generally consists of approximately 53 acres located southeast of the intersection of Indian Street and Gentian Avenue (See Figure 1). The site is bounded on the west by Indian Street, on the north by the eastward extension of Gentian Avenue, on the east by the California Aqueduct easement, and on the south by the westward extension of Santiago Drive. The attached Geotechnical Map (Figure 2) depicts the planned development area. Based on our past history on this site and recent site observations this site was used for agricultural purposes within the period of at least 1953 to 1980, and was otherwise vacant. At the time of our observation on August 25, 2016, the site is vacant with some local debris and concrete rubble. The property has been disced and some weeds and grasses exist throughout the property.

41715 Enterprise Circle N., Suite 103 ▪ Temecula, CA 92590-5661
951.296.053

Based on the project Tentative Tract Map (Rick, 2016) we understand that the overall site will be developed to host 221 typical one- and two-story residential structures similar to those anticipated during our original site evaluation. Additionally, two bioretention basins are proposed in the southwest and southeast corners and approximately 2.8 acres in the center of the southern boundary are reserved for a park site. Grading will consist of cut and fill typically on the order of 2 to 3 feet. Remedial removal and recompaction will increase the fill thickness by approximately 3 feet. The maximum depth of excavation is approximately 9 feet for the southwest water quality Basin.

SUMMARY OF OBSERVATIONS AND UPDATED RECOMMENDATIONS

Based on the above, it is our opinion that the proposed development is feasible from a geotechnical/geologic standpoint and may be constructed as planned provided the recommendations included the referenced soils report (Leighton, 2004) and those provided below are incorporated into the design and construction phases of development.

In case of conflict the recommendations presented below should superseded those previously included in the referenced soils report. However, if new rough grading plans become available, additional reviews and/or geotechnical evaluations will be required to confirm that the as-graded site conditions remain suitable for the proposed improvements.

Seismic Design Parameters

For the purpose of structural design and based on current codes (2013 CBC) and utilizing a software program published by United States Geological Survey (USGS, 2016), the seismic design coefficients for this site are presented in table below:

CBC Categorization/Coefficient	Value
Site Latitude	**33.893976**
Site Longitude	**-117.232060**
Site Class Definition	**D**
Mapped Spectral Response Acceleration at 0.2s Period, S_s	**1.500 g**
Mapped Spectral Response Acceleration at 1s Period, S_1	**0.605 g**
Short Period Site Coefficient at 0.2s Period, F_a	***1.00***
Long Period Site Coefficient at 1s Period, F_v `	***1.50***
Adjusted Spectral Response Acceleration at 0.2s Period, S_{MS}	**1.500 g**
Adjusted Spectral Response Acceleration at 1s Period, S_{M1}	**0.907 g**
Design Spectral Response Acceleration at 0.2s Period, S_{DS}	**1.000 g**
Design Spectral Response Acceleration at 1s Period, S_{D1}	**0.605 g**

g=Gravity acceleration

PLANS AND SPECIFICATIONS

We recommend that the project rough grading plans and specifications be reviewed by the geotechnical consultant to determine whether the geotechnical recommendations in this and previous reports have been effectively implemented in the project design and remain applicable to the proposed development. Additional recommendations may be provided based on that review.

LIMITATIONS

This report was prepared solely for the use of our client and his design consulting team, for the design of the proposed improvements described in this report, in accordance with generally accepted geotechnical engineering practices at this time in California. No warranty is expressed or implied.

This report was necessarily based in part upon data obtained from a limited number of observations and existing reports. Such information is necessarily incomplete. It should be understood that additional subsurface verification is necessary for the completion of the geotechnical evaluation of this site during construction. The nature of many sites is such that differing characteristics can be experienced within small distances and under various climatic conditions. Changes in subsurface conditions can, and do, occur over time.

This report is not authorized for use by, and is not to be relied upon by any party except, our client and/or his design team, with whom Leighton & Associates, Inc. has contracted for the work. In addition, this report is subject to review and approval by the City of Moreno Valley. Use of or reliance on this report by any other party prior to approval is at that party's risk. Unauthorized use of or reliance on this report constitutes an agreement to defend and indemnify Leighton & Associates, Inc. from and against any liability which may arise as a result of such use or reliance, regardless of any fault, negligence, or strict liability of Leighton & Associates, Inc.

If you have any questions regarding this report, please do not hesitate to contact this office. We appreciate the opportunity to be of service.

Respectfully submitted,

LEIGHTON & ASSOCIATES, INC.

EXECUTIVE SUMMARY

SUMMARY OF FINDINGS

The City of Moreno Valley has not adopted its own numeric threshold of significance for determining impacts with respect to greenhouse gas (GHG) emissions. The SCAQMD has convened a GHG CEQA Significance Threshold Working Group (Working Group). Based on the last Working Group meeting (Meeting No. 15) held in September 2010, SCAQMD is proposing to adopt a tiered approach for evaluating GHG emissions for development projects where SCAQMD is not the lead agency. SCAQMD had proposed a Project level efficiency significance threshold, in which a 2020 statewide population and employment for land use sectors was divided by 2020 statewide service population (SP), amounting to a 4.8 MTCO2e per service population threshold (1). The City will utilize the Project level efficiency significance threshold approach recommended in the SCAQMD's Interim Thresholds document for commercial, residential, and mixed use projects.

Thus, and based on guidance from the SCAQMD, if a residential project would emit GHGs less than 4.8 MTCO2e per service population, the project is not considered a substantial GHG emitter and the GHG impact is less than significant. On the other hand, if a residential project would emit GHGs in excess of 4.8 MTCO2e per service population, then the project could be considered a substantial GHG emitter, requiring additional analysis and potential mitigation.

As shown in Table ES-1, the proposed project would result in approximately 4.62 MTCO2e per service population and would not exceed the threshold of 4.8 MTCO2e per service population. Therefore, project-related emissions would not have a significant direct or indirect impact on GHG and climate change.

TABLE ES-1: TOTAL PROJECT GREENHOUSE GAS EMISSIONS (ANNUAL)

Emission Source	Emissions (metric tons per year)			
	CO_2	CH_4	N_2O	Total CO_2E
Annual construction-related emissions amortized over 30 years	37.06	4.16E-03	0.00	37.16
Area	56.79	4.63E-03	9.70E-04	57.20
Energy	888.47	4.00E-02	1.00E-02	523.66
Mobile Source	3,157.07	1.60E-01	0	3,161.18
Waste	52.60	3.11	0.00	130.31
Water Usage	67.33	0.47	1.00E-02	82.69
Total CO_2E (All Sources)	**3,992.20**			
Total Service Population (Persons Per Household)	**864**			
Total CO2E (All Sources/ Service Population))	**4.62**			
Threshold (Persons Per Household	**4.8**			
Significant?	**NO**			

The Project would not conflict with the City of Moreno Valley Energy Efficiency and Climate Action Strategy

The Project is consistent with and supports the City of Moreno Valley Energy Efficiency and Climate Action Strategy (CAS), which is the applicable plan, policy or regulation adopted for the purpose of reducing greenhouse gases. Project consistency with the CAS is detailed in Section 2.10.

CONSTRUCTION AND OPERATIONAL-SOURCE MITIGATION MEASURES

No significant impacts were identified, therefore, no mitigation measures are required.

1 INTRODUCTION

This report presents the results of the greenhouse gas analysis (GHGA) prepared by Urban Crossroads, Inc., for the proposed Legacy Park (Tentative Tract Map No. 36760) Project (referred to as "Project").

The purpose of this GHGA is to evaluate Project-related construction and operational emissions and determine the level of greenhouse gas (GHG) impacts as a result of constructing and operating the proposed Project.

1.1 SITE LOCATION

The proposed Legacy Park (Tentative Tract Map No. 36760) site is located on the southeast corner of Indian Street and Gentian Avenue in the City of Moreno Valley. The Project site is currently vacant. Residential land uses are located west of the Project site. The vacant land use located adjacent north and east of the Project site is designated as Residential and Commercial, respectively. March Middle School is located adjacent south of the Project. The Interstate 215 (I-215) Freeway is located approximately 2.20 miles west of the Project site.

1.2 PROJECT DESCRIPTION

The Project consists of 221 single family residential dwelling units, as shown on Exhibit 1-A.

For the purposes of this AQIA, it is assumed that the Project will be constructed and at full occupancy by 2021.

1.3 REGULATORY REQUIREMENTS

The Project would be required to comply with all mandates imposed by the State of California and the South Coast Air Quality Management District aimed at the reduction of air quality emissions. Those that are applicable to the Project and that would assist in the reduction of greenhouse gas emissions are:

- Global Warming Solutions Act of 2006 (AB32) (2)
- Regional GHG Emissions Reduction Targets/Sustainable Communities Strategies (SB 375) (3)
- Pavely Fuel Efficiency Standards (AB1493). Establishes fuel efficiency ratings for new vehicles (4).
- Title 24 California Code of Regulations (California Building Code). Establishes energy efficiency requirements for new construction (5).
- Title 20 California Code of Regulations (Appliance Energy Efficiency Standards). Establishes energy efficiency requirements for appliances (6).
- Title 17 California Code of Regulations (Low Carbon Fuel Standard). Requires carbon content of fuel sold in California to be 10% less by 2020 (7).
- California Water Conservation in Landscaping Act of 2006 (AB1881). Requires local agencies to adopt the Department of Water Resources updated Water Efficient Landscape Ordinance or

equivalent by January 1, 2010 to ensure efficient landscapes in new development and reduced water waste in existing landscapes (8).

- Statewide Retail Provider Emissions Performance Standards (SB 1368). Requires energy generators to achieve performance standards for GHG emissions (9).
- Renewable Portfolio Standards (SB 1078). Requires electric corporations to increase the amount of energy obtained from eligible renewable energy resources to 20 percent by 2010 and 33 percent by 2020 (10).

Promulgated regulations that will affect the Project's emissions are accounted for in the Project's GHG calculations provided in this report. In particular, the Pavley Standards, Low Carbon Fuel Standards, and Renewable Portfolio Standards (RPS) will be in effect for the AB 32 target year of 2020, and therefore are accounted for in the Project's emission calculations.

1.4 PROJECT DESIGN FEATURES

Energy-saving and sustainable design features and operational programs would be incorporated into facilities developed pursuant to the currently-proposed Legacy Park (Tentative Tract Map No. 36760). The Project also incorporates and expresses the following design features and attributes promoting energy efficiency and sustainability. Because these features/attributes are integral to the Project, and/or are regulatory requirements, they are not considered to be mitigation measures.

- Regional vehicle miles traveled (VMT) and associated vehicular-source emissions are reduced by the following Project design features/attributes:
    - Pedestrian connections shall be provided to surrounding areas consistent with the City's General Plan. Providing a pedestrian access network to link areas of the Project site encourages people to walk instead of drive. The Project would provide a pedestrian access network that internally links all uses. The Project would minimize barriers to pedestrian access and interconnectivity.
    - The Project's proposed collocation of varied residential, school, park, and open spaces within ¼ mile proximity together with supporting amenities would tend to decrease the propensity for vehicle travel for local residents.

1.5 CONSTRUCTION AND OPERATIONAL-SOURCE MITIGATION MEASURES

No significant impacts were identified, therefore, no mitigation measures are required.

2 CLIMATE CHANGE SETTING

2.1 INTRODUCTION TO GLOBAL CLIMATE CHANGE

Global Climate Change (GCC) is defined as the change in average meteorological conditions on the earth with respect to temperature, precipitation, and storms. GCC is currently one of the most controversial environmental issues in the United States, and much debate exists within the scientific community about whether or not GCC is occurring naturally or as a result of human activity. Some data suggests that GCC has occurred in the past over the course of thousands or millions of years. These historical changes to the Earth's climate have occurred naturally without human influence, as in the case of an ice age. However, many scientists believe that the climate shift taking place since the industrial revolution (1900) is occurring at a quicker rate and magnitude than in the past. Scientific evidence suggests that GCC is the result of increased concentrations of greenhouse gases in the earth's atmosphere, including carbon dioxide, methane, nitrous oxide, and fluorinated gases. Many scientists believe that this increased rate of climate change is the result of greenhouse gases resulting from human activity and industrialization over the past 200 years.

An individual project like the proposed Project evaluated in this GHGA cannot generate enough greenhouse gas emissions to affect a discernible change in global climate. However, the proposed Project may participate in the potential for GCC by its incremental contribution of greenhouse gasses combined with the cumulative increase of all other sources of greenhouse gases, which when taken together constitute potential influences on GCC. Because these changes may have serious environmental consequences, Section 3.0 will evaluate the potential for the proposed Project to have a significant effect upon the environment as a result of its potential contribution to the greenhouse effect.

2.2 GREENHOUSE GAS EMISSIONS INVENTORIES

Global

Worldwide anthropogenic (man-made) GHG emissions are tracked by the Intergovernmental Panel on Climate Change for industrialized nations (referred to as Annex I) and developing nations (referred to as Non-Annex I). Man-made GHG emissions data for Annex I nations are available through 2012. For the Year 2012 the sum of these emissions totaled approximately 28,865,994 Gg CO2e[1] (11) (12). The GHG emissions in more recent years may differ from the inventories presented in Table 2-1; however, the data is representative of currently available inventory data.

United States

As noted in Table 2-1, the United States, as a single country, was the number two producer of GHG emissions in 2012. The primary greenhouse gas emitted by human activities in the United

[1] The global emissions are the sum of Annex I and non-Annex I countries, without counting Land-Use, Land-Use Change and Forestry (LULUCF). For countries without 2005 data, the UNFCCC data for the most recent year were used. United Nations Framework Convention on Climate Change, "Annex I Parties – GHG total without LULUCF,"

States was CO_2, representing approximately 83 percent of total greenhouse gas emissions (13). Carbon dioxide from fossil fuel combustion, the largest source of US greenhouse gas emissions, accounted for approximately 78 percent of the GHG emissions.

TABLE 2-1: TOP GHG PRODUCER COUNTRIES AND THE EUROPEAN UNION[2]

Emitting Countries	GHG Emissions (Gg CO2e)
China	10,975,500
United States	6,665,700
European Union (27 member countries)	4,544,224
India	3,013,770
Russian Federation	2,322,220
Japan	1,344,580
Total	**28,865,994**

State of California

CARB compiles GHG inventories for the State of California. CARB GHG inventory data indicates that in 2013 (the most recent inventory of record) California GHG emissions totaled approximately 459.3 Million Metric Tons of Carbon Dioxide Equivalent ($MMTCO_2e$).[3] "In 2010, California accounted for 6.8 percent of all emissions in the country [United States], and ranked second highest among the states with total emissions of 453 $MMTCO_2e$, only behind Texas with 763 $MMTCO_2e$. From a per capita standpoint, California has the 45th lowest emissions with 12.1 $MMTCO_2e$ /person in 2010."[4]

2.3 GLOBAL CLIMATE CHANGE DEFINED

Global Climate Change (GCC) refers to the change in average meteorological conditions on the earth with respect to temperature, wind patterns, precipitation and storms. Global temperatures are regulated by naturally occurring atmospheric gases such as water vapor, CO_2 (Carbon Dioxide), N_2O (Nitrous Oxide), CH_4 (Methane), hydrofluorocarbons, perfluorocarbons and sulfur hexafluoride. These particular gases are important due to their residence time (duration they stay) in the atmosphere, which ranges from 10 years to more than 100 years. These gases allow solar radiation into the Earth's atmosphere, but prevent radioactive heat from escaping, thus warming the Earth's atmosphere. GCC can occur naturally as it has in the past with the previous ice ages. According to the CARB, the climate change since the industrial revolution differs from previous climate changes in both rate and magnitude (14).

Gases that trap heat in the atmosphere are often referred to as greenhouse gases. Greenhouse gases are released into the atmosphere by both natural and anthropogenic (human) activity.

2 Used http://unfccc.int data for Annex I countries. Consulted the CAIT Climate Data Explorer http://www.wrig.org site to reference Non-Annex I countries such as China and India.

3 Cal EPA. "California Greenhouse Gas Emission Inventory - 2015 Edition." California's Greenhouse Gas Emission Inventory. Cal EPA, n.d. Web. 29 Oct. 2015.

4 California Environmental Protection Agency. Air Resources Board. California's Greenhouse Gas Emission Inventory - 2014 Edition (May 2014), p. 28.

Without the natural greenhouse gas effect, the Earth's average temperature would be approximately 61° Fahrenheit (F) cooler than it is currently. The cumulative accumulation of these gases in the earth's atmosphere is considered to be the cause for the observed increase in the earth's temperature.

Although California's rate of growth of greenhouse gas emissions is slowing, the state is still a substantial contributor to the U.S. emissions inventory total. In 2004, California is estimated to have produced 492 million gross metric tons of carbon dioxide equivalent (CO2e) greenhouse gas emissions. Despite a population increase of 16 percent from 1990 to 2004, California has significantly slowed the rate of growth of greenhouse gas emissions due to the implementation of energy efficiency programs as well as adoption of strict emission controls (15).

2.4 GREENHOUSE GASES

For the purposes of this analysis, emissions of carbon dioxide, methane, and nitrous oxide were evaluated (see Table 3-1 later in this report) because these gasses are the primary contributors to GCC from development projects. Although other substances such as fluorinated gases also contribute to GCC, sources of fluorinated gases are not well-defined and no accepted emissions factors or methodology exist to accurately calculate these gases.

Greenhouse gases have varying global warming potential (GWP) values; GWP values represent the potential of a gas to trap heat in the atmosphere. Carbon dioxide is utilized as the reference gas for GWP, and thus has a GWP of 1.

The atmospheric lifetime and GWP of selected greenhouse gases are summarized at Table 2-2. As shown in the table below, GWP range from 1 for carbon dioxide to 23,900 for sulfur hexafluoride.

TABLE 2-2: GLOBAL WARMING POTENTIAL AND ATMOSPHERIC LIFETIME OF SELECT GHGS

Gas	Atmospheric Lifetime (years)	Global Warming Potential (100 year time horizon)	
		Second Assessment Report (SAR)	4th Assessment Report (AR4)
Carbon Dioxide	50-200	1	1
Methane	12 ± 3	21	25
Nitrous Oxide	120	310	298
HFC-23	264	11,700	14,800
HFC-134a	14.6	1,300	1,430
HFC-152a	1.5	140	124
Sulfur Hexafluoride (SF6)	3,200	23,900	22,800

Source: Table 2.14 of the IPCC Fourth Assessment Report, 2007

Water Vapor: Water vapor (H_2O) is the most abundant, important, and variable greenhouse gas in the atmosphere. Water vapor is not considered a pollutant; in the atmosphere it maintains a climate necessary for life. Changes in its concentration are primarily considered to be a result of climate feedbacks related to the warming of the atmosphere rather than a direct result of industrialization. A climate feedback is an indirect, or secondary, change, either positive or negative, that occurs within the climate system in response to a forcing mechanism. The feedback loop in which water is involved is critically important to projecting future climate change.

As the temperature of the atmosphere rises, more water is evaporated from ground storage (rivers, oceans, reservoirs, soil). Because the air is warmer, the relative humidity can be higher (in essence, the air is able to 'hold' more water when it is warmer), leading to more water vapor in the atmosphere. As a GHG, the higher concentration of water vapor is then able to absorb more thermal indirect energy radiated from the Earth, thus further warming the atmosphere. The warmer atmosphere can then hold more water vapor and so on and so on. This is referred to as a "positive feedback loop." The extent to which this positive feedback loop will continue is unknown as there are also dynamics that hold the positive feedback loop in check. As an example, when water vapor increases in the atmosphere, more of it will eventually also condense into clouds, which are more able to reflect incoming solar radiation (thus allowing less energy to reach the Earth's surface and heat it up).

There are no human health effects from water vapor itself; however, when some pollutants come in contact with water vapor, they can dissolve and the water vapor can then act as a pollutant-carrying agent. The main source of water vapor is evaporation from the oceans (approximately 85 percent). Other sources include: evaporation from other water bodies, sublimation (change from solid to gas) from sea ice and snow, and transpiration from plant leaves.

Carbon Dioxide: Carbon dioxide (CO_2) is an odorless and colorless GHG. Outdoor levels of carbon dioxide are not high enough to result in negative health effects. Carbon dioxide is emitted from natural and manmade sources. Natural sources include: the decomposition of dead organic matter; respiration of bacteria, plants, animals and fungus; evaporation from oceans; and volcanic outgassing. Anthropogenic sources include: the burning of coal, oil, natural gas, and wood. Carbon dioxide is naturally removed from the air by photosynthesis, dissolution into ocean water, transfer to soils and ice caps, and chemical weathering of carbonate rocks (16).

Since the industrial revolution began in the mid-1700s, the sort of human activity that increases GHG emissions has increased dramatically in scale and distribution. Data from the past 50 years suggests a corollary increase in levels and concentrations. As an example, prior to the industrial revolution, CO_2 concentrations were fairly stable at 280 parts per million (ppm). Today, they are around 370 ppm, an increase of more than 30 percent. Left unchecked, the concentration of carbon dioxide in the atmosphere is projected to increase to a minimum of 540 ppm by 2100 as a direct result of anthropogenic sources (17).

Methane: Methane (CH_4) is an extremely effective absorber of radiation, though its atmospheric concentration is less than carbon dioxide and its lifetime in the atmosphere is brief (10-12 years), compared to other GHGs. No health effects are known to occur from exposure to methane.

Methane has both natural and anthropogenic sources. It is released as part of the biological processes in low oxygen environments, such as in swamplands or in rice production (at the roots of the plants). Over the last 50 years, human activities such as growing rice, raising cattle, using natural gas, and mining coal have added to the atmospheric concentration of methane. Other anthropocentric sources include fossil-fuel combustion and biomass burning.

Nitrous Oxide: Nitrous oxide (N_2O), also known as laughing gas, is a colorless greenhouse gas. Nitrous oxide can cause dizziness, euphoria, and sometimes slight hallucinations. In small doses, it is considered harmless. However, in some cases, heavy and extended use can cause Olney's Lesions (brain damage) (18).

Concentrations of nitrous oxide also began to rise at the beginning of the industrial revolution. In 1998, the global concentration was 314 parts per billion (ppb). Nitrous oxide is produced by microbial processes in soil and water, including those reactions which occur in fertilizer containing nitrogen. In addition to agricultural sources, some industrial processes (fossil fuel-fired power plants, nylon production, nitric acid production, and vehicle emissions) also contribute to its atmospheric load. It is used as an aerosol spray propellant, i.e., in whipped cream bottles. It is also used in potato chip bags to keep chips fresh. It is used in rocket engines and in race cars. Nitrous oxide can be transported into the stratosphere, be deposited on the Earth's surface, and be converted to other compounds by chemical reaction

Chlorofluorocarbons: Chlorofluorocarbons (CFCs) are gases formed synthetically by replacing all hydrogen atoms in methane or ethane (C_2H_6) with chlorine and/or fluorine atoms. CFCs are nontoxic, nonflammable, insoluble and chemically unreactive in the troposphere (the level of air at the Earth's surface). CFCs are no longer being used; therefore, it is not likely that health effects would be experienced. Nonetheless, in confined indoor locations, working with CFC-113 or other CFCs is thought to result in death by cardiac arrhythmia (heart frequency too high or too low) or asphyxiation.

CFCs have no natural source, but were first synthesized in 1928. They were used for refrigerants, aerosol propellants and cleaning solvents. Due to the discovery that they are able to destroy stratospheric ozone, a global effort to halt their production was undertaken and was extremely successful, so much so that levels of the major CFCs are now remaining steady or declining. However, their long atmospheric lifetimes mean that some of the CFCs will remain in the atmosphere for over 100 years.

Hydrofluorocarbons: Hydrofluorocarbons (HFCs) are synthetic, man-made chemicals that are used as a substitute for CFCs. Out of all the greenhouse gases, they are one of three groups with the highest global warming potential. The HFCs with the largest measured atmospheric abundances are (in order), HFC-23 (CHF_3), HFC-134a (CF_3CH_2F), and HFC-152a (CH_3CHF_2). Prior to 1990, the only significant emissions were of HFC-23. HFC-134a emissions are increasing due to its use as a refrigerant. The U.S. EPA estimates that concentrations of HFC-23 and HFC-134a are now about 10 parts per trillion (ppt) each; and that concentrations of HFC-152a are about 1 ppt (19). No health effects are known to result from exposure to HFCs, which are manmade for applications such as automobile air conditioners and refrigerants.

Perfluorocarbons: Perfluorocarbons (PFCs) have stable molecular structures and do not break down through chemical processes in the lower atmosphere. High-energy ultraviolet rays, which occur about 60 kilometers above Earth's surface, are able to destroy the compounds. Because of this, PFCs have very long lifetimes, between 10,000 and 50,000 years. Two common PFCs are tetrafluoromethane (CF4) and hexafluoroethane (C2F6). The U.S. EPA estimates that concentrations of CF4 in the atmosphere are over 70 ppt.

No health effects are known to result from exposure to PFCs. The two main sources of PFCs are primary aluminum production and semiconductor manufacture.

Sulfur Hexafluoride: Sulfur hexafluoride (SF6) is an inorganic, odorless, colorless, nontoxic, nonflammable gas. It also has the highest GWP of any gas evaluated (23,900). The U.S. EPA indicates that concentrations in the 1990s were about 4 ppt. In high concentrations in confined areas, the gas presents the hazard of suffocation because it displaces the oxygen needed for breathing.

Sulfur hexafluoride is used for insulation in electric power transmission and distribution equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas for leak detection.

2.5 EFFECTS OF CLIMATE CHANGE IN CALIFORNIA

Public Health

Higher temperatures may increase the frequency, duration, and intensity of conditions conducive to air pollution formation. For example, days with weather conducive to ozone formation could increase from 25 to 35 percent under the lower warming range to 75 to 85 percent under the medium warming range. In addition, if global background ozone levels increase as predicted in some scenarios, it may become impossible to meet local air quality standards. Air quality could be further compromised by increases in wildfires, which emit fine particulate matter that can travel long distances, depending on wind conditions. The Climate Scenarios report indicates that large wildfires could become up to 55 percent more frequent if GHG emissions are not significantly reduced.

In addition, under the higher warming range scenario, there could be up to 100 more days per year with temperatures above 90oF in Los Angeles and 95oF in Sacramento by 2100. This is a large increase over historical patterns and approximately twice the increase projected if temperatures remain within or below the lower warming range. Rising temperatures could increase the risk of death from dehydration, heat stroke/exhaustion, heart attack, stroke, and respiratory distress caused by extreme heat.

Water Resources

A vast network of man-made reservoirs and aqueducts captures and transports water throughout the state from northern California rivers and the Colorado River. The current distribution system relies on Sierra Nevada snowpack to supply water during the dry spring and summer months. Rising temperatures, potentially compounded by decreases in precipitation, could severely reduce spring snowpack, increasing the risk of summer water shortages.

If temperatures continue to increase, more precipitation could fall as rain instead of snow, and the snow that does fall could melt earlier, reducing the Sierra Nevada spring snowpack by as much as 70 to 90 percent. Under the lower warming range scenario, snowpack losses could be only half as large as those possible if temperatures were to rise to the higher warming range. How much snowpack could be lost depends in part on future precipitation patterns, the projections for which remain uncertain. However, even under the wetter climate projections, the loss of snowpack could pose challenges to water managers and hamper hydropower generation. It could also adversely affect winter tourism. Under the lower warming range, the ski season at lower elevations could be reduced by as much as a month. If temperatures reach the higher warming range and precipitation declines, there might be many years with insufficient snow for skiing and snowboarding.

The State's water supplies are also at risk from rising sea levels. An influx of saltwater could degrade California's estuaries, wetlands, and groundwater aquifers. Saltwater intrusion caused by rising sea levels is a major threat to the quality and reliability of water within the southern edge of the Sacramento/San Joaquin River Delta – a major fresh water supply.

Agriculture

Increased temperatures could cause widespread changes to the agriculture industry reducing the quantity and quality of agricultural products statewide. First, California farmers could possibly lose as much as 25 percent of the water supply they need. Although higher $CO2$ levels can stimulate plant production and increase plant water-use efficiency, California's farmers could face greater water demand for crops and a less reliable water supply as temperatures rise. Crop growth and development could change, as could the intensity and frequency of pest and disease outbreaks. Rising temperatures could aggravate $O3$ pollution, which makes plants more susceptible to disease and pests and interferes with plant growth.

Plant growth tends to be slow at low temperatures, increasing with rising temperatures up to a threshold. However, faster growth can result in less-than-optimal development for many crops, so rising temperatures could worsen the quantity and quality of yield for a number of California's agricultural products. Products likely to be most affected include wine grapes, fruits and nuts.

In addition, continued global climate change could shift the ranges of existing invasive plants and weeds and alter competition patterns with native plants. Range expansion could occur in many species while range contractions may be less likely in rapidly evolving species with significant populations already established. Should range contractions occur, new or different weed species could fill the emerging gaps. Continued global climate change could alter the abundance and types of many pests, lengthen pests' breeding season, and increase pathogen growth rates.

Forests and Landscapes

Global climate change has the potential to intensify the current threat to forests and landscapes by increasing the risk of wildfire and altering the distribution and character of natural vegetation. If temperatures rise into the medium warming range, the risk of large wildfires in California could increase by as much as 55 percent, which is almost twice the increase expected if temperatures stay in the lower warming range. However, since wildfire risk is determined by a combination of factors, including precipitation, winds, temperature, and landscape and vegetation conditions, future risks will not be uniform throughout the state. In contrast, wildfires in northern California could increase by up to 90 percent due to decreased precipitation.

Moreover, continued global climate change has the potential to alter natural ecosystems and biological diversity within the state. For example, alpine and subalpine ecosystems could decline by as much as 60 to 80 percent by the end of the century as a result of increasing temperatures. The productivity of the state's forests has the potential to decrease as a result of global climate change.

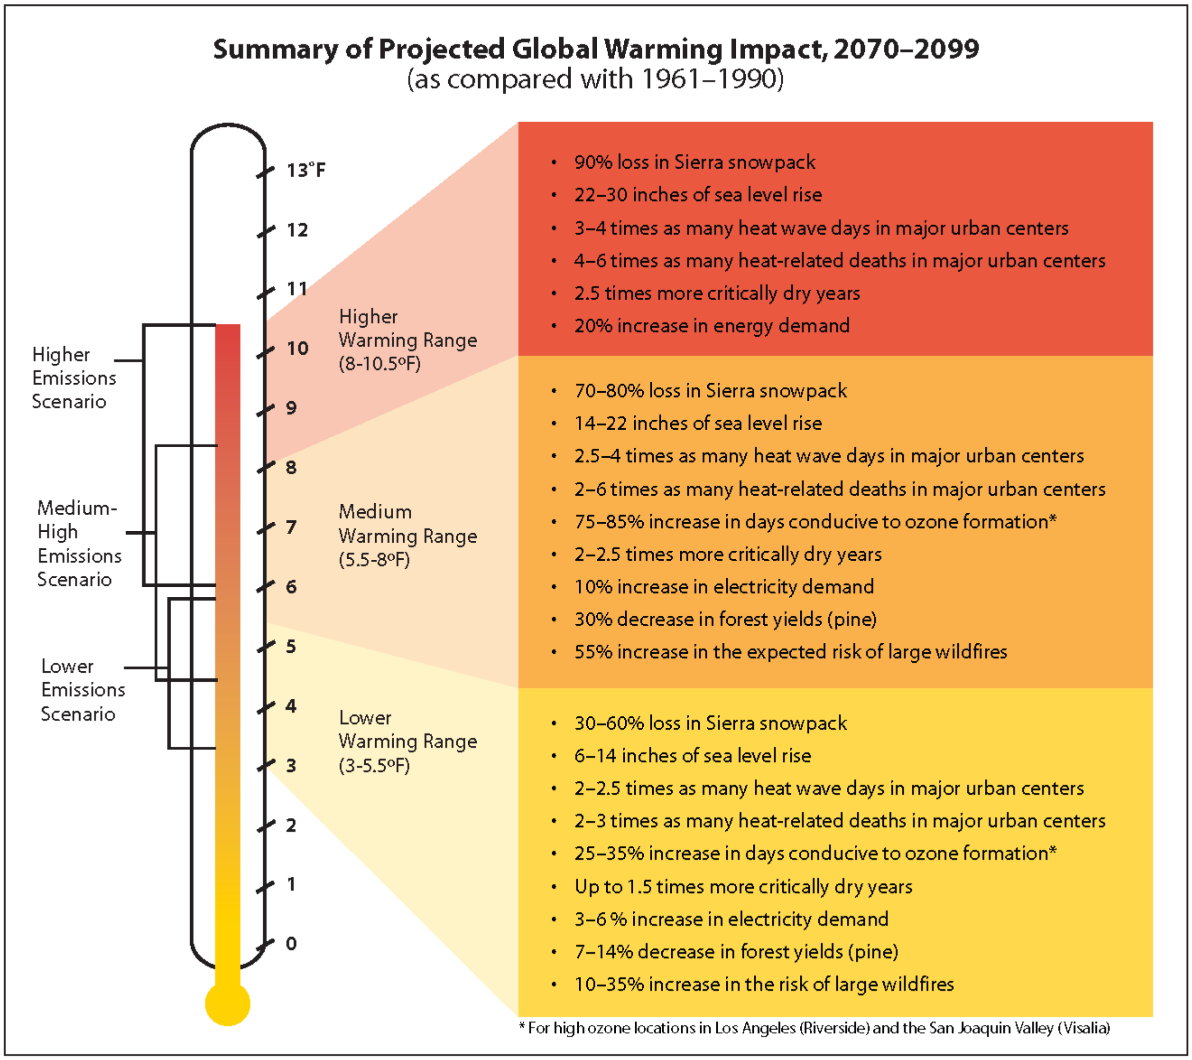
Rising Sea Levels

Rising sea levels, more intense coastal storms, and warmer water temperatures could increasingly threaten the state's coastal regions. Under the higher warming range scenario, sea level is anticipated to rise 22 to 35 inches by 2100. Elevations of this magnitude would inundate low-lying coastal areas with salt water, accelerate coastal erosion, threaten vital levees and inland water systems, and disrupt wetlands and natural habitats. Under the lower warming range scenario, sea level could rise 12-14 inches.

2.6 HUMAN HEALTH EFFECTS

The potential health effects related directly to the emissions of carbon dioxide, methane, and nitrous oxide as they relate to development projects such as the proposed Project are still being debated in the scientific community. Their cumulative effects to global climate change have the potential to cause adverse effects to human health. Increases in Earth's ambient temperatures would result in more intense heat waves, causing more heat-related deaths. Scientists also purport that higher ambient temperatures would increase disease survival rates and result in more widespread disease. Climate change will likely cause shifts in weather patterns, potentially resulting in devastating droughts and food shortages in some areas (20). Exhibit 2-A presents the potential impacts of global warming.

EXHIBIT 2-A: SUMMARY OF PROJECTED GLOBAL WARMING IMPACT



Specific health effects associated with directly emitted GHG emissions are as follows:

Water Vapor: There are no known direct health effects related to water vapor at this time. It should be noted however that when some pollutants react with water vapor, the reaction forms a transport mechanism for some of these pollutants to enter the human body through water vapor.

Carbon Dioxide: According to the National Institute for Occupational Safety and Health (NIOSH) high concentrations of carbon dioxide can result in health effects such as: headaches, dizziness, restlessness, difficulty breathing, sweating, increased heart rate, increased cardiac output, increased blood pressure, coma, asphyxia, and/or convulsions. It should be noted that current concentrations of carbon dioxide in the earth's atmosphere are estimated to be approximately 370 parts per million (ppm), the actual reference exposure level (level at which adverse health effects typically occur) is at exposure levels of 5,000 ppm averaged over 10 hours in a 40-hour workweek and short-term reference exposure levels of 30,000 ppm averaged over a 15-minute period (21).

Methane: Methane is extremely reactive with oxidizers, halogens, and other halogen-containing compounds. Methane is also an asphyxiant and may displace oxygen in an enclosed space (22).

Nitrous Oxide: Nitrous Oxide is often referred to as laughing gas; it is a colorless greenhouse gas. The health effects associated with exposure to elevated concentrations of nitrous oxide include dizziness, euphoria, slight hallucinations, and in extreme cases of elevated concentrations nitrous oxide can also cause brain damage (22).

Fluorinated Gases: High concentrations of fluorinated gases can also result in adverse health effects such as asphyxiation, dizziness, headache, cardiovascular disease, cardiac disorders, and in extreme cases, increased mortality (21).

Aerosols: The health effects of aerosols are similar to that of other fine particulate matter. Thus aerosols can cause elevated respiratory and cardiovascular diseases as well as increased mortality (23).

2.7 REGULATORY SETTING

International Regulation and the Kyoto Protocol:

In 1988, the United Nations established the Intergovernmental Panel on Climate Change to evaluate the impacts of global warming and to develop strategies that nations could implement to curtail global climate change. In 1992, the United States joined other countries around the world in signing the United Nations' Framework Convention on Climate Change (UNFCCC) agreement with the goal of controlling greenhouse gas emissions. As a result, the Climate Change Action Plan was developed to address the reduction of GHGs in the United States. The Plan currently consists of more than 50 voluntary programs for member nations to adopt.

The Kyoto protocol is a treaty made under the UNFCCC and was the first international agreement to regulate GHG emissions. Some have estimated that if the commitments outlined in the Kyoto protocol are met, global GHG emissions could be reduced an estimated five percent from 1990 levels during the first commitment period of 2008-2012. Notably, while the United States is a signatory to the Kyoto protocol, Congress has not ratified the Protocol and the United States is not bound by the Protocol's commitments. In December 2009, international leaders from 192 nations met in Copenhagen to address the future of international climate change commitments post-Kyoto.

Climate Action Plan

On June 25, 2013, President Obama announced the Climate Action Plan, a national plan for tackling climate change. This marked a historic turning point, as the President used his executive authority to push forward a climate change agenda. The plan, divided in to three sections, outlines the steps to cut carbon pollution in the United States, including standards for both new and existing power plants, action to prepare the US for the impacts of climate change, and plans to lead international efforts to address global climate change (24).

Clean Power Plan

In June 2014, the Environmental Protection Agency (EPA) proposed the Clean Power Plan – the first-ever carbon pollution standards for existing power plants that will protect the health of our children and put our nation on the path toward a 30 percent reduction in carbon pollution from the power sector by 2030. Power plants are the largest single source of carbon pollution, accounting for about one-third of all domestic greenhouse gas emissions. The Clean Power Plan will set standards for carbon pollution from power plants, just as we have set limits on power plant emissions of arsenic, mercury, sulfur dioxide, nitrogen oxides, and soot.

In November 2014, in a historic joint announcement with China, President Obama laid out an ambitious but achievable target to reduce greenhouse gas emissions in the United States in the range of 26 to 28 percent below 2005 levels by 2025, while China announced its intent to peak carbon emissions around 2030 and to double its share of zero-carbon energy to 20 percent. The announcement was a historic step for climate change action and for the U.S.-China relationship, as the world's two largest economies, energy consumers, and carbon emitters came together to demonstrate leadership on an issue that affects the entire world (25).

2015 United Nations Paris Climate Change Conference

On December 12, 2015, which marks the 11th meeting of the Parties to the Kyoto Protocol, 195 nations, including the United States and China, agreed upon a strategy for combatting global climate change to be in effect in 2020. This historic meeting, known as the 21st annual Conference of the Parties (COP21), focused on five key elements: mitigation, a transparency system and global stock-take, adaptation, loss and damage, and support.

In mitigating global climate change, COP 21 participating nations agreed upon a universal long-term goal of keeping the global temperature to well below 2°C or 3.6°F well above pre-industrial levels. The agreement also encouraged participating nations to limit temperature increases even further to 1.5°C or 2.7°F above pre-industrial levels. In addition to that, nations agreed to peak their GHG emissions as soon as possible, with the recognition that developing countries may take longer than developed countries. Thereafter, nations are to undergo rapid reductions in accordance to best available technological advances. The nations are to submit national climate action plans that detail future objectives to address climate change.

In supporting a transparency system and global stock-take, the participating nations agreed to meet every 5 years to set more ambitious targets on global climate change as technologically feasible. The nations are to report to each other and to the public on their progress towards implementing targets and goals through a transparency and accountability system.

In adaptation, participating nations are to strengthen the ability of nations to deal with climate impacts and provide continued international support for adaptation to developing countries.

In supporting loss and damage, participating nations understand the importance of minimizing and addressing the loss and damage associated with adverse effects of global climate change.

These nations acknowledge the need to cooperate with each other and support each other through safeguards, such as early warning systems, emergency preparedness, and risk insurance.

Participating nations are to support each other in their efforts to fight against global climate change. Developed countries within the COP21 are to continue their existing collective goal of utilizing 100 billion per year in support of the poorest and most vulnerable participating nations, known as climate finance, until 2025, when a new collective goal will be set (26) (27)

In accordance with Article 21, paragraph 1, of the Paris Agreement, the Agreement shall enter into force on the thirtieth day after the date on which at least 55 Parties to the COP21 accounting in total for at least an estimated 55% of the total global greenhouse gas emissions have deposited their instruments of ratification, acceptance, approval, or accession with the Depositary.

On October 5, 2016, the threshold for entry into force of the Paris Agreement was achieved. The Paris Agreement will enter into force on November 4, 2016 (28).

Federal Regulation and the Clean Air Act:

Coinciding 2009 meeting in Copenhagen, on December 7, 2009, the U.S. Environmental Protection Agency issued an Endangerment Finding under Section 202(a) of the Clean Air Act, opening the door to federal regulation of GHGs. The Endangerment Finding notes that GHGs threaten public health and welfare and are subject to regulation under the Clean Air Act.

The Act requires that when new industrial facilities are designed and built, good pollution control must be part of the design. This means that as new, cleaner facilities are built, the country's industrial base becomes cleaner overall. Public health is protected as economic growth proceeds. In areas not meeting air quality standards, to avoid making pollution worse, new and modified large plants and factories must meet the lowest achievable emission rate and obtain offsetting emissions reductions from other sources. In areas that meet air quality standards, new and modified large plants and factories must apply the best available technology considering cost and avoid causing significant degradation of air quality or visibility impairment in national parks. For example, new coal-fired power plants typically install control devices that capture up to 98 percent of the sulfur dioxide and in many cases 90 percent of the nitrogen oxide emissions, relative to uncontrolled levels.

These requirements are applied through pre-construction permitting programs that are administered by state, local, tribal, or EPA permitting authorities, depending on the location. State and local permitting authorities usually administer the pre-construction permit programs that determine how to apply these requirements to facilities.

To date, the EPA has not promulgated regulations on GHG emissions, but it has already begun to develop them. Previously the EPA had not regulated GHGs under the Clean Air Act (29) because it asserted that the Act did not authorize it to issue mandatory regulations to address global climate change and that such regulation would be unwise without an unequivocally established causal link between GHGs and the increase in global surface air temperatures. In

Massachusetts v. Environmental Protection Agency et al. (127 S. Ct. 1438 (2007), however, the U.S. Supreme Court held that GHGs are pollutants under the Clean Air Act and directed the EPA to decide whether the gases endangered public health or welfare. The EPA had also not moved aggressively to regulate GHGs because it expected Congress to make progress on GHG legislation, primarily from the standpoint of a cap-and-trade system. However, proposals circulated in both the House of Representative and Senate have been controversial and it may be some time before the U.S. Congress adopts major climate change legislation. The EPA's Endangerment Finding paves the way for federal regulation of GHGs with or without Congress.

Title 24 Energy Standards:

Although global climate change did not become an international concern until the 1980s, efforts to reduce energy consumption began in California in response to the oil crisis in the 1970s, resulting in the unintended reduction of greenhouse gas emissions. In order to manage the state's energy needs and promote energy efficiency, AB 1575 created the California Energy Commission (CEC) in 1975.

The California Energy Commission (CEC) first adopted Energy Efficiency Standards for Residential and Nonresidential Buildings (30) in 1978 in response to a legislative mandate to reduce energy consumption in the state. Although not originally intended to reduce GHG emissions, increased energy efficiency, and reduced consumption of electricity, natural gas, and other fuels would result in fewer GHG emissions from residential and nonresidential buildings subject to the standard. The standards are updated periodically to allow for the consideration and inclusion of new energy efficiency technologies and methods. The Energy Commission's 2013 Building Energy Efficiency Standard is 25 percent more efficient than previous standards for residential construction and 30 percent better for nonresidential construction. The Standards, which took effect on January 1, 2014, offer builders better windows, insulation, lighting, ventilation systems and other features that reduce energy consumption in homes and businesses. Some improved measures in the Standards include:

Residential:

- Solar-ready roofs to allow homeowners to add solar photovoltaic panels at a future date
- More efficient windows to allow increased sunlight, while decreasing heat gain
- Insulated hot water pipes, to save water and energy and reduce the time it takes to deliver hot water
- Whole house fans to cool homes and attics with evening air reducing the need for air conditioning load
- Air conditioner installation verification to insure efficient operation

Nonresidential:

- High performance windows, sensors and controls that allow buildings to use "daylighting"
- Efficient process equipment in supermarkets, computer data centers, commercial kitchens, laboratories, and parking garages

- Advanced lighting controls to synchronize light levels with daylight and building occupancy, and provide demand response capability
- Solar-ready roofs to allow businesses to add solar photovoltaic panels at a future date
- Cool roof technologies

It should be noted that the 2016 Building Energy Efficiency Standards were released in June 2015. The 2016 Standards, which will take effect on January 1, 2017, will continue to improve upon the 2013 Standards for new construction of and additions and alterations to residential and nonresidential buildings. The Impact Analysis for the 2016 Standards, which estimates the percent savings for residential and nonresidential buildings from the previous Standards, have not yet been released. As such, the 2013 Title 24 Standards are utilized in the report.

CALGreen

Part 11 of the Title 24 Building Standards Code is referred to as the California Green Building Standards Code (CALGreen Code) (31). The purpose of the CALGreen Code is to "improve public health, safety and general welfare by enhancing the design and construction of buildings through the use of building concepts having a positive environmental impact and encouraging sustainable construction practices in the following categories: (1) Planning and design; (2) Energy efficiency; (3) Water efficiency and conservation; (4) Material conservation and resource efficiency; and (5) Environmental air quality." The CALGreen Code is not intended to substitute or be identified as meeting the certification requirements of any green building program that is not established and adopted by the California Building Standards Commission (CBSC). The CBSC has released the 2010 California Green Building Standards Code on its Web site. Unless otherwise noted in the regulation, all newly constructed buildings in California are subject of the requirements of the CALGreen Code.

CALGreen contains both mandatory and voluntary measures, for Non-Residential land uses there are 39 mandatory measures including, but not limited to: exterior light pollution reduction, wastewater reduction by 20%, and commissioning of projects over 10,000 sf. There are two tiers of voluntary measures for Non-Residential land uses for a total of 36 additional elective measures.

The 2013 CALGreen includes additions and amendments to the water efficiency standards for non-residential buildings in order to comply with the reduced flow rate table. The 2013 CALGreen has also been rewritten to clarify and definitively identify the requirements and applicability for residential and nonresidential buildings.

California Assembly Bill No. 1493 (AB 1493):

AB 1493 requires CARB to develop and adopt the nation's first greenhouse gas emission standards for automobiles. The Legislature declared in AB 1493 that global warming was a matter of increasing concern for public health and environment in California (32). Further, the legislature stated that technological solutions to reduce greenhouse gas emissions would stimulate the California economy and provide jobs.

To meet the requirements of AB 1493, ARB approved amendments to the California Code of Regulations (CCR) adding GHG emission standards to California's existing motor vehicle emission standards in 2004. Amendments to CCR Title 13 Sections 1900 (CCR 13 1900) and 1961 (CCR 13 1961) and adoption of Section 1961.1 (CCR 13 1961.1) require automobile manufacturers to meet fleet average GHG emission limits for all passenger cars, light-duty trucks within various weight criteria, and medium-duty passenger vehicle weight classes beginning with the 2009 model year. Emission limits are further reduced each model year through 2016.

In December 2004 a group of car dealerships, automobile manufacturers, and trade groups representing automobile manufacturers filed suit against ARB to prevent enforcement of CCR 13 1900 and CCR 13 1961 as amended by AB 1493 and CCR 13 1961.1 (Central Valley Chrysler-Jeep et al. v. Catherine E. Witherspoon, in her official capacity as Executive Director of the California Air Resources Board, et al.). The suit, heard in the U.S. District Court for the Eastern District of California, contended that California's implementation of regulations that in effect regulate vehicle fuel economy violates various federal laws, regulations, and policies. In January 2007, the judge hearing the case accepted a request from the State Attorney General's office that the trial be postponed until a decision is reached by the U.S. Supreme Court on a separate case addressing GHGs. In the Supreme Court Case, Massachusetts vs. EPA, the primary issue in question is whether the federal CAA provides authority for USEPA to regulate CO2 emissions. In April 2007, the U.S. Supreme Court ruled in Massachusetts' favor, holding that GHGs are air pollutants under the CAA. On December 11, 2007, the judge in the Central Valley Chrysler-Jeep case rejected each plaintiff's arguments and ruled in California's favor. On December 19, 2007, the USEPA denied California's waiver request. California filed a petition with the Ninth Circuit Court of Appeals challenging USEPA's denial on January 2, 2008.

The Obama administration subsequently directed the USEPA to re-examine their decision. On May 19, 2009, challenging parties, automakers, the State of California, and the federal government reached an agreement on a series of actions that would resolve these current and potential future disputes over the standards through model year 2016. In summary, the USEPA and the U.S. Department of Transportation agreed to adopt a federal program to reduce GHGs and improve fuel economy, respectively, from passenger vehicles in order to achieve equivalent or greater greenhouse gas benefits as the AB 1493 regulations for the 2012–2016 model years. Manufacturers agreed to ultimately drop current and forego similar future legal challenges, including challenging a waiver grant, which occurred on June 30, 2009. The State of California committed to (1) revise its standards to allow manufacturers to demonstrate compliance with the fleet-average GHG emission standard by "pooling" California and specified State vehicle sales; (2) revise its standards for 2012–2016 model year vehicles so that compliance with USEPA-adopted GHG standards would also comply with California's standards; and (3) revise its standards, as necessary, to allow manufacturers to use emissions data from the federal CAFE program to demonstrate compliance with the AB 1493 regulations (CARB 2009, http://www.arb.ca.gov/regact/2009/ghgpv09/ghgpvisor.pdf) both of these programs are aimed at light-duty auto and light-duty trucks.

Executive Order S-3-05:

Executive Order S-3-05, which was signed by Governor Schwarzenegger in 2005, proclaims that California is vulnerable to the impacts of climate change (33). It declares that increased temperatures could reduce the Sierra's snowpack, further exacerbate California's air quality problems, and potentially cause a rise in sea levels. To combat those concerns, the Executive Order established total greenhouse gas emission targets. Specifically, emissions are to be reduced to the 1990 level by 2020, and to 80% below the 1990 level by 2050. The Executive Order directed the Secretary of the California Environmental Protection Agency (CalEPA) to coordinate a multi-agency effort to reduce greenhouse gas emissions to the target levels. The Secretary also is required to submit biannual reports to the Governor and state Legislature describing: (1) progress made toward reaching the emission targets; (2) impacts of global warming on California's resources; and (3) mitigation and adaptation plans to combat these impacts. To comply with the Executive Order, the Secretary of the CalEPA created a Climate Action Team (CAT) made up of members from various state agencies and commission. CAT released its first report in March 2006. The report proposed to achieve the targets by building on voluntary actions of California businesses, local government and community actions, as well as through state incentive and regulatory programs.

<u>California Assembly Bill 32 (AB 32):</u>

In September 2006, Governor Arnold Schwarzenegger signed AB 32, the California Climate Solutions Act of 2006. AB 32 requires that statewide GHG emissions be reduced to 1990 levels by the year 2020 (34). This reduction will be accomplished through an enforceable statewide cap on GHG emissions that will be phased in starting in 2012. To effectively implement the cap, AB 32 directs CARB to develop and implement regulations to reduce statewide GHG emissions from stationary sources. AB 32 specifies that regulations adopted in response to AB 1493 should be used to address GHG emissions from vehicles. However, AB 32 also includes language stating that if the AB 1493 regulations cannot be implemented, then CARB should develop new regulations to control vehicle GHG emissions under the authorization of AB 32.

AB 32 requires that CARB adopt a quantified cap on GHG emissions representing 1990 emissions levels and disclose how it arrives at the cap; institute a schedule to meet the emissions cap; and develop tracking, reporting, and enforcement mechanisms to ensure that the state achieves reductions in GHG emissions necessary to meet the cap. AB 32 also includes guidance to institute emissions reductions in an economically efficient manner and conditions to ensure that businesses and consumers are not unfairly affected by the reductions.

In November 2007, CARB completed its estimates of 1990 GHG levels. Net emission 1990 levels were estimated at 427 MMTs (emission sources by sector were: transportation – 35 percent; electricity generation – 26 percent; industrial – 24 percent; residential – 7 percent; agriculture – 5 percent; and commercial – 3 percent). Accordingly, 427 MMTs of CO2 equivalent was established as the emissions limit for 2020. For comparison, CARB's estimate for baseline GHG emissions was 473 MMT for 2000 and 532 MMT for 2010. "Business as usual" conditions (without the 28.4 percent reduction to be implemented by CARB regulations) for 2020 were projected to be 596 MMTs.

In December 2007, CARB approved a regulation for mandatory reporting and verification of GHG emissions for major sources. This regulation covered major stationary sources such as cement plants, oil refineries, electric generating facilities/providers, and co-generation facilities, which comprise 94 percent of the point source CO2 emissions in the State.

On December 11, 2008, CARB adopted a scoping plan to reduce GHG emissions to 1990 levels. The Scoping Plan's recommendations for reducing GHG emissions to 1990 levels by 2020 include emission reduction measures, including a cap-and-trade program linked to Western Climate Initiative partner jurisdictions, green building strategies, recycling and waste-related measures, as well as Voluntary Early Actions and Reductions. Implementation of individual measures must begin no later than January 1, 2012, so that the emissions reduction target can be fully achieved by 2020.

Table 2-3 shows the proposed reductions from regulations and programs outlined in the Scoping Plan. While local government operations were not accounted for in achieving the 2020 emissions reduction, local land use changes are estimated to result in a reduction of 5 MMTons of CO2e, which is approximately 3 percent of the 2020 GHG emissions reduction goal. In recognition of the critical role local governments will play in successful implementation of AB 32, CARB is recommending GHG reduction goals of 15 percent of 2006 levels by 2020 to ensure that municipal and community-wide emissions match the state's reduction target. According to the Measure Documentation Supplement to the Scoping Plan, local government actions and targets are anticipated to reduce vehicle miles by approximately 2 percent through land use planning, resulting in a potential GHG reduction of 2 MM Tons of CO2e (or approximately 1.2 percent of the GHG reduction target).

TABLE 2-3: SCOPING PLAN GHG REDUCTION MEASURES TOWARDS 2020 TARGET

Recommended Reduction Measures	*Reductions Counted toward 2020 Target of 169 MMT CO2e*	*Percentage of Statewide 2020 Target*
Cap and Trade Program and Associated Measures		
California Light-Duty Vehicle GHG Standards	31.7	19%
Energy Efficiency	26.3	16%
Renewable Portfolio Standard (33 percent by 2020)	21.3	13%
Low Carbon Fuel Standard	15	9%
Regional Transportation-Related GHG Targets[1]	5	3%
Vehicle Efficiency Measures	4.5	3%
Goods Movement	3.7	2%
Million Solar Roofs	2.1	1%
Medium/Heavy Duty Vehicles	1.4	1%
High Speed Rail	1.0	1%
Industrial Measures	0.3	0%
Additional Reduction Necessary to Achieve Cap	34.4	20%
Total Cap and Trade Program Reductions	146.7	87%
Uncapped Sources/Sectors Measures		
High Global Warming Potential Gas Measures	20.2	12%
Sustainable Forests	5	3%

Industrial Measures (for sources not covered under cap and trade program)	1.1	1%
Recycling and Waste (landfill methane capture)	1	1%
Total Uncapped Sources/Sectors Reductions	27.3	16%
Total Reductions Counted toward 2020 Target	174	100%
Other Recommended Measures – Not Counted toward 2020 Target		
State Government Operations	1.0 to 2.0	1%
Local Government Operations	To Be Determined[2]	NA
Green Buildings	26	15%
Recycling and Waste	9	5%
Water Sector Measures	4.8	3%
Methane Capture at Large Dairies	1	1%
Total Other Recommended Measures – Not Counted toward 2020 Target	42.8	NA

Source: CARB. 2008, MMTons CO2e: million metric tons of CO2e
[1]Reductions represent an estimate of what may be achieved from local land use changes. It is not the SB 375 regional target.
[2]According to the Measure Documentation Supplement to the Scoping Plan, local government actions and targets are anticipated to reduce vehicle miles by approximately 2 percent through land use planning, resulting in a potential GHG reduction of 2 million metric tons of CO2e (or approximately 1.2 percent of the GHG reduction target). However, these reductions were not included in the Scoping Plan reductions to achieve the 2020 Target

Overall, CARB determined that achieving the 1990 emission level in 2020 would require a reduction in GHG emissions of approximately 30 percent in the absence of new laws and regulations (referred to as "Business-As-Usual" [BAU]). The Scoping Plan evaluates opportunities for sector-specific reductions, integrates all CARB and California Climate Action Team early actions and additional GHG reduction measures, identifies additional measures to be pursued as regulations, and outlines the role of the cap-and-trade program.

When the 2020 emissions level projection also was updated to account for implemented regulatory measures, including Pavley (vehicle model-years 2009 - 2016) and the renewable portfolio standard (12% - 20%), the 2020 projection in the BAU condition was reduced further to 507 MTCO2e. As a result, based on the updated economic and regulatory data, CARB determined that achieving the 1990 emissions level in 2020 would now only require a reduction of GHG emissions of 80 MTCO2e, or approximately 16 percent (down from 30 percent), from the BAU condition. (35) (36)

On February 10, 2014, CARB released a Draft Proposed First Update of the Scoping Plan. The draft recalculates 1990 GHG emissions using new global warming potentials identified in the IPCC Fourth Assessment Report released in 2007. Using those GWPs, the 427 MTCO2e 1990 emissions level and 2020 GHG emissions limit identified in the 2008 Scoping Plan would be slightly higher, at 431 MTCO2e. (37) Based on the revised 2020 emissions level projection identified in the 2011 Final Supplement and the updated 1990 emissions levels identified in the discussion draft of the First Update, achieving the 1990 emissions level in 2020 would require a reduction of 78 MTCO2e (down from 509 MTCO2e), or approximately 15.3 percent (down from 30 percent), from the BAU condition. (35) (36) (37)

Although CARB has released an update to the Scoping Plan and reduction targets from BAU, it is still appropriate to utilize the previous 30% reduction from BAU since the modeling tools available are not able to easily segregate the inclusion of the renewable portfolio standards, and Pavley requirements that are now included in the revised BAU scenario.

Senate Bill 97 (SB 97):

Pursuant to the direction of SB 97, OPR released preliminary draft CEQA Guideline amendments for greenhouse gas emissions on January 8, 2009, and submitted its final proposed guidelines to the Secretary for Natural Resources on April 13, 2009 (38). The Natural Resources Agency adopted the Guideline amendments and they became effective on March 18, 2010.

Of note, the new guidelines state that a lead agency shall have discretion to determine whether to use a quantitative model or methodology, or in the alternative, rely on a qualitative analysis or performance based standards. CEQA Guideline § 15064.4(a)"A lead agency shall have discretion to determine, in the context of a particular project, whether to: (1) Use a model or methodology to quantify greenhouse gas emissions resulting from a project, and which model or methodology to use . . .; or (2) Rely on a qualitative analysis or performance based standards."

Also amended were CEQA Guidelines Sections 15126.4 and 15130, which address mitigation measures and cumulative impacts respectively. Greenhouse gas mitigation measures are referenced in general terms, but no specific measures are championed. The revision to the cumulative impact discussion requirement (Section 15130) simply directs agencies to analyze greenhouse gas emissions in an EIR when a Project's incremental contribution of emissions may be cumulatively considerable, however it does not answer the question of when emission are cumulatively considerable.

Section 15183.5 permits programmatic greenhouse gas analysis and later project-specific tiering, as well as the preparation of Greenhouse Gas Reduction Plans. Compliance with such plans can support determination that a Project's cumulative effect is not cumulatively considerable, according to proposed Section 15183.5(b).

CEQA emphasizes that the effects of greenhouse gas emissions are cumulative, and should be analyzed in the context of CEQA's requirements for cumulative impacts analysis. (See CEQA Guidelines Section 15130(f)).

Section 15064.4(b) of the CEQA Guidelines provides direction for lead agencies for assessing the significance of impacts of greenhouse gas emissions:

1. The extent to which the project may increase or reduce greenhouse gas emissions as compared to the existing environmental setting;
2. Whether the project emissions exceed a threshold of significance that the lead agency determines applies to the project; or
3. The extent to which the project complies with regulations or requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of greenhouse gas emissions. Such regulations or requirements must be adopted by the relevant public agency through a public review process and must include specific

requirements that reduce or mitigate the project's incremental contribution of greenhouse gas emissions. If there is substantial evidence that the possible effects of a particular project are still cumulatively considerable notwithstanding compliance with the adopted regulations or requirements, an EIR must be prepared for the project.

The CEQA Guideline amendments do not identify a threshold of significance for greenhouse gas emissions, nor do they prescribe assessment methodologies or specific mitigation measures. Instead, they call for a "good-faith effort, based on available information, to describe, calculate or estimate the amount of greenhouse gas emissions resulting from a project." The amendments encourage lead agencies to consider many factors in performing a CEQA analysis and preserve lead agencies' discretion to make their own determinations based upon substantial evidence. The amendments also encourage public agencies to make use of programmatic mitigation plans and programs from which to tier when they perform individual project analyses. Specific GHG language incorporated in the Guidelines' suggested Environmental Checklist (Guidelines Appendix G) is as follows:

VII. GREENHOUSE GAS EMISSIONS

Would the project:

a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

<u>Executive Order S-01-07:</u>

On January 18, 2007 California Governor Arnold Schwarzenegger, through Executive Order S-01-07, mandated a statewide goal to reduce the carbon intensity of California's transportation fuel by at least ten percent by 2020 (39). The order also requires that a California specific Low Carbon Fuel Standard be established for transportation fuels.

<u>Executive Order B-30-15:</u>

In January 2015, Governor Brown, in his inaugural address and annual report to the Legislature, established supplementary goals which would further reduce GHG emissions over the next 15 years. These goals include an increase in California's renewable energy portfolio from 33% to 50%, a reduction in vehicle petroleum use for cars and trucks by up to 50% measures to double the efficiency of existing buildings, and decreasing emissions associated with heating fuels.

On April 29, 2015 California Governor Jerry Brown, through Executive Order B-30-15 ("BEO") states a new statewide policy goal to reduce GHG emissions 40 percent below their 1990 levels by 2030.

The BEO sets an ambitious new Statewide GHG emissions reduction target of 40% below 1990 levels by 2030 as a "mid-term" benchmark needed to achieve the 80% below 1990 levels by 2050 (40).

Senate Bill 32:

On September 8, 2016, Governor Jerry Brown signed the Senate Bill (SB) 32 and its companion bill, Assembly Bill (AB) 197. SB 32 requires the state to reduce statewide greenhouse gas emissions to 40% below 1990 levels by 2030, a reduction target that was first introduced in Executive Order B-30-15. The new legislation builds upon the AB 32 goal of 1990 levels by 2020 and provides an intermediate goal to achieving S-3-05, which sets a statewide greenhouse gas reduction target of 80% below 1990 levels by 2050 (41) (42).

The Project reduces its GHG emissions to the maximum extent feasible as discussed in this document. At this time, no further analysis is necessary or required by CEQA as it pertains to Executive Order B-30-15 and SB 32.

Additionally, as described previously, the project applicant would not actively interfere with any future City-mandated, state-mandated, or federally-mandated retrofit obligations enacted or promulgated to legally require development City-wide, state-wide, or nation-wide to assist in meeting state-adopted greenhouse gas emissions reduction targets, including that established under Executive Order S-3-05, Executive Order B-30-15, or SB 32.

Based on the foregoing, the Project does not interfere with the state's implementation of (i) Executive Order B-30-15 and SB 32's target of reducing statewide GHG emissions to 40% below 1990 levels by 2030 or (ii) Executive Order S-3-05's target of reducing statewide GHG emissions to 80% below 1990 levels by 2050 because it does not interfere with the state's implementation of GHG reduction plans described in the CARB's Updated Scoping Plan, including the state providing for 12,000 MW of renewable distributed generation by 2020, the California Building Commission mandating net zero energy homes in the building code after 2020, or existing building retrofits under AB 758. Therefore, the project's impacts on greenhouse gas emissions in the 2030 and 2050 horizon years are less than significant.

Senate Bills 1078 and 107 and Executive Order S-14-08:

SB 1078 (Chapter 516, Statutes of 2002) requires retail sellers of electricity, including investor-owned utilities and community choice aggregators, to provide at least 20% of their supply from renewable sources by 2017 (43). SB 107 (Chapter 464, Statutes of 2006) changed the target date to 2010 (39). In November 2008 Governor Schwarzenegger signed Executive Order S-14-08, which expands the state's Renewable Energy Standard to 33% renewable power by 2020 (44).

Senate Bill 375:

SB 375, signed in September 2008 (Chapter 728, Statutes of 2008), aligns regional transportation planning efforts, regional GHG reduction targets, and land use and housing allocation (45). SB 375 requires metropolitan planning organizations (MPOs) to adopt a sustainable communities strategy (SCS) or alternative planning strategy (APS) that will prescribe land use allocation in that MPO's regional transportation plan. ARB, in consultation with MPOs, will provide each affected region with reduction targets for GHGs emitted by passenger cars and light trucks in the region for the years 2020 and 2035.

These reduction targets will be updated every 8 years but can be updated every 4 years if advancements in emissions technologies affect the reduction strategies to achieve the targets. ARB is also charged with reviewing each MPO's SCS or APS for consistency with its assigned targets. If MPOs do not meet the GHG reduction targets, transportation projects will not be eligible for funding programmed after January 1, 2012.

This law also extends the minimum time period for the regional housing needs allocation cycle from 5 years to 8 years for local governments located within an MPO that meets certain requirements. City or county land use policies (including general plans) are not required to be consistent with the regional transportation plan (and associated SCS or APS). However, new provisions of CEQA would incentivize (through streamlining and other provisions) qualified projects that are consistent with an approved SCS or APS, categorized as "transit priority projects."

The Southern California Association of Governments (SCAG) is required by law to update the Southern California Regional Transportation Plan (RTP) every four years. On April 7, 2016, the SCAG's Regional Council adopted the 2016-2040 RTP/SCS (46). The 2016 RTP/SCS incorporates transportation, land use, and housing policies that would result in an eight percent reduction in greenhouse gas emissions per capita by 2020, an 18 percent reduction by 2035, and a 21 percent reduction by 2040 —compared with 2005 levels. This would meet or exceed the GHG emissions targets established by the California Air Resource Board (CARB) for 2020 (8% reduction) and 2035 (13% reduction). In June 2016, the Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA) indicated that all air conformity requirements for the 2016 RTP/SCS have been met (47).

<u>CARB's Preliminary Draft Staff Proposal for Interim Significance Thresholds:</u>

Separate from its Scoping Plan approved in December of 2008 (48), CARB issued a Staff Proposal in October 2008, as its first step toward developing recommended statewide interim thresholds of significance for GHGs that may be adopted by local agencies for their own use. CARB staff's objective in this proposal is to develop a threshold of significance that will result in the vast majority (approximately 90 percent statewide) of GHG emissions from new industrial projects being subject to CEQA's requirement to impose feasible mitigation. The proposal does not attempt to address every type of project that may be subject to CEQA, but instead focuses on common project types that, collectively, are responsible for substantial GHG emissions – specifically, industrial, residential, and commercial projects. CARB is developing these thresholds in these sectors to advance climate objectives, streamline project review, and encourage consistency and uniformity in the CEQA analysis of GHG emissions throughout the state. These draft thresholds are under revision in response to comments. There is currently no timetable for finalized thresholds at this time.

As currently proposed by CARB, a quantitative threshold of 7,000 metric tons (MT) of CO2e per year for operational emissions (excluding transportation), and performance standards yet to be defined for construction and transportation emissions are under consideration. However, CARB's proposal is not yet final, and thus cannot be applied to the Project.

South Coast Air Quality Management District Recommendations for Significance Thresholds:

In April 2008, the South Coast Air Quality Management District (SCAQMD), in order to provide guidance to local lead agencies on determining the significance of GHG emissions identified in CEQA documents, convened a "GHG CEQA Significance Threshold Working Group." The goal of the working group is to develop and reach consensus on an acceptable CEQA significance threshold for GHG emissions that would be utilized on an interim basis until CARB (or some other state agency) develops statewide guidance on assessing the significance of GHG emissions under CEQA.

Initially, SCAQMD staff presented the working group with a significance threshold that could be applied to various types of projects—residential; non-residential; industrial; etc (49). However, the threshold is still under development. In December 2008, staff presented the SCAQMD Governing Board with a significance threshold for stationary source projects where it is the lead agency. This threshold uses a tiered approach to determine a project's significance, with 10,000 metric tons of carbon dioxide equivalent (MTCO2e) as a screening numerical threshold for stationary sources. More importantly it should be noted that when setting the 10,000 MTCO2e threshold, the SCAQMD did not consider mobile sources (vehicular travel), rather the threshold is based mainly on stationary source generators such as boilers, refineries, power plants, etc. Therefore, it would be misleading to apply a threshold that was developed without consideration for mobile sources to a Project where the majority of emissions are related to mobile sources. Thus there is no SCAQMD threshold that can be applied to this Project.

In September 2010 (1), the Working Group released additional revisions that consist of the following recommended tiered approach:

- Tier 1 consists of evaluating whether or not the Project qualifies for applicable CEQA exemptions.
- Tier 2 consists of determining whether or not a Project is consistent with a greenhouse gas reduction plan. If a Project is consistent with a greenhouse gas reduction plan, it would not have a significant impact.
- Tier 3 consists of screening values at the discretion of the lead agency; however they should be consistent for all projects within its jurisdiction. Project-related construction emissions should be amortized over 30 years and should be added back the Project's operational emissions. The following thresholds are proposed for consideration:
    - o 3,000 MTCO2e per year for all land use types

      or
    - o 3,500 MTCO2e per year for residential; 1,400 MTCO2e per year for commercial; or 3,000 MTCO2e per year for mixed-use projects
- Tier 4 has the following options:
    - o Option 1: Reduce emissions from business as usual by a certain percentage (currently undefined)
    - o Option 2: Early implementation of applicable AB 32 Scoping Plan measures
    - o Option 3: A project-level efficiency target of 4.8 MTCO2e per service population as a 2020 target and 3.0 MTCO2e per service population as a 2035 target. The recommended

plan-level target for 2020 is 6.6 MTCO2e and the plan level target for 2035 is 4.1 MTCO2e

- Tier 5 involves mitigation offsets to achieve target significance thresholds

The SCAQMD has also adopted Rules 2700, 2701, and 2702 that address GHG reductions. However, these rules address boilers and process heater, forestry, and manure management projects, none of which are required by the Project

2.9 CITY OF MORENO VALLEY GENERAL PLAN MEASURES

Although the City of Moreno Valley General Plan does not identify specific GHG or climate change policies or goal, a number of the measures identified in the General Plan's Air Quality Element act to reduce or control criteria pollutant emissions and peripherally reduce GHG emissions. The proposed Project has been evaluated for consistency with the City's General Plan Air Quality Element, as shown on Table 2-4.

TABLE 2-4: CITY OF MORENO VALLEY GENERAL PLAN CONSISTENCY

Objective 6.6: Promote land use patterns that reduce daily automotive trips and reduce trip distance for work, shopping, school, and recreation.	**Consistent.** *The Project site is developed approximately 0.50 miles north of a regional shopping center (Stoneridge Towne Centre)*
Objective 6.7: Reduce mobile and stationary source air pollutant emissions.	**Consistent.** *The Project site is located proximate to existing and proposed major roadways, acting to generally reduce vehicle trip lengths, thereby reducing mobile source emissions.*
Policy 6.7.5: Require grading activities to comply with South Coast Air Quality Management District's Rule 403 regarding the control of fugitive dust.	**Consistent.** *The Project will be required to implement fugitive dust control measures consistent with SCAQMD Rule 403.*
Policy 6.7.6: Require building construction to comply with the energy conservation requirements of Title 24 of the California Administrative Code [California Code of Regulations].	**Consistent.** *Pursuant to City and State Building Code requirements, the Project will meet or surpass applicable CCR Title 24 energy conservation requirements.*

2.10 CITY OF MORENO VALLEY ENERGY EFFICIENCY AND CLIMATE ACTION STRATEGY

The City of Moreno Valley released an Energy Efficiency and Climate Action Strategy (CAS) as well as a Greenhouse Gas Analysis for public review on May 8, 2012. The documents were approved on October 9, 2012. The CAS identifies ways that the City can reduce energy and water consumption and greenhouse gas emissions as an organization (its employees and the operation of its facilities) and outlines the actions that the City can encourage and community members can employ to reduce their own energy and water consumption and greenhouse gas emissions. The policies in the document are to reduce greenhouse gas emissions in 2010 by 15 percent by 2020. The following consists of an analysis of project consistency with the policies in the CAS.

- R2-T1: Land Use Based Trips and VMT Reduction Policies. Encourage the development of Transit Priority Projects along High Quality Transit Corridors identified in the SCAG Sustainable Communities Plan, to allow a reduction in vehicle miles traveled.

Project consistency: Not applicable.

- R2-T3: Employment-Based Trip Reductions. Require a Transportation Demand Management (TDM) program for new development to reduce automobile travel by encouraging ride-sharing, carpooling, and alternative modes of transportation.

  Project consistency: Not applicable.

- R2-E1: New Construction Residential Energy Efficiency Requirements. Require energy efficient design for all new residential buildings to be 10 percent beyond the current Title 24 standards. (Reach Code)

  Project consistency: Consistent; the Project will comply with this measure if adopted by the City.

- R2-E2: New Construction Residential Renewable Energy. Facilitate the use of renewable energy (such as solar (photovoltaic) panels or small wind turbines) for new residential developments. Alternative approach would be the purchase of renewable energy resources offsite.

  Project consistency: Consistent; the Project will comply with this measure if adopted by the city.

- R2-E5: New Construction Commercial Energy Efficiency Requirements. Require energy efficient design for all new commercial buildings to be 10% beyond the current Title 24 standards. (Reach Code)

  Project consistency: Not applicable.

- R3-E1: Energy Efficient Development, and Renewable Energy Deployment Facilitation and Streamlining. Updating of codes and zoning requirements and guidelines to further implement green building practices. This could include incentives for energy efficient projects.
- Project consistency: Not applicable.
- R3-L2: Heat Island Plan. Develop measures that address "heat islands." Potential measures include using strategically placed shade trees, using paving materials with a Solar Reflective Index of at least 29, an open grid pavement system, or covered parking.

  Project consistency: Consistent; the Project will comply with the City of Moreno Valley's landscaping requirements.

- R2-W1: Water Use Reduction Initiative. Consider adopting a per capita water use reduction goal, which mandates the reduction of water use of 20 percent per capita with requirements applicable to new development and with cooperative support of the water agencies.

  Project consistency: Consistent. California Green Building Standards Code, Chapter 5, Division 5.3, Section 5.303.2 requires that indoor water use be reduced by 20 percent. The Project will be consistent with this measure.

- R3-W1: Water Efficiency Training and Education. Work with EMWD and local water companies to implement a public information and education program that promotes water conservation.

  Project consistency: Not applicable.

- R2-S1: City Diversion Program. For Solid Waste, consider a target of increasing the waste diverted from the landfill to a total of 75 percent by 2020.

  Project consistency: Consistent; the Project will comply with the City of Moreno Valley's citywide goal of solid waste reduction. Additionally the Project will be compliant with the City of Moreno Valley's Municipal Code 8.80.030 by implementing a Waste Management Plan.

As shown above, Project Consistency with Moreno Valley Energy Efficiency and Climate Action Strategy, of this report, many of the measures are not applicable to the project. The project is consistent with the applicable measures in the Strategy. Therefore, the project is consistent with the CAS.

2.11 DISCUSSION ON ESTABLISHMENT OF SIGNIFICANCE THRESHOLDS

The City of Moreno Valley has not adopted its own numeric threshold of significance for determining impacts with respect to greenhouse gas (GHG) emissions. The SCAQMD has convened a GHG CEQA Significance Threshold Working Group (Working Group). Based on the last Working Group meeting (Meeting No. 15) held in September 2010, SCAQMD is proposing to adopt a tiered approach for evaluating GHG emissions for development projects where SCAQMD is not the lead agency. SCAQMD had proposed a Project level efficiency significance threshold, in which a 2020 statewide population and employment for land use sectors was divided by 2020 statewide service population (SP), amounting to a 4.8 MTCO2e per service population threshold (1). The City will utilize the Project level efficiency significance threshold approach recommended in the SCAQMD's Interim Thresholds document for commercial, residential, and mixed use projects.

Thus, and based on guidance from the SCAQMD, if a residential project would emit GHGs less than 4.8 MTCO2e per service population, the project is not considered a substantial GHG emitter and the GHG impact is less than significant. On the other hand, if a residential project would emit GHGs in excess of 4.8 MTCO2e per service population, then the project could be considered a substantial GHG emitter, requiring additional analysis and potential mitigation.

Furthermore, and based on Item b) of the CEQA Guidelines Appendix, the analysis presented would determine if the Project would conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing emissions of greenhouse gases. As the Project is located within the City of Moreno Valley, Project consistency will be based on the CAS. Project consistency with the CAS is determined in Section 2.10.

3 PROJECT GREENHOUSE GAS IMPACT

3.1 INTRODUCTION

The Project has been evaluated to determine if it will result in a significant greenhouse gas impact. The significance of these potential impacts is described in the following section.

3.2 PROJECT RELATED GREENHOUSE GAS EMISSIONS

CEQA Guidelines 15064.4 (b) (1) states that a lead agency may use a model or methodology to quantify greenhouse gas emissions associated with a project (50).

On October 14, 2016, the SCAQMD in conjunction with the California Air Pollution Control Officers Association (CAPCOA) and other California air districts, released the latest version of the California Emissions Estimator Model™ (CalEEMod™) v2016.3.1. The purpose of this model is to more accurately calculate construction-source and operational-source criteria pollutant (NO_x, VOC, PM_{10}, $PM_{2.5}$, SO_x, and CO) and greenhouse gas (GHG) emissions from direct and indirect sources; and quantify applicable air quality and GHG reductions achieved from mitigation measures (51). Accordingly, the latest version of CalEEMod™ has been used for this Project to determine construction and operational air quality impacts. Output from the model runs for both construction and operational activity are provided in Appendix 3.1.

3.3 CONSTRUCTION AND OPERATIONAL LIFE-CYCLE ANALYSIS

A full life-cycle analysis (LCA) for construction and operational activity is not included in this analysis due to the lack of consensus guidance on LCA methodology at this time. Life-cycle analysis (i.e., assessing economy-wide GHG emissions from the processes in manufacturing and transporting all raw materials used in the project development, infrastructure and on-going operations) depends on emission factors or econometric factors that are not well established for all processes. At this time a LCA would be extremely speculative and thus has not been prepared.

3.4 CONSTRUCTION EMISSIONS

Construction activities associated with the proposed Project will result in emissions of CO2 and CH4 from construction activities.

The report Legacy Park (Tentative Tract Map No. 36760) Air Quality Impact Analysis Report, Urban Crossroads, Inc. (2016) contains detailed information regarding construction activity (52).

For construction phase Project emissions, GHGs are quantified and amortized over the life of the Project. To amortize the emissions over the life of the Project, the SCAQMD recommends calculating the total greenhouse gas emissions for the construction activities, dividing it by a 30-year project life then adding that number to the annual operational phase GHG emissions (53). As such, construction emissions were amortized over a 30-year period and added to the annual operational phase GHG emissions.

3.5 OPERATIONAL EMISSIONS

Operational activities associated with the proposed Project will result in emissions of CO2, CH4, and N2O from the following primary sources:

- Area Source Emissions
- Energy Source Emissions
- Mobile Source Emissions
- Solid Waste
- Water Supply, Treatment and Distribution

3.5.1 AREA SOURCE EMISSIONS

Hearths/Fireplaces

GHG emissions would result from the combustion of wood or biomass and are considered biogenic emissions of CO2. The emissions associated with use of hearths/fireplaces were calculated based on assumptions provided in the CalEEMod model. The Project is required to comply with SCAQMD Rule 445, which prohibits the use of wood burning stoves and fireplaces in new development. In order to account for the requirements of this Rule, the unmitigated CalEEMod model estimates were adjusted to remove wood burning stoves and fireplaces. As the project is required to comply with SCAQMD Rule 445, the removal of wood burning stoves and fireplaces is not considered "mitigation" although it must be identified as such in CalEEMod in order to treat the case appropriately.

Landscape Maintenance Equipment

Landscape maintenance equipment would generate emissions from fuel combustion and evaporation of unburned fuel. Equipment in this category would include lawnmowers, shedders/grinders, blowers, trimmers, chain saws, and hedge trimmers used to maintain the landscaping of the Project. CalEEMod default parameters were used to estimate emissions associated with landscape maintenance equipment for the Project scenario.

3.5.2 ENERGY SOURCE EMISSIONS

Combustion Emissions Associated with Natural Gas and Electricity

GHGs are emitted from buildings as a result of activities for which electricity and natural gas are typically used as energy sources. Combustion of any type of fuel emits CO2 and other GHGs directly into the atmosphere; these emissions are considered direct emissions associated with a building. GHGs are also emitted during the generation of electricity from fossil fuels; these emissions are considered to be indirect emissions. CalEEmod default parameters were used to estimate electricity and natural gas demand for the Project scenario.

3.5.3 MOBILE SOURCE EMISSIONS

Vehicles

GHG emissions will also result from mobile sources associated with the Project. These mobile source emissions will result from the typical daily operation of motor vehicles by visitors and residents. Trip characteristics available from the report, Legacy Park (Tentative Tract Map No. 36760) Traffic Impact Analysis (Urban Crossroads) 2016 were utilized in this analysis (54). A fleet mix consistent with the Caltrans ITS Transportation Project-Level Carbon Monoxide Protocol was used in this report in order to appropriately represent vehicular trips from a primarily residential development (55).

3.5.4 SOLID WASTE

Residential land uses will result in the generation and disposal of solid waste. A large percentage of this waste will be diverted from landfills by a variety of means, such as reducing the amount of waste generated, recycling, and/or composting. The remainder of the waste not diverted will be disposed of at a landfill. GHG emissions from landfills are associated with the anaerobic breakdown of material. CalEEmod default parameters were used to estimate GHG emissions associated with the disposal of solid waste for the Project scenario.

3.5.5 WATER SUPPLY, TREATMENT AND DISTRIBUTION

Indirect GHG emissions result from the production of electricity used to convey, treat and distribute water and wastewater. The amount of electricity required to convey, treat and distribute water depends on the volume of water as well as the sources of the water. CalEEMod default parameters were used to estimate GHG emissions associated with water supply, treatment and distribution for the Project scenario.

3.6 EMISSIONS SUMMARY

According to the City of Moreno Valley Census, the latest Persons per Household data (2010-2014) is 3.91 (56). The Project proposes to construct 221 single family detached dwelling units. As such, the Project would result in approximately 864 Persons per Household. The annual GHG emissions associated with the operation of the proposed Project are estimated to be 3,992.20 MTCO2e per year. As shown in Table 3-1, the total annual Project efficiency threshold would be 4.62 MTCO2e per year. The Project would not exceed the Project efficiency threshold of 4.8 MTCO2e per year and therefore would result in a less than significant impact with respect to the Project efficiency threshold.

TABLE 3-1: TOTAL PROJECT GREENHOUSE GAS EMISSIONS (ANNUAL)

Emission Source	Emissions (metric tons per year)			
	CO_2	CH_4	N_2O	Total CO_2E
Annual construction-related emissions amortized over 30 years	37.06	4.16E-03	0.00	37.16

Note: Totals obtained from CalEEMod™ and may not total 100% due to rounding. Table results include scientific notation. *e* is used to represent *times ten raised to the power of* (which would be written as x 10^{b}") and is followed by the value of the exponent

Attachment: Greenhouse Gas Analysis (2444 : Legacy Park Project)

4 CONCLUSION

The City of Moreno Valley has not adopted its own numeric threshold of significance for determining impacts with respect to GHG emissions. The SCAQMD has convened aWorking Group. Based on the last Working Group meeting (Meeting No. 15) held in September 2010, SCAQMD is proposing to adopt a tiered approach for evaluating GHG emissions for development projects where SCAQMD is not the lead agency. SCAQMD had proposed a Project level efficiency significance threshold, in which a 2020 statewide population and employment for land use sectors was divided by 2020 statewide SP, amounting to a 4.8 MTCO2e per service population threshold (1). The City will utilize the Project level efficiency significance threshold approach recommended in the SCAQMD's Interim Thresholds document for commercial, residential, and mixed use projects.

Thus, and based on guidance from the SCAQMD, if a residential project would emit GHGs less than 4.8 MTCO2e per service population, the project is not considered a substantial GHG emitter and the GHG impact is less than significant. On the other hand, if a residential project would emit GHGs in excess of 4.8 MTCO2e per service population, then the project could be considered a substantial GHG emitter, requiring additional analysis and potential mitigation.

As shown in Table 4-1, the proposed project would result in approximately 4.62 MTCO2e per service population and would not exceed the threshold of 4.8 MTCO2e per service population. Therefore, project-related emissions would not have a significant direct or indirect impact on GHG and climate change.

TABLE 4-1: TOTAL PROJECT GREENHOUSE GAS EMISSIONS (ANNUAL)

Emission Source	Emissions (metric tons per year)			
	CO_2	CH_4	N_2O	Total CO_2E
Annual construction-related emissions amortized over 30 years	37.06	4.16E-03	0.00	37.16
Area	56.79	4.63E-03	9.70E-04	57.20
Energy	888.47	4.00E-02	1.00E-02	523.66
Mobile Source	3,157.07	1.60E-01	0	3,161.18
Waste	52.60	3.11	0.00	130.31
Water Usage	67.33	0.47	1.00E-02	82.69
Total CO_2E (All Sources)	**3,992.20**			
Total Service Population (Persons Per Household)	**864**			
Total CO2E (All Sources/ Service Population))	**4.62**			
Threshold (Persons Per Household	**4.8**			
Significant?	**NO**			

The Project would not conflict with the City of Moreno Valley Energy Efficiency and Climate Action Strategy

The Project is consistent with and supports the CAS, which is the applicable plan, policy or regulation adopted for the purpose of reducing greenhouse gases. Project consistency with the CAS is detailed in Section 2.10.

CONSTRUCTION AND OPERATIONAL-SOURCE MITIGATION MEASURES

No significant impacts were identified, therefore, no mitigation measures are required.

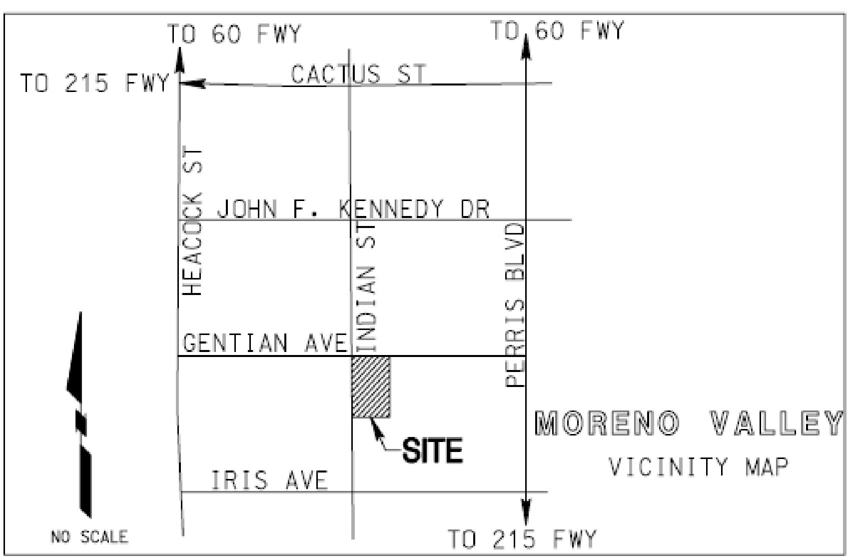
LIST OF ATTACHMENTS

Introduction

This study presents the hydrologic and hydraulic analysis of the Legacy Park Tract 36760. The project site is located at the southeast corner of Indian Street and Gentian Avenue in the City of Moreno Valley, California. The site is approximately 48.5 acres and is located in the Perris Valley Hydrologic Subarea of the Santa Ana Watershed. The site drains to two separate basins in both the southwestern and southeastern corners. Tract 36370 proposes 221 single-family residential lots. The two onsite basins will be designed as bioretention basins, and will serve to treat the water for water quality. The basins are also attenuating flows, but this volume fits entirely within the water quality volume, therefore they are acting as water quality and not detention basins. The water exiting the west basin will tie into an existing storm drain system, and the water from the east basin will outlet into a proposed storm drain system to the east.

The site is surrounded by existing residential development to the West and proposed residential development to the North. To the East of the site there is an easement for the California DWR Aqueduct, with commercial development bordering it. To the South of the site is March Middle School which is designated as public use.

The vicinity map below shows the location of the project site.



2.0 Methodology

The hydrologic and hydraulic criteria used for the design of the storm drain systems are outlined in the Riverside County Flood Control Hydrology Manual. The 10-year storm shall be contained within the roadway from curb to curb. The 100-year storm shall be contained within the roadway right of way limits. To meet these requirements the 100-year storm event is contained within the roadway from curb to curb. All habitable dwellings shall be free of inundation during the 100-year storm.

<u>HYDROLOGIC ANALYSIS</u>

The Rational Method program from Advanced Engineering Software (AES) was used to perform the hydrologic analysis. The analysis represents the watershed as a link-node model. The existing and proposed conditions drainage basin maps with drainage basin boundaries and nodes are provided in Attachment 2 & 3, entitled Rational Method Hydrology Maps. The analysis can perform up to 15 hydrologic processes. These processes are assigned code numbers, which appear in the printed results. The code numbers and their meanings are as follows:

Hydrologic Process Code	Subarea Hydrologic Processes
1.	CONFLUENCE analysis at node
2.	INITIAL subarea analysis
3.	PIPEFLOW travel time (COMPUTER-Estimated pipe size)
4.	PIPEFLOW travel time (USER-Specified pipe size)
5.	TRAPEZOIDAL channel travel time
6.	STREET-FLOW analysis
7.	USER-SPECIFIED information at node
8.	ADDITION of subarea runoff to mainline
9.	V-GUTTER flow through subarea
10.	COPY Mainstream data onto a memory bank
11.	CONFLUENCE a memory BANK with the Main-Stream memory
12.	CLEAR a memory BANK
13.	CLEAR the Mainstream memory
14.	COPY a memory Bank onto the Main-Stream Memory
15.	HYDROLOGIC data BANK storage functions

ROUTING

The hydrology portion of this report, as shown on the attached hydrology map, is for hydrologic “Routing” purposes only. Peak flow-rates are routed through the system. At each confluence, flow-rates are adjusted to take into account their different times of concentration. The storm drains may require minor size and elevation changes upon completing the hydraulic portion of the calculations. Refer to the tentative tract map for proposed invert elevations and pipe sizes.

3.0 Rational Method Hydrology

3.1 Pre-Project Condition

The pre-project rational method was analyzed for the entire project site. The flows from the pre-project site split to the west and the east. Approximately 23.6 acres drain west while 25.4 acres drain east.

In the existing western portion of Tract 36760, water sheet flows to the southwest corner of the site. The water then flows south along the existing curb and gutter, and enters an existing catch basin on the eastern portion of Indian Street. The catch basin drains to the existing Riverside County Flood Control and Water Conservation District Master Drainage Line D-1. Line D-1 is a 36” RCP located South of Santiago Drive on the western portion of Indian Street. Along the eastern portion of the existing site water will sheet flow to the southeast and drain east along Santiago Drive before discharging into the Perris Valley Channel downstream of the site.

The results from the west side of the site show that a Q_{100} of 23.3 cfs currently enters into Line D-1. The results from the east side of the site show a Q_{100} of 27.2 cfs. Both the east and west flows eventually converge in the Perris Valley Channel which is an MS4 storm drain facility. Please see Attachment 2 for calculations and backup plans.

3.2 Post-Project Condition

In the post-project condition the majority of the flows from the eastern and western portion of the site flow to the basin at the southwest corner adjacent to Indian Avenue and Santiago Drive. The flows from the remaining eastern portion will drain to the basin in the southeastern corner of the site. Since both of these flows will ultimately outlet into the Perris Valley channel, this remains consistent with the pre-project condition.

The western basin will pick up flows from the western and northeastern portions of the site, including the proposed park along the southern boundary. The western portion drains in a general southwestern pattern. Water from the northeast lots will drain through Street M before being picked up in a set of storm drain catch basins. Water from Street L will also be picked up in catch basins near the intersection of street L and Street D. The storm drain will drain southwest through Street D, where other flows from Streets B, D, K and portions of I and N will be picked up in catch basins just before entering into the Basin at the end of Street D cul-de-sac. At this point, flows from the southern areas (Street G, a portion of Street N, and the park) will confluence with the storm drain flows at Node 134.0 to outlet into the basin. Water from Streets A, C, H, and J flows south/west, draining to the end of the Street C cul-de-sac. The 100 year peak flow into the western basin is 74.3 cfs. Once in the basin, flows will outlet west to the connection into Line D-1 on Indian Street. The existing storm drain is capable of receiving 21.9 cfs. This project site will add the full 21.9 cfs into the storm drain. Any remaining flows will be detained by the basin. Please see the Tract 36760 Pre and Post Rational Method Hydrology maps and calculations located in Attachment 3.

The eastern basin will pick up flows from the southeastern portions of the site. The water will drain southeast through the site to the basin located at the southeast corner. The high points on Streets L and G delineate the drainage boundary for the eastern portions. Water from Street L will drain south and then east to join Street G surface flows before being picked up in a set of catch basins. Water from Street E will split to drain to both street L and Street M. Street M drains south, joining with Street F, and eventually to the catch basin located on Street G. A portion of Street L (south of Street G) drains north to join flows from the southern half of Street G as well as Street P, which enter a catch basin on Street G. These flows are conveyed through storm drain to enter the eastern basin at Node 210.0. The most southerly portion of Street L drains south towards Santiago Drive. Flows from this portion of Street L and Santiago Drive (east) are picked up by catch basins and outlet into the basin at Nodes 218.0 and 221.0. The east end of Street G drains to the east and flows are picked up by a catch basin at the Street G cul-de-sac, which are also conveyed through storm drain to outlet to the basin at Node 215.0. From the confluence off all the flows draining to the southeast basin, the 100 year peak flow is 24.6 cfs. Flows from the basin will outlet into the proposed Line M-2 storm drain, which will then drain to the Perris Valley Channel. The proposed storm drain Line M-2 will receive 10.0 cfs from the project site, while the remaining flows will be detained by the basin. Please see the Tract 36760 Pre and Post Rational Method Hydrology maps and calculations located in Attachment 3.

4.0 Synthetic Unit Hydrograph

Due to the outlet of flows into the existing and proposed storm drain facilities, the 1-hour, 3-hour, 6-hour, and 24-hour storm events were analyzed for the 2-year, 10-year, and 100-year storms in order to obtain the required detention volume for the basins. For the analysis of the mitigation for the required storm events, the synthetic unit hydrograph (SUH) was used in accordance with the RCFC&WCD hydrology manual. All SUH results for the pre-project condition can be found in Attachment 4 and the post-project conditions can be found in Attachment 5.

All flows drain according to the previously explained flow patterns. The pre-project and post-project conditions were analyzed for all storm events for comparison between the separate areas.

For the western basin only the 10-year 1-hour and the 100-year 1-hour storm events produced flows in excess of the 21.9 cfs outlet. Therefore these two storm events were the only events to be analyzed for detention sizing. The 100-year1-hour storm event generated the largest storage volume needed to detain the post-project condition down to the allowable outlet of 21.9 cfs. The required detention volume was 0.75 ac-ft. The western basin was sized to allow for 2 feet of freeboard within the basin.

For the eastern basin only the 100-year 1-hour storm event produced flows in excess of the 10.0 cfs outlet. Therefore this storm event was the only event to be analyzed for detention sizing. The required detention volume was 0.11 ac-ft. The eastern basin was sized to allow for 2 feet of freeboard within the basin.

For water quality requirements, it was found that 1.19 ac-ft of storage volume is required for the western basin and 0.42 ac-ft of storage volume is required for the eastern basin. According to the Riverside County Flood Control and Water Conservation District LID Manual, the bioretention facility will consist of a layer of soil media (24" for the east basin, 36" for the west basin) at a porosity of 30% and a 12" layer of gravel with a porosity of 40%. Since the water quality storage volume exceeds the required detention volume, the basins will be designed solely as water quality features and not detention basins. Therefore the necessary basin capacities, governed by the water quality volume are 1.2 ac-ft for the western basin and 0.4 ac-ft for the eastern basin.

In the final hydrology analysis, the basin will not be designed to retain the total storage without an adequate outlet to maintain the required 48-hour drawdown time. All outlet sizing, including emergency overflows for the 100-year 1-hour storm event bypass, will be done in the final analysis for the project site.

5.0 Hydraulics

As indicated above, hydrologic process No. 6 analyzes street flow (using Manning's Equation), and calculates the depth of flow in the gutter. The storm drain systems will be designed to intercept the 100-year street flows into catch basins before the depth in the street reaches the top of curb or splits over the street crown. Therefore, the 10-year storm water surface will never exceed the top of curb. Per the City of Moreno Valley Plan

Check Manual page 45, the design HGL should be 6” below the local depression lip of inlets.

6.0 Conclusion

The supporting hydrologic and hydraulic calculations are provided in the following sections to substantiate the design of the proposed storm drain facilities. The hydrology rational method calculations for pre and post project conditions onsite hydrology routing are shown in attachments 2 and 3 respectively. The Synthetic Unit Hydrograph calculations are located in attachment 4 of this report.

OWNER'S CERTIFICATION

This Project-Specific Water Quality Management Plan (WQMP) has been prepared for MPLC Legacy 75 Partners, LLP by Rick Engineering Company for the Legacy Park project.

This WQMP is intended to comply with the requirements of City of Moreno Valley for Ordinance 827 which includes the requirement for the preparation and implementation of a Project-Specific WQMP.

The undersigned, while owning the property/project described in the preceding paragraph, shall be responsible for the implementation and funding of this WQMP and will ensure that this WQMP is amended as appropriate to reflect up-to-date conditions on the site. In addition, the property owner accepts responsibility for interim operation and maintenance of Stormwater BMPs until such time as this responsibility is formally transferred to a subsequent owner. This WQMP will be reviewed with the facility operator, facility supervisors, employees, tenants, maintenance and service contractors, or any other party (or parties) having responsibility for implementing portions of this WQMP. At least one copy of this WQMP will be maintained at the project site or project office in perpetuity. The undersigned is authorized to certify and to approve implementation of this WQMP. The undersigned is aware that implementation of this WQMP is enforceable under Moreno Valley Water Quality Ordinance (Municipal Code Section 8.10).

"I, the undersigned, certify under penalty of law that the provisions of this WQMP have been reviewed and accepted and that the WQMP will be transferred to future successors in interest."

Section A: Project and Site Information

PROJECT INFORMATION	
Type of Project:	Residential
Planning Area:	None
Community Name:	
Development Name:	Legacy Park
PROJECT LOCATION	
Latitude & Longitude (DMS): 33°53'37"N, 117°13'54"W	
Project Watershed and Sub-Watershed: Santa Ana River Watershed San Jacinto HU, Perris HA, Perris Valley HSA	
APN(s): 485-220-023, 485-220-032, 485-220-040	
Map Book and Page No.: MB 8/23	
PROJECT CHARACTERISTICS	
Proposed or Potential Land Use(s)	Residential: Max 5 du/ac
Proposed or Potential SIC Code(s)	None
Area of Impervious Project Footprint (SF)	1,397,321
Total Area of proposed Impervious Surfaces within the Project Limits (SF)/or Replacement	1,397,321
Does the project consist of offsite road improvements?	☒ Y ☐ N
Does the project propose to construct unpaved roads?	☐ Y ☒ N
Is the project part of a larger common plan of development (phased project)?	☐ Y ☒ N
EXISTING SITE CHARACTERISTICS	
Total area of existing Impervious Surfaces within the project limits (SF)	None
Is the project located within any MSHCP Criteria Cell?	☐ Y ☒ N
If so, identify the Cell number:	N/A
Are there any natural hydrologic features on the project site?	☐ Y ☒ N
Is a Geotechnical Report attached?	☒ Y ☐ N
If no Geotech. Report, list the NRCS soils type(s) present on the site (A, B, C and/or D)	N/A
What is the Water Quality Design Storm Depth for the project?	0.65

A.1 Maps and Site Plans

When completing your Project-Specific WQMP, include a map of the local vicinity and existing site. In addition, include all grading, drainage, landscape/plant palette and other pertinent construction plans in Appendix 2. At a **minimum**, your WQMP Site Plan should include the following:

- Drainage Management Areas
- Proposed Structural BMPs
- Drainage Path
- Drainage Infrastructure, Inlets, Overflows
- Source Control BMPs
- Buildings, Roof Lines, Downspouts
- Impervious Surfaces
- Standard Labeling

Use your discretion on whether or not you may need to create multiple sheets or can appropriately accommodate these features on one or two sheets. Keep in mind that the Co-Permittee plan reviewer must be able to easily analyze your project utilizing this template and its associated site plans and maps.

A.2 Identify Receiving Waters

Using Table A.1 below, list in order of upstream to downstream, the receiving waters that the project site is tributary to. Continue to fill each row with the Receiving Water's 303(d) listed impairments (if any), designated beneficial uses, and proximity, if any, to a RARE beneficial use. Include a map of the receiving waters in Appendix 1.

Table A.1 Identification of Receiving Waters

Receiving Waters	EPA Approved 303(d) List Impairments	Designated Beneficial Uses	Proximity to RARE Beneficial Use
Perris North	N/A	MUN, AGR, IND, PROC	N/A
San Jacinto River Reach 4	N/A	AGR*, WILD*, GWR*, MUN*, REC1*, REC2*, WARM*	N/A
San Jacinto River Reach 3	N/A	AGR*, GWR*, MUN**, REC1*, REC2*, WARM*, WILD*	N/A
San Jacinto River Reach 2 & Canyon Lake	Nutrients, pathogens	AGR, GWR, WILD, MUN, REC1, REC2, WARM	N/A
San Jacinto River Reach 1	N/A	AGR*, GWR*, MUN*, REC1*, REC2*, WARM*, WILD*	N/A
Lake Elsinore	Nutrients, organic enrichment/low DO, PCBs, sediment toxicity, unknown toxicity.	MUN**, REC1, REC2, WARM, WILD	N/A

*Intermittent Beneficial Use
**Exempted from MUN

A.3 Additional Permits/Approvals required for the Project:

Table A.2 Other Applicable Permits

Agency	Permit Required	
State Department of Fish and Game, 1602 Streambed Alteration Agreement	☐ Y	☒ N
State Water Resources Control Board, Clean Water Act (CWA) Section 401 Water Quality Cert.	☐ Y	☒ N
US Army Corps of Engineers, CWA Section 404 Permit	☐ Y	☒ N
US Fish and Wildlife, Endangered Species Act Section 7 Biological Opinion	☐ Y	☒ N
Statewide Construction General Permit Coverage	☒ Y	☐ N
Statewide Industrial General Permit Coverage	☐ Y	☒ N
Western Riverside MSHCP Consistency Approval (e.g., JPR, DBESP)	☐ Y	☒ N
Other *(please list in the space below as required)* Grading, Building and Encroachment Permits will be required.	☒ Y	☐ N

If yes is answered to any of the questions above, the Co-Permittee may require proof of approval/coverage from those agencies as applicable including documentation of any associated requirements that may affect this Project-Specific WQMP.

Section B: Optimize Site Utilization (LID Principles)

Review of the information collected in Section 'A' will aid in identifying the principal constraints on site design and selection of LID BMPs as well as opportunities to reduce imperviousness and incorporate LID Principles into the site and landscape design. For example, **constraints** might include impermeable soils, high groundwater, groundwater pollution or contaminated soils, steep slopes, geotechnical instability, high-intensity land use, heavy pedestrian or vehicular traffic, utility locations or safety concerns. **Opportunities** might include existing natural areas, low areas, oddly configured or otherwise unbuildable parcels, easements and landscape amenities including open space and buffers (which can double as locations for bioretention BMPs), and differences in elevation (which can provide hydraulic head). Prepare a brief narrative for each of the site optimization strategies described below. This narrative will help you as you proceed with your LID design and explain your design decisions to others.

The 2010 Santa Ana MS4 Permit further requires that LID Retention BMPs (Infiltration Only or Harvest and Use) be used unless it can be shown that those BMPs are infeasible. Therefore, it is important that your narrative identify and justify if there are any constraints that would prevent the use of those categories of LID BMPs. Similarly, you should also note opportunities that exist which will be utilized during project design. Upon completion of identifying Constraints and Opportunities, include these on your WQMP Site plan in Appendix 1.

Site Optimization

The following questions are based upon Section 3.2 of the WQMP Guidance Document. Review of the WQMP Guidance Document will help you determine how best to optimize your site and subsequently identify opportunities and/or constraints, and document compliance.

Did you identify and preserve existing drainage patterns? If so, how? If not, why?

Yes, the existing site drainage pattern splits flows, with the majority of the site draining to the southwest corner before entering the street and flowing to an existing storm drain. A portion on the east side of the site drains to the southeast corner. The proposed development will drain through the streets into proposed storm drains, then into our proposed water quality and bioretention basins at the southwest and southeast corners of the site. The proposed drainage split is similar to that of the existing condition. The water in the basins will drain through proposed storm drain and tie into the existing storm drain southwest and southeast of the project site.

Did you identify and protect existing vegetation? If so, how? If not, why?

Any existing vegetation will be removed when the mass grading occurs.

Did you identify and preserve natural infiltration capacity? If so, how? If not, why?

The natural infiltration capacity is 0.45 in/hr (see Appendix 3), therefore infiltration is not feasible onsite.

Did you identify and minimize impervious area? If so, how? If not, why?

Yes, the sidewalk and street design will adhere to city standards for appropriate widths required.

Did you identify and disperse runoff to adjacent pervious areas? If so, how? If not, why?

Yes, runoff from this site will disperse to landscaped areas when possible. The project will disperse the remainder of the runoff to the bioretention basin.

Section C: Delineate Drainage Management Areas (DMAs)

Utilizing the procedure in Section 3.3 of the WQMP Guidance Document which discusses the methods of delineating and mapping your project site into individual DMAs, complete Table C.1 below to appropriately categorize the types of classification (e.g., Type A, Type B, etc.) per DMA for your project site. Upon completion of this table, this information will then be used to populate and tabulate the corresponding tables for their respective DMA classifications.

Table C.1 DMA Classifications

DMA Name or ID	Surface Type(s)[1]	Area (Sq. Ft.)	DMA Type
D-100 Impervious	Concrete or Asphalt	320,442	Type D – Area that drains to BMP
D-100 Roofs	Roofs	727,285	Type D – Area that drains to BMP
D-100 Landscape	Ornamental Landscaping	571,926	Type D – Area that drains to BMP
D-200 Impervious	Concrete or Asphalt	118,702	Type D – Area that drains to BMP
D-200 Roofs	Roofs	230,892	Type D – Area that drains to BMP
D-200 Landscape	Ornamental Landscaping	193,462	Type D – Area that drains to BMP

[1]*Reference Table 2-1 in the WQMP Guidance Document to populate this column*

Table C.2 Type 'A', Self-Treating Areas

DMA Name or ID	Area (Sq. Ft.)	Stabilization Type	Irrigation Type (if any)
n/a			

Table C.3 Type 'B', Self-Retaining Areas

Self-Retaining Area				Type 'C' DMAs that are draining to the Self-Retaining Area		
DMA Name/ ID	Post-project surface type	Area (square feet) [A]	Storm Depth (inches) [B]	DMA Name / ID	[C] from Table C.4 = [C]	Required Retention Depth (inches) [D]
n/a						

$$[D] = [B] + \frac{[B] \cdot [C]}{[A]}$$

Table C.4 Type 'C', Areas that Drain to Self-Retaining Areas

DMA					Receiving Self-Retaining DMA		
DMA Name/ ID	Area (square feet) [A]	Post-project surface type	Runoff factor [B]	Product [C] = [A] x [B]	DMA name /ID	Area (square feet) [D]	Ratio [C]/[D]
n/a							

Table C.5 Type 'D', Areas Draining to BMPs

DMA Name or ID	BMP Name or ID
D-100 Impervious	D-100 Bioretention Basin
D-100 Roofs	D-100 Bioretention Basin
D-100 Landscape	D-100 Bioretention Basin
D-200 Impervious	D-200 Bioretention Basin
D-200 Roofs	D-200 Bioretention Basin
D-200 Landscape	D-200 Bioretention Basin

Note: More than one drainage management area can drain to a single LID BMP, however, one drainage management area may not drain to more than one BMP.

Section D: Implement LID BMPs

D.1 Infiltration Applicability

Is there an approved downstream 'Highest and Best Use' for stormwater runoff (see discussion in Chapter 2.4.4 of the WQMP Guidance Document for further details)? ☐ Y ☒ N

If yes has been checked, Infiltration BMPs shall not be used for the site. If no, continue working through this section to implement your LID BMPs. It is recommended that you contact your Co-Permittee to verify whether or not your project discharges to an approved downstream 'Highest and Best Use' feature.

Geotechnical Report

A Geotechnical Report or Phase I Environmental Site Assessment may be required by the Copermittee to confirm present and past site characteristics that may affect the use of Infiltration BMPs. In addition, the Co-Permittee, at their discretion, may not require a geotechnical report for small projects as described in Chapter 2 of the WQMP Guidance Document. If a geotechnical report has been prepared, include it in Appendix 3. In addition, if a Phase I Environmental Site Assessment has been prepared, include it in Appendix 4.

Is this project classified as a small project consistent with the requirements of Chapter 2 of the WQMP Guidance Document? ☐ Y ☒ N

Infiltration Feasibility

Table D.1 below is meant to provide a simple means of assessing which DMAs on your site support Infiltration BMPs and is discussed in the WQMP Guidance Document in Chapter 2.4.5. Check the appropriate box for each question and then list affected DMAs as applicable. If additional space is needed, add a row below the corresponding answer.

Table D.1 Infiltration Feasibility

Does the project site…	YES	NO
…have any DMAs with a seasonal high groundwater mark shallower than 10 feet?		X
If Yes, list affected DMAs:		
…have any DMAs located within 100 feet of a water supply well?		X
If Yes, list affected DMAs:		
…have any areas identified by the geotechnical report as posing a public safety risk where infiltration of stormwater could have a negative impact?		X
If Yes, list affected DMAs:		
…have measured in-situ infiltration rates of less than 1.6 inches / hour?	X	
If Yes, list affected DMAs: D-100 and D-200 (Infiltration rate = 0.45 inches/hour)		
…have significant cut and/or fill conditions that would preclude in-situ testing of infiltration rates at the final infiltration surface?		X
If Yes, list affected DMAs:		
…geotechnical report identify other site-specific factors that would preclude effective and safe infiltration?		X
Describe here:		

If you answered "Yes" to any of the questions above for any DMA, Infiltration BMPs should not be used for those DMAs and you should proceed to the assessment for Harvest and Use below.

D.2 Harvest and Use Assessment

Please check what applies*:*

☐ Reclaimed water will be used for the non-potable water demands for the project.

☐Downstream water rights may be impacted by Harvest and Use as approved by the Regional Board (verify with the Copermittee).

☐The Design Capture Volume will be addressed using Infiltration Only BMPs. In such a case, Harvest and Use BMPs are still encouraged, but it would not be required if the Design Capture Volume will be infiltrated or evapotranspired.

If any of the above boxes have been checked, Harvest and Use BMPs need not be assessed for the site. If neither of the above criteria applies, follow the steps below to assess the feasibility of irrigation use, toilet use and other non-potable uses (e.g., industrial use).

Irrigation Use Feasibility

Complete the following steps to determine the feasibility of harvesting stormwater runoff for Irrigation Use BMPs on your site:

Step 1: Identify the total area of irrigated landscape on the site, and the type of landscaping used.

Total Area of Irrigated Landscape: 0.41 acres*

*This area does not include: homeowner maintained landscaping/slopes within the private lots or parkway. The homeowner will be required to maintain landscaping/slope off of each individual meter. The basins, which will be maintained by the City of Moreno Valley, are also not included.

Type of Landscaping (Conservation Design or Active Turf): Conservation design

Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for irrigation use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

Total Area of Impervious Surfaces: 32.1 acres

Step 3: Cross reference the Design Storm depth for the project site (see Exhibit A of the WQMP Guidance Document) with the left column of Table 2-3 in Chapter 2 to determine the minimum area of Effective Irrigated Area per Tributary Impervious Area (EIATIA).

Enter your EIATIA factor: 1.05

Step 4: Multiply the unit value obtained from Step 3 by the total of impervious areas from Step 2 to develop the minimum irrigated area that would be required.

Minimum required irrigated area: 33.7 acres

Step 5: Determine if harvesting stormwater runoff for irrigation use is feasible for the project by comparing the total area of irrigated landscape (Step 1) to the minimum required irrigated area (Step 4).

Minimum required irrigated area (Step 4)	Available Irrigated Landscape (Step 1)
33.7 acres	0.41 acres

Toilet Use Feasibility

Complete the following steps to determine the feasibility of harvesting stormwater runoff for toilet flushing uses on your site:

Step 1: Identify the projected total number of daily toilet users during the wet season, and account for any periodic shut downs or other lapses in occupancy:

Projected Number of Daily Toilet Users: 660

Project Type: Residential

Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for toilet use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

Total Area of Impervious Surfaces: 32.1 acres

Step 3: Enter the Design Storm depth for the project site (see Exhibit A) into the left column of Table 2-1 in Chapter 2 to determine the minimum number or toilet users per tributary impervious acre (TUTIA).

Enter your TUTIA factor: 108

Step 4: Multiply the unit value obtained from Step 3 by the total of impervious areas from Step 2 to develop the minimum number of toilet users that would be required.

Minimum number of toilet users: 3,467

Step 5: Determine if harvesting stormwater runoff for toilet flushing use is feasible for the project by comparing the Number of Daily Toilet Users (Step 1) to the minimum required number of toilet users (Step 4).

Minimum required Toilet Users (Step 4)	Projected number of toilet users (Step 1)
3,467	660

Other Non-Potable Use Feasibility

Are there other non-potable uses for stormwater runoff on the site (e.g. industrial use)? See Chapter 2 of the Guidance for further information. If yes, describe below. If no, write N/A.

n/a

Step 1: Identify the projected average daily non-potable demand, in gallons per day, during the wet season and accounting for any periodic shut downs or other lapses in occupancy or operation.

Average Daily Demand: Projected Average Daily Use (gpd)

Step 2: Identify the planned total of all impervious areas on the proposed project from which runoff might be feasibly captured and stored for the identified non-potable use. Depending on the configuration of buildings and other impervious areas on the site, you may consider the site as a whole, or parts of the site, to evaluate reasonable scenarios for capturing and storing runoff and directing the stored runoff to the potential use(s) identified in Step 1 above.

Total Area of Impervious Surfaces: Insert Area (Acres)

Step 3: Enter the Design Storm depth for the project site (see Exhibit A) into the left column of Table 2-3 in Chapter 2 to determine the minimum demand for non-potable uses per tributary impervious acre.

Enter the factor from Table 2-3: Enter Value

Step 4: Multiply the unit value obtained from Step 4 by the total of impervious areas from Step 3 to develop the minimum number of gallons per day of non-potable use that would be required.

Minimum required use: Minimum use required (gpd)

Step 5: Determine if harvesting stormwater runoff for other non-potable use is feasible for the project by comparing the Number of Daily Toilet Users (Step 1) to the minimum required number of toilet users (Step 4).

Minimum required non-potable use (Step 4)	**Projected average daily use (Step 1)**
Minimum use required (gpd)	Projected Average Daily Use (gpd)

If Irrigation, Toilet and Other Use feasibility anticipated demands are less than the applicable minimum values, Harvest and Use BMPs are not required and you should proceed to utilize LID Bioretention and Biotreatment, unless a site-specific analysis has been completed that demonstrates technical infeasibility as noted in D.3 below.

D.3 Bioretention and Biotreatment Assessment

Other LID Bioretention and Biotreatment BMPs as described in Chapter 2.4.7 of the WQMP Guidance Document are feasible on nearly all development sites with sufficient advance planning.

Select one of the following:

☒ LID Bioretention/Biotreatment BMPs will be used for some or all DMAs of the project as noted below in Section D.4 (note the requirements of Section 3.4.2 in the WQMP Guidance Document).

☐ A site-specific analysis demonstrating the technical infeasibility of all LID BMPs has been performed and is included in Appendix 5. If you plan to submit an analysis demonstrating the technical infeasibility of LID BMPs, request a pre-submittal meeting with the Copermittee to discuss this option. Proceed to Section E to document your alternative compliance measures.

D.4 Feasibility Assessment Summaries

From the Infiltration, Harvest and Use, Bioretention and Biotreatment Sections above, complete Table D.2 below to summarize which LID BMPs are technically feasible, and which are not, based upon the established hierarchy.

Table D.2 LID Prioritization Summary Matrix

DMA Name/ID	LID BMP Hierarchy				No LID (Alternative Compliance)
	1. Infiltration	2. Harvest and use	3. Bioretention	4. Biotreatment	
D-100 Impervious	☐	☐	☒	☐	☐
D-100 Roofs	☐	☐	☒	☐	☐
D-100 Landscape	☐	☐	☒	☐	☐
D-200 Impervious	☐	☐	☒	☐	☐
D-200 Roofs	☐	☐	☒	☐	☐
D-200 Landscape	☐	☐	☒	☐	☐

For those DMAs where LID BMPs are not feasible, provide a brief narrative below summarizing why they are not feasible, include your technical infeasibility criteria in Appendix 5, and proceed to Section E below to document Alternative Compliance measures for those DMAs. Recall that each proposed DMA must pass through the LID BMP hierarchy before alternative compliance measures may be considered.

D.5 LID BMP Sizing

Each LID BMP must be designed to ensure that the Design Capture Volume will be addressed by the selected BMPs. First**,** calculate the Design Capture Volume for each LID BMP using the V_{BMP} worksheet in Appendix F of the LID BMP Design Handbook. Second**,** design the LID BMP to meet the required V_{BMP} using a method approved by the Copermittee. Utilize the worksheets found in the LID BMP Design Handbook or consult with your Copermittee to assist you in correctly sizing your LID BMPs. Complete Table D.3 below to document the Design Capture Volume and the Proposed Volume for each LID BMP. Provide the completed design procedure sheets for each LID BMP in Appendix 6. You may add additional rows to the table below as needed.

Table D.3 DCV Calculations for LID BMPs

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	*Bioretention Basin D-100*		
	[A]		[B]	[C]	[A] x [C]			
D-100 Impervious	*320,442*	*AC Pavement*	*1.0*	*0.89*	*285,834.3*	*Design Storm Depth (in)*	*Design Capture Volume, **V_{BMP}** (cubic feet)*	*Proposed Volume on Plans (cubic feet)*
D-100 Roofs	*727,285*	*Roofs*	*1.0*	*0.89*	*648,738.2*			
D-100 Landscape	*571,926*	*Ornamental Landscaping*	*0.1*	*0.11*	*63,173.8*			
	1,619,653				997,746.3.	0.65	54,044.6	**54,045**

[B], [C] is obtained as described in Section 2.3.1 of the WQMP Guidance Document

[E] is obtained from Exhibit A in the WQMP Guidance Document

[G] is obtained from a design procedure sheet, such as in LID BMP Design Handbook and placed in Appendix 6

DMA Type/ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Areas x Runoff Factor	*Bioretention Basin D-200*		
	[A]		[B]	[C]	[A] x [C]			
D-200 Impervious	*118,702*	*AC Pavement*	*1.0*	*0.89*	*105,882.2*	*Design Storm Depth (in)*	*Design Capture Volume, **V_{BMP}** (cubic feet)*	*Proposed Volume on Plans (cubic feet)*
D-200 Roofs	*230,892*	*Roofs*	*1.0*	*0.89*	*205,955.7*			
D-200 Landscape	*193,462*	*Ornamental Landscaping*	*0.1*	*0.11*	*21.369.4*			
	543,056				333,207.3	0.65	18,048.7	**18,049**

Section E: Alternative Compliance (LID Waiver Program)

LID BMPs are expected to be feasible on virtually all projects. Where LID BMPs have been demonstrated to be infeasible as documented in Section D, other Treatment Control BMPs must be used (subject to LID waiver approval by the Copermittee). Check one of the following Boxes:

☒ LID Principles and LID BMPs have been incorporated into the site design to fully address all Drainage Management Areas. No alternative compliance measures are required for this project and thus this Section is not required to be completed.

- *Or* -

☐ The following Drainage Management Areas are unable to be addressed using LID BMPs. A site-specific analysis demonstrating technical infeasibility of LID BMPs has been approved by the Co-Permittee and included in Appendix 5. Additionally, no downstream regional and/or sub-regional LID BMPs exist or are available for use by the project. The following alternative compliance measures on the following pages are being implemented to ensure that any pollutant loads expected to be discharged by not incorporating LID BMPs, are fully mitigated.

E.1 Identify Pollutants of Concern

Utilizing Table A.1 from Section A above which noted your project's receiving waters and their associated EPA approved 303(d) listed impairments, cross reference this information with that of your selected Priority Development Project Category in Table E.1 below. If the identified General Pollutant Categories are the same as those listed for your receiving waters, then these will be your Pollutants of Concern and the appropriate box or boxes will be checked on the last row. The purpose of this is to document compliance and to help you appropriately plan for mitigating your Pollutants of Concern in lieu of implementing LID BMPs.

Table E.1 Potential Pollutants by Land Use Type

Priority Development Project Categories and/or Project Features (check those that apply)	General Pollutant Categories							
	Bacterial Indicators	Metals	Nutrients	Pesticides	Toxic Organic Compounds	Sediments	Trash & Debris	Oil & Grease
☒ Detached Residential Development	P	N	P	P	N	P	P	P
☐ Attached Residential Development	P	N	P	P	N	P	P	P(2)
☐ Commercial/Industrial Development	P(3)	P	P(1)	P(1)	P(5)	P(1)	P	P
☐ Automotive Repair Shops	N	P	N	N	P(4, 5)	N	P	P
☐ Restaurants (>5,000 ft²)	P	N	N	N	N	N	P	P
☐ Hillside Development (>5,000 ft²)	P	N	P	P	N	P	P	P
☐ Parking Lots (>5,000 ft²)	P(6)	P	P(1)	P(1)	P(4)	P(1)	P	P
☐ Retail Gasoline Outlets	N	P	N	N	P	N	P	P
Project Priority Pollutant(s) of Concern	☒	☐	☒	☒	☐	☒	☐	☐

P = Potential
N = Not Potential
(1) A potential Pollutant if non-native landscaping exists or is proposed onsite; otherwise not expected
(2) A potential Pollutant if the project includes uncovered parking areas; otherwise not expected
(3) A potential Pollutant is land use involving animal waste
(4) Specifically petroleum hydrocarbons
(5) Specifically solvents
(6) Bacterial indicators are routinely detected in pavement runoff

E.2 Stormwater Credits

Projects that cannot implement LID BMPs but nevertheless implement smart growth principles are potentially eligible for Stormwater Credits. Utilize Table 3-8 within the WQMP Guidance Document to identify your Project Category and its associated Water Quality Credit. If not applicable, write N/A.

Table E.2 Water Quality Credits

Qualifying Project Categories	Credit Percentage[2]
n/a	
Total Credit Percentage[1]	

[1]Cannot Exceed 50%
[2]Obtain corresponding data from Table 3-8 in the WQMP Guidance Document

E.3 Sizing Criteria

After you appropriately considered Stormwater Credits for your project, utilize Table E.3 below to appropriately size them to the DCV, or Design Flow Rate, as applicable. Please reference Chapter 3.5.2 of the WQMP Guidance Document for further information.

Table E.3 Treatment Control BMP Sizing

DMA Type/ ID	DMA Area (square feet)	Post-Project Surface Type	Effective Impervious Fraction, I_f	DMA Runoff Factor	DMA Area x Runoff Factor		***Enter BMP Name / Identifier Here***		
	[A]		[B]	[C]	[A] x [C]				
n/a						*Design Storm Depth (in)*	*Minimum Design Capture Volume or Design Flow Rate (cubic feet or cfs)*	*Total Storm Water Credit % Reduction*	*Proposed Volume or Flow on Plans (cubic feet or cfs)*

[B], [C] is obtained as described in Section 2.3.1 from the WQMP Guidance Document
[E] is obtained from Exhibit A in the WQMP Guidance Document
[G] is for Flow-Based Treatment Control BMPs [G] = 43,560, for Volume-Based Control Treatment BMPs, [G] = 12
[H] is from the Total Credit Percentage as Calculated from Table E.2 above
[I] as obtained from a design procedure sheet from the BMP manufacturer and should be included in Appendix 6

E.4 Treatment Control BMP Selection

Treatment Control BMPs typically provide proprietary treatment mechanisms to treat potential pollutants in runoff, but do not sustain significant biological processes. Treatment Control BMPs must have a removal efficiency of a medium or high effectiveness as quantified below:

- **High**: equal to or greater than 80% removal efficiency
- **Medium**: between 40% and 80% removal efficiency

Such removal efficiency documentation (e.g., studies, reports, etc.) as further discussed in Chapter 3.5.2 of the WQMP Guidance Document, must be included in Appendix 6. In addition, ensure that proposed Treatment Control BMPs are properly identified on the WQMP Site Plan in Appendix 1.

Table E.4 Treatment Control BMP Selection

Selected Treatment Control BMP Name or ID[1]	Priority Pollutant(s) of Concern to Mitigate[2]	Removal Efficiency Percentage[3]
Bioretention Basin	Nutrients	70%
Bioretention Basin	Bacteria, T.O.C	90%
Bioretention Basin	Pesticides	>80%
Bioretention Basin	Sediments	>80%

[1] *Treatment Control BMPs must not be constructed within Receiving Waters. In addition, a proposed Treatment Control BMP may be listed more than once if they possess more than one qualifying pollutant removal efficiency.*

[2] *Cross Reference Table E.1 above to populate this column.*

[3] *As documented in a Co-Permittee Approved Study and provided in Appendix 6.*

Section F: Hydromodification

F.1 Hydrologic Conditions of Concern (HCOC) Analysis

Once you have determined that the LID design is adequate to address water quality requirements, you will need to assess if the proposed LID Design may still create a HCOC. Review Chapters 2 and 3 (including Figure 3-7) of the WQMP Guidance Document to determine if your project must mitigate for Hydromodification impacts. If your project meets one of the following criteria which will be indicated by the check boxes below, you do not need to address Hydromodification at this time. However, if the project does not qualify for Exemptions 1, 2 or 3, then additional measures must be added to the design to comply with HCOC criteria. This is discussed in further detail below in Section F.2.

HCOC EXEMPTION 1: The Priority Development Project disturbs less than one acre. The Copermittee has the discretion to require a Project-Specific WQMP to address HCOCs on projects less than one acre on a case by case basis. The disturbed area calculation should include all disturbances associated with larger common plans of development.

Does the project qualify for this HCOC Exemption? ☐ Y ☒ N

If Yes, HCOC criteria do not apply.

HCOC EXEMPTION 2: The volume and time of concentration[1] of storm water runoff for the post-development condition is not significantly different from the pre-development condition for a 2-year return frequency storm (a difference of 5% or less is considered insignificant) using one of the following methods to calculate:

- Riverside County Hydrology Manual
- Technical Release 55 (TR-55): Urban Hydrology for Small Watersheds (NRCS 1986), or derivatives thereof, such as the Santa Barbara Urban Hydrograph Method
- Other methods acceptable to the Co-Permittee

Does the project qualify for this HCOC Exemption? ☐ Y ☒ N

If Yes, report results in Table F.1 below and provide your substantiated hydrologic analysis in Appendix 7.

Table F.1 Hydrologic Conditions of Concern Summary

	2 year – 24 hour		
	Pre-condition	**Post-condition**	**% Difference**
Time of Concentration	n/a	n/a	n/a
Volume (Cubic Feet)	n/a	n/a	n/a

[1] Time of concentration is defined as the time after the beginning of the rainfall when all portions of the drainage basin are contributing to flow at the outlet.

HCOC EXEMPTION 3: All downstream conveyance channels to an adequate sump (for example, Prado Dam, Lake Elsinore, Canyon Lake, Santa Ana River, or other lake, reservoir or naturally erosion resistant feature) that will receive runoff from the project are engineered and regularly maintained to ensure design flow capacity; no sensitive stream habitat areas will be adversely affected; or are not identified on the Co-Permittees Hydromodification Sensitivity Maps.

Does the project qualify for this HCOC Exemption? ☒ Y ☐ N

If Yes, HCOC criteria do not apply and note below which adequate sump applies to this HCOC qualifier:

Lake Elsinore

F.2 HCOC Mitigation

If none of the above HCOC Exemption Criteria are applicable, HCOC criteria is considered mitigated if they meet one of the following conditions:

a. Additional LID BMPS are implemented onsite or offsite to mitigate potential erosion or habitat impacts as a result of HCOCs. This can be conducted by an evaluation of site-specific conditions utilizing accepted professional methodologies published by entities such as the California Stormwater Quality Association (CASQA), the Southern California Coastal Water Research Project (SCCRWP), or other Co-Permittee approved methodologies for site-specific HCOC analysis.

b. The project is developed consistent with an approved Watershed Action Plan that addresses HCOC in Receiving Waters.

c. Mimicking the pre-development hydrograph with the post-development hydrograph, for a 2-year return frequency storm. Generally, the hydrologic conditions of concern are not significant, if the post-development hydrograph is no more than 10% greater than pre-development hydrograph. In cases where excess volume cannot be infiltrated or captured and reused, discharge from the site must be limited to a flow rate no greater than 110% of the pre-development 2-year peak flow.

Be sure to include all pertinent documentation used in your analysis of the items a, b or c in Appendix 7.

Section G: Source Control BMPs

Source control BMPs include permanent, structural features that may be required in your project plans — such as roofs over and berms around trash and recycling areas — and Operational BMPs, such as regular sweeping and "housekeeping", that must be implemented by the site's occupant or user. The MEP standard typically requires both types of BMPs. In general, Operational BMPs cannot be substituted for a feasible and effective permanent BMP. Using the Pollutant Sources/Source Control Checklist in Appendix 8, review the following procedure to specify Source Control BMPs for your site:

1. ***Identify Pollutant Sources***: Review Column 1 in the Pollutant Sources/Source Control Checklist. Check off the potential sources of Pollutants that apply to your site.

2. ***Note Locations on Project-Specific WQMP Exhibit***: Note the corresponding requirements listed in Column 2 of the Pollutant Sources/Source Control Checklist. Show the location of each Pollutant source and each permanent Source Control BMP in your Project-Specific WQMP Exhibit located in Appendix 1.

3. ***Prepare a Table and Narrative***: Check off the corresponding requirements listed in Column 3 in the Pollutant Sources/Source Control Checklist. In the left column of Table G.1 below, list each potential source of runoff Pollutants on your site (from those that you checked in the Pollutant Sources/Source Control Checklist). In the middle column, list the corresponding permanent, Structural Source Control BMPs (from Columns 2 and 3 of the Pollutant Sources/Source Control Checklist) used to prevent Pollutants from entering runoff. **Add additional narrative** in this column that explains any special features, materials or methods of construction that will be used to implement these permanent, Structural Source Control BMPs.

4. ***Identify Operational Source Control BMPs:*** To complete your table, refer once again to the Pollutant Sources/Source Control Checklist. List in the right column of your table the Operational BMPs that should be implemented as long as the anticipated activities continue at the site. Copermittee stormwater ordinances require that applicable Source Control BMPs be implemented; the same BMPs may also be required as a condition of a use permit or other revocable Discretionary Approval for use of the site.

Table G.1 Permanent and Operational Source Control Measures

Potential Sources of Runoff pollutants	Permanent Structural Source Control BMPs	Operational Source Control BMPs
On-Site Storm Drain Inlets	Mark all inlets with the words "Only Rain Down the Storm Drain" or similar. Catch Basin Markers may be available from the Riverside County Flood Control and Water Conservation District, call 951.995.1200 to verify.	Maintain and periodically repaint or replace inlet markings. Provide stormwater pollution prevention information to new site owners, leases, or operators. See applicable operational BMPs in Fact Sheet SC-44, "Drainage System Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com Include the following in lease agreements: "Tenant shall not allow anyone to discharge anything to storm drains or to

		store or deposit materials so as to create a potential discharge to storm drains.”
Landscape/Outdoor Pesticide Use	All final landscape plans will accomplish the following: Design landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to stormwater pollution. Where landscaped areas are used to retain or detain stormwater, specify plants that are tolerant of saturated soil conditions. Consider using pest-resistant plants, especially adjacent to hardscape. To insure successful establishment, select plants appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions	Maintain landscaping using minimum or no pesticides. See applicable operational BMPs in “What you should know for…..Landscape and Gardening” at http://rcflood.org/stormwater/Downloads/LandscapeGardenBrochure.pdf Provide IPM information to new owners, lessees and operators
Miscellaneous Drain or Wash Water or Other Sources	Avoid roofing, gutters, and trim made of copper or other unprotected metals that may leach into runoff.	

Section H: Construction Plan Checklist

Populate Table H.1 below to assist the plan checker in an expeditious review of your project. The first two columns will contain information that was prepared in previous steps, while the last column will be populated with the corresponding plan sheets. This table is to be completed with the submittal of your final Project-Specific WQMP.

Table H.1 Construction Plan Cross-reference

BMP No. or ID	BMP Identifier and Description	Corresponding Plan Sheet(s)
D-100 Impervious	320,442 sf draining to D-100 Bioretention Basin	Tentative Map Sheet 1
D-100 Roofs	727,285 sf draining to D-100 Bioretention Basin	Tentative Map Sheet 1
D-100 Landscaping	571,926 sf draining to D-100 Bioretention Basin	Tentative Map Sheet 1
D-200 Impervious	118,702 sf draining to D-200 Bioretention Basin	Tentative Map Sheet 1
D-200 Roofs	230,892 sf draining to D-200 Bioretention Basin	Tentative Map Sheet 1
D-200 Landscaping	193,462 sf draining to D-200 Bioretention Basin	Tentative Map Sheet 1

Note that the updated table — or Construction Plan WQMP Checklist — is **only a reference tool** to facilitate an easy comparison of the construction plans to your Project-Specific WQMP. Co-Permittee staff can advise you regarding the process required to propose changes to the approved Project-Specific WQMP.

Section I: Operation, Maintenance and Funding

The Copermittee will periodically verify that Stormwater BMPs on your site are maintained and continue to operate as designed. To make this possible, your Copermittee will require that you include in Appendix 9 of this Project-Specific WQMP:

1. A means to finance and implement facility maintenance in perpetuity, including replacement cost.
2. Acceptance of responsibility for maintenance from the time the BMPs are constructed until responsibility for operation and maintenance is legally transferred. A warranty covering a period following construction may also be required.
3. An outline of general maintenance requirements for the Stormwater BMPs you have selected.
4. Figures delineating and designating pervious and impervious areas, location, and type of Stormwater BMP, and tables of pervious and impervious areas served by each facility. Geo-locating the BMPs using a coordinate system of latitude and longitude is recommended to help facilitate a future statewide database system.
5. A separate list and location of self-retaining areas or areas addressed by LID Principles that do not require specialized O&M or inspections but will require typical landscape maintenance as noted in Chapter 5, pages 85-86, in the WQMP Guidance. Include a brief description of typical landscape maintenance for these areas.

Your local Co-Permittee will also require that you prepare and submit a detailed Stormwater BMP Operation and Maintenance Plan that sets forth a maintenance schedule for each of the Stormwater BMPs built on your site. An agreement assigning responsibility for maintenance and providing for inspections and certification may also be required.

Details of these requirements and instructions for preparing a Stormwater BMP Operation and Maintenance Plan are in Chapter 5 of the WQMP Guidance Document.

Maintenance Mechanism: Home Owner's Association

Will the proposed BMPs be maintained by a Home Owners' Association (HOA) or Property Owners Association (POA)?

☐ Y ☒ N

Include your Operation and Maintenance Plan and Maintenance Mechanism in Appendix 9. Additionally, include all pertinent forms of educational materials for those personnel that will be maintaining the proposed BMPs within this Project-Specific WQMP in Appendix 10.

Index to map of the Santa Ana Hydrologic Basin Planning Area
Page 3 of 3

Notes:

1. The .pdf version of the map that this index accompanies was prepared from an August 1986 revision of a map entitled, “Santa Ana Hydrologic Basin Planning Area (SA),” State of California Regional Water Quality Control Board, Santa Ana Region (8), that was included in the Water Quality Control Plan for the Santa Ana River Basin – Region 8, 1994.

2. The naming conventions used in this index are the same as used by the Department of Water Resources in their Bulletin 130 series. Bulletin 130 was last published in May 1988, for the 1982-85 water year. The numbering system used on the accompanying map is an adaptation of the numbering system used in Bulletin 130.

3. The boundary between Regional Water Quality Control Boards 4 and 8 is specified in California Water Code Section 13200 as coinciding with the southeasterly boundary of Los Angeles County from the Pacific Ocean to San Antonio Peak. Therefore, the boundary between these two regions is not a hydrologic boundary, but a political one. Consequently, some, or parts of some, of the hydrologic subunits shown in the Santa Ana River watershed are within the jurisdiction of the RWQCB 4, and some, or parts of some, hydrologic units are in the San Gabriel River watershed of RWQCB 4, but are legally in Region 8.

4. Parts of the southwestern boundary shown for HSA 801.11 East Coastal Plain do not conform exactly to the boundary shown for this area in the Calwater hydrologic mapping project Version 2.2. This lack of conformity affects the area of Laguna Hills, but is insignificant at the scale of this map.

5. The boundary of Region 8 at southwestern tip of HSA 802.24 Bautista shown has been modified as a result of the construction of Diamond Valley Reservoir. This modification affects the area of Goodhart Canyon, but is insignificant at the scale of this map.

Appendix 3: Soils Information

Geotechnical Study and Other Infiltration Testing Data

Leighton and Associates, Inc.
A LEIGHTON GROUP COMPANY

September 14, 2016

Project No. 11427.001

MISSION PACIFIC LAND COMPANY
4100 Newport Place, Suite 480
Newport Beach, California 92660

Attention: Mr. Jason Keller, P.E.

Subject: Results of Onsite Percolation Testing
Proposed Storm Water Quality Basin, TTM 36760
Moreno Valley, California

References: Riverside County Flood Control District, Design Handbook for Low Impact Development Best Management Practices, dated September 2011.

Rick Engineering Company, 2016, Tentative Tract 36760, Planned Unit Development, dated March 8, 2016, revised July 26, 2016, 60-scale, 1 sheet.

In accordance with your request and authorization, Leighton and Associates, Inc. (Leighton) is pleased to present this percolation testing report for the proposed storm water basin located within Tract 36760. The proposed residential development (APNs 485-220-023, -032, -040) is located southeast of the intersection of Indian Street and Gentian Avenue in the City of Moreno Valley, California (See Figure 1, Site Location Map).

PURPOSE AND SCOPE OF WORK

The purpose of our testing was to determine general infiltration rates of onsite soils, depth to bedrock and/or groundwater with respect to one proposed storm water quality basin location as depicted on the referenced plan. Services provided for this study consisted of the following:

- Drilling, sampling and logging of 1 exploratory deep boring in the area of the proposed storm water basin;
- Field testing of percolation tests in accordance with the procedures outlined in the above referenced County Design Handbook; and

- Compilation of this report that presents the results of our percolation/infiltration testing and laboratory test results.

SITE DESCRIPTION

The overall site consists of approximately 53 acres of vacant relatively flat land. Based on the referenced basin plan (Rick Engineering), the proposed storm water quality basin will be located in the general area depicted on Figure 2. We understand that the planned basin will have a maximum depth of 0.5 to 2.5 feet BGS.

SUBSURFACE INVESTIGATION

Our field investigation consisted of excavating 1 deep exploratory boring up to 21.5 feet deep and 5 percolation test holes (3 feet deep) on September 9, 2016. The boring and test holes were excavated utilizing a truck mounted CME 75 drill rig equipped with an 8-inch hollow-stem auger. The exploratory borings were continuously logged to a depth of deeper than 10 feet below bottom of the proposed basin. A geologist from our office logged and observed all excavations. The locations of the exploratory boring and percolation test holes are shown on Figure 2. The logs of the exploratory boring and percolation test holes are included in Appendix A.

SOILS AND GROUNDWATER CONDITIONS

Based on the results of this study, the site is underlain by younger alluvial soil. The encountered younger alluvium is classified as loose to medium dense, silty sand (SM) with varying amounts of gravel. Groundwater was not encountered to the depth explored of 21.5 feet.

PERCOLATION TEST RESULTS

Percolation tests were performed at the corresponding depths shown in table below. The percolation tests were performed in accordance with the procedures of Section 2.3 of the County Design Handbook referenced above. Results reported below are the most conservative reading in minutes per inch drop and converted to inches per hour per the Porchet method. Field test data are included in Appendix A.

Summary of Percolation/Infiltration Test Results

Test Hole #	Ex. Ground Surface Elev. (ft)	Depth BGS (ft)	Percolation Rate (min/in)	Infiltration Rate (in/hr)	Soil Description/Notes
P-1	1511.5	3	10.0	0.56	Silty Sand (SM) Younger Alluvium
P-2	1512.0	3	6.7	0.85	Silty Sand (SM) Younger Alluvium
P-3	1511.5	3	6.7	0.85	Silty Sand (SM) Younger Alluvium
P-4	1510.5	3	8.6	0.69	Silty Sand (SM) Younger Alluvium
P-5	1510.5	3	6.7	0.85	Silty Sand (SM) Younger Alluvium

CONCLUSIONS AND RECOMMENDATIONS

For preliminary design purposes, an infiltration rate of 0.56 in/hr may be used for the southeast basin.

LIMITATIONS

The above findings and recommendations are based on a general interpretation of soils conditions between test locations, utilizing contemporary engineering principles and practice. We make no other warranty, either expressed or implied. Please notify the engineer in the event conditions are encountered that are not reflected in this report.

If you have any question, please do not hesitate to contact this office. We appreciate this opportunity to be of service.

Respectfully submitted,
LEIGHTON AND ASSOCIATES, INC.

Project No. 021164-001

To: Young Homes
10370 Trademark Street
Rancho Cucamonga, California 91730

Attention: Mr. Thomas Owen

Subject: Preliminary Geotechnical Investigation, Proposed 104-Acre Residential Development, Northwest of Perris Boulevard and Iris Avenue, City of Moreno Valley, California

In response to your request, Leighton and Associates, Inc. has conducted a preliminary geotechnical investigation of the proposed residential development to be located northwest of Perris Boulevard and Iris Avenue in the City of Moreno Valley, California. The purpose of our investigation has been to explore the subsurface conditions at the site, to evaluate the general soil characteristics, and to provide preliminary geotechnical recommendations for the design and construction of the proposed improvements.

Based upon our investigation, the proposed development is feasible from a geotechnical viewpoint, provided our recommendations are incorporated in the design and construction of the project. The following report presents our geotechnical findings, conclusions, and preliminary recommendations. Additional geotechnical investigation and analysis may be necessary, based on the actual development plans for submittal with the project grading plans.

10532 Acacia Street, Suite B-6 ▪ Rancho Cucamonga, CA 91730
909.484.2205 ▪ Fax 909.484.2170 ▪ www.leightongeo.com

We appreciate the opportunity to work with you on this project. If you have any questions, or if we can be of further service, please call us at your convenience.

Respectfully submitted,

LEIGHTON AND ASSOCIATES, INC.

LIST OF ILLUSTRATIONS

1.0 INTRODUCTION

1.1 Site Location and Project Description

The site is located northwest of Perris Boulevard and Iris Avenue in the City of Moreno Valley, California (see Figure 1, Site Location Map). The project area is bounded on the east by Perris Boulevard and the Home Depot shopping center, on the south by Iris Avenue, on the west by Indian Street and an elementary school, and on the north by vacant land. March Air Reserve Base is approximately one mile west. The East Branch California Aqueduct crosses the eastern portion of the site. The approximately 104-acre flat site is irregular in shape and is currently vacant. Vegetation consists of seasonal grasses, brush, and several scattered small trees.

Based on our review of historic aerial photographs, the site was used for agricultural purposes within the period of at least 1953 to 1980, and was otherwise vacant.

It is our understanding that the intended use of the site is a residential development. Although grading and construction plans are not yet available, we anticipate that minor cuts and fills will be required to attain the desired finish grades. We anticipate the one- and two-story single-family residences will be constructed. A parcel map provided by you was used as the base map for our Geotechnical Map, Figure 2 (rear of text).

1.2 Purpose of Investigation

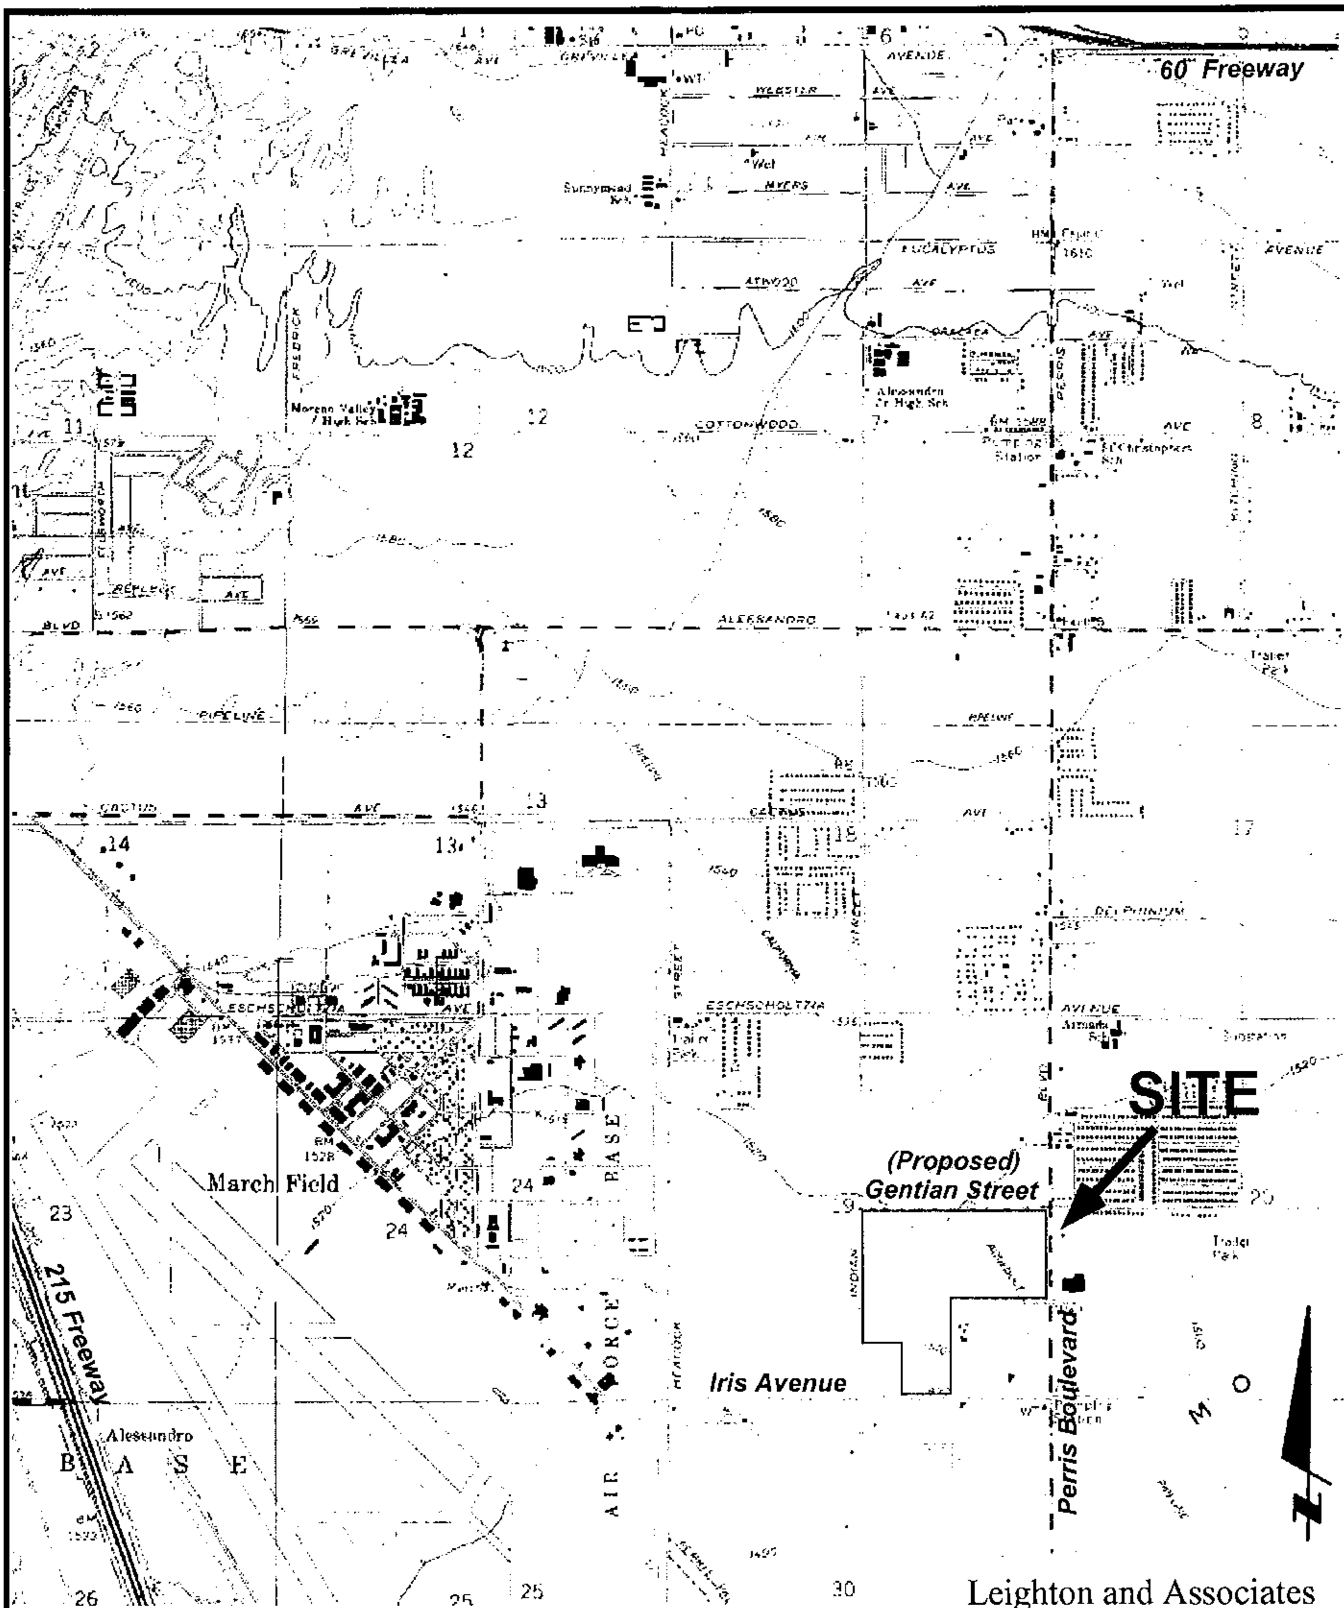
The purpose of this study has been to evaluate the general geotechnical conditions at the site, to identify significant geotechnical or geologic issues that would impact site development, and to provide preliminary geotechnical recommendations for design and construction.

1.3 Scope of Investigation

The scope of our investigation has included the following tasks:

- Background Review - A background review of readily available, relevant, in-house geotechnical literature, and aerial photographs was performed.

- Pre-field Investigation Activities - Coordinated with Underground Service Alert (USA) to have existing underground utilities located and marked prior to our subsurface investigation.



PROPOSED 104-ACRE RESIDENTIAL DEVELOPMENT NORTHWEST OF PERRIS BOULEVARD AND IRIS AVENUE, City of Moreno Valley, California	**SITE LOCATION MAP**	PROJECT NO. 021164-001 DATE June, 2004 Figure 1

Attachment: Preliminary Water Quality Management Plan (2444 : Legacy Park Project)

- Field Investigation - Our field investigation consisted of the excavation of borings and test pits as follows:

  Borings
  Eight hollow-stem auger borings were excavated, logged and sampled at representative locations within the site. One boring was excavated to a depth of 51.5 feet and seven borings were excavated to depths of 21.5 feet below the existing ground surface. Each boring was logged by a member of our technical staff. Relatively undisturbed soil samples were obtained at selected intervals within the borings using Standard Penetration Testing and a California Ring Sampler. Logs of the geotechnical borings are presented in Appendix B. Approximate boring locations are shown on the accompanying Geotechnical Map, Figure 2.

  Test Pits
  Eight backhoe test pits were excavated and logged at representative locations within the site to a maximum depth of 5.5 feet below the existing ground surface. Each test pit was logged by a member of our technical staff. Bulk soil samples were obtained from the test pits. Logs of the test pits are presented in Appendix C. Approximate test pit locations are shown on the accompanying Geotechnical Map, Figure 2.

- Laboratory Tests - Laboratory tests were conducted on selected relatively undisturbed and bulk soil samples obtained during our field investigation. The laboratory testing program was designed to evaluate the engineering characteristics of the onsite soil. Results of the laboratory testing are presented in Appendix D. The laboratory tests conducted during this investigation include:

  - In situ moisture content and dry density.
  - Sieve analysis for grain size distribution.
  - Consolidation and hydrocollapse characteristics.
  - Expansion Index.
  - Maximum dry density and optimum moisture content.
  - R-value for pavement recommendations.

- Water-soluble sulfate concentration in the soil for cement type recommendations.

- Resistivity, chloride content and pH to evaluate corrosion potential.

- Engineering Analysis - The data obtained from our background review and field exploration was evaluated and analyzed in order to provide the conclusions and preliminary recommendations in the following sections.

- Report Preparation - The results of our geotechnical investigation have been summarized in this report, presenting our findings, conclusions and preliminary recommendations.

2.0 FINDINGS

2.1 Site Geology

The site is located in the Perris block of the Peninsular Ranges Geomorphic Province of southern California. The Perris block is a structural block bounded on the north by the San Jacinto Fault Zone (located 8 kilometers northeast of the site) and on the south by the Elsinore Fault Zone (located 29 kilometers southwest of the site). These faults have experienced significant activity in the recent geologic past. These and other northwest-trending right lateral strike slip faults dominate the structure of the Peninsular Ranges. Cretaceous igneous rocks of the Southern California Batholith underlie the Peninsular Ranges in this area. Locally, the site vicinity is underlain by older alluvial soil deposits of clay, silt, sand and gravel (SCGS, 1982; Morton, 1978). Bedrock outcrops of quartz diorite are present approximately ¾ mile east of the site.

2.2 Subsurface Soil Conditions

Based upon our review of pertinent geotechnical literature, and our subsurface exploration, the site is underlain by alluvial soil deposits. The soil encountered during our subsurface exploration in the upper 15 feet generally consisted of loose to medium dense silty sand to gravelly sand and soft to stiff sandy silt. Below a depth of 15 feet, the soil generally consisted of stiff to very stiff sandy silt to clay. These soils were typically characterized as slightly moist to very moist to the depths excavated. Moisture contents in the upper 10 feet ranged from 2 to 10 percent.

2.3 Groundwater

Groundwater was not encountered in any of our borings performed during this investigation to a depth of 51.5 feet. Based on our review of regional groundwater data, groundwater is expected to be on the order of 120 to 140 feet below the ground surface in the site vicinity (CDWR, 2000). However, relatively shallow perched ground water may occur locally (WMWD, 2003).

2.4 Faulting and Seismicity

The two principal seismic considerations for most sites in southern California are surface rupture along active fault traces and damage to structures due to seismically-induced ground shaking. An active fault is one that has moved in the Holocene (last 11,000 years). The closest mapped active fault that could affect the site is the San Jacinto (San

Jacinto Valley) fault, located approximately 9 kilometers northeast of the site. The San Jacinto fault is capable of producing a maximum moment magnitude of 6.9 and an average slip rate of 12 millimeter per year (CDMG, 1998). Other known regional active faults that could affect the site include the San Jacinto (San Bernardino), San Andreas, Elsinore, Chino-Central Avenue and Cucamonga faults.

No traces of active or potentially active faults have been observed to cross the project site. The site is not within an Alquist-Priolo Earthquake Fault Zone (CDMG, 2000). The potential for fault ground rupture at the site is considered very low.

Peak Horizontal Ground Accelerations (PHGA) for the site were estimated using a deterministic seismic hazard analysis, based on currently available earthquake and fault information. The analysis computes the site PHGA that could be expected to result from an earthquake on a specific fault using the estimated maximum magnitude earthquake event. PHGA's were estimated using the EQFAULT computer program (Blake, 2000), based on the attenuation relationship by Sadigh et al. (1997). Based on the analysis, the San Jacinto (San Jacinto Valley) Fault Zone is potentially capable of producing the greatest PHGA at the site, due to its proximity, fault type, and its maximum earthquake magnitude of 6.9 (M_W). It is estimated that such an earthquake on this fault near the site could produce seismic shaking with a PHGA of 0.32g.

The PHGA was also estimated using a probabilistic seismic hazard analsyis. The computer program FRISKSP (Blake, 2000) was used for the analysis. Attenuation relationships used in the computer analysis were developed by Abrahamson and Silva (1997) for soil, Campbell (1997 and 2000) for alluvium, and Sadigh et al. (1997) for deep soil deposits. The analysis indicated an average value of 0.59g for peak horizontal ground acceleration (PHGA) with a 10 percent probability of exceedance in 50 years. The predominant magnitude is approximately 6.8 (Mw) at a distance on the order of 10 kilometers.

2.5 Secondary Seismic Hazards

Liquefaction Potential

Liquefaction is the loss of soil strength or stiffness due to a buildup of excess pore-water pressure during strong ground shaking. Liquefaction is associated primarily with loose (low density), granular, saturated soil. Effects of severe liquefaction can include sand boils, excessive settlement, bearing capacity failures, and lateral spreading.

The Generalized Liquefaction Map for Riverside County (2003) indicates the site is located in an area of shallow groundwater with sediments considered highly susceptible to liquefaction. Our exploratory borings indicate that moderately dense soil underlies the site. In addition, regional groundwater data indicates that shallow groundwater conditions do not exist locally, nor have they existed historically. Based on these findings, the potential for liquefaction appears to be low.

Seismically Induced Settlement

During a strong seismic event, seismically induced settlement can occur within loose to moderately dense, dry or saturated granular soil. Settlement caused by ground shaking can be nonuniformly distributed, resulting in differential settlement. We have performed analyses to estimate seismically-induced settlement using the simplified method set forth by Tokimatsu and Seed (1987).

Based on this preliminary study, the potential total settlement resulting from seismic loading is estimated to be approximately 1½ inches. Differential settlement resulting from seismic loading is generally assumed to be one-half of the total seismically induced settlement over a distance of 40 feet. Seismic settlement is not considered a geotechnical constraint to the project.

2.6 Compressible and Collapsible Soil

Based on our investigation, the upper 5 to 15 feet of older alluvium is generally considered to be slightly to moderately compressible. Partial removal and recompaction of this material will be necessary to reduce the potential for excessive total and differential settlement of the proposed structures.

Hydrocollapse potential refers to the potential settlement of a soil under existing stresses upon being wetted. Representative samples of the upper 5 to 20 feet of the subsurface soil were tested for hydrocollapse potential. Test results indicate that the near-surface soil onsite has a negligible to minor hydrocollapse potential (1 percent or less).

2.7 Expansive Soils

Representative samples of the subsurface soil were tested for expansion potential. Test results indicate an Expansion Index of 0 to 5. Based on these results and the relatively granular nature of the near-surface soil, the onsite soil generally has a very low expansion potential.

2.8 Sulfate Content

Water-soluble sulfates in soil can react adversely with concrete. However, concrete in contact with soil containing sulfate concentrations of less than 0.10 percent are considered to have negligible sulfate exposure (UBC, 1997 edition, Chapter 19).

Near-surface soil samples were tested during this investigation for soluble sulfate content. The results of these tests indicated sulfate contents of less than 0.01 percent by weight, indicating negligible sulfate exposure. As such, the soils exposed at pad grade are not expected to pose a significant potential for sulfate reaction with concrete.

2.9 Resistivity, Chloride and pH

Soil corrosivity to ferrous metals can be estimated by the soil's pH level, electrical resistivity, and chloride content. In general, soil having a minimum resistivity less than 2,000 ohm-cm is considered corrosive. Soil with a chloride content of 500 ppm or more is considered corrosive to ferrous metals.

As a screening for potentially corrosive soil, representative soil samples were tested during this investigation to determine minimum resistivity, chloride content, and pH level. The tests indicated a chloride content of 42 ppm, a pH value of approximately 7.0, and a minimum resistivity of 7,000 ohm-cm. Based on the test results, the onsite soil is considered mildly corrosive to buried ferrous metals.

3.0 CONCLUSIONS AND RECOMMENDATIONS

Based upon this study, the proposed improvements are feasible from a geotechnical standpoint. The recommendations presented below are preliminary. Additional geotechnical investigation and analysis may be necessary, based on the actual development plans for submittal with the project grading plans.

3.1 General Earthwork and Grading

All grading should be performed in accordance with the General Earthwork and Grading Specifications presented in Appendix D, unless specifically revised or amended below or by future recommendations based on final development plans.

Site Preparation

Prior to construction, the site should be cleared of vegetation, trash, and debris. Trees should be removed and grubbed out, and the excavations should be backfilled with compacted fill. Any underground obstructions onsite should be removed. The resulting cavities should be properly backfilled and compacted. Efforts should be made to locate any existing utility lines. Those lines should be removed or rerouted if they interfere with the proposed construction, and the resulting cavities should be properly backfilled and compacted. In addition, any uncontrolled artificial fill, if encountered, should be removed.

Overexcavation and Recompaction

To reduce the potential for adverse differential settlement of the proposed structures, the underlying subgrade soil should be prepared in such a manner that a uniform response to the applied loads is achieved. The soil underneath conventional shallow footings should be overexcavated and recompacted to a minimum depth of 3 feet below the bottom of the proposed foundations for residential structures or 3 feet below the existing grade, whichever is deeper. The overexcavation and recompaction should extend a minimum lateral distance of 5 feet from the footings. Local conditions may require that deeper overexcavation be performed; such areas should be evaluated by Leighton and Associates during grading.

Areas outside the overexcavation limits of buildings planned for asphalt or concrete pavement, flatwork, site walls, and retaining walls (less than 6 feet in height), and areas to receive fill should be overexcavated to a minimum depth of 12 inches below the existing ground surface or 12 inches below the proposed finish subgrade, whichever is deeper.

After completion of the overexcavation, and prior to fill placement, the exposed surfaces should be scarified to a minimum depth of 6 inches, moisture-conditioned to or slightly above optimum moisture content, and recompacted to a minimum 90 percent relative compaction.

Fill Placement and Compaction

The onsite soil is suitable for use as compacted structural fill, provided it is free of debris, and oversized material (greater than 8 inches in largest dimension). Any soil to be placed as fill, whether onsite or imported material, should be accepted by Leighton and Associates.

All fill soil should be placed in thin, loose lifts, moisture-conditioned, as necessary, to near optimum moisture content, and compacted to a minimum 90 percent relative compaction as determined by ASTM Test Method D1557. Aggregate base should be compacted to a minimum of 95 percent relative compaction.

Shrinkage and Subsidence

The change in volume of excavated and recompacted soil varies according to soil type and location. This volume change is represented as a percentage increase (bulking) or decrease (shrinkage) in volume of fill after removal and recompaction. Subsidence occurs as natural ground is moisture-conditioned and densified to receive fill. Field and laboratory data used in our calculations included laboratory-measured maximum dry densities for soil types encountered at the subject site and the measured in-place densities of soils encountered. We estimate the following earth volume changes will occur during grading:

Shrinkage	Approximately 15 percent
Subsidence	Approximately 0.15 foot

The level of fill compaction, variations in the dry density of the existing soils and other factors influence the amount of volume change. Some adjustments to earthwork volume should be anticipated during grading of the site.

3.2 Foundations

Based on our preliminary investigation and our experience in the region, conventional shallow or post-tensioned foundations may be used to support the loads of one- to two-story, frame-type structures. Overexcavation and recompaction of the footing subgrade soil should be performed as detailed in Section 3.1.

Conventional Shallow Foundations

Based on our preliminary investigation, the footings for 2-story structures should have an embedment depth of 18 inches, with a minimum width of 24 and 15 inches for isolated and continuous footings, respectively. The footings for 1-story residential structures should have an embedment depth of 12 inches, with a minimum width of 24 and 12 inches for isolated and continuous footings, respectively.

An allowable bearing capacity of 2,000 psf may be used for preliminary design, based on the minimum embedment depth and width. The allowable bearing value may be increased by 300 psf per foot increase in depth or width to a maximum allowable bearing pressure of 3,500 psf. The allowable bearing pressure is for the total dead load and frequently applied live loads.

The soil resistance available to withstand lateral loads on a shallow foundation is a function of the frictional resistance along the base of the footing and the passive resistance that may develop as the face of the structure tends to move into the soil. The frictional resistance between the base of the foundation and the subgrade soil may be computed using a coefficient of friction of 0.35. The passive resistance may be computed using an equivalent fluid pressure of 350 pounds per cubic foot (pcf), assuming there is constant contact between the footing and undisturbed soil.

The allowable bearing pressure and coefficient of friction values may be increased by one third when considering loads of short duration, such as those imposed by wind and seismic forces.

Footing reinforcement should be designed by the structural engineer.

The recommended allowable bearing capacity is generally based on a total allowable, post construction settlement of 1 inch. Differential settlement is estimated at ½ inch over a horizontal distance of 30 feet. Since settlement is a function of footing size and contact bearing pressure, differential settlement can be expected between adjacent columns or walls where a large differential loading condition exists. These settlement estimates should be reevaluated by Leighton and Associates when foundation plans for the proposed structures become available.

Post-Tensioned Foundations

As an alternative to conventional spread footings, post-tension foundation systems can be used. Post-tension slab foundations should be designed by the project structural engineer. The following table provides post-tension slab design information for soil with a low expansion potential. Post-tension slabs should be designed in accordance with Section 1816 of the current edition of the UBC.

Post-Tension Foundation Design Recommendations		
Very Low Expansion		
Edge Moisture Variation Distance, e_m	Center Lift	5.5 feet
	Edge Lift	3.0 feet
Differential Swell, Y_m	Center Lift	1.0 inch
	Edge Lift	0.4 inch
Modulus of subgrade Reaction		120 pci

Exterior footings (thickened edges) should have a minimum depth of 12 inches below the lowest adjacent soil grade and a minimum width of 12 inches. These footings may be designed for a maximum allowable bearing pressure of 2,000 pounds per square foot. The allowable bearing capacity may be increased by one-third for short-term loading.

These recommendations are based on preliminary data. Additional testing of the soil present near finish grade will be conducted to confirm the final foundation design information. Local agencies, the structural engineer or the Uniform Building Code may have requirements that are more stringent.

3.3 Slab-On-Grade

Concrete slabs subjected to special loads should be designed by the structural engineer. Where conventional light floor loading conditions exist, the following minimum recommendations, which are based on a very low soil expansion potential, should be used:

- A minimum slab thickness of 4 inches (nominal). Reinforcement steel should be design by the structural engineer, but as a minimum should be No. 3 rebar placed at 24 inches on center. Reinforcement should be supported on "chairs" to position the reinforcement within the middle third of the slab thickness.

- A moisture barrier consisting of 6-mil Visqueen (or equivalent) placed below slabs where moisture-sensitive floor coverings or equipment is planned. The moisture barrier should be covered with a minimum of 2 inches of sand.

- The subgrade soil should be moisture conditioned to at least optimum moisture content to a minimum depth of 12 inches prior to placing the moisture barrier, steel or concrete.

The use of reinforcement or post-tensioned cables in slabs and foundations can generally reduce the potential for concrete cracking. However, minor cracking of the concrete as it cures, due to drying and shrinkage, is normal and should be expected. However, cracking is often aggravated by a high water/cement ratio, high concrete temperature at the time of placement, small nominal aggregate size, and rapid moisture loss due to hot, dry, and/or windy weather conditions during placement and curing. Cracking due to temperature and moisture fluctuations can also be expected. The use of low slump concrete can reduce the potential for shrinkage cracking.

Moisture barriers can retard, but not eliminate moisture vapor movement from the underlying soils up through the slab. Floor covering manufacturers should be consulted for specific recommendations.

3.4 Seismic Design Parameters

Seismic parameters presented in this report should be considered during project design. In order to reduce the effects of ground shaking produced by regional seismic events, seismic design should be performed in accordance with the most recent edition of the Uniform Building Code (UBC). The following data should be considered for the seismic analysis of the subject site:

Seismic Design Parameters	
Seismic Source	San Jacinto (San Jacinto Valley) Fault
Distance	Approximately 9 km
Seismic Source Type (UBC, Table 16-U):	B
Seismic Zone Factor, Z (UBC, Table 16-I):	0.4
Soil Profile Type (UBC, 16-J):	S_D
Near-Source Factor N_a (UBC, Table 16-S):	1.0
Source Factor N_v (UBC, Table 16-T):	1.04

3.5 Retaining Walls

We recommend that retaining walls be backfilled with onsite, very low expansive soil and constructed with a backdrain in accordance with the recommendations provided on Figure 3 (rear of text). Using expansive soil as retaining wall backfill will result in higher lateral earth pressures exerted on the wall. Based on these recommendations, the following parameters may be used for the design of conventional retaining walls up to 6 feet tall:

Static Equivalent Fluid Weight (pcf)	
Conditions	Level
Active	35
At-Rest	55
Passive	350 (Maximum of 3,500 psf)

The above values do not contain an appreciable factor of safety, so the structural engineer should apply the applicable factors of safety and/or load factors during design.

Cantilever walls that are designed to yield at least 0.001H, where H is equal to the wall height, may be designed using the active condition. Rigid walls and walls braced at the top should be designed using the at-rest condition.

Passive pressure is used to compute soil resistance to lateral structural movement. In addition, for sliding resistance, a frictional resistance coefficient of 0.35 may be used at the concrete and soil interface. The lateral passive resistance should be taken into account only if it is ensured that the soil providing passive resistance, embedded against the foundation elements, will remain intact with time.

In addition to the above lateral forces due to retained earth, surcharge due to improvements, such as an adjacent structure or traffic loading, should be considered in the design of the retaining wall. Loads applied within a 1:1 projection from the surcharging structure on the stem of the wall should be considered in the design.

A soil unit weight of 120 pcf may be assumed for calculating the actual weight of the soil over the wall footing.

Retaining wall footings should have a minimum width of 12 inches and a minimum embedment of 12 inches below the lowest adjacent grade. An allowable bearing capacity of 2,000 psf may be used for retaining wall footing design, based on the minimum footing width and depth. This bearing value may be increased by 300 psf per foot increase in width or depth to a maximum allowable bearing pressure of 3,500 psf.

3.6 Pavement Design

A representative soil sample tested during this investigation had an R-value of 61. Based on the design procedures outlined in the current Caltrans Highway Design Manual, preliminary flexible pavement section recommendations are presented in the following table for the Traffic Indices indicated. Final pavement design should be based on the Traffic Index determined by the project civil engineer and R-value testing provided near the completion of street grading. These pavement sections meet the City of Moreno Valley's current minimum pavement requirements.

AC PAVEMENT SECTION THICKNESS		
Traffic Index	Asphaltic Concrete (AC) Thickness (feet)	Class 2 Aggregate Base (AB) Thickness (feet)
6 or less	0.30	.040
7	0.35	0.40

If the pavement is to be constructed prior to construction of the structures, we recommend that the full depth of the pavement section be placed in order to support heavy construction traffic.

All pavement construction should be performed in accordance with the Standard Specifications for Public Works Construction. Field inspection and periodic testing, as needed during placement of the base course materials, should be undertaken to ensure that the requirements of the standard specifications are fulfilled. Prior to placement of aggregate base, the subgrade soil should be processed to a minimum depth of 6 inches, moisture-conditioned, as necessary, and recompacted to a minimum of 90 percent relative compaction. Aggregate base should be moisture conditioned, as necessary, and compacted to a minimum of 95 percent relative compaction.

3.7 Temporary Excavations

All temporary excavations, including utility trenches, retaining wall excavations, etc. should be performed in accordance with project plans, specifications and all OSHA requirements.

No surcharge loads should be permitted within a horizontal distance equal to the height of cut or 5 feet, whichever is greater from the top of the slope, unless the cut is shored appropriately. Excavations that extend below an imaginary plane inclined at 45 degrees below the edge of any adjacent existing structure should be properly shored to maintain support of the structure.

Typical cantilever shoring should be designed based on the active fluid pressure presented in the retaining wall section. If excavations are braced at the top and at specific design intervals, the active pressure may then be approximated by a rectangular soil pressure distribution with the pressure per foot of width equal to 22H, where H is equal to the depth of the excavation being shored.

During construction, the soil conditions should be regularly evaluated to verify that conditions are as anticipated. The contractor should be responsible for providing the "competent person" required by OSHA standards to evaluate soil conditions. Close coordination between the competent person and the geotechnical engineer should be maintained to facilitate construction while providing safe excavations.

3.8 Trench Backfill

Utility-type trenches onsite can be backfilled with the onsite material, provided it is free of debris, significant organic material and oversized material. Prior to backfilling the trench, pipes should be bedded and shaded in a granular material that has a sand equivalent of 30 or greater. The sand should extend 12 inches above the top of the pipe. The bedding/shading sand should be densified in-place by jetting. The native backfill should be placed in loose layers, moisture conditioned, as necessary, and mechanically compacted using a minimum standard of 90 percent relative compaction.

3.9 Surface Drainage

Surface drainage should be designed to be directed away from foundations and toward approved drainage devices. Irrigation of landscaping should be controlled to maintain, as much as possible, a consistent moisture content sufficient to provide healthy plant growth without overwatering.

3.10 Cement Type and Corrosion Protection

Based on the results of laboratory testing, concrete structures in contact with the onsite soil will have negligible exposure to water-soluble sulfates in the soil. Common Type II cement may be used for concrete construction onsite and the concrete should be designed in accordance with Table 19-A-4 of the Uniform Building Code.

Based on our laboratory testing, the onsite soil is considered mildly corrosive to ferrous metals. The corrosion information presented in this report should be provided to your underground utility subcontractors.

3.11 Additional Geotechnical Investigation and Services

The preliminary geotechnical recommendations presented in this report are based on subsurfacc conditions as interpreted from limited subsurface explorations and limited laboratory testing. Our preliminary geotechnical recommendations provided in this report are based on information available at the time the report was prepared and may change as plans are developed. Additional geotechnical investigation and analysis may be required based on final development plans. Leighton and Associates should review the site and grading plans when available and comment further on the geotechnical aspects of the project. Geotechnical observation and testing should be conducted during excavation and all phases of grading operations. The conclusions and preliminary recommendations presented herein should be reviewed and verified by Leighton and Associates during construction and revised accordingly if geotechnical conditions encountered vary from our preliminary findings and interpretations. Geotechnical observation and testing should be provided:

- After completion of site clearing.
- During overexcavation of compressible soil.
- During compaction of all fill materials.

- After excavation of all footings and prior to placement of concrete.
- During utility trench backfilling and compaction.
- During pavement subgrade and base preparation.
- When any unusual conditions are encountered.

APPENDIX E

LEIGHTON AND ASSOCIATES, INC.

GENERAL EARTHWORK AND GRADING SPECIFICATIONS FOR ROUGH GRADING

Table of Contents

1.0 General

1.1 Intent: These General Earthwork and Grading Specifications are for the grading and earthwork shown on the approved grading plan(s) and/or indicated in the geotechnical report(s). These Specifications are a part of the recommendations contained in the geotechnical report(s). In case of conflict, the specific recommendations in the geotechnical report shall supersede these more general Specifications. Observations of the earthwork by the project Geotechnical Consultant during the course of grading may result in new or revised recommendations that could supersede these specifications or the recommendations in the geotechnical report(s).

1.2 The Geotechnical Consultant of Record: Prior to commencement of work, the owner shall employ the Geotechnical Consultant of Record (Geotechnical Consultant). The Geotechnical Consultants shall be responsible for reviewing the approved geotechnical report(s) and accepting the adequacy of the preliminary geotechnical findings, conclusions, and recommendations prior to the commencement of the grading.

Prior to commencement of grading, the Geotechnical Consultant shall review the "work plan" prepared by the Earthwork Contractor (Contractor) and schedule sufficient personnel to perform the appropriate level of observation, mapping, and compaction testing.

During the grading and earthwork operations, the Geotechnical Consultant shall observe, map, and document the subsurface exposures to verify the geotechnical design assumptions. If the observed conditions are found to be significantly different than the interpreted assumptions during the design phase, the Geotechnical Consultant shall inform the owner, recommend appropriate changes in design to accommodate the observed conditions, and notify the review agency where required. Subsurface areas to be geotechnically observed, mapped, elevations recorded, and/or tested include natural ground after it has been cleared for receiving fill but before fill is placed, bottoms of all "remedial removal" areas, all key bottoms, and benches made on sloping ground to receive fill.

The Geotechnical Consultant shall observe the moisture-conditioning and processing of the subgrade and fill materials and perform relative compaction testing of fill to determine the attained level of compaction. The Geotechnical Consultant shall provide the test results to the owner and the Contractor on a routine and frequent basis.

1.3 <u>The Earthwork Contractor</u>: The Earthwork Contractor (Contractor) shall be qualified, experienced, and knowledgeable in earthwork logistics, preparation and processing of ground to receive fill, moisture-conditioning and processing of fill, and compacting fill. The Contractor shall review and accept the plans, geotechnical report(s), and these Specifications prior to commencement of grading. The

Contractor shall be solely responsible for performing the grading in accordance with the plans and specifications.

The Contractor shall prepare and submit to the owner and the Geotechnical Consultant a work plan that indicates the sequence of earthwork grading, the number of "spreads" of work and the estimated quantities of daily earthwork contemplated for the site prior to commencement of grading. The Contractor shall inform the owner and the Geotechnical Consultant of changes in work schedules and updates to the work plan at least 24 hours in advance of such changes so that appropriate observations and tests can be planned and accomplished. The Contractor shall not assume that the Geotechnical Consultant is aware of all grading operations.

The Contractor shall have the sole responsibility to provide adequate equipment and methods to accomplish the earthwork in accordance with the applicable grading codes and agency ordinances, these Specifications, and the recommendations in the approved geotechnical report(s) and grading plan(s). If, in the opinion of the Geotechnical Consultant, unsatisfactory conditions, such as unsuitable soil, improper moisture condition, inadequate compaction, insufficient buttress key size, adverse weather, etc., are resulting in a quality of work less than required in these specifications, the Geotechnical Consultant shall reject the work and may recommend to the owner that construction be stopped until the conditions are rectified.

2.0 <u>Preparation of Areas to be Filled</u>

2.1 <u>Clearing and Grubbing</u>: Vegetation, such as brush, grass, roots, and other deleterious material shall be sufficiently removed and properly disposed of in a method acceptable to the owner, governing agencies, and the Geotechnical Consultant.

The Geotechnical Consultant shall evaluate the extent of these removals depending on specific site conditions. Earth fill material shall not contain more than 1 percent of organic materials (by volume). No fill lift shall contain more than 5 percent of organic matter. Nesting of the organic materials shall not be allowed.

If potentially hazardous materials are encountered, the Contractor shall stop work in the affected area, and a hazardous material specialist shall be informed immediately for proper evaluation and handling of these materials prior to continuing to work in that area.

As presently defined by the State of California, most refined petroleum products (gasoline, diesel fuel, motor oil, grease, coolant, etc.) have chemical constituents that are considered to be hazardous waste. As such, the indiscriminate dumping or spillage of these fluids onto the ground may constitute a misdemeanor, punishable by fines and/or imprisonment, and shall not be allowed.

2.2 Processing: Existing ground that has been declared satisfactory for support of fill by the Geotechnical Consultant shall be scarified to a minimum depth of 6 inches. Existing ground that is not satisfactory shall be overexcavated as specified in the following section. Scarification shall continue until soils are broken down and free of large clay lumps or clods and the working surface is reasonably uniform, flat, and free of uneven features that would inhibit uniform compaction.

2.3 Overexcavation: In addition to removals and overexcavations recommended in the approved geotechnical report(s) and the grading plan, soft, loose, dry, saturated, spongy, organic-rich, highly fractured or otherwise unsuitable ground shall be overexcavated to competent ground as evaluated by the Geotechnical Consultant during grading.

2.4 Benching: Where fills are to be placed on ground with slopes steeper than 5:1 (horizontal to vertical units), the ground shall be stepped or benched. Please see the Standard Details for a graphic illustration. The lowest bench or key shall be a minimum of 15 feet wide and at least 2 feet deep, into competent material as evaluated by the Geotechnical Consultant. Other benches shall be excavated a minimum height of 4 feet into competent material or as otherwise recommended by the Geotechnical Consultant. Fill placed on ground sloping flatter than 5:1 shall also be benched or otherwise overexcavated to provide a flat subgrade for the fill.

2.5 Evaluation/Acceptance of Fill Areas: All areas to receive fill, including removal and processed areas, key bottoms, and benches, shall be observed, mapped, elevations recorded, and/or tested prior to being accepted by the Geotechnical Consultant as suitable to receive fill. The Contractor shall obtain a written acceptance from the Geotechnical Consultant prior to fill placement. A licensed surveyor shall provide the survey control for determining elevations of processed areas, keys, and benches.

3.0 Fill Material

3.1 General: Material to be used as fill shall be essentially free of organic matter and other deleterious substances evaluated and accepted by the Geotechnical Consultant prior to placement. Soils of poor quality, such as those with unacceptable gradation, high expansion potential, or low strength shall be placed in areas acceptable to the Geotechnical Consultant or mixed with other soils to achieve satisfactory fill material.

3.2 Oversize: Oversize material defined as rock, or other irreducible material with a maximum dimension greater than 8 inches, shall not be buried or placed in fill unless location, materials, and placement methods are specifically accepted by the Geotechnical Consultant. Placement operations shall be such that nesting of oversized material does not occur and such that oversize material is completely surrounded by compacted or densified fill. Oversize material shall not be placed within 10 vertical feet of finish grade or within 2 feet of future utilities or underground construction.

3.3 Import: If importing of fill material is required for grading, proposed import material shall meet the requirements of Section 3.1. The potential import source shall be given to the Geotechnical Consultant at least 48 hours (2 working days) before importing begins so that its suitability can be determined and appropriate tests performed.

4.0 Fill Placement and Compaction

4.1 Fill Layers: Approved fill material shall be placed in areas prepared to receive fill (per Section 3.0) in near-horizontal layers not exceeding 8 inches in loose thickness. The Geotechnical Consultant may accept thicker layers if testing indicates the grading procedures can adequately compact the thicker layers. Each layer shall be spread evenly and mixed thoroughly to attain relative uniformity of material and moisture throughout.

4.2 Fill Moisture Conditioning: Fill soils shall be watered, dried back, blended, and/or mixed, as necessary to attain a relatively uniform moisture content at or slightly over optimum. Maximum density and optimum soil moisture content tests shall be performed in accordance with the American Society of Testing and Materials (ASTM Test Method D1557-91).

4.3 Compaction of Fill: After each layer has been moisture-conditioned, mixed, and evenly spread, it shall be uniformly compacted to not less than 90 percent of maximum dry density (ASTM Test Method D1557-91). Compaction equipment shall be adequately sized and be either specifically designed for soil compaction or of proven reliability to efficiently achieve the specified level of compaction with uniformity.

4.4 Compaction of Fill Slopes: In addition to normal compaction procedures specified above, compaction of slopes shall be accomplished by backrolling of slopes with sheepsfoot rollers at increments of 3 to 4 feet in fill elevation, or by other methods producing satisfactory results acceptable to the Geotechnical Consultant. Upon completion of grading, relative compaction of the fill, out to the slope face, shall be at least 90 percent of maximum density per ASTM Test Method D1557-91.

4.5 Compaction Testing: Field tests for moisture content and relative compaction of the fill soils shall be performed by the Geotechnical Consultant. Location and frequency of tests shall be at the Consultant's discretion based on field conditions encountered. Compaction test locations will not necessarily be selected on a random basis. Test locations shall be selected to verify adequacy of compaction levels in areas that are judged to be prone to inadequate compaction (such as close to slope faces and at the fill/bedrock benches).

4.6 Frequency of Compaction Testing: Tests shall be taken at intervals not exceeding 2 feet in vertical rise and/or 1,000 cubic yards of compacted fill soils embankment. In addition, as a guideline, at least one test shall be taken on slope faces for each 5,000 square feet of slope face and/or each 10 feet of vertical height of slope. The Contractor shall assure that fill construction is such that the testing schedule can be accomplished by the Geotechnical Consultant. The Contractor shall stop or slow down the earthwork construction if these minimum standards are not met.

4.7 Compaction Test Locations: The Geotechnical Consultant shall document the approximate elevation and horizontal coordinates of each test location. The Contractor shall coordinate with the project surveyor to assure that sufficient grade stakes are established so that the Geotechnical Consultant can determine the test locations with sufficient accuracy. At a minimum, two grade stakes within a horizontal distance of 100 feet and vertically less than 5 feet apart from potential test locations shall be provided.

5.0 Subdrain Installation

Subdrain systems shall be installed in accordance with the approved geotechnical report(s), the grading plan, and the Standard Details. The Geotechnical Consultant may recommend additional subdrains and/or changes in subdrain extent, location, grade, or material depending on conditions encountered during grading. All subdrains shall be surveyed by a land surveyor/civil engineer for line and grade after installation and prior to burial. Sufficient time should be allowed by the Contractor for these surveys.

6.0 Excavation

Excavations, as well as over-excavation for remedial purposes, shall be evaluated by the Geotechnical Consultant during grading. Remedial removal depths shown on geotechnical plans are estimates only. The actual extent of removal shall be determined by the Geotechnical Consultant based on the field evaluation of exposed conditions during grading. Where fill-over-cut slopes are to be graded, the cut portion of the slope shall be made, evaluated, and accepted by the Geotechnical Consultant prior to placement of materials for construction of the fill portion of the slope, unless otherwise recommended by the Geotechnical Consultant.

7.0 Trench Backfills

7.1 Safety: The Contractor shall follow all OHSA and Cal/OSHA requirements for safety of trench excavations.

7.2 Bedding and Backfill: All bedding and backfill of utility trenches shall be done in accordance with the applicable provisions of Standard Specifications of Public Works Construction. Bedding material shall have a Sand Equivalent greater than 30 (SE>30). The bedding shall be placed to 1 foot over the top of the conduit and densified by jetting. Backfill shall be placed and densified to a minimum of 90 percent of maximum from 1 foot above the top of the conduit to the surface.

The Geotechnical Consultant shall test the trench backfill for relative compaction. At least one test should be made for every 300 feet of trench and 2 feet of fill.

7.3 Lift Thickness: Lift thickness of trench backfill shall not exceed those allowed in the Standard Specifications of Public Works Construction unless the Contractor can demonstrate to the Geotechnical Consultant that the fill lift can be compacted to the minimum relative compaction by his alternative equipment and method.

7.4 Observation and Testing: The jetting of the bedding around the conduits shall be observed by the Geotechnical Consultant.

Project No. 14541-11A

Mr. Jason Keller
MISSION PACIFIC LAND COMPANY
3649 Mission Inn Avenue
1st Floor Rotunda
Riverside, CA 92501

Subject: **Interpretive Report for Infiltration System Design, Proposed Residential Development, Located at the Northeast Corner of Indian Avenue and Santiago Street City of Moreno Valley, Riverside County, California**

Earth-Strata, Inc. is pleased to present this interpretive report for the proposed development, located at the northeast corner of Indian Avenue and Santiago Street in the City of Moreno Valley, Riverside County, California. The purpose of our study was to determine the infiltration rates and physical characteristics of the subsurface earth materials within the proposed development. We have provided guidelines for the design of onsite detention basins, where applicable. This study is intended to provide onsite infiltration rates for the earth materials at the approximate depth near the proposed porous pavement areas.

PROPERTY DESCRIPTION

The subject property is located at northwest corner of Indian Avenue and Santiago Street in the City of Moreno Valley, Riverside County, California (see Figure 1). The subject property consists of a developed parcel of land with relatively flat terrain. The subject property is underlain by undocumented fill and alluivium (Qal).

PROPOSED CONSTRUCTION

Based on information provided by you, the proposed development will consist of single family residences which include interior driveways, utilities and hardscape.

SUBSURFACE EXPLORATION AND INFILTRATION TESTING

SUBSURFACE EXPLORATION

Subsurface exploration of the subject site consisted of 2 exploratory excavations to a depth of 6 feet, conducted on May 7, 2014. The exploratory holes were excavated to evaluate insitu permeability rates for the soil below the porous pavement. The approximate location of the exploratory excavations are shown on the attached Infiltration Location Map, Plate 1.

EARTH MATERIALS

A general description of the earth materials observed on site is provided below.

- Quaternary Alluvium (map symbol Qal): Quaternary alluvium was encountered to a maximum depth explored. These alluvial deposits consist predominately of interlayered brown to gray brown, fine to coarse grained silty sand. These deposits were generally noted to be in a slightly moist to moist, loose to medium dense state.

GROUNDWATER

Groundwater was not observed within the exploratory excavations.

INFILTRATION TESTING

The continuous presoak test method was utilized to perform a total of two (2) infiltration tests on May 7, 2014 to evaluate near surface infiltratiion rates in order to estimate the amount of storm water runoff that can percolate into the onsite bio swale retention basins. The infiltration tests were performed in general accordance with the requirements of insitu infiltration testing.

The infiltration tests were performed within 8 inch holes, 6 feet deep. The locations of the infiltration test holes are indicated on the attached Infiltration Location Map, Plate 1. The infiltration test holes were located by property boundary measurement on the site plan and by using geographic features. For the continuous presoak testing method, the pipe was filled with water and allowed to stand.

After the presoak, testing was performed by adjusting the water level. The drop in water level was measured from a fixed initial reference point for more reliable readings, with measurements having an accuracy of 1/8-inch. After each measurement, the water level was brought up to the original test level. Infiltration test data recorded in the field is summarized in the following table and is included within Appendix A.

INFILTRATION TEST SUMMARY

TEST NUMBER	INFILTRATION HOLE DEPTH (ft.)	INFILTRATION RATE (cm/sec)	DESCRIPTION
P-1	6	5	Silty SAND
P-2	6	3	Silty SAND

The infiltration test rates ranged from 3 to 5 minutes per inch (mpi).

CONCLUSIONS AND RECOMMENDATIONS

Based on the data presented in this report and the recommendations set forth herein, it is the opinion of Earth-Strata that the retention basin can be designed for a infiltration rate of 5 mpi.

The following equation was used in order to convert the infiltration rate to infiltration rate.

$$I_t = \frac{\Delta H\ (60)\ r}{\Delta t\ \ (r + 2H_{avg})}$$

The design infiltration rate of 5 mpi is equalvent to 0.45 inch/hour.

GRADING PLAN REVIEW AND CONSTRUCTION SERVICES

This report has been prepared for the exclusive use of **Mr. Jason Keller** and their authorized representative. It likely does not contain sufficient information for other parties or other uses. Earth-Strata should be engaged to review the final design plans and specifications prior to construction. This is to verify that the recommendations contained in this report have been properly incorporated into the project plans and specifications. Should Earth-Strata not be accorded the opportunity to review the project plans and specifications, we are not responsibility for misinterpretation of our recommendations.

Earth-Strata should be retained to provide observations during construction to validate this report. In order to allow for design changes in the event that the subsurface conditions differ from those anticipated prior to construction.

Earth-Strata should review any changes in the project and modify and approve in writing the conclusions and recommendations of this report. This report and the drawings contained within are intended for design input purposes only and are not intended to act as construction drawings or specifications. In the event that conditions encountered during grading or construction operations appear to be different than those indicated in this report, this office should be notified immediately, as revisions may be required.

REPORT LIMITATIONS

Our services were performed using the degree of care and skill ordinarily exercised, under similar circumstances, by reputable soils engineers and geologists, practicing at the time and location this report was prepared. No other warranty, expressed or implied, is made as to the conclusions and professional advice included in this report.

Earth materials vary in type, strength, and other geotechnical properties between points of observation and exploration. Groundwater and moisture conditions can also vary due to natural processes or the works of man on this or adjacent properties. As a result, we do not and cannot have complete knowledge of the subsurface conditions beneath the subject property. No practical study can completely eliminate uncertainty with regard to the anticipated geotechnical conditions in connection with a subject property. The conclusions and recommendations within this report are based upon the findings at the points of observation and are subject to confirmation by Earth-Strata during construction. This report is considered valid for a period of one year from the time the report was issued.

This report was prepared with the understanding that it is the responsibility of the owner or their representative, to ensure that the conclusions and recommendations contained herein are brought to the attention of the other project consultants and are incorporated into the plans and specifications. The owners' contractor should properly implement the conclusions and recommendations during grading and construction, and notify the owner if they consider any of the recommendations presented herein to be unsafe or unsuitable.

Respectfully submitted,

EARTH-STRATA, INC.

APPENDIX E
BMP POLLUTANT REMOVAL EFFECTIVENESS

BMP Pollutant Removal Effectiveness [1]

Pollutant of Concern	Harvest and Use [8]	Infiltration BMPs [3]	Bioretention	Extended Detention Basins [2]	Sand Filter Basin [7]
Sediment	H	H	H	M	H
Nutrient	H	H	[5]	M [4]	L [6]
Trash	H	H	H	H	H
Metal	H	H	H	M	M
Bacteria	H	H	H	M	M
Oil & Grease	H	H	H	M	H
Organic Compounds	H	H	H	M	H
Pesticides	H	H	H	U	U

<u>Abbreviations:</u>

L: Low removal efficiency M: Medium removal efficiency H: High removal efficiency U: Unknown

<u>Notes:</u>

(1) Periodic performance assessment and updating of this table may be performed based on updated information from studies from the District, CASQA, Caltrans or others. These effectiveness ratings are based on the specific BMP designs incorporated into this manual.

(2) Effectiveness based upon total 72-hour drawdown time.

(3) Includes infiltration basins, infiltration trenches, and permeable pavements.

(4) Medium for soil types A & B only. Low for soil types C & D.

(5) Removal rating is dependent on the soil media depth. L=Min. 18” deep, M= Min. 24” deep, H=Max. 30"-36" deep.

(6) Medium where sand filter layer is increased to 36”.

(7) Considered to be a Treatment Control BMP. See the WQMP to determine if this BMP can be used.

(8) Cisterns, when associated with an adequate and reliable (year-round) demand for non-potable use of captured storm water (see the applicable WQMP for any specific requirements), have a High effectiveness at removing all pollutants from stormwater runoff. If there is inadequate demand to reliably drain the cistern through a non-potable use throughout the year, pollutant removal effectiveness will be Low.

Appendix 8: Source Control

Pollutant Sources/Source Control Checklist

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☒ A. On-site storm drain inlets	☒ On-site storm drain inlets	☒ Mark all inlets with the words "Only Rain Down the Storm Drain" or similar. Catch Basin Markers may be available from the Riverside County Flood Control and Water Conservation District, call 951.955.1200 to verify.	☒ Maintain and periodically repaint or replace inlet markings. ☒ Provide stormwater pollution prevention information to new site owners, lessees, or operators. ☒ See applicable operational BMPs in Fact Sheet SC-44, "Drainage System Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com ☒Include the following in lease agreements: "Tenant shall not allow anyone to discharge anything to storm drains or to store or deposit materials so as to create a potential discharge to storm drains."
☐ B. Interior floor drains and elevator shaft sump pumps		☐ State that interior floor drains and elevator shaft sump pumps will be plumbed to sanitary sewer.	☐ Inspect and maintain blockages and overflow.
☐ C. Interior parking garages		☐ State that parking garage floor drains will be plumbed to the sanitary sewer.	☐ Inspect and maintain blockages and overflow.

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☐ D1. Need for future indoor & structural pest control		☐ Note building design features that discourage entry of pests.	☐ Provide Integrated Pest Management information to owners, lessees, and operators.
☒ D2. Landscape/ Outdoor Pesticide Use	☒ Show locations of native trees or areas of shrubs and ground cover to be undisturbed and retained. ☒ Show self-retaining landscape areas, if any. ☒ Show stormwater treatment and hydrograph modification management BMPs. (See instructions in Chapter 3, Step 5 and guidance in Chapter 5.)	State that final landscape plans will accomplish all of the following. ☐ Preserve existing native trees, shrubs, and ground cover to the maximum extent possible. ☒ Design landscaping to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to stormwater pollution. ☒ Where landscaped areas are used to retain or detain stormwater, specify plants that are tolerant of saturated soil conditions. ☒ Consider using pest-resistant plants, especially adjacent to hardscape. ☒ To insure successful establishment, select plants appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions.	☒ Maintain landscaping using minimum or no pesticides. ☒ See applicable operational BMPs in "What you should know for…..Landscape and Gardening" at http://rcflood.org/stormwater/Downloads/ LandscapeGardenBrochure.pdf ☒ Provide IPM information to new owners, lessees and operators.

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☐ E. Pools, spas, ponds, decorative fountains, and other water features.	☐ Show location of water feature and sanitary sewer cleanout in an accessible area within 10 feet. (Exception: Public pools must be plumbed according to County Department of Environmental Health Guidelines.)	☐ If the Co-Permittee requires pools to be plumbed to the sanitary sewer, place a note on the plans and state in the narrative that this connection will be made according to local requirements.	☐ See applicable operational BMPs in "Guidelines for Maintaining Your Swimming Pool, Jacuzzi and Garden Fountain" at http://rcflood.org/stormwater/
☐ F. Food service	☐ For restaurants, grocery stores, and other food service operations, show location (indoors or in a covered area outdoors) of a floor sink or other area for cleaning floor mats, containers, and equipment. ☐ On the drawing, show a note that this drain will be connected to a grease interceptor before discharging to the sanitary sewer.	☐ Describe the location and features of the designated cleaning area. ☐ Describe the items to be cleaned in this facility and how it has been sized to insure that the largest items can be accommodated.	☐ See the brochure, "The Food Service Industry Best Management Practices for: Restaurants, Grocery Stores, Delicatessens and Bakeries" at http://rcflood.org/stormwater/ Provide this brochure to new site owners, lessees, and operators.
☐ G. Refuse areas	☐ Show where site refuse and recycled materials will be handled and stored for pickup. See local municipal requirements for sizes and other details of refuse areas. ☐ If dumpsters or other receptacles are outdoors, show how the designated area will be covered, graded, and paved to prevent run-on and show locations of berms to prevent runoff from the area. ☐ Any drains from dumpsters, compactors, and tallow bin areas shall be connected to a grease removal device before discharge to sanitary sewer.	☐ State how site refuse will be handled and provide supporting detail to what is shown on plans. ☐ State that signs will be posted on or near dumpsters with the words "Do not dump hazardous materials here" or similar.	State how the following will be implemented: ☐ Provide adequate number of receptacles. Inspect receptacles regularly; repair or replace leaky receptacles. Keep receptacles covered. Prohibit/prevent dumping of liquid or hazardous wastes. Post "no hazardous materials" signs. Inspect and pick up litter daily and clean up spills immediately. Keep spill control materials available on-site. See Fact Sheet SC-34, "Waste Handling and Disposal" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☐ H. Industrial processes.	☐ Show process area	☐ If industrial processes are to be located on site, state: “All process activities to be performed indoors. No processes to drain to exterior or to storm drain system.”	☐ See Fact Sheet SC-10, “Non-Stormwater Discharges” in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com See the brochure “Industrial & Commercial Facilities Best Management Practices for: Industrial, Commercial Facilities” at http://rcflood.org/stormwater/

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☐ I. Outdoor storage of equipment or materials. (See rows J and K for source control measures for vehicle cleaning, repair, and maintenance.)	☐ Show any outdoor storage areas, including how materials will be covered. Show how areas will be graded and bermed to prevent run-on or run-off from area. ☐ Storage of non-hazardous liquids shall be covered by a roof and/or drain to the sanitary sewer system, and be contained by berms, dikes, liners, or vaults. ☐ Storage of hazardous materials and wastes must be in compliance with the local hazardous materials ordinance and a Hazardous Materials Management Plan for the site.	Include a detailed description of materials to be stored, storage areas, and structural features to prevent pollutants from entering storm drains. Where appropriate, reference documentation of compliance with therequirements of Hazardous Materials Programs for: • Hazardous Waste Generation • Hazardous Materials Release Response and Inventory • California Accidental Release (CalARP) • Aboveground Storage Tank • Uniform Fire Code Article 80 Section 103(b) & (c) 1991 • Underground Storage Tank www.cchealth.org/groups/haz mat /	☐ See the Fact Sheets SC-31, “Outdoor Liquid Container Storage” and SC-33, “Outdoor Storage of Raw Materials ” in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☐ J. Vehicle and Equipment Cleaning	☐ Show on drawings as appropriate: (1) Commercial/industrial facilities having vehicle/equipment cleaning needs shall either provide a covered, bermed area for washing activities or discourage vehicle/equipment washing by removing hose bibs and installing signs prohibiting such uses. (2) Multi-dwelling complexes shall have a paved, bermed, and covered car wash area (unless car washing is prohibited on-site and hoses are provided with an automatic shutoff to discourage such use). (3) Washing areas for cars, vehicles, and equipment shall be paved, designed to prevent run-on to or runoff from the area, and plumbed to drain to the sanitary sewer. (4) Commercial car wash facilities shall be designed such that no runoff from the facility is discharged to the storm drain system. Wastewater from the facility shall discharge to the sanitary sewer, or a wastewater reclamation system shall be installed.	☐ If a car wash area is not provided, describe any measures taken to discourage on-site car washing and explain how these will be enforced.	Describe operational measures to implement the following (if applicable): ☐ Wash water from vehicle and equipment washing operations shall not be discharged to the storm drain system. Refer to “Outdoor Cleaning Activities and Professional Mobile Service Providers” for many of the Potential Sources of Runoff Pollutants categories below. Brochure can be found at http://rcflood.org/stormwater/ ☐ Car dealerships and similar may rinse cars with water only.

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☐ K. Vehicle/Equipment Repair and Maintenance	☐ Accommodate all vehicle equipment repair and maintenance indoors. Or designate an outdoor work area and design the area to prevent run-on and runoff of stormwater. ☐ Show secondary containment for exterior work areas where motor oil, brake fluid, gasoline, diesel fuel, radiator fluid, acid-containing batteries or other hazardous materials or hazardous wastes are used or stored. Drains shall not be installed within the secondary containment areas. ☐ Add a note on the plans that states either (1) there are no floor drains, or (2) floor drains are connected to wastewater pretreatment systems prior to discharge to the sanitary sewer and an industrial waste discharge permit will be obtained.	☐ State that no vehicle repair or maintenance will be done outdoors, or else describe the required features of the outdoor work area. ☐ State that there are no floor drains or if there are floor drains, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements. ☐ State that there are no tanks, containers or sinks to be used for parts cleaning or rinsing or, if there are, note the agency from which an industrial waste discharge permit will be obtained and that the design meets that agency's requirements.	In the Stormwater Control Plan, note that all of the following restrictions apply to use the site: ☐ No person shall dispose of, nor permit the disposal, directly or indirectly of vehicle fluids, hazardous materials, or rinsewater from parts cleaning into storm drains. ☐ No vehicle fluid removal shall be performed outside a building, nor on asphalt or ground surfaces, whether inside or outside a building, except in such a manner as to ensure that any spilled fluid will be in an area of secondary containment. Leaking vehicle fluids shall be contained or drained from the vehicle immediately. ☐ No person shall leave unattended drip parts or other open containers containing vehicle fluid, unless such containers are in use or in an area of secondary containment. Refer to "Automotive Maintenance & Car Care Best Management Practices for Auto Body Shops, Auto Repair Shops, Car Dealerships, Gas Stations and Fleet Service Operations". Brochure can be found at http://rcflood.org/stormwater/ Refer to Outdoor Cleaning Activities and Professional Mobile Service Providers for many of the Potential Sources of Runoff Pollutants categories below. Brochure can be found at http://rcflood.org/stormwater/

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☐ L. Fuel Dispensing Areas	☐ Fueling areas[6] shall have impermeable floors (i.e., portland cement concrete or equivalent smooth impervious surface) that are: a) graded at the minimum slope necessary to prevent ponding; and b) separated from the rest of the site by a grade break that prevents run-on of stormwater to the maximum extent practicable. ☐ Fueling areas shall be covered by a canopy that extends a minimum of ten feet in each direction from each pump. [Alternative: The fueling area must be covered and the cover's minimum dimensions must be equal to or greater than the area within the grade break or fuel dispensing area1.] The canopy [or cover] shall not drain onto the fueling area.		☐ The property owner shall dry sweep the fueling area routinely. ☐ See the Fact Sheet SD-30 , "Fueling Areas" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

[6] The fueling area shall be defined as the area extending a minimum of 6.5 feet from the corner of each fuel dispenser or the length at which the hose and nozzle assembly may be operated plus a minimum of one foot, whichever is greater.

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☐ M. Loading Docks	☐ Show a preliminary design for the loading dock area, including roofing and drainage. Loading docks shall be covered and/or graded to minimize run-on to and runoff from the loading area. Roof downspouts shall be positioned to direct stormwater away from the loading area. Water from loading dock areas shall be drained to the sanitary sewer, or diverted and collected for ultimate discharge to the sanitary sewer. ☐ Loading dock areas draining directly to the sanitary sewer shall be equipped with a spill control valve or equivalent device, which shall be kept closed during periods of operation. ☐ Provide a roof overhang over the loading area or install door skirts (cowling) at each bay that enclose the end of the trailer.		☐ Move loaded and unloaded items indoors as soon as possible. ☐ See Fact Sheet SC-30, "Outdoor Loading and Unloading," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☐ N. Fire Sprinkler Test Water		☐ Provide a mean to drain fire sprinkler test water to the sanitary sewer.	☐ See the note in Fact Sheet SC-41, "Building and Grounds Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com
O. Miscellaneous Drain or Wash Water or Other Sources ☐ Boiler drain lines ☐ Condensate drain lines ☐ Rooftop equipment ☐ Drainage sumps ☒ Roofing, gutters, and trim. ☐ Other sources		☐ Boiler drain lines shall be directly or indirectly connected to the sanitary sewer system and may not discharge to the storm drain system. ☐ Condensate drain lines may discharge to landscaped areas if the flow is small enough that runoff will not occur. Condensate drain lines may not discharge to the storm drain system. ☐ Rooftop equipment with potential to produce pollutants shall be roofed and/or have secondary containment. ☐ Any drainage sumps on-site shall feature a sediment sump to reduce the quantity of sediment in pumped water. ☒ Avoid roofing, gutters, and trim made of copper or other unprotected metals that may leach into runoff. ☐ Include controls for other sources as specified by local reviewer.	

1 Potential Sources of Runoff Pollutants	2 Permanent Controls—Shown on WQMP Drawings	3 Permanent Controls—Listed in WQMP Table and Narrative	4 Operational BMPs—Included in WQMP Table and Narrative
☐ P. Plazas, sidewalks, and parking lots.			☐ Sweep plazas, sidewalks and parking lots regularly to prevent accumulation of litter and debris. Collect debris from pressure washing to prevent entry into the storm drain system. Collect washwater containing any cleaning agent or degreaser and discharge to the sanitary sewer not to a storm drain.

Appendix 9: O&M

Operation and Maintenance Plan and Documentation of Finance, Maintenance and Recording Mechanisms

Operation and Maintenance Responsibility for Treatment Control BMPs

BMP	Operation and Maintenance Activities	BMP Start Date	Frequency	Indications for Maintenance	Parties Responsible For Maintenance and Funding
Landscaping and Irrigation	Inspect landscaping and irrigation systems and repair/replace if needed.	At the completion of project	The landscaping and irrigation systems shall be monitored monthly.	The landscaping areas should be maintained if areas are eroding away. Irrigation systems should be checked for irregular flows to the landscaped areas when ponding or dry soil occurs.	MPLC Legacy 75 Partners, LLP 4100 Newport Place, Suite 400 Newport, California 92660
Bioretention Basin	Maintain vegetation as needed and remove debris and litter from the basin. Inspect hydraulic and structural facilities, check erosion, and verify infiltration.	At the completion of project	The basin shall be monitored before annual storm seasons and following rainfall events. Mulch replacement prior to start of wet season. An in-depth inspection should occur annually, within 72 hours after a significant rainfall. Perform biannual health evaluation of trees/shrubs.	Vegetation should be maintained if it has eroded. If any debris or litter is seen it should be removed. Odor, insects, and overgrowth indicate the need for repair. The inlet should be examined for blockage, embankment, and damage to the structural integrity. The basin should be aerated if significant ponding of more than 72 hours occurs.	Home Owner's Association
Activity Restrictions	Any activity that may affect surrounding areas or the downstream receiving waters (such as car washes or leaving trash bin lids open) is strictly prohibited.	At the completion of project	Trash areas shall be checked before and after a major storm event, as well as on a monthly basis to reduce debris.	Not applicable	MPLC Legacy 75 Partners, LLP 4100 Newport Place, Suite 400 Newport, California 92660
Education Program	Educational materials are included in this WQMP Attachment D. The property owner shall distribute additional copies of handouts to the homeowners.	When new homeowners move in	The educational material provided shall be included in homeowner information packets and reviewed quarterly.	Not applicable	MPLC Legacy 75 Partners, LLP 4100 Newport Place, Suite 400 Newport, California 92660

BMP	Operation and Maintenance Activities	BMP Start Date	Frequency	Indications for Maintenance	Parties Responsible For Maintenance and Funding
Street Sweeping	A street sweeper shall clean the privately maintained streets and parking areas to reduce debris.	At the completion of project	A street sweeper shall clean the privately maintained streets and parking areas monthly and before any known storm event.	Not applicable	MPLC Legacy 75 Partners, LLP 4100 Newport Place, Suite 400 Newport, California 92660

Appendix 10: Educational Materials

BMP Fact Sheets, Maintenance Guidelines and Other End-User BMP Information

3.5 Bioretention Facility

Type of BMP	LID – Bioretention
Treatment Mechanisms	Infiltration, Evapotranspiration, Evaporation, Biofiltration
Maximum Drainage Area	This BMP is intended to be integrated into a project's landscaped area in a distributed manner. Typically, contributing drainage areas to Bioretention Facilities range from less than 1 acre to a maximum of around 10 acres.
Other Names	Rain Garden, Bioretention Cell, Bioretention Basin, Biofiltration Basin, Landscaped Filter Basin, Porous Landscape Detention

Description

Bioretention Facilities are shallow, vegetated basins underlain by an engineered soil media. Healthy plant and biological activity in the root zone maintain and renew the macro-pore space in the soil and maximize plant uptake of pollutants and runoff. This keeps the Best Management Practice (BMP) from becoming clogged and allows more of the soil column to function as both a sponge (retaining water) and a highly effective and self-maintaining biofilter. In most cases, the bottom of a Bioretention Facility is unlined, which also provides an opportunity for infiltration to the extent the underlying onsite soil can accommodate. When the infiltration rate of the underlying soil is exceeded, fully biotreated flows are discharged via underdrains. Bioretention Facilities therefore will inherently achieve the maximum feasible level of infiltration and evapotranspiration and achieve the minimum feasible (but highly biotreated) discharge to the storm drain system.

Siting Considerations

These facilities work best when they are designed in a relatively level area. Unlike other BMPs, Bioretention Facilities can be used in smaller landscaped spaces on the site, such as:

- ✓ Parking islands
- ✓ Medians
- ✓ Site entrances

Landscaped areas on the site (such as may otherwise be required through minimum landscaping ordinances), can often be designed as Bioretention Facilities. This can be accomplished by:

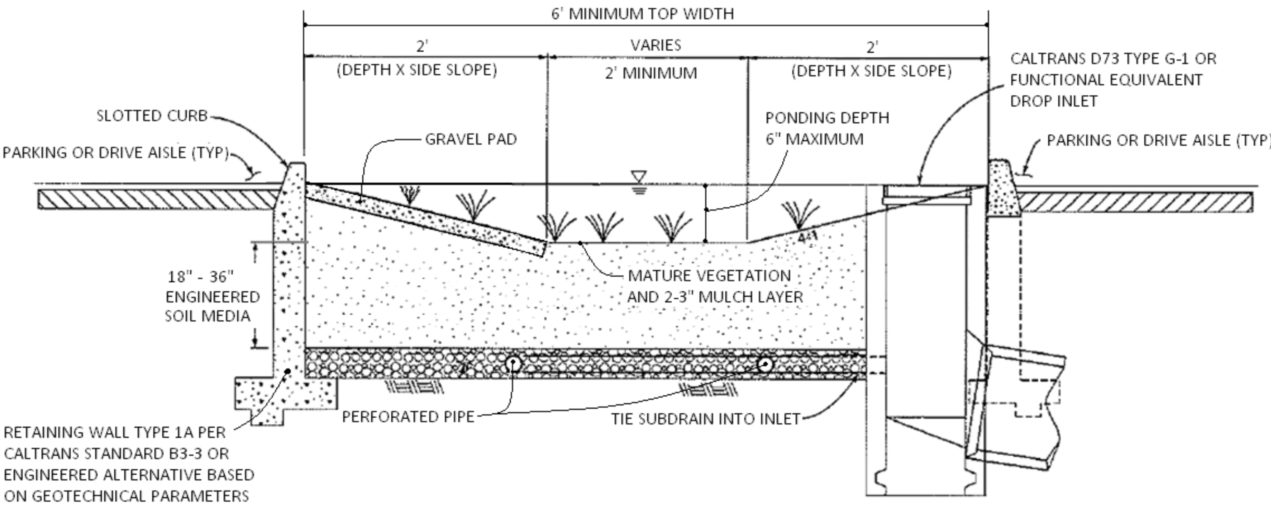
- *Depressing* landscaped areas below adjacent impervious surfaces, rather than elevating those areas
- Grading the site to direct runoff from those impervious surfaces *into* the Bioretention Facility, rather than away from the landscaping
- Sizing and designing the depressed landscaped area as a Bioretention Facility as described in this Fact Sheet

Bioretention Facilities should however not be used downstream of areas where large amounts of sediment can clog the system. Placing a Bioretention Facility at the toe of a steep slope should also be avoided due to the potential for clogging the engineered soil media with erosion from the slope, as well as the potential for damaging the vegetation.

Design and Sizing Criteria

The recommended cross section necessary for a Bioretention Facility includes:

- Vegetated area
- 18' minimum depth of engineered soil media
- 12' minimum gravel layer depth with 6' perforated pipes (added flow control features such as orifice plates may be required to mitigate for HCOC conditions)



While the 18-inch minimum engineered soil media depth can be used in some cases, it is recommended to use 24 inches or a preferred 36 inches to provide an adequate root zone for the chosen plant palate. Such a design also provides for improved removal effectiveness for nutrients. The recommended ponding depth inside of a Bioretention Facility is 6 inches; measured from the flat bottom surface to the top of the water surface as shown in Figure 1.

Because this BMP is filled with an engineered soil media, pore space in the soil and gravel layer is assumed to provide storage volume. However, several considerations must be noted:

- Surcharge storage above the soil surface (6 inches) is important to assure that design flows do not bypass the BMP when runoff exceeds the soil's absorption rate.
- In cases where the Bioretention Facility contains engineered soil media deeper than 36 inches, the pore space within the engineered soil media can only be counted to the 36-inch depth.
- A maximum of 30 percent pore space can be used for the soil media whereas a maximum of 40 percent pore space can be use for the gravel layer.

Figure 1: Standard Layout for a Bioretention Facility

BIORETENTION FACILITY BMP FACT SHEET

Engineered Soil Media Requirements

The engineered soil media shall be comprised of 85 percent mineral component and 15 percent organic component, by volume, drum mixed prior to placement. The mineral component shall be a Class A sandy loam topsoil that meets the range specified in Table 1 below. The organic component shall be nitrogen stabilized compost[1], such that nitrogen does not leach from the media.

Table 1: Mineral Component Range Requirements

Percent Range	Component
70-80	Sand
15-20	Silt
5-10	Clay

The trip ticket, or certificate of compliance, shall be made available to the inspector to prove the engineered mix meets this specification.

Vegetation Requirements

Vegetative cover is important to minimize erosion and ensure that treatment occurs in the Bioretention Facility. The area should be designed for at least 70 percent mature coverage throughout the Bioretention Facility. To prevent the BMP from being used as walkways, Bioretention Facilities shall be planted with a combination of small trees, densely planted shrubs, and natural grasses. Grasses shall be native or ornamental; preferably ones that do not need to be mowed. The application of fertilizers and pesticides should be minimal. To maintain oxygen levels for the vegetation and promote biodegradation, it is important that vegetation not be completely submerged for any extended period of time. Therefore, a maximum of 6 inches of ponded water shall be used in the design to ensure that plants within the Bioretention Facility remain healthy.

A 2 to 3-inch layer of standard shredded aged hardwood mulch shall be placed as the top layer inside the Bioretention Facility. The 6-inch ponding depth shown in Figure 1 above shall be measured from the top surface of the 2 to 3-inch mulch layer.

Curb Cuts

To allow water to flow into the Bioretention Facility, 1-foot-wide (minimum) curb cuts should be placed approximately every 10 feet around the perimeter of the Bioretention Facility. Figure 2 shows a curb cut in a Bioretention Facility. Curb cut flow lines must be at or above the V_{BMP} water surface level.

[1] For more information on compost, visit the US Composting Council website at: http://compostingcouncil.org/

BIORETENTION FACILITY BMP FACT SHEET

Figure 2: Curb Cut located in a Bioretention Facility

To reduce erosion, a gravel pad shall be placed at each inlet point to the Bioretention Facility. The gravel should be 1- to 1.5-inch diameter in size. The gravel should overlap the curb cut opening a minimum of 6 inches. The gravel pad inside the Bioretention Facility should be flush with the finished surface at the curb cut and extend to the bottom of the slope.

In addition, place an apron of stone or concrete, a foot square or larger, inside each inlet to prevent vegetation from growing up and blocking the inlet. See Figure 3.

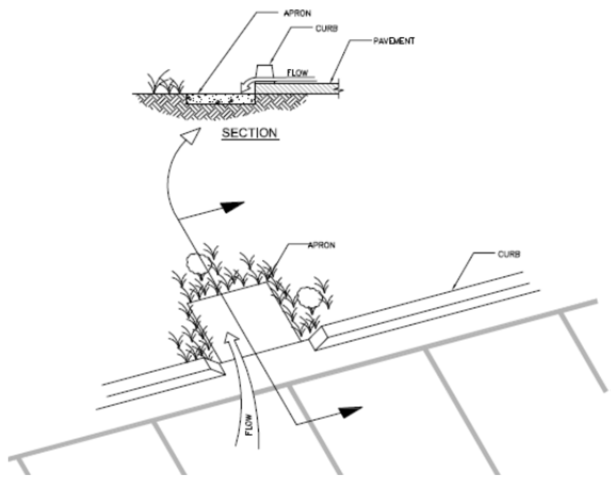


Figure 3: Apron located in a Bioretention Facility

Terracing the Landscaped Filter Basin

It is recommended that Bioretention Facilities be level. In the event the facility site slopes and lacks proper design, water would fill the lowest point of the BMP and then discharge from the basin without being treated. To ensure that the water will be held within the Bioretention Facility on sloped sites, the BMP must be terraced with nonporous check dams to provide the required storage and treatment capacity.

The terraced version of this BMP shall be used on non-flat sites with no more than a 3 percent slope. The surcharge depth cannot exceed 0.5 feet, and side slopes shall not exceed 4:1. Table 2 below shows the spacing of the check dams, and slopes shall be rounded up (i.e., 2.5 percent slope shall use 10' spacing for check dams).

Table 2: Check Dam Spacing

6" Check Dam Spacing	
Slope	**Spacing**
1%	*25'*
2%	*15'*
3%	*10'*

BIORETENTION FACILITY BMP FACT SHEET

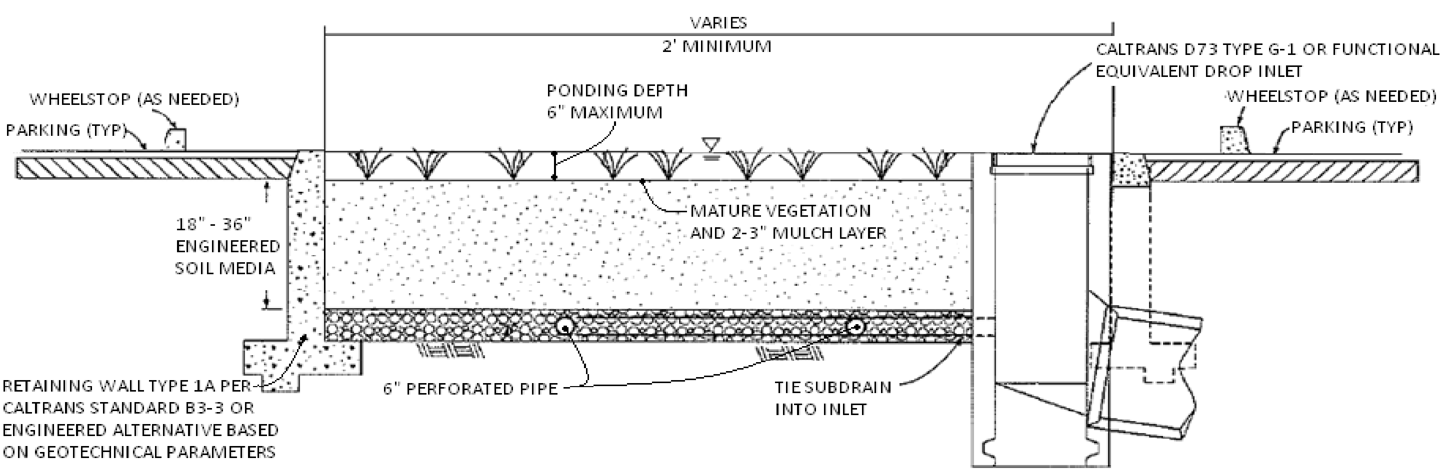
Roof Runoff
Roof downspouts may be directed towards Bioretention Facilities. However, the downspouts must discharge onto a concrete splash block to protect the Bioretention Facility from erosion.

Retaining Walls
It is recommended that Retaining Wall Type 1A, per Caltrans Standard B3-3 or equivalent, be constructed around the entire perimeter of the Bioretention Facility. This practice will protect the sides of the Bioretention Facility from collapsing during construction and maintenance or from high service loads adjacent to the BMP. Where such service loads would not exist adjacent to the BMP, an engineered alternative may be used if signed by a licensed civil engineer.

Side Slope Requirements

Bioretention Facilities Requiring Side Slopes
The design should assure that the Bioretention Facility does not present a tripping hazard. Bioretention Facilities proposed near pedestrian areas, such as areas parallel to parking spaces or along a walkway, must have a gentle slope to the bottom of the facility. Side slopes inside of a Bioretention Facility shall be 4:1. A typical cross section for the Bioretention Facility is shown in Figure 1.

Bioretention Facilities Not Requiring Side Slopes
Where cars park perpendicular to the Bioretention Facility, side slopes are not required. A 6-inch maximum drop may be used, and the Bioretention Facility must be planted with trees and shrubs to prevent pedestrian access. In this case, a curb is not placed around the Bioretention Facility,
but wheel stops shall be used to prevent vehicles from entering the Bioretention Facility, as shown in Figure 4.



BIORETENTION FACILITY BMP FACT SHEET

Planter Boxes

Bioretention Facilities can also be placed above ground as planter boxes. Planter boxes must have a minimum width of 2 feet, a maximum surcharge depth of 6 inches, and no side slopes are necessary. Planter boxes must be constructed so as to ensure that the top surface of the engineered soil media will remain level. This option may be constructed of concrete, brick, stone or other stable materials that will not warp or bend. Chemically treated wood or galvanized steel, which has the ability to contaminate stormwater, should not be used. Planter boxes must be lined with an impermeable liner on all sides, including the bottom. Due to the impermeable liner, the inside bottom of the planter box shall be designed and constructed with a cross fall, directing treated flows within the subdrain layer toward the point where subdrain exits the planter box, and subdrains shall be oriented with drain holes oriented down. These provisions will help avoid excessive stagnant water within the gravel underdrain layer. Similar to the in-ground Bioretention Facility versions, this BMP benefits from healthy plants and biological activity in the root zone. Planter boxes should be planted with appropriately selected vegetation.

Figure 5: Planter Box
Source: LA Team Effort

Overflow

An overflow route is needed in the Bioretention Facility design to bypass stored runoff from storm events larger than V_{BMP} or in the event of facility or subdrain clogging. Overflow systems must connect to an acceptable discharge point, such as a downstream conveyance system as shown in Figure 1 and Figure 4. The inlet to the overflow structure shall be elevated inside the Bioretention Facility to be flush with the ponding surface for the design capture volume (V_{BMP}) as shown in Figure 4. This will allow the design capture volume to be fully treated by the Bioretention Facility, and for larger events to safely be conveyed to downstream systems. The overflow inlet shall **<u>not</u>** be located in the entrance of a Bioretention Facility, as shown in Figure 6.

Underdrain Gravel and Pipes

An underdrain gravel layer and pipes shall be provided in accordance with Appendix B – Underdrains.

Figure 6: Incorrect Placement of an Overflow Inlet.

Inspection and Maintenance Schedule

The Bioretention Facility area shall be inspected for erosion, dead vegetation, soggy soils, or standing water. The use of fertilizers and pesticides on the plants inside the Bioretention Facility should be minimized.

Schedule	Activity
Ongoing	• Keep adjacent landscape areas maintained. Remove clippings from landscape maintenance activities. • Remove trash and debris • Replace damaged grass and/or plants • Replace surface mulch layer as needed to maintain a 2-3 inch soil cover.
After storm events	• Inspect areas for ponding
Annually	• Inspect/clean inlets and outlets

Bioretention Facility Design Procedure

1) Enter the area tributary, A_T, to the Bioretention Facility.

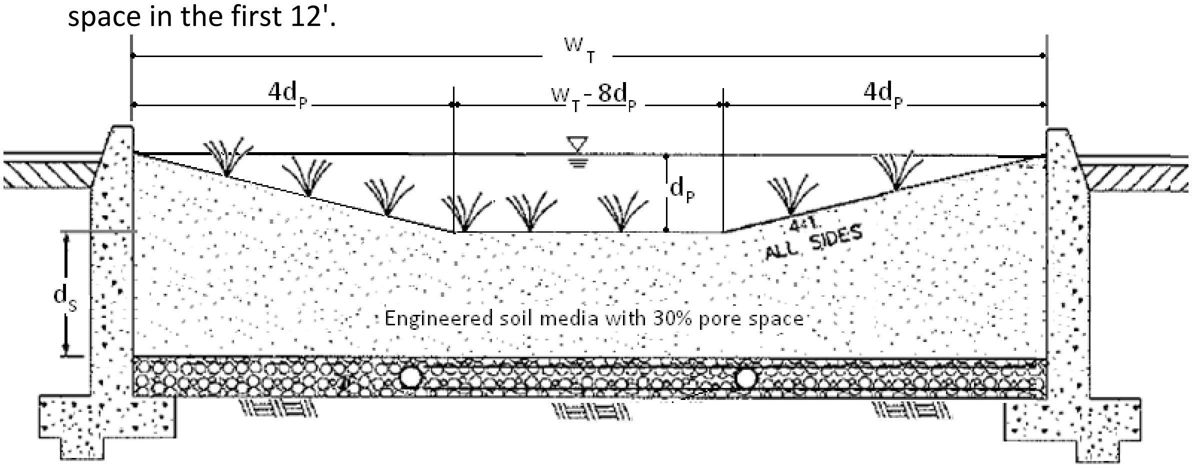
2) Enter the Design Volume, $V_{BMP,}$ determined from Section 2.1 of this Handbook.

3) Select the type of design used. There are two types of Bioretention Facility designs: the standard design used for most project sites that include side slopes, and the modified design used when the BMP is located perpendicular to the parking spaces or with planter boxes that do not use side slopes.

4) Enter the depth of the engineered soil media, d_S. The minimum depth for the engineered soil media can be 18' in limited cases, but it is recommended to use 24' or a preferred 36' to provide an adequate root zone for the chosen plant palette. Engineered soil media deeper than 36' will only get credit for the pore space in the first 36'.

5) Enter the top width of the Bioretention Facility.

6) Calculate the total effective depth, d_E, within the Bioretention Facility. The maximum allowable pore space of the soil media is 30% while the maximum allowable pore space for the gravel layer is 40%. Gravel layer deeper than 12' will only get credit for the pore space in the first 12'.



a. For the design with side slopes the following equation shall be used to determine the total effective depth. Where, d_P is the depth of ponding within the basin.

$$d_E(\mathrm{ft}) = \frac{0.3 \times \left[\left(w_T(\mathrm{ft}) \times d_S(\mathrm{ft})\right) + 4\left(d_P(\mathrm{ft})\right)^2\right] + 0.4 \times 1(\mathrm{ft}) + d_P(\mathrm{ft})\left[4d_P(\mathrm{ft}) + \left(w_T(\mathrm{ft}) - 8d_P(\mathrm{ft})\right)\right]}{w_T(\mathrm{ft})}$$

This above equation can be simplified if the maximum ponding depth of 0.5’ is used. The equation below is used on the worksheet to find the minimum area required for the Bioretention Facility:

$$d_E(\mathrm{ft}) = (0.3 \times d_S(\mathrm{ft}) + 0.4 \text{ x } 1(\mathrm{ft})) - \left(\frac{0.7\ (\mathrm{ft}^2)}{w_T(\mathrm{ft})}\right) + 0.5(\mathrm{ft})$$

b. For the design without side slopes the following equation shall be used to determine the total effective depth:

$$d_E(ft) = d_P(ft) + [(0.3) \times d_S(ft) + (0.4) \times 1(ft)]$$

The equation below, using the maximum ponding depth of 0.5', is used on the worksheet to find the minimum area required for the Bioretention Facility:

$$d_E(ft) = 0.5\ (ft) + [(0.3) \times d_S(ft) + (0.4) \times 1(ft)]$$

7) Calculate the minimum surface area, A_M, required for the Bioretention Facility. This does not include the curb surrounding the Bioretention Facility or side slopes.

$$A_M(ft^2) = \frac{V_{BMP}(ft^3)}{d_E\ (ft)}$$

8) Enter the proposed surface area. This area shall not be less than the minimum required surface area.

9) Verify that side slopes are no steeper than 4:1 in the standard design, and are not required in the modified design.

10) Provide the diameter, minimum 6 inches, of the perforated underdrain used in the Bioretention Facility. See Appendix B for specific information regarding perforated pipes.

11) Provide the slope of the site around the Bioretention Facility, if used. The maximum slope is 3 percent for a standard design.

12) Provide the check dam spacing, if the site around the Bioretention Facility is sloped.

13) Describe the vegetation used within the Bioretention Facility.

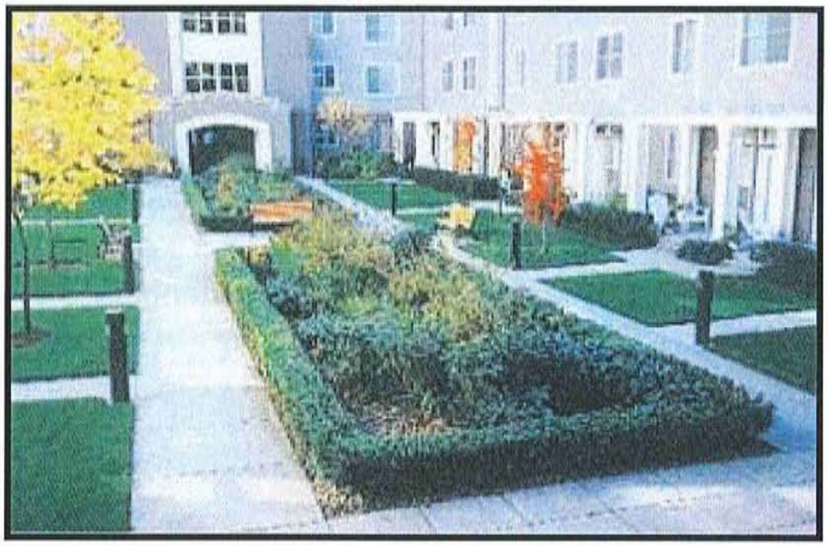
Bioretention

TC-32



Design Considerations

- Soil for Infiltration
- Tributary Area
- Slope
- Aesthetics
- Environmental Side-effects

Description

The bioretention best management practice (BMP) functions as a soil and plant-based filtration device that removes pollutants through a variety of physical, biological, and chemical treatment processes. These facilities normally consist of a grass buffer strip, sand bed, ponding area, organic layer or mulch layer, planting soil, and plants. The runoff's velocity is reduced by passing over or through buffer strip and subsequently distributed evenly along a ponding area. Exfiltration of the stored water in the bioretention area planting soil into the underlying soils occurs over a period of days.

California Experience

None documented. Bioretention has been used as a stormwater BMP since 1992. In addition to Prince George's County, MD and Alexandria, VA, bioretention has been used successfully at urban and suburban areas in Montgomery County, MD; Baltimore County, MD; Chesterfield County, VA; Prince William County, VA; Smith Mountain Lake State Park, VA; and Cary, NC.

Advantages

- Bioretention provides stormwater treatment that enhances the quality of downstream water bodies by temporarily storing runoff in the BMP and releasing it over a period of four days to the receiving water (EPA, 1999).

- The vegetation provides shade and wind breaks, absorbs noise, and improves an area's landscape.

Limitations

- The bioretention BMP is not recommended for areas with slopes greater than 20% or where mature tree removal would

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

be required since clogging may result, particularly if the BMP receives runoff with high sediment loads (EPA, 1999).

- Bioretention is not a suitable BMP at locations where the water table is within 6 feet of the ground surface and where the surrounding soil stratum is unstable.
- By design, bioretention BMPs have the potential to create very attractive habitats for mosquitoes and other vectors because of highly organic, often heavily vegetated areas mixed with shallow water.
- In cold climates the soil may freeze, preventing runoff from infiltrating into the planting soil.

Design and Sizing Guidelines

- The bioretention area should be sized to capture the design storm runoff.
- In areas where the native soil permeability is less than 0.5 in/hr an underdrain should be provided.
- Recommended minimum dimensions are 15 feet by 40 feet, although the preferred width is 25 feet. Excavated depth should be 4 feet.
- Area should drain completely within 72 hours.
- Approximately 1 tree or shrub per 50 ft^2 of bioretention area should be included.
- Cover area with about 3 inches of mulch.

Construction/Inspection Considerations

Bioretention area should not be established until contributing watershed is stabilized.

Performance

Bioretention removes stormwater pollutants through physical and biological processes, including adsorption, filtration, plant uptake, microbial activity, decomposition, sedimentation and volatilization (EPA, 1999). Adsorption is the process whereby particulate pollutants attach to soil (e.g., clay) or vegetation surfaces. Adequate contact time between the surface and pollutant must be provided for in the design of the system for this removal process to occur. Thus, the infiltration rate of the soils must not exceed those specified in the design criteria or pollutant removal may decrease. Pollutants removed by adsorption include metals, phosphorus, and hydrocarbons. Filtration occurs as runoff passes through the bioretention area media, such as the sand bed, ground cover, and planting soil.

Common particulates removed from stormwater include particulate organic matter, phosphorus, and suspended solids. Biological processes that occur in wetlands result in pollutant uptake by plants and microorganisms in the soil. Plant growth is sustained by the uptake of nutrients from the soils, with woody plants locking up these nutrients through the seasons. Microbial activity within the soil also contributes to the removal of nitrogen and organic matter. Nitrogen is removed by nitrifying and denitrifying bacteria, while aerobic bacteria are responsible for the decomposition of the organic matter. Microbial processes require oxygen and can result in depleted oxygen levels if the bioretention area is not adequately aerated. Sedimentation occurs in the swale or ponding area as the velocity slows and solids fall out of suspension.

The removal effectiveness of bioretention has been studied during field and laboratory studies conducted by the University of Maryland (Davis et al, 1998). During these experiments, synthetic stormwater runoff was pumped through several laboratory and field bioretention areas to simulate typical storm events in Prince George's County, MD. Removal rates for heavy metals and nutrients are shown in Table 1.

Table 1 Laboratory and Estimated Bioretention Davis et al. (1998); PGDER (1993)

Pollutant	Removal Rate
Total Phosphorus	70-83%
Metals (Cu, Zn, Pb)	93-98%
TKN	68-80%
Total Suspended Solids	90%
Organics	90%
Bacteria	90%

Results for both the laboratory and field experiments were similar for each of the pollutants analyzed. Doubling or halving the influent pollutant levels had little effect on the effluent pollutants concentrations (Davis et al, 1998).

The microbial activity and plant uptake occurring in the bioretention area will likely result in higher removal rates than those determined for infiltration BMPs.

Siting Criteria

Bioretention BMPs are generally used to treat stormwater from impervious surfaces at commercial, residential, and industrial areas (EPA, 1999). Implementation of bioretention for stormwater management is ideal for median strips, parking lot islands, and swales. Moreover, the runoff in these areas can be designed to either divert directly into the bioretention area or convey into the bioretention area by a curb and gutter collection system.

The best location for bioretention areas is upland from inlets that receive sheet flow from graded areas and at areas that will be excavated (EPA, 1999). In order to maximize treatment effectiveness, the site must be graded in such a way that minimizes erosive conditions as sheet flow is conveyed to the treatment area. Locations where a bioretention area can be readily incorporated into the site plan without further environmental damage are preferred. Furthermore, to effectively minimize sediment loading in the treatment area, bioretention only should be used in stabilized drainage areas.

Additional Design Guidelines

The layout of the bioretention area is determined after site constraints such as location of utilities, underlying soils, existing vegetation, and drainage are considered (EPA, 1999). Sites with loamy sand soils are especially appropriate for bioretention because the excavated soil can be backfilled and used as the planting soil, thus eliminating the cost of importing planting soil.

The use of bioretention may not be feasible given an unstable surrounding soil stratum, soils with clay content greater than 25 percent, a site with slopes greater than 20 percent, and/or a site with mature trees that would be removed during construction of the BMP.

Bioretention can be designed to be off-line or on-line of the existing drainage system (EPA, 1999). The drainage area for a bioretention area should be between 0.1 and 0.4 hectares (0.25 and 1.0 acres). Larger drainage areas may require multiple bioretention areas. Furthermore, the maximum drainage area for a bioretention area is determined by the expected rainfall intensity and runoff rate. Stabilized areas may erode when velocities are greater than 5 feet per second (1.5 meter per second). The designer should determine the potential for erosive conditions at the site.

The size of the bioretention area, which is a function of the drainage area and the runoff generated from the area is sized to capture the water quality volume.

The recommended minimum dimensions of the bioretention area are 15 feet (4.6 meters) wide by 40 feet (12.2 meters) long, where the minimum width allows enough space for a dense, randomly-distributed area of trees and shrubs to become established. Thus replicating a natural forest and creating a microclimate, thereby enabling the bioretention area to tolerate the effects of heat stress, acid rain, runoff pollutants, and insect and disease infestations which landscaped areas in urban settings typically are unable to tolerate. The preferred width is 25 feet (7.6 meters), with a length of twice the width. Essentially, any facilities wider than 20 feet (6.1 meters) should be twice as long as they are wide, which promotes the distribution of flow and decreases the chances of concentrated flow.

In order to provide adequate storage and prevent water from standing for excessive periods of time the ponding depth of the bioretention area should not exceed 6 inches (15 centimeters). Water should not be left to stand for more than 72 hours. A restriction on the type of plants that can be used may be necessary due to some plants' water intolerance. Furthermore, if water is left standing for longer than 72 hours mosquitoes and other insects may start to breed.

The appropriate planting soil should be backfilled into the excavated bioretention area. Planting soils should be sandy loam, loamy sand, or loam texture with a clay content ranging from 10 to 25 percent.

Generally the soil should have infiltration rates greater than 0.5 inches (1.25 centimeters) per hour, which is typical of sandy loams, loamy sands, or loams. The pH of the soil should range between 5.5 and 6.5, where pollutants such as organic nitrogen and phosphorus can be adsorbed by the soil and microbial activity can flourish. Additional requirements for the planting soil include a 1.5 to 3 percent organic content and a maximum 500 ppm concentration of soluble salts.

Soil tests should be performed for every 500 cubic yards (382 cubic meters) of planting soil, with the exception of pH and organic content tests, which are required only once per bioretention area (EPA, 1999). Planting soil should be 4 inches (10.1 centimeters) deeper than the bottom of the largest root ball and 4 feet (1.2 meters) altogether. This depth will provide adequate soil for the plants' root systems to become established, prevent plant damage due to severe wind, and provide adequate moisture capacity. Most sites will require excavation in order to obtain the recommended depth.

Planting soil depths of greater than 4 feet (1.2 meters) may require additional construction practices such as shoring measures (EPA, 1999). Planting soil should be placed in 18 inches or greater lifts and lightly compacted until the desired depth is reached. Since high canopy trees may be destroyed during maintenance the bioretention area should be vegetated to resemble a terrestrial forest community ecosystem that is dominated by understory trees. Three species each of both trees and shrubs are recommended to be planted at a rate of 2500 trees and shrubs per hectare (1000 per acre). For instance, a 15 foot (4.6 meter) by 40 foot (12.2 meter) bioretention area (600 square feet or 55.75 square meters) would require 14 trees and shrubs. The shrub-to-tree ratio should be 2:1 to 3:1.

Trees and shrubs should be planted when conditions are favorable. Vegetation should be watered at the end of each day for fourteen days following its planting. Plant species tolerant of pollutant loads and varying wet and dry conditions should be used in the bioretention area.

The designer should assess aesthetics, site layout, and maintenance requirements when selecting plant species. Adjacent non-native invasive species should be identified and the designer should take measures, such as providing a soil breach to eliminate the threat of these species invading the bioretention area. Regional landscaping manuals should be consulted to ensure that the planting of the bioretention area meets the landscaping requirements established by the local authorities. The designers should evaluate the best placement of vegetation within the bioretention area. Plants should be placed at irregular intervals to replicate a natural forest. Trees should be placed on the perimeter of the area to provide shade and shelter from the wind. Trees and shrubs can be sheltered from damaging flows if they are placed away from the path of the incoming runoff. In cold climates, species that are more tolerant to cold winds, such as evergreens, should be placed in windier areas of the site.

Following placement of the trees and shrubs, the ground cover and/or mulch should be established. Ground cover such as grasses or legumes can be planted at the beginning of the growing season. Mulch should be placed immediately after trees and shrubs are planted. Two to 3 inches (5 to 7.6 cm) of commercially-available fine shredded hardwood mulch or shredded hardwood chips should be applied to the bioretention area to protect from erosion.

Maintenance

The primary maintenance requirement for bioretention areas is that of inspection and repair or replacement of the treatment area's components. Generally, this involves nothing more than the routine periodic maintenance that is required of any landscaped area. Plants that are appropriate for the site, climatic, and watering conditions should be selected for use in the bioretention cell. Appropriately selected plants will aide in reducing fertilizer, pesticide, water, and overall maintenance requirements. Bioretention system components should blend over time through plant and root growth, organic decomposition, and the development of a natural soil horizon. These biologic and physical processes over time will lengthen the facility's life span and reduce the need for extensive maintenance.

Routine maintenance should include a biannual health evaluation of the trees and shrubs and subsequent removal of any dead or diseased vegetation (EPA, 1999). Diseased vegetation should be treated as needed using preventative and low-toxic measures to the extent possible. BMPs have the potential to create very attractive habitats for mosquitoes and other vectors because of highly organic, often heavily vegetated areas mixed with shallow water. Routine inspections for areas of standing water within the BMP and corrective measures to restore proper infiltration rates are necessary to prevent creating mosquito and other vector habitat. In addition, bioretention BMPs are susceptible to invasion by aggressive plant species such as cattails, which increase the chances of water standing and subsequent vector production if not routinely maintained.

In order to maintain the treatment area's appearance it may be necessary to prune and weed. Furthermore, mulch replacement is suggested when erosion is evident or when the site begins to look unattractive. Specifically, the entire area may require mulch replacement every two to three years, although spot mulching may be sufficient when there are random void areas. Mulch replacement should be done prior to the start of the wet season.

New Jersey's Department of Environmental Protection states in their bioretention systems standards that accumulated sediment and debris removal (especially at the inflow point) will normally be the primary maintenance function. Other potential tasks include replacement of dead vegetation, soil pH regulation, erosion repair at inflow points, mulch replenishment, unclogging the underdrain, and repairing overflow structures. There is also the possibility that the cation exchange capacity of the soils in the cell will be significantly reduced over time. Depending on pollutant loads, soils may need to be replaced within 5-10 years of construction (LID, 2000).

Cost

Construction Cost

Construction cost estimates for a bioretention area are slightly greater than those for the required landscaping for a new development (EPA, 1999). A general rule of thumb (Coffman, 1999) is that residential bioretention areas average about $3 to $4 per square foot, depending on soil conditions and the density and types of plants used. Commercial, industrial and institutional site costs can range between $10 to $40 per square foot, based on the need for control structures, curbing, storm drains and underdrains.

Retrofitting a site typically costs more, averaging $6,500 per bioretention area. The higher costs are attributed to the demolition of existing concrete, asphalt, and existing structures and the replacement of fill material with planting soil. The costs of retrofitting a commercial site in Maryland, Kettering Development, with 15 bioretention areas were estimated at $111,600.

In any bioretention area design, the cost of plants varies substantially and can account for a significant portion of the expenditures. While these cost estimates are slightly greater than those of typical landscaping treatment (due to the increased number of plantings, additional soil excavation, backfill material, use of underdrains etc.), those landscaping expenses that would be required regardless of the bioretention installation should be subtracted when determining the net cost.

Perhaps of most importance, however, the cost savings compared to the use of traditional structural stormwater conveyance systems makes bioretention areas quite attractive financially. For example, the use of bioretention can decrease the cost required for constructing stormwater conveyance systems at a site. A medical office building in Maryland was able to reduce the amount of storm drain pipe that was needed from 800 to 230 feet - a cost savings of $24,000 (PGDER, 1993). And a new residential development spent a total of approximately $100,000 using bioretention cells on each lot instead of nearly $400,000 for the traditional stormwater ponds that were originally planned (Rappahanock,). Also, in residential areas, stormwater management controls become a part of each property owner's landscape, reducing the public burden to maintain large centralized facilities.

Maintenance Cost

The operation and maintenance costs for a bioretention facility will be comparable to those of typical landscaping required for a site. Costs beyond the normal landscaping fees will include the cost for testing the soils and may include costs for a sand bed and planting soil.

Schematic of a Bioretention Facility (MDE, 2000)

Roof Runoff Controls SD-11

Rain Garden

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- ☑ Contain Pollutants
- Collect and Convey

Description

Various roof runoff controls are available to address stormwater that drains off rooftops. The objective is to reduce the total volume and rate of runoff from individual lots, and retain the pollutants on site that may be picked up from roofing materials and atmospheric deposition. Roof runoff controls consist of directing the roof runoff away from paved areas and mitigating flow to the storm drain system through one of several general approaches: cisterns or rain barrels; dry wells or infiltration trenches; pop-up emitters, and foundation planting. The first three approaches require the roof runoff to be contained in a gutter and downspout system. Foundation planting provides a vegetated strip under the drip line of the roof.

Approach

Design of individual lots for single-family homes as well as lots for higher density residential and commercial structures should consider site design provisions for containing and infiltrating roof runoff or directing roof runoff to vegetative swales or buffer areas. Retained water can be reused for watering gardens, lawns, and trees. Benefits to the environment include reduced demand for potable water used for irrigation, improved stormwater quality, increased groundwater recharge, decreased runoff volume and peak flows, and decreased flooding potential.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

Design Considerations

Designing New Installations

Cisterns or Rain Barrels

One method of addressing roof runoff is to direct roof downspouts to cisterns or rain barrels. A cistern is an above ground storage vessel with either a manually operated valve or a permanently open outlet. Roof runoff is temporarily stored and then released for irrigation or infiltration between storms. The number of rain

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

barrels needed is a function of the rooftop area. Some low impact developers recommend that every house have at least 2 rain barrels, with a minimum storage capacity of 1000 liters. Roof barrels serve several purposes including mitigating the first flush from the roof which has a high volume, amount of contaminants, and thermal load. Several types of rain barrels are commercially available. Consideration must be given to selecting rain barrels that are vector proof and childproof. In addition, some barrels are designed with a bypass valve that filters out grit and other contaminants and routes overflow to a soak-away pit or rain garden.

If the cistern has an operable valve, the valve can be closed to store stormwater for irrigation or infiltration between storms. This system requires continual monitoring by the resident or grounds crews, but provides greater flexibility in water storage and metering. If a cistern is provided with an operable valve and water is stored inside for long periods, the cistern must be covered to prevent mosquitoes from breeding.

A cistern system with a permanently open outlet can also provide for metering stormwater runoff. If the cistern outlet is significantly smaller than the size of the downspout inlet (say ¼ to ½ inch diameter), runoff will build up inside the cistern during storms, and will empty out slowly after peak intensities subside. This is a feasible way to mitigate the peak flow increases caused by rooftop impervious land coverage, especially for the frequent, small storms.

Dry wells and Infiltration Trenches

Roof downspouts can be directed to dry wells or infiltration trenches. A dry well is constructed by excavating a hole in the ground and filling it with an open graded aggregate, and allowing the water to fill the dry well and infiltrate after the storm event. An underground connection from the downspout conveys water into the dry well, allowing it to be stored in the voids. To minimize sedimentation from lateral soil movement, the sides and top of the stone storage matrix can be wrapped in a permeable filter fabric, though the bottom may remain open. A perforated observation pipe can be inserted vertically into the dry well to allow for inspection and maintenance.

In practice, dry wells receiving runoff from single roof downspouts have been successful over long periods because they contain very little sediment. They must be sized according to the amount of rooftop runoff received, but are typically 4 to 5 feet square, and 2 to 3 feet deep, with a minimum of 1-foot soil cover over the top (maximum depth of 10 feet).

To protect the foundation, dry wells must be set away from the building at least 10 feet. They must be installed in solids that accommodate infiltration. In poorly drained soils, dry wells have very limited feasibility.

Infiltration trenches function in a similar manner and would be particularly effective for larger roof areas. An infiltration trench is a long, narrow, rock-filled trench with no outlet that receives stormwater runoff. These are described under Treatment Controls.

Pop-up Drainage Emitter

Roof downspouts can be directed to an underground pipe that daylights some distance from the building foundation, releasing the roof runoff through a pop-up emitter. Similar to a pop-up irrigation head, the emitter only opens when there is flow from the roof. The emitter remains flush to the ground during dry periods, for ease of lawn or landscape maintenance.

Foundation Planting

Landscape planting can be provided around the base to allow increased opportunities for stormwater infiltration and protect the soil from erosion caused by concentrated sheet flow coming off the roof. Foundation plantings can reduce the physical impact of water on the soil and provide a subsurface matrix of roots that encourage infiltration. These plantings must be sturdy enough to tolerate the heavy runoff sheet flows, and periodic soil saturation.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Efficient Irrigation SD-12

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Irrigation water provided to landscaped areas may result in excess irrigation water being conveyed into stormwater drainage systems.

Approach

Project plan designs for development and redevelopment should include application methods of irrigation water that minimize runoff of excess irrigation water into the stormwater conveyance system.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

Design Considerations

Designing New Installations

The following methods to reduce excessive irrigation runoff should be considered, and incorporated and implemented where determined applicable and feasible by the Permittee:

- Employ rain-triggered shutoff devices to prevent irrigation after precipitation.
- Design irrigation systems to each landscape area's specific water requirements.
- Include design featuring flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines.
- Implement landscape plans consistent with County or City water conservation resolutions, which may include provision of water sensors, programmable irrigation times (for short cycles), etc.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

SD-12 Efficient Irrigation

- Design timing and application methods of irrigation water to minimize the runoff of excess irrigation water into the storm water drainage system.
- Group plants with similar water requirements in order to reduce excess irrigation runoff and promote surface filtration. Choose plants with low irrigation requirements (for example, native or drought tolerant species). Consider design features such as:
  - Using mulches (such as wood chips or bar) in planter areas without ground cover to minimize sediment in runoff
  - Installing appropriate plant materials for the location, in accordance with amount of sunlight and climate, and use native plant materials where possible and/or as recommended by the landscape architect
  - Leaving a vegetative barrier along the property boundary and interior watercourses, to act as a pollutant filter, where appropriate and feasible
  - Choosing plants that minimize or eliminate the use of fertilizer or pesticides to sustain growth
- Employ other comparable, equally effective methods to reduce irrigation water runoff.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

1 INTRODUCTION

This report presents the results of the traffic impact analysis (TIA) for the proposed Legacy Park (Tentative Tract Map No. 36760) development ("Project") located on the southeast corner of Indian Street and Gentian Avenue in the City of Moreno Valley as shown on Exhibit 1-1.

The purpose of this TIA is to evaluate the potential circulation system deficiencies that may result from the development of the proposed Project, and to recommend improvements to achieve acceptable circulation system operational conditions. This traffic study has been prepared in accordance with the City of Moreno Valley Transportation Engineering Division's *Traffic Impact Analysis Preparation Guide* (August 2007) and consultation with City of Moreno Valley staff during the scoping process. (1) The approved Project Traffic Study Scoping agreement is provided in Appendix 1.1 of this TIA.

1.1 PROJECT OVERVIEW

The Project is proposed to consist of a total of 221 single family detached residential dwelling units. Per the City's traffic study guidelines, the Opening Year will have a 5-year minimum horizon from baseline conditions. As such, the Opening Year analysis will assess 2021 traffic conditions.

Vehicular access will be provided via the following driveways (see Exhibit 1-1):

- Gentian Avenue via Street J and Street L – Full access driveways. Both driveways are proposed to align with future driveways on the north side of Gentian Avenue.
- Santiago Drive West via Street N – Knuckle from Street N into the Santiago Drive West
- Santiago Drive East via Street L – Knuckle from Street L into Santiago Drive East. Project is proposing to prohibit access to the existing Emma Lane (south of Santiago Drive).

Regional access to the project site is provided via the I-215 Freeway at Cactus Avenue interchange.

Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) *Trip Generation Manual*, 9th Edition, 2012. (2) The Project is estimated to generate a net total of 2,104 trip-ends per day on a typical weekday with approximately 166 net AM peak hour trips and 221 net PM peak hour trips. The assumptions and methods used to estimate the Project's trip generation characteristics are discussed in greater detail in Section 4.1 *Project Trip Generation* of this report.

1.2 ANALYSIS SCENARIOS

For the purposes of this traffic study, potential impacts to traffic and circulation have been assessed for each of the following conditions:

- Existing (2016) (1 scenario)
- Existing plus Project (E+P) (1 scenario)
- Opening Year Cumulative (2021), Without and With Project (2 scenarios)
- General Plan Buildout (2040), Without and With Project (2 scenarios)

1.2.1 EXISTING (2016) CONDITIONS

Information for Existing (2016) conditions is disclosed to represent the baseline traffic conditions as they existed at the time this report was prepared.

1.2.2 EXISTING PLUS PROJECT CONDITIONS

The Existing plus Project (E+P) analysis determines circulation system deficiencies that would occur on the existing roadway system in the scenario of the Project being placed upon Existing conditions.

1.2.3 OPENING YEAR CUMULATIVE (2020) CONDITIONS

To account for growth in traffic between Existing Conditions (2016) and the Project Opening Year (2021), a compounded annual traffic growth rate of 2 percent was assumed (10.41 percent aggregate growth in background traffic for the period 2016—2021). The 2 percent annual growth rate is intended to capture non-specific ambient traffic growth.

In context, the TIA's assumed 2 percent compounded annual growth rate is considered a reasonable approximation of future traffic growth when compared to demographic projections reflected in other local and regional growth modeling efforts. More specifically, the Southern California Association of Governments (SCAG) 2016—2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) growth forecasts for the City of Moreno Valley assume the City population to increase from 197,600 in 2012 to 256,600 by the year 2040, or an approximate 0.94 percent growth rate compounded annually. The RTP/SCS assumed growth in households over the same 28-year period reflects an increase from 51,800 households to 73,000 households; a rate of 1.23 percent compounded annually. At the upper end of assumed RTP/SCS growth rates, employment over the same 28-year period is projected to increase from 31,400 jobs to 83,200 jobs; a rate of approximately 3.54 percent compounded annually. (3) The 2 percent compounded annual traffic growth rate employed in the TIA reflects the fact that not all persons comprising population growth, household growth, or employment growth would translate on a one to one basis as a new vehicle trip in the region; and establishes a judicious midrange estimate lying between the RTP/SCS assumed regional population growth rate (0.94 percent) and the RTP/SCS assumed regional employment growth rate (3.54 percent).

Conservatively, the TIA estimates of area traffic growth then add traffic generated by other known or probable related projects. These related projects are at least in part already accounted for in the assumed annual 2 percent ambient growth in traffic noted above; and in some instances these related projects would likely not be implemented and operational within the 2021 Opening Year time frame assumed for the Project. The resultant assumed traffic growth rate employed in the TIA (2 percent annual ambient growth + traffic generated by related projects) would therefore tend to overstate rather than understate background cumulative traffic impacts under 2021 conditions

The Opening Year Cumulative (2021) Without and With Project traffic conditions analyses will be utilized to determine if improvements funded through regional transportation mitigation fee programs, such as the Transportation Uniform Mitigation Fee (TUMF) and Development Impact Fee (DIF) programs, or other approved funding mechanism can accommodate the near-term cumulative traffic at the target level of service (LOS) identified in the City of Moreno Valley General Plan. (4) If the "funded" improvements can provide the target LOS, then the Project's payment into TUMF and/or DIF will be considered as near-term cumulative mitigation through the conditions of approval. Other improvements needed beyond the "funded" improvements (such as localized improvements to non-TUMF facilities) are identified as such.

1.2.4 General Plan Buildout (2040) Conditions

At the City's direction, the evaluation of General Plan Buildout (2040) traffic conditions was contemplated for the purposes of this TIA. The development of the proposed Project (R5 land use designation) is anticipated to generate 1,799 fewer trip-ends per day with 135 fewer AM peak hour trips and 156 fewer PM peak hour trips, as compared to the currently adopted General Plan land uses (R5 and R30 land use designation). As such, evaluation of long-range traffic conditions was determined to be unnecessary as the proposed General Plan Amendment is anticipated to reduce the trips generated by the site. E+P and Opening Year Cumulative traffic conditions have been evaluated as part of this TIA in an effort to identify the near-term Project impacts, however, long-range traffic impacts are anticipated to be consistent with or less than those identified by the City's currently adopted General Plan.

1.3 Study Area

To ensure that this TIA satisfies the City of Moreno Valley's traffic study requirements, Urban Crossroads, Inc. prepared a project traffic study scoping package for review by City of Moreno Valley staff prior to the preparation of this report. The scoping agreement provides an outline of the Project study area, trip generation, trip distribution, and analysis methodology and is included in Appendix 1.1.

1.3.1 Intersections

The 13 study area intersections shown on Exhibit 1-2 and listed at Table 1-1 were selected for this TIA based on the City of Moreno Valley's Traffic Study Guidelines and in consultation with City of Moreno Valley staff. Pursuant to the Traffic Study Guidelines, the City requires analysis of intersections where the Project would contribute 50 or more peak hour trips.[1]

TABLE 1-1: INTERSECTION ANALYSIS LOCATIONS

ID	Intersection Location	Jurisdiction	CMP?
1	Indian St. / Cactus Av.	Moreno Valley	No
2	Indian St. / John F. Kennedy Dr.	Moreno Valley	No
3	Indian St. / Gentian Av.	Moreno Valley	No
4	Indian St. / Santiago Dr.	Moreno Valley	No
5	Indian St. / Iris Av.	Moreno Valley	No
